Of the Federal Power Commission's Chairman Jerome Kuykendall for secret contacts with a representative of a gas company, resulting in changes in decisions regarding the company's (Midwestern Gas Transmission Co.) permission to pipe gas from Canada.

Of the soap-opera-family-situation comedy provided by two families, including wives, children, etc., etc., in the Wisconsin primary: the Kennedys and the Humphreys.

Of Florida-based airplanes raiding Cuban territory as positively proved by one such plane being shot down by Castro's forces.

Of the University of Illinois for suspending Dr. Leo F. Koch, assistant professor of biological sciences, for advocating an unacceptable theory on sexual behavior.

Of Frank Sinatra's yielding to pressure in firing Albert Maltz as the screen playwright for the film "The Execution of Pvt. Slovik," because the latter went to jail in 1947 when he refused to answer questions before a congressional committee on alleged Communist leanings.

Of the House Ways and Means Committee, the American Medical Association, and President Eisenhower for defeating Representative AIME J. FORAND'S bill to provide medical and hospital care for persons over 65 drawing social security benefits.

Of the New Hampshire Supreme Court's rejection of an appeal by Dr. Willard Uphaus, 69, former Methodist minister and Christian pacifist, jailed since December 14 for refusing to turn over the guest list of a Pacifist meeting of the World Fellowship in 1954 to the State's attorney general.

A Critical Situation

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. IRWIN. Mr. Speaker, in recent days we have been reading of the walkout by airline pilots protesting a regulation ordered by the Administrator of the Federal Aviation Agency. The dispute has highlighted a longstanding feud between the pilots and the Administrator over procedures of insuring airline safety. Aside from the question of who is right, we see in this dispute that there is a question of airline efficiency and more important one of public safety. Under permission previously granted, I include an article from this morning's New York Times which clearly presents the issues and furnishes a sharp picture of exactly how serious the situation has become. In closing I would like to quote the closing paragraph:

As long as the feuds continue the campaign for maximum airline safety will be sadly handicapped.

The article:

PILOTS-QUESADA FUED—THOUGH STRIKE IS APPARENTLY ENDED, UNDERLYING ISSUES ARE UNRESOLVED

(By Richard Witkin)

The wildcat strike that has disrupted operations of Eastern Air Lines and Pan American World Airways apparently is over.

If so, the Federal Aviation Agency will have won at least a temporary victory in its quarrel with the pilots over cockpit seating for FAA inspectors checking jet crews' performance.

In the industry there is general relief that the walkout has ended and, with it the immediate threat of its spread to other airlines.

But the industry is not very happy about anything else.

The issues underlying the strike—which go far beyond the problem of who sits where—remain.

And as long as they do, qualified observers feel, they will eat away at crew morale, and—what is more important—the efficiency and safety of operations will not be all they could be.

THE PROFESSED REASON

The professed reason for the walkout was an FAA ruling that the third pilot on four-man jet crews give up his front seat to FAA inspectors riding along to check crew proficiency, and move to the rear of the cockpit.

This switch from normal procedures, the pilots contend, is a safety hazard. (On some lines, by union-management contract, the flight engineer doubles as the third pilot, so the inspector can sit where he wants without altering procedures.)

But this squabble is but a small part of the story. Ever since Elwood R. Quesada became the first head of the FAA 18 months ago, he and the pilots have been engaged in a running feud.

Mr. Quesada tightened rules on crew performance and passed out stiff penalties for violations. Pilots complained of gestapo-like harassment.

Then, this spring, Mr. Quesada put through a rule making it mandatory for pilots to retire at age 60. The pilots, furious, are still fighting the ruling in the courts. Finally came the rule on cockpit seating for FAA inspectors.

There is little doubt that many pilots genuinely believe safety to be at stake in the cockpit issue.

A majority of neutral observers apparently do not agree. Nor do they agree with Quesada that the inspector can discharge his duties properly only from the disputed seat.

In any case, many doubt whether the pilots would have taken the extreme step of walking out—in defiance of court injunctions and the public stand of the union leadership—had the difference with Mr. Quesada been an isolated case rather than an added irritation in a long-standing feud.

This hit pilots in a particularly sensitive area because it seemed to some that Mr. Quesada was trying to show that the extra pilot was an unnecessary appendage. It took the pilots a long time to win their battle for the principle of having three qualified pilots in jet crews.

Nevertheless, few impartial observers feel the pilots chose a particularly good issue to walk out on, whether safety or the larger feud was the main motivating factor.

Pilot spokesmen point to the long tradition whereby the captain has the ultimate say on whether flight conditions are safe.

Others argue that the tradition should not extend to a mass refusal to fly, especially in the face of court injunctions.

On the overall feud, highly placed observers believe there has been too much chinjutting on both sides, and too little willingness to compromise.

They applaud Mr. Quesada, for the most part, for bringing a much-needed tightening up to aviation. But they think he could have been more diplomatic on some issues, particularly on the age-60 retirement.

In addition to feuding with Mr. Quesada, the pilots are engaged in a jurisdictional dispute with the flight engineers. This too has marred cockpit efficiency and is deplored throughout the industry.

As long as the feuds continue the campaign for maximum airline safety will be sadly handicapped.

Pilots Have Different Viewpoint: Disagree With FAA Regulation on Seating of Extra Man in Cockpit

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. DOOLEY. Mr. Speaker, the following letter from my constituent, Mr. Curtis M. Olsen of Port Chester, N.Y., a qualified pilot and a capable public relations man, portrays a side of the story that should be widely told.

I have profound respect for Mr. E. R. Quesada who took over the direction of the newly formed Federal Aviation Agency less than 2 years ago and whose administrative ability has injected vitality and force into that Agency.

My purpose in inserting this letter in the RECORD is simply to present the pilots' viewpoint regarding the question of adequate observation from the cockpit by an FAA inspector. I think the viewpoint of the pilots, who are themselves responsible for safety in flight, merits consideration in the total scheme of things.

Mr. Olsen's letter follows:

JUNE 17, 1960.

The Honorable EDWIN B. DOOLEY,
Member of Congress, House Office Building, Washington, D.C.

DEAR MR. DOOLEY: It is regrettable that the controversy of the recent ruling (unilateral) by the Administrator of the Federal Aviation Agency has precipitated the situation between Eastern Airlines and its pilots, with a situation of growing seriousness coming into the other three airlines, PAA, TWA, and American. The ruling in reference is that of the seating arrangement on the flight deck of jet aircraft; wherein Mr. Quesada insists that an adequate observation cannot be achieved from a position 3 or 4 feet further back in the cockpit. His insistence that the FAA inspector (who may not even be a pilot) be in a position where he can question the captain during the

course of the flight, despite the obvious conclusion that it is inadvisable to distract any pilot in the course of an approach to landing, or during flights in heavily trafficked areas.

This situation is merely one of a series that have arisen since Mr. Quesada took over the direction of the newly formed FAA less than 2 years ago; the effort presupposed to be one of the continuance of the excellent cooperation that had existed between the airline pilots of this country and the predecessor organization, the Civil Aeronautics Authority. Certainly the intention of the Congress of the United States was obvious, that of an administrative agency that would best accomplish the most orderly growth and proper supervision of the airline industry.

To describe briefly, this present situation represents the denial by one agency of the Federal Government of the United States, what another has provided. Contracts committing both the airlines and the Airline Pilot Association members to certain stated limitations and procedures, are part of the broad area under the National Railway Labor Act and stipulate a minimum crew of three licensed pilots on the flight deck of any jet aircraft flown in air carrier service of this country. This minimum crew concept resulted from hearings held before a Presidential Board and like any contract were assumed a certain inviolability. But, the FAA Administrator avers and promulgates rulings under section 600 of the Federal Aviation Act of 1958 that set aside this minimum safe crew. The result of this ruling is to observe and evaluate the performance and proficiency of the captain as a member of a pilot team, while denying him the services of one member of the team. And the inspector of this team is responsible to no one aboard the aircraft, merely to the FAA. So we are faced with the problem of disregard of the safe crew team in evaluation of the team in the name of safety.

Certainly there is room for reasonable doubt of the efficacy of this ruling, yet an appeal to modify or suspend the rule must be made to the agency originally promulgating it.

That this situation represents the state of cooperation existent currently through the Administrator's rule by fiat under what he claims is an emergency does nothing to increase public confidence in the airline industry, and the use of press conferences by the Administrator instead of industry conferences to achieve the proper implementation of civil air rules bespeaks a certain lack of administrative ability by the Administrator. Despite the pleas for conferences between those persons affected mostly by air safety, the pilots of the air carriers; the Administrator inserted his rule into the civil air regulations part 40:22 and part 41:5, making it mandatory for the pilots of jet aircraft to violate their contract. And this in the name of safety.

Further comment of safety might be indicated by the lack of action by the Administrator of the FAA in the matter of disparities in parts 40 and 41 of the Civil Air Regulations; for the flight time limitations of a crew operating in international aviation exceed those of pilots in domestic operation when a crew of two pilots, plus a third licensed crew member is aboard. The limit for domestic is 8 hours of flight in a 24-hour period, while it is 12 in 24 for the like crew in international service. That this represents a safety item has not brought comment or action from the FAA. And further, when the pilots of PAA, through joint resolution advised the company that they considered this unsafe and not in accord with reality, they were enjoined by court order to live up to their contract. Now through another court order they are enjoined from living up to another portion of the same, legal, binding, and current contract.

Senator ENGLE, through bills S. 3563 and S. 3564 and Congressman JOHN BELL WILLIAMS, through House bills H.R. 12440 and H.R. 12441; both attempt the correction of the oversights of the Federal Aviation Act of 1958 to give the Civil Aeronautics Board certain powers of review over the actions of the FAA. Isn't this part of our governmental philosophy, to design sufficient checks and balances to prevent unwarranted arrogation of authority to any one arm or agency? We, the pilots of Pan Am, as well as all pilots currently flying air service in this country need a return to the spirit of cooperation between them and the supervisory agency of the Government; but they can only get it from a change in attitude at the top of the FAA.

Please use your influence in this Mr. DOOLEY, before irreparable harm is done the air carrier industry in the name of safety, for the consensus of jet pilots flying is that there is demonstrable and vital need for the crew complement as is. The airline captain must certify that he has examined all factors bearing on the flight at hand and certifies them as safe. How can he do this with one vital crew member displaced by an inspector who should observe for proficiency, not harass the crew.

Sincerely,

CURTIS M. OLSEN, *Pan Am Pilot.*

James Megellas Discusses the Forand Bill and Other Welfare Issues

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. REUSS. Mr. Speaker, James Megellas of Fond du Lac, on May 2, 1960, addressed the House of Delegates of the Medical Society of Wisconsin at the Hotel Schroeder in Milwaukee. Mr. Megellas, former acting postmaster of Fond du Lac, is presently serving in his second term as councilman of the city of Fond du Lac, Wis. He was recently elected president of the Fond du Lac Common Council.

As a paratrooper with the 82d Airborne Division in World War II, he is one of Wisconsin's and the Nation's most highly decorated soldiers. He bears the Distinguished Service Cross, Silver Star with Oak Leaf Cluster, Bronze Star with Oak Leaf Cluster, Purple Heart with Oak Leaf Cluster, the French Croix de Guerre, the Belgium Fouragere and the Presidential Citation with two Oak Leaf Clusters.

Mr. Megellas is active in the civic life of Fond du Lac. He is the treasurer of the Fond du Lac Class D Baseball Club, and has been active in Red Cross, Community Chest, and YMCA drives.

I commend Mr. Megellas' remarks to Members on both sides of the aisle:

REMARKS OF MR. MEGELLAS

Members of the House of Delegates of the State Medical Society of Wisconsin and guests, I am very grateful for this opportunity to be here this evening to present the Democrat's Party's viewpoint on health and welfare. The invitation was extended to the chairman of the State Democratic Party, Mr. Lucey, and I have the very happy opportunity this evening to represent the Democratic Party.

Of course you might well realize that the position I express to this group here this evening might not be the most popular one, at least from what I have been able to read in recent accounts. Therefore, I feel somewhat like the fellow who was about to be tarred and feathered and run out of town on a rail.

They asked him if he had anything to say, and he replied, "If it wasn't for the honor of all this, I'd just as soon walk." [Laughter.]

I must confess, however, that that story does not apply to me. I am, indeed, most happy to have this opportunity to discuss the Democratic viewpoint, because today particularly controversy is raging around the type of health insurance we should have for our aged.

I think the Democratic Party is as devoted to the interest of people as are other people, and other medical societies, and, therefore, I am happy to present their viewpoint.

The subject I was supposed to speak on expressly tonight was the Democratic Party's position on health and welfare as adopted in the 1956 platform. Of course much of that is outmoded and outdated, but in due respect to the title of the assignment I am going to cover that briefly this evening, so we might have a little better understanding of what the Democratic Party's feeling is on this for all of our citizens.

Under the general welfare, the Democratic Party in its 1956 platform adopted in August 1956 states that the Democratic Party believes "that America can and must adopt measures to assure every citizen an opportunity for a full, healthy, and happy life. To this end we pledge ourselves to the expansion and improvement of the great social welfare program inaugurated under Democratic administration."

Under social security, as you know, the Democratic Party has been the champion of social security, inaugurated 25 years ago, and we will be observing the 25th anniversary of social security in this Nation this year.

We believe that social security coverage should be broadened to take in more people. The benefits should be greater. We believe that the benefits now enjoyed by our elder citizens are not sufficient to provide for a full life in the twilight years of their life.

Specifically, we say, "We shall continue our efforts to broaden and strengthen this program by increasing benefits to keep pace with improving standards of living; by raising the wage base upon which benefits depend, and by increasing benefits for each year of covered employment."

We feel the same way about unemployment insurance: "We shall continue to work for a stronger unemployment insurance system, with broader coverage and increased benefits consistent with rising earnings."

We take the same position about public assistance. We state: "The Democrats shall pledge themselves to increased aid for the aged, the blind, dependent children, the disabled, and other needy persons who are not adequately protected by our contributory insurance programs."

Under the provision for health and medical care we state in our platform only that "We pledge ourselves to initiate programs of Federal financial aid without Federal control for medical education. We pledge continuing and increased support for hospital construction programs as well as increased Federal aid to public health services, particularly in rural areas."

In the field of housing, "We feel that every American is entitled to a decent home and a suitable living environment."

These are not only words on the part of the Democratic Party, but we have translated these words into action. Last April you may have read in your local newspaper that the Democratic-controlled House of Representatives passed a housing bill which

proposes to spend $1 billion to finance FHA and GI loans for homes under $13,800. This bill passed the House and has now gone to the Senate.

The Wisconsin congressional delegation was split evenly, five Democrats favoring the bill and five Republicans opposing the bill. Of course, I need not tell you that the position of the Democratic Party on matters of housing and Federal aid for housing has not met with favor from the administration, and it is anticipated that if this does pass the Senate the administration will veto it. However, this is the position of the Democratic Party in the field of housing:

"We pledge that housing insurance and the mortgage guarantee programs will be redirected in the interests of the homeowner, and that the availability of low-interest housing credit will be kept consistent with the expanding housing needs of the Nation."

In the field of education, our party has a five-point program. I might say from my own personal viewpoint on education that this is perhaps next to medical care for our aged, the most important bit of legislation before the Congress. I think this is one of the most urgent needs that the Nation is faced with today, particularly in light of the recent scientific and technological advancements made by the Russians and the very threat to our security that they impose.

We need to offer more educational opportunities for children in this Nation. The greatest natural resource we have in this Nation is the imagination and mentality of our youth; and, unlike other resources that may lie dormant until used, not so with the brainpower of this Nation, because if we do not use this imagination and mentality and brainpower of our youth when it is available it will be lost for all time. This is a loss that this Nation cannot afford.

It doesn't make any difference to me, frankly, whether the boy or girl who finds a cure for cancer is colored or white, whether he lives in Arkansas or California or New York or Wisconsin, or whether the boy or girl who is going to advance our scientific program that will keep up abreast of the Russians lives anywhere else in this Nation.

It is our responsibility here in Milwaukee and in Wisconsin and in the Nation to provide adequate educational opportunities. This is an area in which the Government must act. I don't think we can sit back much longer. The need is there, and we must recognize it. If we don't, I believe history will prove us to be a second-rate power in time.

Our five-point program on education says this: "Providing Federal financing to assist States and local communities to build schools and to provide essential health and safety services for all schoolchildren. Better educational, health, and welfare opportunities for children of migratory workers. Assistance to programs for training teachers of exceptional children. Programs for providing for the training of teachers to meet the critical shortage in technical and scientific fields. Expansion of the program of student-teacher and cultural exchange with other nations."

These are some of the clauses in the Democratic Party's platform adopted in 1956, and I suppose it might be said by some that these are socialistic measures. Well, on that point I would very much disagree. I think every one of these proposals in the Democratic Party platform is an instrument of democracy.

Thomas Jefferson once said that government must do for people what they cannot do for themselves. This is the basis of government—to provide for opportunities and to take care of the needy, to heal the sick, and to eliminate illiteracy and all the other things that play on our masses. This is very essential.

Today there is a controversy raging in Congress over whether or not the Government should enter the field of health insurance for the aged. There is no reference made to this in the Democratic Party's platform because it was not an issue in 1956.

What will happen in the conventions of the two political parties, one in Los Angeles and the other in Chicago, I cannot speculate on at this time. There are many thoughts in this field. I was looking today for a program that was supposed to be delivered by the administration, providing care for the aged. Apparently that was not brought forth, but some program will be forthcoming.

As I view this situation, there are three schools of thought today in this Nation—three political schools of thought, but only two political parties. We have the conservatives, who generally follow a status quo proposition and don't advocate any change, and who like things as they are. There are the liberals, who advocate change and who will support new measures. There are the moderates, who come in between somewhere. You know, as a matter of fact, the moderates have been in control of the stage for some time now; while the liberals have advocated many proposals, they have not been successful.

While the conservatives oppose them in trying to keep the status quo, they have not been successful, and this is what we see today in this field of health legislation for the aged. We see the liberals advancing a program calling for compulsory health insurance financed through the social security system; the conservatives opposed to any change, to any Government participation in the program; and many moderates in both political parties advocating something in between.

When I was invited to speak here, I pondered what approach I might take. As I said, our party platform has not been drawn up, and I thought that for the sake of presenting the extreme position I would take the liberal viewpoint. I know it might not be the most popular here this evening, but I think if you are going to arrive at any understanding of the problem you must understand, first of all, the position of the liberals and why they have this intense feeling of sponsoring compulsory health insurance under the social security plan.

If I were to speak on either side of this question tonight, I feel I could speak with the same intensity and fervor because there is much to be said on both sides. The three D's of democracy are deliberation, discussion or debate, and decision. And unless you have an intelligent discussion and debate you can't arrive at a proper decision.

In this field particularly, wherever one recognizes the need for medical care for the aged that faces the Nation there is a great need for discussion and deliberation and debate. For that purpose, therefore, I am going to express the liberal viewpoint.

Only recently the official publication of the Democratic Party, the Democratic Digest, in its January edition made a statement that I want to quote in part since I am expressing the viewpoint of the Democratic Party:

"As a start in distributing medical care more widely, hospital and surgical care should be added to the benefits provided social security beneficiaries financed by an increase in payroll tax collections. Loans to local comprehensive health insurance cooperatives should also be authorized."

More recently, at the last meeting of the Administrative Committee of the Democrtic Party of the State of Wisconsin, which is the policymaking body, that body unanimously approved a resolution in favor of the Forand bill; so I think it is safe to say that the Democratic Party of the State of Wisconsin, at least on that basis, is supporting the Forand bill, and I will make my arguments on their behalf.

I don't think any discussion this year and this month about health and welfare would be to the point unless it were related in some part to the controversial Forand bill, which is today kicking up so much fuss in the Halls of Congress, in the various branches of your organization, and among the American people in all walks of life.

Almost all of our liberals are supporting it. I accompanied Senator KENNEDY and Senator HUMPHREY when they were campaigning in our State, and I heard Senator SYMINGTON speak, and they came out for a Forand-type bill. I am not going to elaborate on the provisions of the Forand bill. I am sure if any group is acquainted with the provisions of that bill it is the State Medical Society of Wisconsin.

Senator KENNEDY has introduced a measure of his own in the Senate. As you know, the Forand bill in the House was defeated in committee, although there is a movement now to bring it out of committee. Senator KENNEDY at the same time has introduced practically the same type of bill in the Senate. I think our position on this can be summed up in one word. We recognize there is a problem here, and we are concerned in solving it.

Modern medical science has brought about a miracle in extending the life expectancy of the individual. I want to congratulate each and every one of you here this evening because you have contributed materially to this accomplishment.

Today we can expect to live an average of 71 years. Sixty years ago the life expectancy was 48 years. Between 1850 and 1900 it had increased only 10 years. In 1850 a man could expect to live only 38 years. In 1960 the even larger miracle is that, having attained 65 years of age, the individual has a life expectancy of 14 additional years. As a result it has been estimated that there are 35 million more Americans alive today than there would be if no medical progress had been made since 1900.

Approximately 16 million Americans are 60 years of age or older, and the statistics that are available make it amply clear that their numbers will increase rapidly in the next decade.

I don't believe I have to point out the need, because I think it is generally accepted. The administration recognizes the need as do both political parties, but I do want to touch on it briefly to bring it more into focus.

Many older Americans are in real need today. They average $75 a month which they draw from social security. This hardly provides for food and shelter, much less for medical expenses which increase with age. Few are in a position to meet the cost of chronic illness, from which many suffer, yet even to get charity care itself, inadequate in quantity and often inferior in quality, they must suffer the indignity of a pauper's oath.

The April 16 edition of Business Week, on the subject of health insurance for the aged, points out that the average older couple spends $140 a month on health costs unrelated to hospitalization. One out of every six persons 65 years and older, said Senator JAVITS, pays over $500 in medical bills annually. Sixty percent of the old people have annual incomes under $1,000 and cannot afford home or office care that might cut down the length of hospitalization or eliminate it completely.

This is the shocking revelation, that over 9 million people have an annual income from all sources of less than $966 a year in the twilight of their career when the need for medical care is the greatest.

It is plain to see that among these people even a modest doctor bill, hospital bill or surgical bill amounts to a major financial catastrophe. This, then, is the problem.

The question is, How can it best be solved?

Insurance companies have taken steps to cover a larger portion of our older citizens in their health care plans. These efforts are indeed praiseworthy, but it is clear that the greater health care and the lower income of aged people does not make them good insurable risks for private carriers. Either the private insurance companies must raise their premiums to a prohibitive level or impose such restrictions on benefits that the value of the coverage and the benefit is too small in comparison to the needs of the aged.

A working man in his productive years can take advantage of group plans, but when he retires his income is down so low and generally his right to group coverage is often lost, so this does not generally apply to the aged. Only two out of five over 65 years of age have any protection at all, and in most cases it is very inadequate. The policy can often be canceled, and is very expensive.

It is said that the Forand bill would hurt the insurance companies and would hurt welfare agencies and others; but that is not true. As a matter of fact, the Forand bill would strengthen the welfare agencies because it would relieve them of the high cost load of the aged. Many hospitals, as you know from your own experience, have large and growing deficits.

Medical care can best be provided for under social security. During a man's productive years, when he can pay in small amounts the cost the Forand bill proposes, under social security, one-quarter of 1 perment matched by the employer, three-eights of 1 percent by the self-employed not to exceed $25 a year, isn't very much in amount; but when a man pays it during his productive years he is insured for his old age. If this bill went into force it would cover all people over 65 now under social security.

Dr. Basil C. McLean, who recently retired as president of the National Blue Cross Association, had this to say recently about the proposals for something like the Forand bill:

"A lifetime of experience has led me at last to conclude that the cost of care of the aged cannot be met by the mechanism of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these because of the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged."

I know that the doctors in this Nation are concerned about this type of legislation because they have said that this would be socialistic—that the patient would not have the opportunity of choice. Well, the Forand bill provides freedom of choice for hospitalization, and freedom of choice for surgical care. There is no denial of choice. It is there. It is a real choice. It is a choice that can be made and you know it will be paid for.

There is no use having freedom of choice of an automobile if you can't afford to buy one. There is no freedom of choice in having an opportunity to buy a house if you can't afford a tent. There is no freedom of choice of a hospital or doctor if you can't afford to pay for it except by swallowing your pride and going on the public relief rolls. This seems to me to be the denial of the real choice of freedom.

The well-known and conservative Washington Post supports the Forand bill approach in an editorial of February 20, 1960, which says in part:

"That the American Medical Association would offer its usual doctrinaire opposition to this proposal was as much to be expected as a bill from the doctor after a visit to his office. Senator MCNAMARA has observed that the AMA has nothing to offer but tired abuse. This is not by the wildest flight and the most neurotic fancy socialized medicine or political medicine. It is simply a system.

"If the AMA could but calm its nerves enough to realize it, this, like Blue Cross or group hospitalization or any other insurance program, would enable a patient to go to the doctor and the hospital of his choice and pay the bill, resulting from the care he needs in old age. It would enable American men and women to retire in their old age with more security and self-respect."

I know that this evening I am addressing a group of dedicated and devoted public servants. I know in my own community of Fond du Lac our doctors are very highly regarded, and we have a wonderful group of doctors. I don't think in any profession you can find a more dedicated and a higher level of person than you find in the medical profession. Over the ages the family doctor and the country doctor have been looked upon as the bulwark of the community, as a pillar of all that is good, and people have rallied around them in the community. This is true today.

However, I don't have the same feeling about the AMA. For years the ruling clique of the AMA and its powerful lobby in Washington have been using the time-worn tag of state socialism or socialized medicine in all legislation which they oppose. A generation ago the AMA opposed reporting tuberculosis cases to a public authority, which as you know has since become the basis of all tuberculosis control.

The AMA also opposed the National Tuberculosis Act, which Congress passed unanimously. Since then this organization has fought against compulsory vaccination for smallpox; immunization against diphtheria and other preventive measures by public health agencies; Federal aid to reduce infant and maternal deaths. It stubbornly resisted the Social Security Act. To this date it continues to oppose inclusion of physicians and surgeons under its coverage, and I quote from an article in the CONGRESSIONAL RECORD that says, "Poll after poll has indicated that the members of the American Medical Association would prefer to come under social security." But yet this apparent will, as I understand it, has been opposed by the AMA.

The list of progressive legislation which was unsuccessfully resisted by the AMA seems endless. It includes public venereal disease clinics; free diagnostic centers for tuberculosis and cancer; the Red Cross blood banks; Federal aid to medical education; voluntary health insurance; Blue Cross; school health services, and Federal aid to public health.

The small clique controlling the AMA has opposed all the forward steps that the American people have taken through the Congress. As a layman it appears to me that this is quite an impressive array of bills that have been passed by the Congress in the public interest, and that all today are accepted by laymen, again, as I say, as instruments of democracy. They have proven themselves to be beneficial to the general welfare and the health particularly, of the people of this Nation.

I ask you doctors here this evening not to hang the scalp of compulsory health insurance, financed through social security payments, on your belt with these other proposals.

Some of you may dismiss all that I say here tonight as so much campaign oratory. You may feel that the Democrats are just out trying to bargain for votes. But I ask you to think of the older people you know. Look at this as a human problem. Look at it from the standpoint of thousands of individuals each trying somehow to get along. As doctors this is the way you look at your patients. As doctors interested in an explosive political problem you should look at the problem in the same way, through the eyes of individuals.

Would a State subsidy to private insurance companies help the people who need help the most? Should older people be forced to take a pauper's oath before they can receive medical care? Would the Forand bill be any different from Blue Shield where the Government pays the bill you send, just as Blue Shield does now?

If we answer these questions honestly, I am convinced that the only conclusion we can reach here this evening is that something like the Forand bill is the answer to this enormous problem.

Private insurance just can't handle this problem, and it is unfair to the rest of us to assume the cost of exceptionally high risk cases.

Likewise, there is something degrading about forcing people who have worked hard in their lifetime to take a means test in the twilight of their years just so they can qualify for medical care.

Finally, as doctors who are interested in having your bills paid, what better way than to expand the system used under Blue Shield, where you set the fees, where the patient picks his own doctor, and where the American system of free choice is preserved, as is true under the Forand bill?

There is a passage from the Holy Scriptures which has been used in the Forand bill campaign, which I think is wholly fitting and proper to conclude my remarks this evening.

"Cast me not off in the time of old age. Forsake me not when my strength faileth."

Thank you again for inviting me to participate in this discussion this evening. I hope that as a result of this gathering we will come up with a solution to the problem of medical care, which we are all so earnestly and deeply interested in and concerned about, which will prove beneficial for our older citizens and which will fulfill the solemnest hope of the American dream.

Commissioner John F. Floberg of the Atomic Energy Commission Has Proved To Be an Excellent Public Servant

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. VAN ZANDT. Mr. Speaker, with considerable regret, I wish to draw the attention of the Members of the House to the resignation of AEC Commissioner John F. Floberg, which becomes effective today.

Jack Floberg has done an outstanding job as an AEC Commissioner for the past 3 years. He has demonstrated enthusiasm, competence, hard work, and good judgment, and has discharged his heavy responsibilities very capably.

As a member of the Joint Committee on Atomic Energy, I would like to say that we regret to see Jack Floberg leave the Commission, and I am sure that I am joined in this sentiment by all my colleagues on the Joint Committee. He has served his country well, both as an AEC Commissioner and during an early period as an Assistant Secretary of the

Navy for Air, and he now plans to accept an important position with private industry. I am sure that my colleagues on the Joint Committee on Atomic Energy, and in the Congress, join me in saying "well done" to Jack Floberg, and in wishing him good luck in his new endeavors.

Fair Inquiry

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. LINDSAY. Mr. Speaker, the editorial appearing in the Washington Post on June 22 concerning the recent Supreme Court decision regarding the investigative authority of the Civil Rights Commission is timely and important. I ask unanimous consent to include that editorial in the RECORD:

FAIR INQUIRY

The Civil Rights Commission was created in order to obtain for Congress some information vital to its legislative duties—whether "certain citizens of the United States are being deprived of their right to vote by reason of their color, race, religion, or national origin." To help it in its task, the Commission was empowered to receive sworn allegations and to summon witnesses before it and question them under oath. Congress could have chosen to obtain this information through a committee of its own Members; it chose instead to obtain it through a Commission made up of distinguished citizens operating under the executive branch of the Government.

The Commission was not intended in any sense to be a court. It was not empowered to adjudicate controversies or try individuals. It pronounces no one guilty of any crime and imposes no penalties. It simply functions in lieu of a congressional committee. As Chief Justice Warren observed, "The only purpose of its existence is to find facts which may subsequently be used as the basis for legislative or Executive action." This being so, the Supreme Court was thoroughly justified, we think, in its conclusion that fairness does not require the Commission to adhere to the strict procedures of a court.

It is true that the Commission summons and questions voting registrars who allegedly have denied voting rights conferred by the U.S. Constitution. It questions them, therefore, about conduct which is criminal—and for which, it may be, they will subsequently be prosecuted. But the Commission itself is not interested in prosecuting them. If prosecution should be instituted against them, it will take place in a court where they will be accorded the full protections of due process—including the right of confrontation and cross-examination. The Chief Justice made the distinction clear:

Due process is an elusive concept. Its exact boundaries are undefinable, and its content varies according to specific factual contexts. Thus, when governmental agencies adjudicate or make binding determinations which directly affect the legal rights of individuals, it is imperative that those agencies use the procedures which have traditionally been associated with the judicial process. On the other hand, when governmental action does not partake of an adjudication, as for example, when a general fact-finding investigation is being conducted, it is not necessary that the full panoply of judicial procedures be used.

The Commission's function is decisively different from that of a security board as well as from that of a court. A security board passes judgment on a Federal employee's character and fitness for public trust; and its judgment may cruelly stigmatize the employee and cost him his job. In its decision of Monday regarding the Civil Rights Commission, the Supreme Court gave fresh indication that it considers confrontation indispensable to fair procedure in a security hearing.

But the Civil Rights Commission makes no such judgment and inflicts no such punishment. Its quest for the facts desired by Congress would be completely thwarted if it tried to conduct a trial or were required to pursue trial procedure. The Court's decision of Monday fortunately frees the Commission to carry forward its immensely important investigative function.

Walter S. Hallanan of West Virginia Nominated

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks:

REMARKS OF ROBERT H. C. KAY, FORMER STATE CHAIRMAN, BEFORE THE REPUBLICAN STATE EXECUTIVE COMMITTEE, CHARLESTON, W. VA., JUNE 4, 1960, PLACING IN NOMINATION WALTER S. HALLANAN AS REPUBLICAN NATIONAL COMMITTEEMAN FOR WEST VIRGINIA

Mr. Chairman, ladies, and gentlemen of the committee, there are some, Mr. Chairman, who look upon politics as something evil, but politics is nothing more or less than the science of governing ourselves. Politics is conducted through political parties. It is through political parties that this republic is maintained and sustained. As Elihu Root once said:

"Politics is the practical exercise of the art of self-government, and somebody must attend to it if we are to have self-government; somebody must study it, and learn the art, and exercise patience and sympathy and skill to bring the multitude of opinions and wishes of self-governing people into such order that some prevailing opinion may be expressed and peaceably accepted. Otherwise, confusion will result either in dictatorship or anarchy. The principal ground of reproach against any American citizen should be that he is not a politician. Everyone ought to be, as Lincoln was."

We are met on the eve of an important political campaign. A political party is something more than a static paper organization. It is something more than a constitution or officers or committee. It is something more than a tradition which one generation passes to the next for the sake of precedents. A political party is a body of men and women who have a common conviction and who strive to translate that conviction into the common life of our times. Its vitality is determined by the vitality of the men and women who work in party organization. It takes three elements to make a political party, indeed to justify its existence. The first is the ideal of government. The second is the candidate or candidates who espouse that ideal and who can be trusted to apply it. The third is made up of that great army of men and women whose business it is to get the candidates elected. Neither the issue nor the candidates can prevail without that army of workers. They form the rock upon which a political party must build its house. If that foundation rock is strong, the winds of adversity may blow against it, the frost of failure may attempt to weaken it, but it will survive and stand according to the strength and stability of that foundation.

It is from the heart of that army of political workers that I present for your consideration the man I wish to nominate as Republican national committeeman for West Virginia. High though his titles, proud his name, he is still one of us. He understands our problems. By the testament of his example we receive inspiration, hope, confidence and determination. In sunshine and storm he can be counted upon to be steadfast and stable. Neither adversity, discouragement nor criticism ever swayed him from his determined course. It is true that the snipers always shoot the man who carries the flag in battle; this is no less true in political campaigns. One who inspires others to action will always receive criticism from his adversaries. His adversaries in their confusion have neither the strength of the arm nor point to the arrow to pierce his faith, his courage or his ability. These qualities he possesses in measure of abundance found in but few men.

It is indeed fortunate that we in West Virginia, and in the Republican Party, have had a person so gifted, so inspired, so tested and so tried to assume again the continuation of the brilliance of his leadership. We who are the "hewers of wood and drawers of water," have always found him faithful to the trust, ever eager to be of help and assistance. He has kept and defended the faith in dark hours when others of faint heart could see no hope. He is the kind of national committeeman that every precinct worker, every party organization person, and every plain rank and file party member wants in this position of trust and leadership. His peers are few. Renowned above all others of the party's faithful, he is, indeed, its champion.

His years of experience on the Republican National Committee give West Virginia prestige a small state would not otherwise have. His recognition as an outstanding national leader likewise reflects credit upon this State. Small though may be her size and few her numbers compared with other States of the Union, her position on the National Committee ranks second to none. He made it thus. His sound advice and wise counsel on national matters are eagerly sought and diligently followed by national leaders. They know that in his knowledge and wisdom there is strength.

He has brought great credit to West Virginia. No other political party in the history of this State has ever honored a West Virginian as Chairman of its National Convention. Through him this honor came to West Virginia in 1952. While his selection as Chairman of the Convention brought distinction to his State, his impartial discharge of responsibility in the stress of those hectic days, made integrity and West Virginia synonymous. The people of the Nation said with one voice that West Virginia produced, in Walter Hallanan, a man. The name of the State and his name were inseparably linked, and the credit and glory of one reflected upon the other.

Senator LAUSCHE of Ohio, when he was then Governor, made the remark about a great American when he said, "As long as Ohio has men of Bob Taft's stature, she will send them to the U.S. Senate where they will be not only of benefit to the Nation, but also a credit to the State." So long as the Republican Party in West Virginia

has a man of Walter Hallanan's stature, ability, courage and faith in the Party's principles, he should be our National Committeeman. He has given generously of his time and his talents, his head and his heart, his energies and his pocketbook. He is known throughout the State by everybody as "Mr. Republican."

I, therefore, move that the Republican State Executive Committee now select and nominate to the Republican National Convention to be held in Chicago, Walter S. Hallanan of Charleston, W. Va., as Republican National committeeman for West Virginia.

Highway Safety

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. HOSMER. Mr. Speaker, in the late 1930's it was recognized that the nonuniformity of traffic control devices throughout the country posed dangers to life and property for the country's increasingly mobile population. By December 20, 1944, Federal legislation was passed implementing uniformity as recommended by the Bureau of Public Roads and a joint committee composed of representatives of the American Association of State Highway Officials, the Institute of Traffic Engineers, and the National Committee on Uniform Traffic Laws. The joint committee now also includes representatives of the American Municipal Association and the National Association of County Officials.

A manual on "Uniform Traffic Control Devices for Streets and Highways" was issued for nationwide guidance by the Bureau of Public Roads. The last edition was published in 1948 and amended in 1954.

A general revision of the basic manual, approved by the organization represented on the joint committee and by the Bureau of Public Roads, the American Standards Association, and other national organizations, will soon be issued. It will be an up-to-date guide covering modern standards for signs, signals, and pavement marking for all classes of roads and streets. Included for the first time will be standards for modern expressways, including the Interstate System. Also included for the first time will be standard signs for safe traffic control during construction and maintenance operations.

It has been generally accepted that these uniform standards have been a big factor in traffic safety in this Nation. This is one of the important findings of the Bureau of Public Roads recent report to Congress on "The Federal Role in Highway Safety."

The longstanding and meticulous attention which has been paid to this matter of uniform standards is undoubtedly responsible for the avoidance of many thousands of fatal and nonfatal highway and road accidents.

In fact, today the principal cause of automobile accidents is recklessness, which includes violation of traffic laws and inattentiveness. In this connection, Senator CLIFFORD P. CASE, of New Jersey, has pointed out the way in which effective Federal action should again be employed to eliminate today's major cause of highway and street accidents. His article on the subject, recommending a national clearinghouse for major traffic offenses, the equivalent of the FBI's criminal files, appeared in the RECORD on June 6 at page 11009.

Senator CASE has embodied his ideas in the bill S. 3635, now pending before the Senate Interstate and Foreign Commerce Committee. It deserves the support of all.

Problems Don't Change—Just the Answers

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit a speech which I recently gave before a combined meeting of the Kiwanis and Lions Clubs in San Jose, Calif.:

PROBLEMS DON'T CHANGE—JUST THE ANSWERS

When a modern-day politician looks backward it is considered almost sinful. Today I shall sin.

But by looking backward into American history and American heritage—even to the first inauguration of President Washington, we find meanings and answers which illuminate present-day times and problems.

Between 1789 and 1960 there are vast differences. We have come from the simplest of colonial societies to a complex civilization which leads the entire world.

But for all the differences that set 1789 apart from 1960 we can find many similarities in problems which confront us in either the colonial or atomic age.

For President Washington it was a time of beginning and despite all that has transpired, we too are concerned with beginnings in the nuclear and space age.

One of the first issues which faced Washington and his Congress was to etablish the public credit of the United States. Another was to liquidate the Nation's debt. The third was to provide for defense. A fourth was to establish a fair system of taxation. And a fifth was to work out a place for America in the family of nations.

In 1960 the setting is much different and so is the magnitude of problems but basically they are the same: How to preserve our credit, how to handle our public debt, how much of our resources to allocate to our national defense, what kind of tax structure will serve the needs of Government and our private enterprise system, and how best to win and hold the confidence of a troubled world in our own ideals and values. Listen for a moment to a portion of Washington's farewell address:

"As a very important source of strength and security, cherish the public credit. One method of preserving it is to use it as sparingly as possible * * * avoiding the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear."

This advice, after nearly two centuries of change is still as sound as the day it was spoken. Even today we know that if our society ignores economic realities we will fall like all nations and empires whose political and moral decay pushed them into economic bankruptcy.

A sound economy will not guarantee a great nation, but there can be no hope for greatness without it.

In this day of titanic government I raise the question, "Have we rejected the advice which Washington so profoundly gave us and come up with different answers to the same problems?"

No one would suggest that we return to the first Federal budget which Alexander Hamilton presented to the Congress in 1791 calling for appropriations of $740,232.14⅔. But there is something striking in the fact that the total expenses of the Federal Government in its first 150 years amounted to $157 billion—and we now spend more than that in two years of operation.

As a nation we followed Washington's advice for nearly 150 years through war and peace, boom and recession, and over the generations we gained in national vigor and stature. But in the space of the last 30 years our budgets have increased by 25 times and the consequences are reflected in the public debt and our future commitments.

This brings me to my theme. Problems haven't changed—just the answers.

Instead of following the advice of Washington to use the public credit sparingly and avoid accumulation of debt by shunning occasions of expense, we have blindly pushed forth laboring under two of the most unkind delusions which have ever captured the mind of man.

First, we have become fascinated with the "crash" technique for solving our national problems. We have been persuaded that money will buy anything, that tremendous expenditures will guarantee prompt and definitive results. And, of course, the more we spend the faster we will solve anything. We have deluded ourselves into believing that for just a few more quick billions we can buy a faultless national defense, that for additional fast billions we can mass produce an ideal educational system, that billions of dollars are the whole answer to being first in outer space, that a few hurried billions are all that stand between us in victory over sickness, disease, and all the worries of living. Put all of these together and you see a state of mind that regards compulsive spending as the answer to 20th century problems.

Another great delusion is caused by a local and mistaken idea of the limitless resources of the Federal Government.

The story is told of a mid-western city which needed a bridge to cross the river separating this city from the countryside. The city refused to spend its funds on the ground that it gave the country people access to the city. The county refused to pay the bill on the ground that it gave city people access to the country. Finally the problem was solved in joint session of county and city officials—they would ask the Federal Government to foot the bill—This idea has become prevalent because people in a local community refuse to solve local problems locally and rely instead on the Government in Washington to do it for them—with some other fellow's money.

This thinking is undoubtedly a throwback to the depression of the thirties and the emergency pump priming of the WPA. But it is now engrained indelibly in mental attitudes. We seem to overlook completely the fact that when the Federal Government takes on the problems of local government it isn't "somebody else" who pays, but each one of us. It's our mortgage, our debt, our taxes,

and we will pay them each and every one of us.

We have forgotten that Government can't give us a cent that it doesn't first take away from us in taxes.

Laboring under these two great delusions, we have adopted a national state of mind which has led to our present Federal fiscal policy. We have justified the tremendous increase in public spending on ground of one emergency or another—fighting a depression, fighting a war, or reacting to changes in the temperature of the cold war. Now the slogan is "Keeping up with the Khrushchevs". Tomorrow it may be a different slogan, but they all rationalize the continued rise in government spending.

I wish that each of you could sit at my desk in Washington, D.C., and read the mail which comes to me from my constituency. By a count of 10 to 1 the letters asking for the Federal Government to spend more outnumber those asking that it spend less. The pressure is tremendous and it is only natural that men who are responsive to public opinion and elected by the public should sense this spirit—this changed national attitude—and vote accordingly. As a result, when we experience an economic down-spin we accelerate Government spending and borrowing to pull ourselves out. But when equilibrium is restored Congress seems, up to now at least, to lack the fortitude to cut back spending in order to pay off what has been borrowed to tide us through the emergency. If we continue along this line our national debt is bound to go in one direction—steadily upward. As it goes up inflation will always stalk us as it has 29 out of 67 free countries who have had price increases of 50 percent or more in the last 10 years.

Nikita Khrushchev has served notice that he will bury us economically. One thing is clear—to meet Mr. Khruahchev head on, we need to marshall our full strength and resources and employ them wisely and well. And so we must look to the fiscal problems of the future and decide once and for all if the advice of George Washington is out of date or is still good in the atomic age.

Where is the Federal budget headed in the next 10 years?

This is a statistical fact and not a prediction: If we continue the trend of the past 30 years for just 10 more years, we will be spending $160 billion per year by 1970. It seems fantastic, doesn't it? Yet it is not a bit more fantastic than the increases we have already experienced from $3 billion in 1930 to $9 billion in 1940, to $40 billion in 1950, to almost $80 billion in 1960.

In looking to our fiscal future there are three shocking facts that every American should be aware of—and ashamed of.

Fact No. 1: Future generations, your children and your grandchildren, now owe $750 billion in debt which you have bequeathed them.

We owe $290 billion, which is only the interest bearing national debt.

In addition we have promised veterans and their dependents some $300 billion in the years ahead. In fact, we have just finished paying veterans benefits for the Revolutionary War, are still paying them for the War of 1812 and have not yet hit the peak in our payments for World War I. On top of all this the unfunded Government liabilities for military and civil service retirement already amount to $60 billion if not another single man is retired from the military or civil service. This bring our total to $650 billion.

Add this to our c.o.d.'s—our commitments for highway improvements, for public housing, for public works, and for subsidies, add the unspent balances of appropriations in the defense program and you have a total of $98 billion in c.o.d.'s.

Add the public debt, $350 billion of future obligations, $98 billion in c.o.d.'s and you have the unbelievable total of obligations which future generations must pay of nearly $750 billion. This is the mortgage on America's future. I wonder what George Washington would be thinking in this year of 1960.

Fact No. 2: If this session of Congress doesn't add a single new program, the level of Federal spending is going to go up. This is due to "built-in increases" in existing programs which continue to push future expenditures upward. The catalog of built-in increases covers outer space, civil aviation, public works, merchant shipping, urban renewal, science education, medical research, public assistance, and veterans pensions. The farm program will become more costly unless we have the courage and the foresight to do away with the farm price support program.

For 1961 alone these built-in increases amount to over $2 billion and looking ahead to 1962 there are built-in increases of more than a billion. And unfortunately built-in increases are never accompanied by built-in decreases since Government programs, once started, develop their own immunity to curtailment. A year ago the President in his budget message specified 18 programs which should be revised in order to reduce expenditures. Only three of them were considered by Congress and the net result of that consideration was an increase of future expenditures by about $9 billion.

Fact No. 3: Pressures for new spending programs are increasing in intensity and represent by far the most dominant influence exerted against Congress. Each year there are new programs which, if considered without reference to the overall problems of the entire Nation, are worthwhile. To say no to these proposals places one in somewhat the same position as the father who denies the new dress that "sister just has to have." Certainly any normal father wants to buy that dress and wants his daughter to have it, but he realizes that the family budget just will not stand it.

Each of these things becomes a project of new and high priority. But as we are confronted with these priorities we have to face the fact that the budget is so saddled with yesterday's priorities that it has lost most of the flexibility needed to put aside the old and take up the new.

In response to pressures for new spending programs billions of dollars in new spending authorizations are introduced at each session of Congress and are backed by floods of mail from constituents who might benefit from the passage of such bills. In fact if the new programs currently pending in the House and Senate were to be enacted into law they would add between $50 and $60 billion a year to our present spending. And at the same time enough bills have been introduced which, if enacted, would reduce taxes by between $5 and $10 billion a year. This is what is called slippery arithmetic—vote against going into debt but spend more and tax less. The odd part of it is that the men who espouse such a philosophy are continuosly reelected.

Because of these proposals we hear that our budget is austere and reactionary; that we don't look forward and we don't have the confidence in the capacity of America to grow and support increased expenditures. Those of us who insist upon adopting a responsible fiscal policy are criticized and maligned as not caring; as having no human understanding and no heart.

Let me put some questions to you.

Is it wrong to believe in a balanced budget?

Is it wrong to think that the Federal government should live within its income, especially in times of prosperity?

Is it wrong to resist the infinite demands of special groups for special favors from the Federal Government?

Is it wrong to plan on applying surplus in each good year to the reduction of our staggering public debt?

Is it wrong to ask that a new look be taken at some of the subsidies that have grown untouchable with the passing years?

Is it wrong to believe that private enterprise can do a better job of fostering economic growth and government spending?

It must be wrong—because with each passing year the ranks of Congressmen who think it is wrong are thinner and thinner.

This is the result of a changed national attitude, an attitude which adopts the philosophy that any crisis can be solved on a crash basis with the spending of more money, provided you spend what you think is somebody else's money.

But I refuse to believe that it is wrong.

I believe it is possible for America to look ahead—to recognize that with a changing world which is now on the frontiers of space we can solve new and different problems with the aid of our Government. But I also believe that we can solve these problems by keeping faith with future generations and turning our backs on the principle of spending what we do not have.

At the present time Federal spending and tax receipts represent about 16 percent of our gross national product of $500 billion. If our economy continues to grow normally and we keep it fiscally sound, the gross national product could reach $750 billion by 1970. If we continue to tax at the rate of 16 percent of the gross national product, this would mean that the Federal Government can meet the needs of an expanding population in the nuclear space age with an expenditure of $120 billion and impose a tax burden no greater than what you pay today.

But how should we spend this $40 billion increase? Must we apply Parkinson's second law that Government spending automatically keeps up with Government income? Certainly we should not, but I have grave doubts that we won't.

Shouldn't we exercise the restraint which Washington recommended and use some of that $40 billion increase for debt reduction? Shouldn't we give some of it back to the taxpayers in the form of a tax reduction?

If we do not adopt this as a firm philosophy and a firm goal, if we do not resist the tendency of our people to ask for more and more, then we will find in 1970 that we will be spending more than our $120 billion of income and we will still be piling up debt and encouraging inflation and ruining incentive.

We must not fail to face these issues and answer them decisively.

But to do so we must take stock of our own moral qualities and decide that answers to old problems haven't changed and that the sound business sense recommended by George Washington is as good today as it was in colonial times. To do so our people must be indoctrinated with the spirit of turning their back on big and paternalistic government. Looking to government to solve each and every one of our problems can only result in one thing—big business, big government, and big labor. There will be no room for the small businessman and the independent soul who likes to solve his own problems.

Just a few weeks back I received a letter from a small businessman in Los Altos. He is in the business of supplying aquarium materials to schools and colleges. He same here as an immigrant and with his wife built up a successful small business.

Near the end of February 1959 the reemployment office of the Santa Clara County Welfare Department contacted this gentle-

man with the request that he give employment to a 16-year-old boy of Mexican descent and who had quit high school, was married to an even younger bride, and expected a child. He was on relief and so were his parents. He had been repeatedly refused employment and his best offer was $1 per hour working in a nursery. This small businessman agreed to hire the young father-to-be and employed him at $1.50 per hour. Subsequently, because he was satisfied with his work, he raised the boy to $1.85 per hour. One day the boy came to his employer and said, "I cannot make enough money after taxes to support my family on 40 hours per week. May I please work longer hours?" The request was granted and subsequently another member of the family, the boy's illiterate father, was taken off the relief rolls and given employment at $1.50 per hour. One more family had become self-supporting. A third man was hired from the Santa Clara County welfare rolls and made independent.

Then an official representative of the U.S. Department of Labor descended on this small business scattering Federal bulletins like a swarm of locusts and causing equal devastation. He learned that the small business shipped a few small orders across the State line into Oregon and assumed jurisdiction because this firm was in interstate commerce. For 3 solid days he plowed through all of the company's books, orders, and checks, interviewed all employees, telephoned ex-employees, and finally came up with the judgment that this small businessman owed $1,388 in back wages because he had failed to pay overtime in excess of 40 hours.

If this small businessman refused to pay this $1,388 in accordance with installments directed by the Department of Labor he would then be forced to deposit twice the amount and the Labor Department would notify each of his former and present employees that they would be furnished free legal services in order to prosecute a suit against their employer.

The ironic fact about this whole matter is that if the small businessman had paid the young fellow on relief $1 per hour and $1.50 per hour for all in excess of 40 hours per week, he would have complied with the law. But because he had paid him straight time at $1.85 per hour he found that he was to suffer because he had taken three families off relief.

Laws are supposed to be made for all people. Instead they seem to be made solely for the benefit of bureaucrats who enforce them in the name of what is good for employees. Employers are ignored. Isn't this to coin an overused phrase, "killing the goose which laid the golden egg"?

This is the result of big government where all morals and decent motivations are cast to one side, simply because the letter of the law and the book has not been adhered to.

I have no idea what effect this $1,388 will have on this small business. But to many small businesses it would mean bankruptcy. And what would take their place—large corporations.

This is not an isolated event; it happens many times daily. The result is big government, big business, and big labor.

In frequent conversations with the Santa Clara County Board of Supervisors and the district attorney, I have been appalled at the manner in which aid to needy children payments are made. On record in Santa Clara County are numerous cases of mothers who have borne several illegitimate children, often by different fathers. The fathers come home on weekends but make certain they stay away during the rest of the week to allow the mothers to qualify for aid to needy children payments. The mother then receives more than she could ever possibly earn. Here is a case where beneficient government offers encouragement to those who ignore the moral obligation of any decent father to properly care for his children.

What has become of the day when each of us in our communities personally felt the obligation to assist the needy family in the next block? Instead of feeling a personal obligation today we shift the responsibility to big government.

This is the striking evidence of how our whole society has changed.

In our new society free and articulate citizens are discouraged about even raising their voices against the current trend. I know full well that I will be criticized today for saying that each of us should recognize our obligations as human beings instead of passing it along to a government 3,000 miles away. Individual citizens in a free democracy have become so hemmed in by organized bigness that they feel they must march in step, with the end result that they no longer have a personality and a political dignity of their own.

The real challenge of today's society is not the "missile gap." The real security gap is that with the passage of each day we undermine the economic framework which is the true balance of power in the contest between international communism and democracy. Inflation, excessive taxes, exorbitant public debt, irresponsible spending, habitual deficits, long labor-management disputes, and "pressure group" government are illustrations of how we wear down the energies of our economy instead of enhancing its capacity to prove Mr. Khrushchev is mistaken in his estimates of our endurance.

This is the real challenge of our time. Problems of today are no different than they ever were. They only differ in degree. Answers which have been sound through the ages have been discarded. We labor under delusions; delusions that money spent in a crash program will solve any problem and that money which comes from Washington isn't ours but somebody else's.

I repeat Government can't give us a cent that it doesn't first take away from us in taxes.

The real challenge of our time is to stop deluding ourselves, to reawaken each American to his moral responsibility, as a member of a free society to help his fellow man, to work for the progress of a nation and humanity, and to ask of Government only that which he has tried to do for himself and has not been able to do.

Without such a change in national attitude, I fear the boast of Khrushchev, "we will bury you," is something more than just an idle comment.

We must see to it that it is the mind of America that shapes our Government, rather than Government shaping the mind of America.

The Late Douglas Elliott

SPEECH
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. BOSCH. Mr. Speaker, I was greatly saddened at the untimely death of our colleague from Pennsylvania, DOUGLAS ELLIOTT. I originally had the pleasure of meeting him at the time of his nomination to succeed the distinguished late Richard Simpson through the courtesy of our former colleague, Franklin H. Lichtenwalter. After he became a Member of this body, I had occasion to become better acquainted with him. Short as that period was, I was convinced that DOUG ELLIOTT had great prospects for distinguished service in this body. Tragedies such as these are indeed hard to understand, and we will sorely miss him.

I extend sympathy to his loved ones.

Lynwood (Calif.) Elementary School Student Body Observes Special Day for Distinguished Graduate Student—An Exchange Student to Europe—As Tony Krulic Day

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present for your information and that of all others who read it a most interesting and inspiring experience which I enjoyed on June 3, 1960, at Lindbergh Elementary School in the great 23d Congressional District. The following texts explain the reason for Tony Krulic Day by these California elementary school students. Manifestly, it indicates very much that these several hundred elementary school students at this early age in their lives begin to realize the importance and significance of the fact that one of their former student body presidents had been selected from nationwide competition to be an exchange student to Italy.

The program follows:

TONY KRULIC DAY PROGRAM, LINDBERGH SCHOOL, LYNWOOD, CALIF., JUNE 3, 1960

Presiding, President Dayna Bancroft.
Recording secretary, Bobbie Swisshelm.
Ushers and programs, Paul Page and Jan Stephens.
Call to order, Dayna Bancroft.
Flag Salute.
Silent prayer.
"America," "Lindbergh School Song."
Welcome, Dayna Bancroft.
Music, Steve Niethamer, Frank Wahl.
Presentation of honored guests, Dayna Bancroft.
Presentation of distinguished guests, Miss Sparlin, principal.
Introduction of past presidents, Mrs. Hartz.
Presentation of gifts: Student body, Rickey Oelschlager; Brownies, Susan Staudt and Bobbie Gray; Lindbergh school personnel, Mrs. Gust; Lynwood Unified School District office employees, Mrs. Rollins; principal's, Miss Sparlin; Lynwood Unified School District Educational center and principals, Dr. McCaughin; past presidents, Fred Holder.
Response, Tony Krulic.
Remarks, Trudy Schwarz, exchange student from Germany.
Music, Bruce Bradberry.
Adjournment, Dayna Bancroft.

Past presidents: Bob Austin, Washington State; Jerry Henderson, Lynwood High; Tony Krulic, Lynwood High; Dana Hoopingarner, Lynwood High; Shirley Hamilton,

Lynwood High; Fred Holder, Lynwood High; Gail Perry, Lynwood High; Jackie Finch, Lynwood High; Roy Hansink, Hosler Junior High; Dennis Wilson, Hosler Junior High; Dan McCullough, Hosler Junior High; Rod Bancroft, Hosler Junior High; Ricky Oelschlager, Lindbergh School.

Lynwood teachers: Fourth grade, Mrs. Ella Gust; fifth grade, Mr. John Roseberry; sixth grade, Mrs. Wilda Hartz.

Messages: Mr. Clyde Doyle, Congressman, Washington, D.C.; Dr. Melvin Barnes, Oklahoma City Schools; Bob Austin, Ferndale, Wash.

Student council faculty sponsors, Mrs. Wilda Hartz, Miss Donna Mamula.

Distinguished guests: Congressman Clyde Doyle, Dr. Donald D. Reber, Mayor Arnold Finch, Mr. Norman Wasserman, Mrs. Robert Cohee, Mr. Walter E. Read, Mr. Kenneth M. Phelps, Mr. Lester K. Bright, Mr. E. L. Morris, Mr. J. Jack Willard, Dr. Robert C. McCaughin, Miss Laura A. Bechtel, Mr. Louis A. Thompson, Mr. Heustis B. Snow, Mr. Robert F. Kelley, Mrs. William Ruth, Miss Margaret Heidenreich, Mrs. Beatrice Escofie, Mr. Ralph Cosman, Mr. John Caples, Mrs. Charles Holder, Mrs. Tom Bancroft.

DAYNA BANCROFT, PRESIDENT OF STUDENT BODY, SPEAKS ON TONY KRULIC DAY

Welcome to Lindbergh School, and a big, warm welcome to all our visitors, especially our guest of honor, Tony Krulic.

We are proud to honor you, Tony, for many reasons, but most of all because you are one of the exchange students to go to Europe this summer. What a grand opportunity, and I know many surprises are in store for you.

We salute you, Tony, because you are one of Lindbergh's favorite sons. We will offer this tribute to you by guests of honor, music, and gifts.

Tony, I want to present you to our audience.

I understand Lindbergh was the first California school you attended. You entered here in the fourth grade, and Mrs. Gust was your teacher.

When you were in the fifth grade in Mr. Roseberry's room you were known as a good ballplayer and a good student.

As you entered sixth grade, when Mrs. Hartz was your teacher, you began to show your leadership ability. You had been at Lindbergh 3 years and you had made many friends. When you ran for student body president you were elected and on your way. During your term of office our Lindbergh School library was started, and you presented the key to the library to Miss Sparlin. This was the same year we won our Freedoms Foundation Award and your picture went to Valley Forge in our school's entry.

Tony, we have kept up with your records as you have gone through junior high and into high school. Every year you have added new honors to your list of achievements.

Now you have two of the highest honors any student can receive: A summer exchange program of travel and learning—and—president of the high school student body for 1960–61.

It's no wonder, Tony, we are proud of you, and that we salute you on this day.

May we stand and give Tony a big hand.

PRESENTATION SPEECH FOR THE STUDENT BODY—BY RICKY OELSCHLAGER

Tony, our student body was overwhelmed with happiness and pride when we found out that you were chosen one of 50 high school students to be an exchange student in Europe. We all know how hard you must have worked and how fine a citizen you must be to represent our country in a foreign land.

We are especially proud of you because you used to go to our school and were a fine student body president.

For about one week, everybody was trying to think of something that we could do to raise money for you. Finally someone came up with the idea of having ice cream and candy sales. Our student council approved this. Everyone worked extremely hard on the sales, and we have done a wonderful job, we think. I think I'd like to introduce two students who put forth a great deal of effort during the sales—Candy Dement and Bobbie Ann Swisshelm. We have had such fine cooperation, that I have this sum of $120.65 to present to you to use as you please in Europe.

Again, I want you to know how proud we are that you were chosen to be an exchange student. Have a nice trip, Tony, and a safe return.

MAY 31, 1960.

A favorite son will be honored tomorrow when Lindbergh Elementary School celebrates Tony Krulic Day in a Lynwood youth version of hometown-boy-makes-good.

The young man of the hour will be Tony Krulic, former Lindbergh student leader, now student body president-elect at Lynwood High School and the first Lynwood representative chosen for the American abroad student exchange program.

The salute to Tony beginning at 10 a.m. in the school auditorium will be highlighted by comments from distinguished guests and the presentation of gifts. Dayna Bancroft, present president at Lindbergh, will offer the first tribute to the school's student body president of 1954–55.

Dr. Robert McCaughin, superintendent of schools; Dr. Donald D. Reber, former Lynwood superintendent; Congressman CLYDE DOYLE, and Trudy Schwarz, the high school's first foreign exchange student will extend congratulations.

Four gifts will be presented to help with Tony's summer trip overseas under the American Field Service student exchange program. A student body contribution will be presented by Ricky Oelschlager, and Susan Staudt will offer the gift of a Brownie group.

Mrs. Ella Gust, Tony's first California teacher when he enrolled at Lindbergh in the fourth grade, will make the presentation from the Lindbergh faculty, and Mrs. Phyllis Rollins will give a gift from the office employees association of the school district.

All of Lindbergh's former student body presidents have been invited according to Principal Bess Sparlin, and they will share in the recognition day, as will Tony's mother Mrs. Beatrice Escofie. Introductions will be made by Mrs. Wilda Hartz, student council adviser. Lindbergh's tribute to Tony Krulic will also be hailed as a tribute to the strong citizenship program of the Lynwood Unified School District, Miss Sparlin says.

Musical numbers for the assembly program will be played by Steve Niethamer, Frank Wahl, and Bruce Bradberry.

"LINDBERGH SCHOOL SONG

I

"Our Dear Old Lindbergh School

"Lindbergh School, Lindbergh School
We're here to cheer for you,
Lindbergh School, Lindbergh School
Show them what you can do.
Blue and white, blue and white,
Colors that ne'er will die,
We love you, we do
We'll always be true
To our dear old Lindbergh School.

II

"Lindbergh School, Lindbergh School
We all have a common goal,
To learn to read, to learn to write
And be good citizens day and night—
White and blue, colors true
Will fly for evermore,
For you we will stand
You're the best in the land
Our dear old Lindbergh School."

Khrushchev Is "Soviet Man" Bred To Rule All by Tension

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article entitled "Khrushchev Is 'Soviet Man' Bred To Rule All by Tension," which appeared in the May 22, 1960, Los Angeles Times. The article was written by Mr. Robert Hartmann, chief of the Times Washington bureau.

In my view, this extremely well-written portrait of Premier Khrushchev merits the attention of all Members of Congress and the public.

Mr. Hartmann presents a very penetrating insight into Mr. Khrushchev's character and as to what type of individual he is. But of greater importance, and this is the point of the article, he describes the type of individual Khrushchev represents.

I believe that everyone interested in world events will find the article interesting and informative in helping them better to understand the threat to freedom represented by the Soviet man.

The article follows:

KHRUSHCHEV IS "SOVIET MAN" BRED TO RULE ALL BY TENSION

(By Robert Hartmann)

WASHINGTON, May 20.—"I'm a human being. I have feelings."

This was Nikita Sergeivich Khrushchev, his portly frame precariously upheld by a wooden chair, telling Moscow newsmen of his disillusionment with President Eisenhower 5 days before he told off the American Chief Executive in Paris.

Khrushchev's self-pity in Gorky Park, where he went to unveil the remnants of the U–2 spy plane (and to be cornered by newsmen) was a tipoff to the blast that blew his own summit conference skyhigh. It was also a tipoff of the man himself.

Why was anyone surprised?

Millions of persons around the world were surprised and are still mystified—as President Eisenhower said on his return yesterday—because they persist in regarding Nikita Khrushchev precisely the way he wants to be regarded, as a human being who has feelings.

BIGGEST LIE OF ALL

This is the biggest lie of all.

Khrushchev is not a human being, in the sense understood by our part of humanity, and if he has any personal feelings left, they are as absolutely under control as those of a Hindu fakir on a bed of nails.

He is, rather, what the French Communist newspaper L'Humanite proclaimed him in a special color supplement: Un Homme Sovietique—A Soviet Man and the archtype for all true Soviet men and women, as long as he lasts.

It is only in this frame of reference that Khrushchev or any other dedicated Communist within a working Commuhist society becomes remotely understandable. They are not just Russians, mere megalomaniacs, Marxist idealists, slightly veneered orientals, or anything else the like of which the world has never before known. They are a new species, a deliberate mutation, and fiercely proud of it.

KHRUSHCHEV SPUTNIK

I speak earnestly but not as a Soviet expert, a field in which we have too many amateurs already running for office. I am merely one of Khrushchev's sputniks—a term of feigned affection he himself applied to the foreign reporters who orbited ceaselessly around him when Vice President NIXON visited Moscow last July and revived again in September as the Soviet boss barnstormed his way around the United States.

On these exciting if exhausting assignments I watched Khrushchev pull many a trick from his bag both at home and abroad. He uses the same bag and often the same tricks. I have been fascinated by his brutal determination and frightened by the way in which he seemed to succeed in making otherwise hardheaded Americans accessories to his act.

The word "act" is used advisedly. Khrushchev is the consummate actor of this age. He does not "go into his act" as we are used to suspecting Western politicians of doing when the spotlight turns their way. Like all masters of deception he deceives himself in playing his part.

He not only lives his role; his role is how he stays alive.

It is with just such histrionic performances as he put on in Paris that Khrushchev climbed to the pinnacle of a new kind of society which had discarded all the old rules and was making up its own as it went along, but in which the only changeless coin was power. What we seem too sophisticated to grasp is that in such evolving and tightly controlled societies words, gestures, and postures are themselves instruments of power, weapons of a strange new warfare.

There is a story told in whispers behind the Iron Curtain, to the effect that Stalin used to amuse himself and the high party circles by commanding the rotund Khrushchev to dance the gozotski until he fell exhausted on the floor. But he always came up laughing with the others despite the hate in his heart.

MIGHT BE MYTH

Maybe this is a myth—nobody really knows anything of the Kremlin's mysteries except such rumors—but it is revealing nonetheless. Certainly the goatherd and coalminer suffered thousands of equally humiliating experiences both from czarist and Communist overlords along his road to the chairmanship of the Council of Ministers of the U.S.S.R.

He must have had feelings once, but by now they are superbly suppressed as befits "a Soviet man." Instead of feelings he assumes attitudes for every circumstance, as Shirley Temple once expertly cried or laughed at the director's call.

Americans who watched Khrushchev on his road show tour of the United States last summer must have sensed the quick-change character of his many moods. Though he moved so fast this was more obvious to those of us sputniks who stayed with him the whole route.

MELLOW AND RUDE

He was mellow in Washington and angry in New York; as rude to Mrs. Eleanor Roosevelt (whose late husband he extravagantly praised last week) as he was to President Eisenhower in Paris. He watched the Hollywood can-can with the leering relish of a baldheaded row regular, then denounced it like a Puritan elder on the train leaving Los Angeles.

He blew his top and rattled his rockets at Mayor Poulson, demanded (and that time got from a fidgety White House) an apology for his imagined affront. But 24 hours later he forgave all and dallied in a passing affair with San Francisco. He instructed Iowans in corn growing and butchering, ate hot dogs, patted President Eisenhower's grandchildren on the head (all the time knowing, he admitted in Paris, that the United States was spying regularly over Russia) and lashed back in gutter Russian at reporters' questions at the National Press Club.

GAMUT OF EMOTIONS

No normal human being runs such a regular gamut of emotions or snaps back so instantaneously from livid rage to benevolent mercy. I saw him make the switch twice in the length of a single Pullman car as he walked through the press section of his special Daylight Limited train to San Francisco. This was neither temper nor temperament, but cold, calculated cunning; the epitome of the "soviet man" shaping events to his liking rather than submitting to nonexistent fate.

What is true of Khrushchev's amazing self-discipline is also true, to greater or less degree, of all Soviet citizens who have made places for themselves in the ruling elite of Soviet society. We can see it in the dour Gromyko, but Khrushchev's own physical appearance enhances his dramatic monolog.

He looks like a jolly old roguish peasant, and everyone knows the bottomless store of Russian proverbs he recalls or invents to adorn this unterrifying image of uncommon commonness. It is all but impossible for products of the Christian ethic the West has held for two millennia to doubt, upon first encountering Khrushchev, that he is not after all a human being fundamentally like most of us.

WHAT HE WANTS

He is not. He is not merely an astute and successful politician—a foreigner who talks and dresses and runs his country a little differently than we do. That is what he wants us to think he is.

Nikita Khrushchev is a Soviet man. And if he ceases to behave as the prime public example of a Soviet man is expected (by other Soviet men) to behave we will no longer have to worry about him; but we will have to deal with another almost exactly like him in everything but looks. The Soviet Union is deliberately creating a wholly new kind of subspecies of the human animal and it is this animal, Khrushchev is constantly tell us, who will inherit the earth.

This Soviet man cannot accurately be described by the kind of imagery we have heard this week from Paris; he is not "badmannered," "furious," or "indignant" except in our eyes; he does not "lose his temper" or "reach the boiling point" or "shout hysterically" unless it is for very definite purposes of his own.

BULLDOZES WAY TO GOAL

He "blunders" but once, nor does he need "blunders" by his opponents or any such pretext to shape his strategy, though he makes use of every enemy move—deliberate or accidental—to bulldoze his way to his goal.

The failure of Americans—in high and low places—to understand the phenomenon of a Khrushchev—a Soviet man—is not due to lack of scholarship on the subject. Harvard has a whole Russian research center devoted to the most meticulous study of this unique development which has challenged western civilization to mortal combat. In a splendid small volume, "How the Soviet System Works," three renowned American scholars make the picture clearer for anyone not too lazy to read it.

PERSECUTORY ANXIETY

"The (Soviet Communist) Party attempts—and has to some extent been able with small groups—to create the 'new' Soviet man; disciplined, working steadily and consistently, puritanical in conduct and motivation," the authors report. Prestige attaches to those who can master impulses and mood swings. The stress is on unlimited achievement, on restless organizing activity, and on tempo. The elite attaches great importance to technology, machines, and other assurances of mastery over nature and internal threats.

"There is also a persecutory anxiety which has two aspects. On the one hand, there is the compulsion to project tormenting fears onto foreign agressors; on the other, the constant scenting of ill will, revolt, and opposition in everyone's motivations."

The basic idea of the "Soviet man" is as simple as it is terrifying. Religion is outlawed and science is perverted to achieve it; man is an animal with a brain which can be trained to any kind of behavior the trainer desires. Mass Pavlovian therapy will suffice to condition the clods, but the better brains get more attention. The key to their control is the manipulation of tension.

ALL IN INTEREST OF STATE

Eminently documented by both Soviet and Western psychologists and psychiatrists is the fact that the science of the mind, in the U.S.S.R., aims not to free the individual from fears and frustrations but to respond to tensions correctly, that is in the interests of the state.

Thus the supreme error the United States made, looking back on the wreckage of the summit, was not the U-2 incident at all. The big blunder eclipsing all others was to suppose that relaxation of tensions could ever be the real desire of a Soviet man.

Tensions are the absolutely indispensable element of the Soviet system of making men (or nations) behave as desired. Any real relaxation of tensions in the world would inevitably lead to relaxation of tensions at home; this would bring the whole pyramid which Khrushchev now stands atop down in disaster.

WHAT TENSION MEANS

Tension in the Communist sense is something short of nuclear war externally and less than martial law internally, but it is just as much the opposite of peace in the Christian sense.

The most common and economical way to create tensions, as any husband and wife, employer and employee, or Democrat and Republican can tell you, is with words. And this, in the peculiar mind of the Soviet man—Khrushchev—is what words are primarily for.

Khrushchev's words are not supposed to convey simple meanings, and his apparent contradictions are deliberate, not irrational. He uses words and gestures with such practiced skill that he vaults over the language barrier at times—but solely to bend his hearers to his will, to force a preconceived pattern of behavior from them.

PLAYING MONSTROUS GAME

How can we continue to be surprised when Khrushchev does this? How can we expect a man of the elemental decency of Dwight D. Eisenhower to match him at such a monstrous game?

He destroyed Stalin with violent words, though Stalin was already dead. He destroyed Bulganin, Malenkov, Molotov, Zhukov, and a host of others so effectively with words it was unnecessary to kill them. Words have eliminated the most powerful men Khrushchev ever knew.

Why should we be shocked—or sympathize—when the "Soviet Man" determines to destroy President Eisenhower as he must destroy every symbol of decency and honor that stands in the way of the wave of the future he calls communism?

Foreign Policy Setbacks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by George E. Sokolsky as it appeared in the Washington Post of June 23, 1960:

FOREIGN POLICY SETBACKS
(By George E. Sokolsky)

Recently our country has encountered three major international setbacks:

1. Cuba.
2. The Paris summit conference.
3. President Eisenhower's visit to Japan.

The State Department is the agency of our Government responsible for formulating foreign policy, for evaluating data which come to it from many sources; for knowing in advance what events are likely to transpire. The most important men in this mechanism are the deskmen, usually junior officials who are specialists in particular areas or matters and whose reports and memorandums eventually reach those who finalize policy. The State Department is, therefore, the responsible body that must answer to Congress and to the American people for whatever errors, misinterpretations, incompetences led to the disasters associated with the events. If the men at the top are badly informed, it is the deskmen who passed on incorrect data. The alibi usually is that a man used his best judgment. If his judgment is no good, he should not hold that job.

First, the Cuban disaster. Our Ambassador to Cuba at the time that Fidel Castro seized power by revolutionary means was Earl E. T. Smith. When he was appointed to this office, he was briefed as to State Department policy by officials of the Department and Herbert L. Matthews of the New York Times who has had the reputation of favoring revolutionary groups in Spain and in Latin America. Smith, who is a knowledgeable person, reported back to the State Department on the Communistic characteristics of the Castro movement. His reports were ignored. Smith was retired because he was opposed to the extensive support given to Castro by the State Department which was principally responsible for putting Castro in power.

Second, prior to the holding of the Paris summit conference, I and others wrote that it would come to nothing. Therefore, it is not hindsight to say that there was ample information available to indicate that Khrushchev would have to find a way out of that meeting. In fact various broadcasts from Moscow foretold failure. Nobody could have foretold that Khrushchev would have attacked Mr. Eisenhower with such brutality of language and manner but there was ample evidence in Russian, Red Chinese and other satellite literature to indicate the course of Russian action. In charge of the desks in the State Department dealing with the summit conference and the President's trip to Russia were Hugh S. Cumming Jr., Director of Intelligence and Research; T. Achilles Polyzoides, Director of Current Intelligence Indications; Charles E. Bohlen was Adviser on Russian Affairs; Edwin M. J. Kretzmann, Deputy Assistant Secretary for Domestic Affairs.

Third, the Eisenhower visit to Japan. I do not know enough about the current handling of the data from Red China and Japan in the State Department. Years ago, the Far Eastern Division in the State Department was one of the most competently organized and staffed.

It is impossible to believe that so great a storm could have been brewed in the Far East without some advance knowledge on the part of the State Department. What was done about it? What countermeasures were taken?

These questions need to be answered because faith in the efficiency and knowledge of the State Department is again disappearing in this country.

Farmers Not To Blame for High Food Prices

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. QUIE. Mr. Speaker, recently there appeared in the Red Wing Republican-Eagle, published in Red Wing, Minn., an excellent editorial based on statistics presented in an article by the Land O' Lakes Creameries News.

By reading the News and the Republican-Eagle articles the facts surrounding food prices are put into perspective, and I thought it would be valuable for the Republican-Eagle editorial to be reprinted here:

YOU CAN'T BLAME FARMERS FOR HIGH FOOD PRICES

Land O' Lakes (Creameries) News calls attention to some figures which deserve a bit of reflection by all of us nonfarmers. The facts are from U.S. Department of Agriculture studies, and we assume them to be correct. Here they are:

In 1951, a U.S. population of 153 million people paid $42.8 billion for the food it ate that came from American farms. Of this $42.8 billion, $20 billion went to farmers. The balance, of course, went to processors, transport concerns, wholesalers, and retailers who provide the important service of taking the food from the farm to you and transforming it into the attractive supermarket items to which we've become accustomed.

In 1959, after 8 years of gradually rising prices, a U.S. population of 176 million paid $51 billion for the food it ate from American farms. But farmers received only $19.8 billion of this $51 billion total, with the marketing charges from farm through retail store rising from $22.8 to $31.2 billion.

Land O' Lakes' purpose was not to quarrel with the wages or profits being earned by the various middlemen or to object to the idea that we consumers are paying for more and more services—precooking, brown 'n serve, cake mixes, etc.—when we push the selfservice cart up to the food store checkout. But Land O' Lakes did want to make the point that, in 1959 as compared with 1951, U.S. farmers were feeding 23 million more Americans and were actually receiving less money—$19.8 compared with $20 billion—for doing so.

If food prices seem high to you, it's not because farmers are getting a lot of money or farm price supports have pushed up retail prices. As Land O' Lakes News puts it—

Farmers as a group have a proud record. Hunger in the United States has been greatly reduced. Important inroads have been made on hunger outside the United States. And all of this at prices which reflect the opposite of inflation in years when inflation has become a national problem.

Social Security Amendments of 1960 (H.R. 12580)

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes.

Mr. DONOHUE. Mr. Chairman, unfortunately it is quite evident there is much fear and distressing doubt, in the minds of a goodly number of Members here that this proposal, H.R. 12580, the Social Security Amendments of 1960, is as reasonable and realistically responsive as it could and should be, to the needs and the desires of the great majority of American citizens. Under such circumstances we are, unhappily, because of the closed rule under which we are operating, permitted to vote only for or against the whole bill, without modifications.

Being restricted, then, to these two choices, I intend to support the bill because it does provide an extension and expansion of a limited number of benefits to those people whose needs are most urgent.

For instance, the bill removes the age 50 eligibility requirement for disability benefits; it liberalizes the eligibility requirements of old age, survivors and disability benefits; it makes certain improvements in the social security benefit protection for children and extends benefit eligibility to more widows; it effectuates certain improvements in the administrative financing and solvency provisions of the unemployment compensation system, as well as extending its coverage; it extends coverage to groups that were not before included. All these improvements are good and they have already been carefully and thoroughly explained by the distinguished chairman of the House Ways and Means Committee.

Unfortunately, the committee has not seen fit to recommend other advances and improvements which a great many of us have been advocating with the earnest hope that they would be included in this measure. Chief among these would be provisions to reduce the retirement age, especially for women, and particularly for widows; to increase the minimum benefits in accord with rising living costs; and realistically raise the outmoded and outdated basic income limitations.

Of course, the major fears and doubts about the substantial worth of this

measure are concentrated on the most controversial new title XVI, which would initiate a new Federal-State grants-in-aid program to help the States assist low-income aged individuals who need help to meet their medical expenses. In my own opinion this title, and its provision, and its provisions, fall far short of adequately and equitably assisting our older citizens in the desperate financial distress they tragically encounter from the ills and the sicknesses so common in the later stages of life.

It is my earnest hope, that after this measure is considered, and probably changed, in the Senate, we may yet have the opportunity to repair and strengthen this title so that a far more equitable and effective program of medical service and hospitalization treatment assistance may be granted to the millions of aged Americans so desperately and dispairingly in need of it.

Congressman Farbstein Protests Insults to Tourists

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. FARBSTEIN. Mr. Speaker, there has been called to my attention a situation which has existed for the last several weeks in the national parks of this area which I deplore very much and which I think all decent-minded citizens, upon being made aware of it, would similarly deplore. Feeling very strongly about the foregoing, I communicated with the Honorable Fred A. Seaton, Secretary of the Interior, requesting that some affirmative action be taken to see that this condition be cleared up.

Following is the letter which I wrote to Secretary Seaton:

JUNE 23, 1960.

Hon. FRED A. SEATON,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: For many weeks my constituents, including schoolchildren who have come to see their Nation's Capital, have been insulted on a basis of religion and race by the so-called commander of the American Nazi Party as they made their way to the galleries and museums in the area known as the Mall. For over 2 months this man Rockwell has held these meetings regularly, their only purpose being to incite to riot and be offensive to others.

The use of the Nazi symbol, the taunting language, the threats of his henchmen in the audience, the caricatures portrayed, plus the insulting epithets employed are all designed to incite the populace to hatred and violence.

This un-American incitement to riot, these libelous, flagrant, and abusing statements are beyond the limits of free speech. The incitement is such that police have already been forced to make several arrests on various disorderly conduct charges.

The Supreme Court has ruled that such criminal libel does not come under the legitimate interpretation of free speech. Is it necessary that mayhem occur before the authorities stop this disgraceful spectacle? Not only does Rockwell exploit and abuse so-called free speech privileges so generously accorded him, but he deliberately and obviously incites to violence in a manner incompatible with the safety of my constituents who come to visit the national shrines as tourists.

While unnoticed, and as part of a lunatic fringe, his use of the National Parks for the purposes of spewing his poison was sufficiently evil. Now that public attention has been directed to this malefactor by the near riot in New York City when he made application for a permit to speak in that city, I believe it to be the duty of the Department of Interior and its law-enforcement agents to protect the rights of the schoolchildren and other tourists from my district when they visit their Nation's Capital.

As a member of the House Committee on Foreign Affairs, I am particularly shocked to know that the atrocious spectacle that has been permitted has been exploited by world Communist propaganda to discredit the United States. Agents of Communist embassies in Washington have photographed this thoroughly atypical and un-American display, including the seeming coddling of the neo-Nazis by the U.S. Park Police.

I think the time has come for you to take action to abate this nuisance. Will you be good enough to acknowledge receipt of this communication and advise me whether it is your intention to take any action in the circumstances.

Sincerely yours,

LEONARD FARBSTEIN,
Member of Congress.

Home Misrule

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of June 23, 1960:

BALKY CITY COUNCIL

The House of Representatives, having lately turned back the District's drive for home rule and having thus reaffirmed its wish to act as city council for the Capital, has again shown how little suited it is to act in that capacity. Its legislative committee on District affairs for several months has refused to act upon the Commissioners' request for an increase in a variety of District taxes, needed to finance urgent public works improvements. Instead, at the 11th hour, it has decided to hold hearings on a proposal of its chairman to increase the sales tax alone. Whatever the merits of such a move, the Committee members must know that it would almost certainly be blocked in the Senate, where under adjournment pressures the objections of a single member would suffice to prevent any action.

With adjournment nearing, the Commissioners went back to the House District Appropriations Subcommittee to request the appropriation of the withheld portion of the Federal payment toward local expenses, which the subcommittee had previously refused to grant. Now the revenue, too, has been denied, even though the subcommittee in effect conceded the urgency of the public works projects by suggesting that the Commisioners build them if they can find the money.

As if this sort of performance were not perverse enough, Congress is also considering pay increases for various groups of city employees which would cost around $8 million—or nearly as much as the unfinanced public works projects. The pay raises would be mandatory, and if higher taxes or a higher Federal payment should fail to win approval, presumably urgent construction projects would have to be deferred.

The Commisioners have control only over the city's realty tax rate, and the way things are going, they may be forced to order a large increase in property taxes to keep the budget in the black and maintain essential services and programs. We think this would be the worst possible way to meet the emergency, for it would load upon one class of taxpayers a wholly disproportionate burden. But it will be inescapable if Congress persists in ignoring its responsibilities. At the very least, the Commisioners ought to be given control over other local tax rates if Congress is unwilling to face these problems intelligently.

An International Effort To Break Down the Language Barriers

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, recently a young Japanese by the name of Soichi Kato came to see me at my office. He told me about the International Language Institute and left me a memorandum which is set forth in full at the conclusion of these remarks.

He told me of the work that was being done by the International Language Institute to eliminate language barriers among nations. This is indeed a worthy purpose and one which should find support in the United States and elsewhere.

The memorandum follows:

International Language Institute was established in 1958 in Tokyo to eliminate the language barriers among nations.

As a result of our survey by questionnaires asking what should be the common language, the answers were divided into: (1) Esperanto, (2) English, (3) simplified English, (4) English and French concurrently, (5) English and Esperanto concurrently, (6) simultaneous interpretation, (7) impossible to chose any language, (8) should not chose any language, (9) encouraging teaching any foreign language in compulsory education.

We shall not support any particular language as the international language and we are going to set up an international organization to deal with this problem in a democratic and scientific way.

During our 2-year research, we found there were many things to improve the present situation, before we chose any common language. As an example, musicians and mathematicians already use international signs to communicate their ideas.

We have several research programs which are as follows:

A. International language policy in international conference.

Our data, collected at international conferences held in Tokyo shows that the delegates did not understand each others views by linguistic reasons. So, we shall study the nature of the handicap that exists between English-speaking people and non-English-speaking people.

We shall also study misunderstandings which happen frequently even among English-speaking people because of dialect, difference of usage, etc.

The correctness of interpretations, too, should be examined.

After scientific research, we may be able to recommend the delegates to speak at a certain speed, slower than usual, with a smaller vocabulary, and a standard pronunciation.

B. International language policy in tourism.

Today, New York is no more a city of Americans, but a city of those come from all over the world. The same could be said for Tokyo, Bombay, Cairo, or Moscow. So, we should be more kind to foreign tourists in order to avoid linguistic troubles.

For instance, employing common pictorial signs for traffic signs in every country may be a great advantage for drivers and pedestrians.

INTERNATIONAL ENGLISH

English is the language today most widely used in every airport, immigration office, etc., however, we find many difficult words in the documents even English-speaking people sometimes cannot understand.

If we have a certain limited vocabulary easy to learn and we make documents with it, every one who has learned this vocabulary of "international English" will be able to understand.

C. There are still many things in many fields, such as science, education, engineering, commerce, etc., which should be overcome by international cooperation.

INTERNATIONAL LANGUAGE INSTITUTE

Office: Heibonsha Building, Yonbancho, Chiyoda-ku, Tokyo, Japan.

President: Yasaburo Shimonaka, president of Heibonsha Publishing Co.

Standing director: Dr. Iwao Ayusawa, professor of International Christian University, international relations; Dr. Shiro Hattori, professor of Tokyo University, linguistics.

Secretary general: Soichi Kato.

Address in the United States: Soichi Kato, in care of Mrs. Solomon, 417 West 121 Street, New York 27, N.Y., United States of America. Telephone MO-2-2030.

Brainpower for the Space Age

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

BRAINPOWER FOR THE SPACE AGE

(Address by Bernard Haldane, career development specialist, Fairleigh Dickinson University (N.J.), February 16, 1960, at the National Missile/Space Conference, Washington, D.C., as part of the panel presentation, Space Challenge—Philosophy)

(Panel chairman: Dr. Fred S. Singer, University of Maryland; panel members: Richard B. Canright, Douglas Aircraft Co.; Rear Adm. Thomas F. Connolly, Pacific Missile Range and Astronautics; Hon. James G. Fulton, Pennsylvania, House of Representatives; Mr. Haldane; Andrew G. Haley, Esq., International Astronautical Federation; Ernest K. Lindley, Newsweek magazine, Dr. Donald Michael, Brookings Institution; Dr. Leo Steg, General Electric Co.)

Where and how can space-missile organizations obtain the brainpower needed for operations and progress? This is the question to which my remarks are addressed. I expect to convey procedures and attitudes which can lead to overcoming the apparent shortage of brainpower, and lead to a 33-percent rise in desired brainpower availability within 2 years.

Plenty is being said about the slowest method of increasing brainpower—education along formal lines. There is general agreement that this method, and other generally accepted procedures, are not good enough to meet our needs.

Three other possibilities exist. First, stronger motivation of known scientists and engineers. Second, methods that will identify available and willing talent which is not now recognized. Third, better utilization of the time of scientists and engineers.

Take the first of these—stronger motivation. Management cannot dictate motivation; to be sustained, it must come from within, be self-inspired. But management can establish the climate for self-motivation. The difficulty here lies in long-held attitudes, hardening of the attitudes, as well as social custom.

I have created a dialogue to illustrate the problem. For obvious reasons, the characters are Alice in Wonderland, and the Mad Hatter.

"ALICE. Where I come from, people study what they are not good at, in order to be able to do what they are good at.

"MAD HATTER. We only go around in circles, but we always end up where we started. Would you mind explaining yourself?

"ALICE. Well, grownups tell us to find out what we did wrong, and never do it again.

"MAD HATTER. That's odd. It seems to me that in order to find out about something, you have to study it. And when you study it, you should become better at it. Why should you want to become better at something, and then never do it again? But please continue.

"ALICE. Nobody ever tells us to study the right things we do. We're only supposed to study the wrong things, and learn from them. We may study the right things other people do; and sometimes we're told to copy them.

"MAD HATTER. That's cheating.

"ALICE. That's true, Mr. Hatter. But I live in a topsy-turvy world. It seems like I have to do something wrong first, in order to learn from it what not to do. And then, by not doing what I'm not supposed to do, perhaps I'll be right. But I'd rather be right the first time, wouldn't you?"

We say we want to encourage excellence, but we give first attention to mistakes. We look for the weaknesses in people when we select them; we give them lots of attention when something goes wrong, and little attention when things are running smoothly. The accepted doctrine of management by exception has converted managers into troubleshooters rather than encouragers of excellence.

Nationally, we aim to lift averages through elimination of lows, rather than through stimulation of highs.

Yet the democratic ideal calls for giving attention at all levels, not just the bottom ones. It is well known that geniuses rarely take care of themselves; they need attention and encouragement, too. So do the steady builders in the middle, and old reliables.

What can be done to establish the climate for self-motivation, for stimulation of excellence?

Men and women are happiest when they are doing their best at the kind of work which fits their talents. At other times, according to doctors and psychologists, they are virtually asking for the illnesses that arise from tensions. The climate for stimulating men's excellence, then, is one in which each man finds encouragement to do his best.

So, if you want to get the best out of a man, look for the best that is in him. This is obviously different from looking for or giving greatest attention to his mistakes. Much evidence is available to show that men do not learn from their mistakes. Evidence is also available to show that they do learn from their achievements and successes—but usually are discouraged from doing so.

I believe it is evident that if a manager knows a man's best, and the man knows the manager does, then the man will be self-motivated to be his best more often—so long as he likes his work. Managers, then should encourage their employees to speak about their achievements—to discuss them without boasting or bragging. This kind of discussion helps a man to appreciate his best, and strive to do better—voluntarily.

We all know that the standard procedure of constructive criticism, combined with "letting well enough alone," doesn't work satisfactorily. It is possible, if not probable, that a climate where achievements are discussed as facts which could point the way to greater achievements, could stimulate the growth of excellence.

There really is plenty of room for improvement. Social scientists have pointed out that only 1 person in 20 uses as much as 50 percent of his brainpower, and that the great majority of us operate at the 25 percent level. A climate that encourages excellence could easily lead to a 20 percent rise in the application of our brainpower.

My second point is identification of available and willing talent which is not now recognized. This requires what I call success factor analysis, a procedure I teach at Farleigh Dickinson University, and have used with professional and management men for almost 20 years.

A largely untapped talent pool exists, awaiting identification and utilization. Personnel department policies will need to be modernized before much can be accomplished. It is a fact, for instance, that at every level of intelligence there are more non-college graduates than there are college graduates. Yet the possession of a degree has become necessary to consideration for a scientific or engineering position. Edison and Ford wouldn't have a chance with companies that bear their names. Personnel departments are self-protective—overly so—in their standards of selection; in general, these tend to establish mediocrity, high-level mediocrity perhaps. The exceptional man with great talent does not conform to such standards.

How can the men and women in this vast untapped pool be recognized? A 1-hour questionnaire, which can be completed at home, identified people with a pattern of high talent. This questionnaire explores the best in a man, finds out what he is self-motivated to do effectively, and also enjoy. An average of fifteen minutes with the answers exposes unrecognized talents.

The theory behind this questionnaire, "Individual Report On Achievement Experiences," will take just a minute to explain. Selected experiences reported on the questionnaire are analyzed, separated into factors. Since each of these experiences is a small or large achievement, not necessarily associated with a man's or woman's employment, each set of factors must include many of a man's best qualities. A group of these factors is repeated in almost all the achievement-experiences. These factors repeated in the different experiences disclose the man's best qualities; the experiences themselves show how he uses his best qualities most effectively.

Standard employment application forms, aptitude tests and structured job-interview procedures do not even seek this information.

Some training in success factor analysis is required in order to develop the desired facts; but a good manager or supervisor can acquire this knowledge readily. However, since the facts developed are taken from experience, and are not statistical, they are dependable. So we now have a way to identify scientific and engineering talent among those who lack degrees. Theoretically, this procedure could increase our space-age brainpower by more than 100 percent; but I think that a 15-to-25 percent increase would certainly result—providing we do not permit a college-degree "aristocracy" to bar such a program in personnel departments.

My third point, which I do not have time to discuss, calls for taking nonscientific and nonengineering tasks from scientists and engineers, so as to give them more time to apply their most-needed talents. Budget Bureaucracy militates against this, but the change must come if security and progress are to have higher priority than temporary balancing of the books. We won't have books to balance, if we don't have the brainpower and progress required by these times.

BIOGRAPHICAL DATA ABOUT BERNARD HALDANE

Educator, author, speaker, personnel consultant, pioneer—developed self-analysis and self-motivating techniques that bring out the best in professional men and women; widely quoted by business, government, educational, and religious leaders—in speeches, books, and articles.

Career success and executive development specialist—seminar leader at the American Management Association; formerly, adjunct professor of career development and personnel management, Wagner College; consultant on placement counseling to Harvard Business School; presently, career development specialist, Fairleigh Dickinson University School of Business Administration. Guest lecturer, George Washington University, Tampa University, Cornell University, etc. Most leading companies now use some of the procedures he developed.

Professional-business activities—discovered the success pattern, a new principle which shatters the limitations man has placed on his own potentialities; developed procedures (success factor analysis) which reveal a man's strengths and weaknesses—and help him to be his best more often. In 1947, founded Executive Job Counselors, Inc., a placement counseling service; 1960, founded the Haldane Workshop Seminars—to help professional management men plan for progress in their companies. Member, American College Personnel Association, American Management Association, American Personnel & Guidance Association, Society for Advancement of Management.

Placement consultant for the S.A.M., developed placement procedures recommended in over 70 colleges. Served government agencies in liquidation on outplacement of released personnel. Consultant on placement for classes of the U.S. Naval Academy. Founded and directed the first counseling and placement service for veterans with professional and management abilities (1945, for the S.A.M.). The White House commended this volunteer work.

Public service: Testified before Joint Committee on Atomic Energy on the shortages of engineers and scientists; directed personnel development study for the Air Research and Development Command, U.S.A.F. (with Stanford Research Institute); counseled with ARDC on appraisal, identification and development techniques for engineering and scientific personnel; extensively quoted in the CONGRESSIONAL RECORD (reprint available).

Author: More than 40 books and articles on new techniques that stimulate and assure success: How To Find the Best in Every Man—Personnel; A New Pattern for Executive Placement—Harvard Business Review; Help Guide Your Child To Success—Supervisor's and Foremen's Digest; New System for Career Success—Journal of Machine Accounting; The Best That's in You—Career Development Council (C.D.C.); Make Your Success More Certain—C.D.C.; Manual for Career Development—C.D.C.; Seed for Success; etc.

Speaker: Scores of addresses to business, professional, and educational groups, in addition to radio programs and TV appearances. Representative organizations include: American Society of Mechanical Engineers, American Management Association, Personnel Clubs, National Association of Accountants, American Institute of Industrial Engineers, Society for the Advancement of Management, International Management Congress, Paris (U.S. delegate, 1957), Rotary, and other men's service clubs, Altrusa and women's service clubs, national conventions, university and college conferences—Cornell, Harvard Business School, Syracuse, Rutgers, University of Pennsylvania, George Washington University, Tampa University, etc.

Education and personal data—b. 1911, Brentwood, England; U.S. citizen, 1937; married 1951; granted first certificate by Royal College of Surgeons of England; attended Merton Institute, Columbia, and New York universities.

Social Security Amendments of 1960

SPEECH

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to State for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes.

Mr. GALLAGHER. Mr. Chairman, as we have taken up H.R. 12580, Social Security Admendments of 1960, it is apparent that the need for a liberal medical care for the aged bill is clearly and strongly supported by factual statistics that highlight the plight of so many of the country's senior citizens.

I vote for this bill despite the fact that I do not feel the provisions of the bill go far enough in attempting to give relief and a feeling of security to elderly citizens. Defeat of this proposal would kill off any chance of a medical care bill being enacted this year. I am hopeful that the Senate will amend and liberalize the provisions.

The following statistics highlight and emphasize the seriousness of the problem and the need for a more adequate program:

Persons over 65 have two to three times as much chronic illnesses as the remainder of the population.

The average hospital patient over 65 stays 15 days, twice the national average for all age groups.

The cost of medical care has increased 49 percent, since 1947. Hospital costs are up 300 percent since before World War II.

Four out of every five persons over 65 are not employed.

Half of those over 65 have incomes of less than $1,000 per year.

Only 40 percent of persons over 65 carry some form of commercial health insurance as compared to the national average of 70 percent.

We have come to a critical juncture in this tremendously important matter, either this Congress is going to provide necessary assistance to our senior citizens, who certainly have earned the right to such aid, or we are going to ignore the plight of the elderly.

I introduced a bill early in the year to amend the social security laws to make health benefits part of the social security system.

Agricultural Abundance an Asset

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. ULLMAN. Mr. Speaker, I want to call the attention of my colleagues and of others who read the RECORD to an editorial which appeared recently in the Pendleton (Oreg.) East Oregonian. It highlights an aspect of our farm program that is rendering a real service to America and the world.

The editorial follows:

[From the East Oregonian, Pendleton, Oreg., June 16, 1960]

AGRICULTURAL ABUNDANCE AN ASSET

(Members of the Pendleton Chapter of the American Association of University Women make intensive studies of many subjects of public interest. This is the first of two reports they have compiled from a study of Federal farm programs.)

The Federal farm program has been frequently displayed to the American public as a dastardly expense to the taxpayer. Any public program that accounts for some $6 billion per year is admittedly expensive.

Obviously, the problem is too complex to delineate in one article.

This article deals with that part of the Federal farm program that enables the United States to move substantial quantities of its farm surpluses in export sales to underdeveloped countries. Public Law 480 currently authorizes $1.5 billion per year to finance such sales to these countries. This represents 25 percent of the total farm program costs. It may be of interest to some to learn what all is included.

The significance of the export market to the Pacific Northwest wheat market is paramount. Freight rates have priced the region's soft white wheat and flour out of Eastern markets where it once enjoyed premium prices. Thus we must look to exports for 80 percent of our market. The influence of this market has some bearing right here at home. Umatilla County produces 25 percent of Oregon's wheat with an annual value of $12.5 million.

Public Law 480, now in its 6th year of operation, provides a means by which the

United States can sell, as well as donate, wheat and other commodities to underdeveloped countries. It is the basis of all "Food for Peace" programs.

During the first 5 years of its operation, Public Law 480 acounted for 45 percent of Pacific Northwest wheat exports. Nationally, it has accounted for $3.7 billion in sales to foreign countries; $547 million in famine relief; $1.2 billion in donations; and $1.1 billion in barter for strategic materials.

Let us examine a bit more closely some of these categories. This program provides a means by which the United States can donate food to meet famine conditions, brought on by flood, drought, hurricanes, and earthquakes, etc. Of the $547 million worth of food donated under this program, $247 million was represented by wheat.

Organizations such as CARE, U.N. Relief, United Catholic Relief, and others, have received food surpluses worth $1.2 billion, which they have distributed to needy persons in many countries. Food packages all bear the label "Donated by the people of the United States." These donations include food for school lunch feeding programs for 21 million school children in 68 countries.

In addition to donations to foreign peoples, Public Law 480 includes provisions for needy persons in the United States. From 1954 to 1959, donations totalling $413 million has been made here at home to 1.4 million persons in charitable institutions, 5 million needy families, and 14 million school children.

In 5 years the United States has traded farm surpluses to acquire $1.1 billion in strategic materials for defense.

Let us turn now to sales made to underdeveloped countries. Between 1954 and 1959, the United States received the equivalent of $3.7 billion in the currencies of a wide variety of countries. For the most part, the currency of underdeveloped countries has limited use in international trade. It can be used, however, to finance economic development projects within the country of origin. About 1.4 billion of this has been from the sale of U.S. wheat. It might be interesting to examine the uses to which the United States has put this $3.7 billion.

The law provides 16 major uses for this money: eight Federal agencies are involved in the programing of this money.

The largest portion of this money, 1.8 billion—or roughly 48 percent, has been loaned back to the purchasing countries for purposes of economic development. Long term, interest bearing (4 percent) loans have been made to 27 countries. In India $234 million has been loaned for the construction of the Sharavathi Power and River Development project. Pakistan received loans for construction of the Karachi Water Supply and Sewage Disposal System, for rehabilitation of Pakistan railroads, and for financing of small industries. Many other underdeveloped countries have received loans for construction of roads and bridges, irrigation and reclamation projects, construction of cement plants, hospitals, and many other projects needed in countries that are striving for improved conditions and economic development.

The second largest use of these funds has been by the United States itself. Fifteen percent of the total foreign currency ($567 million) has been paid for embassy expenses, military housing projects, and other U.S. costs abroad.

A category known as "common defense" accounts for $308 million, or 8.3 percent of the total. This is for the procurement of military equipment, and supplies in friendly countries. In Korea, funds accruing to the United States for sale of farm commodities under Public Law 480, provide 45 percent of the Korean army budget. About $80 million has been allocated for support of the Pakistan army. Similar uses are to be found in 14 countries, including Turkey and Formosa.

A category known as "grants for economic development" provides a means by which money can be granted to foreign countries for the construction and improvement of facilities for health, welfare, and education. This has amounted to $234 million, or 6.3 percent of the total.

Public Law 480 also provides for loans to private enterprise. In 5 years $224 million, or 6 percent of the total foreign currency, has been loaned to 70 firms. Sixty-five of these have been made to U.S. firms for a wide variety of projects. These include such familiar names as the Otis Elevator Co. (India); United Saran Plastic (Israel); Kaiser Frazer (Israel); Warner Lambert Pharmaceutical Co. (Pakistan); Pfizer Pharmaceuticals (Pakistan, Turkey, and Colombia); Abbot Laboratories (Pakistan, France, and Colombia); Bendix Corp. (France); Socony Mobil Oil (Greece); Singer Sewing Machine Co. (Pakistan); Sears Roebuck (Mexico and Peru); General Electric (Mexico); Philco (Mexico); Procter & Gamble (Mexico); Ralston Purina (Mexico and Colombia); International Harvester (Mexico); John Deere (Mexico); and the Lovable Brassiere Co. (Mexico).

All other uses of these funds account for $605 million, or 16.4 percent.

Among these other uses are items such as $1.8 million for a program to teach Turkish Army inductees reading and writing. It includes an educational program that most readers are familiar with—the Fulbright scholarship program.

The first specified use of these funds is for the development of foreign markets for U.S. farm products. This is the source of funds used by organizations like the Oregon Wheat Growers League for the development of markets in foreign countries. This program has played a major role in achieving a 300-percent increase in wheat consumption in Japan during a period of time when bumper rice crops were harvested. It is interesting to note that the total foreign currencies accruing to the United States, sixtenths of 1 percent ($18 million) has been set aside for market development. In the past 5 years, $12 million of this amount has been allocated to producer groups, such as the Oregon Wheat League. Producers of wheat, cotton, tobacco, etc., matched Government funds by providing $5.6 million obtained from growers.

Time will tell us how much foreign aid there has been in Public Law 480. This will depend on the extent to which countries repay their loans. If the loans are repaid, then the United States has been extremely successful in its efforts to assist in the economic development of underdeveloped countries. If the loans are not repaid, this will suggest that these countries have not progressed in their economy ar.d the effect of this could be far greater than the cost represented by unpaid loans.

This article has dealt only with 25 percent of the farm program. However, other portions of the farm program would reveal that the moneys are spent in a wide variety of projects, many of which the American people accept as worthwhile. Before people become overly critical of U.S. foreign aid and food disposal programs, it is well to examine carefully some questions regarding the U.S. responsibility to underdeveloped countries. Whether we like it or not we are involved in the cold war. We have accepted the fact that there is a conflict of ideologies in the world and a battle for men's minds and men's souls. The abundance produced on American farms is playing a very important role in the foreign policy of the United States.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. LEVERING. Mr. Speaker, I believe it is most regrettable that the House failed to approve farm legislation today. Because this session is fast drawing to a close, it probably means that nothing will be done this year to correct the programs that our colleagues on both sides of the aisle admit are damaging, not only to farmers, but to all of our people. The failure to act today apparently means that the Government will continue on in the same insane business of spending more and more in piling up greater and greater surpluses that we do not need—all to the detriment of those who till the soil and to the consumers who are paying more and more for food and more and more in taxes to meet the added needs for defense.

Mr. Speaker, with all the imperfections which it contained, the legislation which was voted down was at least a step in the right direction, because, among other things, it would have attacked headon the scandalous situation involving the cost of the farm program, particularly as it involves the acquisition of surplus commodities by the Government.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from a report dated June 18, 1960, from the National Grange, one of the Nation's oldest and most conservative farm organizations, for the consideration of my colleagues who may have some doubts about the need of adopting a sensible farm program in the interests of the entire Nation:

WASHINGTON, *June 18, 1960.*

The Grange placed a 4-point recommendation this week before the farm policy committee of the Democratic Advisory Council which will prepare a proposed farm plank for the Democratic National Convention in Los Angeles next month.

The recommendations prepared and presented by Roy Battles, assistant to National Master Herschel D. Newsom, represent the kind of balanced and sensible approach to farm problems which has earned for the Grange leadership in farm program development and the unsurpassed confidence of Members of Congress.

The Grange rejected the argument that all present programs should be continued, and at the same time emphasized that it would be sheer folly to discard those programs without first having developed alternatives that would enable farmers to earn reasonable incomes from their labor, investment, and and management of our agricultural production and marketing facilities.

Here, in summary, are the four points of the Grange recommendations made at the Chicago meeting of the farm policy committee:

1. Farm income is dangerously inadequate in terms of national interest.

"Agriculture is the victim of a vicious cost-price squeeze which is not only unfair to

farmers, but dangerous to the Nation as a whole.

"Our capacity to produce in the case of practically all commodities continues to exceed by a significant margin our capacity to sell that production at anywhere near adequate prices. The surplus often sets the price for the total output. Farmers lack machinery for the most part with which to cope with this problem.

"Added processing and marketing costs usually are pushed back in the form of lower prices to farmers rather than resulting in higher prices to consumers, or narrower margins for those in between.

"Low farm income acts as a tremendous drag on the Nation's potential level of economic activity and well-being—because farmers represent an enormous pool of buying power for production, marketing, and consumer goods and services."

2. The efficient family owned and operated farm has an array of values that contribute to the general welfare to such a degree that we feel national policy should be pointed toward whatever steps are necessary to preserve it.

"The family farmer—with capital, labor, and management pooled under his control—has fed and clothed American consumers better and for a smaller proportion of their spendable income than is true in any other nation in the world.

"We believe the family farm represents the Nation's best insurance of a continuation of the policy of food abundance so vital to America in time of peace and in time of a national emergency.

3. In order to solve their income problem farmers must—with the aid of Government in most cases—develop commodity programs designed to stabilize and upgrade income.

"Many of these programs involve the implementation of effective bargaining positions. Farmers sell in a vastly different climate from that enjoyed by those who influence their production, marketing, and living costs, and for the most part lack the machinery with which to adjust their inventories, market on an orderly basis, and bargain effectively.

"Lacking the practical capacity to attain these fundamental goals without the help of Government, we feel that wise national policy calls for enabling legislation on a commodity-by-commodity basis to help them attain these ends.

"Agriculture is faced with a multiplicity of separate problems, more often diverse than similar, arising out of the relationship of agricultural production, processing, and distribution to the total American economy.

"There are two basic approaches to the farm income problem now being debated. (a) The so-called laissez faire, full, free market, get the Government out of agricultural price matters, let the law of supply and demand solve the problem. This is the squeeze-out route. Contention is this would result first in lower prices, then in fewer farmers, and that, eventually, because of fewer farmers, more income per farmer. This would be sheer folly—tantamount to inviting economic catastrophe; and (b) development of programs specifically tailored to meet the individual needs of commodities concerned.

"We favor enabling legislation which would (1) enable farmers to achieve a reasonable degree of effective control over their own marketings, (2) permit programs which place the responsibility for surpluses in the hands of producers themselves, (3) call for programs which would enable price to perform its function and protect farm income while using the facilities of private trade, (4) enable farmers to cope with ever-rising production and marketing costs, (5) enable farmers to secure income from consumers, not taxpayers, (6) authorize machinery that would enable farmers to continue to produce and market better products more efficiently, and (7) authorize programs that would give us the same sort of economic powers used in the public interest that are enjoyed by organized labor and most industries."

4. Plan now for meeting the expanded requirements of a growing population by developing a long-range land-utilization program designed to encourage each acre being put to its best use.

"We should be preparing for the day when our expanding markets finally catch up with our capacity to produce. This means land utilization so as to preserve its productivity.

"We do not envision this as a production adjustment effort, although it would undoubtedly help to balance excess supplies with demand, but rather as a program whereby farmers would be helped—educationally and sometimes with incentives—to utilize their land in accordance with wise land use.

"The best land, from a food production standpoint, should not be gobbled up by industries, defense installations, and other developments, when such developments could take place equally well on less desirable land."

Educator Praises Stand on School Construction Bill

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. QUIE. Mr. Speaker, with some people bemoaning the fact that the Federal aid for school construction bill has been held within the confines of the House Rules Committee, I believe it is of interest to bring to the attention of my colleagues a letter I received recently from one of Minnesota's outstanding educators, Dr. George Budd. Dr. Budd is the president of Saint Cloud State College and is an informed spokesman for education progress in the State of Minnesota and the Nation.

I believe his letter clearly underscores the position of many members of the National Education Association who have seriously and constructively opposed further extension of Federal aid to education for elementary and secondary schools.

To give Dr. Budd's views on H.R. 10128, I am submitting the text of his letter to me at this time:

SAINT CLOUD STATE COLLEGE,
Saint Cloud, Minn., June 10,1960.

Representative ALBERT QUIE,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE QUIE: I am pleased to note that you voted against the Federal aid school construction bill. It is my hope that even though this bill has gone to the conference committee you will continue to fight against its passage.

I am a life member of the National Education Association and I am well aware that the NEA staff in Washington support the broadest kind of Federal aid to public education. I would point out to you that there are many strong, active, and important members of the NEA who, even though we are a minority, are unequivocally opposed to any expansion of the Federal aid to education program until such time as the individual States have proved that they have exhausted every possibility to meet their responsibilities to the children of the schools of their respective States.

Cordially yours,

GEORGE F. BUDD,
President.

Farm Surplus Reduction Act of 1960

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. BERRY. Mr. Speaker, the House has just killed the only farm bill that has come to the floor this year. It appears that so far as wheat is concerned there will be no legislation this session. This should be sufficient notice to Members from the agricultural areas that the time has now come when they must stop playing politics with agriculture and attack the problem at its source.

The fact is, agriculture is simply the first of the various segments of our country to fall victim to our international, one-world policy. No one in Congress or no one in the Nation who has the ability to add a column of figures can lack the understanding of the problem facing American agriculture, but few have the political courage to do anything about it.

Everyone knows there is actually no such thing as a domestic farm problem. Everyone knows that the problem is simply a foreign policy problem. Everyone knows that what is actually happening is that America is importing the food that goes onto our tables and the fiber which goes onto our backs, and the production of the acreage supplanted by these imports is being purchased by the Federal Government and termed as "surplus."

There is no question but what we have in this country a large surplus, but that surplus is not created by overproduction. It is simply created by an oversupply.

Those who refuse to admit that the agricultural problem is simply the result of our foreign policy contend that overproduction and oversupply are synonymous. I call your attention to the fact, however, that oversupply can be created by three things: first, excessive imports, second, lag in exports, and third, excessive domestic production. The oversupply that we have in the United States today is caused primarily by the first two, excessive imports and a lag in exports. We do not have an excessive domestic production, only in the sense that our desire to maintain these foreign imports has led to a program of supports on certain commodities which have kept these commodities in high production and have thrown agricultural production out of balance.

The serious thing is that this program is not only throwing agricultural production out of balance in America, but it is throwing agricultural production out of balance throughout the free world.

DOMESTIC PROBLEM

Let us take a look first at the import problem as it applies to our domestic situation:

First, with regard to wool, American agriculture is permitted to produce less than one-third of the wool that is actually processed and used in this country, and yet because wood is a commodity that is readily susceptible to international trade, the Federal Government has been required to provide a wool support and subsidy program in order to prevent the complete abandonment of wool production in the Nation. It is impossible to determine the acreage required to produce the wool actually used in this country, but it is estimated it would require at least 75 million acres. If American agriculture were producing only the wool used domestically, there would be no surplus acres, there would be no need for soil bank and all of the other acreage reduction programs.

Another example: In 1958 we permitted the import of 2,061,456 head of beef into this country. This was serious, and some of us who protested were given the assurance that beef imports would be reduced. In 1959, instead of a reduction, beef imports jumped to 2,337,438 head.

The Department of Agriculture is unable to give me relative figures on the acres required to produce a beef for market, but it is estimated that nationwide it requires the production of approximately 20 acres to produce, feed, fatten, and place a beef on the American market. In other words, beef imports alone supplanted the production of more than 45 million acres in the United States during 1959. The total national wheat allotment is only 55 million acres, and there are probably few wheat producers who would not prefer being in the cattle business if they had a market for their beef.

Lamb and mutton: During the past 3 years imports of dressed lamb have increased more than 90 percent, reaching more than 9,500,000 pounds of dressed lamb in 1959, with mutton imports in 3 years jumping almost 7,400 percent to 47,300,000 pounds. Live sheep and lamb imports in 1959 totaled 75,073 head with facilities now available for mass importation of live sheep from Australia and New Zealand. The production of many thousand domestic acres is supplanted by these imports, and yet the Tariff Commission refuses to invoke the escape clause on any agricultural imports.

Hogs and pork have followed the same pattern on imports with thousands of head of hogs or the carcass equivalent in pork pouring across our borders supplementing the production of thousands of acres of corn and feed grain.

Other countries with an eye to protecting their farmers and consumers have taken steps to protect their people. Beef imports would probably have been a half million head higher in 1959 had not Canada and Mexico invoked quotas against exporting beef into the United States because the U.S. market was draining the beef from our two neighboring countries creating shortages and excessive prices in both of those countries.

DISRUPTION

The American international policy has not only ruined agriculture by forcing a freeze in acreage production, but is creating the same situation in friendly foreign countries who are exporting into the United States because their farmers are producing for export to America rather than producing for consumption in their own countries. Our policy has not only disrupted agriculture in America, it is disrupting agriculture throughout the free world.

WHEAT

The high support price resorted to by Congress rather than protecting the American farmer against foreign imports has resulted in a freeze in crop acres. The commodity that has suffered the greatest from this freeze is wheat with a 55 million-acre domestic quota and then an unlimited bypass program for farmers in noncommercial wheat areas. More than half of the so-called wheat surplus is annually produced by 1,200,000 15-acre exemption farmers. Wheat is no longer raised in the Great Plains wheat producing area. The present farm program has diverted wheat to the rice paddies of the South, to the sugarcane fields of the South—fields that should be producing rice and sugar but are prohibited because of the so-called Sugar Act which permits countries like Cuba to import over 3,200,000 short tons of sugar per year for American consumption while sugar beet and sugarcane acres are diverted to some other crop that instead of going onto the American market goes into some Government warehouse.

If Congress were to protect American agriculture from a majority of these imports, there would be no wheat problem. Acres now producing wheat would return to the production of beef, lamb, pork, wool, sugar, and the other food and fiber crops supplanted now by imports.

FEED GRAINS

This bill provides a special program for feed grains. This provision is supposed to be necessary in order to support the price of the crop. Were it not for importation of beef, pork, and mutton, we do not have enough acres to produce this food without the need for such a program. We are supposed to have a surplus of some 200 million bushels of barley and 275 million bushels of oats which costs the American taxpayers approximately $26 million per year in storage and which, because of its existence, is depressing the domestic price of these two commodities. By checking the records, however, we find that in the past 10 years this Nation has imported, primarily from Canada, 224 million bushels of barley and over 344 million bushels of oats. One wonders whose surplus feed grains the American taxpayer is contributing $26 million per year to store.

Rye is another example. In the past 10 years, the actual disappearance of rye has been in excess of the domestic production, and yet there are several million bushels in storage today at the expense of the American taxpayer.

THE ILLNESS

As I indicated before, there is in America today no farm problem. We do not have sufficient acres to produce the food and fiber eaten and worn by American citizens. Our problem is rather an international or import problem manipulated by the State Department under laws passed by Congress authorizing the further reduction of tariffs.

Of course, we have not seen the end of this yet. Meeting next September in Geneva under the aegis of the General Agreement on Tariffs and Trade are delegates under the authorization of this Congress passed in August 1958, directing the President to further reduce by 20 percent import tariffs. Our delegates will be further reducing import quotas and tariffs on agricultural commodities. It can only have one effect on agriculture, and that is to increase imports and to further supplement the production of more acres, creating further and greater havoc for the American farmer and further compounding the problems of this Congress.

EXPORTS

Throughout our national history, America has been an agricultural exporting Nation. This is no longer true. Last year our agricultural exports, even though a bulk of them were highly subsidized, amounted to only $3.719 billion while our agricultural imports exceeded $4 billion. What Congress and the Nation have been doing under the program that has been in operation for a number of years is to import the food and fiber going onto our tables and onto our backs and then purchasing the production from the acres thus supplanted and trying to give away or sell for foreign currencies which are in turn given away, or to sell under a highly subsidized program for dollars the production from these acres that would otherwise be producing for American consumption.

These giveaway programs include relief and school lunch programs domestically and a vast Public Law 480 program internationally. Under Public Law 480, our products from the acres supplanted by foreign imports are sold for foreign currencies which currencies must then be used in that country and in many instances are used for the construction of highways, dams, public power facilities, and other programs that the American taxpayer cannot afford at home but is sponsoring elsewhere under the disguise of disposing of surplus farm products.

We brag about our foreign agricultural exports. The truth is we have very little foreign agricultural exports. What actually happens is that much of it, for which the Department of Agriculture is taking credit, is outright gifts, grants, and donations.

Of the $3.719 billion of agricultural exports last year, $1.050 billion was disposed of through Public Law 480. Other exports totaled $2.669 billion. On these exports the American taxpayers paid a subsidy in the form of ocean transportation of more than $90 million. Of the $2.669 billion exports it is estimated that $1.2 billion received governmental sale subsidies in the form of short-term

credit, sales from Government-owned stocks at less than market price, and export payments in cash or in kind at the rate of about 60 cents per bushel on wheat and 8 cents per pound on cotton, et cetera. In order to move these products at all, these export subsidies paid by the American taxpayer was in excess of 10 percent of the value thereof, this in addition to the cost of ocean transportation.

Actually, our so-called agricultural exports which are not gifts or the equivalent of gifts or are not highly subsidized in one form or another are small indeed. It is difficult to determine the exact figure, but it is probably not in excess of a half billion dollars.

It should be borne in mind that every dollar's worth of imports entering this country comes in at regular price and goes onto the American market at regular price, whereas, of the exports we actually have, not more than a half billion dollars is sold free of subsidy and a large percentage of it is given away.

DOLLAR VALUE

I am not proposing that we stop all agricultural imports. To do so would probably not only disrupt our domestic economy but would likewise disrupt the economies of friendly foreign countries. I am suggesting that it is absolutely essential that we stop a majority of these imports. Otherwise, the agricultural industry in America faces complete ruination.

It should be remembered that the American farmer is producing his product and selling it on the domestic market, receiving therefore a dollar bill worth 47.8 cents. This has been brought about because of inflation. The foreign farm producer sells his product on the American market and receives therefore a dollar bill which he in turn can deposit in any international bank and demand and receive 100 cents in gold from the depository at Fort Knox.

The American farmer operates on a dollar worth 48 cents in paying his rent, his machinery, his tools, his equipment, his labor, while his foreign competitor operates on a dollar worth 100 cents in gold.

SOLUTION

As I have indicated so many times before, the illness that faces American agriculture is the malignant import cancer. As an untrained physician, Uncle Sam is attempting to cure the illness by placing support price bandages over the sores where the cancer is draining instead of performing a major operation for the removal of the cancer. Major surgery can be accomplished in four principal steps:

First. Repeal of the Trade Agreements Act renewed in August 1958, which authorizes the President to further reduce tariffs as much as 20 percent.

Second. Return the handlings of tariffs to the Tariff Commission, an arm of Congress, as the Constitution requires, and force the Tariff Commission either to invoke the escape clause liberally or provide import tariffs equal to the competitive value of the inflated dollar on a domestic basis of 47.8 cents as compared with the foreign basis of 100 cents.

Third. Freeze all existing agricultural stocks in the hands of the CCC, permitting none of it to be placed on the domestic competitive market.

Fourth. Repeal all price supports, acreage controls, and regulatory programs, and return agriculture to the free enterprise system under the law of supply and demand.

In the case of presently supported crops, it will require a few years to adjust from the present acreages to acreages producing crops and foods that are salable on the American market, and during that interim period an adjustment program will probably be needed. For instance, wheat will need a domestic parity program while some of those acres are going into production of beef, mutton, pork, and other crops, but the time has come when Congress must stop this political and international hokum and face up to the realities of American needs.

PRESENT BILL

Today we are considering the extension of a wheat support bill, a program which provides a high support payment for wheat with a provision for limited production.

It is necessary that Congress pass this kind of a bill until the Congress garners sufficient intestinal fortitude to tackle this problem at its roots.

Much has been said about reducing support prices on the basic crops in order to discourage production of these crops. Much has been said about the value of the soil bank program and other programs to take cropland out of production. These probably are necessary, but let me say again, Mr. Speaker, that unless we materially reduce these imports, Congress cannot take land out of production fast enough to meet the added import problem.

American agriculture is sick, not because of American agricultural overproduction, but because of oversupply, and that oversupply has resulted and will continue to result from excessive imports.

Social Security Amendments of 1960

SPEECH

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes.

Mr. CARNAHAN. Mr. Chairman, the Social Security Act is of importance to millions of Americans today. It is for this reason that I am highly gratified that the Committee on Ways and Means has spent these past several months giving close study to many proposed amendments aimed at improving and strengthening this act. While this bill may not incorporate some of the features many of us might have liked to have seen presented to the House, it does recognize the fact that laws dealing with social security need almost constant attention in order to determine whether or not in these changing times the law meets the basic needs for which it was originally designed. I believe that there are some good proposals in this bill.

However, I am frank to admit, Mr. Chairman, that I was disappointed to have the committee fail to report favorably the Forand bill which would have placed the problem of medical assistance for the aged under our social security system. I wish to put myself on record as still favoring such an approach to this most pressing problem.

One significant amendment to the present law is the removing of the requirement that disabled workers must be at least 50 years old to receive benefits. This would be removed and although the present strict definition of eligibility would remain it does liberalize the law with respect to disability eligibility.

I for one am tired of having the threadbare cliche of "socialized medicine" thrown into the picture everytime the problem of America's senior citizens and their medical problems are discussed. I seem to recall that something of the same bogeyman was thrown up as a diversion way back in the days when the first social security law was enacted. The Washington Post in an editorial of February 20, 1960, rather effectively demolished this alarm cry of socialized medicine when it says in part:

> That the American Medical Association would offer its usual doctrinaire opposition to this proposal was as much to be expected as a bill from a doctor after a visit to his office. Senator MCNAMARA has observed that the American Medical Association had nothing to offer but tired abuse. This is not, by the wildest flight of the most neurotic fancy, socialized medicine or political medicine. It is simply a system, if the AMA could but calm its nerves long enough to realize it, which like Blue Cross or Group Hospitalization or any other insurance program, would enable a patient to go to the doctor and the hospital of his choice and pay the bills resulting from the care he needs in old age. It would help doctors, hospitals and medicine in general. And it would enable American men and women to retire in their old age with more security and self-respect.

There are other reasons why I favor the placing of this program within the framework of the Social Security Act. By placing this program under social security most older persons would benefit and could be assured of hospital care, additional skilled nursing care, and surgical benefits. Around 13 million men and women would get lifetime protection—all of those eligible for old-age benefits under social security. By placing this program under social security it

would mean that old people not entitled to old-age benefits would be helped indirectly if they turn to public assistance for, since smaller numbers would be forced to seek such aid, each one could be given more adequate assistance from the limited funds available to existing welfare agencies.

By placing this program under social security young workers would gain, since their aging parents would be protected at once and they and their families would have similar protection on retirement or if the wage earner dies leaving young children. The most any employed person would have to pay in the early years would be a dollar a month or 23 cents a week—one-fourth percent of earnings up to $4,800. For farmers and other self-employed people, the maximum contribution would be 35 cents a week.

Mr. Chairman, few persons over 65 have now nor can they afford good health insurance protection through any other means than within the framework of the social security setup. According to Government published figures only about two out of five have any such protection now and much of that is inadequate, can be cancelled, has lifetime ceilings and is very costly. The best-known policies cost from $6.50 to $8.50 a month per person and pay only part, perhaps not even half, of hospital costs for up to only 31 days.

It is my firm contention that by approaching this problem of medical aid for the aged from the angle of our social security setup, we would actually strengthen our welfare agencies, hospitals and Blue Cross. Such an approach would relieve these agencies of the high-cost load of the aged. Many hospitals today have large and growing deficits. Blue Cross keeps raising rates partly because it includes retired people without charging them more than the community rate. As a result, Blue Cross is increasingly threatened by competition from commercial companies selling such insurance. Public welfare agencies now spend $300 million a year for health care for the aged. In many communities a large part of the old-age assistance costs are for medical care, which is an ever-growing burden. A dependable system of financing health costs for the aged, such as would be provided through the social security system, would help these community agencies to improve and extend their services. High quality, skilled nursing homes would be assured of revenues. A speedy return to independence and home care could be stressed.

Now the costs of all this would be very moderate. According to the Secretary of Health, Education, and Welfare the cost would be only about $1 billion the first year and these new benefits can be financed on a sound basis through the social security payroll tax and without endangering present cash benefits. The Secretary of Health, Education, and Welfare estimates that the long-range cost of such a program under social security would be only about four-fifths of 1 percent of taxable payrolls. Therefore, it seems to me, Mr. Chairman, that insurance through the social security system is the best insurance buy available.

When over 10 million Americans—and the estimate runs as high as 16 million oldsters—stand in need of big medicine, it is no time to come up with an aspirin tablet. To use the standing joke of the veteran of the past war, an APC—all purpose capsule—is not the solution to specific and pressing medical needs for these elderly citizens and we of the Congress should not hold this out to these people.

While I shall vote to enact the provision in H.R. 12580 concerning medical care for the aged, I must state that I am not at all satisfied with it. This dissatisfaction points up sharp differences now existing in the approach to the health problems our senior citizens are facing. This proposal in H.R. 12580 would leave the elderly liable to heavy outlays. Also, instead of being operated by one agency as would be the case under social security, this plan would be either operated by those of the 50 States which adopted it, or by commercial insurance companies which the States paid to do the job. Not only would such an administrative program be expensive and relatively inefficient, but the plan would require adoption by the individual State legislatures, and many feel that there would be heavy pressure from various quarters against such adoption. It is further recognized that many States are already in critical financial condition and would be extremely hard put to pay their share of the program. In addition, this program under consideration by us here today is designed to cover only about one-half to one million persons—leaving ignored the millions who need such insurance and who would be eligible under social security arrangements. Let us hope, Mr. Chairman, that the Senate will see fit to incorporate into its consideration of this bill the social security approach to this matter.

I support the other amendments to the Social Security Act and believe these changes are in the direction of liberalization and that in spite of the limitations I have discussed the bill deserves support.

The Blind: A Case of Mistaken Identity

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. JUDD. Mr. Speaker, recently it was my privilege to hear a most remarkable address by Dr. Jacobus tenBroek, president of the National Federation of the Blind, at a 40th anniversary banquet given by Minnesota Organization of Blind, Inc., in Minneapolis. Dr. tenBroek, who is an educator, author, legal scholar and social welfare administrator, prepared the address in braille. I asked him to have it transcribed into English that it might have the widest possible circulation—both because of the sensitive insights which only a man himself blind could have, and because of the penetration and precision of his thought, the beauty and eloquence of his expression, and the delicate humor and warm humanness of his persuasive presentation. It is easy to understand how he has risen to his position as chairman of the Department of Speech at the University of California and chairman of the State Board of Social Welfare in California. The address follows:

THE BLIND: A CASE OF MISTAKEN IDENTITY

(Address by Prof. Jacobus tenBroek, president, National Federation of the Blind, spring 1960)

From time immemorial, blind people have been the victims of mistaken identity. Not that their lack of sight has gone unrecognized or unnoticed—far from it. But at one time or another they have been falsely identified also as a class of pariahs, as divinely accursed, as mentally defective, physically incompetent, or socially unstable. It is only in very recent years that society has begun to give recognition to the novel doctrine that blindness means only the loss of sight, neither more nor less; and that any further loss to the blind person is the consequence not of his blindness but of the social and psychological conditions in which it occurs. In short, the disability of blindness is physical; but the handicap of blindness has always been predominantly social.

This is still today a revolutionary doctrine—not only among the public but among the professionally informed and expert as well. In the social diagnosis of blindness, mistaken identification is still generally the rule rather than the exception.

There are, in particular, two forms of mistaken identity by which the blind are victimized in modern society. The first is the mistake of overidentification, which assumes that if blind people are alike in one respect they must be alike in all—and in all respects different from the rest of society. The second is the mistake of underidentification, which presumes that those who are blind have no characteristics at all in common and cannot for any purposes be grouped or classified together.

We are all familiar with the fallacy of overidentification, which in its classic form identifies all who are blind as members of a class of abnormal if not wholly incompetent human beings. What we may not know is how widespread this fallacy has become in professional and academic, as well as public, circles. While there are many social scientists and workers with the blind who recognize and resist this form of mistaken identity, there are others actively at work to reinforce and perpetuate it. The most dangerous form which this fallacy assumes today is that of categorizing the blind as a "deviant group." The concept of the "deviant" is a recent and dubious device of social science to identify any person or group which departs in some significant way from the "norm"—that is, from the average and conventional. In other words, "deviant" is a sophisticated synonym for the old-fashioned term "abnormal." The social scientist may protest that his use of "deviant" has only a technical and statistical meaning; that those who are superior and unusually gifted are no less "deviants" than those who fall below the social norm. But the fact is that "deviation" is seldom used to describe such differences as these. As one authority has noted, "Everyone is deviant in some respects. A man known to the author is abnormally short, abnormally good in singing hillbilly, * * * is undernourished, and is allergic to camel hair. In all of these respects he is markedly deviant, but he is a successful, in fact prominent, businessman with an enviable reputation." In short, this man's

"deviations" from the norm are no handicap because they pass unnoticed. He may be, as the author says, "markedly deviant"; but he is not marked as a deviant.

On the other hand everyone knows, or supposes that he knows, who and what a "real" deviant is. Sex fiends are deviants. Criminals are deviants. So are morons, fanatics, prostitutes, juvenile delinquents, and all who inhabit skid rows and lunatic fringes of society. In short, the term "deviant" refers in its most common usage to immoral or antisocial behavior patterns, and to the characteristics of abnormality which call for suppression or isolation. When the blind are so marked and classified, however innocent the intention of the classifier, they are effectually thrown back into the communal pit of outcasts and misfits which was known to earlier centuries under the simple and accurate title of Bedlam.

Lest I seem to exaggerate, let me cite an example from the current literature of social science. It is from a textbook significantly entitled "Social Pathology," written by Prof. Edwin M. Lemert of the University of California at Los Angeles, first published in 1951. Pathology, as the dictionary tells us, is the scientific study of diseases and the diseased. What are the social diseases with which this author is concerned? They are the diseases listed in several chapters under the heading, "Part Two: Deviation and Deviants"—and they include the following: "Blindness and the Blind," "Radicalism and Radicals," "Prostitution and the Prostitute," "Crime and the Criminal," "Drunkenness and the Chronic Alcoholic," and—finally and inevitably—"Mental Disorders."

These then are the deviations and deviants—the forms of social disease and the disease carriers—which are taken to be the proper subject matter of a study in "social pathology." This is the company which the blind find themselves keeping in a modern textbook of social science.

It is, of course, exactly the company which the blind formerly kept in the asylum and the almshouse. We need only recall the American almshouse of half a century ago, whose inmates comprised (according to a classic description) "the crippled and the sick; the insane; the blind; deaf mutes, feeble-minded and epileptic; people with all kinds of chronic diseases; * * * short term prisoners; thieves, no longer physically capable of crime; worn out prostitutes, etc." In short, the almshouse was the place of last resort for all those marked indelibly by society as "deviants." Over the years the blind have gradually made their escape from this bedlam and its psychological stigma, Or so we had thought and hoped. Are we now to be recommitted to the category of the asylum through a new device of mistaken identity: that of "deviation and the deviant"?

This form of mistaken identification of the blind is not a superstition conjured up by ignorant folk unacquainted with the nature of social groups. It is not the shrewd device of tax-conscious citizens who fear the excessive cost of adequate social provisions. It is not the rationalization of lighthouse custodians with a vested interest in the preservation of the myth of incompetence and abnormality. It is not the excuse of sentimental and overprotective souls who enjoy ministering to the helpless, so long as they remain perfectly helpless. It is the sophisticated theory of a professor of social science—an expert in social diseases—whose interest is in the classification and treatment of pathological deviations from the norm of social health.

It is especially significant—and in keeping with the proper moral attitude toward "deviants"—that the author of this textbook on pathological behavior regards the blind, and particularly the organized blind, with undisguised suspicion. In fact, he finds them a crafty if not a sinister group. His chapter on blindness and the blind opens with these words: "Blindness is at once a dramatic and engaging handicap." Near the end he cites a newspaper story to illustrate "the relative ease with which the public may be manipulated by the blind." He concludes his chapter with this evaluation: "As long as the societal reaction toward the blind remains as it is, there will continue to be a sizable number of the blind who make a profession of dependency."

No less revealing is this pathologist's attitude toward voluntary organization by the blind. After a summary account of two so-called militant groups of the blind in Minnesota—"militant," apparently, because they are all blind in membership and have had disagreements with local welfare agencies—the author concludes: "All these facts create interesting speculation. While the actions of the two groups may be regarded as the group equivalent of tantrum behavior, they also raise a question as to what happens when the blind in a collective capacity desert their traditional roles of humility and agitate in an independent way like any other pressure group." Finally, the author's judgment of the general capabilities of blind people (and incidentally of which ones among them are especially gifted) may be gleaned from this observation: "While most of the blind are immobilized because of illnesses or because of extreme dependency, some blind mendicants are able to move fairly well through their environments."

This then is the modern form of mistaken identity imposed upon the blind at the hands of some social scientists—the high-sounding categorization of "deviation and the deviant" which not only tars all who are blind with the same brush of abnormality but shuffles them in with all those others branded by society as "undesirables": that is, with radicals, prostitutes, criminals, drunks, and the mentally defective.

But it is wrong to think of this stereotype of the deviant as a new form of mistaken identity. It is rather, as we have seen, an ancient superstition in modern dress; it is the age-old conception of the blind as an abnormal, inferior, and suspect group—a group to be segregated and confined apart from normal society in institutions of charity and correction.

Nor is this conception of the deviant the only form of "overidentification" indulged in by social scientists. There is also the equally frivolous abuse of the vocabulary of psychoanalysis by social workers and psychologists—an abuse exemplified by the loose currency given such terms as "compulsive," "aggression," "compensation," and the like, which has led in some circles to the appallingly unscientific supposition that all blind persons are neurotic by definition—if not downright mentally ill. Even so relatively sophisticated a volume as Allen Gorman's recent study of "The War Blind" shows signs of succumbing to this easy imputation of ill-defined complexes and subconscious conflicts on the part of all who are blind: an attitude which leads inescapably to the inference that the primary responsibility for the condition of the sightless—for dependency and discrimination, for poor laws and prejudice, for exclusion and overprotection—lies not with society and its institutions but with the "unsocial" or unhealthy attitudes of the blind person himself. The consequences of such "pseudo-analysis" are as destructive as they are defeatist: destructive in their sweeping denial of normality and equality to all who are without sight, and defeatist in their suggestion that the only feasible solution to the social and economic problems that press upon the average blind individual lies in a change of heart or of metabolism on his part alone. They are still another variant of that form of mistaken identity of the blind which we have labeled "overidentification"—the assumption that blindness means, not just the lack of sight, but the lack of normality, the lack of ability, and very probably the lack of sanity as well.

This fallacy of overidentification occurs not only among those who are in opposition or indifferent to the blind; but even among many who are their friends and wish them well. Thus the State of Pennsylvania just last year passed a law permitting physically disabled persons such as the blind to teach in the public schools. Nothing could be more commendable or progressive. But the legislature could see no better way of accomplishing this than by amendment to a section dealing with mental disorders, communicable diseases, narcotics addicts, and immoral character. The law, as duly amended, now reads:

"Section 1209. Disqualifications. No teacher's certificate shall be granted to any person who has not submitted * * * a certificate from a physician * * * setting forth that said applicant is neither mentally nor physically disqualified, by reason of tuberculosis or any other chronic or acute defect, communicable disease or by reason of mental disorder from successful performance of the duties of a teacher; nor to any person who has not a good moral character, or who is in the habit of using opium or other narcotic drugs in any form, or any intoxicating drink as a beverage, or to any applicant who has a major physical disability or defect unless such a person submits a certificate signed by an official of the college or university from which he was graduated or of an appropriate rehabilitation agency, certifying that in the opinion of such official the applicant, by his work and activities, demonstrated that he is sufficiently adjusted, trained, and motivated to perform the duties of a teacher, notwithstanding his impediment."

Note with what unusual weight the burden of proof falls upon the blind or physically disabled applicant. All who apply to teach require a medical clearance; but he alone requires a testimonial from his college or his rehabilitation counselor to the effect that he is sufficiently adjusted, trained, and motivated—and that he has proved all this by his work and activities—whatever that may mean. Not only is the burden of proof upon the handicapped; the full spotlight of suspicion is on him; the underlying assumption that he is ill-adjusted and unmotivated. The traditional associations of mistaken identity, in the classic form of overidentification, are thus vividly revealed even in this up-to-date and constructive legislation partially removing the absolute bar against blind teachers.

So much for the form of mistaken identity known as overidentification. There is an equal and opposite form of mistaken identity which is no less vicious and destructive in its consequences—that of underidentification. It consists of the refusal to regard the blind as possessing any characteristics common to themselves which are also unique to themselves. It is the denial that blind persons can or should be classified together for any purposes whatsoever. This fallacy of underidentification is the device for example of those who reject the right of the blind to organize by themselves as an independent group—on the ostensible theory that blind people really have nothing in common which justifies their mutual association, and indeed that it is somehow a denial of individuality for the blind person to seek common cause with others who are blind. Thus the American Association of Workers for the Blind have argued against the right-to-organize bill that "the great majority of blind persons prefer to be considered as normal members of society"—that is to say, as individuals with no common

characteristics which organization might further. At the same time, the executive director of the Nation's largest private agency for the blind opposed the bill on the grounds that "it would tend to further the segregation of blind persons" and to coerce them into into an identification which he obviously considered artificial and unreal. In short, it is often argued that the blind have no right to organize because they have no need to organize—that there are no needs and purposes common to the blind which should draw them together in voluntary association.

This form of mistaken identity—the refusal to identify or classify the blind on any grounds at all—is also the device of those who, like some agency reviewers of Hope Deferred, resist any and all generalizations about "the blind" as suggesting a unity and solidarity which they choose to disbelieve in. Thus Philip S. Platt of the New York Lighthouse has said of the volume: "It is regrettable that the authors throughout the book generalize about 'the blind,' who have little if anything in common except varying degrees of loss of vision." Thus also Burnham Carter, the national director of Recordings for the Blind, maintained in his book review that blind people differ widely among themselves in their personal characteristics, and therefore cannot be classified together as a group. One wonders how Mr. Carter's agency justifies its restrictive title and even its existence. Since there is no group of "the blind," how is there a special and common need among them for recordings and talking books? The wonderment grows when we consider Mr. Platt's Lighthouse for the Blind. Here is a specialized agency providing a battery of services for a group which does not exist—or which, at best, has "little if anything in common except varying degrees of loss of vision."

This fallacy of underidentification is also exemplified by those who contend that the blind ought not to have separate sheltered workshops — for purposes of training, therapy, or employment—but should simply be thrown in with all others of the handicapped and unfortunate under a single blanket of shelter. It is the fallacy, further, of those who would take away the preference of blind persons in the Federal vending-stand program and extend it to all who are in any way physically disabled. It is the fallacy, still more significantly, of all who resist the provision of specialized counseling, training and placement facilities for the blind within programs of vocational rehabilitation—on the grounds that blindness is after all just another disability, no more or less complex or severe in its nature and consequences than any other.

This form of mistaken identification is, most popularly of all, the fallacy of those who would dissolve the established categories of aid under the social security programs of public assistance; namely, the categories of the blind, the aged, dependent children, and the permanently and totally disabled. The argument which they advance is one of the bureaucratic convenience and economy; but the assumption which lies behind it is that none of these categories or recipient groups is sufficiently distinct from the others to be treated independently, in terms of its peculiar needs and specific problems.

How valid is this argument? For an answer we must look at the purposes which public assistance is or should be designed to serve with respect to these various clients. Are they the same purposes for needy children and for the permanently and totally disabled, for the needy aged and the blind?

It is true that there is one overriding purpose applicable to all four categories: to relieve the distress of poverty through a program of income maintenance. It is true also that there is some intermingling and sharing of other purposes, such as self-care, medical attention and rehabilitation. Finally, it is true that some of the categories are more closely related to each other than others. Many of the blind, for example, are also aged. Where blindness is the consequence of the infirmities and diseases of old age, a choice of categories may be necessary. In other respects, the problems of the blind are more similar to those of the permanently and totally disabled than they are to those of the aged or dependent children. The compartments are not watertight. There is some seepage and interchange. Especially at the edges and in individual cases, there is a tendency to overlap. Differences are often to be marked out in terms of focus, emphasis and degree rather than in terms of absolutes and of kind. It was ever thus in dealing with humans, who, whatever their diversities, do at least have this in common, that they are humans.

Within these broad qualifications, however, the purposes of the four categories are distinct.

For aid to dependent children the purposes are to protect children from the consequences of poverty and family disorganization, to maintain and strengthen family life so that the children may avail themselves of educational opportunities and may grow up to be responsible, self-supporting, and self-sufficient citizens; to encourage parents to attain maximum self-support and personal independence consistent with the maintenance of continuing parental care and protection. Needy children may vary in a thousand other ways among themselves; but as children they share these needs in common, and they share them with no adult group. For the restricted legal and social purposes of public aid, they are rightly to be regarded as a separate group and distinct category.

What about the senior citizens who are the recipients of old-age assistance? Are their needs no different from those of needy children? Are their problems those of babies and adolescents? Do they require educational opportunities? This group of aid recipients is by state of life past the years of preparation and training for occupation or profession. This group is by the chronology of life no longer concerned about relations with its parents. Their parents need no longer be encouraged to "attain maximum self-support and personal independence consistent with the maintenance of continuing parental care and protection." The aged group is by the biology of life, if nothing more, freed from those features which have plagued the public relations of ADC; the availability of child-care facilities; truancy from school; juvenile delinquency; illegitimate children; sexual promiscuity; and common law relations. One does not, of course, maintain that those who are in the advanced years of life are identical in their interests, talents, backgrounds, or personalities. But however much they vary among themselves, in these and a thousand other ways, they share the characteristics and the needs which it is the purpose of old-age assistance to meet; self-care; housekeeping, nursing home, hospital and medical care facilities; the creative use of leisure in the sunset of life; the search for a role by and for those whom the economy and the social organization have left unloved, unhonored, unwanted, and unutilized.

No less distinctive and distinguishable is the set of special needs peculiar to those of our citizens who are permanently and totally disabled. The legal and social purposes of public aid are not concerned with the myriad personal differences—say, of race, color, or creed—among the members of this category; nor should they be. However much these members differ among themselves, they are alike in the needs which are imposed by permanent total disability—the need for restorative and independent living services—and they share these needs with no others in quite the same way or to the same degree.

How is it, finally, with the blind? Are their needs in public assistance the same as those of other categories of recipients? Are they to be treated in the same way as the permanently and totally disabled with whom they share many common problems and above all a common need for rehabilitation? If so, their hopes for escape from dependency, for the achievement of self-support and competitive acceptance, are surely doomed, for their rehabilitation problems are quite distinct, as I shall show in a moment. Are the needs of blind people still in the productive years of life the needs of older citizens who have progressed beyond those years? If so, the objectives of rehabilitation, of retraining and of economic contribution are pointless. Are the problems of blind adults then the problems of needy children? Only those who still regard the blind as helpless wards to be sheltered and overprotected are likely to answer that question in the affirmative.

To argue for the preservation of the principle of separate aid categories under public assistance is not at all to defend the present boundary lines or requirements of eligibility for any one of them. It is entirely unreasonable and senseless, for example, to provide aid to needy children (as the law now provides it) only on the death, incapacity or continued absence of a parent from the home. Children become needy on many more grounds than these. Again, with reference to old-age assistance, it is unreasonable to draw distinctions between those who have lived in one place for an arbitrary length of time and those equally old and equally needy who have not—or between those who are citizens and those who are not. But such objections as these are not to the principle of distinctive categories but only to artificial restrictions within them. Indeed, the opposition to separate categories—where it does not stem from the philosophy of mistaken identity—is otherwise misdirected and misconceived: it should be aimed, not at the principle, but at its maladministration.

In the field of vocational rehabilitation the common and unique needs of the blind as a group are no less distinguishable than in public assistance. For the average person with other disabilities, rehabilitation typically involves some form of medical provision or physical therapy: learning to walk or to use prosthetic devices, learning to use one's muscles after polio, learning to live with limitations after a heart attack, correcting a speech defect, or adjusting to a hearing aid. In short, vocational rehabilitation for the average disabled person who is not blind generally means physical restoration. But rehabilitation of the blind is altogether different. The average blind person in need of rehabilitation has no health problem. He is not sick. He does not need physical restoration. Lenses will not help him. He cannot be taught new ways of using his eyes. In short, his rehabilitation needs are not those of the patient. What he does need is help in adjusting to his blindness. He needs to understand that it should not keep him from doing the things he has always done. More specifically, he must have training in skills and techniques, and training also in a profession or vocation. The techniques of training must be geared to his disability and still more to his ability. Above all, he must have help in finding a job. The challenges which he confronts in the job market, the problems he faces, the attitudes of the wider community—such obstacles are the common hurdles of all who are blind.

Why must those who have distinct problems and peculiar needs be grouped together for aid and rehabilitation purposes? The answer is as simple as the proposition that all who are alike should be treated alike and all who are different should be treated differ-

ently. It is only by grouping those who are alike together that public assistance provisions can be particularly adapted to meeting their peculiar needs. It is only by grouping them together that a specialized staff with specific qualifications can be assembled and utilized in assisting them to resolve their problems. It is only in this way that it is possible to secure for the blind the solid advantages of special divisions of the blind in welfare departments, special workers for the blind in segregated caseloads, special administrative units and counselors and placement officers for the blind in vocational rehabilitation.

The underidentification of the blind, in short, is no less dangerous and destructive of their cause than the alternative fallacy of overidentification. Mistaken identity is no less evident where the blind are left wholly unidentified—where they are deemed to have no needs or attributes in common, for any purposes whatsoever. Rarely, of course, are the advocates of underidentification entirely consistent. If it is legitimate for there to be an American Foundation for the Blind, on the assumption that a distinctive group exists for whom particular services are desirable, then it is no less legitimate for there to be a National Federation of the Blind, on the assumption that the same distinctive group deserves the right to associate and to speak for itself.

Between the two forms of mistaken identity—those of overidentification and of underidentification—lies a broad field of true identification in which the blind may properly be classified together. The test, in every case, is plain and simple: it lies in the purpose for which the classification is made. If the purpose is that of public assistance, then, as we have seen, separate classification of the blind is proper. If the purpose is that of vocational rehabilitation, such independent treatment is again legitimate. It is legitimate because these purposes are clearly consistent both with the peculiar needs and problems arising from blindness, and with the social objectives of integration and self-support. In other words, where the purpose meets actual needs and forwards the ultimate goals of blind people, then separate classification is thereby justified—and there is no peril of mistaken identity.

On the other hand, if the purpose is that of segregating the blind from normal opportunity and participation, on the ground that they are all alike in their incapacity, then separate classification is illegitimate—and becomes a virulent form of mistaken identity. If the purpose is that of maintaining blind persons in dependency and custodialism, on the assumption of the universal helplessness; if it is that of regarding them as social "deviates" on a par with thieves and prostitutes; if it is that of dispatching them all to the psychiatrist, on the assumption that they are neurotic by definition; if it is that of refusing them the ordinary rights of citizenship such as those of dignity, privacy, and free expression—then the purpose is destructive, and any classification in its terms is illegitimate.

Finally, if the purpose of classification is that of the collective voluntary organization of the blind; and if this organization is carried out not to raid the treasury of funds which properly should go to others in greater need; if it is carried out not in order to gain personal political power or economic wealth or popular prestige; but if instead it is carired out in the cause of collective self-expression and self-improvement, toward the objectives of equality and integration, of opportunity and independence—who will then declare this purpose to be improper and this classification unlawful?

Those of us who are blind are—need we say it once again—citizens as well. We wish to be treated as other citizens are treated, for all ordinary and general purposes. But when we step off the sidewalk into traffic, we hope also to be recognized as blind, lest we soon be recognized as dead. Most of all we wish to participate freely and to compete normally for our places in the economic community—but we hope that in preparing for that competition our chances may be equalized through the special services necessary to counteract our handicap. We who are blind hope that our interests will be recognized as only normal and reasonable by those who govern our affairs—but we also believe that we are the ones best qualified to interpret and express those interests to the Government and public. We seek neither to be overidentified nor underidentified, but only to be identified, accurately recognized as we really are—in a way which will erase forever the ancient and double curse of our mistaken identity.

Foreign Economic Aid

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. GOLDWATER. Mr. President, Mr. Conrad Kohler of Wisconsin appeared before a Senate committee this week and made a very interesting and informative address on the subject of foreign economic aid. Because this touches upon so much of our own economy as it relates to the development of the other countries, and because it comes from a young man whom I recognize as an expert in this field, I ask unanimous consent to have his address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, I am Conrad Kohler and my home is Kohler, Wis. I am vice president of the Kohler-Joa Corp. We are manufacturers of heavy machinery and specialized equipment for the wood and wood products industries, which includes the furniture, sash and door, and plywood producers.

I am primarily concerned here in revealing to the committee the adverse economic position of one American industry—among many—which position can be directly attributed to the foreign-aid program of the U.S. Government. This industry is hardwood plywood.

It is particularly appropriate, however, to precede this testimony with the words of Joseph Stalin, who, in his book, "Marxism and the National Colonial Question," on pages 115–116, wrote, "That is why it is essential that the triumphant proletariat of the advanced countries should render aid, real and prolonged aid, to the toiling masses of the backward nationalities in their cultural and economic development. Unless such aid is forthcoming it will be impossible to bring about the peaceful coexistence and fraternal collaboration of the toilers of the various nations and peoples within a single world economic system that is so essential for the final triumph of socialism." It is this statement, gentlemen, which effectively establishes the origin of impersonal, tax-extracted, maladministered, and ineffective assistance from America to the countries abroad.

Within the past several years, five hardwood plywood manufacturers in my home State of Wisconsin have closed their doors and gone out of business. Each of these closures caused considerable hardship in the respective community, especially in those smaller towns where these plants employed a majority of the earning population. This, by itself, may seem to have been quite local in its harmful economic and social effects, but the apparent simplicity of the picture is deceiving.

My company, or our competitors, are now unable to sell them new machinery, nor will we order the required motors, castings, controls, and other equipment from still different manufacturers which would have built those machines. Consequently, the effective course of the economic harm done to the Nation by the elimination of these plants from American industry is traced to include a value far in excess of that originally perceived. All this can hardly be realistically reconciled by the grand opening of a modern, new plywood manufacturing factory in Manila or Tokyo or Helsinki.

The inexcusable irony of this situation lies in the fact that in all too many cases, these companies and the individuals involved are actually being forced to dig their own graves—through taxation, a large portion of which is to be sent abroad to finance competition.

Prior to World War II, for example, the plywood production of Japan was about 200 million square feet per annum of which 25 percent was exported.

Following the defeat of our dedicated and ruthless enemy in the Pacific, our Government extended foreign-aid grants and credits to Japan totaling $3,200 million as of March 31, 1960.

The Japan Trade Monthly, report for September 1958, established the hardwood plywood production of that nation during 1957 at 2½ billion square feet of which 630 million square feet were exported to the United States. There is little comment necessary to speculate on the amount of our aid to Japan that has been used to capitalize one of her most representative modern industries. There are now over 218 manufacturers of hardwood plywood in Japan with some 70 engaged solely in supplying overseas markets.

In 1951, plywood imports from Japan totaled 13 million square feet. In 1959, this figure reached 811 million square feet or an increase of well over 6,000 percent.

A similar accounting is true of the Philippine Islands, which has received foreign aid to the extent of $907 million as of June 30, 1959.

Dr. Zafra of the Philippine Embassy recently testified that foreign aid funds in excess of $5 million had been insistently advanced by the ICA to his country to finance development of a hardwood plywood industry there. Some 21 plants are now in production. He further stated that as a consequence of this obtrusion into their domestic affairs, the United tSates must be prepared to accept all the available plywood production of the Philippines and indicated that they will soon be in a position to ship some 300 million square feet per annum into our markets. In 1958 the Philippine Islands became the second largest exporter of hardwood plywood to the United States after Japan, and in 1959 supplied over 213 million square feet.

Shipments of hardwood plywood from Finland nearly doubled between 1958 and 1959. Imports from Formosa, during the period from 1956 to 1959, increased almost 9,000 percent, while Belgium's export of this commodity to our domestic market expanded 700 percent and that of France nearly 600 percent during the same period.

All of these foreign nations have been and still are the recipients of lavish grants and credits by our Government from the Treasury of the United States.

In 1951, hardwood plywood imports accounted for approximately 7.7 percent of our totaled domestic sales. In 1958, these sales amounted to 1.7 billion square feet of which over 911 million square feet, or 53.4 percent, were imported. During 1959, according to the U.S. Department of Commerce figures, over 1,330 million square feet of hardwood plywood was imported. If we estimate the U.S. market sales for 1959 at 1.81 billion square feet, based on the average annual increase in consumption of 110 million square feet since 1951, we have now lost a startling 73½ percent of our own domestic markets.

Gentlemen—it has long been generally recognized that perhaps the most influential stabilizer of our position in world trade has been our ability, under free enterprise, to reduce the costs of production relative to the rising cost of labor. It is a rather unamusing spectacle that American industry was able to accomplish this balance as long as they have, what with being continually squeezed between a massive and insatiable Government on one side and an overly powerful, spoiled and misled labor on the other. The invention and development of new machinery and production techniques had, in the past, offset the ascending charge for labor, making it possible to remain competitive in the world markets. Foreign labor costs, however, have not materially increased during the last 20 years or more, and where they have, it has been only a fraction of that which we have been forced to absorb in the price of our products.

But our Government's foreign aid program has placed the means of modern, low-cost, high-speed mass production overseas—as would a doting parent to a pampered child—into areas where the labor costs are one-fifth to one-tenth of our own.

As a result, the now completely unstable situation in which many American industries find themselves—indicated nationally by a previous and continuing adverse balance of trade—is that we are forced to compete pricewise, not on a healthy basis of production or quality, but on a cost of labor basis—to the extent that we are being priced out of world markets, while many are losing our own domestic market.

It is additionally true that nationalized or government favored industries abroad are able to create and expand with funds made available through foreign aid.

In more and more cases, American industry is being forced to transfer all or part of its manufacturing facilities abroad in self-defense to be able to retain its world markets. Furthermore, many producers are purchasing parts and subassemblies overseas for final assembly and sale in this country in an attempt to retain a portion of their domestic market. The hardwood plywood industry is an example where imported veneers are being used to face doors and panels in increasing quantities while the particle boards or laid-up cores are still manufactured here.

It is, unfortunately, axiomatic that capital can be sent abroad. But jobs cannot.

In support of this, I would like to quote from a letter written by Mr. Robert Strenger, president of the Wisconsin State Council of the United Brotherhood of Carpenters and Joiners of America, AFL–CIO, to Congressman WILLIAM VAN PELT, of Wisconsin, Sixth District, dated January 11, 1960.

It reads:

"At the recent convention of the Wisconsin State Council of Carpenters, considerable discussion and concern was shown by delegates and members on the importation of goods directly in competition with our American employers who are employing members of the Brotherhood of Carpenters in various branches of industry.

"For quite some time, there has been a deep concern by our members on the importation of plywood. We are of the opinion that statistics will show that many of the smaller plants in Wisconsin have been shut down, throwing people out of jobs, mostly because of this cheap plywood imported from Japan and elsewhere.

"For many years, the lumber industry, from the raw material to the finished products, was ranked high in Wisconsin and has provided thousands of jobs for Wisconsin residents; but in Wisconsin this industry is on the decline, and if something is not done we will lose out on one of the greatest potential industrial opportunities afforded to the State. This industry, if it progresses, will have a terrific impact on the whole economy of the State, and the Nation also.

"We can appreciate assisting the foreign countries in raising their economic standards, but when it effects the wage earners of our own Nation who are paying a good share of the assistance through taxes, we believe some study and action should be given the domestic side of the issue. We don't think anyone in America would care to see our standard of living lowered, as it affects us all, and with the ever-increasing population we should take steps toward creating job opportunities instead of decreasing them."

I completely agree with Mr. Strenger.

It is becoming increasingly difficult to pacify the American public toward a continuing annual trade deficit—which reached $3.7 billion in 1959—when the Bank of Japan announces an international surplus of payments of $43 million for the month of March, and West Germany discloses a first quarter surplus of over $337 million, especially since our deficit is due in its entirety to the foreign aid program.

It is also difficult to explain the transplanting of American industry overseas to the American jobholder.

Gentlemen, it is interesting to speculate on even a partial reestablishment of industry abroad. Do we have any guarantee which we can trust that our so-called allies will not be forced into neutrality should the U.S.S.R. and the United States become involved in a hot war? Would it not then be reasonably simple for the Soviets to capture the oversea industrial complexes intact with their superior ground forces? Might she next estimate that what was taken would be sufficient to supply a Communist worldwide economy at an acceptable standard? What reason then would Soviet Russia have to "spare" the diluted industrial facilities of our country, since it would no longer be necessary to secure them for economic existence? Would they then willingly and without any warning attempt to destroy all of America—for possible recolonization at some future date?

It is realistically undeniable that the foreign aid program—a program which, including lend-lease has cost the American people over $124 billion since 1940—is primarily responsible for the international economic and political dilemma in which we find ourselves today.

I am a young man. There are many like me in this country. We are trying to start our own businesses and make our own futures. It is not easy under the taxes and the controls—but young men like us made this country great, and we want to see it remain great for our children. We will work hard to that end.

To help insure this, it is of extreme importance that this mad worldwide redistribution of wealth be soberly and realistically reappraised to conform to the best interests of the United States.

Through our present foreign aid program, America is following Joseph Stalin's spending prescription for the establishment of "a single economic system that is so essential for the final triumph of socialism."

I thank you.

An American Catholic for President

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1960

Mr. SANTANGELO. Mr. Speaker, on May 1, 1960, I was privileged to have been invited as a guest of the New York Post Office Holy Name Society, which held its 39th annual communion breakfast at the Hotel Astor in New York City. Many distinguished public officials and guests, including one of my distinguished constituents, His Excellency, the Most Reverend John A. Fearns, auxiliary bishop of New York, representing His Eminence, Francis Cardinal Spellman, who celebrated the mass prior to the breakfast, and the former Postmaster General, the Honorable James A. Farley, attended. The approximately 2,000 members of the Holy Name Society and the guests who were present were both moved and delighted by the splendid address delivered by the principal speaker, Dr. Edward D. Re, on the subject of "Catholic's Obligations of American Citizenship." Stressing the obvious compatibility of the teachings of the Catholic Church with the American Constitution, Dr. Re, a professor of law at St. John's University School of Law, as well as a member of the New York City Board of Higher Education, stated that it would be well-nigh impossible for any Catholic public official, including a U.S. President of the Catholic faith, to act in dissonance with the laws of the land without also subverting his moral and religious precepts.

Dr. Re, incidentally a graduate of both public and private schools in New York City, is an acknowledged authority on international and public law and the author of several leading treatises which are used in the leading law schools of our country. He is a special hearing officer for the U.S. Department of Justice and a vice chairman of the section of international and comparative law of the American Bar Association. A veteran of World War II, he is presently a major in the Judge Advocate General's Department of the Air Force Reserve.

Mr. Speaker, it is with great pleasure that I ask leave to insert into the RECORD the patriotic address delivered by Dr. Re on May 1, 1960, at the Hotel Astor in New York City:

Your Excellency, members of the clergy, distinguished public officials, members of the New York Post Office Holy Name Society, and guests, your kind invitation to address you on the occasion of your 39th annual communion breakfast does me great honor. This is an honor, however, which gives pause—both in view of the fact that so many laymen of distinction have addressed you in the past, and because of the serious duty it implies to bring you a message both significant and timely. Fortunately, the time is ripe—never in the memory of this great Nation was the duty upon the individual so clear and affirmative to exercise full citizenship with all its attendant rights, privileges, and duties. We might add too that never was the duty upon the Catholic citizen more clear or more insistent. Hence it is that

when asked by your moderator the title of my remarks, I responded that an appropriate title might very well be "The American Catholic's Obligations of Citizenship."

If I were to seek an appropriate theme to commence my remarks, I could not find a more suitable one than the beautiful exhortation taken from the Sermon on the Mount: "Even so, let your light shine before man in order that they may see your good works and give glory to your Father in Heaven." Christianity is not a secret religion, or an esoteric practice, which removes the citizen from the world. Rather it is a positive, militant doctrine which bids him adore the Father in secret yet sends him to preach from the housetops. He is indeed meant to be the leaven of society, working in it and through it and with it, so that the mass is catalyzed, and rendered sweet, savory, and Godlike. The figures of the Gospels abound—the true Christian is not only a light before men, a leaven in the mass, but the salt of the earth which preserves, conserves, sweetens, and saves from corruption. The point is clear—he who buries his talents is censured and condemned; he who utilizes them and multiplies them is praised and is placed over greater things. Therefore, we as Catholics, in connection with citizenship, have special responsibilities and obligations which, as to their purpose, may be said to be "pro Deo et patria"—for God and country. Hence the proper fulfillment of the Catholic's obligations will not only inure to the glory of God but to the glory of our great country.

Now the obligations of the Catholic citizen are many. Of course, I can enumerate only a few. I start with the hypothesis that our obligations of citizenship, although they may begin at the polls, do not end there. Among the paramount duties of the American Catholic, indeed high on the list, is the duty to speak up, to enunciate clearly, to all Americans what he stands for. This is especially so when misunderstanding and confusion have become a divisive force in our land. We, therefore, have a duty to speak not as a pressure group, not as Americans who feel that we have been injured and maligned, but simply as Americans who owe it to our fellow Americans to enlighten them as to the guiding principles of morality, both spiritual and political, that motivate our behavior. It is not enough to state what we do not stand for. We must affirmatively declare what we do stand for.

A second pressing obligation upon us as Catholic citizens is to aline ourselves with our fellow Americans. At times there has been a tendency, on the part of Catholics, to separate themselves from community affairs and community activities. This tendency may have stemmed from differences of opinion and viewpoint, perhaps moral, or from sheer inertia. Often the Catholic tends to sit back complacently in the security of his faith. But bear in mind, that we who stand for love of God, love of country, love of parents, love of family and respect for duly ordained authority have given much and have much to give to America. To the extent that we separate ourselves from our fellow Americans, we are derelict in our duty, both to God and to country.

Although our obligations as citizens are constant, certain great issues that face our Nation highlight our responsibilities. Today the question that is perhaps foremost in the minds of so many Americans is, Is America ready for a Catholic President? It is, of course, oversimplification to say that we have been ready since 1789. The question is indeed a serious one and however un-American it may be regarded by so many of us, it must nevertheless be considered. The question may properly be deemed to be un-American and objectionable for two reasons. First, it violates article 6 of the Constitution of the United States which provides that "no religious test shall ever be required as a qualification for any office or public trust in the United States." Secondly, it does violence to the first of the 10 amendments to the Constitution which all Americans proudly call their Bill of Rights. That amendment provides that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof, and it is not farfetched to say that to deny to any American any public office because of his religion is a violation of this constitutionally guaranteed right of freedom of religion. And I repeat the phrase, freedom of religion, because such are the words and the guiding spirit of the Constitution. The Founding Fathers who formulated that language were endeavoring to promote freedom of worship and religion and not a freedom from worship or religion. Clearly, this amendment prevents the establishment of a national religion or a favored church in America. It was designed to attain unity by guaranteeing an equality of treatment to all religions, permitting neither favored treatment to one nor discrimination against another. The question, however, Is American ready for a Catholic President? is not disposed of simply by saying that it is un-American. The question is not a simple legal question. It is rather a question which concerns the attitudes of our fellow Americans. It is a question that stems perhaps more from the heart than from the mind. And it is at this point that our mission of enlightenment must begin. Whether motivated by ignorance or bigotry, there is afforded by the question a golden opportunity for the Catholic to tell his fellow Americans precisely what the American Catholic stands for.

In this connection, both Christian charity and fundamental fairness require that we not do an injustice to our fellow Americans by believing that the overwhelming majority are opposed to a Catholic for President. Likewise, the views of a particular clergyman are not to be taken to represent the views of all Americans of that particular denomination. I have absolutely no doubt that our fellow Americans are fair. Note, for example, the statement of Dr. John Sutherland Bonnell, Minister of the Fifth Avenue Presbyterian Church in New York City who, in a sermon entitled "Religion and the Presidency," had this to say:

"It is unthinkable that the highest office in the gift of the American people should be permanently denied to any qualified representative of some 38 million Americans of the Roman Catholic faith." He added that selection of a candidate "should be on the basis of his experience and personal equipment for important public office and not because he belongs to the Jewish, Catholic, or Protestant faith."

With this, of course, all of us most heartily agree. And note also the statement made by Mr. George Sokolsky in a syndicated column appearing in the Journal American on March 7, 1960. In a column entitled "Religious Conflict Damages America," a column that I hope all Americans will read and take seriously, Mr. Sokolsky wrote:

"We already have too many racial and religious conflicts in the United States. * * * It it not a question of bigotry or smear. It is a question as to whether any American citizen, of whatever faith, who fulfillls the qualifications set forth in the Constitution, may be nominated and elected to the Presidency of the United States. Do we have secondary citizens?"

Surely to pose the question, "Do we have secondary citizens?" is to answer it. Yet I give these two quotations from non-Catholics to indicate my strong conviction in the basic fairness of our fellow Americans, and that our task of enlightenment is to proceed on the basis that those who have doubts about this matter of a Catholic President are genuinely interested in learning and are, at worst, laboring under a lack of knowledge of the fundamental tenets and beliefs of Catholicism.

It is, of course, improper and prejudicial to compare the civil status of the church in America with that of the church in countries like Italy, Spain, and Portugal. The civil status of the church, of course, depends upon the legal and constitutional framework of the particular country. And the American national policy of complete equality for all religious denominations is not only acceptable to Catholics but is regarded by them as the most practical and most beneficial in a pluralistic society that is America. As for the particular candidate who is of the Roman Catholic faith, the question would simply be whether he understands and appreciates the constitutional framework within which the church exists in America and the permissible degree of cooperation between church and state under the Constitution and the decisions of our Supreme Court.

From a purely positive standpoint, it is interesting to see what the church teaches American youths who attend its schools. "A citizen must love his country, be sincerely interested in its welfare, and respect and obey its lawful authority." These, my friends, are the words contained in the catechism of Christian doctrine which is the basis for the religious instruction of Catholic children in the United States.

We who, as Catholics, adhere to the principle that love of country is a virtue, have a duty to bring to the attention of all Americans the words of Archbishop Ireland, of St. Paul, who declared:

"My religious faith is that of the Catholic Church. * * * My civil and political faith is that of the Republic of the United States of America. * * * Between my religious faith and my civil and political faith, between my creed and my country, it has been said there is discord and contradiction, so that I must smother something of the one when I bid the other burst forth into ardent burning, that I must subtract something from my allegiance to the one when I bend my full energy to the service of the other. Those who speak so, misunderstand either my creed or my country; they belie either the one or the other. * * * The partition of jurisdiction into the spiritual and the temporal is a principle of Catholicism; no less is it a principle of Americanism. Catholicism and Americanism are in complete agreement. * * * They know us little who accuse us of coveting civil and political power that we may dim the fairest flower in the garden of Americanism. Our combats, if combats there be, are never against the liberties of America, but in defense of them; never against Americanism, but against such of its sons whose souls never yet have thrilled in full response to its teachings and inspirations."

A most eloquent testimonial, if one were needed, comes from the executive editor of the Syracuse Herald-Journal, Alexander F. Jones. After citing the views of highly placed Catholic clergy on the separation of church and state from Bishop John Carroll of Maryland down to the recent utterings of Cardinal Cushing of Boston, and Archbishop John T. McNicholas, speaking on behalf of the National Catholic Welfare Conference, the most authoritative body in the Catholic Church in America, he concludes: "This then is the record of 170 years of Roman Catholic opposition to joining church and state. * * * As a Protestant, I ask this question: How long must the idea of a Roman Catholic President of the United States be blocked by a contention the record does not justify."

In conclusion, may I respectfully remind myself as well as yourselves that ours is a noble mission—the love and service of God and country. The Lord grant that we may live up to both of them. May I urge one further thought. A well-known and well-worn maximum of the law is: the law favors

the vigilant. The Lord said: "The kingdom of heaven suffers violence and the violent bear it away." Yes, the violent in that scriptural sense, i.e., those with enthusiasm, those with love for a cause, those with a passion for justice—these are the victors in the struggle. What cause is so glorious, what purpose is so lofty, what life is so well spent as that which is consumed in the love of God, the love of his neighbor, and the love of his country?

St. Paul Welcomes Roy Wilkins Home

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. HUMPHREY. Mr. President, I wish to salute the work of the National Association for the Advancement of Colored People on the occasion of their 51st annual convention being held in St. Paul, Minn.

I can think of no more appropriate salute to this fine organization than the welcome extended by the Minneapolis Spokesman and its editor, Cecil E. Newman, to Roy Wilkins, the top executive of NAACP, who, although not born in Minnesota, attended both high school in our State and the University of Minnesota School of Journalism. Even in the student community, Roy Wilkins exhibited the great qualities of mind and character which were to make him such an effective community and national leader.

Recently he was honored by the University of Minnesota, by being given its outstanding leadership citation.

Mr. President, I am happy to join my good friend, Cecil Newman, the editor of the Spokesman, in a salute and welcome home to Roy Wilkins; and I ask unanimous consent that the editorial entitled "Brought Roy Home," from the Minneapolis Spokesman of June 17, 1960, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BROUGHT ROY HOME

When the brash young delegation from the St. Paul branch of the National Association for the Advancement of Colored People appeared at the Cleveland convention of the association in 1958, it was "armed to the teeth" with invitations for the organization to hold its 1960 convention in Minnesota's capital city.

There were the usual chamber of commerce bids, letters of invitation from Orville Freeman, Governor of the State, letters from prominent citizens and the saintly city's mayor.

More than this the St. Paulites felt they also carried a "secret weapon," or "hole card" not held by any other city seeking the 51st annual convention.

They did not unveil the not-so-secret weapon until the contest for the 1960 meeting got hot, and then they took full and legitimate advantage of the fact that St. Paul and Minnesota is the place where Roy Wilkins, the association's chief executive officer was reared and received his training and education.

Then the theme of the successful St. Paul convention selling job became "Bring Roy Home." Roy Wilkins himself maintained a studied, proper neutrality in the contest between the cities seeking the 1960 meet but what human being would not be excused if within his breast there was not a thrill in seeing that the homefolks were anxious to have him come back home as head of a powerful organization for good, in the Nation.

Although St. Louis, and Missouri may have some slight claim to being the birthplace of the dynamic, youthful Roy Wilkins, St. Paul and Minnesota claims him, as its own son, and rightly so, for it was here in St. Paul that he spent his formative years, attended high school, and graduated from the great University of Minnesota.

It was here in Minnesota that his ability for leadership was early discerned at Mechanic Arts and St. James A.M.E. Church, where as a young man he exhibited such fine qualities that he became a leader in youth religious groups in the city.

Mechanic Arts High School remembered the slightly built, articulate youngster who became one of the Nation's outstanding leaders, when in May this year the school presented him with the annual award which goes to a distinguished graduate.

This month his college alma mater the University of Minnesota will present Roy Wilkins the school's "Outstanding Achievement Award," at the closing session of the 1960 NAACP convention, Sunday afternoon, June 26, to be held in Northrup Auditorium, on the University campus. This award annually is presented to a graduate of the school who has reached the pinnacle of success in their chosen field.

Many Minnesotans believe the prominence which Roy Wilkins was to achieve, was early foreseen by his activity as a young man in his early high school years until the period after his graduation from the University of Minnesota School of Journalism. On and off the campus Wilkins showed a real interest in the issues of the day.

He was one of the editors of the Minnesota Daily, which was at that time and is at present, the largest college daily newspaper in the United States. This in itself was a distinction which up until that time had not been accorded any U.S. Negro student on a major college campus.

Not only was Roy a good student but evidence of his community activity outside the scholastic areas is shown by the records which list him as the first secretary of the board of directors of the newly formed St. Paul Urban League in 1922.

Roy Wilkins utilized his spare time to serve on the staff of a St. Paul Negro weekly, bringing to it the journalistic training he was receiving to improve the style, writing, and format of the publication.

When Roy left the Twin Cities of Minnesota in 1923 to become the managing editor of the Kansas City Call, where he remained until 1931 he became one of the first college trained journalists to be employed by a U.S. Negro weekly. The Call which had the field and incentive to become a great newspaper, grew into a well-developed publication with a good sound news and editorial policy which made it one of the important influences in the Missouri Valley. Wilkins as managing editor set a pace for news coverage unequalled in contemporary Negro journalism.

An excellent, effective, though not flamboyant speaker, Wilkins' articulateness and desire to advance the legitimate aspirations of the American Negro attracted the attention of the national office of the NAACP, notably the late Walter White. In 1931 Wilkins was invited to join the NAACP as assistant secretary and also as editor of the Crisis magazine, the association's monthly organ. He accepted the post reluctantly because he had grown to love the Call and his own Midwest.

Readers of this editorial know the extent of Mr. Wilkins' services to the NAACP, which resulted in his being named to fill the top executive position upon the untimely death of Walter White in 1955.

In the campaign for equality for the American Negro so well lead by the NAACP, Mr. Wilkins, as directing head of the organization, has shown real leadership in guiding the organization, which is the target of every influence in this Nation which rejects the idea of full democracy for persons of Negro ancestry.

As such he has been constantly on the firing line directing with consummate skill the public opinion skirmishes which are a part of American life. In this area of activity his training as a newsman holds him in good stead. Not a single one of the U.S. segregationists of stature is anxious or willing to meet Wilkins in debate on public platform, TV screen or on radio.

Minnesota Negroes and the white people too, are extremely proud that Wilkins, the chief architect today, for the extension of freedom, equality and true justice—indeed real democracy in this land, is a product of the great freedom-loving State of Minnesota.

That Wilkins today is one of 20 most influential and effective American leaders is a source of great pride to the people of this State and the Midwest.

Those who remember him as a vigorous, intellectually alert, vocal lad have watched Roy Wilkins as he assumed increasing stature in the United States and indeed by reflection and interest the international scene—as the emerging African nations, on the world's last frontier, identify themselves with the aims and aspirations of the 19 millions of U.S. Negroes with considerable and understanding pride.

The holding of the 51st annual NAACP convention which "Brings Roy Home," is more than just another convention to the people of Minnesota.

It has added significance and impact in that the great prestige of the organization, and the great progress our Negro citizens have made in the past two decades in the area of human rights, is embodied in the career and success of one of its sons, who has played such a tremendous role in the advancement of people, and country to increasingly sounder values in democratic living.

So, one can be sure as the NAACP convenes in St. Paul it will receive a hearty welcome, for in its welcome there is mixed the story of Roy Wilkins "a local boy who made good," a time-honored and laudable excuse for people, as well as entire communities, to feel proud of their products, and the things which those products have produced for the sum total of human good and progress.—C.E.N.

Back Door Expenditures

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. TABER. Mr. Speaker, pursuant to the unanimous consent granted me, I submit for printing in the RECORD a letter from the Director of the Budget showing that the new and unnecessary appropriations pending for back door expenditures would if passed exceed the budget by over $10 billion.

The letter follows:

JUNE 21, 1960.

Hon. JOHN TABER,
House of Representatives,
Washington, D.C.

DEAR JOHN: In response to your query this morning as to the probable consequences to the Government's fiscal position of major spending and tax proposals already passed by Congress or now being seriously considered in its two Houses, I do not hesitate to advise you as to the gravity of the situation. The dimensions of the problem are set forth below, and I hope you will find it possible to bring this information before the Members of the Congress at the earliest possible time.

The prospective surplus of $4.2 billion which was reflected in the President's budget for fiscal year 1961 stands in acute jeopardy at this writing, because of the actions and inactions of the Congress with respect to the President's budget recommendations.

On the spending side, affecting 1961 and subsequent years, the Congress has taken steps toward authorizing amounts far in excess of the President's budget. It has:

(a) Approved an average increase of about 22 cents an hour, or about 8 percent, in pay of Government employees, costing $746 million a year, despite administration opposition on the ground that it is wholly unsupported and follows a 10 percent increase just 2 years ago and a liberal health insurance program effective this year. The 5-year cost would be $3,730 million.

(b) Voted in the Senate to increase Defense appropriations by $1 billion 180 million above the budget and appropriations for the Department of Health, Education, and Welfare by $474 million above the budget, a total of $1,654 million.

(c) Voted in the Senate to adopt a Housing bill with authority to spend, in a lesser period of time, $800 million more than the President's proposals. Total increased cost at least $820 million.

(d) Voted in the House an unrequested program of $1 billion 75 million to buy housing mortgages at a total cost of $1,075 million.

(e) Voted in the Senate for school assistance which would cost over $1.7 billion beyond the President's proposals in a 2-year period, $1,742 million.

(f) Voted in the Senate for an omnibus public works bill adding projects, over the administration's recommendations, totaling $400 million.

Beyond these, the Congress has under consideration in its committees a number of other unbudgeted proposals which could authorize further large amounts of expenditures. It is not possible to evaluate the probabilities of action on these at this session.

On the revenue side, despite all this action to increase spending, the Congres has thus far:

(g) Voted in the House to grant special tax deductions to the self-employed for pension payments, the cost of which would be $365 million a year, or over 5 years, $1,825 million.

(h) Failed to consider administration proposals to increase revenues through higher postal rates (to provide a self-sustaining postal service in accord with stated congressional policy), aviation fuel taxes, and highway fuel taxes (to obviate diversion of general fund revenues to the highway fund), with a consequent serious loss to the Treasury. The total or 5-year effect of the failure of these proposals would be $6,237 million.

These contemplated reductions from needed revenues, in the face of greatly increased spending, defy all fiscal logic. The commendable action of the Senate on Monday in rejecting committee-proposed excise tax reductions clearly evidences recognition of the necessity of relating revenue actions to expenditure actions.

The total added charge on the Treasury as a result of these unnecessary extra burdens is about $17.5 billions over 5 years. And even this figure does not reflect the possible continuance over the full 5-year period of such measures as those indicated for school assistance, housing, and highways.

It is true that most of these have not as yet been enacted, and there may be decreases, or even increases, before final action into law; also it is true that the impact will not be as large in fiscal 1961 as the authorization amounts. However, it is equally clear that if all or most of these measures are enacted in substantially their present form, they will shatter the hopes of millions of taxpayers that in due time there might be tax reduction and reform, while meeting our solemn obligation to reduce the staggering $290 billion public debt.

In assessing the significance of the figures which I have set forth in the preceding paragraphs, one more point needs to be stressed. The forecast of any budget surplus for fiscal year 1961 is only an estimate, based on reasonable assumptions regarding general economic conditions. If the Congress enacts greatly increased spending and if economic activity should not advance to the extent we have assumed, we could have a substantial deficit. In short, the estimated budget surplus for 1961 cannot be regarded as a liberal insurance policy which justifies taking unreasonable risks with our fiscal situation in the rush of the Congress toward an early adjournment.

As you are well aware, the President formulates and presents the budget for the Federal Government, but the final result is in the hands of the Congress. However, I would not be doing my duty as Budget Director if I failed to give you this frank expression of my concern regarding the budgetary situation for 1961 and future years.

Sincerely yours,

MAURICE H. STANS,
Director.

Labor Readies Big Vote Drive

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Friday, June 24, 1960

Mr. GOLDWATER. Mr. President, when the so-called clean elections bill was before this body, I discussed at great length with the author of the measure the necessity for placing some provision in the bill which would control the outlandish expenditures by labor unions in the field of politics. I tried by amendment to accomplish the same thing, but I was unsuccessful.

Mr. President, the Corrupt Practices Act prohibits such expenditures, and the Taft-Hartley Act prohibits expenditures by unions or by corporations in any election touching upon a Federal candidate.

I noted in a newspaper recently a column written by Victor Riesel, entitled "Labor Readies Big Vote Drive."

I ask unanimous consent that this column be printed in the Appendix of the RECORD, because I desire to have all the "doubting Thomases" in this body realize what labor will spend in the 1960 elections.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

INSIDE LABOR—LABOR READIES BIG VOTE DRIVE

(By Victor Riesel)

While the Democratic Party has been preparing to nominate a candidate, labor's political leaders have been training thousands of activists in a series of 2-day mobile training schools to elect that candidate—and to attempt to defeat at least 14 "unfriendly" Senators. Some would call this a purge list, some would.

The roving labor institute for political action was the most modern since the ballot was contrived. The briefings were built around more professional motion pictures than the film festival at Cannes.

Through these political sprucing courses which covered the continental United States—and such points west as Hawaii and Alaska—went 6,500 regional labor officials. They were getting their primary training while the Nation was watching the big primary shows—and they will be the avant garde of the campaign later this year to smash the Republican Party.

All but one of the political action films were produced by Guy Nunn, media and communications expert of Walter Reuther's United Auto Workers. The lone film came from the National Association of Manufacturers. It happened one afternoon not too long ago. One of labor's top political leaders telephoned the NAM. He wanted to know how much the businessmen's association wanted for its do-it-yourself political action kit.

The NAM spokesman said $300, but take it with our compliments. The labor man said he wanted nothing from the NAM—especially their compliments. So the AFL-CIO's Committee on Political Education (COPE)—which will make the national headlines many a day during the presidential campaign—sent along a check for $300.

In the kit was a movie called "Labor Conflict." In it are some picket line melees and some mighty grim pictures of Walter Reuther and colleagues. The COPE instructors showed it to their regional people as a hint of what might be thrown at them during the fall election drive.

This is a neutral study of precinct politics. As for labor's own movies, they were more detailed. These are six 15-minute films—which can be broadcast as well as shown in union halls. They deal with such topics as the Forand aid-to-the-aged bill, the Labor-Management Reporting and Disclosure Act, taxes, and social security. The use of the films and the bricfing sessions in COPE's 15 2-day area conferences are the most unusual campaigning activity yet developed.

These parleys began February 13 in Savannah, Ga. They wound up during mid-May in Portland, Oreg. Labor leaders believe their most successful conference was held in Philadelphia. It was run during the week—and drew 1,231, according to COPE's records.

COPE's practice was to put its two top political directors, Jim McDevitt and Al Barkin, in a city. First they would run a general session on the opening morning. That afternoon and the following morning the delegates were shifted into four discussion groups. Each group, in turn, was lectured on four topics. These groups were run in 75-minute classes.

After these detailed sessions, the conference ended with another mass general review parley. Thus every important politically active labor official from Coney Island to Waikiki Beach knows just what is expected of him and how he should attempt to fulfill his political mission.

Self-Determination for the Oppressed

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a most impressive resolution adopted by American Estonians, Latvians, and Lithuanians at a recent Baltic freedom meeting at Boston, Mass.

It is most appropriate that Congress should give attention at this time to the sorry plight of the peoples in whose behalf this splendid resolution was unanimously approved by a significant gathering of freedom-loving people.

The domination of Estonia, Latvia, and Lithuania by the Soviet was spawned in illegality, conducted in illegality and continues in illegality.

The aggression against these fine people who are committed irrevocably to the principles of human freedom was an unconscionable act and the ruthless deprivation of their personal liberties and right to govern themselves constitutes a crime against the law of nations and is a violation of basic human rights, as they are recognized by free governments and Western civilization.

As the resolution indicates, the suppression of these nations follows the usual Soviet pattern of brutality, tyranny, and flagrant disregard of the elementary God-given rights of human beings.

It would be unthinkable for this Nation—born as it was in better sacrifice and bloodshed for liberty, and conducted as it is to preserve the essential freedoms of the individual—not to rally to the support of peoples and nations seeking the free way of life and struggling to reestablish democratic institutions.

It is a sacred obligation of the American Nation to stand in a forthright, fearless manner for the perpetuation of the principles of freedom, democracy and justice, and if we are to be true to our own great heritage, we must not only sympathize with the aspirations for liberation of presently oppressed peoples but we must indicate to the entire world our purpose to do everything in our power to assist them in realizing their objectives to return into the orbit of free, independent nations.

It should be clear to all of us that the road to peace and international order does not lie in further appeasement or intoleration of tyranny and oppression. To the contrary, the road to peace and freedom must be assured, if it is to be assured at all, by strong resolution to defend human freedom and practicable determined efforts to build the necessary strength, military, economic and spiritual, to deter Communist aggression in the world and to compel respect for the aspirations of those who are seeking to throw off the shackles of slavery.

We must make it plain to the world that we will never compromise our principles and we will never yield to the threats of radical dictators, of the right or of the left. The task of American citizenry is to protect and preserve our great political and economic systems, not only as a cherished possession of Americans, but as a beacon light of hope and inspiration for millions of oppressed peoples throughout the world striving to be free.

With courage, determination, faith, and hard work, we can and will protect our liberties, and in our time find some way by which the rule of law and morality will replace force in the relations of nations and men. In that way, lies our opportunity, and it is a great opportunity and challenge, to establish a peace based upon justice and equity that will bring order out of chaos, and security, prosperity, and happiness to the human race.

I heartily congratulate Chairman Valdemars Lambergs, of the Baltic Freedom Meeting, and his associates for their significant contributions to the cause of liberation, liberty, and peace.

The resolution follows:

RESOLUTION ADOPTED BY AMERICAN ESTONIANS, LATVIANS, AND LITHUANIANS ASSEMBLED AT BALTIC FREEDOM MEETING, LITTLE OPERA HOUSE, BOSTON, MASS.

Whereas 20 years ago, June 15–17, 1940, the Soviet Union violently invaded and occupied the Baltic States of Estonia, Latvia, and Lithuania, and thereafter illegally incorporated them into the U.S.S.R.; and

Whereas by this unprovoked aggression the Government of the Soviet Union committed an international crime; and

Whereas 19 years ago, June 14, 1941, the Government of the Soviet Union started mass deportations of the Baltic people of all walks to slave labor camps in Siberia and other remote parts of the U.S.S.R.; and

Whereas by this inhuman deed the Government of the Soviet Union committed a crime of genocide against the Estonian, Latvian, and Lithuanian nations; and

Whereas, by signing the Charter of the United Nations and later by adhering to the Universal Declaration of Human Rights, and the Convention on Prevention and Punishment of the Crime of Genocide, the Government of the Soviet Union has assumed explicit obligations in regards to individual's right to life, freedom, personal security, and human dignity; and

Whereas, in violation of all these explicit obligations, expropriation, exploitation, slave labor, suppression of human rights, and fundamental freedoms, Russification, terror, murder, overt and covert deportations are being continued in the Baltic States by ruthless Soviet occupation forces; and

Whereas we, free Estonians, Latvians, and Lithuanians are concious of our responsibility toward our subjugated nations behind the Iron Curtain, we feel dutybound to speak out for those in captivity in protest against genocide and inhumanity in the Baltic States under Communist tyranny; and

Whereas we are deeply concerned about the weakness of the U.S. foreign policy in the face of ever-marching Soviet aggression that allows Soviet Union's Premier Nikita Khrushchev even to offend the President of the United States without any fear of retaliation: Now, therefore, be it

Resolved, by American Estonians, Latvians, and Lithuanians assembled here, That—

(1) We accuse the Government of the Soviet Union of committing and continuing an international crime against the Baltic States of Estonia, Latvia, and Lithuania;

(2) We demand that the Government of the Soviet Union withdraw its military and political occupational forces from the Baltic States;

(3) We appeal to the Government of the United States to strengthen its foreign policy as to the Soviet Union and world communism as well;

(4) We request the Government of the United States to undertake all necessary and appropriate ways and means to speed up the long delayed liberation of the Baltic States as well as the other captive nations.

God save Estonia, Latvia, and Lithuania.

VALDEMARS LAMBERGS, Esq.,
Chairman of the Baltic Freedom Meeting in Boston.

H. M. Baggarly, Tulia, Tex., Famed Country Editor, Given New Recognition as Editor of the Week

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. YARBOROUGH. Mr. President, on many occasions, I have had the privilege of discussing on the Senate floor and having had printed in the RECORD editorial columns by H. M. Baggarly, editor of the Tulia (Tex.) Herald.

From all the papers I see and read, both major dailies and country weeklies, and including the news magazines, I believe there are very few journalists today who are the equal of Mr. Baggarly. Week after week he does a masterful job producing a brilliant newspaper. When I say he produces the paper, I mean just that. He covers every editorial feature of his paper unassisted. He is not only writer of a brilliant column—he is reporter, photographer, sports editor, society editor, makeup editor. In addition, he writes and delivers two 15-minute newscasts each day on the local radio station and has a special news program on Sundays called, "The Country Editor Speaks."

He is truly a William Allen White of our times and a shining example of what newsmen with talent, energy, intelligence and particularly, courage, can achieve when they really make freedom of the press meaningful to the people they serve.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from a recent issue of the Publishers Auxiliary, a newspaper trade publication, in which Mr. Baggarly was honored as Editor of the Week. The article was written by Mr. Bill Dorr, associate editor of Publishers Auxiliary, and published under the heading "A Country Editor With a Taste for Controversy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A COUNTRY EDITOR WITH A TASTE FOR CONTROVERSY

(By Bill Dorr)

As the cyclonic whirlwinds that whip across the sands of his native Texas Panhandle, Editor H. M. Baggarly is always in a whirl.

Being editor of the 3,200 circulation Tulia Herald is a time-consuming job, but Baggarly is also reporter, photographer, society editor, sports editor, and columnist. In fact, he covers every editorial feature of his paper—unassisted—and the paper runs 16 to 24 pages a week. In addition, he writes and delivers two 15-minute newscasts on a local radio station each day, and has a program called "The Country Editor Speaks" on Sundays.

Then in times of political campaigns he steps up his schedule to include as many as seven political columns and several radio and TV talks a week in addition to his regular duties at the Herald.

Does all this mean that Editor Baggarly writes short in his weekly column or skips editorials some weeks? You can bet your Ludlow he doesn't. He always writes editorials and his columns are long and deep rooted, generous of thought and intellect.

In 1957, for instance, the National Editorial Association selected "The Country Editor" as best column in the country. He has won first place awards in 1951 and 1958 from the Panhandle Press Association; and from the Texas Press Association in 1955 and 1957; from Theta Sigma Phi each year from 1953 to 1957 when the award was discontinued; editorial awards each year, 1953 through 1957.

Somehow, Baggarly makes the whole thing look—and sound—easy. He writes with a simple graceful style that seeps into the reader's system unannounced. He is at times witty, biting and, more rarely, eloquent.

"I have found that success of a newspaper, particularly a weekly, is related to the honesty and sincerity of the editor—even though much of the public may disagree with him—than to his efforts to be noncontroversial, to please everyone, to offend no one."

To offend, Baggarly has not been reluctant. Particularly when it falls in his line of duty as a country editor to keep his readers informed.

"Towns like Tulia," he wrote in a recent column, "and counties like Swisher have just about sinned away their day of grace when it comes to voting for friends of agriculture. We've just about had our last chance—and even now it may be too late."

One of the country editor's pet peeves is the Benson farm policies, and he has hammered with a satiric punch that has an abundance of lemon. He has opposed every major daily in the State in some of his political sanctions, as in the case of Senator RALPH YARBOROUGH, who won. In that event, his columns were run in State dailies as political ads and he took to TV and radio on behalf of his black horse candidate.

In 1952, despite overwhelming odds, he went all out for Adlai Stevenson in his campaign for President—so much so, that in the heat of the campaign a brick was tossed through his front window. AP carried the story and pictures through the Nation.

Undeterred by his county's overwhelming support of Eisenhower in that election, Baggarly was back again—all Stevenson—in 1956. "The county went 5 to 1 for Stevenson," he says proudly.

"I would say that my political writing has been the most rewarding experience I have had in the (newspaper) business."

Like southerners Ashmore and Golden and McGill, he has trained penetraing eyes on the civil rights controversy despite his southern background and setting:

"There are those who will subscribe by word to the principle that all citizens should be allowed to vote, regardless of color—yet in practice they submit black voters to a literacy test that many college professors couldn't pass. Then when the big bad Federal Government attempts to step in and to guarantee that the Negroes and the whites be treated alike when it comes to voting, they shout Federal encroachment and violation of States rights."

Editor Baggarly's political life has carried him far from his typewriter and into some exciting—and embarrassing—situations. Like this pearl from an oyster incident confided in a column to his readers:

It was too embarrassing to admit in print at the time it happened. In fact, it had been forgotten until we saw a similar incident happen in a restaurant the other night.

"Several years ago we were having dinner with Frances Perkins, Secretary of Labor throughout the Roosevelt administrations and, for a while, under Truman. While eating an oyster cocktail, one of the oysters slipped off our fork and fell to the floor. Frances didn't see the accident which eased the embarrassment somewhat.

"Two hours later we prepared to leave. The preparations included slipping on our slip-on shoes which, for reasons of comfort, had been slipped off in the semidarkness.

"The forgotten oyster was quickly remembered when we felt it in the heel of the shoe where it had fallen.

"It was nearly a half day later that we found longed-for privacy and a chance to get rid of that slippery oyster."

Because of the depression years, Baggarly went against his mother's journalistic ambitions for him and became a schoolteacher at Tulia High School. Simply because his studies included sponsorship of the school paper, he became interested in newspapers and makeup:

"Being somewhat of a perfectionist, I spent each Saturday in the newspaper shop making sure that the page was made up as I wanted it. I even learned to make up the page myself. Soon the school paper began to win prizes in the various contests. I continued to teach a class in journalism and sponsored the paper until I enlisted in the Navy in 1943. Returning in the spring of 1946, I planned to resume teaching. In August, the editor of the paper wanted to take a vacation and asked me to pinch hit for him for two issues. I enjoyed it very much and when he returned the school agreed to let me serve as news editor of the paper by working after school and on Saturdays. At the end of a year, I bought third interest in the paper and resigned at school. After another year, friction developed between the three partners. I sold my interest and returned to teaching."

It didn't last. In 1950, Baggarly was approached by a group of Tulia citizens who wanted to buy the paper if he would return as editor. At first, he bought a small interest but a 1955 purchase of 50 percent of the stock, made him the principal stockholder.

Despite late entry, Baggarly is doubtlessly a born newsman. He has at once become a controversial editor and a popular one. He has opposed a majority of advertisers in political issues and had a steady increase in advertising, circulation and prestige. He has gained some of his strongest support from many who seldom agree with him.

"The fence straddler and the noncontroversial wind up with few if any supporters," he believes.

"To be deplored is the editor who measures every decision in terms of its effects on the advertisers, who is fearful, who is in intellectual bondage to those he feels are better qualified to speak than he. I know some editors who never take a side until they first see which side the big dailies take. Frankly, I dislike controversy and argument, yet I could not publish a noncontroversial paper.

"Often I feel that I would like to retire to an obscure job where I didn't have to become identified with every public issue—yet this thing is like having a lion by the tail. I can't turn it loose. Although there is more competition than ever in the newspaper field, I feel that nothing will ever take the place of the hometown weekly."

Editor Baggarly works with freedom in a field that has been toiled before by editors like William Allen White and Joseph Pulitzer. In this endeavor there is no immediate reward; it comes later with green shoots that promise fruit.

Such rewards have come. Like a letter from a blind man in Indiana after an appearance on an NBC panel from Chicago during the Little Rock crisis. The 74-year old listener wrote:

"Often a pleasant, sincere voice, clear, concise English, catches my interest as yours did last night. Tulia, I learn from the explorations of my family into the information almanacs, maps and atlases I cannot scan, is about 3,500. A town which I visualize as law abiding, religious in great degree and its people cultured and intelligent."

"It was rewarding to know that this blind man acquired a favorable impression of my town from what I had to say," Baggarly writes. "It is my desire that I will reflect a similar impression in the minds of our readers who live in more than 40 States and several foreign countries."

This seems likely.

Summary of Replies to a Questionnaire—Part 2

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. PILLION. Mr. Speaker, I am pleased to insert the second part of the tabulated results of the replies to my questionnaire. This part consists of the questions and replies for the section entitled "1961 Budget and Taxes—National Debt—Interest—Gold—Inflation."

The tabulated results follow:

QUESTIONNAIRE—1961 BUDGET AND TAXES—NATIONAL DEBT—INTEREST—GOLD—INFLATION

1. Do you believe that the proposed budget expenditures of $79.8 billion are (a) about right, 2,886; (b) too low, 432; (c) too high, 1,650.

2. Anticipating a rising economy to produce more revenue, the President has recommended the following revenue measures to produce $84 billion in receipts. Which measures do you favor?

(a) Continuing the 10-percent telephone and transportation taxes. Yes, 3,228; no, 2,289.

(b) Terminate the 10-percent Federal telephone tax on June 30 to allow this tax to be imposed by New York State. Yes, 1,500; no, 3,930.

(c) Increase taxes on business cooperative. Yes, 3,786; no, 1,419.

(d) Reduce depletion allowances for oil companies, etc. Yes, 3,312; no, 1,827.

(e) Increase aviation gas tax from 2 to 4½ cents per gallon, impose same tax on jet fuel. Yes, 3,702; no, 1,593.

(f) A one-half cent increase to 4½ cents per gallon on motoring gasoline. Yes, 1,770; no, 3,672.

(g) Increase first-class postage from 4 to 5 cents. Yes, 3,126; no, 2,055.

(h) Increase airmail postage from 7 to 8 cents. Yes, 4,185; no, 1,338.

(i) Adjust all classes of postal rates to meet costs. Yes, 4,584; no, 735.

3. Do you believe in increasing or decreasing spending in the following areas?

(a) Defense. Decrease, 981; increase, 3,792.

(b) Farm subsidies. Decrease, 4,833; increase, 534.

(c) Foreign economic aid. Decrease, 3,879; increase, 1,254.

(d) Foreign military assistance. Decrease, 3,573; increase, 1,545.

(e) Public works, harbors, flood control, etc. Decrease, 1,752; increase, 3,384.

(f) Public housing, urban renewal, etc. Decrease, 3,012; increase, 2,052.

(g) Education construction, etc. Decrease, 1,656; increase, 3,219.

(h) Pay for Federal civilian and military personnel. Decrease, 1,845; increase, 2,739.

(i) Federal aid to States for highways, sewage, etc. Decrease, 2,463; increase, 2,307.

4. If you favor increased spending, which tax would you favor increasing?

(a) Personal income tax. Yes, 684; no, 3,480.

(b) Corporation and business taxes. Yes, 2,640; no, 1,620.

(c) Some new Federal sales or manufacturers tax. Yes, 2,940; no, 1,371.

5. Do you favor an increase in national debt and spending more than the tax revenues and inflating our economy at a rate of about 2 percent per year? Yes, 249; no, 4,956.

6. Do you favor a regular and systematic payment on the debt between $1 to $4 billion per year until national credit is improved? Yes, 5,313; no, 201.

7. Do you favor the grant of limited authority to increase the 4¼ percent interest rate ceiling on Federal bonds? Yes, 3,666; no, 2,283; or do you favor an open competitive market for investor's moneys and permit the Treasury to sell bonds without governmental restriction and without governmental buying of its own bonds to produce an artificial low interest rate? Yes, 2,100; no, 2,823.

8. In order to strengthen our unfavorable international balance of payments, do you favor?

(a) Reducing our military and civilian personnel abroad. Yes, 3,498; no, 2,883.

(b) Restricting imports. Yes, 3,861; no, 2,361.

(c) Reducing foreign aid. Yes, 4,719; no, 1,767.

(d) Restricting U.S. tourist spending. Yes, 2,769; no, 3,615.

(e) Restricting the investment of U.S. capital abroad by increased taxation. Yes, 4,317; no, 1,998.

9. Do you believe that domination of markets and pricing practices by big business has substantially contributed to higher inflationary costs? Yes, 4,911; no, 1,872.

10. Do you believe that our antitrust laws should be strengthened and more vigorously enforced? Yes, 5,718; no, 1,005.

11. Do you believe that dominations of the labor market by big unions and its practices has substantially contributed to higher inflationary costs? Yes, 5,979; no, 1,035.

12. Do you believe that antitrust laws should apply to unions also? Yes, 6,243; no, 609.

13. Do you favor a minimum wage law of $1.25 per hour to include small business? Yes, 4,518; no, 2,385.

Medicine and the Democratic Party

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. McNAMARA. Mr. President, I commend highly to my colleagues in the Senate the forthright speech of Paul Butler, chairman of the Democratic National Committee, delivered at the conference of presidents and officers of State Medical Associations, Miami, Fla., June 12, 1960. Mr. Butler specifically endorses "the Forand and McNamara bills which would finance health insurance for the aged through the social security system," and he reminded his audience "that the social security program itself, founded under President Franklin D. Roosevelt in 1935, was branded 'socialistic' and worse by the same organizations which today apply similar labels to measures for caring for the health of our aged."

The "worst aspect" of the administration proposal for health insurance for the elderly is, Mr. Butler pointed out, "that it would require the individual beneficiary himself to pay the first $250 of his annual medical bill, and 20 percent of the costs above that. Now where does that leave the 60 percent of our aged citizens who have incomes of less than $1,000 a year?"

The Democratic national chairman also discussed related problems of medical care for the aged—the high cost of drugs, the need for increased medical research funds, and the shortage of doctors. Mr. Butler's statement shows a deep appreciation of all aspects of the present inadequacies of medical care in the United States. I am certain that all Members of Congress and all Americans will be interested in this thoughtful statement. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MEDICINE AND THE DEMOCRATIC PARTY

(An address by Paul M. Butler, chairman of the Democratic National Committee, at the Conference of Presidents and Officers of State Medical Associations, Miami, Fla., Sunday, June 12, 1960)

For the title of my address here today I have chosen, "Medicine and the Democratic Party." I am grateful to you for this opportunity to speak to you in this session of your conference. I am quite sure that you expect me to speak frankly to you and that I intend to do. There is need for the record to be made clear here and now that the charge that the Democratic Party favors socialized medicine is utter nonsense. There is equal need to make clear also that, if socialized medicine should come to our country, it may well be that the medical profession itself may have brought it about.

My oldest son has forsaken the professions of his father, law and politics, to become a doctor, a goal which I hope he will achieve, a noble profession which I hope he will honor and serve faithfully with unselfish and devoted work for the common good. So I start out by telling you that, despite the fact that I may be critical at times in this speech, I am friendly to your profession and as much concerned about its freedom from governmental control and regimentation as I am about my own profession of the law.

To me the general attitude of the medical profession to the Democratic Party is a curious situation in view of the preeminent record of the Democratic Party in having sponsored virtually every move in recent years to provide better medicine for all our people. Thus it would seem to me that the party of the people—for that's what the Democratic Party is—should be a natural political haven for you who are entrusted with safeguarding that precious asset of a people, their health. Why, all too often, should the American Medical Association and the Democratic Party find themselves taking opposite stands on vital health issues? My fondest hope for my words here today is that in some small way they may contribute to a better understanding of the problems that sometimes divide our respective organizations.

At the outset, may I define, broadly, the Democratic feeling which underlies and governs our attitude toward health measures? It is, simply, that a basic duty of government is to provide for the people those essentials of life which they are unable to provide for themselves. Under the meaning of "essentials" certainly would come large-scale medical research with the centralization and coordination such as is provided by the National Institutes of Health, in Bethesda, Md., largest such research center in the world. It was conceived and strated by a Democratic administration. Another example of necessary Government action was the handling of the Salk vaccine to insure that it was administered to a maximum number of people at a price they could afford.

This matter of price is important to our people. We know that millions of Americans go into debt to purchase medical care each year. We know that the average health insurance policy covers only about 25 percent of the total cost of the average illness. Particularly is this cost of medical treatment a problem among our Nation's 16 million people who are 65 and over. Sixty percent of our aged citizens have incomes of less than $1,000 a year. Only about 40 percent of this aged group has health insurance. Much of it is inadequate in its coverage and the rates are high. In fact, an official of Los Angeles' suicide prevention center told a Senate subcommittee recently that the high cost of medical care is the most important reason for suicide among the aged.

This is a problem of national importance. It calls for Government action of the kind I mentioned a moment ago to provide an essential of life which people are unable to provide for themselves. It calls for Government action because no other form of action has been forthcoming to meet the problem. Neither the American Medical Association nor private insurance companies have come up with a workable substitute plan, although they have condemned two Democratic measures in Congress which would go a long way toward meeting the problem. I refer to the Forand and McNamara bills which would finance health insurance for the aged through the social security system. May I remind you that the social security program itself, founded under President Franklin D. Roosevelt in 1935, was branded "socialistic" and worse by the same organizations which today apply similar labels to measures for caring for the health of our aged.

When I said that neither the AMA nor private insurance companies have offered a workable substitute for the Forand or McNamara bills, I want you to know that is not

only my opinion. In April 1959, President Eisenhower's Department of Health, Education, and Welfare had this to say:

"The difficulties of providing hospitalization and health insurance coverage for the aged stem primarily from the fact that the aged require above-average amounts of care and in general have below-avearge incomes. Any large expansion of protection for the aged thus seems unlikely without some way of covering the costs by spreading them over other segments of the population and throughout the lifetime of the individual.

"Voluntary insurance has succeeded in doing this to a limited extent through community-rated premiums and the inclusion of the retired aged in employed groups.

"There is a question, however, of how far voluntary effort and private industry can go in developing the kind of distribution of costs that would be needed to assure adequate protection to all or the great majority of the aged."

It is true that the administration, after much pulling and hauling, and after much pressure from its own party to come up with something to match the two Democratic measures, produced a health insurance bill of sorts for the aged. But it is a feeble thing, indeed. It has been called an "unworkable, actuarial monstrosity" among other things. I believe the worst aspect of the Republican measure is that it would require the individual beneficiary himself to pay the first $250 of his annual medical bill, and 20 percent of the costs above that. Now where does that leave the 60 percent of our aged citizens who have incomes of less than $1,000 a year?

Even Republican Gov. Nelson Rockefeller, of New York, has blasted the Republican plan. Only this week he described it as "basically unsound—costly and cumbersome." Earlier he had said the heavy payments required by the States under the plan could mean "a very serious fiscal situation" for them. Not only that but he endorsed the social security approach of the Forand and McNamara bills.

There is a second health situation making headlines today in which the Democrats have taken the lead, and in which again we look over our shoulders in vain for support from the AMA. I speak of the scandal uncovered by the Kefauver committee in the drug industry. And I do mean scandal. For here is a situation in which the motive for high profits has actually deprived some Americans of drugs they needed. The Kefauver committee heard testimony, for instance, that thousands of mental patients had to return to mental institutions because they could not afford the high cost of tranquilizer drugs on the outside.

It was testified that Ciba, one of the larger drug firms, sold to druggists for $39.50 the same number of tranquilizer tablets it sold to the U.S. Government for 60 cents.

It was brought out that the profit rate of the drug industry is the highest in the entire manufacturing field.

It was brought out that the Director of the Antibiotics Division of the Food and Drug Administration—Dr. Henry Welch—received $267,000 in the last 8 years, much of it from drug firms he was supposed to regulate, from his private publishing business. This business profited largely by selling reprints of its articles to drug firms, and it was brought out that Welch solicited the firms to buy these reprints. Welch has been allowed to resign from the FDA without official censure or reprimand.

It was also brought out that officials of the 20 largest drug companies gave $149,700 to the Republicans in 1956 and only $4,000 to the Democrats. This latter is an interesting point when you consider that the Kefauver committee undertook its investigation of the drug industry only when the Justice Department failed to act. It is interesting also when one watches day after day the efforts of powerful Republican members of the Kefauver committee to hamstring its operations, to keep the committee from holding hearings at all, or to force it to hold secret sessions where the public couldn't see what was going on. Why, I wonder?

We Democrats would have welcomed the backing of organized medicine in seeking to bring this ugly situation in the drug industry out into the open. Instead we found—as quoted by John Lear in the Saturday Review of Literature—that officers of four State medical societies (in Illinois, Michigan, Tennessee, and Wisconsin) had telegraphed Republican Senator DIRKSEN, a member of the Kefauver committee, that the doctor-patient relationship might be damaged if witnesses were allowed to criticize the drug industry in public. If that be so, why didn't the doctors themselves take the lead in cleaning up the situation in the drug industry?

We found also Dr. Austin Smith, former editor of the AMA Journal, heading the powerful Pharmaceutical Manufacturers Association. Dr. Smith testified before the Kefauver committee in defense of the drug industry.

I would like to speak clearly here. I believe that the moral tone of the drug industry and of a Republican administration which allowed this situation to exist is not one with which the organized medical profession of this country can afford to ally itself. I believe the position of the drug industry is indefensible in the public mind. Medical associations it would seem to me, can only demean the whole medical profession by taking any position which can be interpreted by the public as one of defending the drug industry.

Now it might appear to some, with the rising life expectancy among our people and the new techniques available to our doctors, that the medical problems facing us have been reduced comfortably. But I believe the facts will not bear that out. For instance, the life expectancy in this country is fifth from the top among the nations of the world. Our maternal mortality rate is only third best among the nations. Our infant mortality rate is only 10th best. There are fewer physicians per 100,000 people in this county today than there were in 1921. We do not have enough hospitals or enough nursing homes, and the quality of the latter leaves much to be desired. We do not have enough schools to train more doctors. Millions of Americans are in debt for medical care and millions more put off treatment because of the fear of debt. Heart disease kills 900,000 Americans each year. The cancer death rate is 260,000 lives a year now.

We need more and better medical research. But consistently, ever since President Eisenhower took office in 1953, his administration and Republicans in Congress have opposed necessary increases in medical research funds. It would be nice to be healthy, say the Republicans, if it didn't cost so much. We Democrats believe that it costs too much not to be healthy. Disease costs this country about $35 billion a year—$20 billion for medical care and $15 billion in lost wages and lost taxes.

Over the last 8 years, the Democratic Party has significantly expanded our Nation's medical research. The first budget submitted by the Republican administration severly cut the medical research expenditures proposed in the last of the Truman budgets. Each year since, the Democratic Party has rejected inadequate administration proposals and considerably increased funds for medical research.

While the $400 million administration budget for medical research during fiscal 1960 is a vast improvement over the $50 million recommended by the Eisenhower administration early in 1953, it still is a relatively small expenditure when related either to Federal research expenditures generally or to the specific annual cost of disease.

With the great increase in Federal research and development expenditures since World War II, medical research has barely held its own at about 5 percent of our total research expenditure. The Federal medical research expenditure is only about 2 percent of the accepted cost-of-disease figure.

A year ago, the Senate Appropriations Committee appointed a committee of medical and lay leaders to conduct a comprehensive study of the exact capability of this Nation in the field of medical research. This group reporting last month said: "The proportion of the national income now devoted to health research is small in relation to the need and to the great economic return which has come from medical research in the past. The committee is confident that the Nation will support any level of research for which the men and ideas are available."

The committee recommended $664 million for the medical research programs of the National Institutes of Health during fiscal 1961, an increase of $264 million over the sum recommended by the Republican administration.

The committee went on to predict that by 1970 the total support of medical research in this country may well require annual expenditures of $3 billion, of which more than $2 billion in all likelihood will be provided by the Federal Government.

The Republican administration has constantly neglected the development of a major medical research program in the Veterans' Administration, with its 122,000 beds located in 170 hospitals all over the country. In the early years of the present administration, the VA medical research program struggled along with an annual allocation of about $5 million, compared with an annual VA hospital budget of $800 million. Over the last 5 years, Democratic leadership in both Houses of Congress has concentrated on lifting the level of the VA medical research program. By 1958 it had reached $15 million, but the administration cut it back to $11 million last year.

You well know that there is a critical shortage of doctors in America today. Most recent estimates are that we need a minimum of 25,000 more doctors to provide adequate medical care for our growing population.

Ever since 1949, the Democratic leadership in Congress has been trying to pass legislation to expand the capacity of our medical schools to train more doctors. Such legislation passed the Senate on two occasions during the Truman administration but was bottled up in the House, I am sorry to say, by the combined opposition of the Republican leadership and the American Medical Association. In 1951, Senator Robert Taft joined forces with the AMA to defeat an aid to medical education bill which he had originally sponsored. Again I ask, why does the AMA take this position?

In 1958 Dr. Leroy Burney, Surgeon General of the U.S. Public Health Service, rang the alarm bell on the doctor shortage when he told the American College of Surgeons that the balance between doctors and patients in this country was "at the peril point." But the alarm did nothing to bring a legislative proposal from the administration. Instead, that famous Republican delaying tactic—the study group—was brought onto the scene and valuable time was lost while they studied instead of acting.

Another serious problem now is attracting students into the field of medicine. With the rising cost of tuition at medical schools, a medical education is being increasingly restricted to the sons and daughters of high-income families. Since 1950, the number of applicants for medical schools has dropped by one-third, a startling indication that the cost of medical education is an increasing

obstacle to the recruitment of able students. A recent study showed that one-third of all medical school graduates are at least $2,000 in debt upon completion of their education, and 17 percent of these have debts of $5,000 or more.

As I said at the beginning of this talk I hope my words contribute in some part to a better understanding between your professional organization and the Democratic Party. I assure you that there is action in the Democratic Party to back up my words. Within the last month the advisory council of the Democratic National Committee has established an advisory committee on health under the chairmanship of the eminent Dr. Michael E. DeBakey, head of the Department of Surgery at Baylor University, and recipient of the Distinguished Service Medal of the American Medical Association for a brilliant 6-year project which demonstrated conclusively that many kinds of strokes can be treated surgically.

I am proud to say also that this committee includes many other distinguished members of the medical profession. Among them are three Nobel Prize winners—Dr. Selman A. Waksman, who won the award for his discovery of streptomycin; Dr. Philip S. Hench, honored for his discovery of cortisone, and Dr. Dickinson W. Richards, for a new method of diagnosing heart disease by inserting a tube into the heart.

The purpose of our health committee will be to provide searching inquiry into the health needs of this country. I am sure the work of the committee will be of value to your profession as well as to the American people as a whole.

In closing may I say that I am immensely proud of the accomplishments of the Democratic Party in the field of medicine. I believe our record shows clearly that we have searched for the real problems confronting our Nation in the medical field and that we have sought intelligent solutions to those problems.

I believe further that Democratic programs in providing medical care for those unable to provide it for themselves, in providing for medical research, in providing for more medical training, deserve the support of doctors and related professions, indeed of all those interested in seeing that there is enough good medical care for all our people. There is every reason why all of us should work together in this most important field for the common good.

The Modern American Farmer as Seen Through the Eyes of a 17-Year-Old Boy

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. BONNER. Mr. Speaker, the important subject of the American farmer is widely discussed. A significant organization dedicated to principles of sound and advanced farming is the Future Farmers of America. Recently, I had the pleasure of hearing an outstanding speech by a member of this fine group. He is Mr. Wayne Moore, a 17-year-old 11th grader, of the Chocowinity High School, Beaufort County in North Carolina. I feel Mr. Moore's statements about the modern farmer are important to all Americans and I submit the speech in its entirety for the RECORD:

Honorable judges, worthy opponents, fellow F.F.A. members, ladies and gentlemen, and guests, the topic which I have chosen to discuss with you today is "Should You Be a Farmer?"

Farmers, it seems to me, are literally the most important people in the Nation. Our very life depends upon them, for they—a mere 13 precent of the population—produce the food that keeps all the rest of us alive.

Most of us are blinded by the cartoonist's stereotype of a farmer as a slouchy, unshaven laborer with a straw in his mouth and little else in his head. Today's farmer, however, is more scientist than laborer; if he's to hold his own against the competition he'd better have not only a healthy dose of commonsense but also a fair acquaintance with economics, marketing, chemistry, entomology, meteorology, plant and animal pathology, and cost accounting.

Few men today have as much freedom of thought and action as the farmer; few have as much financial independence. Except for about 3 months a year—during seeding and harvesting time—his hours are not long, and he chooses them himself. He is no longer a manual laborer; most of the drudgery, both around the house and in the fields, is done for him by power equipment. Perhaps the best way to get an idea of what his life is like is to take a look at an avearge—not wealthy—farm today.

TODAY'S AVERAGE FARM

The House has automatic heating, electricity, three or four bedrooms, one or two baths, living room, dining room, kitchen, office, and possibly a recreation room in the basement—for the kids, mostly. It has a radio and television. The kitchen has quite a bit of automatic equipment—washer, dryer, ironer, probably a dishwasher, and certainly a huge deepfreezer.

In his office area, the farmer has a desk, file cabinets for his records, and probably a big table around which all members of the family sit when they are planning the farm's operations. This planning conference is one of the reasons why, I think, a farm is the best place in the world to create a successful marriage and bring up children.

A farm family is an economic unit: husband, wife, and children are all working together for a common goal—the family's livelihood. This creates bonds which make marriages more lasting. Children are more self-sufficient, for they play an important role in earning the family's living, and they know it. I've seen boys of 8 or 10 driving a tractor and operating $5,000 worth of equipment; they're proud of their responsibility, and having it gives them stability and self-confidence as nothing in city life can.

Outside his home, this average farmer has a shop for maintaining his power equipment, at least one tractor with its accessories, a truck, one or two cars, barn, silo, equipment sheds, and a team or two of horses and livestock, depending upon the type of farm he operates. He has a garden which provides most of the family's vegetables, plus a cow or two and a few chickens and hogs to supply other foods. If not on a stream, he probably has one or more ponds which not only water his stock, but provide family sport in fishing and swimming.

INCOME

What about income?

This depends, of course, on the size, value, and productivity of the farm, and will vary widely. However, the average net annual income for a group of about a thousand farmers recently surveyed was about $6,200 after taxes. This would have been their take-home pay if they weren't already home—and they didn't have to buy much of their food out of this.

Apart from their annual pay as such, farmers are forever investing part of their income in land, buildings, equipment, livestock, and so on. Over the years, they are often far more valuable than those of men in other occupations or professions.

According to the latest estimates, the average value of farms—including land and buildings—ranged from about $7,000 in some States to over $70,000 in others. And the Nation's farms range in size from 10 or so acres to several thousand acres. There is no set starting point for a man going into farming—nor is there any limit to his opportunities. I know men who with fairly modest starts, have grown really wealthy—even by today's standards—from farming.

A farmer has three great adversaries—climate, insects, and disease—but they are worthy enemies and a life, to be full, must have struggle. The conditions of the struggle require patience and courage, and also bind farmers together in a deep neighborliness. Almost every week in rural papers, you read that friends filled a farmer's silo when he broke his leg, or neighbors harvested a widow's crops for her. The money that can buy this sort of consideration has not been coined.

EDUCATION

How much education should you have to be a successful farmer? The more the better. As with everything else, a boy can be a successful farmer with a high school education, but his chances are much better if he's been to college. He must know enough chemistry to handle soil and fertilizers properly, entomology to combat insect pests, plant and animal physiology and pathology to produce and husband good stock and crops, economics to market his produce profitably. All this he can learn at a good agricultural college.

Generally, agricultural colleges cost less than other professional schools. A resident can go through a year at State for $900 to $950 and as with other schools, he can cut this down through scholarships and part-time jobs. (Incidentally, since World War II there has been a steady increasing percentage of city boys who are planning agricultural careers, and many who have graduated are now successful farmers.)

APTITUDE

How can you tell whether you should become a farmer? If you love the feel and fragrance of good, rich soil trickling through your fingers, you will probably learn to love the land, and this is essential to a good farmer. If you get pleasure from growing things, both plant and animal, you have another of the requirements, just as you do if you like people and are inclined to help them. Finally, you should enjoy living and working outdoors.

If you do not have these interests, you should be counseled to try another career. But if you do have them, you have a chance at a life that calls upon a man for intelligence, sweat, and compassion, and rewards him with security, satisfaction, and spiritual peace.

The Right To Quit

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, June 24, 1960

Mr. GOLDWATER. Mr. President, a very strange decision was recently handed down by the National Labor Relations Board. Although we have become

used to decisions which are rather queer coming from that Board in the past, we had thought for the past several years that the Board had regained some sense.

This decision, Mr. President, is probably the wildest of all. It is called the Bonnie Lass case. It involves a fabricating company engaged in the manufacture of sweaters.

In June of 1958 the International Ladies Garment Workers Union sought recognition among the employees, and management told them if the firm were organized it would be necessary to close.

Mr. President, later on the firm did close the business. Still later the employers decided to go into an altogether different business, the buying and marketing of products of various mills.

The NLRB has ruled that the shutdown was illegal. The NLRB has gone further and has stated that the new company has to pay to each of the employees "a sum of money equal to the amount he or she would normally have earned as wages from December 15, 1958."

Mr. President, the very interesting recital of the case is the subject of an editorial in the Arizona Republic, of Monday, June 20, 1960, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RIGHT TO QUIT

There was a time, before Government granted labor unions their present monopoly position, when the right to go out of business was taken more or less for granted. This, however, is no longer the case: In a startling decision recently handed down by the National Labor Relations Board, that right was virtually denied to a New Jersey company.

The Bonnie Lass case, as it has come to be known, involved a fabricating company engaged in the manufacture of sweaters. In June 1958, the International Ladies' Garment Workers' Union sought recognition among the plant's approximately 100 employees. The following month, 50 workers went out on strike. In December of that year, the employers decided to go out of business, and they subsequently ceased their manufacturing operation and sold their equipment and machinery. (Later, the employers decided to go into an altogether different business, buying and marketing the products of various mills, a business which required only three full-time employees.)

The NLRB ruled the shutdown was illegal, because—it said—it was done to avoid dealing with the union. Therefore, Bonnie Lass had to reimburse the employees "by paying to each of them a sum of money equal to the amount he or she would normally have earned as wages from December 15, 1958, until such time as each secure or did secure substantially equivalent employment with other employers."

What this means is that the defunct company would be liable to pay its former employes' wages for the rest of their lives in the event they were unable to obtain new employment. And if they did obtain new jobs at lower pay than that which they earned with Bonnie Lass, the company presumably would be required to make up the difference indefinitely. Nor is that all. If an employee were later laid off, after having obtained employed with another employer, he would apparently—according to the language of the Board—be entitled to back pay from Bonnie Lass for the duration of the unemployment.

The Board's decision not only is unprecedented, but it directly contradicts previous NLRB rulings. In other cases, the Board ruled only that former workers be placed on a preferential hiring list, in the event the company ever resumed operation. And in once case, where the Board found that a company discriminately shut down to avoid bargaining with a union, the Board rejected a recommendation that the employer pay back wages until equivalent employment was obtained, and instead awarded back pay only to the time when the plant closed. Earlier, a Federal court of appeals had upheld a similar Board decision, and further observed: "But none of this can be taken to mean that an employer does not have the absolute right—to permanently close and go out of business—for whatever reason he may choose, whether union animosity or anything else. No more can the (Taft-Hartley) act be said to contain any basis to assess remedial back pay beyond the date of his permanent closing."

If the NLRB ruling is upheld, it not only will mark an extreme departure from previous decisions, but it will also signal a departure from commonsense. For if the Board can prohibit an employer from quitting business, it is just a matter of time before it can prohibit a worker from quitting his job, or from going out on strike. If the United States is to face successfully the enormous economic challenges of the future, it must be as free as possible from bureaucratic restriction. And this Board ruling is nothing more than an unjust restriction which seriously infringes upon not only the rights of the Bonnie Lass employers, but upon the rights of all individuals.

Miss Frances Knight of the Passport Office

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. CANFIELD. Mr. Speaker, the Washington Daily News of Wednesday, June 22, carried two most complimentary articles on the good works of Frances Knight, Chief of the Passport Office, and I call them to the attention of my colleagues of the House, so many of whom have already paid tribute to this distinguished lady.

LIE NOMINATES FRANCES KNIGHT AS REDTAPE CUTTER

(By John F. McLeod)

Frances Knight has done such a good job at the Passport Office that she should be considered for another important job—slashing away the redtape that stands in the way of tourists from other lands wishing to visit the United States.

That was the suggestion yesterday of Trygve Lie, former Secretary General of the United Nations at a testimonial luncheon given by the travel industry for Miss Knight at the National Press Club.

Representatives of some 75 international travel firms were present to pay her tribute for, as Mr. Lie said, turning State Department's Passport Office into "a service unit for the benefit of the public at large."

U.S. VISA LAG

Mr. Lie said, however, that the United States has lagged behind European countries who have abolished visa requirements for Americans.

"It sometimes puzzles the governments of these countries," he said, "that this cannot be reciprocated here. It seems odd that the country from whence most tourists originate should be one of the hardest countries in the world to visit."

Then Mr. Lie added:

"I cannot suggest a better solution than that your Government put Miss Knight in charge of this operation. I am sure she could find a way to dispose of the redtape that now very often blocks the tourist routes to this country."

Miss Knight was presented a world globe as a tribute from industry representatives present; then she indicated she had given a lot of thought to Government redtape cutting and perhaps to the job for which Mr. Lie nominated her.

Ears perked up when she said:

IF THERE'S A WILL

"What has been done in the Passport Office could be done in virtually every public service activity, if there is the will to do it. But too frequently the will is weak, the know-how is lacking and in the final analysis it is much easier to do nothing than to become controversial by stepping on sensitive toes. * * * It is a travesty of our times that so often it is easier to get a promotion at a cocktail party than it is to earn it at one's desk."

Transatlantic air travel was up 19.5 percent for the first quarter of this year over the same period last year, International Air Transport Association reports.

WHY THEY LIKE FRANCES KNIGHT

Why is the travel industry so fond of Frances Knight?

Michael J. T. de Tarnowski, district sales manager here for Sabena Belgian World Airlines, told the News this illustrative story:

A tour conductor arrived at New York's Idlewild Airport last Sunday morning from the Middle West without his passport. His plane was to leave that night, and several dozens of tourists were depending on him to be aboard to manage their tour.

This was Sunday morning.

Sabena's passenger representative at Idlewild frantically called Mr. de Tarnowski at his Washington home. Mr. de Tarnowski called Miss Knight at her home. Miss Knight called an aid who rushed right to the office and processed the passport within an hour. The passport was safe handed by an American Airlines stewardess to Idlewild just before the Sabena plane was to leave.

Added Mr. de Tarnowski: "Every international airline man in Washington can tell you similar stories of how Frances Knight has come to their rescue. She is simply wonderful."

Unemployment in United States Too High; We Must Meet the Challenge as Forthrightly and Successfully as Have Britain and Some Western Europe Industrial Countries

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. RANDOLPH. Mr. President, the Department of Labor recently announced that employment in the United States reached an all-time high in May of this year with a figure of 67,208,000—an increase of 1,049,000 over April. While we are gratified by this develop-

ment, it must not obscure the somber facts of continued severe unemployment in many parts of the country and a national average of 4.9 percent last month.

An equally disturbing fact is that the rate of joblessness has held near 5 percent or higher for 31 consecutive months, and after each postwar recession has leveled off at a progressively higher figure.

Thus, we find persistent and too high unemployment among conditions of general prosperity and substantial industrial production. Much of this we know to be due to technological changes. But we must meet the challenge in the United States as forthrightly and as successfully as have several of the countries of Western Europe and Great Britain. In spite of the similarly of conditions of change in Europe and Britain and our country, few of the Western Europe industrial countries or the British Isles have permitted unemployment to go much higher than 2 percent. We must work diligently toward an equivalent record of accomplishment.

These are the conditions which led to the appointment of the Senate Special Committee on Unemployment Problems under the chairmanship of the diligent and effective junior Senator from Minnesota [Mr. McCARTHY]. I am privileged to report that appropriate phases of the sound work of that committee, of which I was a member, are receiving the attention of the Labor and Public Welfare Committee's Subcommittee on Employment and Manpower, of which I am the chairman. I shall have more to say on the subject of the long-range problems of manpower and employment when the report of our initial hearings is completed.

Meanwhile, I commend for the attention of my colleagues two recent newspaper articles from the Washington Post and the New York Times, both of June 19, 1960. These stories offer excellent summaries of certain salient facts of the too-high rate of unemployment which exists even after generalized recession has been overcome. But there has not been anything approaching a satisfactory solution to the problem of chronic labor surplus and depressed areas, even though both the 85th and 86th Congresses passed comprehensive measure which would have enabled such areas to engage in rehabilitation and self-development programs. The President vetoed both the 1958 and 1960 enactments.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the "Business Outlook" column from the Washington Post by J. A. Livingston and the New York Times story, "Unemployment: In a Rising Economy," by Richard E. Mooney.

There being no objection, the articles were ordered printed in the RECORD, as follows:

[From the Washington Post, June 19, 1960]

BUSINESS OUTLOOK—FIVE PERCENT OF U.S. WORKERS GO WITHOUT JOBS

(By J. A. Livingston)

Stubborn. That describes present-day unemployment. It persists in particular industries in particular places and for particular persons and reasons. That's not good. And, yet, it's a mark of progress.

This is a period of industrial and economic change. Inevitably, some industries expand, others contract. As householders and industries switch from coal to oil and natural gas, coal miners in Pennsylvania and West Virginia lose their jobs. As freight moves by truck and passengers by airplane and autos railroad employment falls. And progress proceeds heartlessly.

Displaced workers often are not readily reemployable. Business men aren't anxious to take on older men. Older people hate to move. They have their homes, their friends, their habits. So we get pernicious pools of unemployment. The saving grace is that this change has occurred during general expansion. Disemployment has been cushioned by increased employment elsewhere.

Consequently, May cannot be called merry, even though employment reached the all-time high for the month of 67,208,000, an increase of 1,049,000 over April. The previous high was last year—66,016,000.

THAT PERSISTENT 5 PERCENT

And unemployment declined 201,000 to 3,459,000. Yet, 49 out of every 1,000 persons in the labor force were jobless. And the rate of joblessness has held near 5 percent or higher for 31 consecutive months, or since October 1957, when the 1957–58 recession began gathering momentum. The high was 7.5 percent in August 1958; the low 4.8 percent in February of this year.

In the 1953–54 recession, the high was 6.2 percent, and in the subsequent recovery the low fell to 3.8 percent. The peaks and valleys get higher, a primary indication of the stubbornness of the problem.

A second indication is the unusually high number of persons who have been out of work for 15 weeks or more—920,000, or a quarter of the unemployed. Almost half of these have been out of work more than half a year.

A third indication is the Department of Labor's list of "Areas of Substantial and Persistent Labor Surplus." These are located in 24 States and Puerto Rico and include such localities as Evansville and Terre Haute, Ind.; Fall River, Lawrence, Lowell, and New Bedford, Mass.; Detroit, Mich., notwithstanding the high level of automobile production this year; Atlantic City, N.J.; numerous coal sectors in Pennsylvania and West Virginia; Providence, R.I.

WHITE COLLARITIS

The Nation is suffering from white collaritis. Once manual workers far exceeded white-collar workers. Now, white-collar workers exceed blue-collar workers. In 1940, blue-collar workers constituted 55.3 percent of the work force; in 1957, the proportion had declined to 47.6 percent; and today, it's just under 45 percent.

Manufacturing, long the hard core of American industrial activity, continues to expand, but with fewer workers. Five years ago, manufacturing accounted for 33 percent of the nonagricultural workers; today, far less than 31 percent. Such industries as steel, rubber, automobile are not employing as many persons in this prosperity as in the prosperous era of 1956–57. Railroad employment is down much more—25 percent from 1956—and bituminous employment, 27 percent.

These are high-pay industries. Not readily will workers leave them for lower paying jobs as clerks in five-and-dime stores or supermarkets, assuming the coal miner, or steelworker, or metalworker could adjust to such tasks.

LESS DEPRESSION PRONE?

As already noted, habit also causes viscosity. The older coal miner, the railroader, the steelman, the cotton spinner, whose job has progressed elsewhere, stagnates in America's pool of disutility. He's disfranchised economically by change.

A surge of the economy to new highs—a taking up of the slack—will reduce the unemployment that results from temporary layoffs. It will cut down the amount of fractional unemployment—waiting between jobs.

But it won't, unfortunately, eliminate the idleness of progress. This is, in large part, an industrial-welfare problem, which John L. Lewis, in his vast wisdom, foresaw when he set up the United Mine Workers' Health and Welfare Fund.

There's also a touch of solace.

If a high level of employment is less dependent on manufacturing, if the white-collar workers, who, heretofore, have had more stable jobs, predominate, then we'll be less depression prone. May this not be an explanation of the shallow brevity of our postwar declines?

UNEMPLOYMENT: IN A RISING ECONOMY—WHILE PRODUCTION IS AT A PEAK, AUTOMATION AND CHANGED LABOR MARKET KEEP JOBLESSNESS UP

(By Richard E. Mooney)

WASHINGTON, June 18.—The short, sharp recession of 1957–58 hit bottom 2 years and 2 months ago. Production, employment, and personal income have long since recovered the ground they lost in the slump and moved on to new records—but unemployment is another story.

In the prosperous years of 1955 and 1956, and in 1957 until the recession set in, the rate of unemployment averaged 4¼ percent. It rose to 7 percent and more in 1958. The first 12 months of recovery brought it down to 5 percent, and there it has remained. Five-percent unemployment is disturbing for two reasons:

(1) It is high. Three to four percent is probably the irreducible minimum; certainly the general objective for prosperous times.

(2) It has risen. In the late 1940's the rate changed between 3½ and 4½ percent. Two years after the 1949 recession it was down to 3½ again and went lower, with help from the Korean war. Two years after the 1954 recession it was 4 percent and did not go lower. Two years after 1958 it is 5 percent.

JOBLESS ANALYZED

What is this 5-percent unemployment?

In numbers, the Labor Department estimated this week that it was 3,459,000 workers in mid-May. They were a shade short of 5 percent of the labor force, which is the total of workers with jobs and those without but looking.

A number of characteristics stand out about those who are unemployed:

Youth: There are 5,500,000 teenagers in the labor force—only one-thirteenth of the total force. But 750,000 of them are unemployed—one-eighth of their number and one-fifth of the total unemployment. Young workers typically change jobs more often than those who have had time to become established. In the youngest bracket, 14 through 19 years of age, some of the unemployed are students who work part time or want to. Some in the May total were early summer-job seekers and high school seniors setting out for a career. And some were dropouts—boys and girls who have quit school and can't stay put.

Lack of skills: The rate of unemployment among unskilled laborers is almost 10 percent and the rate among the semiskilled is 7½ percent. By contrast, unemployment among managerial and professional workers is less than 1½ percent, and among white collar and skilled factory hands it is 3½ and 4 percent.

Color: Negroes suffer from discrimination plus lack of skills, and each of those factors probably contributes to the other. The rate

of unemployment among nonwhites is 9 percent. Among whites it is just half as much.

So much for description. How does it help to explain why, in the midst of the greatest prosperity this Nation has ever known, 5 percent of its workers are not working?

IRREDUCIBLE MINIMUM

First, let it be noted that no one is saying that in prosperous times there should be zero percent unemployed. On the contrary, it is assumed that there will be 2,500,000 to 3 million jobless in normal prosperity, largely because of constant job changing. Granting that, what accounts for the 3,500,000 unemployed today?

It may not appear that the aforementioned dominant characteristics of the unemployed are new. Basically they are not, but they reflect some significantly changed conditions:

(1) The 14-percent rate of unemployment among teenagers reflects the population boom, with the heaviest impact yet to come as more and more youths reach working age. At the other end of the age scale, with people living longer, unemployment is more frequent than the overall average, and lasts much longer.

(2) Higher-than-average unemployment among the semiskilled and unskilled reflects the fantastic technological advances of the postwar era, inspired in part by rising labor costs. The productivity of the individual workers is up. The replacement of men by machines creates more jobs for Ph. D.'s, and it may contribute to a greater prosperity that will create more jobs for everyone, but it doesn't do a thing for the men immediately displaced.

Another effect of advancing technology is the displacement of old products by new. As the military shifts from bombers to missiles, the market, for aircraft workers falls off.

(3) High unemployment among Negroes reflects no postwar phenomenon, but the current joblessness can be traced back to the labor needs of World War II when the demand brought workers into jobs from which they were previously barred. With the coming of peace many of these workers were reluctant to return to more menial jobs. And, because of automation, some of these lower jobs no longer existed.

The pressures caused by unemployment raise a big question. Is the national economy growing fast enough to provide jobs for all? At this moment, the answer has to be "No." Here in mid-1960 there is record prosperity but slow growth. On last year's record, the answer would be "Yes," The gross national product grew by a handsome 7 percent despite widespread effects of the steel strike.

VARYING GROWTH RATE

Today's "no" and last year's "yes" only illustrate that the growth rate is anything but constant. For further confusion, ask two economists what the long-term average is. It appears to be 3 to 4 percent, but that's a $5 billion difference in a $500 billion economy.

Looking backward, a fast growing labor force has been rather fully employed in most of the postwar years. Looking ahead, the force will most assuredly grow faster.

Since 1950 the national economy has grown by 43 percent, the population by 18 percent, and the labor force by 14 percent. The numerical growth was 28 million population and 9 million labor force.

In the coming 10 years it is estimated that the economy will grow by another 50 percent, the population by 15 percent, and the labor force by 18 percent. This assumes the same 28 million addition to the population, but an increased addition to the labor force—14 million.

Obviously, in an economy where productivity is rising, a 1 percent growth in production does not mean a 1 percent growth in jobs. The economy grows faster than the labor force.

PROBLEM OF MESHING

Must it grow three times as fast as the labor force, as in the 1950's? Not necessarily. It depends on what parts of the labor force and what parts of the economy are growing at what speeds.

Will the speeds mesh? They have never meshed perfectly and probably never will. The authorities agree and disagree on what to do about it.

They agree that there is room for improvement in the economic machine. Featherbedding in labor, monopoly in business and surpluses on the farm are generally deplored, if not eliminated. They agree that certain chronic disorders need relief. The very young and the unskilled need more training. Some of the skilled need retraining. Some communities are so depressed that they need outside help. Discrimination against Negroes and older workers does not vanish by itself.

They disagree on measures which each side advances in the name of faster growth. The "conservative" favors tax cuts to stimulate business and investment, and thus jobs. The "liberal" favors tax cuts to stimulate consumer spending, and thus jobs. Another "conservative" favors tariff protection so domestic industry may prosper, but his opposite "liberal" argues that higher tariffs here breed higher tariffs abroad and fewer jobs in industries which export.

Finally, and quite clearly, they disagree on the basics—whether generally higher Government spending will make the economy grow or break it, whether the exercise of restraints against inflation retards growth or assures economic vitality, and whether growth should or can be stimulated.

Sequoyah's 200th Anniversary

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. EDMONDSON. Mr. Speaker, this year is the 200th anniversary of the birth of a great American, the Cherokee leader and scholar, Sequoyah, whose statue stands in our Nation's Hall of Fame here in the Capitol.

Recently this anniversary was called to my attention by Mrs. Sidney H. Ruskin, 2663 Fair Oaks Road, Decatur, Ga. Mrs. Ruskin has eloquently summarized the contribution of Sequoyah in these words:

The year 1960 marks the 200th anniversary of the birth of the greatest of all Cherokee Indian leaders, Sequoyah, inventor of the famous Cherokee alphabet.

This Cherokee alphabet was the greatest contribution to the culture of the Cherokee Indian. Easily understood, it altered the status of the Cherokee from an illiterate to a literate people in an unbelievably short length of time. It led to the birth of the Indian newspaper, the Cherokee Phoenix, first published in 1828.

Sequoyah was granted an annual literary pension from the Cherokee government. He was the recipient of a medal from the Cherokee Council for his invention of the Cherokee alphabet. He was official emissary from the Western Cherokee to Washington. In this capacity and because of his famous alphabet, the famous oil painting was made of him by a Washington artist. He was a veteran of the War of 1812. He was an artisan who developed silvercraft to the highest level attained by North American Indians. He was the inspiration for the naming of the giant California redwoods, the Sequoias. He is commemorated in Statuary Hall in our Nation's Capitol. The noted historian, James Mooney, speaks of Sequoyah's alphabet thusly, "In the various schemes of symbolic thought representation, from the simple pictograph of primitive man to the finished alphabet of civilized nations—our own system, though not yet perfect, stands at the head of the list—the result of 3,000 years of development by Egyptians, Phoenician, and Greek. Sequoyah's syllabary, the unaided work of an uneducated Indian, reared amid semisavage surroundings, stands second."

Death of Charles W. Anderson, Jr., of Kentucky

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a beautiful editorial tribute to the late Charles W. Anderson, Jr., of Kentucky, written by Frank L. Stanley, Sr., and published in the Louisville Defender of June 23, 1960.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

CHARLES W. ANDERSON, JR., LEAVES A RICH LEGACY

"Cut is the branch which
Might have grown full straight,
And burned is Apollo's Laurel Bough
That sometime grew within
This Learned Man."

—*Marlowe, Faustus.*

There is much to lament in the sudden, tragic death of Charles W. Anderson, Jr., one of Kentucky's most talented and highly successful individuals. Death came in the flower of a steadily advancing and brilliant career which saw him rise above the handicap of color and race to a pinnacle of national fame.

Born of formally educated parents and endowed by Almighty God with unusual talents and gifts, C. W. Anderson, Jr., learned early to use them well.

He had exceptional ability at leadership and organization. His was a vivid and productive imagination and dauntless courage. He was interested not in merely narrow and selfish things but seemed always to be looking toward the wider horizons which would benefit others as well as himself. He had the uncommon faculty to gather to himself loyal friends in every walk of life from Presidents and Senators on down.

There are many roads in life which one may follow. Some lead to quicksands of tyranny and some to statesmanship. Some roads lead to individual despair and others to happiness. Many roads lead to destinations unknown. Attorney Anderson was always ready to use his legal and legislative influence to erect helpful signposts for his fellow citizens traveling along life's highways and byways. He attained the stature of true statesmanship.

He sought as a legislator to use the rightness of law to prevent the privileged and

strongest travelers from impeding the progress and rights of the weak.

He used his voice and vote to open doors of opportunity for discriminated and segregated people. He was a true liberal and sacrificed much in the cause of freedom.

From an early age Charles Anderson seemed destined for leadership. Son of a doctor and a schoolteacher, he has adorned a great family name.

A truly fine lawyer, his leadership zenith was attained in political life. Notable first: Member of a southern legislature in 1935, assistant Commonwealth attorney in 1946 and delegate to the United Nations Assembly in 1959, all attest to his rare ability and prestige.

Among many things Charles Anderson was a gifted orator. But his eloquence did not consist, as many fine specimens of eloquence do, of types and figures, elegant arrangements of words and sentences but rather of that deeply earnest and impassioned tone and manner which can proceed only in a speaker with great sincerity and thorough conviction in the justice of his cause. He seemed touched with a quality which came from beyond the greed, the pettiness, and the passing passions of the hour. Charles Anderson would not compromise with wrong nor waver on a principle. He stanchly kept the faith that was his because he knew that finally the principle of human liberty must prevail.

In the course of his dedicated professional life, Charles Anderson championed unpopular causes. He insisted on full rights for all.

The many contributions Charles Anderson made to his community, State, and Nation are too numerous for review here. But because of them, new leaders will arise in Charles Anderson's memory, inspired by his devotion, to carry the torch of true liberalism toward the final goal. Examples of his achievements and unflinching courage will be cited endlessly.

He had great faith in democracy. His life was dedicated to making it truly functional for all citizens. His compass was the law of the land, and his ultimate goal, a better life for his fellow man. Democracy to him was not for the few, not for the strong, but for the individual—every individual under its banner.

One of the imperishable yearnings of the soul of man is to live beyond the day of death. During life our departed leader created to himself an everlasting memorial. His services to his Government, and through Government to his fellow man, will go on and on. Many hereafter, because of his enobling example, will gain new inspiration to serve in the cause to which he gave his full devotion. Those who seek to emulate his deeds will constitute the most lasting memorial that can possibly be erected in his honor.

Needed: More NATO Consultation

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Jackson (Miss.) State-Times:

NEEDED: MORE NATO CONSULTATION

The Canadian desire for greater consultation among the NATO powers seems justified, even if the United States apparently has not always seen it that way.

This renewal of Canadian enthusiasm for a more united voice in important military decisions of the NATO countries was prompted, in part, by the U–2 incident. While it is true that many key officials of our own Government were ignorant of the U–2 flights, the fact that this surveillance of Russia involved, for better or worse, the NATO nations is grounds for concern by any one of them.

As the Toronto Globe and Mail puts it, "Canada and the other smaller members of NATO have to demand consultation not only in decisions of moment made by the Big Three, but in decisions of moment made by any single one of the NATO powers—meaning, particularly, the United States."

It has long been known that NATO suffers not only from the absence of clearly defined purpose, but also from proper communication among the 15 member nations. Generally its purpose, of course, is to protect the free world against any military onslaught from Russia. But in recent years its functions have gone into the political and economic arena as Moscow stretched its trade attack throughout the world.

Too, not all countries have met their military obligations to NATO. Yet those which have, including Canada, do not always know precisely what actions the Big Three—United States, France, and Britain—contemplate unilaterally in pursuit of NATO aims. More open lines of communication would appear a small step toward improving the North Atlantic alliance.—R.W.

The Connally Amendment

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. GOLDWATER. Mr. President, a short time ago I received a copy of a letter written to the editor of the Brooklyn Tablet. Because it concerns a matter of current interest, the Connally amendment, and because I feel that the points made by the writer merit serious reflection, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Brooklyn Tablet, May 21, 1960]

UNITED STATES ALREADY GONE FAR ON WORLD COURT MOVE

DEAR SIR: Recently I was prompted to do a little research in regard to one of the statements made by opponents of the Connally reservation (which reserves to the United States the right to determine what matters are essentially within our domestic jurisdiction and therefore not within the terms of our acceptance of the compulsory jurisdiction of the World Court). I came up with a surprising result.

The particular statement is that there are 38 nations now having in effect declarations of acceptance of the compulsory jurisdiction of the Court. This is quoted with understandable good faith by many advocates of repeal of the reservation and is in the U.N. publications. (See "Everyone's United Nation," 1959, p. 380.)

These declarations are set out in the 1953–59 Yearbook of the International Court of Justice. On examining these declarations I found that 21 of them are terminable on notice. The declarations for all the nations of the British Commonwealth which have accepted jurisdiction are terminable on notice, by their expressed language. These are for Australia, Canada, New Zealand, Pakistan, the South African Republic, and the United Kingdom. So are those for Columbia, Israel, Liberia, Philippines, Portugal, and the Sudan. Certain other acceptances of jurisdiction have no express provision for notice (and no unexpired term to run) and so they would appear to be terminable at will. These are for the Arabic Republic, Dominican Republic, El Salvador, Haiti, Nicaragua, Panama, Paraguay, Turkey, and Uruguay. That makes 21 nations out of the 38 which apparently can terminate their acceptance of compulsory jurisdiction upon notice; leaving only 17 nations whose adherence has an unexpired term to run or else requires some advance notice for termination (such as, for example, in our case, 6 months or in some cases 6 months before the expiration of a term of years). Two of the 17 are not members of the United Nations, so it would be correct to say that only 15 of the United Nations countries are really bound to compulsory jurisdiction.

The U.S. declaration requires 6 months' notice to terminate, and following the notice we would be vulnerable to proceedings by unfriendly nations any of which could accept jurisdiction for the purpose of bringing cases against us. The United Kingdom was too smart to get caught that way for their declaration of acceptance of jurisdiction (in addition to being terminable on notice) excluded disputes with any nation which has not filed a declaration of acceptance of compulsory jurisdiction at least 12 months before bringing the case to Court.

We are told that the United Kingdom withdrew its equivalent of the Connally reservation, as if that should move us to do likewise. However, the United Kingdom's action has little significance since they could terminate their entire adherence upon notice anyway.

So it is fair to say that even with the self-preserving Connally reservation, we have already gone farther than 67 of the 82 nations in the U.N. in acceptance of the jurisdiction of the World Court.

JOHN B. GEST.

PHILADELPHIA.

Extending Monroe Doctrine

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. FLOOD. Mr. Speaker, I call to the attention of the Members of this body and the Members of the Senate to an editorial from the Sentinel of Carlisle, Pa., in the June 16, 1960, edition. As the Members of the House will recall we passed a resolution earlier in this session to uphold the rights of this Nation in the Panama Canal and in the Canal Zone. The Senate, however, has not as yet taken any action on the House-passed resolution and the Sentinel, in the following editorial, calls upon it to take appropriate action on that highly important resolution.

The editorial follows:

EXTENDING MONROE DOCTRINE

U.S. Representative DANIEL FLOOD, of Pennsylvania, proposes that the United States extend the Monroe Doctrine to include subversion and that immediate steps be taken to prevent the Panama Canal from becoming nationalized, as was the Suez.

The House in Washington has passed and dispatched to the Senate a resolution upholding the United States rights to the Canal and the Canal Zone. But the Senate has withheld action on the resolution at the request of Secretary of State Herter. In the bargain, the executive branch granted permission some time ago to Panama to fly the Panamanian flag alongside that of the United States within the zone.

Few citizens, probably, realize that Representative FLOOD is making a valid request and one that would halt, as he put it, "the impression of weakness, timidity, and an excessive zeal for appeasement" by the administration of the nations to the south of us. With Cuba now practically a captive of the Soviet Union and lying so close to our shores, and very close to the northern approach to the canal, we can ill afford to be too kindly and too friendly with our southern brothers even though we need good relations with those of them which are Western allies.

It is all the further necessary that we exercise a stronger hand and hold our frontiers if the situation in Venezuela be studiously viewed. Venezuela, on the southern approach to the vital waterway, is a hotbed of agitation, infiltrated by Communists and others who hope to sever our relations with the free Latin countries.

With Representative FLOOD's proposal there can be little disagreement. The Senate should approve the resolution in quick order so that we can fully hold and protect the Panama Canal and the zone. They are strategic and immensely important to us. The zone was made inhabitable and the canal constructed at high cost, both in money and lives. It is unthinkable that we should share it, or allow any other nation to have even a small part in its operation.

New Recognition for Congressman Udall

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the Washington (D.C.) Post this morning handed a well-deserved editorial bouquet to our colleague, the Honorable STEWART L. UDALL, of Arizona, for his work on behalf of home rule for the District of Columbia. Motivated by the principle that in a democracy such as ours no group of people should be denied a voice in their local government, STEWART UDALL worked untold hours to try to make local self-government possible for the residents of our Nation's Capital. On top of the heavy load he has carried in the Committee on Education and Labor and the Committee on Interior and Insular Affairs, this near-miss he achieved has been indeed remarkable.

I am particularly pleased that the Washington (D.C.) Post has recognized his unusual leadership qualities—something of which his colleagues and I have long been aware. The editorial follows:

[From the Washington (D.C.) Post and Times Herald, June 24, 1960]

SALUTE TO STEWART UDALL

As District residents view the wreckage of their hopes for home rule during the present session of Congress, there is a continued afterglow amid the gloom. This represents the admiration, respect, and appreciation that many voteless Washingtonians have acquired for Representative STEWART L. UDALL, Democrat of Arizona, who led the fight to discharge the House District Committee from further consideration of the bottled-up home-rule bill. The hard-fighting legislator from Tucson might well be designated public servant of the year in the District.

Few persons who watched the struggle to move the home-rule bill onto the floor of the House realize the volume of work that was entailed in getting 215 congressional signatures on a discharge petition. Mr. UDALL took charge of this task, not because his constituents have any special interest in it, but because he believes in the principle of local self-government. Month after month he continued the toilsome process of adding signatures, sometimes under the most disheartening circumstances. He stimulated many Congressmen into activity on the issue; he encouraged local home-rule groups; with some expert help he surveyed the entire membership of the House and brought the discharge petition within a few names of the required 219 when the time limitation ran out last week.

Mr. UDALL's performance was the more remarkable because of its unselfishness. It was not his home district for which he was fighting but voteless Washingtonians who have no political rewards to offer. Let no one assume, however, that his efforts in behalf of this worthy cause have been waste motion. His sature in legislative affairs has undoubtedly grown; his colleagues have come to recognize him as a stout protagonist, a man of principle and an effective leader. These are valuable assets to any man in public life.

Of course, many others contributed to the almost successful home-rule drive in the House. To all of them the District owes a hearty vote of thanks. It was STEWART UDALL, however, who led the fight and exerted the strongest pull for the restoration of local suffrage. The gratitude of the community is nonetheless real because it has no official voice with which to speak.

Frieda B. Hennock

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. MULTER. Mr. Speaker, Brooklyn has given many distinguished public servants to her city, State and Nation. One such beautiful personality was the late Frieda B. Hennock. She was able, conscientious, and radiant with charm. Her passing is mourned by all who knew her.

I am pleased to direct our colleagues' attention to the following editorial which appeared in the Washington Post of June 22, 1960, and the column by Bernie Harrison which appeared in the Washington Evening Star of June 23, 1960.

[From the Washington Post, June 22, 1960]

FRIEDA B. HENNOCK

Frieda B. Hennock leaves a monument more substantial than marble though it exists only in thin air. As the first and only woman member of the Federal Communications Commission, Miss Hennock was among the most vigorous champions of educational television. Even after her FCC term ended in 1955, she continued her campaign for more "schoolhouses of the air" until her death on Monday at the untimely age of 55. Her efforts bore fruit. Some 257 channels—or 10 percent of the total—have been reserved for educational TV stations, and more than 50 educational stations are expected to be in operation by the end of this year. Miss Hennock was rightfully proud of her part in reserving a portion of the airwaves for purely educational purposes.

Miss Hennock was also a forthright dissenter of a kind that has been sorely missed on the regulatory agencies in the past few years. During her 7-year term on the FCC, her outspokenness sometimes vexed commercial broadcasters and grated the nerves of some potentates in Congress. If on occasion she erred through enthusiasm, her insistent demand for high standards of broadcasting seems more pertinent than ever in light of the low-frequency scandals that have jarred the airwaves.

[From the Washington Evening Star, June 23, 1960]

A LOSING FIGHT—OR WAS IT?

(By Bernie Harrison)

If there's one line which instantly evokes the frantic flavor of TV's relation to Government from the late forties to the middle fifties, it would have to be the one so often delivered by industry spokesmen (with understanding shrugs):

"It's only Frieda again."

Frieda Hennock, alas, won too few of her battles to make TV lift its sights and live up to its immense potential—but she never stopped fighting.

Her untimely passing this week only underscores the obvious; the causes for which the only woman to serve on the Federal Communications Commission fought (1948–55) can ill afford to lose a champion.

Unlike so many of the experts on TV's current woes, Miss Hennock (who served a full term on the FCC from 1948 to 1955) was right by foresight, not hindsight.

For example:

She was always for an FCC, with enough power to exercise directional control of the industry. As late as April 1955 she was telling a Senate subcommittee:

"The FCC should pursue a rigorous policy or refusing renewal of licenses of offending stations which disregard their public service responsibilities by continuing to victimize immature audiences with a concentrated and profuse deluge of crime, brutality, sadism and outright murder."

(The new FCC Chairman, you may have noted, recently asked Congress for the funds to hire monitors to help the Commission check the performance of stations.)

She was concerned with dangerous possibilities of a powerful medium improperly used as long ago as 1951, when no body was paying attention. And she distributed the blame equally. For instance:

"The overwhelming majority of educators • • • do nothing about TV."

And in distributing the blame for TV's woes, she did not overlook Congress. In May 1954, she wept as she gave the Senate a scolding:

"I will have to take my hair down and blame the Senate as much as the Commission for problems which have arisen in the television industry. • • • Senators call up and say, 'Hurry up and give us television service to our communitics and give it to us by tomorrow.' "

In April 1955, Miss Hennock was urging a Senate subcommittee to find a way of making radio and television time available without cost to the major candidates of the major political parties. Does that sound familiar?

The failure of UHF stations OK'd to function in VHF markets was no surprise to her. UHF prospects, she warned in the

early fifties, were nil if they were forced to compete with VHF's. They were nil.

And going back to the big color debate in 1950 and 1951, remember when the FCC OK'd CBS's incompatible system? Guess who dissented vigorously from the FCC majority and said the decision should be delayed until a compatible method had been perfected?

It was only Frieda again. Her proudest accomplishment, she felt, was in the fight to save TV channels for educational purposes. She said, in 1951, that 500 to 600 stations in the remaining TV frequencies should be set aside for noncommercial educational use, and she settled for 257 such reservations in the FCC's sixth report in 1952. Ours is still to be activated.

Overemotional? Extreme? Maybe. But looking back—with hindsight—one can only marvel at her restraint. I've a hunch that a number of awards for educational programing, etc., will be established in her honor—and they should be—but I think I'd settle for something more immediate. Like another Frieda Hennock on the Commission.

Our deepest sympathy to her husband, William H. Simons.

Editorial Support for Vice President Nixon's Food-for-Peace Proposal

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. KEATING. Mr. President, editorials appearing in newspapers all over the country have praised the proposal of Vice President RICHARD M. NIXON to establish a United Nations food pool in the cause of peace. It has been properly noted that funneling this project through the United Nations would contribute to enhancing the world standing of that vital institution, and would also help insure worldwide distribution of food, which is one of the best antidotes to the poison of communism.

It is my hope that most serious consideration will be given to this imaginative proposal, which can contribute not only to building peace with justice, but to diminishing America's tremendous food surpluses.

Mr. President, I want to call to the attention of Members of the Senate an outstanding editorial on this subject which recently appeared in the Rochester Democrat & Chronicle. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat & Chronicle, June 22, 1960]

TO FIGHT REDS, FILL TUMMIES

The world food pool proposal supported by Vice President NIXON may become the most powerful weapon for peace that could ever be wielded in these trouble times. Implemented by the United Nations, it could change the whole complexion of the cold war on the principle that troublemaking doesn't thrive on a full stomach.

Mr. NIXON urges that creation of the pool of surplus food to feed the world's hungry be a U.N. function. The World Health Organization is eminently fitted to administer the program. Under such auspices the program could not be ascribed to unilateral action for selfish advantage of this Nation.

The food pool is a part of Mr. NIXON'S program for a new attack on the U.S. farm surplus problem. It is not a panacea, but its humane outlook should make it a factor in any ultimate solution.

The food pool potential should not be underestimated. Communism breeds on hunger, unrest, poverty, disease. Victims fall easy prey to the blandishments of the Soviets. But communism can produce no weapon—propaganda blasts, rockets, satellites, subversive tactics—to match a full stomach. A food distribution program under the U.N. may well be more important and more rewarding than any summit conference.

Food is practical, tangible, visible, edible, healthful—it is the best friend peace could ever have.

Prosperity by Edict

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent to have reprinted in the Appendix of the RECORD the following editorial entitled "'Prosperity by Edict' Could Hurt Economy" which appeared in the Tuesday, June 21, 1960, edition of the Chicago Daily News:

PROSPERITY BY EDICT COULD HURT ECONOMY—WAGE LAWS WORK TWO WAYS

As Congress gathers momentum for the final push, the House Labor Committee has approved an increase in the present $1-an-hour minimum legal wage. The compromise version would give pay hikes to some 3.3 million workers by raising the minimum to $1.25 in three stages by November, 1963.

This method of making people more prosperous by edict has gained in political popularity since the original 40-cent minimum was raised to 75 cents in 1950, and to $1 in 1956. Many workers heretofore excluded would be brought under the law. Of these, retail clerks are the largest group.

The 1956 hike in the minimum wage gave an opportunity to gage the effect on the economy. Some price rises were immediately noted, in such industries as lumber, cotton, turpentine, and peanuts.

What could not be accurately measured was the unemployment which resulted from the fact that some workers in some industries simply weren't worth a wage of $40 for a 40-hour week. Labor leaders, stanchly confident of the humaneness of their position, advocate that any industry which cannot afford a $1.25 hourly wage be allowed to vanish.

A rub comes, however, when and if this happens. The displaced workers may compete with those in another industry, exerting a downward pressure on wages. Or they may go on relief, since society has taken the position that if they aren't worth $1.25 an hour they can't work at all, but will be supported by the community.

Those who may thus go on relief have less than when they were working at below the new legal wage, and they are robbed of their independence.

For the most part, however, the higher costs incident to the raised minimum wage are passed along to the consumer and paid without much complaint. Industries requiring a high proportion of unskilled labor per dollar for income are placed under additional pressure to mechanize.

Some economists, disliking the principle of government dictation of wages, are persuaded that the net results would be better if the Government were simply to subsidize wages in the lowest paid industries. They contend that the dislocations and the cost to consumers would be less than by fixing a floor under wages.

In theory they could be right, but in practice that method offers administrative difficulties enough to give shudders to the most determined bureaucrat. The lawmakers, in proposing 3 yearly jumps of 10 cents, 10 cents, and 5 cents, have taken note of the possibility of industrial dislocations, and allowed leeway for adjustment.

A further concession to reality is the proposed exclusion of employes whose pay comes mainly from tips.

It is ironic, in a way, that the measure is sponsored by Senator KENNEDY, Democrat, of Massachusetts, and Representative ROOSEVELT, Democrat, of California, who are among the wealthiest Members of Congress. A great many employers will contend that these two have too little knowledge of the practicalities of life, but nobody can argue that they arent alert to political realities.

Moving With the Brakes On

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. WIDNALL. Mr. Speaker, the 2d session of the 86th Congress is drawing to a close. One most important piece of legislation has not been enacted by the Congress that could have rewarding consequences for the economy.

Some time ago the administration requested that the present ceiling of 4¼ percent be lifted on Government long-term bonds. There has been ample evidence to show that by forcing the Government into short-term financing, a demand has been built up within the money markets that has caused an overall inflation in interest rates. The following editorial from the New York Times of June 18, 1960, is one that merits the attention of the House:

MOVING WITH THE BRAKES ON

The Treasury has made public the preliminary figures on the results of its first venture in the technique of advance refunding—which is to say, offering a new security in exchange for an outstanding issue that issue that isn't due for redemption until well into the future. The issue that had been chosen for the experiment by the Treasury's debt managers consisted of $11.2 billion in 2½-percent bonds issued in 1954 and due in November 1961.

In terms of reducing the refinancing task that would otherwise have had to be faced in November of next year, the operation was highly satisfactory. But if anyone had entertained serious hopes that the operation would produce any visible improvement in the maturity pattern of the Government debt (and fortunately few had any illusions on that point) these were emphatically disappointed.

It is possible to make these sweeping generalizations because the holder of the out-

standing 2½s was given a choice of surrendering them for one of two new issues. One of these was a 4-year note carrying a 3¾-percent coupon rate; the other was an 8-year bond with a 3⅞-percent rate. Holders of nearly $4.6 billion of the old bonds announced their readiness to accept the new notes; in the case of the new 8-year bond acceptances totaled a mere $321 million. Under the allotment plan announced a week ago $3.9 billion of the $4.6 billion in notes will be accepted. Naturally, the $321 million subscription to the new bonds will be recognized in full. This means that the problem posed by the November 1961, maturity of the old bonds has been reduced by $4.2 billion, or from $11.2 billion to $7 billion.

We not only know that the Treasury was unsuccessful in its effort to make a dent in its second problem—increasing the average life of the debt—but we know what and who are responsible for that failure. The "what" is the present legal ceiling of 4¼ percent on interest rates that the Treasury may attach to security issues with maturities of 5 years or longer. The "who" are those Members of Congress who have prevented the removal of this absurd and costly provision.

True, the 3¾-coupon rate carried by the new bond is well below that ceiling, but legally the ceiling is also regarded as covering the true cost of refunding a maturity issue in advance, a cost that, in the case of the new bond issues, is calculated at 4.22 percent. In short, the otherwise highly successful Treasury operation suffered from only one drawback. It carried a fresh and painful remainder that in this country the market, and not legislative fiat, decides what constitutes a fair price.

Aid to Certain Migratory Workers

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Men's Class Forum of the Riverside Church, New York, N.Y., favoring the enactment of certain pending legislation, relating to aid to certain migrant workers and their children.

There being no objection the resolution was ordered to be printed in the RECORD, as follows:

Whereas the migrant workers of America, their wives and their children, who harvest so much of our fruit, vegetable, and cotton crops, are now largely unprotected in their rights and liberties either by the Federal Government or by the State where they work from sunrise to sunset but for such short periods of time that they cannot establish residence or State citizenship; and

Whereas the crew leaders now transport these defenseless, stateless migrants from State to State and from job to job at exorbitant rates and without contracts, and have arbitrary power to exploit them: Therefore be it

Resolved, That we express ourselves strongly in favor of Senator JAVITS' bill S. 1778 and Representative KEARN's bill H.R. 5930 for the registration of crew leaders and the curbing of malpractices, and we hereby urge our Senators and Representatives to bend all their efforts to secure the passage of these bills, and also of Senator WILLIAMS' bill S. 2864 and Representative BAILEY's bill H.R. 10378 to help provide education for migrant children.

Unanimously approved April 26, 1960.

MASON OLCOTT,
Chairman, Men's Class Forum.

Providing Economic Independence for the Handicapped

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, a little over a year ago, a group of civic-minded individuals in my home district met and developed the idea that our largest city, Eau Claire, needed a place where handicapped persons could be employed. After many months and a great deal of work, a building was obtained, and six handicapped people were employed. At the present time, the Shelter for Handicapped, Inc., is engaged in many phases of light manufacturing and employs 14 people who, for all practical purposes, were previously considered unemployable.

I feel that the Shelter has not only become an asset to its community as a growing business but is doing a job that cannot be totaled in dollars and cents. This organization has taken the handicapped out of their homes and given them a chance for economic independence.

Under leave to extend my remarks, I would like to include a story about the Shelter in the RECORD:

THE SHELTER FOR HANDICAPPED, INC.

The Abadan Grotto of Eau Claire surveyed the possibility of a cerebral palsey workshop in this community. The outcome of the survey showed a need for a multiple-handicap workshop, which led to a pilot project. The facilities of the McDonough School were offered, and the Abadan Grotto furnished transportation during the 3-month period.

Mrs. Ernest Affett, together with Mrs. Theodore Maxymof and the grotto auxiliary, evaluated the work possibilities of the handicapped adult. As this evaluation progressed, members of other civic groups and social organizations became interested, and the need of a sheltered workshop type of industry was realized. This realization brought about the official organization now known as the Shelter for Handicapped, Inc. The board of directors was formed of people of the community in many walks of life interested in aiding the handicapped.

The Shelter for Handicapped, Inc., is a nonprofit, nonsectarian, nonaffiliated organization whose main purpose is to provide sheltered workshop type of employment, giving the handicapped adult a sense of security, dignity, and usefulness.

A fundraising campaign was held in September of 1959 to provide the necessary funds to purchase housing for the Shelter. The lack of sufficient funds could not stop the desire of volunter workers in their aim. The Shelter was started on a "wing and a prayer," with more of the latter than the former in evidence.

The building at 115 Ninth Avenue was obtained and work began with four handicapped employees on November 23. In a few days the number increased to eight. A very happy Christmas rush began, and hands that had never been employed before were now producing items such as litterbags, ceramic items, stationery imprinting, and machine sewing.

Donations have been made by various individuals and groups in the forms of cash, labor, and equipment. Volunteers have spent many hours of their time in aiding the handicapped at the shelter, with only the handicapped receiving a wage.

The ultimate aim of the Shelter is to evaluate and provide experience to those who can be employed in outside industry, to provide a sense of security to those who are afraid to return to their job due to untimely setbacks, and to provide a job to those who cannot be employed in any other competitive industry.

The Shelter for Handicapped, Inc., is a community project worthy of the support of the entire community. It is the only sheltered workshop of its kind in the entire State and one of which Eau Claire can be very proud.

Social Security Amendments of 1960

SPEECH
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes.

COMMENDATION OF CHAIRMAN MILLS, HOUSE WAYS AND MEANS COMMITTEE

Mr. DERWINSKI. Mr. Chairman, the purpose in my remarks this afternoon on the subject of the 1960 social security bill is not to reiterate the words that were uttered by many Members during the discussion of the legislation, but I feel that it is proper to pay tribute to the distinguished chairman of the Ways and Means Committee, the Honorable WILBUR D. MILLS, whose dedication to the soundness of the social security system protects the citizens of this country from the irresponsible measures advocated each election year, which if enacted would bring actuarial ruin to the social security fund.

Mr. Speaker, I especially wish to commend the chairman and the members of his committee on the soundness of the provision which eliminated the disability benefit provision to disabled insured workers 50 and over, since statistics show us that wage earners under 50 who are disabled very often have families in need, and actually are more in need of this legislation than only those who had been previously covered.

And surely, the provision for medical care for older folks in need is a practi-

cal approach to a problem designed to assist those needing this protection without impairing, as I indicated earlier, the basic strength of the social security fund. All of us recognize the responsibility of our society to provide for people truly in need, but we must resist the attempts of the socialistically inclined Members who would force compulsory Government regimentation upon our medical profession and our citizens, to the detriment of all concerned.

Mr. Chairman, may I repeat that Chairman MILLS is entitled to our respect and admiration for his constant interest in maintaining the fiscal integrity of the Federal Government.

Also, I would be remiss at this point if I did not remind one and all of our obligation to point out to the citizens we represent that you never get something for nothing from Government.

Tidelands

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks I wish to present for the consideration of the Congress, House Concurrent Resolution 45 of the Louisiana Legislature by Mr. Gibbs. This matter is of vital importance to the State of Louisiana and I am sure the Members from all States are interested in fair and equitable treatment. The resolution is as follows:

HOUSE CONCURRENT RESOLUTION 45

Whereas the recent decision of the Supreme Court of the United States denying rights of this State to its lawful wealth from the production of oil from submerged offshore lands has resulted in the application of one rule to other States and a different rule to the State of Louisiana, which is clearly discriminatory and based in law upon the justification of ancient treaties which never contemplated the production of minerals from such areas; and

Whereas the result of the drawing of one set of seaward boundaries for the States on the coast of the Atlantic and Pacific Oceans and of another set of boundaries for those on the coast of the Gulf of Mexico with each of the States upon the Gulf of Mexico having different boundaries, has been the allowance to all of the petroleum producing States except Louisiana of all or at least the major portion of the coastal production areas; and

Whereas this discrimination against one of the States is unwarranted in a Nation comprised of States of equal rights and dignity; and

Whereas this particular discrimination against the State of Louisiana causes a discriminatory reduction of revenue to the one State out of all of the petroleum producing States which has the greatest expense to afford roads, schools, law enforcement, judicial process, and the other benefits of State and local government to the petroleum industry and the citizens engaged in making their livelihood therein because of the swamp and marsh coastline of the State which extends across virtually the entire coastline for an inland depth in many areas of as much as 100 miles; and

Whereas the economic burden upon the State of Louisiana of providing the normal and necessary State and local governmental facilities for the petroleum industry and its employees and equipment, such as roads, schools, and law enforcement, is greatly in excess of the burden of other coastal States having a more accessible coastline; and

Whereas the loss of revenue from petroleum production from the area which other States are allowed to receive, will necessitate the State of Louisiana being unable to provide the necessary facilities for assisting the petroleum industry to expand and develop the petroleum resources of our tidelands, with the resultant loss to the entire Nation of the benefits to be derived therefrom: Therefore be it

Resolved by the House of Representatives of the State of Louisiana (the Senate thereof concurring), That the Louisiana Senators and Representatives in Congress are hereby urged and requested to take all measures within their lawful powers to obtain the restoration to the State of Louisiana of the revenue derived from offshore mineral development and operations which other coastal States are allowed. Be it further

Resolved, That copies of this resolution be sent to each Louisiana Senator and Representative in Congress.

———,
Speaker of the House of Representatives.

———,
Lieutenant Governor and President of the Senate.

Centennial of Theodor Herzl

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. CAHILL. Mr. Speaker, May 2 Marked the centennial birthday of Theodor Herzl, founder of the Zionist movement, prophet and martyr of modern Jewish nationhood.

The cause to which he gave his life was the achievement of a national home for the Jewish people who suffered persecution and oppression in lands less fortunate than ours. He inspired millions with the vision of a Jewish State restored to the family of nations. Through the Zionist organization which he created, Herzl's vision came to realization in the establishment of the Republic of Israel, whose 12th anniversary was also celebrated on May 2. In the wake of the terrible holocaust which decimated European Jewry in the Hitler era, there has arisen a vital center of Hebrew civilization in which the ancient Judaic concepts of justice and brotherhood are fused with Western ideals of equality and democratic freedom.

The name of Theodor Herzl will be enshrined in the hearts not only of his own people but of all men who rejoice in the doing of justice and the redressing of wrong.

In taking note of the centennial it is fitting to record our tribute to the memory of Theodor Herzl and to convey our felicitations to the Zionist Organization of America, which in the United States has carried aloft the banner of Herzl ever since the founding of the World Zionist Organization over six decades ago.

Defense Procurement

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD, an editorial appearing in the Washington Star of Friday, June 24, 1960, entitled "Far From Satisfactory" which discusses the pending action of the Congress on the defense appropriation bill.

The Congress over a period of years and through two different administrations has endeavored to bring about integration of the procurement and supply activities of the Department of Defense. The 3-percent cut of the procurement appropriation made by the House has a meaning beyond that of the cut itself. The meaning should be clear to the military departments that feet dragging and delay in making necessary reforms in this area will not prevail.

The editorial follows:

FAR FROM SATISFACTORY

In approving recommendations of the Senate Appropriations Committee on the defense budget, the Senate also has given the Pentagon a well-merited rebuke for its lethargy in consolidating supply and procurement services. As the Senate committee has pointed out, the progress of the Defense Department in reducing costly waste of dollars intended for weapons and other equipment is "far from satisfactory."

The overlapping and duplication of services in the fields of material buying and distribution have been strongly criticized in the past by the Hoover Commission, the Controller General and several congressional committees. Now the Senate appropriations group has added to the chorus of condemnation with this comment: "The committee notes with grave concern the numerous and admitted examples of waste and duplication in defense procurement which have been reported to this and other congressional committees. The audit reports of the General Accounting Office show that these are not isolated examples; rather they underscore the urgency of integrating the supply systems and service activities of the military departments—repeatedly expressed as the intent of Congress. * * * The committee calls on the Department of Defense to take immediate and vigorous steps to integrate its procurement and supply service activities in order to provide maximum utilization of the defense dollar."

The House, as a spur to such consolidation, cut the procurement appropriation by 3 percent—pointing out that much more than this amount could be saved by an efficient and effective merger of buying services. The Senate restored this cut—but, in effect, has backed its committee's demand for a prompt end to waste. Whatever the final action by the conferees, both Houses of Congress now have served notice that they expect drastic supply reforms—reforms which it has been estimated could save the Department more than a billion dollars every year. The savings could buy a lot of additional security for America.

Summits and Politics

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. DAGUE. Mr. Speaker, I am sure that every American citizen regardless of party is relieved that our President is back on American soil. And by the same tokens we have only regret that Mr. Eisenhower was pressured beyond his better judgment into embarking upon a global tour, even though his visits to foreign shores were for the purpose of persuading a troubled world of our peaceful intentions. What does amaze us, however, is the critical clamor now coming from certain Democrats whereas a few short months ago they were insisting that a summit meeting was imperative and implied that if Ike failed to cooperate the issue would be raised in the upcoming election.

In that connection my favorite columnist, David Lawrence, in a recent statement brought into focus the fact that a certain influential Senate Democrat, on January 30, 1959, criticized the administration for appearing unwilling to negotiate the issues dividing East and West. This same Democrat, according to Mr. Lawrence, also declared that the United States should be willing to explore the possibilities of arriving at some understanding with Red China that might lead to its recognition. And then Mr. Lawrence further reports that this same Democrat Senator became so enthusiastic about summit conferences that in March 1959 he declared that they should be held at least twice a year and on June 7, 1959, remarked that he could not see any great reason to fear a summit and talk things over. In the light of these Olympian observations from such an exalted Democrat authority the present criticism coming from that camp seems to smack of insincerity and carries with it the political tinge which I suppose we must tolerate in an election year.

But as Mr. Lawrence observes in that same article—

> The real concern, therefore, in international relations today—a disease that is eating away at the vitals of the democracies of the West—is interparty politics.

And while we are on politics we may as well dispose of a recent statement by Columnist Ralph McGill to this effect—

> The GOP farm policy is a liability. It's foreign policy is a shambles. The major asset of the Republican Party was that of one which would keep the world at peace.

Taking these observations one at a time, what farm policy is he talking about? Does he refer to the 90 percent support program sponsored by the Democrats under which the farmer took his greatest losses except during the periods of war when a lot of Americans were getting killed? Or does he mean the farm policy of lower supports and reduced controls advocated by the President which the overwhelming Democrat majority in both Houses have steadfastly refused to enact into law? Sure, our present farm policy is a liability, but it is a liability handed down from previous Democrat administrations.

And as for our foreign policy—here again we have an inheritance that was bequeathed to Ike by his Democrat predecessors. The greatest misfortune to befall the GOP was that it had to pick up the pieces left by the debacle at Teheran, Yalta, and Potsdam, while at the same time undertaking to contain a police action let loose by an inept Democrat Secretary of State who declared to the world that we had no intention of defending the Republic of Korea.

Finally, as for keeping the peace—in this era of the cold war an administration that can keep Americans from being fired upon in anger by other nations cannot properly be said to have failed to maintain the peace—albeit an uneasy one. And when we remember 1917–18, 1941–45, and 1950–52, we can only conclude that our Democrat critics are not talking from a position of strength and that from their previous record they are not the people that can be depended upon to lead us to that longed-for day when nations shall beat their swords into plowshares and their spears into pruning hooks.

A Veteran Judge Speaks

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on May 17, 1954 the Supreme Court handed down its now infamous edict seeking to bring about the mixing of the races in public schools. In essence that decision was nothing more than an arrogant, naked grab for power, a brazen attempt to usurp legislative authority, and an effort to unsettle accepted law which has been in force for decades.

In a recent issue of Southern Advertising & Publishing, Mr. Garland B. Porter, editor and general manager of that magazine published an editorial entitled "A Veteran Judge Speaks." Mr. Porter's remarks are pertinent, direct, timely, and clear as are the remarks of Judge Jule W. Felton whose statement serves as a basis for this editorial. This speech and the editorial indicate that informed and thinking people have not been deceived by the Court's attempt to rewrite the law in clear violation of its constitutional authority. Pursuant to unanimous consent I insert this editorial herewith:

A VETERAN JUDGE SPEAKS

(By Garland B. Porter)

The racial strife and political debates that were triggered by the "outrageous" (quotes are from the late Senator Walter George of Georgia) edict of the Warren Court on May 17, 1954, took a most interesting turn June 7 when Chief Judge Jule W. Felton of Georgia Court of Appeals stated that the Warren court on that day exceeded its constitutional authority when it ordered mixing of the races in public schools.

Speaking before the Georgia Lions Club convention, Judge Felton, a veteran of 41 years at the bar, said: "Separate and equal facilities is the law of the land, and those opposing the 1954 decisions are not misguided, ignorant, intolerant radicals." A very potent statement and fully justified by the Constitution itself and all precedents dated prior to the 1954 edict. The veteran judge stated further:

"The decisions of the Court acting beyond the scope of its power are wholly and completely void and are entitled to no respect and obedience anytime or anywhere."

The function of the Supreme Court is to interpret the law. That it can willy-nilly and by whim upset a whole line of decisions and interpretations without any intervening change of statutes or constitutional amendments is a gross abuse of power. This is true because once a constitutional decision is made, all statutory process must fall into line; the Supreme Court was designed to be and has fulfilled the function of checking after legislation, not creating it. Otherwise its only true function is nullified. The appearance of Warren on the Court did not alter this fact. To allow him to initiate and pursue a different process is to weaken the national system.

Judge Felton speaks in the true tradition of a judge, not a lawmaker. No judge can change the law of any case before him; and if any ruling he makes is contrary to law, it is thrown out. There must be a top rung to every ladder, and our Supreme Court is that rung. But this does not mean it is free of restraints of the law itself. The Warren Court did not simply rule on the case of Brown et al., it rewrote the accepted law and violated all precedents. To force mixing of the races is something wholly outside the meaning, purpose, and justice of the law of our land, and no Supreme Court can force it without invasion of the rights of the individuals.

Growthmanship

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. WIDNALL. Mr. Speaker, it is true that we are living in critical and perilous times, when through the impatient act or insane will of a dictator, a spark can ignite the world and destroy civilization as we know it. Because this is general knowledge, it has been fashionable to criticize our Nation's growth as compared with that of Russia.

It is my belief that an editorial in the Wall Street Journal of June 24, 1960, places such views in the right perspective. The editorial follows:

GROWTHMANSHIP

The cult of growthmanship, as most of our readers are aware, is embraced by edgy people who see in every new Russian economic statistic that surpasses our rate of growth a sign that Mr. Khrushchev's threat to bury us economically is almost upon us. Missionaries of the cult hold that unless our Government forces growth so that we match or surpass the Russian rate we'll soon be overwhelmed.

Well, the basic fallacy in this sort of reasoning was shown the other day when two gentlemen we know were discussing the sim-

ultaneous launching of two U.S. satellites with one U.S. missile.

Said one: "I see where we now have 11 satellites orbiting the Earth and 2 orbiting the Sun, while the Russians have only 2 orbiting the Earth and 1 orbiting the Sun."

"Ah, yes," said the other. "But just think how much greater the Russian rate of growth will be when Moscow puts up just one more satellite."

Pharmaceutical Group Opposes H.R. 10597 as Amended

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SANTANGELO. Mr. Speaker, as a member of the Appropriations Committee, Subcommittee on the District of Columbia, I am keenly interested in the regulations and the operations of the District Commissioners. The Pharmaceutical Society of the State of New York has been interested in raising the standards of the practice of pharmacy and protecting their economic interests. The pharmaceutical profession is one of the hardest working professions in our country and has demonstrated its responsibility and trustworthiness.

Recently I received a letter from the secretary of the Pharmaceutical Society of the State of New York, my old friend, Nicholas S. Gesoalde, who has complained bitterly of the rewriting of the proposed Pharmacy Act, H.R. 10597, without consultation and advice by the pharmacists. Consequently, the Pharmaceutical Society has withdrawn its support of H.R. 10597 and opposes the amended version because of the harmful consequences to the pharmaceutical trade and the bad effects it will have upon the public.

I am setting forth a copy of the letter which the Pharmaceutical Society of the State of New York has forwarded me in connection with this legislation, H.R. 10597:

JUNE 21, 1960.

Hon. ALFRED SANTANGELO,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: The Pharmaceutical Society of the State of New York has been informed that the proposed Pharmacy Act, H.R. 10597, has been completely rewritten by the House of Representatives subcommittee with the consent of the District of Columbia Commissioners. The revision of said bill was drafted without the advice of the District of Columbia Pharmaceutical Association, or other pharmaceutical representatives. This change from the original bill would destroy pharmacy as a profession. Professional practice is reduced to a mere trade which has routine licensing.

The rewritten bill will allow complete elimination of the pharmacy board; provides loop holes for prescription dispensing by nonpharmacists; facilitates a store representing itself falsely as a pharmacy; and makes pharmacists criminally responsible for acts which others may perform with impunity. As a matter of fact, conditions under this bill would be worse than the districts laws of 1906.

The Pharmaceutical Society of the State of New York, representing more than 6,500 retail pharmacists condemn the substance, or lack of substance, of the rewritten bill and deplores the procedure of ignoring pharmaceutical council in drafting a bill concerned with responsibility on pharmacists in public health. For this reason, the Pharmaceutical Society of the State of New York must withdraw all previous support of this bill.

Yours very truly,

NICHOLAS S. GESOALDE,
Secretary, Pharmaceutical Society of the State of New York.

Africa on the Move

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. MUSKIE. Mr. President, on March 22, March 23, and March 24, Mrs. May Craig published three columns in various Maine newspapers.

In the first, she described to us Victoria Falls, and the changing mores of Africa.

In the second, Mrs. Craig describes the display of mercy for wild animals in the construction of the Kariba Dam on the Zambezi River.

In the third, she tells of the vast wave of nationalism now being felt throughout Kenya.

Mr. President, I ask unanimous consent to have these three articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—DUCKTAIL JUVENILES COME FROM COCKTAIL PARENTS

(By May Craig)

VICTORIA FALLS.—The Victoria Falls were found by David Livingstone, Britisher, in November, 1855. They are the greatest, most stupendous, beautiful falls in the world. At the falls, the Zambezi River is 1,860 yards wide. It falls into deep rocky, winding gorges with terrific rapids. The natives call the falls "The smoke that thunders," because the spray and mist from the incredible crash of waters down steep rocks to the bottom of the gorge, rises 2,000 feet into the air, thick with rainbows. The thunder of the water can be heard from my hotel room and I can see the mist rising into the sky. It is like the pounding of heavy surf, but steady. Lying in bed, in this comfortable old (1905) British hotel, under a white mosquito net, one hears it and thinks awesomely that this has gone on since, as Kipling says: "The world was so new and all." There is an extraordinary engineering feat in the bridge that is built across the second gorge, so one can look to the roaring rapids, and then into the rainbow mist to the water falling over the cliffs of black rock.

Some of the southerners in our group had an argument with Mr. Sugg against the restrictions on voting here, a complex graduated system basted on literacy, income and property, which keeps most blacks from voting. "We get blamed for voting restriction in the South," said one editor from South Carolina, who didn't take any stock in this "partnership concept."

Today we visited a model native village, just as they have been for centuries, with huts, dancing grounds, prepared by the Government as an exhibit, with natives in the huts making pots, with bellows of skin over a wood fire, making spears and bows and arrows and ornaments. This is like a living museum.

Since we have passed our half-way mark, the group is falling apart. Everybody has lost or left behind their belongings; suitcases have broken hinges and are strapped or tied with rope, clothes are bedraggled, nobody has been really ill. Friendships and feuds have developed, we never remember the kind of money we use because we move every few days. Getting airmail stamps for post cards to home is a major project. One editor is sending post cards from every place we stop to everybody on his papers. Others have lists addressed at home and brought along on typed stick-on tabs, to all his relatives and friends. Mail for a post card from most of these countries is 25 cents, plus the cost of the cards, more than at home.

While some problems differ, between United States and Africa, there are some that are common—including juvenile delinquency. In Johannesburg, Union of South Africa, they were having a parent-teacher meeting about the "ducktail" juveniles, so-called because they wear their hair in a ducktail long behind on the neck. Psychiatrists talked to the parents. "Ducktail children come from cocktail parents," they said. They said parents must learn to live with their children. Don't try to force religion on your children unless you live the religion yourself. "It's like measles—you can't give it unless you have it." "If your child is stubborn, with a perpetual scream, let him carry on. He may be more patient than you—but you are bigger and if you can't stand the noise, walk out of the room."

Papers in Africa are full of tidbits about Princess Margaret getting married, especially since his father was twice divorced and he has three stepmothers, in view of all the fuss about Margaret marrying Peter Townsend—forbidden her because he was divorced, though the innocent party. Elvis Presley is in the papers, pictures and stories. Comment here because new budget in Union for social aids and pensions gives no increase to low income people and Africans. The whites get increase of 10 shillings a month; 2 shillings for colored; nothing extra for Africans. Provincial Commissioner Sugg defended the voting regulations here by saying they apply to white and black the same, only most black cannot make the literacy, income or property conditions.

In our country it is so well populated, standards of public health are high, we are rich, we do not have hordes of people in the almost savage stage, so we do not have some of the problems they have in this vast continent. Malaria is licked around the cities; even here in this comfortable hotel the screens are tight, set in small metal panels and we sleep under mosquito nets. There is a horrible thing called bilharsis, an infinitesimal parasite that lives in the rivers. Get wet, even sometimes by a few drops on the skin, and there is a slight red spot, the beast burrows in, roosts in the liver, kidneys and other vital parts and literally eats your insides out at his pleasure. Doctors and scientists are working on this, but have not licked it yet.

Maine housewives will be interested in the way they serve fresh, small, sun-ripened pineapples. They cut the top off for a lid; slice around the inside with a sharp knife, take it out whole, slice it, and put it back in the order of slices, so they fit, put the lid on, chill it and bring it to you at the table whole.

AFRICA ON THE MOVE—AN EXTRAORDINARY DISPLAY OF MERCY FOR WILD ANIMALS

(By May Craig)

VICTORIA FALLS.—There is a kinship born of unselfish kindness, mercy, justice. In

building the first section of the great Kariba Dam on the Zambezi River, upstream from the Victoria Falls, they created the largest manmade lake in the world—not yet filled. The rise of the waters in the flooded areas left innumerable islands with wildlife on them, gradually starving as the islands grew smaller and smaller. The wild game rangers set out to rescue them. Blacks and whites worked together from dawn to dark, sleeping in mosquito net tents in the bush and jungle at night, roaming in waters in launches, large and small, with a small plane overhead to help spot the animals, which ran about in terror.

Catching them was in incredible task, they showed us a colored movie of part of it. Some of the animals, such as the sable buck, weigh 500 pounds; there was the mean wart hog with his sharp, curved tusks, poisonous snakes, little things like turtles and the babies.

Almost naked, with boots on, they roamed, swam, and watched. Some of the animals were caught as we catch young steer for branding in the West, with ropes. They set up great strong rope nets across an island, beaters ran the animals pell-mell into the nets, with drums and gongs and stones, and other men were behind the nets to run out and tie them up while they were caught in the nets.

This tying-up was dangerous, some were so frightened they had to be given injections of tranquilizers so they could be carried in the boats to the mainland. Some died of fright, they had no way of knowing this was an act of mercy to save them. There was one rhinoceros—the picture showed it—which was even more dangerous because frightened. It could have swam to the mainland, but every effort to make it go into the water failed. It kept charging its would-be rescuers, and so they left it: "Victorious—but to die."

Many of the various deer could swim to the mainland from the less-distant islands, but had to be guided. The males would herd the females and the babies and sometimes the launches were able to get on each side of the line of deer and guide them, helping those who were exhausted. If you think getting snakes and warthogs and biting, kicking animals into bags and boxes to load on the launches was child's play, you should have seen that movie. With the water rising every day, each day was worse. It is the most extraordinary act of mercy to dumb animals I ever heard of. It will be a bond of kinship forever for the black and white men who worked on it—still are. It may help the "partnership concept" which the British hope for here. They hope for industry from the dam—it was washed out twice by floods while building—OK now.

Climbing around the various edges of the falls is awesome and somewhat dangerous because the clouds of spray fall on the ground and make mud. They do not have any railings of any kind. Paths of many feet show the best spots to view the Devil's Cataract, the Boiling Pot, the terrible smooth rush of the river towards the falls, the white water as it hits rocks and islands, then the fall, twice as high as Niagara. Often the smash on the rocks at the bottom of the first gorge cannot be seen for the mist and rainbows. This fall into a gorge is a fearsome thing. There are several gorges in sharp curves like several letter S's. One has to wear galoshes and raincoats and bonnets to follow along most of the cliff edges because the spray falls like rain. Then into the Rain Forest, with great ancient trees, jungle ferns as tall as trees. It is all left as it has been since time began; if a tree falls, they let it lie; this is nature as it always was.

In the afternoon we went upstream by bus to take a boat to the calm Zambezi, far from the falls, with a pull only at floodtime. We went in two motorboats because we are so many, and a half dozen officials, and our consul and rangers went with us. I was in the lead boat; we saw crocodiles sunning on sand banks, innumerable birds, including the cormorant which stands on the shore, wings spread, ready to take off if it sees a fish, its long neck and sharp beak stretched out. Wild tropical trees and flowers and fruits along the way. We went to a small island where a clearing had been made for visitors. The guide and a native had brought a kettle and clean water, built a small fire over a grate, with twigs and bits of paper and made tea. Monkeys came down from the trees to watch, snatched a pack of cigarettes right out of one lady's handbag. They had brought plastic cups and a can of sweetened evaporated milk. It was too fantastic for words. We worried about the other boat not coming. Then at a small landing across the river we saw a man waving. Our guide and boat went over and did not come back. We felt marooned.

An hour later he came back with the rest of the group. Their boat had sprung a leak; they had managed to get to shore, stop a man in an auto on a nearby road, and he had brought the message to the small landing on his side and waved to us. Everybody was all right—but it was lucky the man in the auto came by—although our guide was going back anyway, when they did not come. This is life as a reporter visiting Africa. We are burned black by the African sun. There is the strangest combination of civilization and savagery, jungle and boulevard, movies and fighting tribes, with spears and faces daubed with colored muds, blacks unprepared for freedom but wanting it, whites hanging on by different methods.

Africa on the Move—Intent To Be Free Is Almost Savage in Kenya

(By May Craig)

Nairobi.—It is hard to remember that this is the land of the Mau Mau terror of 1957–58, when fanatic members of the Kiwuyu tribe swore brutal, sadistic, obscene oaths in jungle nights, facing sacred Mount Kenya, the death oath against the white men. Nairobi is a handsome city. We are staying in the new modern Stanley Hotel. At Government House this morning we met British Gov. Gen. Sir Patrick Renison and his Cabinet, sitting around a long, polished oak table, in red leather chairs with E II R gilt emblazoned on the backs—Elizabeth II, Regina. We walked on polished parquetry floors. Outside were the beautiful English gardens that the British carry with them round the world.

This year Kenya will get its independence, decide whether to stay in the Commonwealth with Elizabeth Regina as their head. Most of the black Kenyans (nearly a hundred to one white man) prefer to be a republic within the Commonwealth, as India is. This independence comes sooner than expected by anyone—in London, a few weeks ago they were talking of 3 to 4 years. But the passion for freedom now has taken hold of Africans as they see other African people getting freedom now—the Belgian Congo, nearby, to be free in June—perhaps in the Commonwealth as is Ghana, for the present.

Sir Patrick had most of his Cabinet sitting with him to answer questions in their field—it was sign of the times that his Minister of Housing is Musa Amalemba, only African minister in the government; and C. B. Madan, Asian minister without portfolio, one of two Asian ministers in the government. There are many Asians, Indians, Arabs in Kenya and they side with the African cry for freedom, but these ministers are more moderate than, for instance Tom Mboya, head of the Peoples' Convention Party and the Kenya Federation of Labor and one of the leaders of the Kenya independence movement. He is a friend of Jomo Kenyatta, who led the Kikuyu Mau Mau, was jailed for 7 years and is still in detention. Mboya is of a different tribe, the Luo, and was not in the Mau Mau horror, but he believes in Kenyatta as the great Kenya leader, that he should be allowed to come back into Kenya public leadership.

There is no doubt that when Kenyan blacks get control of the government, Kenyatta will be prominent, if he does not drink himself to death first. It would be better for his people if he did, because Mau Mau would destroy all foreign confidence in Kenya black government—and blacks cannot make a go of it, unless they have foreign capital and knowhow.

Amalemba belongs to the New Kenya Party, to which Madan the Indian minister belongs and also a Britisher, Michael Blundell, who believes that it is inevitable that blacks shall govern here, hopes they are sincere, and that whites can live peacefully and honorably here under black rule. There is another rightwing European party which is reactionary and separatist and has no chance of living.

The schools here are segregated, between European and non-European, though not the colleges. Segregation must go, said Tom Mboya, who had a press conference with us. Amalemba and Madan said: "Not yet." Said Musa Amalemba: "It would be difficult and unfair to put the great majority of black children in the white schools now. There is the language barrier, they do not have the preparation to keep up with the white children, their parents are mainly illiterate and could not help them." Mr. Madan agreed.

At the U.S. Information Service downtown office we had an off-the-record talk with our consul, Charles Withers, then Mr. Mboya and then Blundell. When Blundell came back recently from the London Conference on a constitution for Kenya when it is free, he was greeted by a shower of silver coins and cries of "Judas" from the whites who said he had betrayed them. Sir Patrick said: "Nobody got everything they wanted." But the blacks of Kenya are going to get freedom probably this year, and Mboya was frank to say this constitution, even if accepted as basis for an election, is only an instrument of progress and will be rewritten, without the guarantee against expropriation.

As the Dutch in the Union of South Africa and the Belgians of the Congo foresee what would happen to them under African control, so did the Governor General and his Cabinet—so did Prime Minister Macmillan who on a recent visit to the Union warned that "the wind of changing times" is blowing across Africa. It will be a hurricane unless the colonial powers agree to independence for Africans much sooner than they thought—and sooner than the Africans are really capable of running their own affairs.

"They know they cannot do with us," said Blundell optimistically. "They can't run the country without us. I believe they will create a climate in which we will stay and work." He admitted whites may become "second class citizens," when the blacks are in complete control. That standards of living will go down for the whites. "But we never did live as well as you Americans. And I find educated black Kenyans who want to live as well as we do."

In this beautiful modern city, it is hard to remember the vast expanses of this country, much of it empty, the seething, almost savage, intent to be free, especially among soldiers of the last war who saw the white world.

Worldwide Conference Fund

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the Oregonian for June 19, 1960:

OREGON'S CONGRESSMAN PORTER SEEKS $300,000 FOR WORLDWIDE CONFERENCE FUND

(By A. Robert Smith)

WASHINGTON.—Representative CHARLES O. PORTER, Fourth District Oregon Congressman, is looking for an angel—any peace-loving philanthropic organization with $300,000 to spare will do—to finance an international conference of parliamentarians.

The Rockefeller, Ford and Carnegie Foundations have all declined with regrets. Others have yet to be heard from.

Cyrus S. Eaton, the Ohio industrialist, has donated $1,000 to help arouse interest in the idea of a meeting of parliamentarians from most of the world's countries who would meet here in Washington. PORTER has used Eaton's donation to hire a man, Tom Blake to prepare for the conference by sending letters about it to prominent political figures throughout the world.

As PORTER envisions it, this conference would break down into small groups and deal with such knotty international problems as improving international courts, revising the U.N. Charter, plans for disarmament, prevention of war by miscalculation. It would be under the auspices of the World Parliament Association, American Bar Association, United World Federalists and the Members of Congress for World Law. The State Department has endorsed the general idea.

Purpose of the conference would be to focus attention on these problems, to muster public opinion in favor of negotiations, to spread the concept of governments settling disputes according to international law.

PORTER would like it to be held next spring, if some means of underwriting it can be secured. The estimated cost of transportation, lodging and other arrangements, he notes would be far less than the cost of one missile.

The Oregon Congressman, who has attended numerous international conferences in his 4 years in office, concedes that he strongly favors this method of seeking rapprochements between East and West. Said PORTER:

"I don't know any other way. If man's reasoning power is going to save him, we have to do as the old preacher said. 'Let's come reason together.' "

He noted that President Eisenhower, in telling the American people about the breakup of the Paris summit meeting, said, "We must continue businesslike dealings with the Soviet leaders on outstanding issues, and improve the contacts between our own and the Soviet peoples."

PORTER said among those who favor his idea for a world rule of law conference are Arthur Larson, ex-adviser to Eisenhower, and now a college president; Charles S. Rhyne, ex-president of the American Bar Association.

PORTER GOES ABROAD

While trying to foster interest and financial support for his venture, PORTER has been participating in meetings in Europe of an unofficial group known as the East-West Parliamentary Disarmament Conference. He became involved after a radio commentator, Tris Coffin, asked if he would be interested in attending such a meeting in London last winter. Coffin's broadcasts have been sponsored by the Chesapeake and Ohio Railroad, of which Cyrus Eaton is board chairman. Eaton offered to pay expenses of any "forceful" Congressman whom Coffin selected. PORTER accepted and went to London in February.

There he became the American member on an executive committee assigned to plan for a future disarmament conference to be held late this year. It was for such a planning session that he went to Stockholm 2 weeks ago.

For the trip to London, PORTER received $1,075.20 in estimated expense money, but upon his return sent back $23 to Eaton. For the Stockholm meeting, he received $1,316, and upon his return he gave back $37 to Eaton. PORTER'S staff had slightly overestimated his expenses, and so the Congressman returned what was left to the man who is reputed to be worth $100 million.

EATON UNDERWRITER

Counting the $1,000 for planning the Washington conference, PORTER has received $3,331.20 from Eaton to underwrite his activities in these various meetings concerned with world tensions. He has another planning session scheduled for September in Brussels, with the big disarmament meeting probably in Rome after the elections. PORTER hopes to go, Eaton's generosity being what it is.

Despite some editorial criticism from Oregon, PORTER said he sees no reason for rejecting Eaton's funds that made his attendance at these meetings possible. He noted that he has made no secret of these benefactions.

"I can't think of a better way for Cyrus Eaton to spend his money," observed PORTER. "I think there is a concensus against war in the world. Conferences such as these help apply pressure of public opinion on the governments to find peaceful avenues."

As for Eaton himself, PORTER has never met him. He has read some of his speeches, he explained, and agrees with his general theme that peaceful coexistence must be sought through multiple contacts across and through the Iron Curtain. PORTER does not agree with all of Eaton's expressed views, as quoted in various articles.

RED COUNTRIES PRAISED

Recently Eaton returned from a visit to Hungary, Poland and Czechoslovakia with glowing accounts of conditions and the happy prosperity of the people. Eaton recently was awarded the Lenin Peace Prize.

"In some ways he goes too far in accepting and trusting the Communists," said PORTER. "Even though we deal with Communist states, we should always make clear that we believe in freedom."

PORTER is inclined to think Eaton is "naive" in his appraisal of Communist satellites, but he admires his effort to persuade Premier Khrushchev that American capitalists would much prefer peace and a decline in taxes that are now required for defense spending, to the profits to be gained from war munitions.

CRUSADES FOR PEACE

Eaton, at 76, is devoting himself with missionary zeal to his crusade for understanding between East and West. A Republican who favored Franklin Roosevelt, he is reported to control a $2 billion empire in iron and steel, coal, paint, rails and shipping.

He has invested considerable sums in recent years in his peace mission. Mainly Eaton has sponsored meetings of world scientists and scholars at his boyhood home, Pugwash, Nova Scotia, and subsequently in Europe.

PORTER said he is convinced these conferences have helped make people more aware of the dangers of atomic weapons.

Several weeks ago Eaton was criticized in the Senate by Senator THOMAS DODD, Democrat, of Connecticut, for visiting Khrushchev after the blowup of the summit meeting. DODD suggested the Attorney General take action against Eaton under the Logan Act, which provides penalties for any private citizer who, without authority, deals directly with the head or representative of a foreign government in an effort to influence that government in relation to its policies toward the United States.

PORTER DEFENDS EATON

PORTER took the House floor subsequently to defend Eaton by discrediting DODD'S attempt at "restricting the efforts of citizens like Cyrus Eaton who believe that peace is too important to be left to the President, the State Department, the generals, or anybody else." PORTER said the Logan Act would apply only when a citizen tried to negotiate with a foreign government about a specific dispute or controversy.

"Communication among nations must increase, not decrease. If we are to attain peace and avoid war. We can disagree profitably. We should not seek a legal pretext for denying others the right to speak and act. In our crusade for peace, we need all the help we can get. We have too few thoughtful and concerned citizens like Cyrus Eaton spending their talents, time, and money for world peace," PORTER concluded.

Life Article Unfair

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. DOOLEY. Mr. Speaker, the derogatory article by Walter Pincus and Don Oberdorfer in a recent issue of Life magazine was a great disservice to the Congress.

Congressmen who have risked their lives on so-called junkets carrying them at times to such places as the antarctic polar regions, often necessitating their flying through fog and storm over barren wastelands where the chance of survival if grounded would be remote, were pilloried for expenditures of a few dollars. Under careful analysis even the expenses in question could be properly accounted for save in one or two instances of fiscal abuse.

Since my name was mentioned in the Life magazine article I wish to point out that the dinner at the Orienta Beach Club, which was criticized by inuendo, was for some 20 people. The club insisted that the check be paid by a member, so consequently I paid the check and was reimbursed for it later on by the House Public Works Committee. This was a simple and honest business procedure and it reflected ill on no one. The Congressmen and the Congresswoman present paid to the committee their share for their spouses' expense on the cost of the meal. I was entitled to reimbursement as it was a legitimate committee expense.

When I spoke with Mr. Oberdorfer about the injustice of the article and the damage it had done to me by making me guilty by association, he explained

that the only reason he mentioned my name was because he wanted to show that the committee dined at a club, this attitude being in keeping with his theme of expensive traveling and high living.

The Orienta Beach Club is one of the finest clubs in New York's Westchester County. It is strictly a family club where conservative living and entertaining is emphasized.

In order that those who are concerned about this affair should know the facts, I dispatched a letter to some of my friends in my constituency delineating various aspects of the trip and indicting why the expense was necessary. The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 6, 1960.

DEAR CONSTITUENT: Recently Life magazine carried a story on congressional spending.

I was mentioned and placed in a situation where, because of being included with other Congressmen who were pilloried by the printed word, I was regarded by some as guilty by association.

Let me clarify the issues as succinctly as I can.

First, I permitted the House Public Works Committee to hold a dinner meeting at the Orienta Beach Club on the occasion of one of its inspection trips because the club had the proper facilities and was close to the harbors and roads which were scheduled for inspection.

At the time I had two pieces of legislation pending in the House before the Public Works Committee. One had to do with the deepening of the East Basin at Mamaroneck Harbor and the other provided for a study of Port Chester Harbor.

Since it is a rule of the Orienta Beach Club that a member sponsor each party held there and pay for the same, I sent a check for the dinner costs. I was later reimbursed by the Public Works Committee, at the direction of the chairman of the committee, a perfectly honorable and normal transaction. However, Life magazine seems to attach some evil innuendo to this honorable piece of business.

I might mention that I did not bill the committee for the party which my wife gave for the wives of the Congressmen at the Stork Club earlier that day. She paid for that herself. We did not want or expect reimbursement. We felt it was our duty to be as hospitable and courteous to our friends as we could.

As for the payment of my wife's expenses. I have canceled checks for any and every expense she incurred as my companion on congressional study trips. I always paid my bills for transportation, lodging and sustenance as soon as the committee billed me. My checks were drawn to the order of the hotels at which we stayed, and to the railroads, ships or airlines on which we traveled. These checks are available to any responsible person wishing to see them.

Let me add, by way of explanation, that if Congressmen do not travel in behalf of their committees they are liable to approve expenditures of vast sums of money needlessly because they cannot know the facts at first hand.

I have learned more about roadbuilding and public works by visiting the Ottawa Road Experimental Installation in Illinois, the harbors for which Federal funds are being sought, and the sites where public buildings are to be erected, costing millions of dollars, than by intensive reading of literature pertaining to the same.

In the complex world it is necessary for a Congressman to inspect certain sites and facilities in order to know his subject and to ascertain what is taking place in certain areas. Only a provincially minded person would try to decide on the wisdom of an expenditure without studying the facts thoroughly and seeing and knowing the project intimately.

I have no apology for the trips I made in behalf of my committee.

I have traveled by train, bus, plane, and car, often at great inconvenience and under trying circumstances. I feel it is part of my duty as a Congressman.

Travel is not new to me. I have seen much of the world, having taken a long trip to Africa, Europe, Scandinavia, South America and the Antilles in 1938.

I feel that in serving my Public Works Committee I am serving my constituency and my country in accordance with my oath of office.

Sincerely yours,

EDWIN B. DOOLEY.

Discrimination Against Reserves Charged in Retiring Officers With World War I Service

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1960

Mr. HUDDLESTON. Mr. Speaker, in the March 7, 1959, issue of the Army Navy Air Force Journal, there appeared an article dealing with the reasons that it is necessary for Congress to enact legislation to equalize the retirement benefits accorded Reserve officers of the military service with those of Regular officers. For some time I have been attempting to remedy one inequity in this area. My bill, H.R. 1136, is mentioned in the Army Navy Air Force Journal article, and I commend this article to the careful study of the Members of the House:

DISCRIMINATION AGAINST RESERVES CHARGED IN RETIRING OFFICERS WITH WORLD WAR I SERVICE

Many Members of Congress, as well as many other well-informed persons, have expressed the feeling that there should be no discrimination between officers of the Regular establishments and officers of the Reserve components. In the Armed Forces Reserve Act of 1952 this was specifically established as basic policy: "There shall be no discrimination between and among members of the Regular and Reserve components in the administration of laws applicable to both Regulars and Reserves."

In spite of the general feeling that culminated in this statement of policy, there appear to be a few who feel that a retired Reserve should not have the same right to an increase in retired pay, because of World War I service that is now given to retired Regular officers.

Regular Army officers who served in the military or naval forces prior to November 12, 1918, whether or not in combat areas, retired under such circumstances that their retired pay would be less than 75 percent of their active-duty pay, are entitled to an increase in the retired pay up to the maximum of 75 percent because of such wartime service. Reserve officers, retired at considerably less than the maximum retired pay, do not get a similar increase for wartime service.

The provision for special recognition of service in the World War I period had its origin in the act of July 31, 1935 (49 Stat. 507). At that time, due to the large increase in Regular officer personnel following World War I, there was a stagnation in promotion. In order to alleviate this bad morale factor, provision was made for voluntary retirement of Regular officers after 15 years of service. The retirement pay was at a reduced percentage rather than the conventional 75 percent, being based on years of service. The retired pay was such percentage of active-duty pay as was derived from multiplying the number of years of service by 2½ percent. A special award, however, was given to those who had served as commissioned officers during the war period by raising to the grade of major for retired pay purposes any officer below that grade who voluntarily retired under the act.

In June 1940, in furtherance of the same plan, the 1935 act was amended to provide that any officer on the active list of the Regular Army who had served in any capacity in the military or naval service prior to November 12, 1918, could, upon his own application, be retired with 75 percent of his active-duty pay, with an added provision for increasing the pay and rank of majors and lieutenant colonels, to lieutenant colonel and colonel.

The 1940 amendment made the retired pay provision so broad and liberal, to use the words of the Senate Committee on Armed Services, in Senate Report No. 1543, June 8, 1948, "as to make it theoretically possible to retire certain officers after only 1 day's service under a Regular Army appointment," if they had served in the military or naval service prior to November 12, 1918.

Shortly thereafter during the preparedness program, on July 29, 1941, Congress passed a joint resolution to provide a speedy method of elimination of unsuitable officers from the active list of the Regular Army. This law provided that any officer so eliminated who had served in any capacity in the military or naval service prior to November 12, 1918, should be retired with 75 percent of his active duty pay, with service of only 7 years. This law suspended for the emergency an earlier law passed in 1920 under which unsuitable officers were classed as class B officers and eliminated from the active list. Under that law, which was cumbersome to operate, officers eliminated from the active list who had had 10 years of service were retired with the reduced retired pay based on 2½ percent for each year of service, without a special award for World War I service.

When the Pay Readjustment Act of 1942 was under consideration by Congress, the fact was brought out that Army officers who served in World War I were granted retired pay of 75 percent whereas officers in the Navy and Marine Corps who had served in World War I were not so entitled. In the House an amendment was adopted to provide a similar right for the Navy and Marine Corps officers. The bill was rewritten in committee and apparently to make this provision uniformly applicable, it said that the retired pay of any officers in any of the services mentioned in the title of the act, i.e., Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, or Public Health Service, who served in any capacity as a member of the military or naval forces of the United States prior to November 12, 1918, thereafter retired under any provision of law, shall be paid 75 percent of his active-duty pay.

However, before the bill was passed by Congress, another paragraph was added giving to the class B officers eliminated under the 1920 act, 75 percent retirement pay if they had served in the World War I period. The War Department had opposed this latter paragraph but after a fight in Congress, the paragraph was adopted.

Having given this special right to officers eliminated from the active list as unsuitable,

under the 1920 act and under the joint resolution of 1941, Congress on October 18, 1943, amended the Pay Adjustment Act of 1942 by adding another paragraph granting the same right to those officers who had been eliminated in 1922 as the result of an economy wave then existing. These officers had been retired if they had at least 10 years of service. The retired pay for the 10 year retired officers, under the act under which they were eliminated, amounted to only 25 percent of active-duty pay.

Thus, most, if not all, Regular Army officers retired on a reduced pay basis have had their retired pay raised to the maximum of 75 percent if they had World War I service. Even the officers eliminated as unsuitable whose retirement pay would otherwise be 17½ percent (the 7-year officers retired under the 1941 joint resolution), or 25 percent (the 10-year officers under the 1920 act), have now been raised to 75 percent merely because a part of their unsuitable service was during the period of World War I.

It is against this background that the equity of retired Reserves to a similar treatment is to be appraised.

Reserve officers in order to be retired must be 60-years old and must have had over 20 years of satisfactory service. When this age factor is considered, it will be seen that most of these officers not only were in service in the period of World War I but served as well in the period of World War II.

It certainly is equitable to consider that over 20 years of satisfactory service by a Reserve officer is equal to the 7 or 10 years of service by Regular Army officers, which service was so unsatisfactory that they were eliminated from the active list. The average retired pay for Reserve officers is not over 30 percent, with no increase at all for World War I service, yet the eliminated Regular officers have been granted 75 percent retired pay because a part of their service was during World War I.

There are bills pending in the 86th Congress to correct this manifest inequity, notably bills sponsored by Senators SPARKMAN and JACKSON, and by Representative HUDDLESTON. It is to be hoped that early remedial legislation will result, if only to assure justice to a dwindling but distinguished group of veteran officers whose service dates back to World War I.

Great Distinction for the Lenker Family

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. BERRY. Mr. Speaker, I rise to call attention of the House to the fact that the South Dakota American Legion at their convention last week made history when they selected Bill Lenker, of Sioux Falls, as the American Legion department commander for South Dakota.

This is only the second time in the Legion history of the State that a father and son have held the position of State Commander. Commander Bill's father, Dr. Carle B. Lenker of Winner, held the position of department commander for South Dakota in 1926.

The other instance of both father and later the son serving as State Commander was in Indiana when former Gov. Robert E. Gates who was elected in 1932 saw his son elected in 1958.

Certainly, Mr. Speaker, this is a great distinction for the Lenker family.

War or Surrender—An Alternative

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. HIESTAND. Mr. Speaker, a letter to the editor of the Santa Barbara News Press Saturday evening, June 11, presents rather a startling picture:

WAR OR SURRENDER—AN ALTERNATIVE

EDITOR, NEWS-PRESS:

Never before in history (in time of peace) has the leader of any great nation been subjected to the vile indignities, slander and invective heaped upon our Chief Executive by that mass-murderer Khrushchev. Although this scurrilous attack has tended to unify the free nations, to millions in other parts of the world, our abject acceptance of this tirade suggests that we are weak and afraid—a "paper tiger."

To those who have been brainwashed into believing that surrender to the Communist conspiracy is better than a nuclear war, this indignity may be bearable. They do not realize that surrender (which includes complete disarmament and control by an international police force perhaps under the United Nations, eventually dominated by Russia) means subjugation by Communist forces and eventual liquidation (murder or death in concentration camps) of at least 40 million Americans. Those who have been misled by propaganda see no alternative—but there is one and it is completely logical.

Americans must accept the fact that we are not in a cold war—but a hot one. Communism and democracy cannot coexist. All Russian leaders have said so, and their plans are based on this premise. We are at war. Let us realize this and act accordingly.

Nuclear war is unthinkable—to us and to the Russians. The U–2 flights over Russia in the past 4 years have proven to Khrushchev that our atomic bombers cannot be shot down and that Russian defenses against them are therefore nonexistent. This may account, in part, for his hysterical reaction.

Our prime weapon is to encourage and support revolution behind the Iron Curtain and this is our ace in the hole that frightens the men in the Kremlin. The slaves in Russia, Poland, Hungary, Czechoslovakia, etc., are our allies. They are our secret weapon. Why not use them?

Now is the time to resign from the United Nations, composed, according to the original documents, of "peace-loving nations" unless Russia and her satellites are thrown out. Now is the time to sever diplomatic relations with Russia and her puppets and thus cut off the major source of espionage in the United States. They cannot stand isolation. They cannot and will not wage atomic war knowing that it would mean devastation of their own countries.

Why not cut them off from civilized nations and let them wither on the vine until internal revolution overthrows their murderous dictators? And thus free the world from the threat of atomic war. Only then can we dream of world peace and work toward a world community of cooperative nations. In the meantime, let us look to our own defenses and expose the subversives who would take us over from within, since the plan for world conquest is based on these tactics. We need new laws to rectify recent decisions of our Supreme Court which now make it almost impossible to effectively prosecute Communists and subversives in Government agencies. (Write your Congressmen and Senators to this effect.)

Knowledge is power. Our citizens must understand not only what the Kremlin plans for us, but the strategy and tactics being used to confuse us and undermine our will to resist. If we will remember, believe in, and if necessary die for, the moral principles which have made our country great, the Communist threat can be overcome. Let us not be bluffed into surrender, liquidation, and slavery. In self-defense let us take the offensive—the Politburo is vulnerable and we are still invincible.

GRANVILLE F. KNIGHT,
Chairman, Santa Barbara Committee Against Summit Entanglements.

Where Mr. Nixon Stands

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I wish to take this opportunity to bring to the attention of my colleagues an editorial which appeared in the St. Louis Globe-Democrat on Wednesday, June 22, 1960:

WHERE MR. NIXON STANDS

Critics of Vice President NIXON, in his party and out, have raked him over the coals for not saying where he stands on the critical issues that face this Nation. They could profitably read his Minot, N. Dak., talk on how to make the huge farm glut shrink and his St. Louis speech on how to make the economy grow.

The Vice President made no attempt to spell out details of a farm program which he will elaborate later. But his talk in St. Louis was a clear and specific outline of what he thinks Washington should—and should not—do to keep business humming and our economy expanding.

He brushed aside the claims of some economists who argue that the Federal Government's only proper role is that of the impartial, innocent bystander—keeping hands off the economy, come hell or high water.

Mr. NIXON said Washington has four economic responsibilities at home. They are:

One, to "pursue sound fiscal policies" that check inflation.

Two, to combat abuses by industry or labor which curb competition or deprive us of the benefit of newer, better ways of making things.

Three, provide a tax setup that stimulates new and creative enterprise, instead of strangling it.

Finally, Government has a responsibility to prevent and correct wide swings between boom and bust by sensible fiscal policies, and by preventing the national misfortune of widespread unemployment.

Mr. NIXON said the United States free economy is so far ahead of the Soviet Union planned economy that the U.S.S.R. will never reach us within the foreseeable future, not even in the year A.D. 2000.

He warned that we must not imitate the Marxist system to match fancied gains often claimed for it. Some of Moscow's alleged great gains of the postwar years are due to an all-out effort to repair the ravages of war.

Both Japan and West Germany, it might be pointed out, outstripped the Soviet Union in economic growth in the same period under the same stimulus.

The Soviet Union is still a very primitive economy, as the Vice President said. It is still much occupied with the basic job of building a sizable steel industry and a trans-

portation system—goals which this country achieved a half century ago, or more.

As Moscow's planners get past the stage of building steel mills and attempt to satisfy the Russian people's pent-up demand for consumer goods, their "state planning" breaks down.

Thus, China factories turn out large expensive pieces, because their quota is expressed in rubles and this is the easy way to "fulfill" it. But Russian workers, who make an average salary of about $80 a month, can't afford these luxury porcelains. So they pile up in government warehouses.

Russia's economy is wallowing in red tape, the one product that "planners" turn out easily and in unlimited quantities.

In his talks in North Dakota and in St. Louis, the Vice President showed courage and conviction.

North Dakota's wheat farmers bitterly resent the soil bank idea which takes land out of production. But Mr. NIXON said, without hesitation, that "we must recognize the necessity for taking acreage which produces crops in surplus out of production."

He indorsed a new administration program for UN distribution of the world's supply of surplus food to feed the world's hungry. President Eisenhower, he said, intended to present this plan at the summit meeting which Nikita Khrushchev sabotaged.

Mr. NIXON made crystal clear that he is not wedded to the bankruptcy farm policies of the past. He said:

"We should not dig in and fight the battle over farm policy in the entrenched positions which we have occupied over the last 5 years."

At the same time, we should not abandon or destroy a free economic system that has produced more goods, more efficiency than any other system in the world.

Mr. NIXON nailed that battle flag to his mast here in a talk that is required reading for all candidates—and all Americans.

Effect of Importation of Leather Footwear on the Domestic Economy

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SHIPLEY. Mr. Speaker, I would like to take this opportunity to briefly point out the effects of imports of leather footwear on the economy of the United States, and the serious consequences for American shoe workers and their employers.

More than 5,500 people in my district are directly employed in the manufacture of leather footwear.

This is an industry which has felt the full effect of import competition. From about 3.6 million pairs in 1949 imports had jumped to 80.5 million in 1959. Practically all of this increase has come since 1954.

During this same decade our exports of all types of footwear have been dropping. In 1949 we exported 5.759 million pairs; in 1959 fewer than 3.75 million pairs. Statistically, in 1949 we exported six-tenths of a pair of footwear for each pair imported, while in 1959 we imported over 21 pairs for each pair exported. Truly this is a phenomenal increase. Imports of nonrubber footwear have grown from slightly more than 1 percent of our production in 1954 to 3.52 percent in 1959. The number of pairs of women's, misses', children's, and infants' leather shoes imported in 1959 was over 12 times as large as in 1954 and about 2½ times as large as in 1957 while for men's and boys' shoes the comparable figures were 8 times and 2 times.

In December 1959 the Department of Commerce reported that it saw no indication of any halt in the increase of shoe imports; in fact, it stated, "There is good reason to believe that shoe imports during 1960 will be 10 percent higher than in 1959."

This is cause for serious concern to the economy of the United States and to the 23d Congressional District of Illinois.

Imports are causing serious concern in our country. While exports increased only slightly less than the gross national product between 1950 and 1959, imports increased by 8 percentage points more than the increase in gross national product.

Dun's review has recently completed a survey of the effects of imports on our economy. Both the members of their presidents panel—representing 175 of the Nation's leading companies—and a random selection of 300 small manufacturers expect more serious competition from foreign imports in the next 5 years. Most of the panel members and the smaller companies polled believe that lower labor costs, less overhead, foreign government export subsidies and low ocean freight rates account for the difference in costs. Many trace it primarily to lower wage costs although there is diversity of opinion here. I am sorry to say that close to 40 percent of the presidents of large corporations on the panel reported that they plan to launch more foreign operations: Licensing arrangements, new plants and expanded facilities abroad, joint operations with oversea manufacturers, and purchase of foreign concerns. I do not know how many of these are located in Illinois or if any are in my district, but I do know that this means the export of jobs from our borders and import competition. The smaller businesses must rely on increased efficiency, new products, automation and greater production. The increase in imports of finished manufactures, which in 1950 constituted about 18 percent of total consumption imports, accounted for about 34 percent of import transactions in 1959. Together with semimanufactures they accounted for over half of U.S. imports by value. This is a grave portent for my congressional district and for the State of Illinois.

For all these reasons, I feel that concrete action should be taken immediately to alleviate such conditions.

The following is an example of many resolutions which I have received from my congressional district:

Whereas it has become known that the American shoe manufacturing business, generally, and that of the Moran Shoe Co. of Carlyle, Ill., particularly, is imperiled by reason of unrestrained importation of foreign manufactured shoes; and

Whereas said foreign-made shoes are produced upon such an extremely low cost basis that they can be sold in this country in harmful competition with American-made shoes; and

Whereas the healthy economy of our communities is dependent upon the Moran Shoe Co.: Now, therefore, be it

Resolved, That we protest against the importation of foreign-made shoes to be resold in the United States in competition with domestic-made shoes; be it further

Resolved, That a copy of this resolution be sent to our two Senators and the Congressman of this district.

(Endorsed by: Ruf-Marcham Post 404, the American Legion, Carlyle, Ill.; city clerk of Carlyle, Ill.; Veterans of Foreign Wars, Carlyle, Ill.; Ladies Auxiliary to Veterans of Foreign Wars, Post 3523, Carlyle, Ill.; village clerk of Bartelso, Ill.; village clerk of Germantown, Ill.; village clerk of Huey, Ill.)

Nation Needs Aircraft Carrier

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. HOSMER. Mr. Speaker, the following article from the Washington Post of June 24 points out another instance where U.S. oversea bases are encountering opposition within the country within which they are located. This further stresses the importance of building mobile bases at sea such as attack aircraft carriers and Polaris submarines.

The article follows:

TOKYO RIOTS BOOST NAVY CARRIER HOPES—ATTENTION FOCUSED ON PERIL TO OVERSEA BASES

(By John G. Norris)

Tokyo disorders over ratification of the Japanese-American security treaty are giving the Navy's proposed new aircraft carrier a much needed boost on Capitol Hill. For they focus congressional attention on the precarious condition of much of the U.S. oversea base structure and the key role of the Navy and its "mobile bases" in the Nation's basic "forward strategy."

"Yankee go home" cries have increased in many parts of the world, partly Communist inspired and partly of purely nationalist origin. As a result, the United States has withdrawn some forces from France. There is trouble in such longtime stanch allies as Turkey, Korea, and the Philippines. The U–2 incident raised questions about American base rights in Pakistan and Norway.

But it took the Tokyo riots and cancellation of President Eisenhower's Japanese visit to cause many on Capitol Hill to face up to the deteriorating base situation.

Recognition of the problem does not mean, as Defense Secretary Thomas S. Gates, Jr., affirmed last week, that the United States should alter its strategy of collective security alliances and keeping our "frontline" across the oceans. The alternate "Fortress America" strategy must not even be considered, Gates declared.

NO PAT ANSWER

If driven out of Japan, Gates said, we must go "some other place." Where? It would be impossible to replace the Japanese bases with their industrial facilities and skilled work force. Strategically, Korea and Formosa are too exposed and the Philippines too far south. In Okinawa, as President Eisenhower found out on his visit there, there already are complaints about the extensive areas occupied by American bases.

Hawaii is too far back and Guam has limitations.

There is no pat answer to the base situation. Bolster the collective security alliances wherever possible, maintain foreign aid at current or higher levels and do the best we can to hold crucial bases, administration leaders urge.

Others are urging greater reliance on "base rights" rather than complete bases, and some a reappraisal of the whole forward concept.

In this connection, Navy supporters on Capitol Hill are pointing up the advantages of carrier task forces as "mobile bases under the American flag." They can ply the seven seas without anyone's permission. They can help cement alliances by putting into foreign ports long enough to hint at American power, and for the crews to spend their pay and go back to sea before they wear out their welcome.

NO COMPLETE SUBSTITUTE

Carrier forces are no complete substitute for land bases in allied territory and certainly not for collective security alliances. But they can fill in many gaps, and by controlling the seas, link together what has been called the "oceanic confederation."

These arguments helped win Senate approval of an administration request for $293 million to build a conventionally powered aircraft carrier to replace one of the aging *Essex* type flattops built in World War II. It was defeated in the House Appropriations Committee largely through the strong opposition of Chairman CLARENCE CANNON, Democrat, of Missouri.

The case for keeping the Navy's carrier force modern as a potent "small war" weapon was argued at length during the appropriations hearings last year and again this year. Both times Senators voted for building a new flattop. Both times a majority of the House Appropriations Committee disapproved and the House itself did not vote on the issue.

ISSUE BEFORE CONFERENCE

Last year, the Navy lost because Senate and House conferees agreed on a compromise that the administration refused to accept. The compromise was to vote funds for the reactors and other long leadtime components of a nuclear instead of a conventional carrier.

Now the issue is up before a new Senate-House conference committee. The complex pro and con arguments will be voiced again behind closed doors. A second defeat would gravely threaten the future of the ship that the Navy believes will be the backbone of the fleet for many years to come, and weaken U.S. control of the seas.

A compromise like that of last year doesn't seem to be in the cards. Renewal of the cold war and anxiety over the future of American oversea bases, however, may finally win approval of the controversial ship.

Lewis "Seaway" Castle

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I insert in the RECORD an editorial which appeared in the Cleveland Plain Dealer on June 9, titled, "Lewis 'Seaway' Castle":

LEWIS "SEAWAY" CASTLE

Lewis G. Castle, dead in Massena, N.Y., at 70, truthfully was called "Mr. Seaway."

He worked long and hard to put the idea of the St. Lawrence Seaway across in this country. And after President Eisenhower signed the seaway bill in 1954, Mr. Castle worked even harder, as administrator of the St. Lawrence Seaway Development Corp. In that position he supervised the U.S. portion of the huge project's construction.

He was a banker and businessman in Duluth when he served on the executive commission of the Great Lakes-St. Lawrence Association. For years he was a spokesman for the need and the advantage of U.S. participation in the seaway.

When his appointment to the development corporation came, he gave the job all the benefit of his business training in seeking the best and the most economical construction possible. And he also gave the job all the benefit of his great enthusiasm.

It seems to us that it would be fitting to memorialize his contribution to the seaway by naming some portion of it, such as a lock, for him.

Peace Through Law

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1960

Mr. OSMERS. Mr. Speaker, because of the present widespread interest in the repeal of the Connally reservation, I wish to insert in the CONGRESSIONAL RECORD a statement concerning it by Dr. L. A. Alesen, which appeared in the May 17, 1960, Freedom Club Bulletin of the First Congregational Church, Los Angeles, Calif. My constituent, Mrs. Geraldine Earlin, of West Englewood, N.J., who is a leader in a number of civic and patriotic organizations, has made this statement available to me:

PEACE THROUGH LAW

(By L. A. Alesen, M.D.)

To those whose memories are not too short the proclamation calling upon Los Angeles to observe May as "Law Day" strikes a familiar and sinister note. Just 2 years ago, President Eisenhower called upon the entire Nation for a similar observance, and thereby triggered a great propaganda onslaught against our national sovereignty, leading to the attempt to abolish the Connally reservation. Public officials, bar associations, leading legal lights, and all manner of lesser organizations and individuals joined in the claque and clamor designed to condition the apathetic American people to relinquish their right to determine at all times whether any given issue was a domestic issue or was in fact an international one which should be adjudicated by the World Court. That public was urged to accept meekly and without protest this proposed fatal surrender of its birthright of freedom on the quaint and fanciful theory that America must take the lead in giving carte blanche to this international juggernaut, and thereafter, of course, all other nations would blindly follow. "Peace through law" was the attractive Madison Avenue gimmick coined for the occasion, and the unspeakable horrors of devastation and destruction by the H-bomb were duly painted in lurid detail.

After due time and opportunity had been afforded for this lethal barrage to manifest its expected effect, Senator HUMPHREY introduced Senate Resolution 94, calling for the repeal of the Connally reservation. This was all done quietly and without fanfare, with the full expectation that after a short and rigged hearing before the Foreign Relations Committee the bill would be reported to the floor of the Senate with a do-pass recommendation.

But something went wrong, to the great surprise and consternation of those who had so carefully plotted to take from the American people by stealth and subterfuge that which they knew would be difficult to wrest from them by open and honest approach. Once word of those hearings before the Foreign Relations Committee was imparted to the public by a few alert and patriotic citizens, such an avalanche of telephone calls, telegrams and letters descended upon the committee members and upon all other Senators that all hope of an immediate passage of Senate Resolution 94 was lost, and it was pigeonholed for the time being.

Recognizing that the necessary two-thirds majority required for the passage of the Senate resolution would be impossible to secure, a change in strategy resulted in the introduction of the McDowell resolution (H.R. 558) in the House of Representatives, an identical conterpart of S. 94. The passage of this resolution by a simple majority in the House, and in the Senate would achieve the same goal and with much less risk of defeat. Both measures now rest in their respective committees awaiting the return of the American people to their customary state of somnolence.

The pattern of this attack against American sovereignty is crystal clear: Hold in abeyance for the moment agitation for passage of the dangerous legislation now pending, and return to the grassroots with a clever selling campaign based upon broad and general pious platitudes extolling the virtue of law and the benefits it confers upon the individual. Then, having effectively conditioned the mind of the citizen to appreciate and approve those benefits for himself and his fellows on the national level, the next step will be the well-known trick of the psychologist in the transference of that approval to the international field, and thus the enrollment of our once great and proud constitutional Republic as just another minor waystation in the international welfare police slave state.

The proclamation calling for the observance of May 1 as Law Day is deliberately and disarmingly disingenuous, citing as it does the well-known and commonly accepted facts concerning the value of law in a civilized society, and the protection it gives the individual. Strangely missing is any reference to the unconscionably callous disregard of individual rights as guaranteed by the fourth, fifth, and sixth amendments now commonly practiced by the Internal Revenue Service in its administration of the income tax law; or by our courts and law-enforcement officers in commitment of the allegedly mentally ill. Strange, also, is the lack of any mention of the constantly increasing major crime and juvenile delinquency and the obvious fact that the most important single reason for that great and constant increase is the flight from individual responsibility so carefully taught by our public school system and so widely disseminated by the Freudian psychiatrist.

Those who seek to undermine and eventually to destroy American sovereignty work unceasingly and overlook no single opportunity to achieve their diabolical ends. The Bricker amendment, designed to protect us from domestic law accomplished by the evil mechanism of treaty or executive agreement in areas where the good sense of Congress still prevails, lost by one vote. Now before Congress are H.R. 531 and Senate Concurrent Resolution 83, which if adopted will give the President the so-called "sense of the Congress" that will free him to make or sign any agreements with the Kremlin that suit his fancy. This legislation is designed

to bypass the provision of section 2, article II of the Constitution requiring that all treaties before becoming effective have concurrence of two-thirds of the Senate.

The internationalists have always been with us. Our Revolutionary forebears were plagued with the Tories, the appeasers and the compromisers who sought in every possible way to discourage and obstruct the formation of the Republic. The Cliveden set in Great Britain during World War II agitated for a negotiated peace with Hitler, totally unmindful of what that peace would eventually mean. For a time, they did cause some embarrassment to the British Government in the conduct of the war. And now in America we have those who seek peace at any price and would sacrifice the very principles responsible for the greatest land upon which God's sun has even shone in exchange for a worthless piece of paper signed by a nation that has never honored its obligations except in their breach.

"The brave man dies but once; the coward a thousand times." Our cynics would call this corny as they do the Bible, the Declaration of Independence and the Constitution, but those great men who gave to us a nation founded upon the unique concept of individual primacy and right based upon individual responsibility pledged their lives, their fortunes, and their sacred honor. It it not now high time that we the natural beneficiaries of their genius and devotion realized once and for all time that there is something far worse than death by the H-bomb? Can we not understand that the blackmailer is never satisfied short of the total destruction of his victim?

Shall we continue to act as craven cowards quaking dutifully when the dictator frowns and abjectly and fawningly offering him every compromise and token of appeasement he requires, or shall we just for once remember that we are Americans, inject just a trace of calcium into our flabby spines and face with a smile of courage and resolution the worst he has to offer?

FMC Contract

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit herewith an editorial from the San Jose Evening News relative to the charges made by the gentleman from Ohio [Mr. VANIK], that a contract recently awarded Food Machinery & Chemical Corp. was rigged:

FMC CONTRACT

It is of course no accident that a U.S. Senator from Ohio has succeeded a Representative from Ohio in charging that a contract was rigged by the Defense Department in favor of the Food Machinery & Chemical Corp. of San Jose.

Apparently Senator STEPHEN YOUNG (Democrat, of Ohio), has taken up the ball from Representative CHARLES VANIK, (Democrat, of Ohio), and is making the rafters ring with highly fluid denunciations that establish absolutely nothing.

Anyone who has followed the stories with a Washington dateline is left baffled simply because there is not a shred of evidence that specifications were so drawn as to make the local company, which has a vast history of service in both war and peace, the sole possibility for a winning bid.

The chief argument seems to be that there is an empty Government arsenal in Cleveland where the M-113 armored personnel vehicle can be produced. What is not mentioned is that FMC is not only skilled in turning out equipment but has skilled engineers and labor. In addition, it has the machines, the equipment, the know-how and the setup.

It is no accident either that Cleveland is in Ohio and this is drumbeating on a local level that makes the whole a sham.

The Bracero Story—Growers Tell Their Story

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. GUBSER. Mr. Speaker, a general impression has been created that the Catholic Church is opposed to extension of Public Law 78.

It is noteworthy that in the June 17 issue of the Monitor, the official newspaper of the Catholic archdiocese of San Francisco, an honest effort is being made to look at the other side of the coin.

Under leave to revise and extend my remarks, I submit herewith a story written by James Kelly for this newspaper:

THE BRACERO STORY—GROWERS TELL THEIR SIDE

(By James Kelly),

INTO THE FIELDS

This week James Kelly, ace Monitor reporter, came back from the aromatic fields of Santa Clara Valley with the first of a series of five articles exploring the farm front.

The "Bracero Story" involves an issue: Should Mexican labor be used to harvest U.S. crops? It is a many-sided question, with expert testimony from growers, union organizers, Spanish-speaking missionary priests—and the braceros themselves.

Mr. Kelly has gone after the evidence. All facets will be examined. All angles investigated. He has promised a report in depth.

When a teenage daughter comes home 1 day and says, "Dad, did you know you're committing a sin?" When a high prelate in the church says that you "are perpetuating a ghastly racket against the conscience of our people," it's a pretty good time for any Catholic man to take stock of the situation and ask: "Am I really doing wrong?"

Three Catholics in Santa Clara County have asked themselves the question.

Paul A. Mariani grows and packs fresh, frozen, and dried fruit. He is one of the biggest in the business. He is a member of St. Joseph's Parish, Cupertino.

Stephen A. D'Arrigo grows and packs fresh fruit and vegetables. He and his brother Andrew own and harvest 80,000 acres of choice farmland in California and Arizona. He is a member of St. Christopher's Parish, San Jose.

Gerald B. Hansen is an attorney and U.S. commissioner in San Jose. He is counsel for the Progressive Growers Association of which Mariani and D'Arrigo are members. He belongs to St. Martin's Parish, San Jose.

All three are on the "other side" of an issue that is making headlines in daily and Catholic newspapers across the Nation. They believe it is right and proper for American farmers to import Mexican field labor—"braceros"—to harvest American crops.

They defend Public Law 78, enacted by Congress in 1948 to permit braceros to be brought into this country, and the internation agreement between the United States and Mexico that sets forth the conditions under which braceros are hired, housed, and handled.

ACCUSED

Because they do so, and especially because they represent so-called big or corporation farming, they find themselves accused of "perpetuating a ghastly racket." The accuser is Archbishop Robert E. Lucey of San Antonio, executive chairman, Bishop's committee for the Spanish-speaking, an organization that is fighting hard for the repeal of Public Law 78.

Mariani, D'Arrigo, and Hansen have weighed the charge carefully. They have given it hard, serious thought, in private and in consultation with priests in the San Jose area and elsewhere.

They avowed they "would get out of the business right now" if in their soul-searching it turned up they were guilty in any sense of moral wrongdoing.

They can't see where they have done evil by hiring or defending the use of braceros.

Last week the trio told the Monitor their side of the story. Here are the arguments the growers and the attorney presented:

The U.S. farm labor force, now less than 7 million, has decreased by 4 million workers since 1940. Meanwhile, acreage in production has increased, and so have crop yields through more scientific farming. Without imported labor, who is to pick the crops?

SHORTAGE

"They claim we are flooding the labor market with cheap Mexicans," D'Arrigo said. "All we're doing is trying to fill a labor shortage, so that our fruit doesn't rot on the trees or go to seed in the fields. Fewer than 450,000 braceros were brought into the country last year. Does that sound like a "flood" when the domestic labor supply is so low?

"There's another thing important besides quantity of labor. It's continuity. We get men from Oakland. They work 1 day, 2 days, then quit. This can be disastrous, because a ripening crop doesn't wait for anybody. It has to be picked right now.

"Some are winos. They quit when they have the price of a bottle. Others say frankly they can afford to earn just so much without endangering their unemployment pay. The bracero is available when you need him, he's dependable, and he works hard."

Mariani chimed in here with another point: "Thousands of high school kids would love to have summer jobs in the fields, but we can't hire anyone under 18 to pick crops involved in interstate commerce. They come to me all the time and I have to turn them down. We're rearing a whole generation of youth who don't know the meaning of hard, muscular work—and for many of them it's not their fault. There are evils in child labor, sure, but here's a case where it would do them—and us—some good."

MAN-DAYS

D'Arrigo offered figures from his books to bear out his claim that local labor is nonavailable. During a single growing and harvesting season—1957-58—in one instance they showed a total of 3,372 man-days' work open to domestic workers. The total actually worked 1,031 man-days.

Providing Mexican workers with employment in this country is not morally bad.

"Granted, it involves separating men from their families for periods up to a year, but generally for a much shorter time than that, around 9 months at the most," Mariani said.

"For a man to be away from his wife and children is not evil in itself. How about men in military service, salesmen, and the like? The point is the need.

"I've seen conditions in Mexico. I know the poverty there. When I hire a bracero, I feel I'm helping a man to feed his family when otherwise they might go hungry. That's not the reason I hire him, of course. But should I be condemned for doing something good?"

Puerto Rico and Fidel Castro

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SANTANGELO. Mr. Speaker, Fidel Castro, who was looked upon as a liberator of Cuba, has now demonstrated his unreliability as a leader of freedom, and has disappointed many people who looked forward to amicable relations with Cuba under a democratic regime. Some of the Puerto Ricans who reside in my congressional area are keenly disappointed by the carryings-on of Fidel Castro. They are heartsick at his antics and his diatribes against our Nation which has always sought to befriend the Cuban people.

One of the prominent Spanish-American papers of New York, El Diario de Nueva York, published an editorial of their sentiments on June 14, 1960, which was translated for me and which displays the concern of the Puerto Ricans about Mr. Castro's activities and fitful rages. I believe that the American people would be interested in learning how Spanish-speaking people from Puerto Rico who love the Cuban people feel about Fidel Castro. A translation of the Spanish editorial follows and portrays the relationship with Puerto Ricans and Cubans, their hopes and aspirations, and now their disappointment in Fidel Castro.

PUERTO RICO AND FIDEL CASTRO

Puerto Rico gave leaders to the Cuban revolution so that Cuba could achieve its independence. The history of the glorious epoch of Cuba could not be written without underlining the names of Juan Rius Rivera, the soldier of Mayaguez who wielded his sword shoulder to shoulder with Maximo Gomez to free Cuba, and Pachin Marin, a poet like Marti, who in addition to his verses blazing with rebellion contributed with his arm and his machete—and his life in the jungle—to achieve Cuban sovereignty.

Cuba, once a Republic, also had in men of Puerto Rico leaders who helped to raise its political and cultural level. Eugenio Maria de Hostos, the great philosopher and educator, and the great teacher Felix Aguayo, both Puerto Ricans, laid the basis for Cuban public education. And the Puerto Rican medical revolutionary, Manuel Fernandez Mascaro, returned from the jungle and became Minister of Public Health and then Minister of Education of the Republic of Cuba.

The years that followed also revealed the participation of many Puerto Ricans in the social development of the land of Carlos Manuel de Cespedes and José Martí. So close has become the union between the two peoples that the Puerto Rican poetess, Lola Rodriguez de Tio, also one of the inspirations for the Cuban revolution, felt impelled to write her unforgettable symbolic lines:

"Cuba and Puerto Rico are of a bird its two wings
They receive flowers and bullets in the same heart."

The suffering of Cuba has been, since then, the suffering of Puerto Rico. Between the two peoples there has developed such an affinity of sentiment and interest that the Puerto Rican in Cuba feels like a Cuban, and in Puerto Rico the Cuban feels Puerto Rican.

The dictator Machado was hated in Puerto Rico because Cuba came to hate him. When Batista overthrew him and Cuba rejoiced, Puerto Rico also was happy because it believed that Cuba had embarked on a new life through democracy.

Batista fell, after having permitted the degeneration of the regime, and Puerto Rico, like the rest of the hemisphere, cheered Fidel Castro whom it considered the revindicator of the rights of the Cuban people to live in happiness and prosperity, free and unfettered to renew its own political, economic and social reconstruction.

But Castro, who uttered postulates of justice from the Sierra Maestra, when he reached power betrayed his own principles and worse, fell into the tragic error of making an alliance with the Communists who are the worst enemies of Cuba, of America, and the free world.

Puerto Rico is everything contrary to what Fidel Castro represents today. Puerto Rico is an enemy of the dictatorships. Puerto Rico is enemy of the false politicians. Puerto Rico is enemy of everything which smacks of repressive force, tyranical authority, of a police state.

And since Fidel Castro is everything repulsive to Puerto Rico and to the Puerto Ricans, Fidel Castro some time ago lost the sympathy and admiration which at one time accompanied him among all the democratic peoples of the Western Hemisphere.

More Support for Item Veto

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SCHWENGEL. Mr. Speaker, in further support of my proposals to grant the item veto authority to the President, I wish to call attention to two editorials which have appeared recently in Iowa papers. One, "Fighting for the Item Veto" is from the Des Moines (Iowa) Register of Friday, June 17. The other, "Item Veto in States," appeared in the Burlington (Iowa) Hawk-Eye on Wednesday, June 22.

Under leave to extend my remarks, I include the two editorials in the Appendix of the RECORD:

[From the Des Moines Register, June 17, 1960]

FIGHTING FOR THE ITEM VETO

U.S. Representative FRED SCHWENGEL, Republican, of Iowa, has joined the century-long parade of advocates of the item veto power for the President.

The Iowa Congressman delivered a speech in the House of Representatives recently on the subject. He said it was the first of a series he has planned, using material put together by a team of research assistants at the State University of Iowa.

He reviewed the reluctance of the writers of the Federal Constitution to give any more legislative power than absolutely necessary to the Chief Executive. This reluctance was born out of widespread distrust with respect to kings and others possessing great ruling powers.

Practical necessities of Government mechanics, however, compelled the granting of limited veto powers to the President. Gradually the States followed suit with respect to their Governors.

Since the end of the Civil War, every new State admitted to the Union, with the exception of Nevada, has granted its Governor some form of item veto power. Usually it has been limited to appropriation bills.

Six Presidents have strongly advocated the granting of this power to the President of the United States.

The practice in Congress of logrolling and attaching unrelated riders to appropriation bills has stimulated support for granting the item veto power to the President.

If a President were empowered to veto specific items in a bill without killing the bill as a whole, expenditures benefiting only relatively small pressure groups or sections of the country might be held within more reasonable bounds.

Representative SCHWENGEL deserves applause for adding his bit in support of a worthy cause. His efforts, like the proverbial drop of water, may not shatter the granite determination of most of his congressional colleagues to permit no weakening of their political power and advantage, but they will add to the slow erosion of that resistance.

[From the Burlington (Iowa) Hawk-Eye, June 23, 1960]

ITEM VETO IN STATES

In his efforts to persuade Congress to give item veto authority to the President, Representative FRED SCHWENGEL has checked into how the States handle the matter.

He reports that 42 of the 50 States have provision for the item veto in their State constitutions. The missing eight include Iowa.

The item veto is important because it would permit the President to strike out an individual appropriation which smacks of the pork barrel, without being forced to veto the entire measure.

It is equally important in State government. For example, SCHWENGEL turns to Illinois, where in 1 year the Governor vetoed individual items totaling nearly $22 million, without noticeably hampering the State. The item veto permits the Governor to represent the entire State, which ideally he should. It can be abused, as can any governmental power, but its normal effect is to eliminate purely political appropriations.

If such a veto is good for the Federal Government, and good for 42 of 50 States, why would it not be good for Iowa? The answer: It would.

How To Organize a People-to-People Community Council

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BOLLING. Mr. Speaker, to provide American citizens with an opportunity to participate individually in the development of better understanding be-

tween themselves and other peoples throughout the world, people-to-people councils are being established in communities throughout the United States. These councils are designed to encourage more people to take part in the President's people-to-people program, inaugurated in 1956.

People-to-people councils were first established in Hartford, Conn., and Fresno, Calif. Working closely with the U.S. Information Agency, Office of Private Cooperation, the Hallmark Foundation prepared the plan to organize a people-to-people council in Greater Kansas City. It proved successful and will be used to develop councils in other communities. It was instrumental in successfully stimulating the organization of a council in Cleveland, Ohio.

Since its organization in January of this year, the Greater Kansas City People-to-People Council has made a good start in bettering international relations and understanding. Among many other projects of the past few months the council has established contact between the Boys Club of Rangoon, India, and the Boys Club of Kansas City, and has helped the Kansas Council for World Affairs plan a world trade program, which will take place in Topeka later this summer.

The following is a copy of the plan being prepared by the Hallmark Foundation for distribution throughout the Nation by the U.S. Information Agency:

HOW TO ORGANIZE A PEOPLE-TO-PEOPLE COMMUNITY COUNCIL

"If we are going to take advantage of the assumption that all people want peace, then the problem is for people to get together and to leap governments * * * if necessary to evade governments * * * to work out not one method, but thousands of methods by which people can gradually learn a little bit more about each other"—(Dwight D. Eisenhower, at the White House Conference to organize the President's people-to-people program, Sept. 11, 1956).

PEACE BEGINS WITH YOU

Today the world faces a crucial point in history. Survival is the issue. Through a failure to understand one another, nations could fall into a final, horrible war. Without constant communication and mutual understanding between the peoples of the earth there can be no peace, no hope for the future.

Dr. Edward Teller, the famed atomic scientist, recently told an audience in Washington, "We must agree, we must argue, we must remain friends, and we must arrive at some solution" to the "very difficult and vexing problems" which face mankind. This is the long-range purpose of the people-to-people program.

The people-to-people program is one of the greatest forces for peace and mutual understanding in the world today. In it hundreds of thousands of persons everywhere are getting together to try to bring an end to fear, suspicion, hatred, and war. If people get together, so will governments. For all governments, even those not popularly elected, must bow to the will of the people. On this fact alone may depend the future of humanity.

Thousands of Americans have joined the nonpartisan, nongovernment people-to-people program to bring people together. They believe that the only way to achieve peace and understanding is to work for it.

You can help. You can write letters abroad. You can send books overseas. You can invite visitors from other countries into your home. When you visit other nations you can and should call on persons with whom you have similar interests. You can support athletic exchanges, community affiliations, good will tours, and technical, professional and cultural exchanges. You can help in that way. But there is even more important help you can give the people-to-people program. You can provide leadership to get others to take part in people-to-people activities.

Until every individual in every community joins you in this work, the fullest potential of the people-to-people program cannot be realized. The need to get everyone working together is urgent. Tomorrow may be too late. You can help fill this need by organizing a successful people-to-people program in your community. You can organize a people-to-people community council.

WHAT IS A COUNCIL?

In every community there are individuals, groups, clubs, and organizations interested in creating better understanding and cooperation between the peoples and nations of the world. The idea for a people-to-people community council is based on the premise that in unity there is strength. The purpose of the council is to provide a central agency through which all of these individuals, groups, and organizations can plan and work together. Through this combined effort more attention will be focused on the people-to-people program, and more people in the community can be encouraged to take part in it.

The council provides a clearinghouse for information. It makes it possible for each member to learn what the other is doing. It serves as an exchange for ideas. It makes it easier for members interested in similar projects to work together. It suggests and recommends programs. It undertakes communitywide activities approved by a majority vote of its members.

Each group, club, or organization that joins the council retains its own identity and autonomy. The council exercises no authority or control over the policies or activities of its members. Funds necessary for the operation of the council are obtained by means approved by the council members. It engages in no large-scale fund-raising activities.

WHAT YOU CAN DO

First, write People-to-People Councils, Post Office Box 1960, Washington, D.C., and tell them you want to organize a people-to-people community council. They will help you get your local group going and will send you all kinds of booklets, leaflets, and folders showing you how to start letter-writing programs, book collections, international community affiliations and scores of other people-to-people projects.

Next, contact friends, groups, clubs and organizations in your community and explain the people-to-people program to them. Explain the importance to them of getting everyone to work together. From this group, form a steering committee to organize a council.

Then, have the steering committee call on community leaders and get their support and endorsement of the council. Get them to agree to serve on the advisory committee.

A recent study of American attitudes by the Carnegie Endowment for International Peace has reaffirmed the fact that "within every community there is a relatively small number of citizens who set the tone and the attitude of the community in the whole field of public affairs."

The report continues: "Community leaders can be identified by their positions within the community structure and the influence they have on community attitudes and activities. Top leadership is drawn primarily from business and those professions closely related to business. When top community leaders are prevailed upon to take an active and sustained interest in world affairs, the effects on the community can be substantial."

Now, with everyone agreed to a community council, call a meeting for formal organization, election of officers and selection of working committees.

GOVERNMENT COOPERATION

In order to be fully successful, people-to-people councils must be self-reliant. There are times, however, both in the organization stage and in carrying on activities, when information and guidance from other sources may be needed. The Office of Private Cooperation of the U.S. Information Agency, Washington 25, D.C., can be most helpful when such assistance is needed. It will make available specialists in people-to-people activities to consult with your council, to the extent that the time of these specialists will permit.

WHAT OTHERS ARE DOING

People-to-people councils are active in Hartford, Conn., Fresno, Calif., Cleveland, Ohio, and Kansas City, Mo.; others are being established throughout the country.

Using the four steps previously outlined above, the Greater Kansas City People-to-People Council was successfully organized. Here is the plan it adopted. It may be modified in any way to meet your community's requirement.

THE GREATER KANSAS CITY PEOPLE-TO-PEOPLE COUNCIL

The council consists of individual members and delegates from organizations in the community who have joined together to develop and coordinate the people-to-people program at the local level. It serves as a clearing house for people-to-people activities, throwing a spotlight upon the many events and projects undertaken in the community to encourage international understanding and people-to-people contacts. The council is further organized as follows:

A. Advisory board.

The advisory board provides the leadership for this council and consists of a chairman and a minimum of six board members.

B. Honorary committee.

The honorary committee consists of the mayor, the foreign consular corps and other local dignataries.

C. Officers.

The officers of the council are the president, vice president and secretary-treasurer.

D. Coordinating committee.

The coordinating committee consists of the president, vice president, secretary-treasurer, chairman of the advisory board, and the chairman of the operating committees.

E. Operating committees.

1. Planning committee.

This committee is responsible for the planning and direction of special events to be conducted by the council.

It assists in the development of cooperative programs by those organizations within the council having the same interests.

It undertakes research programs to find ways and means of creating new activities for the council.

2. Public relations committee.

This committee is responsible for the organization and execution of a public relations program to focus greater attention on people-to-people activities in the community. It prepares and distributes information concerning the council and its activities. When requested, it assists individual council organizations in the development of their respective community public relations programs.

3. Visitors committee.

This committee helps receive visitors from abroad to the community and cooper-

ates in arranging their local activities when so requested.

THIS IS A DO-IT-YOURSELF PROJECT

You personally can help bring about better understanding between peoples. You personally can work for peace through people-to-people contacts. You personally can organize a people-to-people community council. Do it now. Write today. Send your letter to People-to-People Councils, Post Office Box 1960, Washington, D.C. Remember—peace begins with you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1928).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Increasing Second-Class Rate: Time Magazine and the Postmaster General

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. PORTER. Mr. Speaker, the fixing of second-class rates is a complex matter. The Post Office and Civil Service Committee, of which I am a member, did not act on rates even though we had extensive hearings.

We did not act because we did not have the basic facts we needed in order to propose responsible legislation. The Postmaster General told us that he was not complying with the terms of the Postal Policy Act of 1958 which require that the public service costs be computed and subtracted prior to a determination of what the users of the mail should pay. The Postmaster General asserted that he could not compute the costs of the third- and fourth-class post offices, star routes, and other matters which are plainly public service and have been so determined by Congress.

If there were a criminal penalty for breaking the law, the Postmaster General could be indicted and convicted.

Many of us on the Post Office and Civil Service Committee have asked the chairman to establish a committee to make an inquiry into both the Postal Policy Act of 1958 and into the cost-ascertainment system. It is our responsibility to get these facts so that we can legislate with confidence as to postal rates.

I often wished during the hearings on rate increases this year, and I said so several times, that we could have the adversaries sitting side by side at the witness table. This would enable them to comment on each other's arguments and would help us sharpen issues and establish necessary facts.

David W. Brumbaugh, executive vice president and treasurer of Time, Inc., appeared before our committee on June 2, 1960. He submitted at that time a series of questions and answers which, at my suggestion, the chairman referred to the Postmaster General for comment.

I inserted the questions and answers in the Appendix of the RECORD. The Postmaster General asked me to submit the Post Office Department's replies and, under unanimous consent, I am doing so following these remarks.

I am also including, after the Post Office Department's replies, a letter I received, dated June 20, from Mr. Brumbaugh commenting on the Post Office Department's responses.

This interchange is, in my opinion, an interesting and valuable discussion of an important problem. Anyone who reads it will agree that we have a complex problem and we need more information before we can do our duty in connection with the fixing of postal rates:

POST OFFICE DEPARTMENT REPLIES TO "SOME QUESTIONS AND ANSWERS ON POST OFFICE MATTERS" SUBMITTED AS EXHIBIT B IN STATEMENT ON BEHALF OF TIME, INC., BY DAVID W. BRUMBAUGH BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, JUNE 2, 1960

Time's question and answer: 1. Did Deputy Postmaster General Stans testify before this Committee in 1957 that there are costs aggregating millions of dollars (examples given alone totaling over $200 million) spread across first-, second-, and third-class mail which should only be charged to first-class mail? Yes.

Post Office Department's reply: Mr. Stans' testimony has been taken out of context. Mr. Stans did not testify that the cost ascertainment figures as such were in any way in error in spreading the $200 million of certain costs over all classes of mail. He did state that the special items which those costs represented were factors which should properly be taken into account for ratemaking purposes in fixing rates above cost for first-class mail. Specifically he said:

"Unfortunately, the cost accounting that would be involved to measure this factor, if we could measure it at all in cost ascertainment, would be fantastic. So we do not take it into account in cost ascertainment. It is a factor that we ask the committee to take into account as a value factor for first-class mail" (p. 221 of 1957 House hearings on H.R. 5836).

In the hearings before the Senate he amplified this concept as follows:

"The important thing about cost ascertainment is that it does not, in itself, provide an automatic formula for fixing postal rates. It was not intended to do that. But cost figures can serve a useful purpose in the ratemaking process if they are used as a starting point for the addition or deduction of other factors which are pertinent under ratemaking principles. This is the procedure followed before many other regulatory ratemaking bodies, such as the Interstate Commerce Commission. Allocated-cost figures are refined through evaluation of pertinent ratemaking factors which do not enter the original costing system itself. Such computations are of immeasurable value in determining the revenue requirements of a class of traffic or type of service and the level of rates necessary to attain the desired revenue objective" (p. 29 of 1957 Senate hearings on H.R. 5836).

Time's question and answer: Did Mr. Maurice Stans subsequently see to it that the proper accounting procedures be instituted to rectify the errors? No.

Post Office Department's reply: Since Mr. Stans did not testify that the accounting procedures were in error, there were obviously no changes required in the system.

Time's question and answer: Does the Post Office use the concept of out-of-pocket costs and less than fully allocated costs when it appears before other Government agencies? Yes.

Post Office Department's reply: The consideration of out-of-pocket costs in ratemaking processes may be appropriate under certain circumstances. There is no question, however, but what the Congress itself has specifically and unequivocally rejected the concept of out-of-pocket costs for postal rate purposes. At one stage in the legislative history leading up to the enactment of the Postal Policy Act of 1958, the bill as reported to the Senate contained a provision that the cost of all classes of mail other than first class and fourth class shall be "computed on an incremental or out-of-pocket cost basis." This provision was deleted from the bill by amendment on the floor of the Senate on the grounds that it was dangerous, confusing, ambiguous and vague.

The Conference Committee rejected vestigial remnants of the primary function theory by deleting the remaining language in the bill (essential to any out-of-pocket cost concept) that first-class mail is the "primary function" of the Postal Establishment and the language referring to what the "cost" of the various classes of mail should contain. In lieu of these rejected principles, the Conference Committee, and subsequently the Congress adopted the Department's preference provision—that first-class postage revenues should be based on allocated expenses plus an "additional amount" representing a judgment appraisal by Congress of the value of intangible factors.

Time's question and answer: Has the Postmaster General publicly recognized that the principle of out-of-pocket costs must be considered in connection with second-class mail? Yes.

Post Office Department's reply: If the Postmaster General made the statement attributed to him in response to a question while on a television program, his use of the term "out-of-pocket costs" was a slip of the tongue as the concept is contrary to the Postmaster General's philosophy of postal ratemaking. He undoubtedly intended to use the term "allocated costs" since he was using it with reference to the starting point from which rate considerations up or down must be made.

Time's question and answer: When supplying you with figures on individual publications in second-class mail, did the Postmaster General take into consideration the out-of-pocket costs of such publications? No.

Post Office Department's reply: The Department has not taken into account out-of-pocket costs for either individual publications or classes of mail since this concept is not germane to postal ratemaking.

Time's questions and answers: Exhibit 1–B, page 21, of the 1959 cost-ascertainment report shows a breakdown of the various subclassifications of second-class mail in which expenses are termed "actual." Are they "actual"? No.

Does the cost-ascertainment system allocate costs only to the general classes of mail and therefore is the breakdown of the subclassifications of second-class mail based solely on statistical averages and not on solid cost accounting? Yes.

Does the statistical breakdown of the second-class subgroups give full credit to those groups where more complete advanced preparation of the mail is more feasible and is performed? No.

Does the use of statistical averages misallocate whole cost categories such as millions of dollars of city delivery carrier costs to free-in-county mail which by definition cannot receive such service? Yes.

Post Office Department's reply:

It should be noted that these questions are directed only toward the validity of the breakdown of cost to subclassifications of second-class mail. They do not in any way question the accuracy of the total cost allocated to second-class mail as a whole under the cost ascertainment system. Any inaccuracies therefore noted or claimed in the cost breakdown by subclasses would serve simply to increase or decrease correspondingly other subclassification costs within the second-class mail category as a whole.

The Department agrees that it has allocated costs to subclasses of mail within a class through the use of average cost factors. Cost elements for second-class mail have been reduced, as appropriate, to terms of cost per piece, per pound, per pound-mile, and per cubic-foot-mile, and then applied to these quantities for the various subclasses. This procedure which was used in parcel post cases before the ICC has been accepted by the ICC in approving rate increases requested by the Department.

Any economies resulting from premailing preparation of publications are reflected in total second-class costs. No attempt is made to separately assign any savings resulting from such practices to specific subclasses. Neither does the Department attempt to assign to specific subclasses additional expenses which may be incurred as a result of the expedited treatment given publications having time news value. There are no data to support the premise that any one group of publications performs premailing services resulting in economies for that group over other groups of publications. The premailing requirements of the Department affect small publications as well, and where the area of distribution is limited, often result in substantial distribution economies.

With respect to the subcategory of free-in-county mail, it could be that to the extent that average delivery cost assigned to this item differed from actual rural delivery costs, some inaccuracy would result. However, any variation in costs allocated to free-in-county mail would automatically result in compensating variations for other subclasses.

The Department discontinued in the fiscal 1957 report the practice of indicating by footnote that the breakdown of second-class mail costs by subclass was developed by processes of approximation but specified in the transmittal letter that no significant change from preceding years was made in the cost ascertainment basic procedures. The Department intends to provide a footnote in future publications of the report.

Time's question and answer: Does the Post Office Department have a cost system which provides for the costing of individual publications? No.

Post Office Department's reply: The Post Office Department can and has on occasion analyzed the handling and established the cost of individual publications, but this procedure is intricate and must be tailored to each individual publication. It is, therefore, expensive and time consuming. The expense of a cost system designed to provide regularly cost figures for any one publication would be prohibitive. Since rates are never established for individual publications, the cost of making such analyses would not be justified.

Time's question and answer: Did the Post Office use simple average cost statistics for all of second class when attempting to compute the individual costs of handling Life? Yes.

Post Office Department's reply: The Post Office Department used average cost factors in computing the costs of handling Life. Mr. Stans stated (House Post Office and Civil Service Committee hearings, 85th Congress, H.R. 5836 and H.R. 5839, page 745) "the Post Office believes—that the result is not significantly incorrect as a measure of the full cost of carrying this publication." Mr. Stans further explained that "a field study made by the Post Office Department produced costs 11 percent below results obtained by use of average cost factors of Time magazine. The Saturday Evening Post cost study resulted in costs 1 percent below results obtained by average cost factors."

Time's question and answer: Did the use of simple averages substantially overstate the cost of transporting Life in the mails? Yes.

Post Office Department's reply: Average cost factors were used in computing the transportation cost for Life magazine. Mr. Stans adequately explained on page 745, House Post Office and Civil Service Committee hearings, 85th Congress, H.R. 5836 and H.R. 5839, Post Office Department measurements of density in transportation as compared to measurements made by Life magazine.

Time's question and answer: Did the use of simple averages substantially overstate the cost of delivering Life on rural routes? Yes.

Post Office Department's reply: The use of average cost factors may result in overstating the expense of transporting Life magazine on rural routes. However, this apparent overcharge might well be offset by higher proportionate costs of city delivery service, the possibly greater distribution expense in urban post offices, as well as additional costs inherent in giving expedited handling to the handling of time value publications.

Time's questions and answers: In spite of the obvious conclusion by any competent analyst that the handling and sortation of pieces is the primary cost element in mail costs, did the Postmaster General ever testify to this fact prior to this year? No.

Is this fact clearly highlighted in the recently released "Survey of Postal Rates," and did we not testify to this very fact in 1957? Yes.

Post Office Department's replies: The Post Office Department has recognized the importance of handling and sorting of pieces as a significant element in mail costs. In fact, the Department has on several occasions recommended to the Congress increases in the minimum per piece rate in order to bring revenues derived more nearly in line with costs incurred for such mail. This fact, as Mr. Brumbaugh observes, has been further highlighted in the Department's "Survey of Postal Rates," which was submitted to the Congress pursuant to Public Law 85-426, and forms the basis for the Postmaster General's current proposal for a ½-cent charge for each piece of second-class matter. In 1957, the Deputy Postmaster General, Mr. Stans, in replying to a statement by Mr. Brumbaugh on this very point, testified: "There is merit in Mr. Brumbaugh's belief that the minimum piece rate of one-eighth cent per copy on second-class matter is entirely too low. However, he is incorrect when he attributes the entire loss on second-class mail to this fact" (p. 743, 1957 House hearings on H.R. 5836 and H.R. 5839).

Time's question and answer: Is it a fact that the larger the circulation of a magazine the more complete the advanced preparation of mail before entering can be made? Yes.

Post Office Department's reply: This question is academic. The Post Office Department has acknowledged the benefits of premailing preparations of a number of publications. However, many smaller publications are made up almost entirely to rural routes and nearby offices, eliminating the need for most clerical distribution and thereby effecting the same economies as the more extensive premailing practices followed by a limited number of large circulaton publications.

Time's question and answer: Is it a fact, therefore, that the average cost per piece of handling a larger circulation magazine with complete advanced preparation is less than the average cost per piece of handling a small circulation magazine which cannot effect substantial advanced preparation? Yes.

Post Office Department's reply: Again the question is predicated on the theory that large circulation publications automatically make more extensive premailing preparations than smaller circulation publications. There is not information available that substantiates this as a general principle.

Time's question and answer: Was this important fact given effect to in the post office calculations of handling Life? No.

Post Office Department's reply: The answers to questions 16 and 17 apply equally to this question.

Time's questions and answers: Since the cost per piece is the most important element, is not the second class rate structure which is based almost entirely on weight discriminatory against heavier pieces? Yes.

Does the recently released "Survey of Postal Rates" point up this fact on page 57 by stating that a disproportionate share falls on the heavier weight publications? Yes.

Post Office Department's reply: The three major cost elements in second-class mail are pieces, weight, and distance. Each of these elements is to some extent reflected in the present second-class rate structure. However, the handling of pieces is the principal cost determinant, while postage revenues are determined primarily by weight and distance. As a result, postage revenues derived from lightweight publications do not cover as much of their costs as do the heavier weight publications. The Department—as does Mr. Brumbaugh—recognizes this imbalance in the rate structure. Accordingly, the Postmaster General has proposed a one-half-cent-per-piece charge on all second-class publications in order to give greater emphasis to handling in the rate structure and to correct somewhat the disproportionate share of total expenses which is currently borne by the heavier weight publications.

Time's question and answer: Does the "Survey of Postal Rates" state that the rates on 40 percent of second-class mail have not been changed since 1925 and the rates on 20 percent have not been changed since 1879-1885? Yes.

Post Office Department's reply: Unfortunately, Mr. Brumbaugh's statement of fact is open to possible misleading conclusions. The current second-class rate structure has evolved in response to many factors and many considerations, political as well as economic. In some instances, this has resulted in an inflexibility of certain rates despite increases in costs. However, it would be wholly misleading to attribute the entire current financial deficiency in second-class mail to these inflexible rate categories. It would be equally fallacious to imply that this revenue deficiency in second-class mail could be corrected merely by changes in these rate categories. With a prospective $280 million revenue deficiency for second-class matter based on 1959 volume, an upward adjustment in the level of all second-class rates is unavoidable if second-class revenues are to be brought more nearly in line with costs.

Time's questions and answers: Did the Post Office advocate and testify in 1957 that second-class mail should pay 50 percent of the costs allocated to it under their present methods of cost ascertainment? Yes.

Did the Post Office advocate and testify in 1957 that third-class mail should pay 75 percent of the costs allocated under their present methods of cost ascertainment? Yes.

Has the Post Office followed up its advocacy by preparing a consistent set of cost figures and releasing them at all times to the proper committees of Congress and to the press? No.

Post Office Department's reply: In 1957 the Department prepared tables showing the extent to which revenues in fiscal 1956 failed to cover 50 percent of the cost of second-class mail and 75 percent of the cost of third-class mail. These percentages were those which a departmental staff committee recommended as immediate goals for revenue coverage by these classes of mail under conditions existing in 1954 taking into account intangible service factors. This committee had also expressed the opinion that in the long run second-class mail should cover 75 percent of its cost and third-class mail 90 percent of its cost. The Department's rate proposals in 1957, however, called only for a coverage of 29.2 percent for second class and 77.7 percent for third class.

The Department has not used the 1954 committee recommendations since 1957. Since that date the Congress has enacted the Postal Policy Act of 1958 and the Department has developed its rate proposals in conformity with the basic concepts of that act and economic and operating conditions as they exist today.

Question 24 confuses proposed standards of cost coverage with the costs themselves. There has been no change in the basic cost figures reported under the cost ascertainment system since these are in nowise affected by rate considerations.

Time's questions and answers: Do the Post Office figures show that free-in-county mail in 1959 furnished zero revenue and cost the Post Office $15,444,933 to handle? Yes.

Does the Post Office assert that the only public service cost for this category is $830,000? Yes.

Does the Post Office leave the balance of $14,600,000 as a deficit in second-class mail to be assessed in theory against the other users of second-class mail? Yes.

Post Office Department's reply: These questions bring out the fact that the loss in fiscal 1959 on free-in-county mail amounted to $15.4 million of which only $830,000 was attributable to the rate concession to this category of mail user and therefore considered as a public service reimbursable by appropriation from the Treasury. Time's answer to question 27 that the $14.6 million balance of the deficit is assessed in theory against the other users of second-class mail, is wholly untrue.

The $14.6 million remaining deficit represents a deficiency in the basic rate. When, and to the extent that, the basic rate is raised, the amount reimbursable from the Treasury as a public service will be increased accordingly. In no way is it proposed that this deficiency be assessed against other users of second-class mail. This is obvious when it is recognized that the administration's rate proposals will recover from users of second-class mail only a portion of the aggregate costs incurred by each subclass. Therefore, until a subclass rate covers the costs allocated to the subclass (and none do) such subclass cannot be considered as paying for costs assigned to another subclass as alleged.

Time's question and answer: Does the Postal Policy Act state that the entire loss should be removed as a Public Service cost? Yes.

Post Office Department's reply: The Postal Policy Act of 1958 provides that the amount which shall be deemed to be attributable to the specified public services shall be the amount appropriated each year for that purpose by the Congress. In its initial request for this appropriation, the Department submitted estimates for loss resulting from free and reduced rate mailings on two bases: (1) the difference between revenues received, if any, and the expense attributable to the categories of mail involved, and (2) the amount of revenue foregone owing to the application of free or reduced rates as compared with the rates otherwise payable. The Congress chose the latter of these concepts in implementing the law. They have reaffirmed this position in the 1961 appropriation action.

Time's question and answer: Does the Postal Policy Act state that no user or group of users of the mails should be compelled to pay for an intended subsidy of this nature? Yes.

Post Office Department's reply: An affirmative answer to this question is correct. No action or proposal of the Post Office Department would require payment by any user or group of users of any intended subsidy to other users.

Time's question and answer: Is the Post Office contradicting both the law and reasonable logic when it handles costs in this way? Yes.

Post Office Department's reply: It is assumed that this question refers to the answer given to question 27. Since the proper answer to question 27 is "No," the answer to this question would also be "No."

Time's questions and answers: Do the Post Office figures for 1959 show an excess of expenses over revenues for exempt publications of $60,126,922 and does the Post Office assert that only $3,094,000 is a public service cost leaving the balance as a part of the second-class deficit to be paid for by other users? Yes.

Do the questions and answers numbered 28, 29 and 30 apply to this case as well? Yes.

Do the Post Office figures for 1959 show an excess of expenses over revenue for exempt classroom publications of $3,757,631 and does the Post Office assert that only $224,000 is a public service cost leaving the balance as part of the second-class deficit to be paid for by other users? Yes.

Do the questions and answers numbered 28, 29 and 30 apply to this case as well? Yes.

Post Office Department's reply: These questions are of the same general nature as those covered by questions 25–30. The same answers apply to both sets of questions. As stated under question 27, any deficit in a subclass cannot conceivably be considered as paid by another subclass until the latter more than covers its own allocated costs, which none do.

Time's questions and answers: Have the McKinsey report conclusions that additional postal rate increases can be easily passed along or absorbed been confirmed by the mail users who have testified here? No.

Do the indexes quoted by McKinsey on paper and hourly wage increases take any account whatsoever of efficiencies put into effect by industry to help to offset such increases? No.

Post Office Department's reply: Despite attempts by some witnesses to discredit its conclusions, the McKinsey report is an independent, objective, and factual evaluation of the impact of the Department's postal rate proposals. The report's findings rest on extensive statistical analysis of published data supplemented by actual interviews with representative mail patrons and an examination of confidential financial data. The facts which were uncovered in connection with these confidential interviews confirm and substantiate the statistical findings of the report regarding the ability of mail patrons to adjust to the modest rate increases which have been proposed.

Although much invective has been hurled at these findings, no adequate financial data has been offered by witnesses before the committee to refute the two principal conclusions of the report: (a) That postage constitutes a relatively minor cost factor in magazine and metropolitan newspaper publishing, and (b) that the rate increases which have been proposed would have little impact on circulation volume or on the financial condition of such publishers.

Time's question and answer: Is the Consumer Price Index up less than 10 percent from 1953 to 1959 and is the Post Office cost for handling a first-class letter up over 33 percent in the same time? Yes.

Post Office Department's reply: The Consumers Price Index is not an accurate index of the increases in costs of the service which the Department pays for. Since 1952, postal wage rates and the cost to the Department of employee fringe benefits have gone up more than 26 percent. Railroad rates have increased an average of more than 25 percent. Also since 1953 the Department has started an intensive program of modernization of its postal facilities. While for the most part these improvements are expected to be self-liquidating, initial installation costs under the Department's accounting system are written off in the year of acquistion. Many of these improvements are directed toward first-class mail. In addition there has been some change in the mix of mail since 1953 resulting in an increase in average weight per piece of first-class mail, primarily because of a relative decrease in the number of postcards.

Mr. Brumbaugh did not direct his question to the cost per piece of second-class mail which since 1953 has increased only 17.4 percent contrasted with the increase in transportation and wage rates of 25 percent and 26 percent.

Time's questions and answers: Can it be said that the Post Office efficiencies compare at all favorably with the progress of the private economy? No.

Has the Post Office testified before you that its operation is still essentially manual and very few modern machines even exist today? Yes.

Since the handling of first-class mail is a granted monopoly should the mail users and the Congress demand greater cost efficiencies so that constant increases of postal rates is not the only method to balance the postal budget? Yes.

Post Office Department's reply: The Post Office Department estimates that operational savings achieved since 1952 are at the rate of approximately $300 million annually. Total costs have gone up in excess of this amount because of wage and other increases referred to in the reply to question 37.

While post office efficiency improvements may not be as great as in many private industries, it should be borne in mind that the service has not been given the funds with which to mechanize its operations to any significant degree, as Time's representatives themselves admit. Furthermore, the Department is not permitted to pay incentive wage rates or employ executive talent on the scale of private industry. Despite these handicaps, it is apparent that the progress of the last 8 years has been outstanding in the history of the postal service. The rate structure which was inherited in 1953 was so far out of line with current-day price levels that no amount of mechanization or improved efficiency alone could balance the budget. The 1958 rate increases were but a half-step in that direction; the other half should now be taken to relieve the taxpayers of this unfair burden.

TIME, INC.,
New York, N.Y., June 20, 1960.

DEAR CONGRESSMAN PORTER: In my testimony before your House Committee on Post Office and Civil Service on June 2, 1960, I presented a list of 40 questions and answers on Post Office operation, ratemaking, and accounting matters. I note that you inserted a copy of this material in the CONGRESSIONAL RECORD. You also requested that the Post Office Department reply to this list of questions. The reply is before me and, because of your interest in these matters, I am taking the liberty of commenting briefly on the status of the factfinding rec-

ord with respect to some of the broad principles involved.

First, it is my intent hereby to restate our request to appear before your committee with representatives of the Post Office Department in order to debate those points on which we are in disagreement. We desire the true facts to be established and clarified for future policy and ratemaking purposes. This request is not for the purpose of prolonged controversy but rather in the interest of proceeding toward a goal of sound decisions in a less controversial atmosphere.

Indeed, although it is not desirable or appropriate to comment in detail in this letter about those Post Office answers which are in demonstrable error, I think this exchange has already been very fruitful because there now seems to be essential agreement on the following important conclusions:

(a) Allocation of costs between various subclassifications of second-class mail has been made on a statistical basis which takes no account of special preparation of mail by some users and is, therefore, subject to error.

(b) The Post Office has no accounting system designed to provide cost figures on individual publications. The Post Office says that the problem of analyzing the handling and establishing the cost of individual publications is "intricate, expensive, and time consuming." The individual figures previously released on Life magazine by the Post Office were a statistical approximation based on average cost factors and the Post Office says it had not done the "intricate, expensive, and time consuming analysis." The Post Office says it may have overestimated the cost of carrying Life on rural routes, but says this may be offset by other errors it made.

Fortunately, the Post Office for good reason now appears to have adopted the policy of not releasing such figures in the future.

(c) The handling of pieces of mail is the principal cost determinant in second-class mail, yet postage rates are determined principally by weight, distance and proportion of advertising matter. As a result, postage revenues derived from lightweight publications and those not carrying large amounts of advertising do not cover as much of their costs as the heavier weight publications and those carrying substantial advertising volume. The Post Office Department desires "to correct somewhat the disproportionate share of total expenses which is currently borne by the heavier weight publications."

(d) The Post Office states that "the rates on 40 percent of second-class mail have not been changed since 1925 and the rates on 20 percent have not been changed since 1879–85." These are subclassifications of second-class mail, such as religious and nonprofit publications receiving special rate consideration.

(e) The Post Office says it would not require any user or group of users to pay any intended subsidy granted to other users.

The Post Office does not propose to assess the deficiency on free-in-county, exempt publications and exempt classroom publications, amounting to approximately $80 million, against other users of second-class mail. We are glad to see this statement. If we can also assume that this loss is not to be assessed against other classes of mail, then it seems impossible to find any characteristic differentiating this from admitted public service items.

(f) The Consumer Price Index is up less than 10 percent from 1953 to 1959 and the Post Office cost for handling a first-class letter is up over 33 percent in the same time. In explaining this the Post Office says, "While Post Office efficiency improvements may not be as great as in many private industries, it should be borne in mind that the service has not been given the funds with which to mechanize its operations to any significant degree."

The cost per piece for handling second-class mail is up 17.4 percent since 1953 but second-class rates are up 67 percent on editorial matter and 100 percent on advertising matter in the same period, and the Post Office is asking for another rate increase.

From the above there is substantial progress in clarifying some areas of broad agreement from the Post Office Department with testimony presented by me to your committee.

I am greatly interested in assisting in any possible way to accomplish the further highly proper and desirable objectives, which still are unattained:

(a) Establishment of sound public service cost figures for Post Office operations and their removal from the costs of each class of mail.

(b) Correction of deficiencies in Post Office accounting, including matters testified to by Mr. Stans before your committee in 1957.

(c) Use of out-of-pocket accounting for second- and third-class mail to produce a result more nearly in accord with revenue requirements of the various classes of mail as determined by the Congress.

(d) Presentation by the Post Office Department of one clear and consistent set of figures on all occasions to all people.

(e) Development of a theoretically sound rate structure for second-class mail and progress toward it rather than away from it as rates are changed from time to time.

(f) Study by your committee of Post Office efficiencies, including a study of reports by management experts rendered to the Post Office in the past, such new ones as you might desire and a study of Post Office recommendations for mechanization and other cost-saving devices.

Sincerely,

DAVID W. BRUMBAUGH,
Executive Vice President.

Statement of the American National Cattlemen's Association to the Platform Committees of the Republican and Democratic Parties

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including a statement of the American National Cattlemen's Association to be submitted to the platform committees of the Republican and Democratic Parties in their July conventions:

The American National Cattlemen's Association is a nationwide organization of cattle producers and feeders now in its 63d year. Its membership includes thousands of individual cattlemen operating in 47 States. It also includes 30 affiliated State associations of cattle raisers and feeders, and 120 breed, county, or regional associations.

The cattlemen for whom American National speaks, and to whose interests it is devoted, represent the largest single segment of American agriculture. The value of cattle and calves sold from farms and ranches was $7.5 billion in each of the past 2 years, or about 20 percent of the total cash income of agriculture. Cattle and calves produce more cash farm income than all six "basic" crops combined, and more than the combined sales of hogs, sheep, wool, and poultry and eggs.

We appreciate this opportunity to submit for your consideration our views on national agricultural policies as they may affect the cattle industry.

The American National Cattlemen's Association has traditionally and vigorously opposed legislative proposals and policy statements which would bring cattle under any form of artificially maintained prices, or controlled marketings, or continued subsidies.

We wish to reemphasize this point of view and to set forth our reasons:

1. Cattlemen, like any other sellers in the market, would be happy to receive higher prices for what they have to sell. However, experience has taught that artificial prices and controls are inseparable. We do not believe that the complex cattle business can fully serve its market or realize its full potentials under a system of production and marketing controls.

Beef is the preferred meat of the American people. Demand for beef has been increasing, and the cattle industry has been expanding production to serve our increasing population.

During the past decade increased per capita consumption of beef has been even more important to the cattle business—that is, has contributed even more to the expansion of the market for beef—than has the sharp increase in the population of the country.

We believe the market for beef can be expanded much more in the years ahead if the cattle industry remains competitive and aggressively strives to further improve the quality of beef offered to the public.

We believe that to whatever degree beef production would be restricted under a system of controls, we would be handing over to other food products a part of the sales volume we otherwise can achieve for our own product. Over the years this would be a price too great to pay for any benefits to be derived from an artificial and subsidized cattle market.

Historically the cattle business has been through repeated experiences of boom and bust coinciding with the ups and downs of the cattle cycle. At times it might seem pleasant for the cattleman to unload these problems onto the taxpaying public. But cattlemen have a long and proud history of insisting upon carrying their own problems of natural and economic hazards.

The price we must pay to have a free and competitive market for cattle is at times an income position lower than is easily accepted. The offsetting advantage is that difficult times keep the cattle industry always in the process of adjusting to its markets. And we know, with a free market there is opportunity to recoup from the stress of low-income years at other times when markets improve.

2. Coupled with the concept of a free market is the need for affording cattlemen—and all business—reasonable incentives and protection against unforseeable and uncontrollable conditions. These incentives and protections should come from logical income tax treatment and from realistic policies concerning imports.

(a) It is a recognized fact that any business with widely fluctuating conditions of supply, weather, and so forth, cannot put away in good years enough to offset entirely the losses or lack of adequate income during poor years. We believe that our Nation's fiscal policy should include provisions for averaging of incomes, for tax purposes, over a span of years to provide for funds to carry out normal business operations.

(b) American stockmen have no intent, or desire, to "fence out" reasonable competition. But they do expect the Government to adopt a realistic policy of tariff or quota protection against excessive imports of foreign livestock and meats. American prices, reflecting a higher standard of living and a high wage scale, often attract unusually large shipments of meats from countries which find in our markets exceptionally profitable outlets for their products raised and processed under substandard conditions. Tariffs on livestock and meat products now in effect have been made almost ineffective as a deterrent against such dumping by inflation and shifting world monetary values.

3. The cattle industry long has avoided interference with farm programs and policy questions not generally considered to directly concern cattlemen. But in recent years, we have observed a disturbing tendency for many farm programs not touching directly upon the cattle industry to become, in fact, a threat and a burden to cattlemen. We deplore these tendencies, and insist that they be corrected.

Especially disturbing to us has been the tendency to shift problems of price-supported crops onto the feed grains, or in the direction of expanding the acreage of grazing lands on a subsidized basis. Such attempts to solve the problems of other farm enterprises create a threat to the stability of the livestock industry. The willingness of livestock producers to face up to problems of their own must not be burdened by dumping the problems of the rest of agriculture upon them.

We request prompt and effective adjustments in programs and policies for the price-support crops that will protect the livestock producers from these burdens.

4. Agriculture does not exist in an economic vacuum. It becomes ever more an inseparable part of the total national economy. The well-being of the cattle industry requires reasonably full employment and production throughout the Nation, stability of the general price level, and a continuing healthy growth of the total economy of the country. Within such an environment, there is opportunity to build an expanding demand for our product through improved quality, efficiency, and service to the consumer, and to operate our farms and ranches with stability of costs and income.

We look to our potential leadership for policies and actions conducive to these objectives.

What Is the American Legion?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting brochure titled "What Is the American Legion?" issued by National Commander Martin B. McKneally. This, Mr. Speaker, is a concise statement of the aims and accomplishments of that fine national organization:

WHAT IS THE AMERICAN LEGION?

(Everyone has heard about the American Legion. But few know much about it. As a mattter of fact, there has never been a completely satisfactory answer to the simple question: "What is the American Legion?" However, a national commander of the American Legion comes to know the organization as no other person can. Here is the way National Commander Martin B. McKneally defines and describes the world's largest organization of war veterans.)

A PATRIOTIC ORGANIZATION

The American Legion is fundamentally a patriotic organization, dedicated and devoted to advancing the ideals of America—justice, freedom, democracy, and loyalty—and to exalting, under the motto "For God and country," the sacredness of human personality and the inestimable gift of American citizenship.

COMRADESHIP

It is the voice of many men and women who fought in three wars[1] and have bound themselves together in comradeship and service.

VETERANS

The American Legion believes that those who have served their country in time of war have earned a special status in our society. It believes that "veteran" is and must continue to be an honorable word.

COMPASSIONATE PROGRAM

Numbering its members in the millions, the American Legion has become a great and influential organization. In just one of its many programs (child welfare) the Legion last year spent $8 million. It has marshaled its resources on behalf of retarded children. It has used its facilities and its influence to relieve the lonelines and the financial distress of the aged.

LOVE OF COUNTRY

Since its beginning, the American Legion has sought to raise the standard of patriotism, of respect for the flag, of reverence for men who fell in battle; and it has tried to enkindle in each man's heart a love for his country.

ANTICOMMUNIST

The American Legion has been vigilant on the issue of communism. In 1933, the Legion raised its voice in strong opposition to traffic with Communist tyranny. Today, it is a rallying point against the seating of Red China in the United Nations and the recognition of that country by the United States.

CITIZENSHIP TRAINING

More than 4 million boys and girls have deepened their knowledge of the Constitution through participation in the American Legion National High School Oratorical Contest. Each summer, 16,000 outstanding high school boys receive intensive training in the operation of democratic government through American Legion Boys States. The annual Boys Nation extends the same type of training at the Federal level to two leaders picked from each of 50 Boys States. Legion posts sponsor 4,333 Boy Scout units, with a membership of 182,000. Nearly a million boys play baseball under American Legion auspices.

GI BILL

The American Legion sponsored, wrote, and supported the original GI Bill of Rights for World War II veterans. It also supported the Korean GI bill. Under these two acts, more than 10,500,000 veterans have received education and training. Five and a half million have been helped in the purchase of homes through guaranteed loans. Another quarter of a million have received business loans. While the original GI bill was opposed by many (including other veterans organizations), it is today largely credited with the smooth readjustment from a total war economy to a peacetime economy of undreamed of prosperity.

ITS MEMBERS

The American Legion is an organization which welcomes honorably discharged veterans of wartime military service, without regard to race, creed, or color. Its members include the President and Vice President of the United States, 61 U.S. Senators, 241 Members of the House of Representatives, and 31 Governors of States.

DEMOCRATIC ORGANIZATION

It is a democratic organization which belongs to the rank and file member. Its officers are elected and its policies made by the delegates to its annual national convention.

WORLD ENCIRCLING

The American Legion's nearly 17,000 posts are located in all of the States, in four territories of the United States, and in 30 foreign nations.

YOUR PARTICIPATION

Because the American Legion must always speak with the strong voice of patriotism, of knowledge, and of creative thinking, it needs and wants the membership of all war veterans who believe in individual freedom in these days of dark peril. It also needs their active and thoughtful participation.

[1] World War I, World War II, Korean conflict.

Let's Place the Responsibility Where It Belongs

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. HOEVEN. Mr. Speaker, the failure of the House of Representatives to accept the Senate wheat bill fixes the responsibility on the shoulders of the Democratic Members of the House. The Senate bill still lies dormant in the House Committee on Agriculture. There is still time to report out this bill and have it enacted into law before Congress adjourns.

I include, as part of my remarks, an editorial from the Washington Post of Saturday, June 25, 1960, as follows:

FAILURE ON WHEAT

The apparent failure of wheat legislation in the present session of Congress may be laid at the door of the House Agriculture Committee. Last January, President Eisenhower offered to sign any reasonable bill to curb the mounting wheat surplus even if it did not fully accord with his views. The Senate finally passed a bill leaving the price support for wheat at 75 percent of parity ($1.77 a bushel) and reducing acreage allotments by 20 percent. There were indications that the President would have signed the measure, but the House Committee insisted on clinging to its outworn concept of high artificial prices and was roundly beaten on the floor.

This is not the first time that the House has revolted against the over-reaching of the Agriculture Committee. The combination of Republicans and urban Democrats against the bill should have been anticipated, even though the size of the opposition vote (236 to 170) came as a surprise. No doubt this could have been avoided if the committee had accepted the substance of the Senate bill, but it had helped to defeat that measure before its own bid for price supports at 85 percent of parity went down. So the committee—and incidentally the Democratic Congress—was left empty-handed on the supposedly vital wheat issue.

The one slender chance of changing this negative record seems to lie in belated ac-

ceptance of the Senate bill by the House Agriculture Committee. With such backing, it would doubtless be approved on the floor, since it previously failed by only a few votes. Does the House committee have the statesmanship to reverse itself for the sake of curtailing the mountainous wheat surplus? Or would its members rather go into their reelection campaigns bearing the onus of having killed the wheat bill?

Responsible Individualism—Our American Heritage

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. HIESTAND. Mr. Speaker, a high school senior from Flintridge, Calif., has written a rather remarkable essay on "Responsible Individualism—Our American Heritage."

It is, in my judgment, and I believe in the opinion of many Members, a shining example of some of the good thoughts of our youth:

RESPONSIBLE INDIVIDUALISM—OUR AMERICAN HERITAGE

(By Penny McElroy)

We discovered America, you and I, sometime between 1942 and 1945. Though we were not interested in anything other than our personal comfort, by virtue of birthright, each of us inherited certain inalienable rights and responsibilities, among which are those of enjoying and defending life and liberty, of acquiring, possessing, and protecting property, and seeking and obtaining happiness. In other words we inherited responsible individualism.

In a very short time, each of us knew what we wanted—we wanted to grow up; yes, that's all we wanted—just to grow up.

Well, you know we are just about as up as we're ever going to get and that's my subject—"Growing Up."

There are many who will never grow up, and I believe it is because they have never been delegated their fair share of individual responsibility.

Most of us know adults who suffer the inability to face unpleasant facts and who are reluctant to assume obligations. They may be 30, 40, or 50 years old, but they have never grown up.

True, their American heritage is the same as ours, but since we find many of these among our own loved ones, I'd like to say that these dear hearts and gentle people have simply abdicated their American heritage of responsible individualism.

Remember when we girls all wore the exact sloppy Joe sweater that every other little girl wore, and the boys all wore jeans or else they all wore cords? We were little kids in our little world where we found our little security through identification with our little classmates.

Now we feel we're pretty clever shoppers if we select apparel and find only a dozen or so duplicates on campus—and if there are no duplicates, we're a total success. We've come out into the big world.

No more of this "monkey see—monkey do" business; we really appreciate being different from one another. We now have the courage to be individuals. And courage, we know, is merely fear that has gone to school—for fear can be overcome by knowledge.

There is only one "you" in the entire world. There is no one else like you (unless, of course, you happen to be an identical twin) but even then the likeness is only physical, for no human being ever shares those mental and spiritual elements that are peculiar to an individual personality.

Today the biggest battle centers on the worth of the individual. That part of the world, that atheistic, socialistic section of the world which denies individuals the right of personal expression and initiative, has become a real menace to the liberties and the human impulses that combine to make our people great in character and achievement. This is a challenge we must meet not only for ourselves and posterity but as a debt we owe to those who fought and struggled that we, who are in school today, might have our present great opportunities.

What can we do about it?

Well, for one thing, while we are growing up and concentrating on our future means of living, we can make sure that we do not neglect the ultimate aims and objectives for which we intend to live.

And while we are growing up, we can prove that we, as young men and women, will not swallow every socialistic nostrum offered us in bottles handsomely designed and labeled with such intriguing names as "Peace," "Coexistence," and "Democracy."

I really don't wish to keep rubbing it into adults, but it was mostly they who gushed over his most nauseating highness from the Kremlin whom we recently dined and wined so royally. Let us hope that his presence with his words and attitude may have started some people to thinking.

Some of us did some thinking, and some growing up, too. We discovered we felt very deeply about our God-given rights and the traditions of our American heritage.

Who says our generation will accept socialism and live under the tyranny of dictatorship whether it be hammer and sickle or some other version of absolutism?

Do you know about the "Judas" goats?

They are goats trained for use in meatpacking plants to lead sheep to the slaughter. The sheep blindly follow the "Judas" goat. Only when it is too late do they sniff the blood of the slaughter pen and panic.

Let us be smart enough not to follow the "Judas" goats who would lead us away from our great traditions and down paths to conditions of slavery from which there is no return.

The great fear of the false leaders is that our generation will wake up and grow up to appreciate the inestimable importance of responsible individualism before their perfidy hypnotizes us.

What is a fear for these false leaders is a hope for everyone else—especially for us, the young people of today. The awakening of our generation is, in fact, the hope of the world.

Self-Government for the Unincorporated Territories

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. SAYLOR. Mr. Speaker, with the achievement of statehood by Alaska and Hawaii, only a few small islands are left in a non-self-governing status. At the proper time these areas also must be advanced to full self-government, and it is none too soon for Congress to begin thinking about it. A few months ago there was printed in the CONGRESSIONAL RECORD a paper prepared by Mr. Harold Seidman of the Bureau of the Budget, entitled "Our Territorial Dilemma," which suggests a manner in which this might be done. I have here another paper on the same general problem, written by Mr. Kirkley Coulter, Legislative Adviser of the Office of Territories in the Interior Department, which supervises most of our territorial possessions. Mr. Coulter has been in charge of legislative work for that office, and in that connection has been engaged in developing the general approach toward giving more self-government to these areas. I believe his paper may be a useful contribution to our thinking on this subject, and under unanimous consent I insert it in the Appendix of the RECORD:

SELF-GOVERNMENT FOR THE UNINCORPORATED TERRITORIES

(By Kirkley Coulter, Legislative Adviser, Office of Territories)

It is clear that the United States, and the world, are fast moving toward the day when self-government will be the minimum respectable formula for the administration of any former possession. If that concept is accepted as the goal, the key question for our most advanced territories, the Virgin Islands and Guam, becomes, should they be given the right to select their own chief executive? And if so, how soon? In both areas there is already a popularly elected legislature, which theoretically has the power to determine policy. The principal limitation on full self-government at present is the federally appointed Governor.

In constructing territorial governments, it has been the American habit to establish the familiar check-and-balance system of independent executive, legislative, and judicial branches. In the territories there are fundamental differences from the situation in the States, however. The territorial Governor, being federally appointed, may have little popular support within the territory in any conflict with the legislature. On the other hand, he is charged with protecting Federal interests, which may not be viewed sympathetically by local public opinion.

This pattern of territorial government is more likely to result in conflict than in cooperation between executive and legislative branches. A check-and-balance system is prone to cause deadlocks anyhow, but in the State and Federal Governments they may be resolved by the pressure of public opinion, or ultimately by the next election. These solutions are not available in the territories, and the deadlocks tend to persist.

In short, the system has not been particularly satisfactory. The only cure discovered to date for the recurring deadlocks has been this: to vest extraordinary powers in the appointed Governor, so that his views will generally prevail in any dispute. For example, when a Governor's veto is overridden by a two-thirds vote of the legislature, the bill is still subject to an absolute veto by the President, who commonly upholds his appointee. The system has tended to place arbitrary power in the hands of the Governor, and to breed frustration in the minds of the legislators, who find that their theoretical authority to determine policy has been largely stultified by the broad powers given the Governor. Too often this has tempted local popular leaders either into irresponsible demagogery or else into devising means to take control of the executive branch away from the Governor. Yet it is no use accusing them of being irresponsible;

they can hardly be expected to be anything else, having been given no area of authority in which to take responsibility for results.

SELF-GOVERNMENT BY EASY STAGES

Some have suggested that the powers of the elected legislature might be gradually broadened, at the expense of the Federal Governor, as a means of establishing full self-government by easy stages. For example, it has been suggested that the absolute veto of the President be abolished, permitting a two-thirds override majority of the legislature to prevail over the Governor.

This proposal begs the question, and might create an impossible situation. If a Governor is to take responsibility for carrying out the executive functions, he must have sufficient power to protect the executive prerogative. Lacking any political backing among the legislators, he might find his vetoes consistently overridden, and in effect he might lose control over the executive branch. A great proportion of the conflicts come on issues involving an encroachment of the Governor's authority, or placing some unworkable duty on one of the executive departments, or breaching a carefully balanced budget. In other words, giving the legislature more authority to override the Governor might make it impossible for the Governor to discharge his responsibilities.

Diminishing the Governor's authority while leaving him with all the responsibility is no solution. Nor is there any workable way to divide control over the executive branch between the Governor and the legislature. If self-government is to be expanded, there is no practical place to stop, short of giving elected officials full responsibility and control over the executive branch, i.e., either an elected governorship, or a parliamentary system under which a chief executive stands or falls with his legislative majority.

If the executive power were vested in a person representative of the local electorate, he would have as strong a base in public support as would the legislators. Frequently he would be of the same political grouping as the legislative majority. Being faced with the same practical administrative problems as are the present appointed Governors, he would be in a position to explain those problems fully to the legislature, and thus perhaps prevent irresponsible legislation by persuasion. There would not be the present ideological conflict, of the elected popular representatives versus an outsider owing allegiance to Washington. Conflicts between the executive and legislature would no doubt continue, but at least there would be a basis for compromising or otherwise resolving them.

This paper will not attempt to say how soon the step should be taken in the Virgin Islands or Guam, of giving control over the executive branch to the people. The ideas suggested hereinafter are intended only to serve as general guidelines for that day when it comes.

PECULIAR FINANCIAL SYSTEM

The problem of moving to self-government is compounded by the unusual system of financing that has been created for the Virgin Islands and Guam territorial governments. A major part of the revenues of our various territories comes either from special Federal grants, or from the diversion of revenues which are truly Federal in nature. The peculiarity of the system is this: that these moneys are not spent by any Federal agency, but are diverted into the territorial treasuries, commingled with local revenues, and are then subject to appropriation by the local legislatures, just as if they had raised the money by taxing their own people.

The impact of finance on the practical operation of government may not be immediately obvious to the casual student. But the fact is that our financial help to our territories, particularly the manner in which it is provided, has shaped the whole nature of their governments, and dominated the attitudes of territorial officials toward governmental responsibilities and policies. It has given local officials a false feeling of opulence, a habit of looking to Washington to meet any financial needs, and a reluctance to tax their own people as long as the golden flow from outside continues.

In short, territorial politicians have been trained how to spend, but not very well how to tax.

In the Ryukyu Islands, which is administered by the Army, the pattern is different. There, substantial Federal financial assistance is also given, but it is not diverted into the control of the local government (GRI). It is expended directly by the federally-appointed High Commissioner through the U.S. Civil Administration of the Ryukyus (USCAR), a Federal agency which is in effect a second government of the islands.

A MODIFIED PARLIAMENTARY SYSTEM

As noted above, there is a tendency on the part of the elected legislatures in the territories to try to take over control of the executive branch. Historically, the parliamentary system in England and elsewhere grew from the success of the legislature in taking over control of the executive functions away from the crown. It is not in principle a bad system, but a pure parliamentary system applied in the territories would ignore at least three major considerations, to wit:

The necessity of protecting the Federal interest via a Federal appointee;

The need to safeguard the expenditure of the Federal subsidies granted or Federal revenues now diverted into the territorial treasuries; and

The lack, among local residents, of many persons having sufficient experience or understanding of the considerable administrative, budgetary, and policy problems involved in administering the executive agencies.

The general problem has been analyzed in an article by Harold Seidman of the Bureau of the Budget entitled "Our Territorial Dilemma," published in the CONGRESSIONAL RECORD on February 4, 1960. Mr. Seidman suggests, not a "pure" parliamentary system, but a modified one, under which plenary power would be kept in the hands of a federally appointed High Commissioner for each territory. The High Commissioner would normally exercise his power, however, only on the "advice" of a chief executive, a Governor or First Secretary, who would be responsible to the legislative majority. The High Commissioner would reject such "advice" only when the "Federal interest" was involved. If necessary, however, he would have plenary power to veto bills (with no legislative right to override), appoint department heads, in fact establish general policy, and even to dissolve the legislature. As precedents, Mr. Seidman cites the informal parliamentary system developed in the Philippines under Governor-General Harrison, and the pattern established for the Ryukyu Islands by President Eisenhower's Executive Order No. 10713, June 5, 1957.

Mr. Seidman's analysis is extremely helpful in several respects. Particularly to the point are his emphasis on the lack of public support for appointed governors; on the need for giving elected officials effective control over the executive branch in any system of true self-government; and on the necessity of retaining some device for protecting the essential Federal authority. His key proposal seems to boil down to this: that the function of a chief executive be given to one (popularly chosen) official, and separated from the duty of protecting the Federal interest, which would be given to a different (federally appointed) official. This principle seems sound but has limitations.

OMISSIONS IN THE SEIDMAN OUTLINE

However, some basic factors are passed over lightly or omitted entirely in Mr. Seidman's analysis.

1. The use of the word "plenary" to describe the proposed High Commissioner's powers is deceptive, to say the least, if applied to the Virgin Islands or Guam. The residents of those areas have heretofore been granted far-reaching statutory rights, including the right, through their elected representatives: to confirm certain gubernatorial appointees; to levy taxes; to appropriate; to override vetoes by a two-thirds vote unless such vetoes are upheld by the President; and to have their elected representatives serve out their full terms, without fear of premature dissolution of the legislature by the High Commissioner.

Presumably Congress is unlikely to rescind most of these rights. Yet it is not clear whether the high commissioner plan could work at all in the manner intended by Mr. Seidman unless the high commissioner had the authority, for example, to dissolve the legislature and order new elections.

2. If a chief executive responsible to the legislature in the Virgin Islands or Guam took office, he would presumably inherit control over all present territorial revenues including the Federal diverted revenues and Federal grants. The Seidman article refers specifically to the Ryukyu Islands as a possible model, but makes no mention that the Federal diverted revenues there are carefully kept under the control of Federal officials. So long as a governor is a Federal official, it may be sound to divert Federal revenues into the territorial treasury. The device loses its logic when the chief executive becomes locally chosen.

3. Mr. Seidman suggests that the high commissioner should have wide discretion in deciding when to exercise his plenary power to overrule the locally chosen chief executive—in vetoing bills, making local appointments to office, determining policy, and the like. If such plenary power were used frequently, it could utterly destroy the concept of local responsibility for the executive branch. The high commissioner would become the real governor, and the titular governor or chief executive would become a mere figurehead. It seems essential to define more precisely the exact powers to be exercised by such a high commissioner.

4. The high commissioner would presumably have an absolute veto (not subject to override) over legislative bills, whenever they affected the "Federal interest," which he alone would have authority to define as broadly as he chose. Since this is a power greater than now held by the governor of either the Virgin Islands or Guam, the people of those areas would probably regard the whole proposal as a step backward, rather than a step toward more self-government. If such an absolute veto power is to be granted, it might be better to specify what constitutes the "Federal interest" to be protected by such a veto.

SUMMING UP THE PROBLEM

The problem may thus be summed up as follows:

1. Any major advance in self-government for the Virginia Islands or Guam must consist of giving control over the executive branch of government to an official chosen directly or indirectly by the people.

2. If control of the executive power is to be relinquished, some authority must be retained in the hands of a Federal official, to protect the Federal interest from injury.

3. It would not be desirable to invade the political rights heretofore granted to the Virgin Islands and Guam in their organic acts.

4. Power should be kept in the hands of some Federal official (such as the Secretary of the Interior) to negate absolutely certain types of legislation to protect the Fed-

eral interest, but the categories of legislation subject to that power should be carefully defined.

It remains to specify the categories of local laws which might properly be negated by Federal action. The following types are tentatively suggested:

Any law which interfered with the conduct of a Federal program;

Any law which interfered with national security;

Any territorial law which contravened a Federal law;

Any law which endangered the financial stability of the territory;

Any law which discriminated against any person or class of persons;

Any law which unreasonably burdened or interfered with the development of the economy of the territory or the growth of trade and tourism. (This item is particularly applicable to the Virgin Islands.)

The power thus to negate local laws, with no right of override, is such a great one, that it would have to be used most sparingly, if any semblance of real self-government were to be preserved. Any decision by the Secretary to veto a law would have to be tied directly to the language of one of the categories listed above. It is not expected that he would veto minor bills merely on the ground that he disagreed with them. Nor should he veto appropriations merely because he thought them foolish, only if they seemed likely to lead to territorial bankruptcy.

He would not have to worry about stopping bills which invaded the gubernatorial prerogative, since the normal gubernatorial veto would deal with them if necessary.

SUMMARY

As part of any such reorganization of territorial government, it might be desirable to place control over the spending of all Federal subsidy money and diverted Federal revenues in the hands of a separate Federal agency (as is done in the Ryukyus) rather than permitting these funds to flow into the territorial treasury. Such a separate agency, headed by a Federal official to be known perhaps as the Federal Coordinator, could see to the wise expenditure of the funds, and might also usefully serve as an adviser to the Secretary of the Interior with respect to the exercise of the secretarial veto of legislative acts which infringed on the Federal interest.

This general scheme of government could be worked as either an elective governorship, or as a modified parliamentary system. Under the modified parliamentary system, the chief executive, instead of being elected, would be appointed by the High Commissioner from among the legislative majority. The system would be a close copy of that in the Ryukyus, except that the Ryukyuans do not have statutory guarantees of their political rights, as do the Virgin Islanders and Guamanians. In the Virgin Islands and Guam the powers of the High Commissioner would be more limited than they apparently are in the Ryukyus. In the two organized territories (Virgin Islands and Guam), he would not have much power except to negate laws adversely affecting the Federal interest (as defined above), and to administer the programs financed by Federal moneys.

This rough outline is not held out as any cure-all of territorial governmental problems. The problem is to create responsible self-government without imperiling the essential Federal authority. It is here proposed that at the appropriate time, this be done by relinquishing control over the territorial executive branch, but retaining a power to negate laws of certain specified categories. The Federal judiciary would remain as at present. In the Virgin Islands there is a Government Comptroller under Federal direction who would continue to audit the territorial accounts, and a similar position could be established in Guam. It is inherent in such a system that at times the chief executive may not be that person whom the High Commissioner would have preferred. Yet there is no other way for our territorial peoples ultimately to develop political maturity, except by sooner or later taking responsibility. The scheme here broadly outlined is intended to bridge the critical transition period that must be passed over.

To Be Great Is To Be Misunderstood

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting address entitled "To Be Great Is To Be Misunderstood" relating to the importance of advertising in the life of America and its people. The address was delivered by a close friend of mine of many years standing, Lawrence Valenstein, chairman of the board of the Grey Advertising, Inc., at the Marketing Executives' Seminar, Hotel Lombardy on June 10, 1960:

"To be great is to be misunderstood." This is one of the memorable sayings of the great American poet and philosopher, Ralph Waldo Emerson. When he said this he was talking about people.

He may well have said the same about advertising.

For this great force which has played so vital a role in shaping our mode of living is misunderstood by far too many people. Nor is the misunderstanding confined to any particular group. It includes financiers, professionals, educators, government officials, and even decisionmakers in management.

If these people who influence opinion are not clear about what advertising means to America, what can we expect from the general public?

That's one of the reasons advertising has been an open target for potshots.

We say "one of the reasons" because we are fully aware that advertising excesses do arise from time to time as the result of the heat of competition. Most often, however, they are perpetrated by "irresponsibles" who help make advertising a tempting target.

History shows that no industry can succeed in completely eliminating its scalawags. But we can do much, very much, to dampen the zeal of those who malign advertising because they do not understand it.

So let's spread the truth about advertising. The truth will be a bulwark against the poisoned darts of the ignorant and the malicious.

Not so long ago I met a gentleman from Australia. He is an economist who has been in this country for over a year studying our way of living, our business methods, especially our advertising. Since he preferred anonymity, I shall not name him.

I should like to report to you a very interesting and stimulating conversation I had with this gentleman.

To those engaged in advertising, his observations are refreshing. To others they may be eye openers because, despite the fact that advertising affects everybody, not everybody really understands what it is and what it does.

I shall try to give you a summary of our conversation. Not word for word, but the gist of what was said.

I began by asking my guest to give his impressions of advertising in America. His approach startled me.

"Advertising?" He began with a question. "Let's look at it this way. I walk down any one of hundreds of Main Streets and I see shops full of beautiful clothes (and I mean beautiful clothes), also beautiful sofas, chairs and lamps, and curtains and drapes. And so many, many things that take the drudgery out of living, lighten labor, and make life more comfortable and enjoyable.

"I go into homes of people of modest incomes and I find all these things which, all over the world, are reserved only for the upper upper classes.

"I see huge supermarkets' shelves loaded with food that only the very rich can enjoy in other parts of the world.

"I pass factory after factory and see huge parking lots filled with cars belonging to the workers. And I see your highways overflowing with automobiles.

"I see an active, busy people. Busy not merely with earning a living, but with enjoying living. That's my impression of advertising."

"Come, come, sir, what you have described are the fruits of the American system of free competitive enterprise, of the American genius for organization and production and of our philosophy of not standing still. Advertising has played a mighty important part in all this, but we can hardly give it all the credit."

And this was his answer:

"I believe that you Americans are so close to advertising that you don't really see what it has done for you. You don't give advertising enough credit. I have talked to some very intelligent and well-educated people in this country. And I was really amazed how little they understand what advertising had to do with the development of your society. What's more, I have frequently been astonished at the distorted notions so many people have of advertising.

"Your creative genius and wonderful ability for organization have resulted in a tremendous flow of goods of all kinds. This created a crucial need for masses of people anxious, willing, and able to buy and consume these goods.

"Only a society with a constantly rising standard of living could provide the customers for your goods. These customers had to be sought, taught, and often persuaded to move higher on the scale of living."

"And you think advertising has done all this?" I asked.

"Indeed it has," he said with emphasis. "I've often heard it said that machines produce products. Advertising produces customers. As your machines began to produce more goods, advertising was needed to supply more customers.

"But people are inclined to take the familiar for granted. Advertising is so deeply imbedded in your life that you accept it as you accept a daily newspaper, or twisting a dial for a television program, or going to school.

"Being part of the gigantic organism, most people cannot see the whole. And it is reasonable that they fail to understand that this giant must have a powerplant or it couldn't move. In my opinion, this powerplant is your advertising."

"Well said, indeed," I commented. "But how do you see this engine or powerplant in operation? I am very much interested in your point of view."

His reply showed the amazing depth and extent of his knowledge of our system of economy.

"I read recently that about $12 billion were spent for advertising in the United

States last year. People outside the United States can't even imagine such a sum. From what I've observed, even here people think it's a fantastic amount to spend. Yet to me it isn't. Let's look at it this way.

"Your factories can turn out a lot of goods. Suppose all your warehouses and stores become filled with merchandise. What would happen if this merchandise remained on the shelves? There would be a glut. Everything would slow down. Sure, people would still have to buy the necessities of living: food, shelter, wearables, medicine. But this is hardly enough to keep a very small part of your factories, railroads, trucks, planes, and shops in operation. Millions and millions of people would have to be laid off."

"Advertising's job is to keep these products moving to people, isn't it?" he asked.

"Yes," I replied. "Advertising not only gives people news about the new products, but provides the urge for people to own and enjoy these products. The wider and deeper the penetration of our products into the life of America, the greater the need for more production. This means more jobs. More jobs mean more people able to enjoy what we make. More people buying means more, still more production. And so on and so on. The result is that here more people enjoy more of the fruits of our productive genius than the people in any country anywhere in the world."

"Spreading the news of new products and getting them into the hands and homes of the people used to take years in the days of the general store and the horse and buggy. Advertising helps accomplish this in weeks or months.

"The amount of money invested in advertising is really only about 1 percent of the total volume of all sales transactions. Considering the big job it has to do, is this too much?"

"Indeed not," he agreed. "But here's another fallacy I found in the thinking of many Americans:"

"A common belief is that advertising raises the cost of goods. It seems to me that by increasing the volume of sales, advertising reduces not only selling costs, but the cost of making each unit. This enables the manufacturer to lower the price of his products. The history of your country has demonstrated that in the long run advertising has usually helped lower prices not of everything, but of practically everything."

My visitor had touched a point so often misunderstood. Few people realize that the cost of reaching a prospect through advertising is often less, much less, than sending him a postcard.

On a well-rated TV show, an advertiser can talk to a prospect for a minute at a tiny fraction of a cent. In popular magazines we can reach a prospect in a full page, in full color also for a tiny fraction of a cent. Other media such as radio, newspapers, outdoor, offer similar low costs of delivering a message to a prospect.

The point is that advertising is the quickest and cheapest way of reaching large numbers of people. It enables the advertiser to reach his market (customers) inexpensively and thus increase his production, thereby reducing the cost of making and selling each unit.

This, my friends, is an outside-looking-in view of advertising. I have reported this conversation to demonstrate that intelligent and informed people outside our own country often see our economic, social, and even political society, more objectively, and hence more clearly than we see it ourselves.

I should now like to discuss with you additional aspects of the positive side of advertising which are too often, far too often, overlooked by our critics and by many of us. We are too prone to fall into the error of thinking of advertising as a force which is directed only toward improving our creature comfort, and that it does nothing toward elevating us intellectually, esthetically and spiritually.

The truth is that advertising has exerted and will continue to exert a powerful influence on our cultural advancement.

Why is this not generally understood?

Frankly (and this may raise some eyebrows), this contribution of advertising has not been sufficiently advertised.

Consider these facts not generally known or thought of:

It's because of advertising that our mass media of communication can afford to command the finest talent from all over the world and give to the American people information, stimulation, and education which in other countries are available only to very few people. Have you been noticing the constantly improving intellectual quality of our mass magazines?

The largest circulation general magazines in 1959 devoted more than 2,700 pages to books, education, music, religion, philosophy, history, science, sociology, and similar subjects which may be classed as cultural.

We can tell a similar story about radio and television, but it would take too long.

The point is that mass advertising, directly and indirectly, makes possible dissemination of high-quality entertainment and information to every corner of America at a minimum cost.

Advertising is in a large measure responsible for better living, less drudgery, more leisure for more people. This, together with the contribution of our mass media, creates opportunities for intellectual and spiritual activities equaled in few, if any, other countries.

Just think of this. While millions and millions of dollars are being spent by Americans for cars, boats, sports equipment, and the paraphernalia of leisure, there is a growing hunger for improvement of the mind and for esthetic enjoyment.

Thousands of people (mainly adults) are enrolled in break-of-day television classes.

There are today 42 major American symphony orchestras against 32 in 1956. If we count colleges and small communities, we have an astonishing total of more than 1,100. And 275 of these were organized in the past 6 years.

The sale of serious musical records is increasing as rapidly as the sale of all other records.

Despite the competition from television, radio, and other media, Americans are buying about a billion dollars' worth of books a year, including paperbacks. Sure, a percentage is junk, but there are enough millions of good books sold to signify a healthy hunger for serious reading. The fact is that in the past decade retail dollar sales of books have more than doubled.

Today, American writing, music, painting, sculpture, and architecture influence the rest of the world. To quote the venerable London Times: "The American imagination has become the most powerful stream of Western thought and culture."

Let's now look at another side of advertising's place in the life of America.

What will be the effect on people's attitudes toward advertising as a result of all the hubbub that started with the television quiz fuss?

Despite all this fussing and fuming, let's remember that out of thousands of products and services being advertised, the FTC has found only a handful of cases to prosecute. Even some of those charges are fuzzy.

Actually, you cannot separate advertising from business as a whole. And business is basically honest. We in advertising are in a continuing war against scoundrels. But as in life, the miscreants always get the headlines. However, in the long run it's the people who decide what kind of advertising they will believe and respond to.

Advertising has never been able to sell an inferior product for a prolonged time. We give the consumer too little credit for the ability to detect fraud, deception, and trickery. But the mass American soon gets wise to chicanery.

The manufacturer of good products, promoted by advertising in good taste, will dominate the advertising scene long after the opportunist has withdrawn his shadily advertised product or has closed up shop completely.

This does not mean that we in advertising must give up our vigilance. But it does mean that all advertising must not be tarred with the same brush as the malefactors.

You often hear critics of advertising indict it for creating dissatisfaction in people's minds with what they have, and persuading and cajoling them into buying what they neither need nor want.

Let's consider this a moment.

Let's admit that a large portion of the products we buy are not to fill actual needs. But what are needs? The needs of people in undeveloped countries are not the same as our needs. Our needs of 50 years ago are not the same as they are today. We don't actually need television sets, electric razors, electric refrigerators, vacuum cleaners, shampoos, beauty treatments, packaged goods, or even automobiles.

For millions of people in other lands the automobile is an unattainable dream. Here the automobile is a necessity for millions. Sure, women can get along without nice clothes or sheer hose. But if these nonessentials give them a lift, why shouldn't they enjoy them?

We recognize that some people may be stimulated by advertising to live beyond their means. But that's not a fault of advertising. There have always been people who lived beyond their means and we'd have such people even if there were no advertising.

Do advertising's critics want to lower our entire standard of living just to discourage the few who are improvident? Would they curb the freedom of millions of people to enjoy new things, new conveniences, new labor-savers, new morale builders, just because there are some who are stimulated to spend more than they can afford?

Would they have advertising stop encouraging people to want a better life? Would they have the millions of people who create, produce, and market the so-called nonessentials thrown out of jobs? Do they want us to go back to the more primitive living of other countries? Do the American people want this?

Attackers of advertising on this score are actually attacking our entire American system. Some do this because they can make a few dollars on "sensational" books or services full of half-truths and evasions. Others because they prefer another system which would regiment people's wants and reduce us to a level dictated by the Government. I'm sure, it's obvious that if advertising, the spark of American business, were eliminated, it would kick the underpinnings from the marvelous structure American genius has built.

Without a healthy discontent there can be no progress.

Before I conclude there are two points I should like to touch on.

First. American advertisers have in their possession a powerful force in advertising. How does it use this force for public service?

We have created a highly efficient and effective instrument for this purpose in the advertising council, a nonprofit organization

supported by American business and advertising media.

Formed in 1942 to put the power of advertising to work for the Government, it engineered many drives on the homefront during World War II. War bonds, victory gardens, salvage of fats, tin and paper, women for war plants, and many, many others. While in other nations, governments usually had to force the public to efforts needed for victory by law, in the United States the advertising council helped inform and persuade the public to act voluntarily.

Since the war, the advertising council has been working on peacetime problems at the request of the Government, private public service organizations, and on its own initiative.

Each campaign is in the hands of a team composed of a volunteer advertising agency, a volunteer coordinator from the staff of an advertiser, and an account executive from the council staff. A complete advertising, merchandising, and promotion program is prepared for national media, local media, retail stores and other outlets which can logically contribute to the success of the program. The agencies prepare these campaigns without charge.

The advertising space donated by media to advertising council campaigns in 1959 alone is valued at about $182 million, to say nothing of the contributions of time and talent made by agencies and advertisers.

Here's what President Eisenhower said to the advertising council in Washington a few months ago.

"For 18 years you have been stimulating the Nation's conscience in areas where the voluntary work of great numbers of people has been necessary in order to promote worthwhile causes. I know you have been in such fields as conservation, organized charities, safety, prevention of accidents, and more recently in giving your efforts to the job of pointing out to our people the need for self-discipline if we are to avoid debasement of our currency and prevent inflation.

* * * * *

"And I think no other body has done more in this regard in trying to inform America across the board of these things than has the advertising council."

The second point.

We don't discuss sufficiently the positive contribution of advertising to our civilization. We should never miss an opportunity to talk about advertising's constructive side. Heaven knows we hear enough of the destructive.

And now I want to leave with you one final thought.

"What would happen if advertising were suddenly stopped?"

It would be like an atomic explosion.

Stores would begin canceling orders and reducing their staffs. This would be followed by manufacturers closing down plants and laying off millions. Volume production would be virtually impossible. Hence, prices would rise fast. Within a week most radio and television stations would close up shop for lack of revenue.

The same story would go for newspapers and magazines. Many would expire immediately. Some would continue as thin, anemic sheets. The cost per copy would zoom for those which would try to keep running only from circulation revenues.

I hope that you have found in my remarks some food for thought about advertising—which powers our American system of free enterprise to ever higher levels of good living, and that when you hear the mouthings of the uninformed or the ill intentioned, you will point proudly and truthfully to the contribution advertising has made and will continue to make to our American good life.

In God We Trust

EXTENSION OF REMARKS
OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. ALBERT. Mr. Speaker, it was my privilege to participate in the presentation of a plaque bearing our national motto, "In God We Trust," to the Washington Post Office on February 3, 1960. Since that time, similar plaques have been placed in the post offices in Dallas and Fort Worth as part of a national drive to establish such plaques in every post office in the country.

The leader of this drive, Miss Ora O'Riley, is a resident of Durant, Okla., in the congressional district which I represent. In recognition of her tireless efforts in this project, I wish to insert in the RECORD, under unanimous consent, excerpts from the dedicatory addresses made on these two occasions and a newspaper article which appeared in the Fort Worth Press:

THE LIVING GOD AND AMERICAN DESTINY

(An address by Rev. John J. Mueller, pastor, First Presbyterian Church, Durant, Okla.)

Salmon P. Chase, Secretary of the Treasury in 1861 received in that year a letter from the Reverend Mr. W. R. Watkinson, pastor of a small church near Philadelphia. It read:

"You are about to submit your annual report to Congress respecting national finances. One fact has been overlooked. * * * I mean recognition of the Almighty God in some form upon our coins. * * * What if our Republic were now shattered * * * would not antiquaries centuries hence reason from our past that we were a heathen nation?"

Shortly after receiving this communication, Secretary Chase wrote as follows to James Pollock, Director of the Philadelphia Mint: "No nation can be strong except in the strength of God or safe except in His defense. The trust of our people in God should be declared on our national coins." Pollock made two suggestions for a slogan: "Our Country, Our God," and "God, Our Trust." The latter was revised by Chase.

The great motto does not imply that we have an established religion or state church, which would be a violation of the first amendment to the Constitution. It signifies our belief in the one true and living God, in whom we as a people put our trust and with whom we link our destiny as a nation.

We rejoice that another American, Miss Ora O'Riley of Durant, Okla., is leading a national movement for the installation of plaques bearing the noble words of our motto upon the walls of Government buildings.

* * * * *

It is necessary that we go beyond the mere words of our national motto and seek the reality to which they point. This motto, "In God We Trust," implies the existence of other and lesser loyalties upon which we, to our peril, might possibly place our supreme confidence. It strongly implies, also, that it has been our experience in times of peace and war, in times of prosperity and depression, in periods of halcyon calm and in periods of stress that the Lord of history has justified the trust we have placed in Him. It also implies our belief that if our country does have a special mission to the world, it is from God and that, as we move forward, we had better look to Him as the guide and inspiration of our journey.

To see the wisdom of trusting in God, all we have to do is to look at some of the nations of earth who trusted in lesser powers. Egypt put her confidence in her architectural achievements. Greece trusted in her art and in her intellectual prowess. Rome put her ultimate faith in law and the sword.

* * * * *

With this consciousness of her great mission, America saw anew the place of God in her glorious history and her need for divine wisdom. But let this Nation beware the temptation to become so engrossed in her task or so enamored of her own might as to forget the Rock whence she was hewn, or the guide of her youth, or the counsellor of her maturity. With her great sense of mission before her, let her say again, "In God we trust."

It is in that spirit we dedicate today this plaque as a reminder, as an inescapable challenge in this present fateful hour.

ADDRESS GIVEN BY VERY REV. MSGR. VINCENT J. WOLF, FORT WORTH, TEX.

In our early days, when the constitutional convocation was in session, Benjamin Franklin wrote the President and told him that he had lived a long time, and the longer he lived the more convincing proof he saw the truth that God governs in the affairs of men. "If a sparrow cannot fall to the ground without His notice," he said, "is it not proof that an empire cannot arise without His aid? We have been assured of our sacred rights that unless the Lord build the house, they labor in vain who build it." These words give us an insight concerning the character of our Founding Fathers. They were ideal statesmen and they gave birth to an immortal document, initially consecrated to God, proclaiming the inherent sacredness of the individual.

In the very beginning of our Nation's history the world outside and around was edified and inspired when they looked upon the United States. In fact, in 1861 the following was spoken:

"It was impossible for De Tocqueville to touch the soil of America," Lacordaire said, "without being astonished by this New World, so different from that where he was born. Everywhere else in the Old World where he visited, whether in England, Russia, China, or Japan, he came face to face with a situation he knew already—that of peoples governed by rulers. For the first time he saw a flourishing nation, peaceful, industrious, rich, powerful, respected abroad, spreading day by day into vast solitudes the tranquil stream of its population, and nevertheless having no master but itself, submitting to no distinction of birth, electing its own magistrates of every degree of the civil and political hierarchy, free as the Indians who preceded them, as civilized as the best peoples of Europe, religious without giving to any sect exclusive or preponderating rights, and presenting to an admiring world the living drama of the most absolute liberty in an equality the most entire."

Yes, unless God guards the Nation, we shall perish. Unless we recognize the sovereignty of God, we shall be powerless. Unless we make our declaration of dependence upon God, our Declaration of Independence among men will fail. Unless we conform to the will of God, we will lose our purpose. Unless we follow God's truth, we shall wander the face of the earth in error. Unless we seek liberty in God, we shall become the slaves of men. Unless we live according to our God-given rights, we shall be as living sepulchers. Unless we seek justice in fulfilling our duties—as well as exercising our rights—we shall be prisoners on earth. Unless we pursue happiness according to the

dictates of our conscience, we shall be a remorseful people.

Civilization is an endless pact of the living with the dead. Our fathers of old have lived and died for the principles that each person is made to the image and likeness of God. They were noble, God-fearing, and worthy of the name of an "American." We, who are in the land of the living, in this Nation under God, pledge our allegiance and our honor and all things we hold precious that we will do everything that we might deserve the continued good pleasure of the God of our fathers.

[From the Fort Worth Press, June 15, 1960]

"IN GOD WE TRUST" PLAQUE IN POST OFFICE—AND BLIND MAN READS THE WORDS

(By Seth Kantor)

The men came all dressed up into the east end of the main post office. They said their prayers. They made stirring speeches.

Then they went away, after dedicating a bronze plaque yesterday, with the words "'In God We Trust" on it.

That's when E. A. Giddens went to read the words on the plaque. His fingers touched them lightly. It's his way of reading. Mr. Giddens, 54, is blind.

He will work closer to the shiny new plaque than anyone else in Fort Worth. Yet he's the ony man in the post office, where 1,200 names are on the payroll, who won't be able to see the words.

Mr. Giddens of 4105 Sandage operates the newsstand in the post office. He's been there 11 years. From his stand he will stare at the wall with the plaque on it perhaps for many years to come.

Although the blind man was ignored as the dedication ceremonies happened directly in front of his stand, it was a time for Catholic, Jewish, and Protestant leaders to gather, to unveil the words for all the rest to see.

A tireless Catholic church worker in Durant, Okla., Miss Ora O'Riley, thought of the idea to put "In God We Trust," the motto on every penny, on the walls of every post office in the Nation.

Members of the Knights of Columbus in Ohio are producing the plaques. Business and professional men in Durant, and leaders of every church there, are backing the idea.

Plaques so far have ben placed in Washington, D.C., Durant, Dallas, and Fort Worth central post offices. Oklahoma City and Tulsa plaques go up tomorrow.

Miss O'Riley previously led Durant businessmen in a nationwide move to install hundreds of copies of a painting of Christ's head in offices throughout the Nation.

The painting was made by a well-known Chicago artist, Warner Sallman, a Methodist, whose son, Richard Sallman of 856 N. Bailey, resident here since 1947, attended dedication ceremonies of the post office plaque.

The blind man in the corner bowed his head as he heard Rabbi Isadore Garsel's invocation:

"May this land under Thy providence • • • fulfill the vision of Thine inspired seers." And the blind man could see, even as the rest, with their heads bowed.

Saline Water Conversion

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. SAYLOR. Mr. Speaker, I wish to present two recent valuable articles and ask consent to reprint them in the CONGRESSIONAL RECORD. They deal with the fundamental subject of water—and as they warn of the exhaustion of our national water resources they also point to the hope for a solution to this problem which mankind's troubled eyes have not yet seen.

I ask that they be included in the RECORD both as a challenge to present attention and as a convenient source for study when the increasing crisis makes it impossible to delay consideration.

These articles, one being the column entitled "Topics," from the editorial page of the New York Times, the other a signed syndicated column by George E. Sokolsky.

This is a tremendous problem. It is a national problem. The Office of Saline Water is doing an excellent job but its program must be expanded. We all must work together to aid our American industries in joining with the government for this all-important Government-industry program to convert sea water into fresh water. Here is a hope to which generations of men and women will turn, both through their public and elected servants, such as the Congress, and also through private enterprise. We cannot neglect it. I know that you will find these articles to be both essential information and a real inspiration.

[From the New York Times, June 9, 1960]

TOPICS

FRESH WATER FROM SEA WATER

The news that two companies jointly have developed a new process for producing fresh water out of sea water gives us the latest hope of fulfilling one of mankind's oldest dreams. For ever since man first became conscious, he has been a slave to water, and water too often has proved to be a perverse master, giving us too much water when we don't need it, too little when we do. Early in history man learned of the water paradox of his earth: a planet surrounded by water, yet offering man barely enough of the kind needed to sustain his life. The cry of Coleridge's Ancient Mariner—"Water, water, everywhere, nor any drop to drink"—echoes throughout the centuries. And man's growth can be written in terms of his efforts to come to terms with these waters of his earth.

MAN'S WATER PROBLEMS

As man has multiplied, he has found new sources of water and new ways to harness old sources, but never has he been able to develop a surplus. On the contrary, sometimes it seems as if his water problems with the passing years become increasingly acute. So low did the water level in our town's reservoirs dip only a few years ago, for example, that we had to cut down the number of our baths and the number of shaves of our adult males. Homeowners have been directed on occasion to defer the watering of their lawns by municipal fathers casting anxious glances at the rainless heavens. An adequate supply of clean water has long been a key factor in determining the location of industry. No one has been made more aware of the preciousness of water than the farmers, who in good times have known the necessity to haul it by truck from the cities, and in bad times they have known the calamity of erosion and the unbridled fury of the floods. Possibly worst of all, we have felt the heartbreak of finding clear water made impure by the intrusion of salt water.

TRIAL AND ERROR

But man has never given up the battle, and throughout his struggle for water nothing has intrigued him more than the effort to tame the destructive saline waters of the sea and to extract good, clean water from them. As long ago as the 14th century, when the Arabs laid the foundations of chemistry, the process of distillation was tried. And while this process always works, given a vessel that will contain the liquid and some means of condensing the steam that is driven off, the energy consumed has always been tantalizingly excessive. Other processes have been developed. Chemical action was used in Navy survival kits during the war. The kits contained silver salts that would react when shaken in sea water to take the salt out of it, leaving the silver in a form that would oxidize and then precipitate—again a process too costly to be useful commercially. More recently, with improved knowledge of the way solids in solution become ions of their components, it has become possible to create fresh water from salt by ionization, but this method has not yet been used commercially with sea water.

A NEW PROCESS

Ever since the ammonia refrigeration method of making artificial ice was patented in the 1840's, the possibility has arisen of freezing sea water and thus expelling all impurities, including the salts. Frozen sea water is a mixture of pure water crystals and tiny salt crystals, the salt crystals occluded on the surface of the ice crystals. Up to this point the practical defect has been that every method devised to get the salt crystals off the ice crystals served to melt the ice crystals. The claim of the new process, developed by engineers of Struthers Wells Co. and Scientific Design Co., is that they have succeeded in centrifuging the salt off the ice, leaving ice crystals after the separation. It is too soon, of course, to know if we have finally hit on the elixir that can give us fresh water from salt, to end our water shortage and create, in Adlai Stevenson's phrase, "a new patrimony for the human race," but the stakes are so high that it's certainly worth giving any new process a whirl.

[From the Journal American, May 28, 1960]

A WATER SHORTAGE POSSIBLE IN 15 YEARS

(By George E. Sokolsky)

One of the most serious political and social problems of universal concern is water. In this country, we generally assume that two things remain free for all to use—air and water. It is not always true about water and never in cities where the people are taxed for it. In some parts of the world, water is so scarce that it has to be used sparingly and treaties are made concerning it.

Marco Polo (1254–1324) wrote a description of his travels from Italy to Peking and back. He describes many rich areas, with gardens and farmlands. Some of the areas are now deserts and they are deserts because the water upon which their richness depended has disappeared.

The question as to whether the water table of the United States is falling is not subject to opinion; it is a matter for study and the production of accurate statistical data. On August 12, 1958, the House Committee on Government Operations recommended:

"The Office of Saline Water must substantially increase its efforts in advancing both basic research and pilot plant work in the saline water conversion program. Such effort would be facilitated by amendment of the Saline Water Act to eliminate the financial authorization restrictions now present in that act and by appropriation of sufficient additional sums to enable such work

to proceed promptly and without deferment."

Nothing has been done about this recommendation but the need for such research is great. It is estimated that the available fresh water supply in the United States amounts to about 515 billion gallons a day and that we are now using about 312 billion gallons a day. The water supply is not evenly divided over the United States and in some areas there is a definite shortage. If the population and the industrial development of the United States continue to increase, there ought to be a very serious water shortage in the country in 1975 which is only 15 years away. The time to consider this is now.

In 1957, the United States suffered from a water shortage which struck 47 States. More than 1,000 cities and towns in 1957 had to restrict the use of water.

The simplest solution to this problem is the adaptation of salt water to current needs. The cost is still very high but the quantity is unlimited. Considerable research is required to bring the cost of desalted water down to a reasonable price. Several plants already exist to distill water and the results are very satisfactory.

The alternative to the conversion of salt water is to limit use, which would be unsatisfactory. The United States is surrounded by water—the Atlantic and Pacific oceans, the Gulf of Mexico—water everywhere. It ought to be possible to develop a salt water distillation for usable water, to be carried in pipelines across the country, so that there would be a shortage nowhere. This is a feasible plan only if it is developed slowly and correctly and does not have to become a crash program where an actual drought is in existence.

The Secretary of the Interior has been put in charge of this program by an act of Congress passed in 1952, with a considerable budget for research and experimental plant operation. All this work is to the good because when it is possible to convert salt water into usable water, the United States will have all the water that is required for individual use, farm and industrial use at a reasonable cost. This is the objective and it does not need to be justified by fulsome attention to what other nations that lack water will say about us. It will be sufficient that we sensed a crisis, met it by careful research and experimentation and averted calamity.

I have lived among people who have inadequate water supply. I have seen their soil blown away by cyclonic winds. I have seen women carrying water on their shoulders because water is one of the most precious ingredients of life.

We need not ever face such a condition if we devote ourselves to converting the apparently unlimited supply of salt water to sweet water, usable for all purposes. It can be done and thus far, the experiments have been bringing the cost down. It could be that the mineral products taken out of the water would, in the long run, return great wealth.

We have all heard the line in the old Indian treaties which bound men to agreements "as long as grass grows and water flows," but experience impresses upon us that this does not mean forever. Rivers have dried up and grass has withered. Furthermore, such calamities can be made to happen by the hand of man as well as by nature. As a single example today, let me remind you that the American naval base at Guantanamo is much less in danger from hostile missiles or other military attack from near or far than it is from the cutting off of its water supply. This Dr. Castro, in his hate campaign, could easily accomplish. But modern applied science can end this sort of menace, simply by enabling Guantanamo to take its own potable water from the sea. Modern science as announced in these articles which I again recommend to every member of the House now offers emancipation from this form of fear and want.

Setbacks in Foreign Relations Due Largely to Certain Erroneous Assumptions in American Thinking

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

RECENT SETBACKS SHOW NEED FOR REFLECTION

(By Edgar Ansel Mowrer)

Nobody, I think, should deny that the United States has suffered two severe defeats: at the summit that didn't happen, and in Japan. During the election campaign, Americans being what we are, it seems inevitable that these defeats will be made a political issue.

Yet it would be a pity if the process of electing a new President should obscure the real problem revealed by these defeats. Yet so far, it seems to me, nobody in high position or of high influence seems ready to ask the basic question: were these defeats just "incidental" to the cold war with its inevitable ups and downs, or were they the natural result of certain mistaken assumptions common to assorted leaders of both parties?

The President, according to Henry Gimmell in the Wall Street Journal, has no present intention of changing the policy he has folowed over the past years. His "dominant objective" is to "buy time during which the Soviet empire is neither permitted to expand nor pressed to contract during which it will evolve into a less virulent, less aggressive society."

This policy finds many champions in both parties at home and has the support of some major allies, notably Prime Minister Macmillan of Britain. But is it working?

Certainly, a neutral Japan, following the emergence of Castro's Cuba as a virulently anti-American, pro-Communist state, would demonstrate conclusively that it is not.

Where does the fault lie? James Reston of the New York Times attributes it to faulty U.S. "diplomacy." The President, he quotes Harrison Salisbury as writing, regards the Japanese crisis as "caused by circumstances over which he has no control." Mr. Reston attributes this to a presidential habit of "self-deception." But in my opinion, Mr. Reston does not go deep enough.

The fault, I feel sure, lies in certain wrong assumptions concerning the nature and purpose of the Communist world and, in consequence, of the means necessary to frustrate that purpose.

Here is a partial list of what seem to me to be current errors.

1. Since the U.S.S.R. and Red China will not risk a major war so long as the United States has the necessary minimum of deterrent power, no more military power is needed by the free world.

A mistake. With major war ruled out, the next strongest weapon in the cold war is prestige. Prestige remains to an overwhelming degree a matter of military power—and the readiness to use it. By crushing the Hungarian revolt, the U.S.S.R. lost popularity but gained greatly in prestige. The free world cannot afford to remain inferior to the Communist bloc in any major weapon.

2. In the absence of a world authority, a major nation like the United States can properly renounce the use of armed force under all circumstances, except direct attack, even though the adversary remains ready to use force. (This obligation lies in the U.N. Charter and was personally repeated by Eisenhower to Khrushchev at the first summit meeting in Geneva.)

Second error. Such a position lays the free world open to continuing losses of peoples, territory and resources by subversion. It relieves the adversary of the fear of just reprisals for almost any outrage short of major armed attack. It promotes pacifism in a country like Japan whose armed—repeat, armed—assistance is necessary to the peaceful defense of Asia.

3. National tensions are caused by threats, aggressive speeches and military preparations, hence can be lessened by soft words, absence of saber rattling, summit and cultural contacts and constant negotiations on subjects chosen by the adversary.

Simply untrue. The cause of 90 percent of the existing "international tension" is the Communist purpose of establishing a Communist world state. It can be lessened (abolished) only when communism achieves its aim (our submission) or when it is compelled by opposing power or natural evolution to renounce this ambition.

Until then the free world must live with "international tension" and use it to its own advantage. The U.S.S.R. and Red China are vulnerable short of war on a dozen fronts—provided we attack them.

4. Given a little time, Communist Russia and Communist China will increase their national rivalry to the point of political opposition, when both will become vulnerable to Western diplomacy.

No real evidence for this view. Even if the two Communist giants are not acting in well-timed concert (as I believe), their common belief in the inevitability of a Communist world state will prevent their pushing any personal rivalry to the point of rift. The free world should accept the unpleasant fact of their continuing partnership and count not upon time or act of God, but upon its own strength, resolution, and wisdom.

5. Although the existence of a Communist bloc of a billion subjects, including half of all Asia, is an undoubted fact, the free countries can successfully oppose Communist ambitions by a loose system of alliances, shunning any radical steps toward greater unity. For sooner or later the Communist bloc will revert to the normal system of rival sovereign states acting through the United Nations to preserve peace and harmony.

Presumably the greatest of all our mistaken assumptions. Every day it becomes clearer that a hastily assembled and disunited "all-star" team cannot hope to beat a beautifully coordinated football machine from Notre Dame or Michigan State. To oppose the Communist bloc successfully, the free world will have to match it in strength, determination, unity, and common purpose.

At least as I see it. Here then, in my judgment, are a few of the basic reasons for the recent setbacks. Nor do I see an end to such defeats until our leaders rethink the situation and recast their policy to meet it.

Questionnaire Results, First District, Massachusetts

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. CONTE. Mr. Speaker, the response to our questionnaire exceeded the amount I expected. While these figures are in direct answer to the questions, the written comments on many of the questionnaires proved to me that my constituents had been giving considerable thought to legislation and to international affairs. I believe that it is gratifying to know that there are many Americans interested in the very vital issues of the day. It is impossible to reproduce here, all the written suggestions and comments; however, the figures represent, I believe, a fairly accurate cross section of the opinions, currently in my district.

The results follow:

QUESTIONNAIRE RESULTS, FIRST DISTRICT, MASSACHUSETTS

1. Do you favor using Federal funds for:
A. School construction? Yes, 1,376—61.9 percent; no, 724—32.6 percent; uncertain 121—5.5 percent.
B. Teachers' salaries? Yes, 474—21.3 percent; no, 1546—69.6 percent; uncertain, 201—9.1 percent.

2. Do you think the Federal Government should take action to control drug prices? Yes, 1364—61.4 percent; no, 700—31.5 percent; uncertain, 157—7.1 percent.

3. Do you favor a fair trade bill which would allow manufacturers to set minimum prices at which brand-name merchandise can be sold? Yes, 742—33.4 percent; no, 1275—57.4 percent; uncertain, 204—9.2 percent.

4. Do you favor raising the minimum wage from the present $1 to $1.25 and extending the coverage of present law? Yes, 1272—57.3 percent; no, 750—33.8 percent; uncertain 199—8.9 percent.

5. Do you favor continuing our mutual security (foreign aid) program as:
A. Economic aid to friendly nations? Yes, 1,638—73.8 percent; no, 356—16.1 percent; uncertain 225—10.1 percent.
B. Military aid to friendly nations? Yes, 1,376—61.9 percent; no, 497—22.4 percent; uncertain, 348—15.7 percent.

6. Would you favor increased aid to underdeveloped nations? Yes, 1,361—61.3 percent; no, 524—23.6 percent; uncertain, 336—15.1 percent.

7. Would you favor a proposal to assist, economically, former independent nations now behind the Iron Curtain, such as Poland and Hungary? Yes, 821—37 percent; no, 1,032—46.5 percent; uncertain, 368—16.5 percent.

8. Would you favor depressed-area legislation which would include Federal loans and direct grants to rural areas for industrial development? Yes, 843—38 percent; no, 1,107—49.8 percent; uncertain, 271—12.2 percent.

9. If not, would you favor a bill which calls for local participation and Federal loans for areas interested in industrial redevelopment, but not direct grants? Yes, 1,267—57.1 percent; no, 230—10.3 percent; uncertainty, 724—32.6 percent.

10. Do you favor free medical care after retirement through increased social security payments? Yes, 1,110—50 percent; no, 941—42.4 percent; uncertainty, 170—7.6 percent.

11. Do you favor a balanced budget even if it means holding down on some new or expanded social welfare program? Yes, 1,491—67.1 percent; no, 480—21.6 percent; uncertainty, 250—11.3 percent.

12. Do you favor the continuation of the House Un-American Activities Committee which investigates communism in this country and is sometimes charged with overriding individuals' constitutional rights? Yes, 1,543—69.5 percent; no, 441—19.8 percent; uncertainty, 237—10.7 percent.

13. Do you believe the Federal Government should have more authority to regulate radio and TV programs? Yes, 807—36.3 percent; no, 1,177—53 percent; uncertainty, 237—10.7 percent.

14. Do you consider our $45 billion defense budget adequate? Yes, 964—43.4 percent; no, 476—21.4 percent; uncertainty, 781—35.2 percent.

15. Do you believe sufficient emphasis is placed on our missile and space programs? Yes, 951—42.6 percent; no, 821—37 percent; uncertainly, 449—20.2 percent.

Total replies, 2,221.

Fifty Dollar Fare to Europe via Construction of Two Transatlantic Superliners

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an address delivered by H. B. Cantor, president of the Sea Coach Transatlantic Lines, Inc., to the Association of Water Transportation Accounting Officers at Delmonico's Restaurant, New York City, on June 22, 1960, on the subject of "$50 Fare to Europe via Construction of Two Transatlantic Superliners."

In my remarks I also include a news item that appeared in the New York Times issue of June 23, 1960:

SPEECH BY H. B. CANTOR TO ASSOCIATION OF WATER TRANSPORTATION ACCOUNTING OFFICERS

Mr. Graziano, Mr. Heidicker, honored guests, and gentlemen, I was extremely gratified to receive your very kind invitation to take lunch with you and to discuss my project of building two superliners to provide transatlantic crossings for a $50 fare.

I think it particularly appropriate that I talk to you about my plans since we share a common interest: You are accountants concerned with the shipping industry. I am a businessman determined to build my two liners, thereby contributing to shipping and related interests.

There has long been a definite need for low-cost ocean travel. Airlines, railroads, and buslines have done their share in achieving inexpensive travel. Considering that water is recognized as the least expensive means of all transportation, why is it that no form of ocean travel exists to match the land and air rates? Perhaps the answer lies in the fact that the steamship lines are so steeped in tradition that they have failed to keep abreast of modern times. For example, buslines offer a cross-country fare of $69; airlines charge as little as $80 for flights to the west coast. I find it appalling that the least expensive rate aboard any ship sailing to Europe is $185.

My project will soon become an accomplished fact. I have signed contracts with Dr. William Scholz, president of the Deutsche Werft Shipyards of Hamburg, West Germany. Final plans are nearing completion and after their OK we anticipate that the laying of the keels will begin in a few months. Our contracts call for delivery of the first ship in 36 months. The second ship is scheduled for completion 12 to 18 months later.

As for physical details of the vessels, each will be 90,000 tons, 1,152 feet long and will be capable of carrying 6,000 passengers plus a crew of 1,350. With 260,000 horsepower, each will have a cruising speed of 34 knots, enabling a 4-day crossing between New York and Zeebrugge, Belgium, the first of two north European ports. The ships will be constructed with 20 airtight compartments, a safety feature designed to make them unsinkable. Designer of the ships is Vladimir Yourkevitch, one of the world's foremost naval architects and the gentleman who designed the famed *Normandie*.

Each liner will have a beam of 132 feet and a draft of 34 feet. The top deck will be a flatop with a clear space of 450 by 80 feet, to the rear of the smokestack. This area will be used as a sports deck for outdoor activities and a swimming pool. Below this will be a double-decked, glass-enclosed area, to be utilized as a huge convention hall for business organizations, fraternal societies and religious and other groups interested in holding shipboard conventions. The convention hall will have a seating capacity of 4,000 persons. Rollaway doors will make it divisible into meeting rooms for smaller groups.

As for accommodations and facilities, there will be a one-class service, with a large kitchen servicing a 1,500-seat cafeteria and a 1,200-seat formal dining room. In addition there will be self-service canteens, bars and cocktail lounges, snack bars and automatic food dispensers. Passenger cabins will be laid out in two- and four-berth arrangements. All staterooms will have private bath, television and will be air conditioned. There will be skating rinks, theaters, concert halls, chapels for religious services, a Free Port shopping center where merchandise from both sides of the Atlantic may be purchased at low prices and duty free and other conveniences and all forms of resort hotel recreation.

You may well question the economic feasibility of operating the ships on such a low-fare basis. Permit me to quote some interesting statistics, which I learned after having made an exhaustive survey of the operations of luxury liners.

Present-day luxury passenger liners have a four-class service system: deluxe, first class, second class, and tourist. This arrangement necessitates four kitchens, four dining rooms, four public spaces of all kinds, four swimming pools, four sets of fire stairs, etc. This quadruplication extends to the ship's personnel, thus requiring four head pursers, four head stewards, four chefs, etc. The result is a tremendous waste of manpower and an enormous amount of nonproductive space.

The *Queen Elizabeth* carries 2,200 passengers and a crew of 1,535. The *Queen Mary* accommodates 1,800 and has a crew of 1,300. The *United States* has 1,700 passengers and a crew of 1,063. In comparison, my ships will have 6,000 passengers and a crew of 1,350. In other words, the present-day liners operate on the passenger-to-crew ratio of 1¼ to 1, whereas the ratio aboard my ships will be 4½ to 1.

I have spent most of my adult life in the hotel industry and I have always been very conscious of costs and operations. If I were

to apply the methods of the luxury liners to my hotels, I shudder to think of the results. For example, my Hotel Dixie in New York has accommodations for 1,400 guests. If I were to operate the hotel on a 4-class basis the first 12 floors would be occupied with public spaces and the bed capacity would be reduced to perhaps 400.

Let me emphasize that the superliners will be operated as floating commercial hotels, eliminating the frills and luxury items, yet providing every facility for oceangoing comfort. In the application of hotel operational procedures to the ships, bear in mind that a major source of incomes in the hotel industry stems from the booking of persons attending conventions of all types. In this connection, I envision a tremendous scheduling of conventions aboard my ships. Groups sailing on the liners can hold meetings during the mornings and afternoons, leaving the evening hours for relaxation and enjoyment of the many entertainment facilities.

I mentioned previously that the interest of everyone here lies in the future of the shipping industry. You may be aware of the desperate straits in which the industry finds itself today. A recent article in the New York Times sounded an ominous note in reporting the sad fact that the U.S. Government is disposing of its shipyards due to lack of business. Our Nation today ranks eighth in the volume of new ship construction. Furthermore, February marked the fifth consecutive month in which no new shipbuilding contracts were signed.

We are all vitally concerned with this situation. I'm sure you will agree that something must be done.

I have given considerable thought to this picture of one of our country's major industries nearing a state of collapse. I would like to offer a suggestion which might well be a solution to the problem.

I would propose that the Government treat the shipbuilding industry as it has treated housing. I refer to Title I: Apartment House and Building Construction. In other words, the Government should devise an arrangement whereby it would accept a 10 percent cash payment from a responsible operator and then permit a 90 percent guarantee of loan at a 2½ percent rate payable in 30 years. I would suggest this rather than a subsidy. Payment would be made on a constant, self-liquidating basis. Thus, the total carrying cost of the 2½ percent interest, plus the 2 percent constant payment amortization—a total of 4½ percent—would be the same as the Government's offer of a 50 percent subsidy with full interest and full amortization. In this manner the Government would lose nothing and the operator would be given the opportunity of amortizing from income. In line with this, I noted recently that the Italian Government now provides a similar favorable arrangement, that of 2½ percent interest, to encourage new ship construction.

Although I have contracted to build my liners in West Germany and plans call for their sailing under the German flag with German crew, I still regret that I was unable to make the project an American one. However, I am ready and more than anxious to build two additional superliners here in my own country if the U.S. Government will assure me of the cooperation I need and indicate a recognition of the intense need for low-cost ocean travel.

My office has been deluged with requests from all over the world from prospective tourists and convention groups seeking to book passage. This tremendous, universal interest assures us that passage reservations can be filled easily year round for 5 years in advance.

I would like you to know that I have had Harris, Kerr, Forster & Co., most renowned hotel accounting and engineering firm, prepare a pro forma study and report. On 83 percent occupancy, which figure they project, they show an enormous available profit under American-flag operation. Also, the Nathan Habib Associates, eminent traffic consultants of Washington, D.C., have made extensive study of the passenger market, corroborating the same occupancy forecast. We have had other engineering studies and reports, all pointing to the enormous profitability.

Here's another point to consider: These ships could be immediately converted into troopships in case of emergency—and what troopships they'd be—each capable of carrying a complete, fully equipped combat division—under a converted flight deck that could carry and launch up to 150 jet interceptor aircraft; in other words, a troopship with its own air support.

FHA and title I financing make it possible to construct new apartment houses and other real estate. Under these acts the Government permits a responsible operator a 90 percent guarantee of loan for 30 years at a reasonable interest rate, which is exactly the type of financing I will accept, and build two additional ships in America, besides the two I will build in Germany. Why isn't this same type of financing available for shipbuilding? What good is all this housing without having the weapons—such as these ships—to defend them? Under this proposal I will require no operating or construction subsidy and will build two additional ships in my country and keep the employment here where we might soon badly need it.

Our Commerce Department estimates U.S. residents spent $2.4 billion for 1959 foreign travel. The American merchant marine provides annually a payroll of over $1 billion. American foreign trade employs over 4½ million people, generating wages of over $13 billion annually. Many of you make your living from the sea. With ship construction in America in the doldrums, a lack of ships might eventually strike a mortal blow to our economy: In fact, we are beginning to feel the effects right now.

Fifty-dollar fare to Europe for the little people of the world is the goal to which I have dedicated myself and I will leave no stone unturned to get it accomplished both in Germany and in America. Why can't we get it done in our own country?

Here is the greatest defense facility. It is convertible and useful and extremely important either in peacetime or wartime. We will require no operating nor construction subsidy. Why can't we get it done in America?

[From the New York Times, June 23, 1960]

PROMOTER SUGGESTS SHIPBUILDING LOANS

H. B. Cantor, hotel owner and proponent of transatlantic travel at $50 a trip, urged yesterday that the Federal Government adapt its housing construction loan program to the passenger shipbuilding industry.

In an address before the Association of Water Transportation Accounting Officers, Mr. Cantor foresaw as practicable, construction of 6,000-passenger ships with a down payment of 10 percent in cash and a 90 percent loan guaranteed by the Federal Government. This is similar to the loan-guarantee program under the Federal Housing Authority.

Mr. Cantor said that in the absence of assistance from the Government for his ship construction plan, he had signed contracts with the Deutsche Werft Shipyards, Hamburg, West Germany. Final plans are nearing completion, he said, and after they have been approved he anticipates that the keels will be laid for the two ships within a few months. The contracts call for delivery of the first ship in 3 years, a second in about 4.

Mr. Cantor made no mention in his speech of the cost of the vessels. However, in earlier references to them he mentioned a figure of $75 million for each ship.

Each ship would have a crew of 1,350 men, and would be of 90,000 tons. They would be 1,152 feet long with a cruising speed of 34 knots on a 4-day crossing between New York and Zeebrugge, Belgium. Facilities would include a cafeteria to accommodate 1,500 persons and a 1,200-seat formal dining room.

Future Uncertain at Fore River

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, an article appeared in the Boston Globe on Friday, June 24, 1960, entitled "Future Uncertain at Fore River," by Wilfrid Rodgers. This article is thought provoking because it points out the rivalry that is developing between the shipyards on the east coast and those on the west coast. The 6-percent differential granted to west coast shipyards on all bids gives to the west coast yards a distinct advantage in gaining Government contracts. This differential should be eliminated and all private yards should be compelled to bid on equal terms.

The technical skills available at the Fore River yard—the know-how are unmatched anywhere in the world. However, Fore River is being discriminated against because of the existence of this 6-percent differential in bidding.

The article follows:

FUTURE UNCERTAIN AT FORE RIVER

(By Wilfrid C. Rodgers)

NEW YORK, June 23.—What is the future of shipbuilding at Bethlehem Steel's Quincy shipyard now that the strike is over?

Barring an international crisis—not good. That is the word of company spokesmen. The uncertain future is the major reason why the company held out during the 5-month labor dispute.

Only through a realistic approach to wage increases could the firm stay competitive in an industry that each year is becoming more and more competitive, the spokesmen insist.

To begin with, Lloyd's Registry of Shipping—the industry's Bible—reports shipbuilding all over the world entering a slump.

No longer are the world's large shipyards glutted. The overflow of ship work has disappeared.

To add to the industry's woes, there has been a sudden decline in tanker usage. Some 400 modern tankers are tied up for lack of work. Others have been converted to carrying grain.

Not for many years have the U.S. shipyards been able to compete on price terms with foreign shipyards.

Perhaps even more important to the Quincy yard is that no longer does the east coast have a monopoly on the Nation's top skills and equipment for building large ships.

West coast shipyards in the past 15 years have put forth a challenge—and the Government, to a degree, is on the west coast shipyard's side.

On Government contracts the west coast is granted a 6 percent differential on all bids.

For the Quincy yard successfully to underbid a west coast competitor, its bid must be more than 6 percent lower.

POLITICS ENTER PICTURE

Politics also enter the picture.

In the past, New England congressional leaders have banded together to try to get contracts for New England yards.

Now west coast congressional leaders, with Representative SHELLEY, Democrat of California, spearheading the bloc, are beginning to make their weight felt.

Aim of the western group is not to get ships for any one yard or any one State, but to insist that shipyards in California, Oregon, and Washington are well taken care of via Government contracts.

Introduction of new methods, new machinery, and new skills have whittled away at what once was considered the forte of the east coast shipyard—highly skilled labor.

The Suez crisis gave U.S. shipbuilding a shot in the arm a few years ago. But lacking such a crisis, shipbuilders in this country today are eyeing the Government plan to replace the merchant marine fleet.

This is a $3 billion program. Aim is to replace 14 ships a year.

EXTENDS DEPRECIATION PERIOD

However, a few jaws dropped among shipbuilding executives a few months ago when President Eisenhower signed a bill permitting such merchant marine fleets to depreciate their ships over a 25-year period rather than 20.

Most shipbuilders see this as another cut in potential business.

Despite this bleak picture, the Quincy shipyard has a valuable asset—unmatched in the Nation.

It consists primarily of brains. Its official name—the central technical department.

Why is the CTD so important?

To begin with a modern ship may require as much as 700 miles of builders' blueprints.

Add to this such complicated and delicate engineering as atomic-powered ships require and CTD takes over.

PLAN SHIPS OF FUTURE

Already CTD is tackling problems that must be solved to float the ships, not of tomorrow, but of 10 years from now.

Its accumulation of brains is credited with making atomic-powered naval ships practical.

How much lead shielding does an atomic reactor need in a large ship?

Today CTD can give you an answer to such a question.

But only a short time ago, even the Navy that was to order such a ship didn't quite know the answer. The Navy went to CTD.

Out came the electronic computers. The brains went to work.

The Navy got its answer. Bethlehem and the Quincy shipyard got the Navy contract.

Summary of Replies to a Questionnaire—Part 3

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. PILLION. Mr. Speaker, I am pleased to insert the third part of the tabulated results of the replies to my questionnaire. This part consists of the questions and replies for the sections entitled "Castro and Cuba" and "Agriculture."

The tabulated results follow:

QUESTIONNAIRE

CASTRO AND CUBA

1. Do you approve of the present U.S. policy toward Cuba of waiting to allow Castro to further alienate Latin American public opinion before taking severe economic or military action against his regime? Yes, 2,772, no 4,131.

2. Do you favor an appeal to the United Nations dramatizing the executions and atrocities of the Castro dictatorship in violation of the Human Rights agreements? Yes, 2,707, no 803.

3. Do you favor an immediate nonnuclear war (of a magnitude of the Korean war) to depose Castro's regime regardless of possible political repercussions, on the theory that Cuba is now an agency of a foreign power in violation of the Monroe Doctrine? Yes 1,842, no 4,699.

AGRICULTURE

1. Do you favor a gradual reduction in price supports (including wheat)? Yes 6,064, no 558.

2. Do you favor an immediate abolishment of all farm price supports? Yes 3,324, no 3,381.

3. Do you favor increasing the soil bank to reduce agricultural surpluses? Yes 2,695, no 3,807.

4. Do you favor governmental aid to encourage cooperatives and other devices for inducing farmers to strengthen and pool their bargaining power for the sale of their products? Yes 3,972, no 2,720.

Red Chinese Give the Treatment to Another Western General

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by Gen. Albert C. Wedemeyer, who dealt with the Chinese Communists almost daily for many months. He knows more about them from firsthand contact, not from VIP treatment. It is too bad if any credence should be given to the comments of General Montgomery on a situation about which he knows so little and so superficially.

The letter follows:

A. C. WEDEMEYER,
FRIENDS ADVICE,
Boyds, Md., June 21, 1960.

To the EDITOR:

Field Marshal Viscount Montgomery deservedly won the acclaim and gratitude of the British people and of the Allied nations for his outstanding achievements in World War II. I have been privileged to know the field marshal—not intimately, but sufficiently well to admire his intellectual integrity, exemplary leadership, and sound judgment in military tactics. However, his recent comments concerning Red China convince me that this fine old soldier should relax on his laurels within the soldiers' domain and avoid the pitfalls within the international arena.

I find it difficult to rationalize the fact that the loquacious field marshal is oblivious to the problems created by Communist China and their relation to the future status of the entire Far East, including Hong Kong-Kowloon. I am reminded of Katherine Mayo, who, after a brief visit to India many years ago, became a self-styled expert concerning the diverse problems in "Mother India." Similarly, Lord Montgomery made a 4-day visit to a country extending over 4 million square miles, within whose borders live more than half a billion people, where he was exposed to the archconspirators Mao Tse-tung and Chou En-lai—both sly and shameless, both particularly adept at distorting facts. He expressed the following provocative views concerning his visit:

"China is commonly supposed to be a nation of unhappy and depressed people, downtrodden and exploited by ruthless leaders and starved into submission, with fear abroad throughout the land. This may be true of the old China, but this is not true of the new China. Such ignorant comment about China does immense harm to the affairs of the Western World; too many people exploit falsehoods as truth and imaginaries as realities."

The field marshal continued: "I saw in Communist China everywhere a happy, laughing people—cheerful, friendly, and seemingly contented with their lot."

Obviously he is unaware of ample evidence concerning the massive famines in China of recent date and the official police action required to crush ruthlessly the dissident elements rioting for food. Nor has he heard the testimony of Chinese refugees in Hong Kong and Macao, where over 300 are slipping across the borders daily to leave the land that Lord Montgomery describes so glowingly.

He expressed admiration for the Communist leaders Mao Tse-tung and Chou En-lai. During World War II, I had occasional contacts with these two men, as I had with others of both the Nationalist and Communist Parties. Of course the Red leaders were charming and disarming with the British field marshal. But there is irrefutable proof, which is available throughout the free world and therefore to Montgomery, that they are crafty, rapacious individuals who operate completely within the discipline of the Communist movement.

The American labor organization AFL–CIO conducted a thorough research and analysis of conditions on mainland China. This revealed that approximately 14 million people have been killed by the Communist regime in the last decade; a congressional committee estimated that 20 million had been killed in the same period; and the free Chinese Government on Taiwan estimated that upward of 40 million have been murdered by the "benevolent" regime which so favorably impressed the British field marshal.

Naively Lord Montgomery accepted Mao Tse-tung's statement that there is widespread hatred of the United States throughout China and that this had its genesis at the time of the Marshall mission in 1945. Mao Tse-tung expressed Chinese resentment of U.S. interference in the affairs of the nation. If the British field marshal were knowledgeable concerning the facts, he would have, as a respected representative of the Western world, pointed out that the Americans were in China by invitation of responsible officials of the recognized government. Then he might have properly asked if the Chinese Communists had been likewise invited into Tibet, Indochina, Malaya, India, and Korea—all recent victims of naked Chinese Communist aggression.

Suggesting that the free world has nothing whatever to fear from Red China, the British field marshal stated, "China has far too much on her own plate to want to expand outwardly, either physically or ideologically." Viewed realistically, China must expand in some direction, for her arable land is much too limited to provide for an ever-in-

creasing population, already denied sufficient shelter, food, and sources of employment. Furthermore, every avowed Communist is pledged to spread the Marxist doctrine, by fair means or foul, and the Red Chinese are no exception.

Finally, our British friend suggested that Taiwan (Formosa) should be handed over to Red China. I wonder what his reaction would be to a suggestion, which I do not, of course, make seriously, that Hong Kong be handed over to Red China or that North Ireland be handed over to the Republic of Ireland?

To be subjected to Communist Chinese propaganda emanating from Peking, Moscow, and other Communist centers is a daily experience throughout the free world, but to have it dished up and articulated by a distinguished military leader of the West is indeed difficult to swallow.

Faithfully,

A. C. WEDEMEYER,
General, U.S. Army, Retired.

Perhaps Congressmen Should Be Required To Make Trips Abroad

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Temple Daily Telegram:

PERHAPS CONGRESSMEN SHOULD BE REQUIRED TO MAKE TRIPS ABROAD

Regardless of what politicians of either party would tell you about their own capabilities, there is not a man in the world capable of calling all the shots today.

World unrest is too widespread—changes take place too fast. It takes constant study and observation to even be acquainted with the world's troubles—not to mention the points where other troubles may be building.

How, then, does a body such as our Congress ever arrive at an intelligent decision on matters of global significance?

There are many ways, but in the main they rely on the advice of those accepted as authorities in the particular field.

How much better it would be if we had more Congressmen directly acquainted with world needs. And there is only one way to become better acquainted—go and see in person.

This raises up the much kicked and condemned term "junket." But handled properly, the world could come to appreciate junkets as inroads to understanding.

For instance, if Congressmen were required to spend 3 weeks of every year out of the country on guided and arranged tours of other countries, other governments and our foreign military installations, who could cast a stone by saying that this was wasted.

Wouldn't it be better to have a man's vote on foreign aid after he had been to see it in action? Would it not be better to have the lawmaker vote on military manpower levels after he had looked across the barbed wire at a Communist sentry?

Certainly it would.

Cost would be the cry of some. But remember that in many countries piles of foreign currency are building up in repayment of prior U.S. loans. These funds cannot be converted into U.S. dollars—they can only be spent within the country where they are accumulating.

There is no use arguing about the plans that allowed this situation to arise—the deed is done. These funds are presently available to pay expenses of U.S. Congressmen on their oversea travels within the affected countries. But they don't make a dent in it.

It seems logical that it should be used extensively for congressional enlightment.

And what about at home? The armed services and various bureaus of the Government sponsor tours to military installations, defense plants and space research centers all over the Nation for businessmen.

Why tell the businessman and expect him to tell the Congressman? Take the Congressman in the first place.

It's a problem that rests in the laps of our lawmakers themselves. They owe it to their own interests and the interests of the country to consider it seriously.

Their trips should be well-planned to see and learn as much as possible in a short time. The trips should be all business. Our freedom is at stake in every session of Congress that convenes—and the people deserve the best informed Representative that can be had.

The press corps of the Nation has been quick to complain about trips with congressional wives along—trips where unnecessary expenses were incurred.

These complaints are justified. They will continue as long as such mismanagement of public funds continues.

It seems doubtful that this week the public would hear complaints from the press corps if a plane bearing 15 or 20 Representatives and Senators had taken a week-long study mission through Alaska, the Philippines, Formosa, Okinawa, Japan, and Korea within the last 6 months.

Perhaps their presence, their knowledge, or some word they could have passed along would have made the President's trip to the Far East this week one of triumph—or even not necessary—instead of one which has ended again in outright embarrassment for both Japan and the United States. The cancellation of Mr. Eisenhower's trip to Japan has been another victory for the Communists.

We should seriously consider sending our Congressmen on truly informative trips.

Dr. J. Fred Rippy Award

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. O'HARA of Illinois. Mr. Speaker, some time ago I made reference to the 1960 William Volker Distinguished Service Award to Dr. J. Fred Rippy. I have just received the press release of the William Volker Fund announcing this award and by unanimous consent I am extending my remarks to include it, as follows:

Dr. J. Fred Rippy, professor emeritus of history, the University of Chicago, has received the 1960 William Volker Distinguished Service Award of $15,000, it was announced today (June 19) by the William Volker Fund.

Dr. Rippy, whose retirement from the faculty of the University of Chicago in 1958 followed 41 years of teaching, research, and writing, was chosen for "distinguished service as a scholar and teacher."

The award is a tax-free grant presented annually by the William Volker Fund of Burlingame, Calif., an organization established in 1932 in memory of the late manufacturer, civic leader, and philanthropist. Previous recipients of the Distinguished Service Award have included Dean Emeritus Roscoe Pound of Harvard University Law School, Professor Emeritus Frank Knight of the University of Chicago; Frank E. Holman, civic leader in Seattle; Ludwig von Mises of the Graduate School of Business of New York University, and Professor Emeritus Charles C. Tansill of Georgetown University.

After obtaining his B.A. from Southwestern of Texas and his M.A. from Vanderbilt, Dr. Rippy began his professional career as an instructor of history at the University of California, where he received his doctoral degree in 1920. He then served as an associate professor of history at the University of Chicago until 1926, when he was appointed to a professorship at Duke University. In 1936 he returned to the University of Chicago, where he remained until retirement in 1958.

In addition to his regular academic appointments, Dr. Rippy has lectured on history and foreign relations at many universities and colleges; among them are Johns Hopkins University, the National University of Mexico, and the universities of Louisiana, Washington, and South Carolina. He was a delegate from the United States to the 1935 Pan American Conference on History and Geography. He was a member of numerous scholarly societies, and served on the editorial boards, for many years, of the Hispanic American Historical Review and the American Historical Review. In addition, he served as editor of the Duke University Press from 1929 to 1936.

Of the 13 books authored by Dr. Rippy, the latest was published by the University of Minnesota Press and Oxford University Press in 1959. Its title was "British Investments in Latin America, 1922–1949: A Case Study in Operations of Private Enterprise in Retarded Nations." In 1958, Regnery published "Globe and Hemisphere," and the University of Michigan Press released "Latin America: A Modern History."

Dr. Rippy will be 68 years old on October 27. He resides at 814 East Forest Hills Boulevard, Durham, N.C.

Presentation for Subcommittee Hearing on Relations of Business With Government in Washington, D.C., June 16, 1960

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, I commend for reading and study to my colleagues the statement of Betty Remer, president of the Hearever Co., Inc., pertaining to small business and the harassments and frustrations that plague it.

Mrs. Remer, who through sheer determination and the application of efficiency of operation has singlehandedly built a going solid business, not only points up the lack of sympathy on the part of Government, but she makes constructive suggestions to correct shortcomings.

We in Congress pay lipservice to small business. We rant about its im-

portance in our economy. De we do much more?

Here is her good statement:

PRESENTATION FOR SUBCOMMITTEE HEARING ON RELATIONS OF BUSINESS WITH GOVERNMENT IN WASHINGTON, D.C., JUNE 16, 1960

(By Betty Remer, president, Hearever Co., Inc., Castro Valley, Calif.)

It is an accomplished fact that imports are adversely affecting the sales, profits, employment and other conditions of small business. My company, Hearever Co., Inc., Castro Valley, Calif., a toy manufacturer and importer, is a prime example of the struggle of the small businessman for survival which is too often lost by "too little, too late" in getting relief and the protective measures that are so sorely needed.

We developed and manufactured a toy crystal device which became an overnight success because of its tremendous customer appeal and, feeling fairly secure, entered the toy and novelty field. We relied on patent protection for our toys to justify the many thousands of dollars spent attempting to acquire patent pendings and subsequent numbers. Unfortunately, for us, we learned that the process was too slow—usually 2 to 3 years—for adequate protection, and we were outmaneuvered by foreign and domestic competition copying our little toys to the last detail without practical recourse, due to present patent laws. Three months after we opened our doors, we employed 80 people, of which at least 50 percent were socially or physically handicapped. At present, we are only able to maintain an average of 12 to 15 employees due to these conditions.

In the toy and novelty field, "time is of the essence" and most items have short-term longevity. With present, outmoded patent procedures, patents have little if any value to our particular trade.

One of the only few ways left for small business to compete with large business is to develop new devices with adequate patent protection which distinguish themselves from existing devices and then, and then only, can they compete with larger organizations. Remove this last hope and soon small business of this type must fade out of the picture. Small business has always been and always will be the backbone of our little communities. Why? Because it establishes roots which spread in every direction for the refinement of its community's interests. Small business spends its earned dollars generally in its own immediate area. Large business, chain stores, and others, frequently remove their funds from the community and, too frequently, out of the State into the "golden pot" located at their home offices.

Problems arise, even after numbers are granted, as courts are reluctant to hold them valid. They are too difficult to enforce and too costly to litigate, as it is well-known to all that small business is consistently underfinanced. The United States has an outstanding record for technical know-how which could be our bread and butter. We are not sufficiently protecting this valuable asset that may well be our guarantee of continued economic stability. Without some protection of patents, new business is strangled; competition is prevented; and we will again be contributing to the growing monopolistic trend. Our economic situation is already suffering because of too many imports and not enough exports. Inventors in the United States are losing their incentive. Why, then, has Japan, who formerly ignored patents, recently come out with a more effective patent procedure than the United States? In all fairness, we should have the same patent protection given to us that is afforded to comparable companies in some of the more economically alert, foreign countries. We are often too guilty of "closing the barn door after the horses have left."

My suggested solution is to reevaluate, streamline, and put some strong teeth into our existing patent laws for the sake of our generally troubled economy and insure small business and the country, as a whole, of its continued, wholesome existence, thereby depressing monopolistic tactics, and solving some of our import problems.

One of the Federal excise tax inequities, relating to imports which exist, in my opinion, is the laxity in policing of the excise tax assessment due on transistor radios and related items. Many of these instances occur innocently. Some importers have no knowledge that the assessment even exists. Some companies insist it is the obligation of the manufacturer in Japan and not theirs. We believe that, in many other cases, unethical open-door importers are ignoring the assessment which places them in an advantageous position for bargaining. The tax which they are avoiding generally represents the greater portion of what little profit there is in this most highly competitive field of imported products. The taxpaying small importer, or large for that matter, cannot go on this way. It is incredibly unjust, unfair, and most important of all, poor economics, as the revenue lost to the Government would far exceed the wages of additional agents. I have heard that the ratio relation of moneys recouped to wages paid was 10 to 1. I fail to understand why this has not as yet been taken into consideration. To me, it is good commonsense and, again, good business.

My suggested solution is to increase the staff of Internal Revenue agents wherever necessary to have maximum control of the excise tax assessment collections, particularly at ports of entry. At customs a notification of excise tax liability should be attached to other custom documents.

An existing loophole in Internal Revenue's excise tax law, results in unfair competition between importers and generally favors foreign trading companies who maintain branch offices in the United States. Specifically, I am referring to the importing of radios and related products where the assessment of excise tax is proper.

Please keep in mind that excise tax on these items is paid by the importer or manufacturer, whichever the case may be, and is assessed on the first sale made in the United States.

For example, Hearever Co. buys a 6-transistor radio from Tsurumi Trading Co., whose sole office is in Japan. The radio is delivered from the dock in San Francisco to Hearever Co. The first sale in the United States by Hearever Co. to its customer includes duty, freight, operating and selling expenses, a small profit and excise tax.

Hearever Co.'s selling price, $18.

Excise tax paid by Hearever Co., $1.64.

Now, Hearever Co.'s competitor buys one of the identical 6-transistor radios from Nichimen Trading Co., in Japan, who also has branch offices in San Francisco. The radio is delivered to Hearever Co.'s competitor from Nichimen Trading Co., in San Francisco, which constitutes the first sale in the United States.

Competitor's selling price, $17.50.

Because excise tax paid by Nichimen, $1.25.

Please remember that this is the identical radio produced by the identical manufacturer in Japan, and the difference in price is because Hearever Co. must pay excise tax on base price, duty, freight, selling, handling and operating expense plus a small profit, while the competitor pays excise tax only on base price, freight, and duty.

This difference in the amount of excise tax can wipe out a major portion of the purchaser's or importer's profit, providing he is not using the most advantageous buying system, which most importers are not even aware of. This variance in pricing is one of the contributing factors in the present chaos of the transistor business. It is forcing some small importers, not using this system of buying, to get caught with heavy inventories, which eventually they must dump on the market in panic and further adds to the confusion we are faced with today.

My recommended solution is that legislation is needed here to provide a method of using a constructive price schedule for all imports of this nature where excise tax assessments are proper, and collectible at manufacturers' or importers' level on the first sale in the United States. It might be more equitable to charge the tax on base factory price, plus necessary shipping and duty costs, or a flat rate could be determined; or as a means to increase volume of tax, the department may decide to have it charged at consumer level, using a lower percentage on the list price. The method chosen is relatively unimportant as long as a constructive price schedule is determined.

Legal procedure inequities to small business due to delays such as tax litigations should be remedied. The unfortunate news of a pending tax suit against any business, small or large, by governmental departments endanger its financial status and many times results in killing or impairing its banking relations. In addition to this, his credit is restricted, if allowed at all. He practically becomes in a state of suspension and must usually rely on a limited few, factoring companies or private lenders, whose interest rate is often triple that formerly paid to his more conventional lenders.

My small company has had this miserable experience during the past year and a half, at a cost to date of more than $20,000 in factoring commissions.

In these apathetic instances of delay on the part of governmental agencies to expedite their legal procedures, the small businessman is forced to play the waiting game. The delay, lack of credit, mounting costly legal fees, and lowering of employee morale can break his back, and he becomes another mortality statistic in the crowded graveyard of the young and inexperienced small businessmen.

My recommended solution is for small business to have a group of men comparable to the group within the Veterans' Administration (technically trained, qualified men, familiar with Government regulations) who are hired for the sole purpose of acting as the small businessman's advocate. Small business cannot continue to turn the other cheek. The average owner of a young, small business, obviously cannot afford top legal talent. He is fighting his own war for survival of the fittest. His purse is too thin. He has no one to turn to except the Small Business Administration, which he generally assumes is used principally for loans, or is frequently unknown to many new small businesses who are suffering from the lack of proper legal or technical counsel.

There seems to be a missing link somewhere between small business and governmental aid and advice. Small business needs encouragement and help—not hostile policing when they inadvertently slip into the many pitfalls ignorance provides. The Agriculture Department spends hundreds of thousands of taxpayers' dollars to prepare and distribute bulletins to educate or advise our farmers. Why can't small businessmen have the benefit of similar pamphlets along these lines? This would, indeed, provide a healthier climate for success and future governmental business relations.

There is inadequacy in custom liquidation procedure because of the custom department's delay in processing papers to the stage of final liquidation which results in severe hardships to importers and purchasers of imported goods, especially in cases where the importer is a manufacturer and is importing his components. How can any manufacturer price his products when he cannot be

advised immediately of the final cost of duty, particularly in the toy, novelty, and radio industry, which is known to be one of the most highly competitive fields of business with an extremely small profit margin? Our small business is in great jeopardy at this very time due to a 2½-year delay in final liquidation of goods which arrived the latter part of 1957. Small manufacturers cannot wait this long to price market their end product, because they are generally underfinanced and rely on a fast turnover of their inventory to maintain their economic status.

There is also a lack of continuity of classification of goods; for instance, toy motors are being classified as toys—toy crystal detectors are being classified as radios. In the case of toy motors which are, in fact, purchased for use as vibrators and dutied as toys, the explanation given by the customs agent was that—with the word "toy" preceding the word "motor," it was automatically placed in the toy classification. A ruling is necessary to indicate where duty should be applied; to the end use of a component or to the component itself.

My suggested solution is to remove the causes of delay in liquidation which in all probability will result in the increasing of the existing staff of agents processing the necessary documents.

And, secondly, we need a more realistic classification of imported goods.

In conclusion, may I say that the United States has spent billions of taxpayers' dollars to aid the weak, the defenseless, and the oppressed of the world. Small business meets all these qualifications.

Thank you for allowing me to present this material.

Current Fears of Teachers in American Education

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. O'HARA of Illinois. Mr. Speaker, at a moment when the whole question of Federal aid to education is very much in our minds it seems fitting that I call attention to "Current Fears of Teachers in American Education," written by Dr. and Mrs. George S. Reuter, of the American Federation of Teachers:

CURRENT FEARS OF TEACHERS IN AMERICAN EDUCATION

(By Dr. and Mrs. George S. Reuter, Jr.)

Much concern has been expressed as to the status of teachers from the early days of America. George Washington said: "In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened," and teachers are expected to achieve this. John Adams, the "blue blood" of his day, uttered these favorable words: "The whole people must take upon themselves the education of the whole people and must be willing to bear the expense of it." About the same time DeWitt Clinton went even further by suggesting: "The first duty of government, and the surest evidence of good government, is the encouragement of education."

These worthy expressions of statesmen made during the early years of our history reflect the concern for public education and teachers, but the teachers were frustrated because they were unable to achieve the goals that would give America the status expressed by Washington, Adams, Clinton, and so forth. Teachers, through war and peace, were able to make progress in public education that greatly benefited the children of the Nation. When progress could be seen by the teachers, after long and difficult struggles, these were times when fears were at a minimum.

Even after some progress was evident, however, there was the fear among teachers of retaining the goals and reaching greater ones. Woodrow Wilson noted this by saying: "Popular education is necessary for the preservation of those conditions of freedom, political and social, which are indispensable to free individual development. No instrumentality less universal in its power and authority than government can secure popular education. In order to secure popular education the action of society as a whole is necessary; and popular education is indispensable to that equalization of the conditions of personal development which are the proper objects of society. Without popular education, moreover, no government which rests upon popular action can long endure."

Teachers are very important in our age. In fact, many believe teachers must become even more important in our civilization. M. H. Trytten of the National Academy of Sciences recently made one such suggestion, when he noted: "Education and the environment it serves are diverging as the rate of flux in our society increases. And yet the importance of education in modern life is steadily increasing. The closing of the gap would seem to be one of the great challenges facing us as educators."

With the early expressed heritage for education and the current recognition among leaders for greater dependence on teachers, it should follow that the teachers possess peace of mind in order to render the greatest service to humanity, yet there are current fears that should be conquered. These fears may be classified as economic, social, legal, physical, and moral.

Economic fear exists at the present time. During the period of time when fortunes are being made in America, teachers find themselves making less than one-half the amount earned by continental truckdrivers. The teachers find themselves in a poorer status in regard to the cost of living than during the great depression. Taxes have increased faster than their annual increments.

While many teachers find current saving to be impossible, they are further frustrated that they are supposed to supply goals for economic security even though their recommendations for worthy national objectives are disregarded. Finally, they face the possibility of periods of recessions in the years ahead largely because the programs they recommended are not adequately considered by the various units of government. Adolf A. Berle, Jr. of Columbia University has expressed these conditions: "My belief is that the United States will have reverses, possibly serious ones, in the next few years. In part these will be ascribed to be failures of the Government. Secondarily, it will be charged that the universities of the country, and its intellectual general staff, failed to prepare the country to take the necessary preventive measures. But at the same time, universities will be expected to supply the ideas, the analysis, the measures and even the men to meet any current emergency in almost any field."

George Romney of American Motors and the AFL–CIO have provided two ideas that are closely related here. Mr. Romney said: "While our economic obsession has produced material success at the sacrifice of adequate interest in education, it has nevertheless provided the resources capable of financing not only the additional facilities and personnel for our lengthening educational program and increasing school population, but also the compensation levels needed to attract and hold capable teachers and administrators." It would thus follow that greater Federal aid from the National Government should come in order to achieve the Romney statement, yet the AFL–CIO indicates the major hurdle: "The real opposition to Federal aid to finance education is because of the taxation question. The Federal tax system is based essentially on graduated, corporate, and personal income levies—progressive and workable and equitable. The States tax systems are based essentially on regressive levy, such as sales taxes, which deny the principle of ability to pay and which taxes a higher percentage of the poor and middle income groups' income than that of the wealthy."

Social fear exists at the present time. Woodrow Wilson, M. H. Trytten, etc., have dreamed of a dynamic society that would include all Americans. Teachers and books are necessary to achieve these goals. Edward J. Gordon of Yale University has expressed a part of the situation: "The student begins to see that great books are great metaphors of human experience as a way of understanding who he is and where he is going. If this happens, he sees that the good life depends largely upon accepting all other's as one's equal in opportunity, that one has no right to sacrifice others to one's own convenience."

Mr. Berle adds the teacher to the great books, and this develops a positive value system. He noted: "All this means a value system. It means teachers who teach according to that system. It means a public life carried on in that system. It requires men who would rather not be in office than get office by false promises, or by promising to support measures they believe are unsound, or who, once in office, want merely to coast from election to election. It means judging statements with fearless honesty. It means social engineers at all levels, from the village council to Washington, who act with the integrity of trustees for their community. It means lawyers who use their technique to secure justice and honorable arrangements, instead of peddling influence."

Teachers should be fearless, free citizens dedicated to the idea of reducing social fears. The first step in this goal is the development of greater quality in teaching, as this will stimulate more profound educational thought. Paul L. Dressel of Michigan State University has expressed it as follows: "We are forced then into the conclusion that it is the quality of teaching, the nature of the objectives and the nature of educational experiences which determine the liberal education contribution of a course and ultimately of a curriculum."

The second consideration is that the teacher has a major part in the development of the curriculum that is to be the framework of the social reconstruction. Warner Moss of the College of William and Mary has reflected this point: "Only if the professor participates in the construction of the curriculum can we understand the relevance of his work to that of the educational program as a whole. Only if he has engaged in the critical discussion producing the curriculum can he accept responsibility for it and believe in its worth. Only if the curiculum reflects his motivation can he hope to influence the student's motivation."

The third consideration is to insure that long-range goals will be considered as well as short-range ones. Dale E. Hathaway of Michigan State University has summarized this point as follows: "The faculty has both a major responsibility and a contribution to make in the process of long-range planning for institutions of higher education. It should be recognized by both faculty and others that this is a contribution which perhaps can best be made by carefully defining the roles of various groups in the long-

range planning process and by limiting the decisions which are required of the different groups."

The fourth consideration will become the social philosophy. Gerard J. Mangone of Syracuse University, has expressed this as follows: "Education—for living in the United States or spending some years abroad—is not worth much if it does not contribute to a vibrant social philosophy. Perhaps education for living and working abroad has been best summed up by Dexter Perkins in his exhortation to teachers to fire their students 'with a generous view of life and a wider view of knowledge.'"

Legal fear exists at the present time. On March 11, 1960, the Chicago Daily News noted: "Sometimes one might think it was a rule of the universe that the average man may accomplish only so much in a lifetime. Most of us struggle along to our three score and ten without more than a small fraction of the achievements of U.S. Senator Richard Lewis Neuberger." Teachers are thus frustrated because of their lack of status in many States.

Teachers are often victims of legal conditions bestowed to them by society. A part of this is reflected by the fact that the various States respond three different ways as to the liability of teachers and school districts. The common law is relied on in several States to give immunity. The second group of States prescribe limited liability. The third group prescribe full liability to teachers and school districts.

The second type of legal fear comes to teachers who are in States without job security (tenure) laws, or who have not qualified in States with these laws.

Harold Benjamin has described the result of legal fears. He noted: "Free men cannot be taught properly by slaves; courageous citizens cannot be well educated by scared hired men." Robert M. Hutchins reflects the results of legal fears: "Hannah Arendt has suggested, we appear to be entering an era in which men will no longer act; they will simply behave."

Physical fear exists at the present time. C. L. Sulzberger of the New York Times recently described such a condition: "Like Draja Mikhailovich, the unhappy Serbian guerrilla executed by Tito for treason, Eden might have said about himself: 'Destiny was merciless toward me when it threw me into the most difficult whirlwinds; I wanted much, I began much, but the whirlwind, the world whirlwind, carried me and my work away.'"

Fear to self is as deadly as other types of fear. The teacher who is afraid of a part of the public because of what he taught in school, the way he disciplined his students, the organizations he belongs to, the racial and religious background of himself, or because he desires to seek public office often develops into a case of actual physical fear. When this becomes the condition, the statement of Dr. J. E. Morgan loses its effectiveness. Dr. Morgan suggested: "It is not possible for society to guarantee to every child a devoted mother and a wise provident father, but society can guarantee to every child a competent, well-prepared, and adequately paid teacher."

Moral fear exists at the present time. Former U.S. Senator Henry Fountain Ashurst, of Arizona, and the historian, Toynbee, give the teacher hope in this important area. Senator Ashurst recently said: "Mankind is inexterminable and there is everywhere a conservation of moral and spiritual energy that preserves the core of every noble resolve and worthy action and molds them into a beneficent achievement aiding the human race in its arduous struggle to conquer all the arts and sciences." On the other hand Toynbee noted: "The 20th century will be remembered as the 1st age in history in which people thought it practical to make the benefits of civilization available to the whole human race."

The dreams of Ashurst and Toynbee still have not reached reality in many areas. George Meany described such a moral fear by writing to Mrs. Povl Bang-Jensen: "The courage and honor of your husband in his refusal to compromise his high principles will everlastingly provide inspiration to men everywhere who defend the ideals of freedom against the forces of tyranny. Sincere condolences to you and your children." This might have been a letter to a widow of a teacher who died in order to escape moral fear.

Leonard A. Duce, of Baylor University, recently described two phases of the moral principle, as follows: "Honesty is a virtue much spoken of but not often realized in its deepest expression. All too frequently, it is restricted to the quality of verbal statements. Only an intellectually active person can be intellectually honest. In other words, he must think seriously and for himself. Genuine intellectual activity involves much more than acquiring, preserving, and transmitting knowledge."

The teacher under moral fear is unable to meet the descriptions of Dr. Duce and often he may regret the day of his birth. He feels that the natural law is so important and that he is a traitor to his heritage.

In conclusion, let us remember the words of Bishop Vincent S. Waters of Raleigh, N.C., that teachers can secure "the right to physical integrity, the right to moral integrity, the right to intellectual integrity, the right to social integrity, and the right to economic integrity."

Educational Needs for Alaska Natives

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. RIVERS of Alaska. Mr. Speaker, a serious situation with respect to the educational opportunities for native boys and girls exists today in Alaska. The present facilities of the Bureau of Indian Affairs are bulging at the seams. Also, approximately 400 qualified Indian and Eskimo children of high school age are being denied the right to attend high school due to the lack of high schools in their villages, or lack of space at the Bureau of Indian Affairs boarding school at Mount Edgecumbe near Sitka, Alaska.

A recent editorial which appeared in the Fairbanks Daily News-Miner on June 21, 1960, makes a constructive contribution toward corrective action, both by the Bureau of Indian Affairs, and by the Congress, with respect to providing funds for the additional facilities which are needed. Both Nome and Fairbanks would be good sites for establishing boarding school facilities to afford to native children from the remote villages the high school education which they want and need. The editorial follows:

AN EDUCATED ALASKA?

Recently, a member of the News-Miner staff wrote a series of three articles concerning educational opportunities available to the native people of Alaska.

It was pointed out that public high school facilities for natives are concentrated near Sitka. Children from villages who wish to attend high school must travel far from their homes, and spend the school year in southeastern Alaska. This has a tendency to discourage many of them from attending high school.

What is worse, there is not room for all of them. Several hundred young people in the villages are turned down each year, when they apply to go to high school. In past years, there was room for all of the young people who wished to attend high school. But, in recent years, native young people have taken a great interest in education as a means of bettering themselves. The resulting demand for a high school education has outstripped facilities that are available.

So, the tragic fact of the matter is that Alaskan native boys and girls living in the villages are not guaranteed a high school education, even though most of them want such an education. We aren't talking about college, or a higher education of any kind. We are referring to something that is the right of virtually every citizen of the United States—except the native people of Alaska.

It is imperative that native children be given better educations. Not only should additional boarding high school facilities be made available to them immediately, but they should also be given opportunities to attend college, and vocational schools. Until these opportunities are made available to them, they are doomed to live their lives in poverty and want.

At the present time, there are funds available to send some of them to vocational school, and there are jobs open for natives who have technical skills.

But, it does little good to send a man or woman to vocational school when they have not progressed beyond the eighth grade. Furthermore, there are not a handful of natives in Alaska who have the skill to accept the technical positions that are now open to them.

It would seem that our Nation has failed the native people of Alaska.

As a final indication that our facilities are totally inadequate, this year some Alaska native boys and girls, who have not completed the first eight grades of elementary school, are being sent to Oregon to attend an Indian Bureau school there. How many children of Fairbanks would have finished the eighth grade if they were forced to go to Oregon to do it?

This is a matter that needs immediate attention.

The answer is simple. Another boarding high school must be built immediately, to serve the native people of the Yukon River system and Arctic Alaska. Until this school is built, native boys and girls who wish to attend high school, and possibly go beyond, will be denied this right.

The logical location for this school is right here in Fairbanks. This city is the hub of interior and Arctic Alaska. All educators familiar with the problems of natives agree that this school is an absolute necessity if we are to give Alaska's native children a change to better their lives.

Leaders of our city should get behind this project; we should see to it that native children of Alaska are given every opportunity to enjoy the benefits of a good education. Without fair educational opportunities, they are doomed to live unproductive, tragic, wasted lives.

Southeast Washington Low-Rent Housing Should Be Rejected Unless Other Districts Share or Slums Eliminated

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. BENNETT of Florida. Mr. Speaker, it is difficult to believe that this could happen in America. It is difficult to believe that taxpayers' dollars from all over the United States could be so used by the officials of the District of Columbia and by local housing officials. It would seem axiomatic that taxpayers' dollars collected to rid areas of slums should in fact be used to eliminate slums and should not be used to depress real estate values and produce new slums. It is cruel enough to condemn private property for a higher public use but when the end result is a lower public and private use how can it possibly be justified? Often the people who have their homes taken suffer a great financial loss in the way that the takings have been made in the District of Columbia. Some of them have even become public charges after losing their homes with inadequate recompense. Other citizens of the District may not actually lose their homes but have their investments stolen by the lower use to which the nearby land is put by the Government. Paradoxically these others are currently being asked to pay higher taxes as their property values are being depressed by the Government.

In all fairness to the people of Southeast Washington, an area in which I own a house and live during sessions of Congress, the Government should not add to the already disproportionate share of low-rent housing borne by this section, merely to empty the slums of other sections of the city, at least until the other sections have borne their own share of the burden. I would not object to this new low-rent housing if it in fact was to result in the destruction or rehabilitation of slum areas. What is actually being done is the moving to Southeast Washington occupants of slums in other districts of the city while those vacated slums then become available to new slum occupants from outside Washington, who later qualify for new low-rent housing to be built for them. This is an endless chain and can well result in a population in Washington comprised chiefly of persons who have recently come here for the purpose of going on public relief. No intelligent Government would wish to have its Capital City so permanently occupied. In an effort to at least slow down this horrible adventure in bad government, I have introduced the following bill—H.R. 12668—and I hope it can be speedily enacted separately or as an amendment to some other law:

H.R. 12668

To amend the District of Columbia Alley Dwelling Act by adding certain requirements with respect to low-rent housing projects in the southeast quadrant of the District of Columbia

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title II of the District of Columbia Alley Dwelling Act (chapter 1 of title 5 of the District of Columbia Code) is amended by adding at the end thereof the following new section:

"SEC. 206. No new dwelling units constituting a part of a low-rent housing project assisted under the United States Housing Act of 1937 shall be constructed in the southeast quadrant of the District of Columbia after the date of the enactment of this section unless (at the time such construction is to be completed)—

"(1) there will have been demolished or rehabilitated in the southeast quadrant of the District of Columbia, pursuant to the slum clearance and urban renewal program under title I of the Housing Act of 1949 or another governmental program for the clearance of slums and the redevelopment of blighted urban areas, an equal number of dwelling units which constitute slum or blighted dwellings within the meaning of such program; or

"(2) there will have been constructed heretofore or hereafter in each of the other three quadrants of the District of Columiba a total number of dwelling units in low-rent public housing projects so assisted equal to the total number of units of such housing (including the new dwelling units referred to in this section) constructed in the southeast quadrant of the District of Columbia, or in each such quadrant as large a percentage of such units among all housing units (privately or publicly owned) as is presently the case in said southeast quadrant."

Sixtieth Birthday

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. McCORMACK. Mr. Speaker, In my extension of remarks, I include a deserving editorial entitled "Sixtieth Birthday," appearing in the New York Times of June 23, 1960, relating to the International Ladies Garment Workers Union. The editorial is one that this splendid union richly deserves. As the editorial well said, "All these endeavors have helped strengthen the democratic way of life at a time when the validity of our enterprise economy has been viewed with increasing skepticism by our critics abroad."

The concluding sentence of the editorial in expressing best wishes to David Dubinsky and his associates in the ILGWU for "many more years of constructive service to the ideals of clean, creative unionism" is highly indicative of the progressive and constructive leadership of the ILGWU. I join with the New York Times in not only this tribute but also in the expression of many more years of constructive service to the ideals of clean, creative unionism. The article follows:

SIXTIETH BIRTHDAY

The Inernational Ladies Garment Workers Union, as distinctive a New York landmark as the Empire State Building, is celebrating its 60th birthday today. Born in the scabrous sweatshops of the old East Side, it has brought economic uplift to its members and stability to its industry, the largest and, in many ways, the most fiercely competitive in the city.

A pioneer in the development of employer-financed pension and welfare funds, the ILGWU has introduced civilized procedures into the adjustment of labor-management disputes, built cooperative housing projects in place of the "lung blocks" in which its early members worked, and contributed millions of dollars to the advancement of labor and liberal causes in all parts of the world.

All these endeavors have helped strengthen the democratic way of life at a time when the validity of our enterprise economy has been viewed with increasing skepticism by our critics abroad. Not the least remarkable aspect of this contribution to the vigor of the capitalist system is that it was made by an organization whose founders were steeped in the traditions of socialism. To David Dubinsky and his associates in the ILGWU we wish many more years of constructive service to the ideals of clean, creative unionism.

A Suggestion for the State Department and the Central Intelligence Agency

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mrs. GRIFFITHS. Mr. Speaker, the following letter was sent to me from a resident of my congressional district. I think his suggestion is excellent and I commend it to the attention of the State Department and the Central Intelligence Agency.

Further I would like to say, if we do not have American Negroes in Africa who can speak the language of the various countries, we should certainly make every effort to get them there. The letter follows:

The Honorable MARTHA W. GRIFFITHS,
U.S. House of Representatives,
Washington, D.C.

DEAR MRS. GRIFFITHS: I think our international relations and policies are in a bit of a mess. This could be easily the greatest understatement of the day.

As a single individual, and in my obscure position, there is very little I can do to change it. But I'm willing to do it even if it's very little. This is my suggestion:

The next time you or some of your colleagues should need a bit of information or should want some kind of investigation done in the Orient, please try this experiment: Send two people, one an American, a Caucasian, and the other also an American but an oriental, on the same assignment. Compare their reports. You will be in for

some interesting revelations, I think, and so would the Central Intelligence Agency.

I am an oriental and even from Europe, where I lived all of 1959, I could have given you information that your own people could not—simply because I, being an oriental, was never taken to be an American, and people talked to me quite frankly about Americans.

Maybe one reason our foreign policies are not so strong is because some information we get is not so accurate. It seems to me this is like a doctor basing his diagnosis on reports from the laboratory, staffed by not so knowledgeable technicians.

Sincerely yours,

——— ———.

Cattle Imports and Price Supports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, the candidates for President and the candidates for Congress are going to hear from the American farmer this fall as never before. The American farmer is tired of seeing his acres and markets given to foreign farmers. The following is only the beginning:

STATEMENT BY FRED H. DRESSLER, PRESIDENT OF THE AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION, TO THE PLATFORM COMMITTEES OF THE REPUBLICAN AND DEMOCRATIC PARTIES, IN CONVENTION, JULY 1960

The American National Cattlemen's Association is a nationwide organization of cattle producers and feeders, now in its 63d year. Its membership includes thousands of individual cattlemen operating in 47 States. It also includes 30 affiliated State associations of cattle raisers and feeders, and 120 breed, county or regional associations.

The cattlemen for whom American National speaks, and to whose interests it is devoted, represent the largest single segment of American agriculture. The value of cattle and calves sold from farms and ranches was $7.5 billion in each of the past 2 years, or about 20 percent of the total cash income of agriculture. Cattle and calves produce more cash farm income than all six "basic" crops combined, and more than the combined sales of hogs, sheep, wool, and poultry and eggs.

We appreciate this opportunity to submit for your consideration our views on national agricultural policies as they may affect the cattle industry.

The American National Cattlemen's Association has traditionally and vigorously opposed legislative proposals and policy statements which would bring cattle under any form of artifically maintained prices, or controlled marketings, or continued subsidies.

We wish to reemphasize this point of view and to set forth our reasons:

1. Cattlemen, like any other sellers in the market, would be happy to receive higher prices for what they have to sell. However, experience has taught that artificial prices and controls are inseparable. We do not believe that the complex cattle business can fully serve its market or realize its full potentials under a system of production and marketing controls.

Beef is the preferred meat of the American people. Demand for beef has been increasing, and the cattle industry has been expanding production to serve our increasing population.

During the past decade increased per capita consumption of beef has been even more important to the cattle business—that is, has contributed even more to the expansion of the market for beef—than has the sharp increase in the population of the country.

We believe the market for beef can be expanded much more in the years ahead if the cattle industry remains competitive and aggressively strives to further improve the quality of beef offered to the public.

We believe that to whatever degree beef production would be restricted under a system of controls, we would be handing over to other food products a part of the sales volume we otherwise can achieve for our own product. Over the years this would be a price too great to pay for any benefits to be derived from an artificial and subsidized cattle market.

Historically the cattle business has been through repeated experiences of boom and bust coinciding with the ups and downs of the cattle cycle. At times it might seem pleasant for the cattleman to unload these problems onto the taxpaying public. But cattlemen have a long and proud history of insisting upon carrying their own problems of natural and economic hazards.

The price we must pay to have a free and competitive market for cattle is at times an income position lower than is easily accepted. The offsetting advantage is that difficult times keep the cattle industry always in the process of adjusting to its markets. And we know, with a free market there is opportunity to recoup from the stress of low-income years at other times when markets improve.

2. Coupled with the concept of a free market is the need for affording cattlemen—and all business—reasonable incentives and protection against unforeseeable and uncontrollable conditions. These incentives and protections should come from logical income tax treatment and from realistic policies concerning imports.

(a) It is a recognized fact that any business with widely fluctuating conditions of supply, weather, etc., cannot "put away" in good years enough to offset entirely the losses or lack of adequate income during poor years. We believe that our Nation's fiscal policy should include provisions for averaging of incomes, for tax purposes, over a span of years to provide for funds to carry out normal business operations.

(b) American stockmen have no intent, or desire, to "fence out" reasonable competition. But they do expect the Government to adopt a realistic policy of tariff or quota protection against excessive imports of foreign livestock and meats. American prices, reflecting a higher standard of living and a high wage scale, often attract unusually large shipments of meats from countries which find in our markets exceptionally profitable outlets for their products raised and processed under "substandard" conditions. Tariffs on livestock and meat products now in effect have been made almost ineffective as a deterrent against such "dumping" by inflation and shifting world monetary values.

3. The cattle industry long has avoided interference with farm programs and policy questions not generally considered to directly concern cattlemen. But in recent years, we have observed a disturbing tendency for many farm programs not touching directly upon the cattle industry to become, in fact, a threat and a burden to cattlemen. We deplore these tendencies, and insist that they be corrected.

Especially disturbing to us us been the tendency to shift problems of price-supported crops onto the feed grains, or in the direction of expanding the acreage of grazing lands on a subsidized basis. Such attempts to solve the problems of other farm enterprises create a threat to the stability of the livestock industry. The willingness of livestock producers to face up to problems of their own must not be burdened by dumping the problems of the rest of agriculture upon them.

We request prompt and effective adjustments in programs and policies for the price-support crops that will protect the livestock producers from these burdens.

4. Agriculture does not exist in an economic vacuum. It becomes ever more an inseparable part of the total national economy. The well-being of the cattle industry requires reasonbly full employment and production throughout the Nation, stability of the general price level, and a continuing healthy growth of the total economy of the country. Within such an environment, there is opportunity to build an expanding demand for our product through improved quality, efficiency, and service to the consumer, and to operate our farms and ranches with stability of costs and income.

We look to our political leadership for policies and actions conducive to these objectives.

Sp5c. Donald E. Weber

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. BOW. Mr. Speaker, I was very pleased to learn that one of my constituents, a young man now stationed in Germany, has received a citation and a certificate of achievement from the Brooks Army Medical Service School Center at Fort Sam Houston, Tex.

Sp5c. Donald E. Weber distinguished himself by exceptionally meritorious services while serving as personnel administrative specialist, Headquarters, 37th Medical Battalion, Sep., Army Medical Service School, from November 16, 1955, to March 21, 1960.

The citation, presented at a recent ceremony in Munich, says in part:

Through his outstanding leadership, initiative, and sound judgment, Specialist Weber contributed immeasurably to the success of the personnel section of headquarters, 37th Medical Battalion (Sep.). Specialist Weber has exhibited unusual ability as an organizer, a leader, and as an instructor to the newly assigned personnel clerks assigned to his section. His outstanding resourcefulness and intelligence caused him to be assigned many tasks which were accepted willingly and enthusiastically and truly outstanding results were attained.

By his dedicated approach to the problems presented by turnover and personnel and personnel shortages within the section and by his willingness to devote many hours of overtime effort, Specialist Weber's contributions to the success of the mission must be considered outstanding.

The House Committee of the Year

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD an article by the noted columnist, Holmes Alexander, of McNaught Syndicate, which appeared recently in more than 100 newspapers throughout the country.

Mr. Alexander has selected the Committee on Science and Astronautics, of which I have the honor of being chairman, as "the House Committee of the Year." The distinction which has come to our committee is due entirely to the hard work and dedication of the members who compose it. It is an honor which they richly deserve. No finer group of men has ever served upon any committee and their interest in its deliberations was truly inspiring to behold.

The members of "the House Committee of the Year" are: OVERTON BROOKS, of Louisiana, chairman; JOHN W. MCCORMACK, of Massachusetts; GEORGE P. MILLER, of California; OLIN E. TEAGUE, of Texas; VICTOR L. ANFUSO, of New York; B. F. SISK, of California; ERWIN MITCHELL, of Georgia; JAMES M. QUIGLEY, of Pennsylvania; LEONARD G. WOLF, of Iowa; JOSEPH E. KARTH, of Minnesota; KEN HECHLER, of West Virginia; EMILIO Q. DADDARIO, of Connecticut; WALTER H. MOELLER, of Ohio; DAVID S. KING, of Utah; J. EDWARD ROUSH, of Indiana; THOMAS G. MORRIS, of New Mexico; JOSEPH W. MARTIN, JR., of Massachusetts; JAMES G. FULTON, of Pennsylvania; GORDON L. MCDONOUGH, of California; J. EDGAR CHENOWETH, of Colorado; FRANK C. OSMERS, JR., of New Jersey; WILLIAM K. VAN PELT, of Wisconsin; A. D. BAUMHART, JR., of Ohio; PERKINS BASS, of New Hampshire; R. WALTER RIEHLMAN, of New York.

Mr. Alexander's article follows:

WASHINGTON, June 17.—It can be argued that none of the 20 outstanding committees of the House deserve any honorable mention this year. Some scandalous things have been discovered and printed about the way House Members swindle the taxpayer on their expense accounts, and how they live high on the hog when traveling in the line of duty.

PERFORMED HEROICALLY

Quite aside from fiscal irregularities, it was not a good year for House committees. Presidential election years seldom are. House leaders try to get controversial work done in the odd years, and to postpone what can't be finished without a lot of headbreaking. In 1959, for example, the House performed heroically by rewriting the Kennedy bill which came over from the Senate. Two near-unknowns, named PHIL LANDRUM, Democrat, of Georgia, and ROBERT GRIFFIN, Republican, of Michigan, became household names. But this year the big, standby committees, like Armed Services and Judiciary, busied themselves with inconsequentials, like restrictions on retired officers becoming salesmen to the Government and like the abolition of capital punishment. The Harris Subcommittee on Legislative Oversight, after catching some petty offenders in the regulatory agencies, got itself caught with a pocketful of phonied-up expense accounts.

Another committee which got a bad press for its expense accounts was Un-American Activities, but the offenses were not excessive and the accusations are suspect. Un-American Activities has automatically drawn a bad press for 20 years, mainly from the left-wing. This is a year when Un-American Activities did a number of worthwhile things. It fingered world communism in a concentrated drive to shake the Americanism of American youth. It went a long way toward salvaging a bad situation in which the Air Force was wrongly made to appear as attacking the American churches. And recently, in hearings in San Francisco, Un-American Activities did these important things in the words of Subcommittee Chairman EDWIN WILLIS, Democrat, of Louisiana:

1. "We have seen confirmed here (in the 'student' riots against the hearings) patterns of Communist activity."

2. "We have observed here the technique of obscuring technical membership in the Communist Party by official (but false) resignation."

3. "Another pattern is the campaign of foreign Communist propaganda being sent to schools, colleges, libraries, and homes in every nook and corner of the Nation."

It is a bit too late in history to sniff in contempt at such reports. The Un-American Activities Committee is earning its keep better than several other groups which claim a higher social standing.

But the House committee-of-the-year has to be the one called Science and Astronautics. This group has been in session almost every day since New Years. It would be incorrect to describe its chairman, OVERTON BROOKS, Democrat, of Louisiana, as any more than conscientious and earnest, or its minority member, JAMES FULTON, Republican, of Pennsylvania, as any more than a busybody and omnipresent. But these are not bad qualities for the only committee on Capitol Hill with general jurisdiction over the enormous subject called "Science."

On scope alone, this committee was remarkable. It covered 10 subjects. One set of hearings on the huge assignment called "Adequacy of the National Space Program" ran over 6 weeks. This astonishingly versatile committee dealt with moon-mapping by the Army, oceanic research by the Navy, mechanical translation of foreign languages, development of the hydrofoil, scientific scholarships and the principle of Federal secrecy of documents.

IRREVOCABLE LICENSE

Only last week, in amending the National Space Act, members of Science and Astronautics had a knock-down-drag-out fight which related to private versus public ownership. It successfully defended a proposition which allowed a private or corporate inventor, even though working on a Government contract, to keep the patent to his invention, and allowed the Government to maintain irrevocable license to use such a patent.

Thus, in the last scheduled month of the 1960 session, Un-American Activities was pointing the finger of scorn and warning at fools and knaves. Science and Astronautics was striking a blow for incentive capitalism.

A lot of persons will find fault with such work—but what else is the cold war all about, anyhow?

Foreign Aid

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, Gen. Bonner Fellers and the great committee he represents is doing an excellent job in pointing out to our people the truth about foreign aid. The following is another one of his great statements:

IMPACT OF FOREIGN AID ON OUR ECONOMY AND DEFENSES

(Statement of Bonner Fellers, Brigadier General, U.S. Army (retired), vice chairman and national director, Citizens Foreign Aid Committee, before the Democratic platform subcommittee, Hotel Biltmore, New York, N.Y., June 21, 1960)

ECONOMIC AID

Foreign aid began—and was to have ended—with the Marshall plan to rebuild war-devastated areas. More than a decade after restoration of the war-torn areas foreign aid continues. President Eisenhower has announced that the program is now permanent.

Many billions of dollars spent on foreign aid are not carried on the annual mutual security appropriations. For the fiscal year 1960, $8.1 billion was available for expenditure. Including the interest on the money which we have borrowed to give away, foreign aid now exceeds $10 billion annually. The total cost of this foreign policy program for 12 years beginning with 1948 and excluding interest on the money borrowed is $86.7 billion. Thus our past and present foreign aid programs are consuming the equivalent of 20 percent of our personal income tax collections.

With the funds and equipment which we have given away, foreign countries have established industries which compete with ours. Thus, foreign aid subsidized by taxes upon our industry is undermining the very American enterprise that generates its support. We have given the rest of the world our latest machinery, know-how, and frequently raw materials. Foreign industry, largely Government-owned, pays little or no taxes and enjoys low wage scales.

On the other hand American industry pays from 4 to 10 times the wages of its foreign competitors. American industry pays prohibitive income and profits taxes, high real estate taxes, and pays for the research and development which our Government frequently gives to foreign competitors.

Foreign aid is undermining American industry by flooding our markets with cheap foreign products. By the tens of thousands, foreign aid is throwing American workers out of their jobs. Here are a few examples of 1959 dumping: Radio sets by the million; 4.4 million tons of steel products; 625,000 foreign cars (with a loss of 172,000 jobs to Americans); 1,220,000 sewing machines; Jewelry, tile, pottery, plywood, textiles, optical instruments, gloves—all at prices far below American prices.

THE U.S. ECONOMY

Our taxes continue confiscatory. Yet, during the past 7 years only twice has our budget been balanced! Last year we had a deficit of $12 billion—the largest peacetime

deficit in our history. In 1952 our gold stock stood at $23 billion; foreign claims stood at $13.5 billion. Eight years later, our gold reserve stands at $19.3 billion; foreign dollar credits, with which foreigners can demand our gold, stand at $23 billion. If foreigners should call this gold, and they can if they so elect, the value of our dollar would become all but worthless.

The inflationary result of these enormous debt burdens, coupled with confiscatory income taxes and the mass dumping of cheap foreign products on our markets, is fast undermining our economy.

U.S. Government obligations held by foreigners are officially stated at $12.117 billion. Interest payments by the U.S. Government to foreigners on these obligations amount to more than $500 million annually. These interest payments themselves constitute a form of foreign aid.

Foreign dollar investments in the United States of more than $12 billion is conclusive proof that foreign aid—except for countries directly threatened with Red aggression—is wholly unnecessary.

CONCLUSION

So far as economic aid is concerned, our financial position is such that this aid should be terminated without delay. Technical assistance, as conceived by President Truman, should continue to be made available to friendly peoples who seek assistance.

MILITARY ASSISTANCE

It is argued that aid to our allies materially strengthens our own defense. But the fact is our allies can neither defend us nor lend material support for our defense. The threat to the United States comes from the sky. Red bombers and missiles based in the Soviet Arctic and fired against us over the Polar Cap are the real threat to our survival. Our troops in Europe, and our allies there, are not even in the path of the attack against us. They have not the means to offer an effective defense against this ghastly Red threat which can be launched over the Polar Cap. Such a threat can be met principally by the retaliatory capability of our Strategic Air Command (SAC) and by our own defensive measures over the North American Continent. Only Americans can defend America.

Despite this self-evident fact, the administration has endeavored to rest our security on a system of alliances. This is a procedure wholly unjustified by history. It is well illustrated by our present loss of oversea bases.

There is no assurance—should war come—that the Soviets will attack Europe. Their real enemy is the United States. Suppose the Reds strike only the United States. Would our NATO allies and other allies attack the Soviet Union? With what and how could they extend material assistance?

Possibly the most compelling argument for foreign aid has been that through it we have a string of oversea bases encircling the Soviet Union. In his statement of March 13, 1959, endorsing mutual security to the Congress, President Eisenhower listed as a first priority collective achievement the 250 allied bases which "our friends among the free world nations make available to us for the use of our forces."

Premier Khrushchev has blackmailed Norway and Pakistan into denial of bases for American reconnaissance flights over the U.S.S.R. Turkey has announced that she has not granted permission for such use of her bases. The Afghans have protested to our Government because our U–2 violated their airspace.

On May 30, 1960, Soviet Defense Minister Rodion Malinovsky warned that he had ordered Soviet rocket forces "to strike at a base from which a plane would take off and violate the airspace of the U.S.S.R."

This was followed on June 2 by Premier Khrushchev's irrational outburst that "if the cold war becomes hot, the first blow will be struck against those countries which play host to U.S. bases."

Malinovsky may have been bluffing, but our allies believe that Khrushchev was not bluffing.

The Communist-exploited riots in Tokyo have their origin in our quest for oversea bases. Our mutual security treaty with Japan would make her bases available to us for the next 10 years. Although the Japanese have ratified their new treaty with us, grave apprehension over our use of their bases continues.

Meanwhile, the Soviets are accomplishing their purpose—to neutralize our oversea bases. Their threat to destroy bases made available to us will have the effect of neutralizing the bases whether or not the host country declares them neutral.

If and when the Soviet overflights are again resumed—and in due course they should be resumed—we ourselves will likely not risk using oversea bases even were they made available to us. Should these bases be used and attacked by Red missiles we face one of two alternatives—go to war against the Soviets or renege on our treaty obligations. To avoid either of the alternatives we most likely will decide not to use oversea bases even for reconnaissance flights over Russia.

Modern airspace nuclear weapons have given a new meaning to alliances. Were war imminent, the Kremlin could threaten European NATO countries with total destruction—unless they declared their neutrality. And since the Soviets have the capability to destroy Europe, a neutral Europe appears inevitable.

The population of NATO in Europe is half again greater than ours. The economy of Europe is flourishing. European NATO powers have the manpower and are financially able to provide such ground forces as they deem necessary. The truth is the military need for American troops in West Germany does not exist.

Since SAC, entirely supported by the United States, constitutes the principal defense of the free world, it is mandatory that our allies provide their own surface forces and relieve the United States from sharing this burden.

It would appear that the only foreign military assistance which we should extend would be that to countries or areas which are directly threatened with Red aggression. Korea, Formosa and Berlin are examples.

SUMMARY

One cannot avoid comment on the failure of our foreign policy. The New York Times of Sunday, May 29, a supporter of our foreign policy, reports violent explosions within various nations about the globe. It pictures alarming turbulence in Cuba, Honduras, Algeria, Belgian Congo, Kenya, Cambodia, Indonesia, South Korea, and Japan.

The President of the United States has been uninvited to Russia; he has attended the summit conference sabotage; his invitation to Japan has been canceled; his personal diplomacy has collapsed. Having failed to take the initiative against communism we have now lost enormous prestige throughout the world.

The Citizens Foreign Aid Committee has been erroneously accused of being isolationist. But today we find that our internationalist leadership has made enemies instead of friends; it has caused our President to be insulted and humiliated. Foreign aid is undermining our economy; it is robbing our own defense; it has bought few friends; it has engendered much resentment and jealousy and some hatred abroad. In many areas of the world Americans are not welcome. In time of war we cannot count on oversea bases. Consequently, we must strengthen our home base. The only remaining recourse is to prepare to defend ourselves and the free world from bases in the Western Hemisphere.

Who now are the isolationists?

CONCLUSION

It is essential for the United States to return to a sound economy. At the same time we must expand the striking element of our Armed Forces so as to achieve and maintain air, space, nuclear supremacy over the Communist forces. This necessity must be achieved on a balanced budget and will require a reapportionment of funds among the Army, Navy, and Air Force.

RECOMMENDATION

It is respectfully suggested that the Democratic Party Convention Platform Committee adopt, in substance, the following resolution:

1. To continue technical assistance in countries which seek our aid; otherwise, foreign economic aid will be terminated.

2. Allied industrialized countries are now prosperous and should provide their own Military Establishment; in countries or areas directly threatened by Red aggression we should continue limited military assistance.

Sugar Allotment Quota

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to incorporate my news release on the sugar allotment quota, which is for the press on Monday, June 27:

Congressman JOHN H. DENT, Democrat, 21st District, of Pennsylvania, called upon the House of Representatives to give serious consideration to the three-point program in the sugar allotment quota as it affects Castro's Cuba.

DENT suggested a three-amendment approach:

(1) Cut out all sugar quota as of the end of this year, or sooner; if the House deems it advisable—will give to the President of the United States the right and the power to restore all or part of the quota as he finds it to be in the best interest of the people.

(2) Reduce the sugar quota by the amount of sugar sold to Russia or Communist satellites at any price less than the subsidized price paid by the United States on the sugar program.

(3) Put the difference between the U.S. price and the world market price into certain escrowed funds to be paid to any American enterprise injured by the Castro policies of expropriation or confiscation. DENT pointed out that there would not be a deficiency in sugar because every sugar producing area in the world practically has a surplus, notably our friends in Mexico with over

a million tons and our friendly Latin-American countries and the Philippines.

The Castro Cuban Government recently sold Russia sugar under a 5-year program at a price which is about one-half charged to the United States. This, said DENT, is an outright subsidy to Russia out of the kitchen money of American housewives.

This is a program based upon commonsense and sound logic without any feelings of reprisal or economic straitjacketing, but rather a measure to bring back some similarity of sanity and economic soundness.

Statement by the Honorable John Lesinski in the House of Representatives, June 25, 1960, Regarding the Centennial Anniversary in 1961 of the Death of the Ukrainian Patriot, Taras Shevchenko

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. LESINSKI. Mr. Speaker, at the outset I desire to extend sincerest gratitude to my colleague, the gentleman from Missouri [Mr. JONES], and the able members of his Subcommittee on Memorials for bringing House Joint Resolution 311 to its first step toward final enactment. I was privileged to participate at the hearings conducted in connection with this proposal, and I fully realize the vast amount of study and consideration which was applied by that subcommittee. I also wish to compliment the sponsor of the resolution, the gentleman from Michigan [Mr. BENTLEY], for the wholehearted enthusiasm and followthrough he furnished in bringing this legislation thus far.

In 1961, Ukrainian people all over the world will observe the centennial anniversary of the death of Taras Shevchenko. An account of his heroic life and splendid literary creations are indeed inspirational to all freedom-loving men and women. Hence the desire to have a monument to his memory placed on public grounds in our Nation's Capital is strongly urged by hundreds of thousands of Americans of Ukrainian descent. May I add that these fine people will effect the construction of the Shevchenko memorial through their own efforts and contributions.

Such an idealistic undertaking should understandably be endorsed by the Congress as a very important factor during this cold war of ideologies between the United States and the Kremlin. Today, as 45 million Ukrainians enslaved by Communist Russia work unselfishly and unceasingly to rid themselves of the despotic rule of Moscow, they do so by holding up this shining exponent of true liberty, Taras Shevchenko, as their symbol of inspiration and incentive.

I am not going to impose on the time of the House by attempting to present an account of the life and deeds of this great Ukrainian hero and poet. This was done, I may add, quite capably and factually during the subcommittee's hearings. I am happy to announce, in that connection, that a biographical documentary of Taras Shevchenko is scheduled to be printed by authority of a simple resolution which I introduced. The material is presently being prepared by one of the principal proponents of this undertaking who made a brilliant statement at the hearing. The projected plan is that all interested persons, associations, and organizations will be informed of the usual privilege of obtaining, by purchase, as many additional copies of the publication as they desire. These copies may be ordered through the Superintendent of Documents, at nominal cost, in conjunction with the press run of my original authorization.

I will conclude these remarks with the firm hope that this resolution receives deservedly favorable consideration in its future course toward final approval. I am completely convinced that a tribute to this distinguished Ukrainian, constructed as a memorial statue here in Washington, is certain to have a beneficent influence on all of us so long as the desire for human liberty, a better life, and the brotherhood of man remains alive and strong in the hearts of free people throughout the world.

Japan and Douglas MacArthur

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, the people of Japan will always love and honor Gen. Douglas MacArthur.

The recent award to General MacArthur by Japan is without precedent in world history. The people of South Carolina join me in congratulations to General MacArthur. Mr. Speaker, the following editorial is from the Washington Evening Star of June 23:

JAPAN'S REAL ATTITUDE

We believe that the unprecedented award to General of the Army Douglas MacArthur of Japan's highest decoration for foreigners is more indicative of the real sentiments of the Japanese people toward the United States than the recent mob demenstrations in Tokyo. The conferring on General MacArthur of the Grand Cordon of the Order of the Rising Sun with Paulownia Flowers was more than a tribute to the 80-year-old soldier who proved to be a benevolent conqueror of Japan. It signified the gratitude of the Japanese people for America's "great contributions to the postwar reconstruction of Japan and to the development of the immense reservoir of good will that exists between our two nations today."

The extraordinary award had been announced by the Emperor on May 17 in connection with the centennial of Japanese-American relations. Ironically, the presentation took place in the wake of the violent anti-American rioting by Communist-led mobs and the cancellation of President Eisenhower's visit to Japan. General MacArthur, deeply moved, commented aptly that he could recall "no parallel in history where a great nation has so distinguished its former enemy commander." We doubt that any parallel exists. And we also doubt that such an award would have been made if the vast majority of the Japanese people shared the anti-American feeling of the Tokyo demonstrators.

Treasury and Post Office Appropriations, 1961

SPEECH
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mrs. DWYER. Mr. Speaker, I support the preferential motion offered by the gentleman from Michigan and oppose any further extension of the franking privileges for Members.

This motion, if it is adopted by the House, will uphold the Senate and reverse the recommendation of the House Appropriations Committee which seeks to extend Members' franking privileges to include the use of mail addressed simply to "Occupant" and delivered to every household in every community to which it is sent.

This would be, in my view, a thoroughly unjustified privilege and would understandably call upon Congress the great displeasure of the people we represent. Congress has more important things to do, especially in an election year, than to find ways and means of perpetuating itself in office at the public's expense.

The use of the frank is an old, honorable and absolutely essential privilege. If the frank did not exist, something like it would have to be invented in order to facilitate communication between the people and their elected representatives. The volume of congressional mail has grown heavier in recent years largely because people are better informed and are taking a more active interest in the conduct of their Government. The responsibility of Members of Congress to answer this mail, to help keep their constituents informed, and to help make possible a freer and franker exchange of views between constituent and representative could not be fulfilled without the frank.

Like all other privileges and rights, however, the frank can be abused. While the law clearly limits the use of the frank to matters of official business,

the line between official and political is sometimes difficult to draw. In addition, the availability of the frank may tend at times to encourage excessive use of the mails.

For these and other reasons, I believe it would be unwise to extend the franking privilege to include so-called "junk mail." Mail addressed simply to "Occupant" is clearly "junk mail." It seems to me that if mail is sufficiently important to qualify for the frank as official business it should be individually addressed. The added time and expense of individual addresses would be a healthy deterrent to the overly generous use of the frank.

There are other good reasons, Mr. Speaker, for opposing the extension of the franking privilege. Unless it can clearly be shown to be necessary for the proper conduct of Congress, we should not be placed in the position of voting for special benefits for ourselves. It is a matter of poor taste, as well as of questionable ethics, for Congress to award itself special privileges unavailable to ordinary citizens—unless those privileges are essential for the performance of official, public responsibilities. This calls for restraint, good judgment, and a concern to protect the integrity of Congress as the cornerstone of free, responsible, and representative government.

Those who urge the extension of the franking privilege, Mr. Speaker, do so on grounds that representatives of urban areas should have the same privileges now available to representatives of rural areas. Speaking for myself, as a representative of a distinctly urban area, I cannot accept this argument, nor do I believe the people I represent would accept it.

It is time, Mr. Speaker, to call a halt to unwarranted special privilege, and the House of Representatives is a good place to stop it.

Statement by Hon. John Lesinski, of Michigan, on Activities of Senior Citizens Study Committee in Dearborn, June 25, 1960

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Saturday, June 25, 1960

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD the following letter I have received from a community in my district which has been taking positive action to explore the needs of the older people and to help them meet those needs. I believe it is appropriate at this time, when action is being taken on the national level, to call attention to what is being done by an individual community to help its older citizens.

The letter follows:

UNITED COMMUNITY SERVICES
OF METROPOLITAN DETROIT,
Dearborn, Mich., June 17, 1960.

Hon. JOHN LESINSKI,
House of Representatives,
Washington, D.C.

DEAR SIR: Thank you for your kind letter of June 6 requesting results of the activities of the senior citizens study committee in Dearborn.

This committee was appointed last November following a general meeting called Retirement Horizons in Dearborn, attended by 135 persons including representatives of 20 public and private agencies. At this meeting group discussions developed a number of questions regarding which some of the people attending desired consideration. Included in the questions were a medical clinic for older people, publicity of existing services, increased family-service staff, a volunteer homemaker program, recreation and housing for older people.

The committee has met regularly since last November to consider the above and allied matters. They found that in Dearborn housing and recreation for the senior citizens are being handled by the city agencies responsible. A request was made by the committee to the united foundation for an increase in the family-service staff. The committee discussed in considerable detail with representatives of the medical profession and the independent pharmacists of Dearborn the subject of health and the medical needs of older people and attendant costs.

The study committee prepared and distributed 5,000 copies of a pamphlet entitled "Information for Dearborn Senior Citizens," a copy of which is enclosed [not printed in the RECORD] to as many persons as could be reached.

Attached to the pamphlet was a tear-off slip asking each person to respond if he or she was in need of more medical care and if he or she would like to discuss this with someone. The response to this question was small. Each person who responded was individually interviewed as to his medical situation.

The committee is now recommending that some form of public counseling for older people in the community is needed. It has been found in a number of instances that older people often need counsel on where to find and obtain needed help. This it is believed can be obtained through a professionally staffed counseling center. Recommendations that such a counseling center be created in the city is being considered. From such an office confidential referrals may be made to medical doctors or agencies best situated to help. The local medical society and the independent pharmacists have assured the committee that they will cooperate fully with such a counseling center in giving preferential attention to persons referred by reducing the cost of medical care and drugs when assured that a financial need exists.

We wish to express our thanks to you for your interest in the senior citizens problems and hope you will feel free to request additional information if this is inadequate.

Sincerely yours,

GEORGE T. BENTLEY,
Chairman.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.

Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address of Hon. Chester Bowles, of Connecticut, at Commencement Exercises at Smith College, Northampton, Mass.

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. SALTONSTALL. Mr. President, recently I interviewed Congressman CHESTER BOWLES on a TV show for the people of Massachusetts. We talked of various issues of public policy, including some of the more imperative considerations of foreign policy.

Congressman BOWLES' background as a Governor, public servant in the Federal Government, writer and Ambassador qualifies him to discuss matters of public importance to all of us.

Recently Mr. BOWLES delivered the principal address at the commencement exercises at Smith College, Northampton, Mass. In this speech, he discussed the basic dimensions of the challenge before us in a historical perspective. This address is really another contribution to the free debate on the national purpose, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SMITH COLLEGE COMMENCEMENT ADDRESS, NORTHAMPTON, MASS., JUNE 5, 1960, BY HON. CHESTER BOWLES, MEMBER OF CONGRESS

President Mendenhall, members of the board of trustees, honored guests, alumnae, parents, and, most especially, members of the graduating class of 1960, it is a very real pleasure to join you here in Northampton for this last official occasion of your college careers.

Since your first freshman assembly in the fall of 1956, I have come to know many of you and to feel personally involved with interest, affection, and pride in much that you have done.

Over the years I have also become well acquainted with the traditional requirements of commencement speakers.

These rules are very clear.

The current state of affairs should be viewed with proper concern.

The inheritance being handed down by the speaker's own generation (so powerfully represented on such occasions by trustees, parents, and alumnae) should be commented upon modestly.

It should be stressed that this particular class is at a crossroads in history, and that great decisions lie ahead.

The graduating seniors, whose thoughts are properly concerned with new jobs, new tours, and new husbands, should then be called upon to drop everything and save the world before it is too late.

This year speakers from the University of Maine to the University of Southern California can be expected to sound an additional note. From hundreds of platforms such as this they will be saying that our moral values are not what they should be, and if anything, that they are slightly worse than at this time last year.

I wish I could promise to say something dramatically different. However it is undeniably true that in most walks of our national life we have not been doing as well as we should. It is also true that our complex and explosive world is in urgent need of your fresh energy and vision.

Although pessimism on such questions has always been considered un-American, and I think properly so, every thoughtful person knows that we are facing profound changes and that the course of events has never been less clear.

Views, assumptions, hopes, and expectations which succeeding generations of Americans have taken for granted are being jolted abruptly.

This situation is not unique in American history. Indeed, my generation faced something similar in the early thirties when the sudden collapse of our economy shocked us out of our easy assumptions that money, at least for the fortunate few, grew on trees.

But the present challenge involves far more than jobs, pay increases, and material comforts.

Now for the first time in American history, our future is tied to that of hundreds of millions of other human beings whose objectives, hopes, and fears appear different from our own, but who, like ourselves, are contending with new forces of massive strength and uncertain direction.

What convinces me that we may learn to deal effectively with this new world is the persistence in the American character of precisely those qualities of creative inquiry and flexible, pragmatic action which have enabled previous generations of Americans to cope with lesser challenges in the past.

Throughout our Nation a reexamination of our policies and purposes is underway. You sense it not only in Washington, D.C., but on college campuses, at crossroads and byways, in buses and in supermarkets, in business offices, and in grange halls.

This reexamination is particularly impressive because this time thoughtful Americans are digging so much more deeply into the nature of the challenge which we face. Dangerously oversimplified views of the world struggle are rapidly giving way to a more realistic understanding of what we are up against.

Let us review briefly three stages of American thinking about world affairs which succeeded one another in the 1950's.

Ten years ago the North Korean Army, armed and directed by the Kremlin, struck without warning across the South Korean border. Suddenly we found ourselves face to face with the militaristic, aggressive nature of world communism.

Before the Korean invasion, we knew that Soviet military power was formidable. But we had comfortably assured ourselves that it would not be used either by the Soviet Union or its satellites. As a result, our military forces had been reduced below the danger point.

In our hurry to redress this error, we adopted a narrowly militaristic interpretation of the challenge which confronted us.

Constructive, creative programs such as the Marshall plan and point 4 were downgraded. The new emphasis was on military force, military alliance, and military thinking. And this in turn set our national mood.

Military problems, being highly specialized and shrouded in secret, logically belong to generals, admirals, and heads of government.

Once the challenge of world communism was accepted primarily as a military challenge, there was little that the ordinary citizen could do except pay his taxes cheerfully and hope that our military experts knew their jobs.

After Stalin's death in 1953, we moved toward a second and much broader interpretation of the world contest.

As Mr. Khrushchev threatened to bury us economically rather than militarily, we became less concerned with the previously assumed inevitability of a military struggle, and more and more alarmed over the Soviet rate of industrial growth.

Our newspapers outdid one another, graphically, in portraying the burgeoning Soviet economy, and, editorially, in worrying over how we could stay ahead.

Although this broader view of the challenge was a long step toward reality, it still left the American citizen in the role of an anxious, but not yet directly involved, bystander.

Worldwide and indeed domestic economic problems, like military problems, had always appeared infinitely complex, and to belong primarily to the great corporations, the great labor unions, and to the distant Federal Government. And so to most Americans in this second stage the world contest still remained remote and impersonal.

In recent months, unless I am seriously mistaken, we have begun to move into a third stage of interpretation, and for the first time to understand what we are really up against.

We are beginning to see that the future may not necessarily belong to those nations which can set off the most rockets or produce the most bathtubs, and that the contest, stripped to its essentials, is between two widely varying interpretations of the meaning of life—one which believes in the inherent dignity of the human individual—the other which believes that man was born to serve the state.

As this becomes more clear, our attention will shift beyond the question of how our society can survive to what we Americans have to offer.

This, I suggest, brings us to the central point—the urgent need for direct involvement by each of us as individuals.

A contest that is primarily military or economic could reasonably be considered beyond our personal powers to influence in any way. But if the primary challenge for the long haul is what I believe it to be—the quality of American society—then each of us has an important part to play that cannot be delegated to a distant government.

Now at this point it may be proper for me cautiously to suggest that history may be more tolerant toward your parents' generation than many of you have been.

By Mr. THORNBERRY:

H.R. 12829. A bill to designate the reservoir formed by Canyon Dam on the Guadalupe River, Comal County, Tex., as Ed Cape Reservoir; to the Committee on Public Works.

By Mr. YOUNG:

H.R. 12830. A bill to designate the reservoir formed by Canyon Dam on the Guadalupe River, Comal County, Tex., as Ed Cape Reservoir; to the Committee on Public Works.

By Mr. DINGELL:

H.R. 12831. A bill to amend the Federal Trade Commission Act to require that drug advertisements must contain certain information; to the Committee on Interstate and Foreign Commerce.

By Mr. HARRIS:

H.R. 12832. A bill to authorize an additional Assistant Secretary of Commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. WOLF:

H.R. 12833. A Civil Defense Bill to provide for a program to establish food storage depots near major cities in the United States to prevent the population from suffering from lack of food as a result of war, flood, or other local or national catastrophe which destroys the usual channels of food supply; to the Committee on Armed Services.

By Mr. GALLAGHER:

H.R. 12834. A bill to authorize the Secretary of the Army to convey the Caven Point Army Terminal, Jersey City, N.J., to the New Jersey Public Market Commission; to the Committee on Armed Services.

By Mr. HECHLER:

H.R. 12835. A bill to amend the Vocational Education Act of 1946 in order to assist the States in providing training and retraining for the unemployed and underemployed; to the Committee on Education and Labor.

By Mr. UDALL:

H.J. Res. 772. Joint resolution proposing an amendment to the Constitution of the United States providing that certain unsuccessful candidates for the office of President shall be Members of the Senate; to the Committee on the Judiciary.

By Mr. CUNNINGHAM:

H. Res. 579. Resolution expressing the sense of the House of Representatives with respect to the administration by the Secretary of Commerce of the Federal-aid highway program; to the Committee on Public Works.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. KASEM:

H.R. 12836. A bill for the relief of Tadashi A. Okada; to the Committee on the Judiciary.

H.R. 12837. A bill for the relief of Donna L. I. Carlisle; to the Committee on the Judiciary.

H.R. 12838. A bill for the relief of Bahran Ansary and Paridokht Ansary; to the Committee on the Judiciary.

By Mr. MOORE:

H.F. 12839. A bill for the relief of Ralph (Yunsoo) Kahn; to the Committee on the Judiciary.

By Mr. PUCINSKI:

H.R. 12840. A bill for the relief of Helena Rams; to the Committee on the Judiciary.

By Mr. SAUND:

H.R. 12841. A bill to provide for the conveyance of certain real property of the United States to the former owner thereof; to the Committee on Agriculture.

H.R. 12842. A bill for the relief of Viola Borwick Warbis; to the Committee on the Judiciary.

By Mr. FORRESTER:

H.R. 12843. A bill for the relief of Mrs. Elsie J. Beamon; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

509. By Mr. CANFIELD: Resolutions adopted by the New Jersey State Bar Association, at its annual meeting in Atlantic City on May 21, 1960, on matters of Federal legislation; to the Committee on the Judiciary.

510. By the SPEAKER: Petition of Albert J. Herman, departmeent adjutant, Veterans of of World War I of the U.S.A., Department of the District of Columbia, Washington, D.C., commending the House Committee on Un-American Activities for its devotion to duty, and urging the Congress of the United States of America to continue this valuable committee; to the Committee on Un-American Activities.

511. Also, petition of Phillip Acker, city clerk, San Diego, Calif., relative to a resolution adopted, which requests legislation which would repeal the tax on transportation of persons; to the Committee on Ways and Means.

512. Also, petition of Joseph B. Greenfield, Board of Aldermen, Chelsea, Mass., relative to a resolution adopted, which asks for the adoption of the Forand bill; to the Committee on Ways and Means.

After all, we were totally untrained, your parents and I, for the kind of world we have had to live in and even help manage.

I can remember little that I or my fellow students learned in college that was relevant to the world in which we were to live our adult lives.

Nor was there anything in the roaring twenties, into which most of us graduated, to prepare us for the economic collapse and social dislocations of the thirties, or for world involvement again in the forties.

But in spite of our unreadiness in terms of what history required of us, I think our record will stand up well under scrutiny.

We broke with 160 years of tradition to put isolationism behind us in world affairs.

We took action, born of economic and social distress, to give new depth and meaning to our national unity.

We pioneered in the postwar world with the bold, creative concepts of the Marshall plan, NATO, point 4, and the mutual security program.

Indeed, some of our more economically timid members still view some of our technological achievements with considerable alarm. Our cows, they say, give too much milk, and our new machines produce too much steel.

Yet in the most crucial area of all our performance has been admittedly and dangerously weak. In our efforts to deal effectively with a vast agenda of new and unfamiliar problems, we have neglected the cultivation of those very human values which are basic to the health and vigor of our American society, and which in the next decade may determine our capacity to survive as a great and influential nation.

We have not only condoned the slick operator and cynical manipulator, we have glorified them. Indeed, in an upside down sort of way we have adopted the semantics of materialism and manipualtion to explain some of our most admirable actions.

It is as though we have felt it necessary to justify decency by proving that the real reasons for our actions are not as decent as they seem.

Thus we argue that the time has come to grant our Negro citizens first-class citizenship, not because they have been patiently waiting for it since the Declaration of Independence asserted that all men are created equal, but because the colored majority of mankind is said to be breathing down our necks.

In order to win public support for urgently needed scholarships for our colleges and universities, we call the legislation the National Defense Education Act, and then for safety's safe surround it with disclaimers and loyalty oaths.

Instead of proudly presenting our foreign aid program for what it is—an honest effort to help new nations ease poverty, illiteracy, and disease so that they may create the conditions of freedom within their own cultures—we explain that our real purpose is to buy friends and supporters in the United Nations, or to fill empty bellies on the cynical assumption that well-fed Asians and Africans will not question the injustices and harassments of the feudal societies in which many of them live.

When our Government generously rushes large shipments of food and medicine to shattered Chile, some of us tell each other that this is smart propaganda to set back the Communists.

Even when we set out to do the wrong things in world affairs—like hiking the tariffs on British bicycles or foreign clothespins—we explain that we are taking these actions in the interests of national defense.

Through our fears and frustrations we have come to act as though our chief national purpose in world affairs is not to maintain and extend our basic American commitment to human dignity, but simply to thwart the Russians.

Nor is this twisted pattern of behavior limited to foreign affairs. Here at home businessmen contributing to boys' summer camp funds and hospital building drives rush to cover up their decent motivations by pointing out that it is good business to do what they are doing, and in any event the tax laws keeps their out-of-pocket costs low.

In the face of some of the highest crime rates in the world we tolerate sadistic exhibitions on radio, TV, in the movies and in comics on the ground that they help keep the children quiet and their minds occupied.

We nod our heads in understanding when Charles Van Doren tells us that he continued his fradulent TV presentation because the whole academic profession had such a stake in his performance, and he did not want to let his fellow teachers down.

We shrug our shoulders when 600 or Mr. Van Doren's students at Columbia announce that they admire him for his slick performance, and that they cannot for the life of them see how it affects his usefulness as a teacher of liberal arts.

Thus, at the very moment in history when the true nature of the world contest is coming into focus, we find ourselves caught up in a maze of payola and quiz scandals, of spying and lying, of tax evasion and false expense accounts—of the fake advertisement, the thumb on the scale, the adulterated product, and the exploitation of violence as entertainment.

In our effort not to seem gullible, not to seem to be suckers, not to seem vulnerable to criticism from any quarter, to avoid controversy, to prove that we are realists who do not go off half cocked, we have developed a moral gap between beliefs to which we subscribe and our day-to-day performance which in its own way may become as dangerous to our long-term future as any missile gap.

This is particularly true if the cold war continues indefinitely. Can an open society like ours remain an open society indefinitely under the pressure of the military, technological, and psychological requirements of 20th century nuclear terror?

No one can be sure.

Already there are some among us who prefer the simple terror of the cold war to the complex search for realistic means to ease it.

This kind of mind is unhappy about complexity, about shades of gray, about difficult choices, about the necessity to pursue various alternative policies at once, about the requirements in the modern world for principles, balance, dexterity, and nerve.

Such individuals are good people to keep out of the control room in the age of push-button war. In the days of bayonets and machineguns they were dangerous enough—in today's nuclear world they have the cataclysmic touch.

So much for the challenge that we face. How best can we cope with it?

As members of an open society it is our primary responsibility to maintain the right of future generations to live in similar societies.

An open society is not a vacant one. It is open for inventiveness in statecraft as well as in science, for controversy in public as well as in private, for competition in ideas as well as in goods, for incentive for leadership as well as for leisure.

Admittedly, an open society faces disadvantages in a world where it coexists with closed societies. This is particularly so when the opposing closed societies are doing everything possible to demolish it.

Yet an open society is the kind of society we want. If we are to keep it, we must see that our individual family, community, college, and professional lives are freer, more creative, and more affirmative than the lives people lead in closed societies.

If we were free to ask them, and they were free to tell us, what difference would there be?

Three meals a day, hard physical work, the bare essentials of life, uncritically believing what the newspapers say, avoiding controversy, sticking resolutely to safe thoughts and simple comments, concentrating on the trite and the unspectacular, never probing, never arguing—these we might agree are the common lot of most of the 800 million people who live under Communist rule.

Now how can we, as members of an open society, successfully compete with a closed society of this kind? Only in living by significantly different values and for significantly different goals.

We must learn to make use of the freedom that our open society provides to do the things others cannot do because of their closed one.

We must accentuate the use of that marginal element in our lives which really is different from theirs—that goes beyond the essentials of eating, sleeping, and keeping alive, to the individual, distinguishing element that enables us to be different.

We must concentrate as free individuals in making use of our margin for living free lives, the margin which in the closed society has been stifled by the threat of fear, eavesdropping, secret police, and regimentation.

What is the outlook? Much, of course, depends on the cold war which, as I have suggested, has dangerously strengthened the negative forces in our own society.

Yet I am heartened because I think that our temptations toward lethargy, apathy, and a cynical retreat into simple pleasures have once again nearly run their course.

For one thing, my informants here at Smith and elsewhere tell me that our campuses are wakening up again.

The first stirrings are said to have occurred in your freshman year with the bitter news that 25,000 young Hungarians had died in the streets of Budapest in an effort to achieve the kind of open society which we take for granted.

More recently many of you have demonstrated your sympathy and support for the sit-in movements in our own American South because of your convictions that what is right in respect to human dignity must win out in the end.

Although some of my generation may disagree, I suggest that such actions are what help keep an open society alive and free. Indeed right here is a major distinction between a closed society and an open one—the closed society makes no pretense of relating its private to its public morals. The open, democratic society must do so continually.

Most impressive of all, the call for a new dedication of American young people seems to be coming from the students themselves. An editorial by Genevieve Lauterbach in your own Smith newspaper, the Sophian, has been widely quoted. It even found its way into the CONGRESSIONAL RECORD.

Some of you may remember what it said—"so sometimes we write home to mummy and daddy about the world situation. And occasionally we mention it to dear ole Joe. Dear Joe smiles and asks us to dance.

"We think of the money America spends on beer and cigarettes and we worry about the economy, and democracy, and things, when we see another TV antenna go up across the street. We remember the News of the Week in Review as we reread Vogue.

"We frown about our culture and its values as we tip the Negro waiters, and we promise we'll talk about the image of America sometime to somebody when we tour Europe this summer. * * *

"We're the very picture of American youth. We gaze at the wide horizons of the world before us with a questioning mind, filled with faith, hope and charity. We forget that challenge, like charity, begins at home."

All of this strikes me as healthy evidence that we are waking up.

We are beginning to see that the conflict between the closed Communist societies and

our own open one is far more than a conflict between rival defense establishments, rival economies, rival espionage systems, and rival summit negotiators.

It is a conflict that touches directly the lives, the energy, the sense of purpose, and the faith of each one of us.

To leave it to admirals, generals and politicians is to abdicate our responsibilities as citizens in a free society.

We must, of course, face the real possibility that even if we Americans rise fully and effectively to the challenge the game may still be lost for reasons beyond our control.

Mankind's hope for a more rational and meaningful existence depends not only on what we do and what we are, but also what happens in the closed societies of Russia and China.

Although here the future is the cloudiest of all, is there not some reasonable basis for hope?

Is it not possible that behind the ruthless, totalitarian leadership of Communist China, humanistic sparks may be smouldering and that out of the ashes of the dead past may again arise the creative genius which made possible the long miracle of Chinese civilization?

Can the Kremlin open the laboratories and lecture halls of the Soviet Union to the inquiring young minds necessary for scientific achievement, while still denying the right to think about, and absorb, the great truths of human history?

But whatever we do, let us not become so preoccupied with the forces and counterforces within China and Russia that we neglect to do the great and good things we are able to in partnership with the majority of mankind for whom communism is still an unappealing foreign ideology.

Every enduring civilization since the beginning of time has been built on the proposition that man is more than a chemical accident.

We ourselves are deeply committed to the concept that man is surrounded by belief and lives for a purpose.

Forty years ago on three continents, Ghandi, Wilson, and Sun Yat-sen represented triumphant moving forces of wider freedom and more significant life.

Although these forces were blunted defensive by two world wars and the chaos that followed them, much of the world is now again on the march.

Africa, Asia, and Latin America are undergoing a revolution based on rising expectations. Hundreds of millions of men and women who were once doomed to endless poverty, misery, and disease, are reaching out not only for bread but for dignity and respect.

The proper position of the American people is at the head of this revolution, acting boldly in the faith of Jefferson and Lincoln and backing our efforts not only with the solid muscle of our material strength but with our historic dedication to the universal rights of man.

Summary of Replies to a Questionnaire—Part IV

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. PILLION. Mr. Speaker, I am pleased to insert the fourth and final part of the tabulated results of the replies to my questionnaire. This part covers "Education" and "Hospitalization, Surgical Insurance for the Aged—Forand Bill."

The tabulated results follow:

QUESTIONNAIRE

EDUCATION

1. Which plan of additional Federal payment to States for public education do you prefer? (a) Murray-Metcalf bill, 915; (b) Senate bill, 291; (c) administration bill, 2057; (d) none, 2471.

2. How would you propose to finance a substantial Federal education program? (a) Lower personal income tax exemptions, 444; (b) borrowing, 416; (c) increase income tax rates, 481; (d) sales tax, 3,439.

3. Do you believe that more emphasis should be placed upon science, mathematics, and vocational training? Yes, 5,807; no, 898.

4. Do you believe it is possible to increase the quantity and quality of our education by television, more instruction standardization, etc., that would produce both savings for taxpayers and provide increased teachers' salaries? Yes, 4,313; no, 2,215.

HOSPITALIZATION, SURGICAL INSURANCE FOR THE AGED—FORAND BILL

1. Would you favor a federally administered voluntary hospital and surgical insurance program for the aged to be paid for by the aged instead of a compulsory program under the social security system? Yes, 2,821; no, 3,561.

2. Do you favor the Forand bill or some similar national compulsory social security hospitalization insurance for the aged? Yes, 3,790; no, 2,904.

Jackson for Vice President

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, June 27, 1960

Mr. BARTLETT. Mr. President, the distinguished junior Senator from the State of Washington, Senator HENRY M. JACKSON, has very properly stated that he is not a candidate for nomination as Vice President of the United States, that this is an office which assuredly must seek the man, not the man the office. Notwithstanding, many friends of Senator JACKSON, knowing his capacity and the measure of his accomplishment, are now suggesting to the Democratic Party that he should be nominated as Vice President. Personally, I believe no better choice could be made. Senator JACKSON has a long and brilliant record of public service and is a specialist in many fields.

Senator JACKSON is well known in Alaska. His association with my State has been close through the years and he was floor manager of the Alaska statehood bill when it was passed by the Senate just 3 days less than 2 years ago today. Senator JACKSON's qualifications for the Vice Presidency are well stated in the lead editorial which appeared in the Anchorage (Alaska) Daily Times last Saturday, June 25. I ask unanimous consent to include that editorial with my remarks in the Appendix of the RECORD and take great pleasure in doing so.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR JACKSON RATES PLACE ON TICKET

The Democrats should nominate Senator HENRY JACKSON as their candidate for Vice President. They couldn't do better.

JACKSON would be a real vote fetcher. He is a man of proven ability in the field of public service. He is a student of the responsibilities that come to him. He does his homework and knows his stuff.

Alaskans know JACKSON as a true friend and helper. He helped them many times during the territorial days. He was one of the key figures in the Senate on the side favoring statehood legislation.

The Nation knows JACKSON, too. He has gained prominence for his intelligent handling of public business. He has made himself an authority in the field of atomic energy as a result of his membership in the Joint Committe on Atomic Energy.

As a politician JACKSON has developed an uncanny habit of winning elections. He has won six elections for a seat in the House, and two for his Senate seat. His "batting average" at the polls stands at 1,000 percent.

There are Democrats who are well aware of the strength of Senator JACKSON for the national office.

Some quiet campaigning is going on to bring his name before the Los Angeles convention. It is obviously being done delicately because the winner of the presidential nomination will have much to say about his running mate. Too much aggressiveness could hurt the Jackson status.

His recognition goes beyond the politicians. The New York Times recently described him as an "effective doer in the field of national security." He has also been prominent on the front pages of New York and Washington newspapers for his efforts to improve the machinery of Government. He is chairman of a Senate Subcommittee on National Policy Machinery. Editorial comment on his objective approach to the task of the committee has been consistently laudatory.

It would be inspiring to have Senator JACKSON win a place on the Democratic ticket.

It would inspire the young people of the Nation because he has come up the hard way. Everything he has done he has done on his own.

One of the results is that he has qualities of dependability and trustworthiness that would stand any man in good stead for positions of great responsibilities. He is known for frankness and sincerity.

His selection as vice presidential candidate should balance the ticket no matter which of the many contenders for the top spot wins. Jackson is the only man from the West Coast who is a prominent contender.

The Alaskan delegation would do well to nominate Senator JACKSON at the appropriate time. They would be supporting a friend of long standing. They would be rendering a service to their party. They would also be strengthening their Nation by putting a qualified man in line for this important job.

Resolution by the Brooklyn Insurance Agents Association, Inc.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Brooklyn Insurance

Agents Association, Inc., at their meeting on June 8, 1960. This represents the thinking, energetic men who are in close touch with the business world and the community of Brooklyn. I believe it worthy of the attention of my colleagues.

Whereas it is our considered opinion that the constantly decreasing value of the American dollar has been brought about mainly through the steady increase in Government spending, bringing the public debt of the country to an all-time high; and

Whereas the interest and refunding of the public debt together with the steadily rising costs of Government services requires a taxload on the American public which is fast approaching the confiscation stage; and

Whereas there is constant pressure by various groups for more and more so-called welfare legislation whereby the public debt would be further increased, or alternatively, taxes would be increased to meet the costs of such projects; and

Whereas this association representing the insurance agency business in Brooklyn believes the time has come to call a halt to Government spending for any but defense purposes and the most essential services: Now, therefore, be it

Resolved, That we call upon our Representatives in Congress to actively oppose any legislation that would further increase the public debt, or increase the already heavy taxload on the people, and that they further oppose any legislation that will extend the present "creeping" inflation in our American economy; and be it further

Resolved, That a copy of this resolution be sent to each Senator from New York, and to each Representative from Brooklyn in the Congress.

BROOKLYN INSURANCE AGENTS ASSOCIATION,
W. F. STANZ, *Secretary*.

Expanded Efforts To Preserve Natural Resources

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. WILEY. Mr. President, to assure a necessary reservoir of natural resources for generations of the future, the Nation, I believe needs to expand its efforts to better utilize, conserve, and manage these resources.

Over the weekend, I was pleased to review the challenge in the field of conservation, as well as to make some recommendations, in a broadcast over Wisconsin radio stations. I ask unanimous consent to have excerpts from this broadcast printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY URGES GREATER EFFORT TO PRESERVE NATURAL RESOURCES; OUTLINES 11-POINT LONG-RANGE PROGRAM

(Excerpts of address by Senator ALEXANDER WILEY over Wisconsin radio stations)

Friends, in a fast-growing nation—existing in an increasingly complex world—we face a great many large and varying challenges.

At this time, I'd like to discuss with you the task of maintaining, preserving, conserving and best utilizing our natural resources—without which a nation would "dry up and wither away"; and without which a nation—and a people—would not be able to meet its challenges. The fundamentals of a good resources program include: Efficient use; adequate development to expand reservoirs to meet the requirements of national security and a growing economy; effective conservation to provide for future generations; and equitable distribution of benefits from resources and efforts to discourage wasteful exploitation.

With the fast-increasing population—as well as urban and industrial expansion, there is—as you and I recognize—a great need to assure that these resources are handled wisely.

NATIONAL OBJECTIVES OF CONSERVATION PROGRAM

Question. What, then, are some of the national objectives of our conservation program, Senator WILEY?

Answer. (1) Increased understanding and assumption of responsibility for conservation leadership by local people, their local soil conservation districts, and their county and State governments;

(2) Acceleration of on-farm soil and water conservation practices, including land use, not only for local benefit, but in light of the effect on, entire watersheds and river basins;

(3) Greater planning, within river basins and watersheds, for multiple use of water, including efforts to promote improved and efficient water use and management.

(4) Expansion of basic, as well as applied, research in the fields of soil, water, and forest conservation;

(5) Further improving, management, and development of our public lands, recognizing the growing pressures for recreational use as well as for the production of crops of timber, livestock, and water;

(6) Strengthening educational efforts in the field of soil and water conservation through the medium of general education as well as through specific organized youth and adult groups, both rural and urban.

Question. Now, what are some of the long-range objectives?

Answer. More emphasis on long-life (as contrasted to annual and recurring) conservation practices in, for example, the cost-sharing phase of the soil conservation program; use of a basic soil and water conservation plan as a basis for technical assistance, credit and cost-sharing aid in conservation on farms or ranches; as possible, separate identification and administration of those programs, aimed primarily at stabilization of production, from those with primary soil and water conservation objectives; better correlation of Federal conservation programs with the programs of State conservation agencies; encourage new investment of private capital in the application of soil and water conservation work and watershed development.

Question. Now, turning to the preservation of our outdoor heritage, what progress is being made, for example, in expanding our national park system?

Answer. You will recall that the National Park Service undertook a program, initiated in 1956, called the Mission 66 program. This program is working to improve conservation and expansion of the national park system. The objectives include: Providing more adequate recreational facilities; assuring protection of natural and historic features of our park lands; and making these out-of-door areas more accessible to visitors.

Included in the national program are efforts for new and improved roads, trails and parkways, visitors' centers, museums, campsites, utility systems, and other services.

In addition, the National Park Service is attempting to appraise the Nation's outstanding scenic, scientific, and cultural resources and evaluate, and meet the future public demand for them.

Question. Along these lines, we recall that you cosponsored legislation for the establishment of a Moraine National Park in Wisconsin. What is the status of this project?

Answer. Initially, the Park Service conducted a preliminary survey. The study revealed that there was real geological, biological, historic significance to the glacially formed moraines. Unfortunately, the Department has been hampered by lack of funds for carrying out the necessary follow-up studies to determine the extent of moraines for inclusion in a possible park system.

Within the limitation of their capabilities, I have suggested that the Department go forward on this as early as possible.

We recognize that if this is too long delayed, there may well be serious deterioration of the valuable moraine features on our Wisconsin landscape.

EXPANSION OF FISH AND WILDLIFE PROGRAMS

Question. As the senior Senator of a conservation-minded State, what's the outlook for improvement of our fish and wildlife programs?

Answer. Currently, there are 18 million acres of national wildlife refuges, 100 fish hatcheries, laboratories, and other facilities for fish and wildlife research.

Nationally, under the supervision of the Department of Interior, programs of research, planning, management, and protection are being carried forward in close cooperation with States, like Wisconsin, to stem the decline of fish and wildlife resources. The Bureau of Sport Fisheries and Wildlife, for example, administers two national wildlife refuges in Wisconsin, the Necedah National Wildlife Refuge of 40,000 acres, and the Horicon National Wildlife Refuge of 21,000 acres.

Question. What's being done in the fisheries management program?

Answer. Two fish hatcheries are operated in Wisconsin: The Lake Mills Hatchery and Genoa Hatchery which, together, produce about 4,300 pounds of warm water species such as bass, and bluegills, and small quantities of trout, for stocking local waters. The La Crosse Research Laboratory now conducts research on methods for selective control of fishes for better management and conservation of Wisconsin's lakes, streams, and ponds.

Question. What is the outlook on the eradication of lamprey in the lakes?

Answer. Sea lamphrey control operations conducted from a field station in Marquette, Mich., include electric barriers and chemical treatment of Wisconsin streams.

The Bureau of Commercial Fisheries is conducting research on lake trout and white fishes from a field station in Ashland. This research is directed to rehabilitation after depredation by sea lampreys to the balance between planted and natural trout in Lake Superior.

CONSERVATION OF WATER

Question. What about conservation of water, Senator WILEY?

Answer. Fortunately, Wisconsin has been blessed with rich water resources. With a fast-expanding population, however, it is expected that we will need more effective methods of use and reuse of water for industrial and similar purposes; as well as a more effective conservation program.

National experts indicate that by 1980, the United States will have to turn to ocean water for industrial, agricultural, and human consumption. To help meet this need, I cosponsored legislation to set up a program for converting saline and brackish water suitable for industrial, agricultural, and human utilization purposes. Five demonstration

plants are being constructed for sea water conversion. Fortunately, the program is going forward encouragingly. As a matter of fact, reports already indicate that it has been possible to substantially cut the cost of converting sea water for human, industrial, and agricultural purposes.

Question. What are some of the highlights of the work in Wisconsin?

Answer. Under the Department of Interior, the following programs are underway.

In the face of a possible future water shortage, we are carrying on extensive water resources investigations in Wisconsin. Information on streamflow and lake stage is being obtained in about 90 locations. Groundwater investigations are in progress in nine areas. Most of this work is financed cooperatively with the University of Wisconsin, the Public Service Commission, and the Commission on Water Pollution.

SOIL CONSERVATION

Question. Now, turning to soil conservation, Senator, we recognize that the organization of soil conservation districts has become a practical means for carrying on effective measures to conserve our natural resources. What is the scope of this program?

Answer. Nationally, there are 2,865 soil conservation districts. These include about 90 percent of the land in farms and 95 percent of all the farms and ranches in the United States. In Wisconsin, for example, the agricultural land by November 1956 had all been organized into soil conservation districts. By June 1959, over 39,000 farmers—operating more than 6½ million acres of land—were cooperating with Wisconsin's 71 soil conservation districts. Some of the outstanding practices include: stripcropping, totaling more than 971,000 acres; crop rotations, more than 173 million acres; pasture planting, 247,000 acres; tree plantings, 66,000 acres; waterway development, 12,403 acres; terracing, nearly 4,000 miles, and contour farming, 173,195 acres. Under the agricultural conservation program, also, a remarkable amount of progress has been made toward putting into effect real, constructive conservation practices.

SCOPE OF AGRICULTURE RESEARCH AND SERVICE

Question. Senator, what about research in agriculture?

Answer. We recognize that research is a key to progress in agriculture, as in other fields. Currently, the Agriculture Research Service is conducting a wide variety of programs in soil and water management and conservation designed to permit more efficient, sustained, and profitable use of these resources. The studies include plant and animal life, soil chemistry, methods of cultivation, irrigation and crop rotation, efforts to produce crops of high nutritive value and soil-water-plant relationships that may affect management of different soils.

Research is also underway in such fields as watershed hydrology, stream and reservoir sedimentation, runoff, engineering aspects of drainage and irrigation, and other programs.

Incidentally, a large portion of this research is carried out in cooperation with State agricultural experiment stations and State departments of agriculture. For example, the Upper Mississippi Valley Conservation Experiment Station at La Crosse, Wis., and Madison, Wis., are focal points of such research and does a splendid job.

FOREST RESOURCES

Question. Now, turning to our forestry program, Senator, in view of the increasing population demands for homebuilding as well as for industrial progress, are we making adequate progress in carrying on forest tree plantings, conservation, and management programs?

Answer. Fortunately, the Federal Forest Service—as well as constructive State programs—are making a fundamentally significant contribution to assuring an adequate volume of forests and forest products for generations of the future.

We recall, of course, that the Forest Products Utilization Laboratory, in Madison, Wis.—celebrating its 50th anniversary this month—is making a significant contribution in the field of research.

Overall, our 181 million acres of forest lands grouped into 151 national forests—including two in Wisconsin, the Nicolet and Chequamegon Forests—yield water, timber, forage, recreation, game and other wildlife, and minerals. All of the renewable resources are managed under principles of multiple use and to produce a sustained yield of products and services.

In fiscal year 1959, 8.3 billion board feet of timber was harvested in the national forests. The cut in 1960 is expected to reach 9.6 billion board feet. In addition, 6 million livestock graze on national forest range; also watersheds are managed to regulate streamflow, prevent floods, and provide water for power, irrigation, navigation, and municipalities.

Recreation, too, ranks with water and timber as a major use of the national forests. Visits to these forests for recreation climbed from 68.5 million in 1958 to 81 million in 1959, and the trend is steadily upward.

Developing the recreation resources, improving the habitation for wildlife, and the prevention and controlling of fires and pests go hand in hand with the management of other resource values of the national forests.

By the year 2000 a nearly doubled timber growth will be needed by a population of nearly 300 million. Consequently, the Nation cannot just haphazardly expect that our natural soil, water, and forest resources will be able to make these ever-increasing demands of the future. Instead, these resources must be protected, developed, and managed to assure that we will have ample resources for the times ahead.

CONCLUSION

This, then, is a brief review of conservation practices and programs for soil, water, and forest resources underway—and for the future.

As stewards of these important resources, you and I—and the Nation—have a responsibility for vigilantly improving and expanding these programs for assuring a reservoir of such invaluable resources for the future.

At this time, I greatly appreciate your being with us for this program.

Thank you very much.

Resolution on Forand Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the board of aldermen of the city of Chelsea, Mass., on June 20, 1960:

Whereas there is now pending before Congress the Forand plan; and

Whereas this plan would extend the social security system to include moderate hospital, nursing homes, and other care for all persons eligible for social security benefits; and

Whereas many residents of our city would be helped by the adoption of this plan; and

Whereas the city itself and the State would save a substantial amount of money if this bill was adopted; and

Whereas this board of aldermen approves the adoption of the Forand plan: Therefore be it

Resolved, That a copy of this resolution asking for the adoption of the Forand plan be sent to our Senators from Massachusetts, Congressman THOMAS J. LANE, the Speaker of the House, the majority leader and the minority leader of both branches of Congress, and the Secretary of Health of the United States.

Alderman JOSEPH B. GREENFIELD.

Adopted in board of aldermen June 20, 1960.

Approved June 22, 1960.

ALFRED R. VOKE,
Mayor.

Attest:

JOSEPH A. TYRRELL,
City Clerk.

The Cincinnati Office of the FBI

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. HESS. Mr. Speaker, the FBI is a highly efficient fact gathering agency which has an outstanding record of accomplishments in the intelligence field as well as in law enforcement. The high qualifications and accomplishments of the FBI are well known throughout the world. It is significant to me that the FBI has established a reputation for wholehearted and enthusiastic cooperation with local law enforcement agencies. In the Cincinnati area the FBI and all law enforcement agencies work hand in hand. The net result is unequaled harmony, unmatched efficiency, substantial economy, and most agreeable results.

Under permission granted me to extend my remarks, I would like to include in the RECORD the views of Mr. C. A. Harrell, city manager of Cincinnati, in which he expresses the views of the citizens of this area and the high regard of the community for Director J. Edgar Hoover and his representatives in the Cincinnati FBI office:

CITY OF CINCINNATI,
OFFICE OF THE CITY MANAGER,
Cincinnati, Ohio, June 21, 1960.

Mr. E. D. MASON,
Special Agent in Charge,
U.S. Department of Justice,
Federal Bureau of Investigation,
Post Office and Court House Building,
Cincinnati, Ohio

DEAR MR. MASON: Your letter commending Chief Schrotel and his staff for their police efforts is greatly appreciated.

The Cincinnati Police Department is highly honored and proud to work with and cooperate with the FBI. The excellent caliber of performance and reputation of the FBI is well recognized in every land in the world. Therefore, we are most happy to join with you in combating those members of society who do not choose to follow prescribed rules of conduct.

We know of no greater organization with which we can work with than the FBI. Please extend to your eminent Director, J. Edgar Hoover, our most sincere thanks for the privilege of having the wonderful assistance of the FBI, and you may rest assured of our ever-continuing cooperation.

A copy of your letter has been sent to the city council for the official record.

Kindest personal regards and best wishes.

Yours very sincerely,

C. A. HARRELL,
City Manager.

Appendix

Roads to Agreement

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. SALTONSTALL. Mr. President, I have here an excellent valedictory address delivered by Miss Linda A. Harrison at the graduation exercises of Melrose High School on June 8, 1960.

This is a most encouraging document, Mr. President, since it forcefully demonstrates the vigor and vision of our youth, in a time when we are experiencing new tensions in our relationships with the East and when the entire Nation is debating our national purpose.

Appropriately enough, Miss Harrison's remarks deal primarily with the challenge of foreign affairs, and the need for Americans of all walks of life to give their talent at a unique frontier—at the edge of the "largely unexplored territory of international relations." The address is titled "Roads to Agreement." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ROADS TO AGREEMENT

(Valedictory address delivered at Melrose High School by Linda A. Harrison, June 8, 1960)

As the members of the class of 1960 leave Melrose High School and enter their various worlds, they will perhaps find a world in which the usual frontiers are gone. Man has conquered nearly every challenge on this earth. He has already climbed the highest mountains, penetrated to the floor of the deepest ocean, bulldozed trails through thick jungles, made desert lands arable, and turned frozen wastes into inhabitable regions. Are there, then, any frontiers left today? In my opinion one vast frontier does remain, challenging the most resourceful of men to explore it and solve its mysteries. This frontier is unique because it is not a physical area. It is the largely unexplored territory of international relations. Throughout history nations have had their differences, but at no time before this has the world been split so decisively into two opposing factions. Today we are keenly aware of the divisive forces pitting the East against the West—communism against freedom—in a cold war. The U–2 spy plane incident and the breakdown of the Paris summit conference emphasize our awareness of this frontier and point out the need for someone to convince the world that the basic demands of two peoples, far from running contrary to one another, are actually alike. President Eisenhower was thinking of this when in an address to the Nation he called America's efforts at negotiation a "careful search for common interests between the Western Allies and the Soviet Union." Someone must persuade nations that man's hope for survival and peaceful coexistence lies in his finding cooperative methods of meeting common needs.

Like every other developing area the field of foreign relations has had its first men and its first discoveries. Woodrow Wilson's 14 points, Cordell Hull's good neighbor policy, and General Marshall's Marshall plan—all are products of original thinking on international problems. In a nonpolitical field, the work of Albert Schweitzer and that of Frank Laubach have been significant. The examples that these men have set are inspiring others today. A few Americans are making successful efforts at creating goodwill between nations.

In 1954 a farm-raised Air Force master sergeant was stationed in Korea. As he walked through the fields near his base, Eugene Hoops noticed that the Koreans were not harvesting their cereal crops efficiently. Because they used a short blade attached to a long handle, they were able to gather only a fistful of grain at a time. Sergeant Hoops introduced the people to an American scythe, taught them to forge their own scythes, and enabled the Koreans to gather their crops five times faster than they had before. On another occasion Sergeant Hoops, realizing the terrible erosion of topsoil taking place on Korean farms demonstrated the effectiveness of cover crops; and then by distributing wild plum seeds to plant, Hoop practically put an end to this tragic waste of fertile soil.

Three thousand miles west of Korea, in India, another American is working toward cooperation in a different way. Mrs. Honsinger Fisher is striving to teach thousands of the illiterate in India to read and write. Laboriously, she and her staff have worked the numberless tongues of India into language primers. With the aid of the CARE organization they have produced "literacy kits" which contain slates, slate markers, and primers—enough supplies to teach 25 people to read and write. Mrs. Fisher estimates that for the price of one Sherman tank she could make 5,000 people literate—5,000 people who could learn to distinguish the truth for themselves.

Another American who has put foreign aid on a person-to-person basis is Dr. Thomas Dooley. At Dienbienphu in 1954 Dr. Dooley saw the link that exists between malnutrition, ill-health, and ignorance on one side and the false promises of communism on the other. He resigned his post in the Navy, organized a volunteer medical team, and returned to the Far East—this time to the Kingdom of Laos. There he has set up hospitals and trained the natives to treat their own people. By wiping out pain and suffering Dr. Dooley and his assistants are bringing the people of Laos closer to understanding of Americans.

These "not so ugly" Americans and many, many more like them who are steadily conquering the frontier of human relationships are representing America well overseas. Just as these men of good will are finding pathways to the goal of understanding, all men should search for enlightened solutions to the problem of coexistence. One of the mildest and most modest of men, Mahatma Ghandi, led his people and the British down one road to agreement. His plan of passive resistance solved peaceably a problem which often creates violence—that of a colony's separation from the mother country. The relative tranquillity in India contrasts sharply with events in Kenya where the brutality of the Mau-Maus was met with similar violence by the British. If, in our time, men use the brain power now channelled into rocket-making to seek new and original answers to the question of cooperation this frontier should soon be conquered.

Acceptance of war has become so standard in our civilization that we must remind ourselves always that war is completely contrary to basic human nature. When the roads to agreement are finally found, the aggressive side of man's nature will seek satisfaction, not in killing, but in waging war against its true enemies—poverty, disease, and ignorance. Then men will have found that William James, the American philosopher, referred to as a moral equivalent for war. It is intrinsic in the moral and religious heritage of all peoples to want to find the patterns of living which will satisfy man's basic urge to live at peace with his neighbor.

An Urgent Report on Domestic Oil

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. EDMONDSON. Mr. Speaker, as this session of the 86th Congress draws to a close, I believe it of utmost importance to discuss with my colleagues the situation existing in this Nation, including my State of Oklahoma, with respect to the oil-producing industry.

Mr. Speaker, it will be recalled that a little over a year ago, President Eisenhower instituted mandatory controls over oil imports. This action was taken because conditions in the domestic petroleum industry had been growing steadily worse due to an ever-increasing flood of foreign oil imports. He acted pursuant to the national defense amendment which Congress had made a part of the Trade Agreements Act, and which required the President to take the necessary steps to curb the imports of any commodity which were threatening the national security.

In announcing this mandatory program, President Eisenhower stated:

The new program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemispheric reserves to replace those being depleted. The basis of the new program, like that for the voluntary program, is the certified requirements of our national security which make it necessary that we preserve to the greatest extent possible a vigorous, healthy petroleum industry in the United States.

Note his words, "the new program is designed to insure a stable, healthy industry in the United States." Surely all will agree this is a noteworthy goal.

Let us examine matters to see just how much of this goal has been accomplished.

Shortly after the program was announced, there seemed to be some renewed confidence instilled in the domestic petroleum producing industry. Drilling picked up. The price of crude oil, which had been steadily declining in the face of climbing drilling costs and and ever-increasing imports, began to level off.

Operators began to feel they could plan future drilling programs in the knowledge that they could sell the oil they found at a fair price which would not be chipped away by cheap foreign produced oil.

Thus, the search for and development of the vitally needed future oil reserves received encouragement as intended by the President's action under the defense amendment. For example, for the Nation as a whole, oil well completions rose in 1959 about 3½ percent over 1958. However, the record will show that this momentary bright outlook has faded away to a point that it can be said that the domestic petroleum industry is neither, to use the words of the President, "stable" or "healthy."

Just what do we find when we look at the facts?

For the Nation, we see this:

First. Geophysical and core drilling crews—the real barometer on oil exploratory activity—are down 13 percent from 1959.

Second. Active rotary rigs are down 19 percent from 1959.

Third. Crude oil production is down 131,000 barrels per day below 1959 averages.

Fourth. Crude oil price reductions have become the order of the day. These price cuts coming in the face of rising costs for everything the operator uses in looking for oil.

Employment in the industry has likewise decreased by many thousands over the last year.

In my own State of Oklahoma, conditions are even worse than for the United States as a whole.

Crude production during the first 5 months of this year is 20,000 barrels less daily than during same period last year and 60,000 barrels less daily than same months in 1956. Allowables have just been reduced to the lowest level in 5 years.

Price cuts have been widespread.

On June 15 last year, 248 rotary rigs were active—this year on June 13, the figure is 173—a decline of 75 rigs or 30 percent.

The number of wells drilled so far this year is 1,743, a decline of 868 wells or 33 percent from same months last year.

The number of Oklahomans employed in the oil- and gas-producing industry in March was 42,400 compared with 44,700 in March of 1959—a drop of 2,300 employees or more than 5 percent in just 1 year. Here again comparing this year with 1956, we see that there has been a drop of 7,000 employees—or 14 percent.

All of these factors have had a depressing effect on the entire economy of Oklahoma.

Does this sound like the oil-producing industry in my State or the Nation as a whole is stable and healthy, capable of meeting the goals laid down for it by President Eisenhower when he established the oil import program in March 1959?

The answer is an emphatic "No."

Mr. Speaker, I must say that had we not had this mandatory program, things would be much worse.

But we must not overlook this fact—that even with this program, total oil imports into this Nation—including residual oil, last year amounted to more than 650 million barrels. That is a lot of oil. In fact, today, total imports amount to more than 25 percent of our domestic oil production, the highest rate in the history of our industry.

Mr. Speaker, we hear many of the experts say that the domestic oil-producing industry is in dire straits because of other factors and not imports. This kind of an answer does not impress me. We must recognize that we are weakening our domestic oil industry because of excessive imports. Solve this problem first. It is this simple. Are we going to continue to allow foreign produced oil to continue to share U.S. markets in ever-increasing amounts while our own industry shrinks and becomes less and less able to meet the goals and challenge of our national security needs?

The answer is clear. I, therefore, call on the executive department to substantially reduce allowable oil imports now—reductions that will be sufficient to meet the executive department's own goal as laid down last year. If this cannot be done, then in the interest of national security Congress will have to reconsider this whole matter to the end that legislation will be enacted to preserve this vital industry in a strong and healthy condition—a position of strength, capable of meeting the challenge of any enemy in the world today.

Adjournment Rush

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent I extend my remarks in the Appendix of the RECORD and include copy of my newsletter released today:

KEENOTES

(By Representative ELIZABETH KEE)

Congress is caught in the grip of its annual adjournment rush.

At this time of the year I am always reminded of individuals who put off until the very last minute doing many things they know must be done. Apparently, it takes a rapidly approaching deadline to get down to hard work.

Congress is trying desperately to adjourn before the beginning of the Democratic convention on July 11. No one wants to have to come back after the conventions and finish up. That accounts for the feverish activity in recent days to dispose of many difficult and complex issues.

Remaining on the agenda are housing, minimum wage, social security, aid to education, and many other important issues. Unless Congress can dispose of these matters in an orderly fashion in the few days remaining before the conventions, then we have no other choice but to come back and finish up.

There is really no excuse for this annual last minute rush. One cause is the tendency of committees to delay getting down to serious business for several weeks after Congress convenes each year. Another reason, too, is that Congress must wait until committees have cleared bills for debate on the floor.

The prospects for the next week or so are for long sessions lasting from 10 o'clock in the morning until late each evening. This will continue until Congress clears its agenda and can adjourn, assured that it has not neglected any important public business.

CONGRESS MUST DECIDE WHAT TO DO ABOUT CASTRO

The Sugar Act expires this year. Ordinarily, it extension would be routine matter but the emergence of the Fidel Castro regime in Cuba has greatly complicated the picture.

How long can the United States continue to tolerate Castro's insults and threats? Should we continue to buy Cuban sugar at good prices when our domestic producers and friendly nations could supply all the sugar that is needed here?

Thus far the United States has hesitated to take such reprisals against Castro. The hope has been that he would curb the extremists in his government and get along with the United States. But to date Castro has shown every indication of becoming more and more violent toward us. He has invited Khrushchev to visit Cuba and apparently Russian technicians are due to visit Cuba on technical missions.

Can we delay acting any longer on the question of sugar? There is strong sentiment in Congress for acting now even at the threat of alienating some of our friends in Latin America. These Members feel we should start by cutting back or canceling the Cuban sugar quota. At least, they feel we should give the President authority to act if the situation worsens.

It is a ticklish problem. No one wants to make Castro a symbol or a martyr. But he must be dealt with. We cannot continue indefinitely to accept his insults and disgraceful charges. If we do, the rest of the world will lose faith in us.

Forging a Nation's Will Via the Ballot Box

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 27, 1960

Mr. WILEY. Mr. President, in 1960—a presidential election year—the American people fortunately are becoming increasingly aware of their duties as citizens—particularly of the need for participating in elections.

Unfortunately, the record of votership in this country has been far too low.

I am delighted, therefore, that, across the country a great many organizations, including management as well as employee groups, are endeavoring to stimulate greater recognition of people on the need to vote, as well as participate in other ways in our Nation's political life.

For example, I was privileged recently to contribute an article entitled "Forging a Nation's Will Via the Ballot Box" to a splendid publication, Wisconsin Telephone News, published by the Wisconsin Telephone Co., for its employees.

Reflecting on the need for greater participation in public affairs by citizens—as well as amplifying the splendid way in which management is encouraging such participation, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORGING A NATION'S WILL—VIA THE BALLOT BOX

The lifeblood of a republic is its people—well informed, creative, thinking, knowledgeable citizens.

In our country we have been endowed with a rich heritage of freedom, including a voice in our government. Tragically, however, too few eligible voters exercise this great privilege—for which our forefathers fought and many died, and for which millions of peoples around the world still yearn.

Currently, barely one-half of the people in this country are participating in its political life. What does this mean? Among other things, it threatens: Rule of a minority, loss of voice in government for millions of people, disproportionately "strong voice" in government for the special interests crusading for their own goals, and a general loss of creativeness and strength which patriotic, dutiful, forward-looking citizen support can bring to government.

The dismally poor record of U.S. voting ranges from 24 percent in 1904 to 63 percent in 1952. By contrast, voting in other countries has ranged as follows: Italy, 93 percent; West Germany, 89 percent; Turkey, 87 percent; Denmark, 80 percent; England, 89 percent.

We realize, of course, that voting is more than just marking and "X" on the ballot, or pulling a lever on a voting machine. Fundamentally, the exercise of this precious right includes educating ourselves on: The issues in a political campaign, the candidates and their qualifications, informing eligible voters of—and encouraging them to meet—registration requirements, educating potential voters on the processes of government—and the value of citizen support, participation in—and, if deemed advisable, constructive opposition, and finally, launching a counterattack against the apathy which, regrettably, is allowing to go unheard the voice of millions of people.

In the spirit of good citizenship, civic-minded management—including the Wisconsin Telephone Co., as well as employee organizations—are now, constructively and wisely, encouraging greater voter participation in elections. This opportunity of voting challenges us to creatively attempt to find ways and means in which our Government—now the greatest in the world's history—can still better serve the Nation.

In a republic, the governmental machinery is the adopted method of carrying out the community, State, or National "business of the people."

If we allow somebody else to "attend to our business," there can be a dangerous loss of freedom.

The ballot box is the means by which "We, the people, speak." If we speak en masse, then the ordinances and laws of the land will reflect our will.

The Local Government Officials' Stake in Air Pollution Control

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 27, 1960

Mr. KEATING. Mr. President, Commissioner Arthur J. Benline, of the New York City Department of Air Pollution Control, has been in touch with me on a number of occasions regarding the overall need for expanded air pollution control and research programs. Commissioner Benline is well qualified to comment on this subject in his capacity as head of New York City's air pollution control program.

I want to call attention today to a speech which the commissioner made on June 20 at the conference of mayors and other municipal officers in Rochester, N.Y., entitled, "The Local Government Officials' Stake in Air Pollution Control." This speech is a hard-hitting and informative analysis of the growth of our Nation's air pollution problems and of the urgent need for an intensification of our efforts to deal with them. Above all, it contains much good advice for communities that are just beginning to come to grips with air pollution difficulties.

I commend Commissioner Benline for his excellent and very useful speech, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LOCAL GOVERNMENT OFFICIALS' STAKE IN AIR POLLUTION CONTROL

(Address by Arthur J. Benline, commissioner, New York City Department of Air Pollution Control, at the conference of mayors and other municipal officials, and the New York State Building Officials Conference, Rochester, N.Y., June 20, 1960)

We hear more and more about air pollution and the need for its control. Hardly a day goes by that we do not see a Government official, a scientist, or an industrialist making a statement about air pollution. Perhaps in your hometown, some citizens are beginning to talk about air pollution and the need for control.

Fortunately, although every area of our country suffers from some form of air pollution—since air pollution, like television, is a byproduct of our civilization—at this time most of the country does not face a serious problem. But, as the U.S. Public Health Service has been saying for some time—the problem is becoming more serious and perhaps dangerous and, most importantly, air pollution will get worse in many places before it gets better.

It is useless to talk about air pollution control without pinning down a few basic facts at the outset. The most important question to be asked in any given case is: Do the people want to avoid air pollution and pay for cleaner air, or are they willing to let air pollution increase and try to control it when it has gotten out of hand? There is not the slightest doubt that the latter approach is foolish, expensive, and dangerous.

The need for air pollution control exists everywhere today, even if it is only a matter of controlling a local nuisance. In most cases, however, air pollution is or will be much more than a nuisance—it is a problem of economic concern and it is a public health matter.

How should local government operate in the field of air pollution control? A great deal will depend on local circumstances, because we must be flexible in our approach. But, there are a few distinctive guides we can use in answering the question:

First. Local government officials must realize and make the citizens realize that there is no such thing as clean air. Clean air is not an attainable goal, since any foreign matter in air is air pollution. But cleaner air is an attainable goal.

Second. Local government officials must understand and make the citizens understand that air pollution is a two-way street. Everyone suffers from air pollution, but everyone is capable of causing air pollution and everyone does cause air pollution on occasion.

Third. Local government officials must understand and make the public understand that all forms of air pollution must be controlled—the leaf fire as well as the smoking industrial chimney. Get enough leaf fires going in a small town on a hazy fall day and you can equal the pollution output of the local factory.

Fourth. Local government must stress two overriding facts: Air pollution costs everyone money, particularly because of wasted fuel and wasted materials, and, air pollution can be a factor—perhaps a highly important one—in our health.

Fifth. Local government officials must understand and make the citizens understand that there are no such things as standards of air pollution control. We are not dealing now with building codes or the various standards of the American Standards Association. We are dealing with a new field of governmental concern and we are still feeling our way along the path to cleaner air.

To accomplish these goals, local government must start with a good, solid, basic law, one which recognizes that in the field of air pollution control, technological progress is taking place all the time. That means that there are some sources of air pollution which we can control right now; others which we may be able to control within a year or two, and still others we may not be able to control for some time. That means the rules under which the control agency operates must be flexible enough to permit advanced technology to be utilized as quickly as possible.

Wherever manmade air pollution is attacked—and I shall leave the pollens to others—there are two facets of the problem: control of old equipment, which was installed without a thought as to what came out of the pipe, stack or exhaust; and control of new equipment, which should be installed only after it has been shown that it conforms to the best engineering techniques available. The key to control of air pollution in many cases is good equipment, well designed, well installed, well maintained and well operated.

Those last two points are important. You can have the best equipment in the world, but if it is not maintained properly, or it is not operated properly, you are going around in a great circle and getting nothing for your pains but a headache. It is clear, therefore, that the job of local government does not end when it approves a new installation of equipment or control devices. Quite the contrary. The job just begins.

Let me make this clear right now: Don't think of air pollution control as a short-term proposition. It is not. Given air pol-

lution—and we have it—we must have air pollution control. Given continued air pollution—and it is safe to predict we will have it—we must have continuing air pollution control.

All right. We have the law. We have good equipment. We have inspection to insure proper maintenance and operation. Well and good. But—we have people.

Few people cause air pollution by design. Some do not know any better. Some are just lazy. Some just do not know what's going on in the world, let alone what's coming out of their chimney.

That means that one of the major concerns of the local control agency must be education—constant, repetitive, simple education as to the basic facts of air-pollution control. And it means that coupled with the education must be the power to take stern legal action against offenders, when education fails. And, believe me, it will fail, on occasion. Yes; we must have the candy, offered at all times. But, the stick must not be far off, if the candy should fail.

Given the sound, basic law, given the desire of the local government to do a job, given the support of the public, and given sensible administration, the air of any community can be made cleaner by controlling or eliminating local sources of air pollution.

But, air pollution in any given community does not affect only the air of that community. Air pollution does not stand still. It has no respect for manmade boundaries. That is why we need a broader attack. But, in undertaking this broader attack, we cannot, we must not lose sight of the truth that the local source of air pollution must ultimately be controlled by the community in which that source originates.

We in the New York City Department of Air Pollution Control have long recognized that air-pollution control is a matter not only of statewide, but of nationwide concern. We favor superior Government support and prodding of local control agencies. We welcome cooperative programs within a given area where air pollution is spilling across political and geographic boundaries—we have such a cooperative setup now with New York State and New Jersey State authorities. All of this is to the good. Such wider vision should be encouraged everywhere.

But the people of the local community must not be lulled into a false sense of security by thinking that just because there is a New York State Board of Air Pollution Control, or just because there is a U.S. Public Health Service, that air pollution will go away. Nothing could be further from the truth. There are not and there will not be any magic wands in air-pollution control.

The hard truth is that air pollution anywhere will be controlled or eliminated where—and only where—the people of the community which is causing air pollution are concerned enough to do something about it.

If you want to control air pollution in your community—and you should want to, before you have to—start doing it now. Make use of the knowledge of others—none of us knows everything. Share your knowledge with others.

But do the job yourself. And start doing it quickly. It is later than many of you think. It does not take very long for any community to start having a serious air-pollution problem, but, once it exists, it will be a long, hard pull to get cleaner air. As Government officials, all of us have a responsibility and a duty to see that we get the job done properly. The Air Pollution Control Association's directory of "government air pollution control agencies" shows that in many States and cities where there is no separate air-pollution-control unit, the building department or building official is charged with this responsibility. In other jurisdictions those duties are delegated to the health officer, the city engineer, public works, or some type of cooperation or coordination between such related agencies. But almost without exception the staff assigned to this duty is inadequate in numbers.

That cloud—no bigger than a man's hand—which lies just above the horizon, is not a cloud at all. It is the signal that air pollution will come to any community which believes that it cannot happen here.

Trade Up in European Common Market

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 27, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the New York Times of June 23 reporting on the great expansion of trade within the European Economic Community this year.

The article reports that trade among members of the Community has increased by 40 percent in the first quarter of 1960 over the first quarter of 1959, and that imports from outside of the Community have risen by nearly 20 percent. The latest data which I have received from the Department of Commerce shows that U.S. exports to the EEC have risen by 54 percent—considerably more than the internal trade gains of the EEC, and nearly three times more than the gains made by other nations in their exports to the EEC.

I believe that the great increase of the internal trade of the European Economic Community and the even greater rise in U.S. exports to these countries are indicative of the tremendous economic expansion within that area and of the vast potential which this market offers to the American producer. Now that all of these nations have substantially or completely eliminated their trade and payments restrictions against dollar goods is the time for U.S. producers and exporters to expand and develop their markets in Europe. A good start has been made. U.S. trade policy must now place this country in the flexible bargaining position necessary to keep expanding the markets in the European Economic Community which are so vital to our own and the free world's economic development and our balance of payments position.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE IS UP 40 PERCENT IN SIX-NATION BLOC—COMMERCE WITHIN EUROPEAN COMMUNITY SHOWS SHARP INCREASE OVER LAST YEAR

(By Edwin L. Dale, Jr.)

BRUSSELS, BELGIUM, June 22.—The six-nation European Economic Community appears to be performing surprisingly like a common market long before it really is one.

Officials of the Community's executive commission reported today that internal trade, which grew almost twice as fast as trade with outsiders last year, continued on a similar path in the early months of this year.

Trade between the members was 40 percent higher in the first quarter of this year than in the same period of 1959, according to unofficial figures just compiled.

Imports from and exports to the outside world also grew during this period, but not nearly so fast as trade within the Community. The United States was among the beneficiaries of the growing imports of the Community, which this year are up nearly one-fifth over last year. But the main growth was internal.

The tremendous growth in exchanges of goods within the six—France, Italy, West Germany, the Netherlands, Belgium and Luxembourg—can scarcely be attributable to changes in tariffs, or even to elimination or enlargement of the relatively few remaining import quotas.

The tariff reductions so far amount to a mere 10 percent, for example, and most of the quota liberalization has helped outsiders almost as much as members of the Common Market.

SOME SPECIAL FACTORS

Several special factors, mainly recovery from the 1958 recession and the devaluation of the French franc, account for much of the trade increase, but not all.

The conclusion of the experts is that businessmen in the six countries are already anticipating the day when free trade will be a fact.

This is far from the case now. Even with the recent decision of the six nations to accelerate the achievement of the Common Market, tariffs by next January 1 will have been reduced only 30 percent from their 1957 level, compared with 10 percent now.

This means they are making an effort to establish sales outlets in the markets of fellow members early in the game, even at some sacrifice of prices and profits at this stage.

One direct bit of evidence is that prices last year for intracommunity exports averaged 5 percent more than the year before, and this was one explanation for the general price stability for the consumers throughout the six countries.

It is apparent from statements of businessmen and their trade associations that they fully expect the Common Market to proceed to its goal of internal free trade, probably well before the treaty deadline of 1970–72. For example, the head of the French wholesalers' association said recently that "what we have always considered as exports we will soon have to consider as internal trade."

OTHER PROGRESS NEGLIGIBLE

Tariffs are not everything, however. Progress has been negligible on such matters as transport discrimination, where Italy refuses even the first step of requiring the transport rates to be published.

Besides, a shipper from New York to Colorado does not have to face the annoying problem of the turnover or value added tax, as does the shipper from France to the Netherlands. The Frenchman must apply for forgiveness of his tax and the Dutch customer must pay a special tax on the imported item equivalent to the Dutch turnover tax on the same item producted domestically.

Last year the Netherlands found it convenient to raise its equivalent tax on many products at about the same time tariffs were reduced.

A little progress on the turnover tax problem was made this week when the ruling Council of Ministers of the Common Market agreed upon a standstill from now on, with plenty of advance notice required for any changes. But these taxes are far from harmonized and, depending on how they are administered, can constitute a disguised import barrier.

Thus the six nations are far from a common market of the sort the United States

has internally. Still trade expands with surprising speed.

Evidently, the impending reduction of straightforward trade barriers alone—tariffs and quotas—is proving enough of an incentive for many businesses to seek markets in the fellow member, or to specialize in parts of finished products that require imports to complete them.

Africa on the Move—By May Craig

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. MUSKIE. Mr. President, on March 25, 26, and 27, Mrs. May Craig published three columns which were printed in various Maine newspapers.

In the first, written in Nairobi, she cites the need of understanding by the West for African native customs.

In the second, she recounts a press conference held with Tom Mboya, KAU leader.

In the third, Mrs. Craig tells of the happy Ethiopia of today.

Mr. President, I ask unanimous consent to have these three articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—NATIVE CUSTOMS NEED UNDERSTANDING BY WEST

(By May Craig)

NAIROBI.—Living close to animals which we do not have in the more populated countries, the Africans, black, yellow, brown, white, all have a feeling of kinship for them, that we do not have. Over the gates into the Nairobi National Park, a game refuge, there is a sign which says:

"The wildlife of today is not ours to dispose of as we please. We have it in trust. We must account for it to those who come after us. Signed: His Majesty King George VI." The rangers are black Kenyans, except a few. They wear khaki uniforms, green caps, with a ruffle hanging down the back of the neck to protect them from the sun. They thus have a protective coloration. They ride bicycles and on paths to which tourists cannot go. We go in cars or small buses. Fine Mercedes, painted like a striped zebra. In these countries the number of "human bodies" that may be carried is printed prominently, how many sitting, how many standing.

We got up at 5 o'clock, had quick toast and coffee brought to the room, left at 6, black dark, great bright stars. By the time we got there, the dawn was coming on, with stars still showing. We rode along in that magic time between dawn and sunrise and gradually we could see the animals getting up, coming to the waterholes, grazing. It was a lovely thing.

The park officials take no nonsense. Signs say: Stay in your car. Do not disturb the animals. No dogs or firearms allowed. Do not discard litter.

We saw many deer of all kinds, cheetah, those sly beauties. Ostriches, many giraffes, tall and slender, looking at us, eating from the tops of the flat-topped trees. There are rhinos here, but they are shy and we saw none; lions passed the thatched rangers huts near the gate just after we had gone in, they told us as we came out, but we did not see them. There were the vultures, black, solemn, many in trees, others circling the sky. All sorts of birds, bright butterflies, elegant jackals, hyenas, the ugly things with humped shoulders. None were afraid and we kept very quiet. It is a pity we did not start saving our own natural wild life sooner—now some of it is gone forever.

This business of witch doctors, voodoo, medicine men, even Mau Mau, needs understanding by the Western whites. Africans have an old civilization; there are the Zimbabwe ruins in Rhodesia. The tribes had intricate systems of laws, justice, marriage, war. They had no written language and the witch doctors and medicine men were the keepers of religion, medicine and other lore. They passed it down from father to son, they had acolytes and disciples. They knew about herbs and diseases and mixed their cures with religions, gods and devils. Many, including the Mau Mau, believed in eating essential organs of enemies, sacrifices, gaining strength, making cures. Today we "civilized" people go to our doctors and get ground up thyroid glands, for instance. Many of our serums are cultured on animals.

The people believed they could be bewitched, a hex put on them, and they would die. Many of us get psychiatric treatment, take pills with nothing in them and get cured because we believe in the doctor. The Africans are emotional people; they have gained from white civilization, but they have suffered from it too. They have been belittled; now they are gaining pride, there is what they call the "African personality" that their leaders want to regain, develop.

The Mau Mau is part of the independence symbolism which absorbs them, inspires them. It was evil in its actions and results and had to be stamped out as such; its evils were holding back the Africans from coming into the light of freedom, into the family of nations of today. But evil needs to be understood, its reasons and roots, and its consequences.

"Education is one of our great needs," Mboya said. This takes time. Even educated people need experience in addition to the education in college. He thinks for now there need be no more than one party dedicated to independence. Later there may be more. "We must not try to impose our kind of democracy in Africa," said one knowledgeable white official. "They are attuned to authoritarian rule. They want to adjust democracy to their needs." Mboya said his people appreciate the exchange and scholarships of Africans to the United States. It is true some are going to Moscow and will bring back some of that creed. That is the competition we face. He smiled as he said that Africans believe in majority rule and how can the Western whites object to that since it is their principle?

The pace of development is based on climate of public opinion, not on some white man's opinion. He does not think pan-Africanism should be attempted now, however desirable it might be in the future, even if only like pan-Americanism, which is a friendship of free separate nations. He thinks like-minded African nations might federate regionally. But Africans are as different as white, yellow, or brown peoples, and need not be compressed into one group. "You should not think blacks necessarily think alike, are alike, just because they are black," he told us.

AFRICA ON THE MOVE—MBOYA IS AGAINST PROPOSED VOTING RESTRICTIONS

(By May Craig)

NAIROBI.—Into the office of the U.S. Information Service here, where this group of 40 white U.S. reporters, editors, publishers, owners of papers, radio and TV stations were waiting, tall, velvet-black Tom Mboya came from the bright African sunshine outside where cheering crowd of black Kenyans gathered to see him. He came catlike, young, only 29, already the idol of his people. He was born of poor, illiterate parents on one of the fine highland farms owned by white men, on the dried cow-dung floor of a thatched mud hut. His father worked with other Africans for $7 a month. He remembers the white overseers with the sjamboks, the hippopotamus-hide whips.

Even that wage helped pay for Tom to go to a Catholic mission school, 25 miles away, at $14 a year tuition. There he learned to read and write, scrawling his lessons in sand under a tree because there were no blackboards. Later he went to a higher Catholic school where he got first lessons in English. He was known to hate violence, which is perhaps why he was never a leader of the Mau Mau. He learned of the American revolution, the lesson: No taxation without representation; about Abraham Lincoln who freed the American slaves and of Booker T. Washington, the great Negro who wrote the book "Up From Slavery" and led his people. Tom even thought of being a priest but was embittered because the priests at the schools did not encourage his budding political ideas.

Today he paid tribute to the missionaries, when we asked him at the press conference, but said that they did not live up to what they preached—they accepted the status quo of black subservience to whites. One of us asked if it were not obligatory that the missionaries do this, else they would not be allowed to stay. He said bitterly that Christians should expect to be persecuted sometimes for what they believed right. He said that Christianity would not decline because of Kenyan independence, but its role would be more religious, and would have less other influence.

When his father could no longer pay the fee, Tom's education stopped. He got to Nairobi, took a 3-year public health course, got a city job, and then heard Jomo Kenyatta's speeches calling for freedom, and Africa for the blacks. Then he was in politics. Kenyatta in 1929 had gone to London for 15 years, then to Moscow for 2. There he learned the cell system and other Communist doctrine. The cell system was well suited to the tribal system of the Kikuyu tribe. He set up a network of bush schools against the white men, revived ancient barbarous rituals out of which the Mau Mau horrors grew. By 1952 gangs of Mau Mau were raiding and killing, each sworn to secrecy. The government was forced into emergency measures. Men, women, and children were being killed, not only whites but the loyalists among the Africans who opposed the Mau Mau. There was slaughter on both sides, the Mau Mau were hunted down. As many as 50,000 in a day were rounded up. Kenyatta was sent to a distant province camp prison. Most of the Mau Mau were put through rehabilitation and are back in regular life. Some of the worst are still in detention, including Kenyatta.

Other Mau Mau leaders followed Kenyatta into prison and Mboya took over as leader of the Kenyatta Party, the KAU, raised money for Kenyatta's defense. Kenyatta does not think much of Mboya, thinks he is too young, too moderate. But Mboya is the leader today; when KAU was banned in 1953, the Kenya Federation of Labor became the focus of the independence movement. He was its leader at the age of 23. Labor leaders in United States and Britain helped him. The International Federation of Free Trade Unions paid his way to a seminar in Calcutta where he learned sympathy with India. He won a scholarship to Oxford, where his English came in handy. He came to the United States to lecture and talk with CIO's Walter Reuther who helped him get money to build

the handsome labor building here in Nairobi. Coming home he won a seat in the legislative council.

Today he talked with us carefully but boldly. He is one with Nkruma of Ghana in wanting a single voting roll, one vote for one man. He is against the proposed voting restrictions agreed on in the recent London compromise—that is what he means by saying the new constitution will be changed. The restrictions would require that everybody under 40 years of age must be able to read and write his own language, own property, or have some income, about 75 pounds a year. This would restrict the number of African voters, of course.

Mboya was asked today whether he would guarantee property of the whites, especially in the highlands, and he said not entirely—that some of the large holdings must be broken up and measured out to Africans. As to compensation—Blundell said: "Where is he going to get the money, if the Europeans do not stay?" Mboya has a fine mind; he knows his problems, but he has to hold his leadership. He denies any Communist inspiration in the Mau Mau, so do many white officials here. He said today he would hope for multilateral assistance in building up Kenya, so not to be involved in political ideologies of either East or West.

AFRICA ON THE MOVE—HAPPY ETHIOPIANS WANT NO CHANGE

(By May Craig)

ADDIS ABABA.—This the oldest Christian nation in the world, this Ethiopia. According to the lore of the people—and the Bible—its monarch, Haile Selassie I, is the descendant of King Solomon, King of Jerusalem, and Mekeda, Queen of Sheba, who lived nearly 3,000 years ago. The present Emperor is the 225th ruler of the line. With Eritrea, this is a big country, more than all of New England plus all States through Virginia and Kentucky, and west through Ohio and Michigan. Its average altitude is over 8,000 feet and officials here besought us to consider this and take it easy.

The Blue Nile rises here in Lake Tana, joins the White Nile in the Sudan, flows into the Mediterranean as the Nile, in Egypt. For centuries they have quarreled over the waters, for years over division for dams, hydroelectric power, irrigation. Just last year they agreed and the work began.

Queen Mekeda was quite a girl and pretty. She heard about King Solomon and how wise he was so she decided to trek up and see him. Sheba was a rich kingdom then including both sides of the Red Sea. Solomon had built a navy for commerce on the Red Sea, including Ethiopia which was on both sides of the Red Sea too. So Mekeda got together "a very great train, with camels that bear spices, and very much gold and precious stones" according to the Old Testament, and betook herself to Jerusalem, thinking up some good questions to try on the wise King.

Solomon had a thousand wives and concubines but he looked on the Queen and found her "black but comely." Besides, one more didn't matter and Sheba was a good conversationalist, while most of the thousand while beautiful were mostly dumb. In those days king and queens and gods and goddesses did about as they pleased. So Sheba and Solomon had an affair and after she went back to Sheba she bore Solomon's son, Menelik, first ruler of the line of Solomonic Ethiopian Emperors—bearing the father's name to this day.

Many of the areas adopted the Jewish religion; Christianity gained a foothold in what is now Ethiopia about the first century of the Christian era, and Islam expanded into it in the eighth century. About one-third of the Ethiopians today are Coptic Christian, one-third Moslem, one-third pagan. Greek travelers knew Ethiopia favorably, Herodotus and Homer wrote of it, Marco Polo and Vasco de Gama visited it.

Menelik I, first of the Solomonic line, was born about 980 B.C. The present Emperor, the Conquering Lion of the Tribe of Judah, Elect of God, Emperor of Ethiopia, was born in 1892.

This is one of the few absolute monarchies left in the world. The Emperor had six children of whom two sons and one daughter are still living. He is a great grandfather at 72. The Crown Prince and heir apparent is Merid Azmatch Asfa Wosen Haile Selassie, who also has a son. He is not regarded with too much confidence as a successor and although the present Emperor is absolute and is said to have the utmost devotion from his people, the succession may not be happy. So great is the respect shown the Emperor that when one of our group went downtown in a cab and the Emperor passed by, the cab driver not only drew to the side and stopped but insisted that she get out and stand at attention as the Emperor went by.

The Emperor and his sons were educated abroad as well as here. This regime welcomes foreigners to stay as long as they wish. More than 400 young Ethiopians are abroad at universities, including United States, Canada, England, Germany, India, France, Switzerland. Technicians and advisers from many countries are here on invitation, in the Government, and the teaching staff includes more than 200 foreigners of 17 different nationalities. Education is the main preoccupation and a deep desire for more rapid progress—which is inclining some of the ministers to pressure the Emperor into seeking aid from the Soviet Union, since he cannot get enough from us and the West or world financial organizations to go ahead as fast as they want do.

The Communists are making a great effort here to spread their doctrine though we are told by American officials and Ethiopians that the monarchy is safe, that the people do not want change, are not affected by the racial revolutions and forceful independencies of other African nations. Ethiopia is free, prosperous, will have a constitutional monarchy soon, regard themselves as white people (black to pale gold), and are friends with the West. The Italians, allies of Nazi Germany, drove the Emperor out temporarily, but he came back and there is no ill will with Italians; in fact, most of their trade is with Italy.

There are border troubles with the Somali countries which the Emperor says he will resist with force, to prevent his borders from being pushed back. It is hard to believe that the absolutism can remain in a world of change, or that the people, many of whom live in such poverty, are as politically unconscious as we are told. Little good American news gets in the controlled press—they get Russian Tass, Agence France Press, and British Reuters free service, while our AP and UPI are costly by Ethiopian standards, though UPI had just made new low rates.

Resolution Endorsing the Kennedy-Morse-Roosevelt Minimum Wage Bill

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. HOLLAND. Mr. Speaker, I would like to call to the attention of the Members of Congress the following resolution adopted by the council and approved by the mayor of the city of Pittsburgh on June 22, 1960, endorsing the Kennedy-Morse-Roosevelt minimum wage bill:

Whereas the present Minimum Wage and Hour Act falls woefully short of its stated objective of achieving a minimum standard of living necessary for health, efficiency, and the general well-being of workers;

Whereas of some 45 million workers who could and should be protected by the Fair Labor Standards Act, over 20 million are totally excluded;

Whereas this lack of coverage means that these excluded employees are paid pitifully low wages or are worked excessive hours without pay;

Whereas extension of coverage and increase in minimum wage is needed for obvious humanitarian and social reasons, for the benefits the economy would gain from increased buying power for low-income families, and for providing protection to socially responsible employers against unscrupulous wage chiselers; and

Whereas the welfare of the citizens of the city of Pittsburgh requires greater income than is provided under the present minimum wage, and broader coverage of the law to include persons presently outside its scope: Now, therefore, be it

Resolved, That we, the elected members of the City Council of Pittsburgh, respectfully request the Congress of the United States to approve the Kennedy-Morse-Roosevelt bill which is designed to raise the minimum wage rate to $1.25 an hour and extend coverage to about 7½ million of the unprotected workers; and urge all Americans to write to their Congressmen and Senators so they will support this measure; and be it further

Resolved, That at the request of this city council, the Honorable Joseph M. Barr, mayor of the city of Pittsburgh, will declare the week of July 26–July 2, 1960, as "Pass the Minimum Wage Law and Extend the Fair Labir Standards Act Week" in order to call to the attention of the American public the extreme importance and necessity of this action.

Hazleton, Pa., Business Firm Observes 120th Anniversary

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Plain Speaker of Hazleton, Pa., issue of Monday, June 13, 1960, which reports that the Reinhart furniture store in that city has completed 120 years in business. This is truly a remarkable record, Mr. Speaker, when it is considered that during that long period this Nation has gone through four major wars, six major financial panics, the long anthracite coal strike, and the great depression of the 1930's. As a personal note, my late grandfather, Attorney Daniel J. McCarthy, a very distinguished member of the bar, was a close friend and associate of the Reinhart family for many years. In recognition of this historic event, I include the above-mentioned news story as part of my remarks:

REINHART'S IS 120 YEARS OLD

Currently observing its 120th anniversary, the Reinhart furniture store at Broad and

Pine Streets is believed to have been the first store exclusively devoted to sale of retail furniture established in the eastern United States.

The firm is also the outgrowth of what is believed to have been Hazleton's first industry, a furniture shop established in 1840 by Martin Reinhart, a cabinet maker.

The factory flourished and when a new plant, using steam-powered machinery was built some time after 1871, Reinhart was making dressers, bureaus and other pieces in addition to the chairs which were the first item.

Furniture pieces made by hand at the old Reinhart shop over 100 years ago are now collectors items.

The retail business, which was eventually to overshadow the original enterprise, was established by Martin Reinhart's son, George. When he died at the age of 44 his widow continued the business under the present name, Mrs. E. Reinhart's Sons.

Today the business is operated by the fourth family generation, A. Oscar Reinhart and his three sons, William, James, and John.

Martin Van Buren was president when the firm was established. It was not easy to operate a business in those pre-Civil War days, particularly when the nearest bank was at Mauch Chunk (now Jim Thorpe).

Over the years the firm has gone through four wars, six major financial panics, the long anthracite coal strikes and the depression of the 30s.

Reinhart's built the city's first "skyscraper", the four story building which is still part of the establishment, since greatly expanded by the erection of a modern two story structure.

Alaska's Transportation in the Sixties

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. BARTLETT. Mr. President, I take especial pleasure in presenting here the text of a paper on Alaska transportation delivered at the Transportation Institute, Western Michigan University at Kalamazoo, on June 18 by Hon. Laurence K. Walrath, member of the Interstate Commerce Commission. In the fine address he gave at Western Michigan University, Commissioner Walrath gave a historical account of Alaska's transportation system, described its operations today, and made some very interesting and informed comments about its future.

Mr. President, few people are more qualified to speak on this subject than Commissioner Walrath. He has made several trips to Alaska and we Alaskans consider him as one of us by adoption. I ask unanimous consent to include Commissioner Walrath's speech with my remarks in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ALASKA'S TRANSPORTATION IN THE SIXTIES

Your chairman gave me a choice of topics. One was that I discuss what may be in store for the general shipping public in the next decade—the other, that I "enlighten" you, as he phrased it, regarding Alaska's transportation problems of the sixties. I believe he knew which I would select, since my enthusiasm for our 49th State is no secret—to see and study it is to be captivated by it. But since both topics would cast me in the role of a prophet he was, indeed, a courageous man; especially since he must know by now that not one of the several legislative recommendations of the ICC, made after my first visit to Alaska, has yet been enacted into law; and even those which seemed to me essential have, in fact, become highly controversial in detail, if not in substance.

But, assuming that you, too, will accept what I may say in the spirit in which it is offered—as a sincere, but personal, appraisal, and that you may find in the solution of Alaska's problems some measure of hope that shippers everywhere may eventually benefit, I am perfectly willing, even happy, to tackle the assignment.

Because I believe the legislative changes, essential to Alaska's transportation's full partnership in the Nation's economy, will soon be worked out, and that the Congress will find a way to resolve the controversies in the public interest, I will not take advantage of your hospitality by arguing temporary problems flowing from the law. Instead, I think it far more important to try to paint a word picture of Alaska's basic problems—those not curable by simple amendment of the Interstate Commerce Act—and to suggest reasons for them and possible solutions.

Contrary to the impressions of most of those who recall the romatic stories of Jack London, Stewart Edward White, and Rex Beach, who wrote of the dog sled, gold rush and salmon days there is nothing of the "primitive" about the movement of goods and people in Alaska today. The heroic bush pilots helped change all this, and today Alaska's air facilities are modern. Service and safety, despite weather and terrain, are the very finest to be found. Dog sledding is now mostly for sport.

The Alaska Railroad, Government-owned, and operated by the Department of Interior—some 500 miles of main line—is also well above average as a system, completely dieselized, and renders efficient service. The same is true of Alaska's primary highway system (traffic and terrain considered) which consists of more than 2,000 miles of all-weather, blacktop roads, and is now kept in year-round operation by capable engineering. It provides the "right-of-way" for some of the most up-to-date truck fleets of the country. Like the railroad, its chief drawback is that it serves such a relatively restricted area.

Water service from west coast ports, to the extent that it presently operates, is also modern, efficient, and reliable.

Why then are there transportation problems? They result from a complexity of reasons which seem to fall generally into three categories: Geographical, political (in the very broad sense), and economic. Together these factors account for the circumscribed nature of Alaska's system of transport and its extremely high cost—not attributable to distance alone. The combination of these also serves to retard the further expansion of the system of surface transportation into large portions of Alaska which desperately require it if a sound economy for the whole State is to develop.

A study of the map of Alaska and comparative census figures since 1940 reveals that only in the limited area where all modes of transportation are available has Alaska enjoyed its remarkable development. This particular area enjoys its transportation advantages largely as the result of the "broad politics" I mentioned earlier, together with defense and geographical reasons.

The Alaska Railroad had been located in the Anchorage-Fairbanks area prior to World War II—starting as early as 1914, with the public purposes of opening up the known deposits of coal and reaching the gold center of Fairbanks some 400 miles to the north. Following the outbreak of war with Japan in 1941, defense authorities realized the necessity of a military highway in the heart of Alaska and the Alcan (now called Alaska) Highway was built through Canada to Fairbanks, which was also already connected with the ports of Seward, Valdez, and Haines.

Also during World War II, in order to shorten the sea-land supply route to Anchorage and Fairbanks, the line of the railroad was extended about 12 miles southeast of Portage to Whittier, which remains principally a military port; this line traverses two mountain tunnels totaling some 18,000 feet and cuts about 50 miles off the rail route to Anchorage.

The so-called rail or rail-highway belt might also be called the population belt since in its relatively small area of influence is to be found more than 75 percent of Alaska's 1960 population.

Location of highways and rail lines since 1940 was not designed to reach Alaska's greatest productive potential but was intended to make possible the successful defense of America against arctic air or sea aggression. However, we can be thankful that, regardless of primary purpose, areas of great beauty, and vast natural resources were opened. For example, both railroad and highway traverse the incomparable Kenai Peninsula from Anchorage south to the port of Seward. Both also reach Palmer, some 50 miles north of Anchorage en route to Fairbanks, in the heart of the famous Matanuska Valley where, in the short summer months of long days are produced carrots 3 feet long and cabbages as big as bushel baskets. Both rail and highway reach Mount McKinley and Mount McKinley Park—one of nature's great panoramas of awesome beauty and protected wildlife.

Let's pause a moment to consider a side effect of the military phase of Alaska's economy. Since 1940 when Anchorage was still a frontier town of less than 4,000 people, and Fairbanks a small, brawling mining town of saloons and trading posts, a steady flow of defense money, supplies and people have passed through them, much of each category finding its way into civilian life with the result that Anchorage today is a sprawling city of neon lights, modern hotels and stores, and a population of nearly 83,000—more than 1,000 percent growth in two decades. Fairbanks boasts nearly 43,000 inhabitants. In spite of this ostensible prosperity both Anchorage and Fairbanks are beginning to realize their economy is far from balanced. During the 20 years in which most of this has transpired nearly everything of substance has been shipped in, very little going out, and costs, whether of materials, labor or development were only a secondary consideration, so long as military necessity and emergency were the driving forces.

In effect, these high costs of military necessity set the pattern for the costs of civilian projects at a level which now tends to defeat any effort to sustain industrial or commercial production. Labor alone is from 25 to 60 percent higher than in the "southern 48."

This, then, is the other side of the coin—almost a frustrating dilemma which bids fair to get worse before it can get better.

Volume transportation for Alaska's bypassed treasure troves becomes of even greater importance in the decade ahead, especially for those areas which lie so much closer to the other continental States and which have not had—and will not have—defense developments of lines of communication.

Southeastern Alaska is a clear example of such a bypassed area. Lying about halfway between Seattle and Anchorage, its Inside Passage provides beautiful, protected, deep water abounding with commercial fish. The snow-capped mountains of its islands and

mainland contain unlimited timber and pulpwood, as well as coal and strategic ores. However, the rugged terrain of the Canadian mountains which flank it on the east, ingrained as they are with huge glaciers of the ages, makes the construction of land communication virtually impossible except at a very few points, and then only at prohibitive expense. Add to this Canada's lack of enthusiasm to spend the large sums necessary to open up northern British Columbia and the Yukon Territory and it will be seen the southeastern Alaska is at the moment as isolated from commercial contact as if it were an island in the far Pacific.

Because of its isolation, southeastern Alaska enjoys only a modest amount of tourism, no industrial development to speak of, and remains a series of fishing villages and small towns, dependent as communities on air and water for contact with each other and the outside world. This area enjoys an almost temperate climate, very similar to, but even less severe than, that of northern Michigan. In it are found the old towns of Ketchikan, Wrangell, Petersburg, Sitka, and the capital city of Juneau. The total population of this large and potentially rich area is less than 35,000 inhabitants, with only Juneau and Ketchikan approaching 10,000 each. Contrast this with the Anchorage-Fairbanks rail-highway area some 600 to 900 miles farther north and west from Seattle but which now boasts of more than 160,000 permanent residents—75 percent of the State's total inhabitants.

I wish we had more time to go into some of the odd circumstances which result from this complex admixture of geography, politics and economy. For example, the disparities in freight rates between ostensibly intermediate and more distant points present some real anomalies. One of these was emphasized by the somewhat humorous but truthful testimony we heard last fall from the local undertaker in Cordova. He said to Senator BARTLETT on the committee record pretty much as follows:

"Bob, I'm not here to talk about the high cost of living; I want to complain about the high cost of dying—it costs so much more for me to get a coffin delivered here from Seattle than it does to ship it 150 miles further west to Seward and then by rail all the way north to Anchorage that I'm advising my clients they'd better move over there when they get ready to die."

The difference, of course, is that Anchorage, in the rail-highway belt enjoys joint water-rail rates. Cordova, although closer to Seattle and on the southern mainland, has no land transportation to the interior. When a ship calls at Cordova it's the end of the line for freight, and, therefore, its water rates from Seattle are local—and maximum.

Another phase of a similar local twist was illustrated by testimony heard at Valdez, where, you will recall, there is a highway connection to the interior (but no rail). One of the witnesses, a local Valdez merchant, testified that rates from Seattle were at a level as high as those to Cordova, but that freight destined to the interior on the highway route to Fairbanks, enjoyed a water-motor rate substantially less than that for delivery at Valdez. He said in substance: "Senator, when I first heard about this rate difference I began to order all my freight shipped to me at Glennallen, some 90 highway miles north of Valdez; then I drove my own truck up there and brought it back here. Now I still order it to Glennallen to get the lower rate, but try to intercept it here at the dock and save the trip."

You will agree, I am sure—from just these two examples, that they do have local problems which cause the cost of living (or dying) to vary from place to place. Preference and prejudice certainly exists—whether it is undue is another question.

Alaska also has assets which even the presence of all modes of transport is unable to unfreeze. At Seward, where the most favorable transportation circumstances exist, we heard testimony by an expert concerning Alaska's shrimp supply. As I recall it, more than half the known reserves of the world have been located in and around the Gulf of Alaska. The texture and flavor of Alaska shrimp is superior to any I've ever eaten. But here again, the high costs of labor in the defense area, both for fishing and processing, have kept Alaska shrimp from world markets.

These are a few of the problems of Alaska's economy, and there are others. When it is realized that the pegged price of gold, together with the high costs of Alaskan production, has actually resulted in the closing of productive mines, such as the famous one at Juneau; that wild fur production has substantially given way to the better pelts of controlled fur farms; and that Alaska's commercial salmon production has been declining steadily; it is apparent that Alaska's real future lies in a newer economy than that of the romantic gold rush and "silver horde" days. It must be built upon commercial and industrial production and upon tourism, which require mass transportation to approach fulfillment.

But there are advantages in adversity. The harsh reality of Alaska's geography and economy has already resulted in substantial contributions to transportation progress. While the rest of the country was engrossed with the controversial features of modern piggybacking plans, Alaska, without fanfare, enjoyed what may be the world's first and finest containerized freight operation on joint rates and through routing by motor, water, and rail. Both dry freight and refrigerated traffic, since before statehood, have been moving in motor carrier trailer containers from Seattle by Alaska Steamship Co. to Seward, then on flatcars of the Alaska Railroad to Anchorage and Fairbanks, thence back to the motor carriers for store door delivery at destination. (This, in large part, accounts for cheaper coffins at Anchorage.)

The success of this coordinated operation has proven that there are economies in single-factor joint rates and that it can work in the other States, provided the carriers are willing to undertake the cooperation necessary to success. The greatest lesson, I think, is that it would not have succeeded even in Alaska if only the carriers were the beneficiaries. The shipper, too, must benefit if any plan of multimode transport is to produce optimum results.

Alaskans have learned to be practical. For example, in recognition of the staggering cost of an orthodox highway system in the southeast, the present efforts, which bid fair to succeed, are to establish an extension of existing highways through an inside-passage ferry system. My guess is that within the next 3 or 4 years you will be able to drive your family (or dispatch your trucks) from Kalamazoo to Prince Rupert, British Columbia, and there, for a modest ferry charge, drive aboard for passage to the principal islands and towns of southeastern Alaska.

Such a system, apart from the shot in the arm it would give the economies of such towns as Ketchikan, Wrangell, Sitka, Petersburg, Juneau, Skagway, and Haines, would allow you to avoid hundreds of arduous highway miles, even if you intended going on to Fairbanks.

Many have asked whether we will ever have railroad connections through Canada and into Fairbanks where the Alaska Railroad now terminates. Until recently I would have thought that very unlikely, partly because of Canada's apparent lack of enthusiasm and partly because of the problems of the railroads generally, with emphasis seemingly on reduction of plant and services in the interest of survival as private enterprise systems, rather than upon expansion. However, some of you may have read the AP release of June 2 from Victoria which indicated that the building of a railroad into the northwest revolves about the extent of concessions which Canada may be willing to give to the Swedish financier, Axel Wenner-Gren, who wants to develop the tremendous hydroelectric potential and through that the industrial potential of the Yukon River area.

That article reported the incorporation of the Pacific Northern Railway Co. for the purpose of constructing a 700-mile railroad from rail connections in southwestern Canada, at a cost of a quarter-billion dollars to tap the potential of the great northwest and, according to the report, there is some indication that the actual building will depend upon the company's being given permission to extent into the Yukon and Alaska. Such a rail connection could brighten the economic outlook of interior Alaska overnight, and cheap hydroelectric power in the southeast would open its vast resources to the world.

Always, when I reach this point in my thinking, I reluctantly visualize what development of the southeast would mean to those of us who cherish its very isolation for its natural beauty and its fabulous hunting and fishing. Obviously, an expansion of commerce and industry will affect some of this, but perhaps we have learned the lessons of conservation and will avoid the thoughtless destruction which so often accompanies civilization.

It was there in the southeast last fall while waiting for evening flights of geese and ducks, and tramping mountain slopes following deer trails, that I recalled something I had read and from that I began to visualize a way for commercial transportation to reach this part of the world without blasting away mountains, clearing vast areas of timber, and changing the courses of rivers to build rail beds and highways. It may be that the very ruggedness of its terrain will cause southeastern Alaska to be the real proving ground for an entirely new and different form of transportation.

I have in mind the experiments being conducted with the air-cushion craft, which rides not on wheels but on compressed air. During the past year it has been demonstrated that such craft can move over land or water at impressive speeds. The major obstacle, so far as Alaska is concerned, is that present models require relatively smooth terrain and can climb grades no greater than 8 or 10 percent because of the thin cushions of air which support them. However, one of the last detailed articles I saw said workable plans actually exist for a craft which can rise to a height of 30 feet, there to hover motionless or accelerate to speeds approaching 100 miles per hour, while loaded with great quantities of freight.

Already proven as amphibious, and with concentration now on adapting their movement to rough terrain, success for use in Alaska would seem to be assured in the not-too-distant future. Instead of having to build highways or railroads, tunnels or bridges, it may be that the only requirement will be to have survey crews locate and mark feasible routes following the natural terrain. With the anticipated low cost of operation and high speeds predicted for such craft, circuity of routing would be less important than it is in rail or highway building.

I do not believe this picture is too far-fetched. If the engineers can do what they say, Alaska could use it today. If it is proven feasible under such adverse conditions, think what it can mean elsewhere. With highway construction and improvement of waterways calling for billions of tax dollars in the next decade and with railroad maintenance a

mounting burden, perhaps the air cushion, impervious to potholes in highways, deficient rail beds, and shallow rivers, will provide the economies we must have.

In any event, you will agree I am optimistic. If there is a way to do it, Alaska will find it.

U.S. Engineers Have Long Record of Service to Nation

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. EVERETT. Mr. Speaker, there appeared in the Lake County Banner of Tiptonville, Tenn., an outstanding weekly newspaper of the Nation, on Thursday, June 23, 1960, an excellent article relative to the U.S. Engineers.

We in our congressional district are very proud of the U.S. Engineers because of the wonderful work they have done in behalf of our people.

The article follows:

U.S. ENGINEERS HAVE LONG RECORD OF SERVICE TO NATION

The U.S. Army Corps of Engineers, known as the world's largest fighting-constructing organization, celebrated its 185th anniversary on June 16.

Originally constituted by a resolution of the Continental Congress on June 16, 1775, the corps has had a long record of responsibility for the defense of the Nation and development of its resources. The first Chief Engineer was Col. Richard Gridley, so designated by Gen. George Washington, and by congressional resolution, his pay was set at $60 per month.

Since that time there have been 40 Chiefs of Engineers, the present incumbent being Lt. Gen. Emerson C. Itschner, whose term has only recently been extended for 2 years by recommendation of President Eisenhower. Included in the list of Chiefs of Engineers are such men as Maj. Gen. Louis DuPortail; Col. Jonathan Williams, first superintendent of West Point; Brig. Gen. William Louis Marshall, who as a junior officer served in rivers and harbors work on the lower Mississippi River (1876–90); Lt. Gen. Edgar Jadwin, author of the comprehensive plan for flood control on the lower Mississippi River; and Lt. Gen. Eugene Reybold, who was district engineer, Memphis district, during the all-time high water of 1937.

Because a majority of the trained and experienced engineers in the Nation made up the Corps of Engineers, following the Revolutionary War, the first nonmilitary engineering projects were placed in their hands. Construction of harbors, canals, and early roadways was followed by development of the country's inland waterways systems. First congressional authorization for a study of the Ohio and Mississippi Rivers came in 1820, and the ensuing planning became a pattern for development of these waterways for more than a century. Waterways planning was followed by railroad planning, and the first transcontinental route was surveyed by the corps.

Development of flood-control plans by the corps came about long after the program of inland waterways had been well advanced. Early appropriation for corps waterways development specifically limited construction of flood-control works except where they could be shown primarily as aids to navigation. Only following the lower Mississippi Valley disaster in 1927 did the Congress recognize flood control as a national problem, and even then the authorized improvements were limited to the lower Mississippi Valley. The outstanding record of that project was responsible for the act of 1936 which finally committed the Federal Government to a nationwide program of flood control.

The act of 1928 placed responsibility for flood control in the Mississippi Valley in the hands of the Mississippi River Commission which had been established in 1879. The Commission, composed of three Army engineer officers (one of whom serve as president), the Commandant of the U.S. Coast and Geodetic Survey, and three civilians, has been in continuous existence since its establishment. It supervises the work of district offices located at Memphis, Vicksburg, and New Orleans. In addition, the same organization, functioning as the Lower Mississippi Valley Division, includes the St. Louis, Mo., District.

The U.S. Army Engineer District, Memphis, with Col. Marvin L. Jacobs as district engineer, comprises an area of nearly 27,000 square miles, including southeastern Missouri, southern Illinois, western Kentucky and Tennessee, northern Mississippi, and eastern Arkansas. Among its more important responsibilities are the maintenance of navigation facilities and channel stabilization from the vicinity of Cairo, Ill., to the mouth of White River, Ark.; construction, enlargement and flood emergency maintenance of more than 636 miles of main line Mississippi River levees, and more than 560 miles of tributary levees; operation of the Wappapello Dam and Reservoir on the upper St. Francis River, and construction of a giant flood-control and drainage project throughout the St. Francis River Valley. Local flood protection projects have been constructed at Dyersburg and Memphis, Tenn., and the Memphis Harbor project, now nearing completion, is an outstanding example of cooperation between the Corps of Engineers and local government.

The Angry American

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Boston Pilot on June 25, 1960:

THE ANGRY AMERICAN

Americans, at the present time, are very seriously concerned about the logic of their international position and are troubled over the recent developments which were as unexpected as they were violent. The collapse of the summit, followed so promptly by the Far East demonstrations, has plainly shocked the public which had begun to hope for a lessening of tensions. It is normal enough for people to allow themselves to hope that things will be better, but it is the more disheartening when we find in reality that they are worse. This can, however, be a blessing in disguise.

The smiling, pleasant Khrushchev is in many ways more dangerous than the Paris denouncer, with all his crudeness and bad manners. Similarly, the incidents which upset the status quo are warning symptoms that indicate an illness of which we might otherwise be unaware. For Americans to be shocked, in short, may be the best thing for them and for the future of the free world. To be sure, no one expected any wonders from the summit conference, although it would have been hard to have foreseen the actual eventuality. Neither did anyone, including the State Department, know the size and effectiveness of the Japanese opposition, even though all were aware of dangers. Clearly, we have misjudged the situation, only believing what we would like to believe.

Nothing suggests, however, that we have to compound our errors at this point by altering essentially our international posture; if temporary disillusionment should encourage a new isolation from our allies, some sort of a withdrawal, we would be in serious trouble indeed. On the other hand, a vast amount of positive good can come from understanding the international picture in more realistic terms if we use our new knowledge wisely. To learn that the cold war is cool only when the Communists see that climate to their advantage, and to know that they can also push up the burners at a moment's notice, is a salutary reminder.

Americans are apt to be more realistic when they are a little bit angry and, if we judge it correctly, that is their present mood. Ruffled and humiliated in the person of their President, in both East and West, they are very likely to take action which they would otherwise just as soon postpone. Undoubtedly, we need a reappraisal. It need not be agonizing if it will only be prompt. What we surely need more than anything else is a true knowledge of the present international situation, not as we would like it to be but as it actually is. After our recent unpleasant adventures, we are in a mood to understand the unpleasant wherever it exists; we do not want a pretty picture, we want the true picture.

The Communists have shown again, along with their ugliness, their true purposes. Tibet is back in the news with a finding of genocide against Red China, and this should recall Hungary and its bloodbath at the hands of the Soviet. The Japanese riots show the Communist use of the so-called neutral countries and the extent of the conspiracy against the free world. After we take the true measure of this menacing enemy, let us take the true measure of ourselves. As soon as we find what is required of us, let us set to action. Americans in their present mood, as in the past, will be equal to the demands of history.

Garfield Saw Self Nominated When Nominator Became Nominee

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 27, 1960

Mr. YARBOROUGH. Mr. President, recently I placed in the Appendix to the RECORD the excellently written article by the able Boyce House, of Dallas, Tex., describing how the Great Commoner, the brilliant William Jennings Bryan, with his matchless oratory, won the presidential nomination of the Democratic Party at the age of 36, the youngest presidential nominee in our history.

Mr. House has written another in his series of absorbing historical accounts of

presidential nominating conventions, this time, the dramatic account of the unique instance when a nominator became a nominee in the Republican National Convention of 1880. Not only that, but James A. Garfield was present in the Convention Hall and saw himself win the nomination for the presidency, the only presidential nominee in history to witness his own nomination. This interesting story was printed in the Houston Post for Sunday, June 19, 1960. I ask unanimous consent to have printed in the Appendix to the RECORD today this account, from the Houston Post, where it is titled, "Garfield Brilliant: When a Nominator Became Nominee."

There being no objection, the article as ordered to be printed in the RECORD, as follows:

GARFIELD BRILLIANT—WHEN A NOMINATOR BECAME NOMINEE

(By Boyce House)

How an orator made a speech of such brilliance in nominating another that he himself became the nominee for President—this forms a story unique in the annals of national political conventions.

Not only that but was the first—and so far as research has disclosed—the only time that a man was present and saw himself win the most coveted of all political honors.

That man was James A. Garfield; the year, 1880; the scene, the Republican convention in Chicago.

The chief candidates were Gen. U. S. Grant (who, 4 years earlier, had concluded his second term as President) and James G. Blaine, that man of magnetism from Maine. Garfield was not a candidate. On the contrary, he was directing the campaign of his fellow Ohioan, John Sherman, Secretary of the Treasury. Garfield was the Republican floor leader in Congress, where he had served nine terms, and was U.S. Senator-elect.

It was a case of Grant against the field. Leading his forces was Senator Roscoe Conkling of New York, one of the foremost orators of the Nation, a man of great ability but of an imperious nature, arrogant, almost contemptuous toward those who opposed his will.

And Conkling almost succeeded in winning the war before the names of the aspirants had even been presented. He sought to establish the unit rule, which would have meant that the vote of a State would be cast in its entirety for the candidate favored by the majority of a delegation. This would have given Grant 367 votes, only 9 short of a majority, and would undoubtedly have resulted in his nomination on the second ballot—if not, indeed, by the switching of votes, on the very first ballot.

Garfield, as the chieftain of the anti-Grant forces, was able to defeat this move.

Later, he and Conkling clashed again. To head off a possible bolt if his man was chosen, the New York Senator moved that every delegate be honor bound to support the nominee, whoever he might be. This carried with only three dissenting votes, the trio being delegates from West Virginia. Infuriated, Conkling moved to expel them.

Garfield replied in a most persuasive speech, appealing to the convention's sense of fair play and "to the deep-seated individualism of his audience," as a biographer expresses it. There was great applause and the motion was badly beaten.

Conkling, if no one else did, sensed the possibilities of the situation. While Garfield was speaking, the New Yorker wrote across the top of a newspaper, "I congratulate you on being the dark horse," tore the margin off and, at the close of the speech, had the note passed to Garfield.

Although both contests had resulted in victory for the anti-Grant elements, these were, after all, only skirmishes. The battle was about to begin in earnest with the nominating speeches and then the actual voting.

Conkling placed Grant in nomination. The speaker had of course a military leader of inspiring achievements as his subject. Grant, after leaving the Presidency had spent 2 years in touring the world, being everywhere received with such honors as had never been bestowed on a private citizen; then, returning to the United States, was welcomed everywhere as a national hero. The orator began with a bit of verse which was currently popular:

"If asked what State he hails from,
Our sole reply shall be:
He comes from Appomattox
And the famous apple tree."

These lines set off wild cheering and the speech was interrupted many times by applause. Chauncey M. Depew (who served in the U.S. Senate from New York) said of Conkling's speech, in his memoirs, that it "was perfectly prepared, delivered with great effect and received universal acclaim on the floor and in the gallery." Historians say that the conclusion aroused storms of applause and shouting which "surpassed anything ever known before in a convention."

It was Garfield's colossal task to follow an oration which unquestionably ranked—and still ranks—as one of the most magnificent speeches ever heard in a national convention. Furthermore, he had no popular hero to present. Sherman was colorless, completely lacking in the ability to inspire enthusiasm. Senator George F. Hoar, of Massachusetts (who was both the temporary and permanent chairman of the convention) said in his autobiography, "There was nothing stimulant or romantic in the plain wisdom of John Sherman. It was like reading a passage from 'Poor Richard's Almanac' after one of the lofty chapters of the 'Psalms of David.'"

If these were not sufficient handicaps, Garfield was going to have to make largely an extemporaneous speech. That very day he had written his to his wife, "I have arisen this morning to tell you the peril I am in. I have not made the first step in preparation for my speech nominating Sherman, and I see no chance I can get to prepare it. It was a frightful mistake that I did not write it before I came. It now seems inevitable that I shall fall far below what I ought to do."

Garfield began in a quiet voice, "I have witnessed the extraordinary scenes of this convention with deep solicitude. Nothing touches my heart more quickly than a tribute of honor to a great and noble character; but as I sat in my seat and witnessed the demonstration, this assemblage seemed to be a human ocean in tempest. I have seen the sea lashed into fury and tossed into spray, and its grandeur moves the soul of the dullest man; but I remember that it is not the billows, but the calm level of the sea, from which all heights and depths are measured.

"When the storm has passed and the hour of calm settles on the ocean, when the sunlight bathes its peaceful surface, then the astronomer and surveyor take the level from which they measure all terrestrial heights and depths.

"Gentlemen of the convention, your present temper may not mark the healthful pulse of our people. When your enthusiasm has passed, when the emotions of this hour have subsided, we shall find below the storm and passion that calm level of public opinion from which the thoughts of a mighty people are to be measured, and by which final action will be determined.

"Not here, in this brilliant circle, where 15,000 men and women are gathered, is the destiny of the Republic to be decreed for the next 4 years. Not here, where I see the enthusiastic faces of 756 delegates, waiting to cast their lots into the urn and determine the choice of the Republic, but by 4 millions of Republican firesides, where the thoughtful voters, with wives and children about them, with the calm thoughts inspired by love of home and country, with the history of the past, the hopes of the future, and reverence for the great men who have adorned and blessed our Nation in days gone by, burning in their hearts—there, God prepares the verdict which will determine the wisdom our work tonight.

"Not in Chicago, in the heat of June, but at the ballot boxes of the Republic, in the quiet of November, after the silence of deliberate judgment, will this question be settled."

He then stirred his audience with an eloquent portrayal of the glorious history of the Republican Party and presented for their consideration a man who, in high office for 25 years, had played an important part in the great achievements of the party. Hoar described Garfield's speech as "one of the greatest oratorical triumphs I ever witnessed."

Grant, as expected, led on the first ballot with 304 votes; Blaine was next with 284, and Sherman was third with 93. Three others received a total of 74 votes. On the second ballot, one vote was cast for Garfield and thereafter, on almost every ballot, one—and sometimes two delegates from Pennsylvania—voted for him. Ballot after ballot showed almost no change.

Overtures were made to Garfield to permit his name to be a compromise choice but he said that he would rise in his place and denounce any such movement if his name became prominent in the balloting. Sherman had no chance; his highest vote was 120; and, sensing the possible trend, he sent a telegram authorizing the release of his delegates when their vote would be likely to nominate Garfield.

The 34th ballot was being taken and the lines were little changed as the rollcall proceeded. And then the break came. Wisconsin, last on the list, voted for Garfield.

Instantly, Garfield sprang to his feet and said, "I rise to a point of order. No man has a right, without the consent of the person voted for, to announce the person's name and vote for him in this convention. Such consent I have not given." Hoar, fearing that Garfield would say something which would make his nomination or acceptance impossible, interrupted, "The gentleman from Ohio will resume his seat."

On the next ballot, Indiana voted for Garfield. During the following ballot (the 36th and last), Henry Cabot Lodge of Massachusetts said that "Garfield sat immovable with a pained expression on his face." All eyes were turned upon him. It was drama, tremendous, unprecedented. A biographer declares, "Some saw in his appearance the aspect of a man overwhelmed by a stunning surprise" and the New York Tribune correspondent noted "an appearance of extra resoluteness on his face, as that of a man who was repressing internal excitement."

Grant's "guard of 306" voted for their idol until the end, then Conkling moved to make the nomination unanimous. Victory in the November election went to Garfield, the man who had made a nominating speech of such impressiveness that he himself was chosen for the Presidency.

Congressman Carroll Reece Honored for 40 Years' Service

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. EVINS. Mr. Speaker, this past Saturday our colleague, the Honorable B. CARROLL REECE, was honored by his constituents and many friends throughout the State of Tennessee on the occasion of completing his 40th year of service as Representative in Congress from the First Congressional District. I am sure that my colleagues will want to join in congratulating CARROLL REECE on his remarkable achievement.

In this connection, the Nashville Banner, last week, described the ceremonies and reviewed the record of our distinguished colleague. I request unanimous consent that this article concerning the life and service of Congressman REECE be reprinted in the Appendix of the RECORD.

The article follows:

CONGRESSMAN REECE TO BE HONORED FOR 40 YEARS' SERVICE

ROAN MOUNTAIN, TENN.—Officials of several States will gather here Saturday to honor B. CARROLL REECE, who at 70 is approaching completion of 40 years' service as Representative of Tennessee's First Congressional District.

REECE, banker, statesman, and soldier who is a candidate for his 18th term in the House of Representatives, will be honored with a "This Is Your Life" program to be a feature of the 14th annual Rhododendron Festival here. It will be "Carroll Reece Day" at the widely heralded annual event.

Knoxville Attorney Ray Jenkins will be master of ceremonies for the program. Wayne Graybeal, Roan Mountain contractor, will present the honoree with awards and gifts following the program. A festival queen was to be selected today from 22 contestants.

The "This Is Your Life" program for REECE will be divided into five phases. Jenkins will moderate the phase depicting REECE's early life; George Dugger, Sr., Elizabethton attorney, will moderate the phase concerning REECE's educational and political life; James R. Greer, Roan Mountain banker, will conduct the phase concerning the Congressman's military career; Mrs. Grace Shell, postmistress of Elizabethton, will moderate the family phase; and Marvin Bryan, Nashville, will conduct the phase concerning REECE's business life.

Jenkins and Guy L. Smith, editor of the Knoxville Journal, and former State GOP chairman, were to leave Knoxville for Johnson City tonight. Jenkins said he would have breakfast with the Reece family Saturday morning and then come to Roan Mountain in a motorcade.

Jenkins labeled REECE "one of the few statesmen left in Washington * * *. He is my kind of statesman—a moderate conservative."

REECE and Representative HOWARD BAKER are the only Republican House Members from Tennessee. REECE also serves as State GOP chairman and is a former national GOP chairman. He attended the 1958 Rhododendron Festival here with Vice President RICHARD NIXON.

LONG SERVICE

The recognition of REECE, Graybeal said, is commemorated to his "long service in Congress, from the First District of Tennessee, and his contribution to humanity."

In the 40 years since he first was elected to the House of Representatives as a young man of 30, REECE was never defeated in the Republican primary.

There have been two interruptions in REECE's House tenure. An independent candidate, Greeneville attorney O. B. Lovette, unseated him in the early thirties for one term; and in 1946, he resigned his seat to become GOP national chairman.

He lost again in 1948 when he tried for the U.S. Senate against Democrat ESTES KEFAUVER. But in 1950, REECE returned to the House and has been there since. He has no GOP opponent for the party nomination in the August primary, but Arthur Bright, Kingsport Democrat, will oppose him in November.

REECE, of Johnson City, was born in Butler, Tenn., and reared on a farm. He attended Watauga Academy, Carson-Newman College, New York University, and the University of London. He has an LL.D. degree from Cumberland University.

He is a member of the board of regents of the Smithsonian Institution; member of the American Statistical Association and the American, Tennessee and Federal Bar Associations.

BANKER

REECE is president of the Carter County Bank and First National Bank of Jonesboro and is chairman of the board of Sullivan County Bank.

He enlisted in May 1917 and served in the American Expeditionary Forces from October 1917 to July 1919. During that time he commanded the 3d Battalion, 102d Infantry Regiment, 26th Division. He received the Distinguished Service Cross, Distinguished Service Medal, Purple Heart, and Croix de Guerre with palm and was cited for bravery by Marshal Petain, and Generals Pershing, Edwards, and Hale.

He was married in 1923 to Louise Despard Goff and they have one daughter, Mrs. Louise Marthens, Washington.

The First Congressional District which he represents includes Carter, Claiborne, Cocke, Grainger, Greene, Hamblen, Hancock, Hawkins, Jefferson, Johnson, Sevier, Sullivan, Unicoi, and Washington Counties.

"Welsh Heads Fine Democratic Ticket"

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, June 27, 1960

Mr. HARTKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Welsh Heads Fine Democratic Ticket," published in the Fort Wayne (Ind.) Journal-Gazette of Thursday, June 23, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELSH HEADS FINE DEMOCRATIC TICKET

An excellent and well-balanced ticket headed by Senator Matthew E. Welsh of Vincennes as the nominee for Governor was chosen by the Indiana Democratic State Convention Tuesday in Indianapolis.

The Democrats were full of enthusiasm and confidence and are ready to launch a crusade to clean out the State House after 8 years of Republican rule under Govs. George Craig and Harold Handley.

They believe that a vast majority of the people of Indiana feel it is time for a change. They think the people are sick and tired of the scandals of the Craig administration, the high taxes of the Handley administration, and the do-nothing record of both.

Under the leadership of Senator Welsh, the Democrats can offer a real contrast to the past 8 years in the Governor's office.

Matt Welsh is one of Indiana's best-trained public servants. He knows the business of the State from his distinguished career in both houses of the general assembly.

His honesty, his capability, and his experience are beyond question.

At the age of 47 he is at the peak of his vigor and usefulness, and his devotion to the welfare of all the people is known from one end of the State to the other.

Senator Welsh comes from a fine Indiana family and has an attractive family of his own, including his wife and twin daughters.

He took his B.S. degree from Wharton School of Commerce and Finance at the University of Pennsylvania, studied law at the Indiana University School of Law and received his legal degree from the University of Chicago.

Twice elected to the house of the general assembly, he resigned from that position to serve in the U.S. Navy during World War II.

In 1950, Attorney Welsh accepted appointment as U.S. District Attorney for the Southern District of Indiana, where he made a fine record.

He served in the State senate in the 1957 and 1959 sessions as Democratic floor leader.

To know Matt Welsh is to like him and respect him. And he deserves election in November, not for his own sake, but for the good of Indiana.

Allen County and the Fourth District are especially pleased by the nomination of one of their own outstanding lawyers and jurists, Clarence R. McNabb, of Fort Wayne, as a candidate for judge of the Indiana Supreme Court.

Judge McNabb's successful career as a practicing attorney and his 6 years on the Allen circuit bench are surety that he will add strength to the ticket and to the State's highest court.

The Democrats of Indiana have taken to the victory road. They will make a clean-cut campaign. They pledge good government and they will earn the right to win in 1960.

Poland Through a Thousand Years

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. KARTH. Mr. Speaker, in recognition of the Polish people's illustrious cultural contribution to Western civilization, the University of Minnesota through its center for continuation study is presenting on August 2–5 an institute on Poland through a thousand years.

Because of widespread interest in the subject I request that the program and details regarding the institute be print-

ed in the Appendix of the CONGRESSIONAL RECORD:

PROGRAM

TUESDAY, AUGUST 2

Registration: Center for continuation study desk.

Convocation: Orchestral concert, Leo Kucinski, conductor. Soloists: Stephan Hero, violinst; Bernhard Weiser, pianist, Northrop Auditorium, 8 p.m.

Reception following convocation: Lounge, center for continuation study, 10 p.m.

WEDNESDAY, AUGUST 3

Introduction: Fred E. Berger, director, center for continuation study, University of Minnesota, 9:15–9:30 a.m.

Poland in Historical Perspective: M. K. Dziewanowski, associate professor of history, Boston College, department of history and government, Chestnut Hill, Mass., 9:30–12 a.m.

Luncheon, 12–1 p.m.

The Geography of Poland: John R. Borchert, professor and chairman, department of geography, University of Minnesota, 1–2 p.m.

Poland and the Sciences: S. Mrozowski, professor, department of physics, University of Buffalo, Buflalo, N.Y., 2:30–4:30 p.m.

THURSDAY, AUGUST 4

Poland the Humanities: Konstantin Symmons-Symonolewicz, professor and chairman, department of sociology and anthropology, Wilkes College, Wilkes-Barre, Pa., 9:30–12 a.m.

Luncheon: 12–1 p.m.

The Polish Language: Ludwik Krzyzanowski, editor, the Polish Review, Polski Instytut Naukowy w Ameryce, New York, 1–2 p.m.

Early Polish Literature: Waclaw Lednicki, department of Slavic languages and literatures, University of California, Berkeley, Calif., 2:30–4:30 p.m.

Convocation: Earle Spicer, folk singer, Northrop Auditorium, 8 p.m.

FRIDAY, AUGUST 5

Polish Literature: Part II (contemporary)—Victor Weintraub, professor, Polish literature, Harvard University, Cambridge, Mass., 9–10 a.m.

Poland in Music: Johannes Riedel, associate professor of music, University of Minnesota, 10–12 a.m.

Luncheon, 12–1 p.m.

Poland Today: Christine Hotchkiss, roving editor, This Week magazine, editorial department, New York, 1–2 p.m.

Poland in America: Open forum, 2:30–4:30 p.m.

Dinner: Center for continuation study dining room, 6 p.m.

The Importance of Preserving the History of Immigration: Rev. Ladislas J. Siekaniec, past president, the Polish-American Historical Association, Cleveland, Ohio.

ELIGIBILITY AND FEES

Anyone interested in what the program of the institute has to offer is eligible to attend. Because of the support of Polanie, the institute can be offered for a fee of $5. Registration is personal and nontransferable and must be made for the entire period of the course.

ACCOMMODATIONS

The dormitory and other facilities of the Center for Continuation Study are available, if desired, to those who register for the course. It will provide the most convenient housing available on the campus. Dormitory space in the Center as well as parking space in university parking areas, however, is limited; and those who want to live at the Center during the course are urged to apply without delay. The application blank which accompanies this announcement lists rates for rooms, meals, and parking facilities. Rooms and parking space will be assigned in the order in which applications are received, and each applicant will be notified as to what reservations have been made for him.

Higher Education

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. IRWIN. Mr. Speaker, an educational group has recently completed a study which indicates clearly that the procedure through which our institutions of higher learning select students is sorely wanting. A good friend and neighbor of mine, Dr. Donald S. Bridgman of the National Science Foundation, has put his finger on the key to one approach to the problem. He has noted that there are certain occupations for which there is no need for college training and that certain persons might be both happy and successful in those occupations without having to go to college. There is, of course, the problem of how to determine who is suited to such occupations and how to convince them of this fact. There is also the even larger problem of convincing the colleges that they and the entire country would be better off if they improved their method of selecting students. Pursuant to permission previously granted, I include an editorial from this morning's New York Times. The editorial:

WHO SHOULD BE EDUCATED?

Higher education in the United States, costing more and more each year, attracting larger and larger numbers of students, is still not reaching all the young men and women it ought to reach and is being wasted on some who are getting no real benefit from it. This is a conclusion one has to draw from a report made public Saturday under the auspices of the College Entrance Examination Board. Dr. Samuel A. Stouffer of Harvard University describes the situation as "a sad indictment of American democracy."

The contributing educators found that color, race, economic position and social background were factors in some admission policies; that colleges seek for athletic talent but not for academic talent; that too many students of superior ability drop out of college; that creative students are sometimes passed over because they are handicapped by an early, underprivileged environment, and that not enough is known about how to measure ability.

Not everybody needs to go to college. Dr. Donald S. Bridgman of the National Science Foundation thought the public should realize "that occupations for which less formal education is needed are more satisfying to the interests of many individuals."

Turning the facts and figures around in one's head, one may approach the conclusion that the question is not whom we can permit to go to college but whom we cannot afford to keep out of college. Higher education cannot be made available to literally every young person in any early future, but it must be made available to every young person who is able to use it for the good of the community.

In short, the processes of selection—one might even say of academic recruitment—must be vastly improved. Intellect, character, the ability to influence other people in constructive ways—all these are important. Other criteria, including family income, ancestry, or the prospective student's prowess in football, are, to put it mildly, of lesser importance.

Baring Calls for Immediate Resumption of Highway Probe Hearings

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD the following letter by a citizen to Hon. JOHN A. BLATNIK, chairman, Special Subcommittee on the Federal-Aid Highway Program, June 22, 1960, as a public service so that all people may better realize the seriousness of the highway program scandal, and may be apprised of the necessity of their giving expressions of their support to Congressman BLATNIK so that he may continue the highway probe at once.

The letter follows:

NEW YORK, N.Y.,
June 22, 1960.

Hon. JOHN A. BLATNIK,
Chairman, Special Subcommittee on the Federal-Aid Highway Program, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN BLATNIK: I and some citizens of America are appalled to read in an Associated Press news item, New York Times, June 21, 1960, page 21, city edition only, that you have decided supinely to "hold no more hearings until after the November elections, partly to keep political considerations out of the inquiry."

The Congress of the United States acting in behalf of the people of America charged the subcommittee presently headed by you almost a year ago with the investigation of the national highway program.

Over a year ago I brought unrefuted documentary evidence to you revealing misplanning, misstatement of technical and economic fact, and general behavior against the best interests of the people of New York and of New Jersey, which involve a waste of more than $450 million in public road building fund.

These matters were ignored until individuals of good will sent me to courageous Congressman WALTER S. BARING of Nevada who examined the documents and made ground inspections of the locations involved.

More than 4 months ago you received documentary proof from Congressman BARING that the superintendent of public works of the State of New York, who handles over $180 million of Federal-aid highway funds this year, had falsified to Congressman BARING the state of demolition of homes in the Seventh Avenue, Brooklyn area.

You have taken no action on this outrageous violation of public trust.

You have received unrefuted documentary proof from Congressman BARING that the U.S. Bureau of Public Roads issued false technical data to the House Subcommittee on the Reno Interstate Highway over which you presided as chairman, February 1959.

You have not reinvestigated this situation to cause resignation of those responsible for the issuance of false information, to vindi-

cate Congressman BARING's public-spirited testimony at that time, to protect the people of Reno, or to save the people of the United States from the wasteful expense proposed for a projected interstate route through downtown Reno.

All who are working to eliminate the falsifiers and evildoers from their positions of power and influence in the highway program know that you, Congressman BLATNIK, are scrupulously honest. You revealed your integrity on February 10, 1960, during your interstate highway low bridge clearance hearing. On that occasion you brought to the attention of the subcommittee (and of America) the fact revealed by earlier military testimony that if we continue construction of the Interstate Highway System as now geometrically designed, we can never again move oversized military or missile objects any considerable distance overland in the United States.

Over $2 billion of Federal-aid highway funds have been spent or obligated, much of it under the administration of revealed falsifiers or their protectors, since the time that your subcommittee was charged with examining the highway program for irregularities.

I am informed that a few days ago you pleaded a shortage of funds needed to continue a meaningful probe into the high places from which the highway program is mismanaged, and that you were informed that Congressman CLARENCE CANNON, chairman of the House Appropriations Committee, knows and is favorably disposed toward your subcommittee's financial needs, and that you were advised to speak to Congressman CANNON on the subject.

I am informed that you have not done so.

The highway program scandal and the scandals of its associated relocation and urban renewal projects planned for the low-taxed capital gains of the favored few who ruthlessly use their political and financial power to influence public planning and communication media will either be cleaned up now, or the United States will be enslaved and destroyed by the enemies which are now assembling at our very doorstep.

You can hold day and night hearings now and throughout the summer without improperly influencing the elections if you will continue to be absolutely honest and objective in your procedure.

Even if individuals on either side of the political aisle might possibly be discomfited, it is still imperative that the truth be revealed before elections and not suppressed until after elections.

In light of these facts, and of your certain knowledge that "some of 120 cases involved 'incompetence, negligence, and even plain wrongdoing,'" a failure or even a delay by you or by the subcommittee to meet your joint responsibility at this crucial time can only be construed by citizens of objective outlook as an overt act to hasten the decay of the moral fiber and to aid in the downfall of the United States.

Faithfully yours,

HENRY SUCH SMITH.

Gen. Joseph Haller

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Saturday, June 11, 1960, which comments upon the death in London, England, of the great Polish patriot and military leader, Gen. Joseph Haller, at the age of 87:

GENERAL JOSEPH HALLER

Like so many Polish patriots and soldiers down through the centuries, Gen. Joseph Haller ended his earthly sojourn in exile. It was because he loved Poland and freedom so much that he could not bear to submit to the tyranny of an alien regime that was the antithesis of all he stood for in life. So at 87, in a London hospital far from home, his dream of the liberation of his country not realized, he joined his comrades in the eternal bivouac.

This is an example of the tragedy of these troubled times, but there is also a nobility about the idealism of men who sacrifice so much in the name of liberty. It is hard for Americans to appreciate fully the decision of a Thaddeus Kosciuszko or a Joseph Haller because we have been fortunate not to be torn between two such extremes. Only men who have died for principle can begin to understand the cross General Haller had to bear.

This gallant soldier, who commanded Polish and American volunteers in France during the First World War and later was a participant in the "Miracle of the Vistula" when his forces turned back the Red hordes at the gates of Warsaw on that eventful August 15, 1920, visited Wilkes-Barre four times—in 1923, 1934 (twice) and 1940. In the Polish forces he commanded in France were scores of Americans of Polish extraction from this area.

Let us hope General Haller will rest; in the not too distant future, in the soil of Poland, his lonely exile over with the dawn of freedom in the land he loved so much he could not endure the sight of its enslavement. That will be a great day for General Haller, for Poland and for the free world.

Soviet Beachhead in Cuba Endangers All Americas

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. OLIVER. Mr. Speaker, on Sunday, June 26, I delivered the following speech over radio station WGAN in Portland, Maine:

Good afternoon, ladies and gentlemen, this is your Congressman JIM OLIVER reporting developments on the Washington scene.

Fifteen years ago, at the end of World War II, our country was the undisputed leader of the world. Not only had we proven, beyond the shadow of any doubt, our military strength by making the "world safe for democracy" for a second time in one generation; but our productive capacity, in making armaments and later consumer goods to meet the great hunger built up by wartime curtailment of consumption, was greater than all of the other nations of the world combined.

And today, a short 15 years later, recent incidents on the international front cause us to reflect whether we are still occupying the position of leadership which was earned by the blood of battle and the precepts of freedom which have historically served as our basic guide; or have we as a nation been relegated by recent events almost overnight to the status of being considered "a second-class power?"

There can be no question in the minds of thinking people but that our posture of leadership is relatively weaker, in spite of the billions of dollars we have given to nations in all quarters of the globe. Our President, it appears, cannot, without risk of his personal safety, visit friendly nations to say nothing of visiting our cold war enemies. In many areas we are the most hated nation on the face of the earth. The architects of our foreign policy continue to be blinded by the pre-engineered, Kremlin directed, prestige-destroying debacles such as we have witnessed in the Japan incident which, following the summit collapse, added to a decline of our national prestige through the personal embarassment and insults to our President.

Over these past few years we have learned a few things about Communist tactics in every part of the world. We know their techniques including provocative and, at first, peaceful mass meetings designed to whip the mob into a frenzy toward ultimate violence. But in order for communism to succeed, we must first be defeated from within. Belief in a supreme being and a respect for law and order are the antithesis of the immoral doctrine of this cult. Hence, God must be denied and the existing legal structure destroyed before freedom can be enslaved my Marxism. Two thousand five hunded years ago, San Tzu, a Chinese militarist wrote:

"To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting."

This, my friends, is exactly what Khruschev and his henchmen are trying to do today; to get us to quit without fighting. By downgrading us culturally, scientifically, diplomatically, and economically, and in every other way to convince the world that the United States of America is a second-class power; that free enterprise does not and cannot work and hence they—the other free nations—should accept the extended invitation of the Communists to "join 'em" because they can't "lick 'em."

Our diplomatic failures abroad have tended to obscure the threat to our Latin American neighbors from the Communistic menace of penetration. It is unquestionably desperately vital to the security of our country each time a nation overseas embraces the Communistic philosophy; but it could be catastrophic if one of our hemispheric neighbors embraced and practiced this credo; for the nations of the American continent are interdependent.

For years since the good neighbor policy was introduced in the 1930's, the United States together with all of the countries of the American continent have been bonded together not only geographically, but, which is more important, by a spirit of friendship and cooperation.

The United States and the rest of the continent are vitally important to each other. Billions of United States dollars have flowed into these countries in the form of purchases of raw materials and investments. In turn, we have in most instances, been their prime supplier of finished products. This is democracy in action. This has been the greatest living example of peaceful coexistence. Our relation with these countries has, for the most part, been that of a partner rather than a competitor.

With improved transportation facilities, we are growing even more dependent on each other. The potential of mutual benefit for the nations of the American Hemisphere is tremendous; but this potential could be lost to our mutual destruction if we fail to be alert to the covetous eyes from overseas envying our material resources and if we make the traditional American mis-

take of taking our friends for granted and not applying in time the ounce of prevention needed now to preserve the integrity of the continent from the grasping designs of the Kremlin. For, it should be obvious to all that our Latin-American neighbors are a prize which the Kremlin will go all out to capture and plans to do just this may be further advanced than we commonly realize, or are willing to admit.

Is the island of Cuba, located only minutes by air from the mainland of the United States, becoming the beachhead of the Soviets to be utilized for the organizing and training of Communist legions to infiltrate and conquer the Latin American nations, preparatory to their main objective—the conquest and control of the United States?

To answer this, we must closely analyze and evaluate, in a cold, hard, realistic light, occurances currently taking place in that country with which we are all familiar. We must shake off the rosy-hued glasses of complacency which have clouded the administration's evaluation of the developments in Cuba. We can no longer afford the luxury of smugness and complacency, which have been ablinding us for these past eight years. We must call a spade and recognize these facts:

1. The constant, unrelenting vitriolic attacks on the U.S. by Castro on manufactured pretexts, certainly are not necessary to preserve or solidify his so-called "revolution." These attacks make sense only if Castro as a communistic agent is deliberately attempting to undermine the prestige of our Nation.

2. Soviet cargo ships are calling at as many Cuban ports as possible to load sugar but what is more important to unload undisclosed cargoes.

3. Confiscation without compensation of "foreign"—(American) property in Cuba.

4. Expulsion of American officials as spies.

5. The important economic discussions currently underway in Moscow with a Cuban trade mission. Reportedly, the Soviet Union is ready to offer maximum trade to Cuba and to send any material, specialists, and technicians, which Castro wants to order.

There is no question but Cuba is supplying the Communist bloc the beachhead in America which they have been trying for years to obtain.

Through excuses such as solidifying the revolution the Cuban leader and his lieutenants will continue to expand and integrate Cuba into a model commune of the Communist network.

From this springboard, the Communists will throw their full efforts into an all out drive to infiltrate and organize Latin America, with Cuba as the model the Communists envision that the other nations of the hemisphere will follow and supplant their independence with the status of becoming Soviet satellites. Through Castro, the voice of the Kremlin will then be heard and felt throughout the Western Hemisphere.

On June 10th, Cuba entered into a 5-year commercial agreement with Red Czechoslovakia, which in effect gives credit in the amount of $20 million to Cuba, repayable in 10 years, for purchases, not specified, in the pact, in Czechoslovakia.

The pact includes an agreement for technical and scientific cooperation which provides for sending Czech technical missions to Cuba. Cuba has signed other similar pacts with the Soviet Union and its bloc of satellites. It should be clear to us that Castro and his communistic advisers are well on the way towards being totally economically welded into the Communist bloc of nations and moving rapidly towards a military alliance as well. Castro, with no constitutional limitations to check his personal power has made Cuba a virtual party to the Warsaw Pact, which as we well know, was organized to enslave by infiltration, subversions and bloodletting if necessary, the rest of the free world.

Cuba's current informal recognition of Red China is expected to blossom into full diplomatic recognition preparatory to an increased effort on the part of the Communists to draw the Latin American nations into supporting Red China's bid for membership in the United Nations.

To us, a people dedicated to the cause of liberty and diametrically opposed to communism in any and all of its many forms, these acts of Castro should wave a flag—yes, my friends, a red flag for all of us to see. The past, it is said, is prologue to the future. We need only to open our eyes to see the arrogant militaristic bastions which have replaced freedom and democracy in other parts of the world, to recognize that, not only are the symptoms of infection present, but that the malignant cancer of communism is restlessly awaiting an opportunity to contaminate insidiously the bloodstream of this continent, with its venom.

The beautiful island of Cuba, only 90 miles from our shores will be, under current plans of the Kremlin, is to be a Russian naval and missile base poised at the very heart of our country.

This Communist beachhead is being clearly established. We must reappraise and reevaluate our foreign policy towards Cuba in this realistic light. We must find an approach upon which our people and Cuba's people can work together to salvage the longstanding friendship which burned brightly in the pre-Castro days.

This is essential. Unless we face up to the threat of this Soviet beachhead, our country in the near future may be jolted out of its complacency some morning by waking up to find a fully developed Soviet war machine aimed at our jugular. It is highly possible that before this year ends, communistic staged demonstrations will take place in such areas as Italy and West Germany, as a diversionary tactic, to allow a major communistic Cuban victory, such as the one I mentioned, to go unnoticed and unchallenged until too late.

The vigorous opposition of Americans to international communism is axiomatic. In our national interest, America's obligation to the world is clear. Our objective must be more than a containment of this vile menace. We must turn back this rising Red tide and restore the dignity of freedom to men. But first, we must concentrate on throwing them out of the American Continent. The Monroe Doctrine is even more applicable today than it was when first drafted in 1823. It extends not only to direct attack but to subversion and infiltration, as well. This we must reaffirm.

The administration should be given authorization for a flexible sugar policy. A reappraisal of our current 2-cent-per-pound "gift" over the world market price for Cuban sugar should be made, working toward a repeal of the same.

The formal omnibus indictment of Cuban anti-American action, which is currently being drafted for the consideration of the Organization of American States is a good move. The OAS is the proper body to deliberate and act in this critical period of emergency.

Furthermore, an inter-American army, operating within the framework of the OAS, could and should, it seems to me, provide a vehicle whereby desirable inter-American action and policies could be implemented.

And, finally, to meet this ever present, ever recurring Communistic threat we must realize that its success depends on decay of the soul, and hence the best defense to this menace rests with the nations of the free world to reevaluate, reaffirm, and strengthen our moral standards.

Earl J. McGrath, Executive Officer for Teachers College, Columbia University, Suggests Education Proposal for Party Platforms

EXTENSION OF REMARKS
OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. BAILEY. Mr. Speaker, I wish to direct to the attention of our colleagues the remarks of Mr. Earl J. McGrath, executive officer of Teacher College, Columbia University, New York City, on June 21, 1960, when he addressed a convocation at the Ball State Teachers College in Muncie, Ind. Mr. McGrath is well qualified to speak on the subject of education. He will be remembered as a former Federal Commissioner of Education. Mr. McGrath's remarks follow:

In only a few days our two leading political parties will hold their quadrennial conventions to nominate a candidate for the presidency of the United States. The delegates to these meetings traditionally adopt a platform which expresses the current position of the party on important public issues and in the event of the election of the party's candidate, serves as a guideline for a legislative program. Until quite recent years these utterances gave only small and perfunctory attention to education. Even lately the discussion of education has either failed to deal explicitly with some of the most pressing problems, or the issues have been obscured by generalities. More importantly the relationship between education and the other features of American life has not been clearly established so that the voter could realize the full implications of our failure to sustain the educational enterprise at a high level of efficiency. Without presuming to speak for either party, or to introduce partisanship into matters where it should have no place, I would suggest the following content as suitable to be included in the section on education in the forthcoming platform statements.

Recognizing that education is a principal factor in our domestic well-being and position among the nations, that in this highly competitive world the race for survival goes to the swift in the educational development of their people, that many of the abilities of our people are now wasted for lack of educational opportunity, that social progress is to that extent retarded, that the Federal Government has at its command—while the States and communities do not have—the resources to support education as our national destiny requires, we declare it to be our firm and unequivocal purpose to strengthen the educational enterprise of the Nation:

(1) Establishing within the Department of Health, Education, and Welfare a Permanent Advisory Council on American Education appointed by the President of the United States and composed of men and women of the highest competence and civic status to advise the Secretary, and through him the Chief Executive, on the condition and needs of the total educational enterprise of the Nation.

(2) Making available immediately to the States $2 billion annually of Federal tax money (about $50 per child of school age) to be used by the States in the same manner

in which they use their own funds for current expense or for the erection, enlargement, or improvement of buildings used for educational purposes.

(3) Giving increased support to the U.S. Office of Education in such ways as to make possible national planning cooperatively with the State educational authorities and by bringing the manifold educational activities of the Federal Government under the general supervision of the U.S. Commissioner of Education so that the national effort in education could be identified, coordinated, and supported.

(4) Providing $5 million a year at once and an addition of $5 million each fiscal year for 4 years for the support of educational research and for the rapid dissemination of the results.

(5) Providing $7,500,000 for 4 years for 10,000 scholarships of an average value of $750, the amount to vary with student needs as established by the institution attended.

(6) Providing grants totaling from $300 million to $800 million a year, graduated over a 10-year period, to institutions of higher education, both public and private, for the erection of buildings, the funds to be granted in accordance with their willingness and ability to accept additional students, and justified on the grounds of the institution's contribution to the national welfare in a time of emergency.

(7) Increasing Federal support of vocational education, education of exceptional and handicapped children, and the education of children of migratory workers to the end that the maximum and most effective use can be made of the abilities and skills of all potential workers in the increase of productive capacity to keep the Nation strong and prosperous.

These Federal objectives in the field of education will impress some as being too idealistic. To others they will appear to involve an expenditure of Federal funds beyond our resources. To still others they will seem to place the Federal Government in a dangerous position of educational control.

To the fainthearted or cynical I would reply that this period in our national life requires the highest type of imaginative idealism in our country's history. Without it we will suffer the fate of all societies which became satisfied with their lot and blindly sure of their place in the sun. To the parsimonious taxpayer I would say that if we make even the most modest sacrifices of our abundant luxuries, the necessary expenditures are well within our resources, and moreover that the income from these investments in education will more than offset the initial cost.

Even if this were not so, the expenditures would be essential to national survival and could, therefore, legitimately be charged off as unavoidable living expenses. To the alarmist I would point out that the history of Federal aid provides little ground for the assumption that Federal control of education is the inevitable consequence of such grants. If, however, a danger of Federal controls exists, this risk must be carefully balanced against the perilous consequences of our failure to act—the impairment of our national well-being at home and the nightfall of our primacy among the nations. Through the ages educators have been idealists. They must now buttress an elevated vision of their calling with a stern advocacy of the measures required to make the Nation physically, morally, and spiritually strong. In so doing they will gain the richest satisfactions of life and at the same time they will dignify the profession of teaching in the eyes of the world.

Unlimited Freedom of the Press

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. GEORGE. Mr. Speaker, seldom does one have the privilege of knowing a hard-hitting, straight-shooting newspaperman who has the courage to rebuke those of his profession who abuse the freedom of the press.

On the editorial page Col. R. L. Thompson, editor and publisher of the Moran Sentinel, seldom fails to criticize the Democratic Party and its candidates, but he uses his other pages in a fair and reasonable manner as far as news items are concerned. And of some 36 newspapers in my congressional district, his is one of the very, very few that does not use extreme and unfair censorship where Democrats are concerned.

In his June 16 issue, one of Colonel Thompson's editorials took his fellow publishers to task for interfering with fair procedures in criminal jurisprudence and I include it as part of my remarks:

DOUBLE JEOPARDY

As I have said so many times, nearly every man accused of a crime in this country is subjected to double jeopardy, which is to say, he is tried twice—once in the newspapers and once in a court of law.

The fifth amendment to the Bill of Rights makes it plain that a man cannot be tried twice for the same offense, yet the newspapers are permitted to go on trying men just the same.

When a man is tried in the newspapers he is nearly always found guilty by enterprising crime reporters which makes it very difficult for him to prove his innocence when he gets to court.

Only a few years ago a newspaper reported that four men attempted to escape from jail. One of the four was charged with stealing a calf, and he was named as one who sought to escape. No innocent man in his right mind would compound his troubles by trying to escape from jail. This man actually never sought to escape and in order to get a fair trial for him, the newspaper had to go to court to answer charges of contempt.

This ought to be done more often. Just the other day a women was found dead in a lover's lane near one of our large cities. One woman has already been charged with murder but the police are still investigating for more evidence. Acres of comment on the case have already appeared in the newspapers and more is sure to follow. I have been reading the newspaper reports and have been able to deduce from them some evidence as to the woman's guilt or innocence.

If I should be called upon to sit in judgment in this case, I could not dismiss from my mind what I have read in the newspapers which may, or may not, be true.

In law an accused is presumed to be innocent until he is found guilty beyond a reasonable doubt, yet we permit newspapers to go on piling up evidence that a man is guilty or innocent long before he gets a hearing in court.

The newspapers have a right and a duty to report that a crime has been committed, but they have no right to print evidence which, in many cases, is not admissible in a court of law.

Governor Lawrence of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. CLARK. Mr. Speaker, recently our distinguished Governor of Pennsylvania, the Honorable David Lawrence received an honorary LL.D. degree from the second oldest Catholic College in America, Mount St. Mary's College in Emmitsburg, Md., and made the commencement address to the graduating class of which his nephew was a member. I thought my colleagues would like to read the article appearing in the July issue of the Catholic Digest about our Governor who is making a fine record for the State of Pennsylvania.

The article follows:

GOVERNOR LAWRENCE OF PENNSYLVANIA AGREES WITH ELIHU ROOT THAT POLITICIANS PARTAKE IN THE HIGHEST FORM OF CITIZENSHIP

David Lawrence, Pennsylvania's 71-year-old Governor, works from 10 to 16 hours a day. He strides briskly through the halls of the Capitol at Harrisburg around 9 in the morning. He then paces himself so well through a day of conferences, talks with visitors, briefings with legislators, and press meetings that there is no stoop in his 5-foot-9-inch frame when he leaves the office at night.

Moderation at the table and a lifelong habit of exercise have kept his figure trim. He has a ready smile and is quick with a jest.

He needs a large supply of both stamina and good humor in the job to which he was elected in 1958. (Lawrence is the first Catholic and the oldest man ever to hold the office.) As Governor he faces the toughest task of his more than half century in politics. It still is too early to determine how successfully he will be.

When he took office in January, 1959, he faced massive problems. He inherited a $177 million deficit from the administration of fellow Democrat George M. Leader. Disastrous floods a week after he was sworn in caused millions of dollars in damages in the western section of the State. For 14 years Pennsylvania had been losing ground economically, with whole communities jobless. Ten percent of the State's working force was unemployed. The unemployment fund was dropping toward zero.

Sending the largest budget in history to the legislature (it topped $1.9 billion in the general fund alone), Lawrence bluntly stated, "I have no rabbits in my hat, no magician's trick which will make it possible to pay for increasing costs without increasing taxes." Among the tax increases was a 1 percent hike in the sales tax, making it a total of 4 percent, the highest in the Nation.

He got an advance of $112 million from the Federal Government to bolster the unployment fund, took immediate steps to spur employment, and won higher appropriations

and retention of a favorable tax climate for industrial development.

Some of his moves were merely stopgap measures. It may be a year before it is known how successful they were. Much will depend on future programs—and on his success in establishing a cooperative spirit in Harrisburg, where he has a split legislature.

It was his success in getting politicians, labor and industrial leaders, and financiers to work together for the good of the city that won him the reputation of being the best mayor in Pittsburgh history.

Lawrence came from a family of active Democrats. Following his graduation from high school, he went to work as an office boy and stenographer in the law office of William J. (Billy) Brennan, Allegheny County Democratic leader.

Brennan taught Dave to believe just as firmly in the future of the party as he himself did. At that time, the Democrats of the country could be packed into one of the 1st-ward boilers, still leaving plenty of room for steam.

He went to his first national convention, at Baltimore in 1912, as a page boy. He has attended every Democratic convention since, though he was not a delegate until 1924, when he replaced Brennan, who had died. Lawrence supported Al Smith that year.

Pickings were slim for western Pennsylvania Democrats until 1931. Lawrence was head of the emaciated party in his section, and a power in State councils. He finally ran for the office of county commissioner, and suffered his first and only defeat. But a lesser event gave him and his party the needed break.

It fell to Lawrence to make arrangements for a Franklin D. Roosevelt rally. He was advised to hire a small hall so that it would be packed.

Instead, Lawrence took a gamble and hired Forbes Field. The depression, a dissatisfied labor force, and Roosevelt's message of hope combined to fill the baseball stadium. In November, F.D.R. carried Allegheny County in a landslide. The new President named Lawrence collector of internal revenue for the district. He remained his friend even when the Pittsburgher personally told him he was against the Supreme Court packing plan.

Lawrence became State Democratic chairman in 1934, and engineered the election of George E. Earle as Pennsylvania's first Democratic Governor in 40 years. Earle named him secretary of the Commonwealth.

Things were going swimmingly for Lawrence when the roof feel in on him in 1938. A split in the party brought defeat in the State elections. Swiftly there followed a Dauphin County grand jury indictment of Lawrence and some of his associates. He later was acquitted by Republican juries after two long trials on charges of misusing the powers of his office.

Most people today dismiss the charges as politically inspired, but Lawrence has never forgotten them. Only one other event ever brought him more suffering.

One evening in 1941 the telephone interrupted a card game in the Lawrence home. A guest, Joseph Barr, now mayor of Pittsburgh, picked it up.

A voice informed him that the two Lawrance boys, Brennan, 16 (named after Billy Brennan), and David, Jr., 13, had been hurt in a car crash. Lawrence, who had thought the two boys were upstairs playing pingpong, glanced outside and found that his car was gone.

It was an hour before he located the right hospital and learned that there were two dead and five survivors.

"Give me the names of the survivors," he said.

He copied down the names. Neither of the Lawrence boys was among the five still living.

Lawrence turned to his wife, and said, "Alice, our boys are gone."

Mrs. Lawrence still makes a practice of writing to strangers who suffer a similar tragedy.

The Lawrences have been married 38 years, and have made their home in Pittsburgh in a modest house in a plain neighborhood for 20 years. They have been made financially independent by an insurance business Lawrence shares with a Republican partner. They have two daughters, both married, and a son, Gerry, a student at Philadelphia's La Salle College.

For a time after the death of his sons, the grief-stricken father lost his interest in politics and almost in life. On his doctor's orders he got back into harness. Today, when a friend suffers a death in his family, Lawrence will point to a picture of Brennan and David on his desk, and advise, "Work hard and it will heal."

Until 1945 he was satisfied with his role of organizer, while other men ran for office. This attitude has earned him the title of kingmaker. The title has some foundation, but Lawrence is more than a kingmaker.

He is a party man. He has guided his career on the dictum that what is good for the party is the course to be followed. He always has believed that Lawrence is good for the party, but if his only value had been as an organizer he never would have run for office. Many times he has pointed to a man whose useful career has ended needlessly, and said, "His ambition killed him." He believes that "political arrogance is political suicide."

Cynics claim that he set the stage in 1945 for his nomination for the first of his four terms as mayor of Pittsburgh, and that he pulled the strings which made him a candidate for Governor in 1958. They have no proof to support their charge.

Lawrence backed a candidate for the mayoralty nomination in 1945, but his man declined to run. Fearing a split over other possible candidates, the caucus asked Lawrence to run. He called Alice, and with her approval accepted. A deadlocked caucus in 1958 catapulted him into the governorship. Again he accepted after telephoning his wife.

Despite all this, the kingmaker legend will haunt him as he leads the Pennsylvania delegation at the Los Angeles convention this summer. As a national committeeman and keeper of his State's 81 votes, he will be a power there, just as he has been for many years.

Two of his top political successes occurred at national conventions. He helped talk Adlai Stevenson into accepting the nomination in 1952. And 8 years earlier, fearful that Henry Wallace was gaining strength over Harry Truman for the vice-presidential nomination, the Pennsylvania delegate moved for a recess until the next day. The move eventually put Truman in the White House.

As a negotiator Lawrence has had the trust of labor, management, and the public. He is a consummate politician, but his credo in office has been that "good government is good politics."

Khrushchev learned that when Lawrence informed him on his visit to Pittsburgh that "in America, politics stop at the water's edge."

David Lawrence was the youngest child of Charles and Catherine Lawrence, and like his two brothers, Isaac and Charles, and his sister Mary, he was born at Pittsburgh's historic Point section at the confluence of the Allegheny and Monongahela rivers.

The Point at the time was a rundown collection of frame houses and blackened boiler yards. The Lawrence home had four rooms, no running water, and no heat except the kitchen stove.

By ordinary standards the Point was a slum, and the people who lived there were poor. Lawrence does not accept the appraisal. "We were not poor, and the neighborhood was a good one." It is people that make slums, and he remembers the people of the first ward with pride. His neighborhood gave the city five mayors.

The family attended St. Mary of Mercy Church, where his father was a trustee and his mother a member of the altar society until their deaths. The children were educated in the parish school. Lawrence still attends the same church when in Pittsburgh, and continues to take up the collection there.

St. Mary's pastor, Msgr. D. A. Lawless, is one of Lawrence's stanchest friends. The priest, who sat in the courtroom through Lawrence's two trials, says, "Dave has never forgotten his humble origins. None of his old friends dies that he doesn't remember to have a Mass said for him."

Lawrence's mother, the monsignor says, "was a one-woman Catholic social-service center," and so revered that a church (St. Catherine's in Allison Park) was given her name. Lawrence went to his mother for advice even after he became mayor.

Most of Dave's friends went to work right after grade school, but his father sent him to St. Mary's High for a 2-year commercial course.

One of his teachers there, Sister Casimir, R.S.M. now 87, remembers that David's father told her he wanted his boy to work hard. She still keeps an eye on her former charge.

"I had to warn him about misuse of a word on television recently," she said. "I wrote him and told him to watch his vocabulary."

Dave played the outfield for the S.J. Toole Baseball Club—a political organization, naturally. His manager, Robert A. Foley, remembers that he was a good fielder, but only an average batter. His idol was the Pirate's Honus Wagner. "I used to wait at the old Expo park, and he always took me in to see the games."

He probably is the only boxing manager who ever became a governor. He managed three fighters in his early days. "The biggest purse any of my boys ever won was $350."

Lawrence cannot succeed himself as governor, but 1962 will not bring retirement. He has loved political life too long to give it up. He is proud of his profession and is fond of quoting Elihu Root: "Politicians are citizens who partake in the highest form of citizenship. To be properly labeled a politician is one of the great tributes given in a democracy."

Federal Employees Health Benefits Act

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. HOLLAND. Mr. Speaker, I have been requested by Mr. O. C. Leckman, business agent of the United Postal Workers Local Union No. 245, Pittsburgh, Pa., to insert in the CONGRESSIONAL RECORD their feelings about the Federal Employees Health Benefits Act. The editorial appeared in the June issue of the local's newsletter. Mr. Leckman has brought out some points which he feels some of the other Members of Congress

might like to compare with opinions from their sections of the country.

FEDERAL EMPLOYEES HEALTH BENEFITS ACT

It has been stated that the Federal Employees Health Benefits Act which offers hospitalization benefits effective July 1960 is a monument to the late Senator Neuberger.

Senator Neuberger was a most respected Member of the U.S. Senate, a man of character and convictions, and a champion for the rights of our people.

It would have been proper for the Members of Congress to make certain that a suitable monument was built for the Senator they so highly respected. However, the many complaints registered by Federal employees, and the dissatisfaction expressed, indicate the monument is a shaky and unstable one, and disrespectful to the wishes of the late Senator.

It appears this act of Congress was bombed from the start when it allowed the Civil Service Commission to approve many individual union and organization plans. A very satisfactory plan could have materialized had all employes been banded together and allowed to deal with individual insurance companies, under a free enterprise system of competition. However, when unions were allowed to deal for themselves, and when it was possible for each to come up with an offer a little more attractive than the Government Blue Cross and Aetna plans, all advantages and possibilities for a country-wide employee deal were dead.

Federal employee unions and organizations are now using their hospitalzation plans to attract new members from the ranks of other unions and from those who must otherwise accept the Blue Cross and Aetna plans. These actions will widen the split between the Government unions.

A five-member advisory committee from the ranks of organized and unorganized labor was appointed last year by the CSC to advise them concerning employee opinions. The committee was composed of James Campbell, American Federation of Government Employees, AFL-CIO; Jerome Keating, vice president, National Association of Letter Carriers, AFL-CIO; Vaux Owens, president, National Federation of Federal Employees, independent organization; William Ryan, president, District 44, Federal Employee Branch International Association of Machinists, AFL-CIO; and Leon Wheeless, Director of Civilian Personnel Policy of the Defense Department.

It appears to our employees that these people have ignored the possibilities of gaining great advantages for all employees under a great combined and single program, and have concentrated on a program which may sell their individual unions. It is our belief that Government unions would progress faster if they would conceiftrate more on honest and sincere representation for employees than by merely attempting to sell their individual unions in competition with other unions and organizations.

Employees had hoped for a good hospitalization plan from this important act of Congress. They know now that what has been granted is little more than another Government subsidy—to the insuring companies. It is true that in some respects the new policy has more coverage than our old Blue Cross-Blue Shield agreements, but the additional coverage is of a nature seldom needed. In some respects, such as maternity benefits, employees have lost the advantages offered by their old policy. Some of our employees are immediately concerned with this, for their impending maternity cases which were fully covered under our old agreement will cause them great expense under the new Government-approved plans. Employees are greatly disturbed over the Civil Service Commission's approval of such a program.

Forty Years as Veterans' Aid Without Pay

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. FLOOD. Mr. Speaker, it is agreed, I am sure, that loyal and patriotic citizens make up the backbone of this great Nation of ours and are, of course, its future salvation. In one of the cities in my congressional district there resides such a man—Mr. Michael Cassic, Sr., of Hazleton, who for the past 40 years and without any remuneration, has placed thousands of flags and markers on the graves of veterans in some 18 cemeteries in the Hazleton city area on or about each Memorial Day. Mr. Cassic is to be warmly congratulated for the high degree of patriotism which he has displayed over four decades and the residents of Hazleton and its surrounding area are indeed most fortunate to have such a gentleman in their midst. In line with this outstanding performance, I include an article from the Hazleton Plain Speaker of Tuesday, June 14, 1960:

MIKE CASSIC: 40 YEARS AS VETERANS' AID WITHOUT PAY

If you were to ask a man to handle a job for 40 or more years without pay, you'd probably get the quickest "no" you ever heard in your life.

But, in the city of Hazleton, there is such a man; a World War I veteran, a family man and a leader in veterans' affairs.

PLACED THOUSANDS OF FLAGS

It is through him that thousands of flags and markers have been carefully placed on the graves of veterans in the 18 cemeteries in the city area on or about Memorial Day.

He has seen to it that the job has been done since he returned home from the war in 1920 with the rank of sergeant in the Regular Army of the United States.

This man is Michael Cassic, Sr., 975 East Chestnut Street, who for many years was a Luzerne County detective.

In addition to placing flags and markers on the graves of the veterans of all wars, Cassic has also found time to transfer "misplaced stones" to the proper cemeteries and to, as he said, "lend a hand in straightening out some of the stones that were leaning to one side or another."

The cemeteries that Cassic has cared for during these past 40 years include St. Gabriel's, St. Joseph's, Mother of Grace, St. John's Greek Catholic, St. Stanilaus, Most Precious Blood, Holy Trinity Slovak, Holy Trinity German Caholic, Our Lady of Mount Carmel, Beth Israel, Agudas Israel, St. Peter and St. Paul Lutheran, St. Mary's Greek Catholic, St. John the Baptist Polish National, SS. Peter and Paul Lithuanian, St. Michael's Ukrainian, Mount Laurel, and St. Patrick's at Beaver Brook.

Today, Flag Day, Cassic made a brief visit to one of the cemeteries in the area to see that at least one American flag is flying over the grave of a man or woman who served that this Nation might live.

Cassic looks back on his 40 years of service to his fellow veterans with a pride that is unequalled.

He feels that he has carried out to the best of his ability a program that certainly means more to veterans and their families than to others, and perhaps, down deep in his heart, Mike Cassic knows that his initials are symbolic of what his services through the years have meant to those who served their Nation, "Mike's Contribution."

Federal Bureau of Investigation—I

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. DEVINE. Mr. Speaker, the following article in the first of a series appearing in the Columbus (Ohio) Dispatch relative to the wonderful record of the world's greatest law enforcement agency. I wish to join with the many friends of the Bureau in expressing continued confidence in, and respect for the Director, J. Edgar Hoover.

The article follows:

THE FBI—FIDELITY, BRAVERY, INTEGRITY—THESE WORDS ARE EMBLAZONED ON THE FBI SEAL. WHO ARE THE MEN AND WHAT ARE THE DEEDS WHICH HAVE GIVEN THEM MEANING?

WASHINGTON.—One of the most chilling sounds in the world is the unexpected scream of a squalling cat at night.

Ask J. Edgar Hoover, a man of indomitable courage and who has personally led extremely dangerous assignments against vicious criminals on many occasions during his more than 36 years as Director of the FBI. He knows it firsthand.

On a dark night in 1942, Mr. Hoover led a squad of agents on a raid in Chicago. The FBI had learned that the Touhy Gang was hiding out in a Chicago apartment. The net was drawn around the building.

J. Edgar Hoover and another agent climbed in a window and made their way up the stairs in pitch blackness. Suddenly, Mr. Hoover stepped on something soft and a horrible, echoing scream split the air. The Director had stepped on a black cat.

Now, 18 years later, Mr. Hoover maintains he has no doubts that the scream of an anguished cat can make anyone's hair stand on end.

But it takes more than a noisy cat to deter Mr. Hoover. He is the same J. Edgar Hoover who was challenged by Alvin Karpis many years ago in New Orleans. Again leading a squad of agents, he personally arrested Alvin Karpis on May 1, 1936, and rang down the curtain on the Barker-Karpis Gang, one of the most vicious gangs of the "Terrible Thirties."

The Director, who at 65 has the physical vigor of a man many years younger, has set the example for personally leading dangerous and hazardous undertakings whenever time would permit.

Although he missed the famous Dillinger apprehension by hours because of conditions beyond his control, there have been few major undertakings when he was not personally supervising "the situation."

Years ago, FBI agents took into custody a notorious kidnaper who refused to tell where he had hidden the body of his murdered victim. Ultimately he said he would tell only J. Edgar Hoover. Hoover walked into the room, elicited a full confession and flew with the kidnaper to a remote spot in Minnesota where the victim's body was found.

During this trek across the snow in bitter cold, Mr. Hoover and agents stopped in

a country store to purchase warm clothing. Later, the storekeeper wrote to Mr. Hooover that one of the old-timers around the cracker barrel had remarked: "Hoover wasn't much as a President, but we got to admit he is a great investigator."

Investigator Hoover would not completely agree with that statement. He is a close personal friend and admirer of former President Herbert Hoover. There is mutual admiration.

The former President once remarked to the special agent in charge of the FBI's Cincinnati office that he felt one of the high spots in his service as President was the administration of the FBI by Director J. Edgar Hoover. The two Hoovers are not related.

The late Julius Lully owned Harvey's Resturant in Washington, D.C. Mr. Hoover enjoyed particularly dining at Harvey's and was quite partial to the steaks, the Florida stone crabs, green turtle soup, popovers, charcoal-crisp hamburgers, and angel food cake.

Over a period of years, Lully and Mr. Hoover became the closest of friends. Each enjoyed a joke at the other's expense. On one occasion, the crisp-spoken J. Edgar Hoover, at the conclusion of his meal, asked the waiter to bring a cherry heering (a noted Danish cordial). Imagine his consternation when, in a short time, the waiter reappeared with a large platter and one herring with a cherry perched on top.

The waiter remarked to Mr. Hoover that orders of the house were to comply with any request of the guest. In short order, Lully, lurking in the background appeared and advised Mr. Hoover that if he would speak more clearly such difficulties could be avoided. The director enjoyed the joke.

On another occasion, Hoover sent a letter to Lully purporting to be from a renowned New York chief, accusing Lully of stealing a certain recipe. Lully brooded over the letter for several days. Then he showed it to Mr. Hoover who frowned his disapproval. Lully exploded: "Why I would not steal a recipe from that bum."

Mr. Hoover: "Where did you steal it?"
Lully: "I got it from * * *"

A most heart warming experience for every man and woman in the FBI was a recent May 10 when Director Hoover celebrated his anniversary as director. He has had 36. In reflecting upon his years of service, Mr. Hoover said:

"I would not exchange my life and experiences these past years for those of any other person in the world."

"Vast problems have confronted the FBI and law-abiding citizens during this period * * * gangsterism in the 1930's; espionage and sabotage threats of World War II; Communist subversion and treachery; the rise of crime to record heights during the 1950's.

"A career of law enforcement presents a never-ending opportunity to combat the enemies of our society. Each day has seemed more interesting and often more challenging than the previous one. And to top it off, a finer group of associates cannot be found than the men and women with whom I have been honored to serve. What more can a man ask of life than blessings such as these?"

The men and women of the FBI feel the same way toward the director. In him they see a leader inspirational in approach, dedicated in objective, firm in supervision, fair at all times, sympathetic as occasion warrants, but always a patriot and a man of selfless sacrifice.

Mr. Hoover has served as director of the FBI under 5 Presidents and 12 Attorneys General. Since that day on May 10, 1924, when the new Attorney General Harlan Fiske Stone appointed him, Mr. Hoover has enjoyed the respect and esteem of his superiors, coworkers, and subordinates.

Prior to his appointment, the Teapot Dome Oil scandal had become a national disgrace, resulting in the imprisonment of a cabinet officer and the removal of the Attorney General.

President Harding had become ill on a trip to Alaska and died. Vice President Calvin Coolidge became President. He brought the dean of the Columbia Law School, Harlan Fiske Stone, to Washington as Attorney General.

Stone realized a housecleaning in the Department of Justice was necessary. He looked around for an individual with the ability, courage, and drive to take charge of the Bureau of Investigation and commence the housecleaning there.

He chose J. Edgar Hoover. Mr. Hoover lost no time. He cleaned out the political hacks, the incompetents, the unstable personalities; severed the dollar-a-year men and those with honorary appointments, and instituted the foundation on which the FBI has been built. It has grown and prospered through the years. Merit is the foundation.

Daily during the course of activities of every FBI agent there is the unanticipated, the unexpected. No agent knows when he leaves home in the morning when he will return, or whether he will ever return.

He is a man sworn to the service of the public of the United States. He is a dedicated, devoted individual operating in the public behalf. Loyalty and dedication are key notes in FBI activities, but these alone are not sufficient. Mr. Hoover expresses his belief that the accomplishments of the FBI may be traced to three fundamentals: (1) Careful selection of personnel; (2) Thorough training and supervision of personnel; (3) Frequent and unexpected inspections by impartial officials reporting to the director concerning all phases of FBI performance.

Special agents through the years have undertaken hazardous assignments with great personal suffering and with unusual inconveniences to their families. In every instance, they have demonstrated dedication and unequaled spirit.

Perhaps the calling of FBI work is similar to that which inspires highly trained teachers to devote their years to serving young people and molding future citizens even though the teachers could probably make more money in another line of work. Many special agents of the FBI have received attractive offers from industry, but have refused to leave their FBI employment.

In tracing why there is such spirit in the FBI and such a willingness to volunteer for FBI missions many considerations can be offered. Among them would be the careful selection of personnel, the requirements that applicants be graduate attorneys.

The stringent physical requirements similar to those demanded of a cadet enrolling at West Point also might have a bearing. The withering and intensive background investigation given each FBI applicant helps to screen out the undesirables and make it possible to select only the best.

This "cream of the crop" technique undoubtedly has much to do with providing the type of personnel who can fit into the FBI scheme of operations. The careful and intensive training schools, the constant refresher courses, the frequent unannounced examinations, all tend to keep an FBI employee on his toes. Tight supervision also helps.

It is quite possible, however, that the real reasons boil down into very simple terms—leadership at the top and the example set by that leadership provide the inspiration and the code for guidance of the FBI.

The philosophy of FBI employees has been to look after the FBI duties to the best of their ability.

It is the citizens, who profit most from such philosophy. "Fidelity, Bravery, Integrity" is the FBI motto. "Service above self" describes the FBI best.

A Demonstration of Good Citizenship

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. GEORGE. Mr. Speaker, in a recent issue of the Fort Scott Tribune, there appeared an editorial which clearly shows that good citizenship and the recognition of responsibility can keep filthy, pornographic literature from the hands of the children of the city.

The effort of the Postmaster General to obtain additional legislation, and his many speeches on the subject, should both be directed toward the solution as evolved by the citizenry of Fort Scott, Kans. He and the Attorney General should more effectively enforce the laws now in effect and stop attempting to divert the attention of the American people from the shortcomings of the administration.

Censorship, and to what extent, would be the issue if more legislation is considered. As pointed out in the editorial, it would be dangerous to give unlimited censorship powers to any public official or Government agency. If an effective measure could be written, which protects against censorship and against the invasion of private rights, to cleanse the mails of filth, it would be passed by the Congress without a dissenting vote.

Mr. Speaker, because publisher G. Watson Marble, in the editorial of June 15, spells out the sensible approach to a serious problem, I ask that it be considered as part of my remarks:

EFFECTIVE LOCAL CENSORSHIP

To a very considerable extent the task of keeping news and magazine stands free of filth literature is a local concern. It would be wonderful if any legislative body could pass a law outlawing obscenity and making it enforcible. No such law can ever be found, let alone be enacted, and for obvious reasons.

The very apparent problem is in defining what is good or bad, decent or indecent, wholesome or obscene. Many people will agree as to the extremes, but can never agree on the borderline cases. There can be no precise definition which can be written into law, acceptable to all, and enforcible too.

Even if such laws were enacted, they would be dangerous because they could be misused as unjustified censorship. Who is going to tell who what they can read and not read, or tell any publisher what he can print or not print? That can never be done in this country by law.

But in every community there is a reliable, sensible, and effective means of policing literature offered for sale. Parents, ministers, teachers, even operators of newsstands themselves, know what is good and what is bad for young people in their community to read. They can, if they want, be the arbiters, the voluntary censors, for their own community.

The plan has worked in Fort Scott. Groups of adults have expressed concern at various times over material that some distributors would make available at newsstands. Retail men have felt the same concern. The result has been that our town has been kept relatively free of filth literature that is so obvious in some other places. A town can be kept just as clean as its people want it to be.

Putting a stop to obscene material that is sent through the mails is more difficult.

That material can come to juveniles without knowledge of postal authorities and in violation of postal rules. Here again, is a parental responsibility to apprehend and control. Parents can stop that flow of fifth through the mails, too, if they want to. They can keep it out of their own homes, and they can help others by notifying postal authorities whenever they do find it.

Report on Wildlife and Recreation in the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. EDMONDSON. Mr. Speaker, I include in my remarks a copy of the report of the committee on wildlife and recreation to the 47th national convention of the National Rivers and Harbors Congress which met in Washington May 24 to 27, 1960.

This was a newly created committee, the principal purpose of which was stated to be to give attention to the problems involved in use of our many reservoir projects throughout the country. The importance of adequate recreation facilities becomes more evident each year with our burgeoning population, and the ever-increasing tempo of modern living.

It was a pleasure and honor for me to be asked to serve as chairman of this committee and I trust that our deliberations will, in some measure, contribute to a solution of some of the problems that confront us in this field.

The committee, which was meeting for the first time since its creation, held two sessions on May 24 and its report was presented to the convention on May 26 by Mr. Hayden W. Olds, Chief of the Division of Wildlife of the State of Ohio, who represents the Ohio River division on the committee, and was unanimously adopted.

It is to be hoped and expected that as the committee gains experience in dealing with the matters over which it has jurisdiction, it will make a sound and useful contribution in the conservation and use of our water resources in these fields of recreation and wildlife.

The committee's report is as follows:

The committee on wildlife and recreation was called to order by Chairman ED EDMONDSON at 10:30 a.m., Tuesday, May 24, 1960, in the Concord Room of the Mayflower Hotel, Washington, D.C.

The following members of the committee were present: Chairman, Representative Ed Edmondson; Ronald W. Green, Augusta, Maine; Hayden W. Olds, Columbus, Ohio, and W. D. H. Rodiguez, Monroe, La. Arthur S. Tidwell, Jr., Monroe La., was appointed to the committee by the chairman and thereafter elected secretary by the committee. Committeeman John A. Biggs, Washington State, entered the committee meeting after noon, along with Senator Leon Field and W. T. Gooldy, Oklahoma, representing Committeeman George Knapp, Oklahoma.

The meeting adjourned at noon and convened again at 2.30 p.m. and adopted the following resolutions:

1. To commend the president and executive officers of the National Rivers and Harbors Congress for creating the committee on wildlife and recreation thereby recognizing the importance thereof to the public welfare of the Nation and permitting greater consideration of these subjects in the deliberations of the National Rivers and Harbors Congress.

2. To support and endorse Federal legislation designed to recognize recreation as an integral part of any new flood control legislation, water supply, hydroelectric or reclamation project and that recreational benefits be evaluated and considered as a partial justification for such projects.

3. To request consideration of a change in the present land acquisition policy of the Federal Government to promote the acquisition of an adequate acreage in fee simple to guarantee public access and use for recreational purposes and that the cost of these lands be included as a part of the project cost.

4. To request consideration of the development of recreational and access facilities as part of the cost of approved projects.

5. To endorse, approve and urge the continuance of the present policy under which the U.S. Corps of Engineers and the Bureau of Reclamation make available recreational areas under lease or license to State and political subdivisions, civic and service nonprofit organizations.

6. To preserve and protect the recreational and wildlife facilities we urge the continuation of the Federal antipollution control program and the provision of matching funds to finance this program.

The meeting was adjourned at 4:30 p.m.

The committee unanimously recommends the acceptance of these resolutions by the Congress of Rivers and Harbors.

What Can You Do About It?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. YOUNGER. Mr. Speaker, I had the privilege of listening to the following sermon by Rev. W. Paul Ludwig at the Chevy Chase Presbyterian Church recently and it was so apropos of our problem today that it occurred to me it worth worthy of insertion in the CONGRESSIONAL RECORD:

WHAT CAN YOU DO ABOUT IT?

Of all the pathetic cries that are squeezed out of the heart of man, the most desperate is the ultimate sob: "There's nothing we can do about ." Staggered by the recent shocks which have well-nigh seemed to swerve our planet out of orbit, too many of our compatriots have shouted into the darkness: "We're trapped. The cell door is bolted shut. It was a nice party while it lasted, but now——?"

As if God's lifeless shape were heaped in a corner under a pile of rags. Man cannot be original even with his tears. We sputter as if there had never been a broken heart but ours; as if no other nation had ever been rocked to her foundations; as if by some divine reluctance we would be spared the moral judgment of God; as if in His grievous disappointment God in a cosmic pout would turn His back upon us. There's nothing to be done—not even with an assist from Heaven.

Even with our vaunted adaptability, it sometimes appears that we Americans are as prone as any race on earth to put life into a quick freeze—to finalize our hope, or our lack of hope, in an irrevocable interoffice memo. Perhaps it is a matter of semantics.

Mencken's "The American Language" lists many of the differences in vocabularly, pronunciation and syntax between our American speech and the English which is spoken in England. These variations appeared quite early as the American colonists faced objects and experiences quite remote from the traditional routine of the old country. An Englishman who visited Savannah in that city's infancy protested the adulteration of the pure mother tongue:

"The village," he wrote, "stands upon the flat of a hill; the bank of the river (which the Americans in barbarous English call a bluff) is steep and about 45 feet perpendicular." So came an early protest against the word "bluff."

The point to be noted is that popular language is a barometer of a people's peculiar temper. It suggests whether a race is basically refined or vulgar; instinctively poetic and picturesque, or stolid and prosaic; it reflects the warmth of a nation's heart, the generosity of her spirit, the depth of her religious conviction. We can weigh a nation's prejudices or analyze the general texture of her political fabric, if we know her vernacular, her common language, her idiomatic speech.

Above all others there is one characteristic of our American language that staggers me with its deadliness. Our speech is riddled with compartments and categories, with words and phrases that classify humanity—that thrust people into groups and types. It is an exceedingly acute reflection of our mood. Classifications once were comparatively simple. A man was either good or bad; either a churchgoer or a person of feeble standing in the community. He was marked according to his craft or business or politics. But these things are inconsequential in our day. We have increased the number of categories but decreased their moral relevance.

Agnes Newton Keith writes this whimsical paragraph in her book, "Land Below the Wind":

"Everything in the world about me shares in a great vigor. I recognize now as never before the tremendous aliveness of the people of this American continent, a germinating aliveness which makes it impossible to catalog them. People and positions flutter out of their pigeonholes and refuse to be documented. Wives wash their husbands' woolens in order to ride in handsome motorcars; plumbers talk philosophy and philosophers do the plumbing; the man who paints the pantry borrows the anthology of English poetry and the man who compiles the anthology paints his own pantry." If only this trend attested to our spiritual health. No such claim can be made. Most of us go on branding and being branded.

We stamp people as they stream by: "She's a typical schoolmarm." "Isn't that just like a preacher?" "He talks like a bond salesman." "Politicians are all alike." "You can tell what he does for a living." "She's just the type." And so the phrases pour from our lips like a potent acid that dissolves individuality. We hook our insulting tags into a man's heart, and if he is ultrasensitive he may never recover.

But there's an antidote for this contemporary poison. I know a story—the story of a Man and an ancient city called Jericho. I know the story of a Man on His way into the city. And of the crowds clinging to the rooftops and the staircases, or standing ankle deep in dust along His road of entry. I know the story of a Man and another man—and of how they met. The other man had climbed into a tree, for he was too small to see—as all men are small before they meet

Jesus. But this man was branded. His legal name was Zacchaeus; to the people he was "a chief publican, a tax gatherer, and rich." Many inventions had been circulated about his dishonesty. He had discovered the unfortunate predicament of belonging to the aristocracy of wealth.

I know a great story: when the Big Man and the little man met. And the One called to the other, "Come down, my friend, we have some things to talk about. Today I must abide at thy house."

And try as they would, the people couldn't get his tag back on. It wouldn't stick. Zacchaeus, the publican—the tax gatherer. Not any more. Zacchaeus, the friend of Jesus. The Master had only one category for men. They are all the children of God; they are all sinners, nevertheless; and He loves them all.

Inevitably we cringe at the sounds and sights of world revolution. The susceptible student mind is being pressed into the mold fashioned by unscrupulous leaders. With personality ignored, culture frowned upon and the soul granted only the deference of a smile, we shudder at the blight which withers the individuality of so much of the earth's population.

The vanity and power mania of a few agitators cannot be held solely responsible. There is something in us all that deserves censure. Mob hysteria is only made possible by those who are willing to be regimented. Those who thrive on group identity rather than self-identity provide the raw material for the madness of our time.

Are we talking about Japan? About any of the festering spots remote from our shores? Or is it America that needs our first scrutiny and our unending prayers? Swept by the tide of our pleasurebound society, men who once knew their own name can react now only to the label which describes the particular pressure group in which they are enmeshed. We are being constantly pushed and shoved and jostled into the car that is nonstop until it reaches the basement.

And in the midst of it all, the pathetic sob: "But what can we do about it?"

I know another story: of a woman at a well. Of a woman who wore a blemish—which was her tag. And of a Man who wore no blemish whatsoever—whose only label was that He was the Son of God. But He saw no type in her save the universality of sin and an opportunity to be once more the Redeemer.

And the beggar. Remember?—the blind beggar whom Jesus healed with spittle and clay—and faith. The townspeople saw his label fluttering away. They rushed to tie it back on. "Is not this he that sat and begged?"

An American visitor to London wrote home to his friends: "You must visit the Victoria Embankment and see the people sleeping on the benches. They are the most interesting types." God help us. Is our whole society a vast sociological laboratory where men have no more distinctiveness than a row of test tubes?

I know a Nazarene who utterly defied description. The unique thing about Christ is that He was unique. You could always single Him out. No standard model, He. No assembly line Christ. No member of the mob.

W. R. Maltby tried to convince us that "we have bleached all the color out of Jesus." Maybe this is what has happened to His followers. But not to Him. Never.

Why did the scribes and the Pharisees hate Him so? Hear them reviling the blind beggar after Jesus had healed him. "Thou art His disciple," they cried, "but we are disciples of Moses. We know that God hath spoken unto Moses, but as for this man, we do not know whence He is. We do not know where this fellow comes from. We haven't the slightest idea where He belongs." That's what fanned their fury. The Pharisees—the men of precise definitions—of standardized classifications—no wonder they parted company with Jesus. He slipped right out of their fingers.

Praise God there is no cell big enough to imprison our Christ. He refuses to be dressed up in a uniform. Even the Christ in denominational regalia is slipping behind the scenes. Christ in a business suit, or in a picket line must be forgotten. The mysterious Son of Love must be seen through our imperfect eyes as the crucified Saviour of the world. He stands triumphantly, majestically alone.

Then where do we stand who profess to follow Him? What can we do about this battered world? We can plead the forgiveness of God for our easy complacency. We can confess the sins that have perverted our discipleship. We can get back into the family of the Father by acknowledging the lordship of Christ and accepting His redeeming love. The task of the individual before he can do one iota for the society in which he lives, is to get himself right with God. This is what we can do about it. Only then can we work with God for the redemption of this frightened and frightening world.

For a Secretary of Science and Technology With Cabinet Rank

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. DOOLEY. Mr. Speaker, following is an article from Burnell & Co., Inc., in Pelham Manor, N.Y., urging the appointment of a Secretary of Science and Technology, with Cabinet rank.

I think this viewpoint is well taken and worthy of consideration by Members of the Congress.

The article follows:

FOR A SECRETARY OF SCIENCE AND TECHNOLOGY WITH CABINET RANK

Twentieth century scientific endeavor has been so productive that we no longer tend to think of achievement in terms of a decade or a generation. Each significant scientific accomplishment marks the beginning of an age in itself. Thus, we have the atom age, the nuclear age, the age of automation, the space age, electronics, and so forth. Since scientific progress is inextricably linked to survival, it follows that it is an important concern of Government. The vast expenditures for defense—more than $40 billion—the large sums for research—$500 million annually—are indicative of our concern with maintaining technological leadership.

NO VOICE IN CABINET

Yet, while the executive department of Government is advised on matters of public policy by the Secretaries of Agriculture, Commerce, Labor, State, Interior, Treasury, Defense, the Attorney General, and the Postmaster General, there is no policy formulating voice speaking in behalf of science. Since Cabinet members have traditionally been the President's closest advisers—the policy was established by George Washington during his second term and officially recognized in 1907—there appears to be an urgent need for a Secretary of Science and Technology with Cabinet rank.

THE SECRETARY'S RESPONSIBILITIES

A Secretary of Science and Technology with Cabinet rank would do much to clarify our scientific goals and objectives. He would: (a) Help coordinate military and civilian elements of scientific programs to achieve a common goal; (b) recommend top level decisions on the inauguration and development of specific projects; (c) establish our objectives in space, nuclear energy, and so forth; (d) have the responsibility for funds and priorities vital to each program; (e) back up members of his team with authority; (f) oppose arbitrary fund limitations.

In an era when science is of transcendental importance to peace and progress, its voice should speak from a position that carries with it no less than the prestige and the influence of the executive department of Government.

Here We Stand—A Declaration of Principles Which Guides the Staff of American Agriculturist

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following excellent declaration of principles, written by Hugh Cosline, appeared in the July 2 number of American Agriculturist.

This farm paper founded in 1842 represents the thinking of the farmers of the Northeast, in which my district is situated.

Mr. Speaker, these northeastern farmers get very little representation in the Congress of the United States, yet they represent one of the most important farm areas in the Nation. They also represent, more than any other section, the family farm to which so much lipservice is paid.

It seems to me that this short declaration presents not only the thinking of the farmers of the Northeast, but the commonsense approach to the problems of agriculture as a whole.

The article follows:

HERE WE STAND—A DECLARATION OF PRINCIPLES WHICH GUIDES THE STAFF OF AMERICAN AGRICULTURIST

(By Hugh Cosline)

Many years ago, our Founding Fathers wrote a Declaration of Independence that lives today as a charter for national purpose. We think it's a good idea to restate basic principles now and then. What better time than near our celebration of Independence Day?

The policies of the editorial staff of American Agriculturist on current farm problems are reached only after thoughtful analysis. Before final approval, two questions must have an affirmative answer: In the long run, will our position improve the financial returns from farming and add to the contentment and happiness of all our readers? Does it meet the following fundamental principles?

FARM ORGANIZATIONS

Farmers cannot go it alone in today's complicated organized economy. Through or-

ganization, they must seek solutions to the troubles that harass them.

We have good organizations, but they must be strengthened. This can be done by increased membership, by grassroots policies established by farmers, by electing and hiring good administrators, and by greater participation on the part of members to see that policies once established are carried out.

American Agriculturist pledges its support to the job of increasing the influence of all sound farm organizations.

THE FUTURE OF AGRICULTURE

The future is bright for young people who wish to farm, who understand and are willing to give what it takes, and who have or are prepared to get the necessary training.

The predominant type of farm in the Northeast will continue to be the family farm, although it will average somewhat larger than at present. Most of these farms will be fundamentally one- or two-men farms, and will be big enough so that, using modern methods and equipment, the man or men will be fully employed. This will permit modern conveniences and luxuries to develop a satisfying homelife.

Your editors will continue to be optimistic about the opportunities in agriculture.

RESEARCH AND EXTENSION

Farmers who expect to maintain incomes sufficient to give their families modern comforts and conveniences must continue to reach out for and adopt practjes which enable one man to produce more with less work. It is the responsibility of American Agriculturist to supply the information needed to do this.

GOVERNMENT

Government is too big, and is doing too many things. In particular Government has no logical reason for owning or operating any type of business establishment in direct competition with its citizen taxpayers.

Government cannot guarantee prosperity to any group. It has nothing to give anyone which it doesn't first take away from someone.

As affecting agriculture, no Government program now in operation, or to be tried later, will solve the price problems of farmers. Certain activities, for example, marketing agreements and orders, will help in getting prices warranted by supply and demand. But, in fact, the effect of price supports past and present has in total been harmful rather than helpful. In particular, Government attempts to control food production have been largely nullified by the actions of other Government agencies which have encouraged production. For example, reclamation of land not presently needed, the granting of easy credit, and the maintenance of unrealistically high price supports.

But, regardless of these facts, there seems little hope that Congress will give up in its attempts to cure the price problems of food producers. Therefore, farmers must continue for some time to live with the present disgraceful situation.

The editors of American Agriculturist will continue to present the facts about Government farm programs as we see them.

EDUCATION

A democracy cannot endure without an informed electorate. This makes education a No. 1 requirement. It is expensive, and will continue to be so, but it should have first priority.

Our schools are not perfect; they never will be. But the strongest force to make them better will continue to be keen interest and activity on the part of all parents and taxpayers.

American Agriculturist favors adequate schools; is opposed to Federal aid and control.

FREE ENTERPRISE

The prime reason why America has prospered above other countries has been the freedom of the individual to set his sights high, to work at whatever job he wishes, to keep the products of his labor, to worship according to the dictates of his conscience.

Therefore, it is our belief that any effort to hamper this freedom, whether it be voluntary groups such as farm organizations, labor unions or political parties, or any course of action by any branch of government, will inevitably curtail freedom and the well-being of all. Your editors will continue to resist the trend toward a regimented economy.

SPIRITUAL STRENGTH

Mechanical power, made effective through the ingenuity of man in a free society, is mainly responsible for better living standards. Yet this mechanical power is puny compared to the spiritual power which is available to all. This spiritual power breeds courage to resist oppression, it develops integrity to oppose dishonesty, it gives high strength and purpose to the lives of all.

Opinions From the Eighth District of Ohio

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. BETTS. Mr. Speaker, during the course of the year I receive ballots from members of the National Federation of Independent Business in the congressional district I represent. These persons are small businessmen and since small business constitutes an important part of our economy, I am always interested in the views expressed on these ballots. I have tallied the results of the balloting and believe it reflects the thinking of this group on some of the important issues we are considering in Congress.

Here is the way the average small businessman in the Eighth District of Ohio feels about some of these subjects:

He is overwhelmingly opposed to any further raising or extension of the Federal minimum wage law.

He believes imports should be curbed.

He believes tariffs should be tied into foreign wage rates.

He strongly favors the taxation of co-ops.

He suports a program to retire the national debt.

He is in favor of reducing subsidies and a cut in spending.

The distressing thing about the small businessman's position becomes apparent when it is realized that he is opposed by powerful pressure groups. On every one of the issues noted above, he represents a small voice against the labor union, the free traders, the spenders, and a variety of organizations whose ultimate effect is to oppress him.

It is not possible to marshal any arguments here for or against these issues, but I do believe it is necessary that Members of Congress are made aware of the position of the small businessman and appreciate the fact that he is entitled to some consideration in the legislative process.

Mr. Speaker, 2 years ago I felt it necessary to speak up for the small businessman in almost these same words. Unfortunately, the plight of the small businessman has not improved in that time and, in fact, his difficulties continue to increase. It is significant to note the 86th Congress has done little to help him. Once again, then, I can only hope that the Congress which convenes next January will give more attention to the independent businessman than has been evident in the past.

The Agriculture Situation With the Politics Left Out

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. SHORT. Mr. Speaker, now that hope of passing any major revision to existing farm legislation is apparently laid away for this session of Congress, it would seem desirable that Members of Congress take a new look at this problem that always seems to be with us. Being a farmer, myself, I believe I have a first-hand knowledge of the problems that exist that adversely affect the farmer's income. I believe I also have an understanding of the limitations we are faced with when we attempt to fix prices with Federal legislation. The vast difference in crops, people, climate, and markets, to say nothing of size of farms creates a dissimilarity of interest that makes almost impossible regulatory and price fixing legislation that is satisfactory to all concerned. A price that may be necessary for the small farmer to make ends meet can be overly attractive to the real large farmer.

Prof. O. B. Jesness, longtime dean of agricultural economics at the University of Minnesota, has written an article which is published in the July issue of Successful Farming magazine. This article, in my opinion, sets forth in clear, brief language the agricultural problem of the Nation without any attempt to blame or justify anyone for what has happened in the past. Congress in its next session must deal with the build-up of surplus farm products. I feel the points clarified by Professor Jesness as fact or fancy provide valuable information for all Members of Congress. I commend it to the attention of my colleagues in the House:

THE FARM PROBLEM: FACT AND FANCY

(The political conventions this month signal the start of the final dash to the election finish line. Political speeches will get more partisan, promises will get bigger, liberties with the truth may become more evident. This report will help you better judge your candidates.)

(By O. B. Jesness, professor emeritus, University of Minnesota)

The heat and oratorical license of the political campaign—now getting a full head of

steam—make it more difficult than usual to separate fact from fancy in trying to think straight about the farm problem. Nor is the job made easier when fancy sometimes has more appeal than fact.

Another difficulty is that neither fact nor fancy on farm issues is pure white nor ebony black. Fact does not always come crystal clear with no tinge of fancy. Nor is fancy always purely a child of imagination.

But in the coming months of emphasis on politics, it behooves us all to try to separate the wheat from the chaff, and to set our thinking straight on at least a few points. Otherwise, we may be even more hopelessly confused by the avalanche of words which soon will cascade around us.

Fact or fancy? Low prices are the cause of farm problems. No one in his right mind would deny that the prices you receive are important in determining your farm income. So, can there be any question about price being the cause of all present-day farm difficulties?

Well, farm programs of the past three decades appear to have accepted as fact that price is the problem. But if the problem was that simple—if price is the real cause of the farm problems—why haven't three decades of effort cured the problem?

Answer. It appears that the prices with which we are concerned are the consequence of something else. So the attack on farm problems should be centered on that something else.

Fact or fancy? Unsatisfactory prices for some farm products are a consequence of surpluses. Now we're getting warmer. Persistent surpluses provide us with clear evidence of an excess capacity to produce the commodities involved.

In short, the basic farm problem arises out of the fact that too many resources—especially land and manpower—are being used in lines in persistent surplus.

Fact or fancy? Food is such a necessity that there cannot be too much. Now there's an appealing statement. But contrary evidence in the form of about $9 billion of the taxpayers' money tied up in loans and inventories of the Commodity Credit Corporation is not easily overlooked.

Political minds may find it convenient to blame the administration—particularly the Secretary of Agriculture—for inefficient handling. However, this surplus problem is no respecter of party lines. Other Secretaries and administrations have faced the problem. For instance, the ever-normal granary of the 1930's was fast becoming ever-abnormal until it was bailed out by World War II.

Then demands of war, the rebuilding of Europe, and the Korean conflict provided a ready market for all we could produce—until the early 1950's. But farmers don't want war-oriented prosperity.

Fact or fancy? We have recognized the fact of surpluses. The acreage allotments and marketing quotas legislated for basic commodities are an indication. The more recent soil bank is another.

But mounting stocks suggest that we have only given lip service to the existing of the problem. We have not faced the facts squarely. For example: In providing acre allotments for wheat and cotton, Congress softened the curb by limiting the total below which allotments were not to fall.

The 55-million acre minimum for wheat still leaves too much land in wheat to bring that crop into balance. Further, the limit was shifted from seeded to harvested acres, which eased the controls. Softening curbs still more was eliminating from restrictions those below a certain acreage—15 acres in the case of wheat.

We haven't controlled surplus production. We haven't really tried to do so.

Fact or fancy? But farmers stand ready to accept and abide by effective controls on their production and sales in return for assured supports.

Some politicians and others who advocate a continuation of present support levels or raising them, recognize that we cannot go on piling up stocks—burdening the public with mounting costs of carrying and disposing of surpluses.

They make the statement that farmers would accept stiff controls in exchange for "high" supports. Past experience suggests that this is not true. A politician who hopes to stay in office has to be a good judge of public opinion. The unwillingness of Congress to authorize stronger controls suggests resistance to, rather than demand for, such measures from farmers.

The minimums and softening of curbs cited above is one proof of this. Another is the present administration's short-lived proclamation of cross-compliance and total acreage allotments—which brought such an avalanche of criticism that they were abandoned.

The consequence of these failures of politicians and/or farmers to accept really effective controls has been that a significant share of the land held out of wheat and cotton has gone into feed grains. Feed grain and livestock producers have felt the effect of these failures.

In short, the half-hearted attempts to control surpluses in some lines has resulted in a spread of, rather than a cure for, the surplus problem.

Fact or fancy? The best answer is to drop the whole business of farm programs and let Nature take its course. This suggested by some who are sick and tired of the present mess and are tired of looking for panaceas.

Although there probably are not very many who seriously think we can continue traveling the road of the present farm program very much longer, the "let nature take its course" view falls short of facing facts frankly.

Such withdrawal in the light of stocks which public policy has encouraged and permitted would lead to chaos in markets and spell disaster for some farmers. This route is unacceptable.

Fact or fancy? Rights to produce should be assigned to the farmer and made transferable—rather than being attached to his land. Let's see how it would work: If you wanted to expand a controlled enterprise, you could buy rights from others without having to buy land in order to get them. This would establish values for rights. The benefit would go to the seller—and you would incur a cost which you would expect to recover from production.

It would hamper your progress, make it more difficult for your son to start farming. He'd have to buy a farm, then buy the right to produce on it. It would give those leaving agriculture something besides their land to sell—but place an additional burden on the man who stays and tries to make a go of farming. Is this what we want farm programs to do?

Fact or fancy? The rallying call of politicians that they "want to preserve the family farm." What they want to preserve it against is not too clear—and may not be too clear in their own minds.

You get the picture of corporations swallowing up family farms right and left. Is there any indication that any general move of this kind is on foot? If it were, results would soon show up in an increase in numbers of hired farmworkers. But the trend has been in the other direction.

Farms have been increasing in size through consolidation in order to make more effective use of modern machines and technology. This has been an adaptation of family farms to modern methods—a strengthening, not replacement.

Fact or fancy? We can get rid of our surplus stocks through Food for Peace and similar endeavors. Again there is need for tempering fancy with reality.

On the one hand we find those who talk glibly about giving away food as though there were no limits.

On the other extreme are those who would restrict such activities, if any, to the domestic scene.

We need to continue to build markets for our products, and to use our food for humanitarian purposes whenever possible. But we cannot realistically expect to get the solution for agriculture's ills in this realm.

Fact or fancy? Farmers should be given "bargaining power." This proposition can be dressed up to carry a lot of appeal. Fancy would have you believe that everyone except the farmer is a monopolist. The fact is that many are not.

The controls which others are supposed to have over production, markets, and prices are easily exaggerated. A look at the rate of business failures makes that obvious.

But even if everyone else were a monopolist, just how would your political "friend" give the farmer bargaining power? Controls over production and sales would be essential—but not enough. If the individual farmer is to get the benefits of such power, the numbers participating must be restricted. Are we ready to require a Government permit for everyone wanting to farm?

Fact or fancy? We should help farmers in lines which are in serious surplus make adjustments. Aim of such a program would be not to hold parts of farms in idleness, but to acheieve adjustments through programs on selected farms with voluntary participation of the farmers involved.

But, isn't this the purpose of the present conservation reserve? The purpose may be the same but the method would be significantly different.

As it has been applied up to now, the conservation reserve has been a shotgun approach. It is not selective in any marked degree in concentrating on the crops or areas where adjustment should take place. Its aim is to take out crop acres—rather than specifically acres of hard winter wheat, cotton, and other crops in need of adjustment.

Much of the conservation reserve involves temporarily withholding land from crop use. The more difficult parts of the adjustment program involve a longer time land removal For example, instead of holding land out for 3 or 5 years with the intent of increasing its productivity and then returning it to its former use, some more permanent shifts are needed.

For instance: In the case of hard winter wheat in the Great Plains it may be a shift out of wheat back to grazing. In other cases it will be a shift out of agricultural use entirely.

Where necessary, it should include help to farmers to transfer to other occupations that provide the prospects of better income to them. It should be a voluntary response to inducements provided by public funds.

These may involve payments for several years ahead, or the use of leases in some instances, and perhaps land purchase in exceptional cases. Firm commitments to keep the land out of specified uses will be essential.

Gradual lowering of price supports will be a part of the program to avoid the impossible situation in which the conservation reserve finds itself—the Government bids to take land out of production through the conservation reserve program, and at the same time provides incentives to farmers to continue production through price supports.

The conservation reserve has encountered opposition from local suppliers and others dependent on the farm community. The same may be expected of any program which

leads to major adjustments in some localities. While these effects cannot be ignored, it may be in order to remind some of the leaders and firms injured by adjustment that they cannot expect the public to support unneeded agricultural production just to keep them in business.

SUMMARY

The real question is whether we will fare better over the years by using and improving the market or by turning the job over to the Government.

The choice is not between Government domination and no Government participation. It is one of what sort of Government participation we want.

The time for sober thinking about this is before we assign the job of control to the Government.

Afterward may be too late.

The High Cost of Federal School Aid

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. HESS. Mr. Speaker, under permission granted me to extend my remarks I wish to include an editorial entitled "The High Cost of Federal School Aid," which appeared in the Western Hills Press of Cheviot, Cincinnati, Ohio, on Thursday, June 23, 1960. This fine editorial should be read by every Member of Congress for it furnishes pertinent information on a most important subject. The article follows:

THE HIGH COST OF FEDERAL SCHOOL AID

Advocates of Federal aid to education have a bill pending in Congress proposing appropriation of $975 million at the rate of $325 million for the next 3 years to finance new school building. This is based on the House Education and Labor Committee report indicating an annual requirement of 52,700 more classrooms for the period from 1960 through 1964.

Federal aid is justified in any area only on the premise that an essential need cannot be supplied by the local community. What is the record in this regard insofar as school building is concerned? We are told that in the past decade—without any Federal aid—the classroom additions have averaged 59,400 per year and that, since 1955, this average has been 66,900 classrooms per year.

Obviously the overall aggregate need has been met in recent years. But has the need been met in the States where it is most acute? This is a moot question which would be difficult to answer. However, it would appear that if the distribution has not been equitable, then the pending legislation is not the answer, for, under the proposed bill, 42 percent of the Federal tax money appropriated would go to only seven States. In addition to Ohio, these favored seven include New York, California, Pennsylvania, Texas, Illinois, and Michigan. Hardly the neediest States, we would say.

But to bring the problem closer to home. Western Hills school districts have not escaped the demand for additional school facilities nor have the taxpayers of these communities shirked their obligation in meeting the demand. Colerain Township may be cited as a typical example. The people of that community have generously approved eight separate bond issues aggregating over $4 million for school building, not to mention numerous tax levies for school operating purposes, since 1947.

Nor has this been an oppressive burden against which local taxpayers have rebelled. With few exceptions, they have approved each new request as it has been presented by their respective boards of education. Moreover, the soundness of the askings have been vindicated when the resulting tax rate has been substantially less than the estimated amount, indicative of conservative, knowledgable financing based on a first-hand understanding of local needs and ability to pay. Indeed, because of increasing tax duplicate, in some cases there has been no net increase or the new tax rate has actually been less than that of previous years.

Thus on November 21, 1958, the Press headlined "Tax Rates Down in 8 of 11 Districts." The following story stated, "The tax rates announced Wednesday by the Hamilton County Budget Commission prove the exception to the rule that 'taxes never come down.' In 8 of 11 unincorporated political subdivisions in the 7 western Hamilton County townships, the rates on which taxes will be collected in 1959 have declined."

Or again, as recently as December 10, 1959, the Press reported, "The largest single jump in tax duplicate in any western county political subdivision is that in the Oak Hills School District, where the duplicate is now estimated at $81,700,000. This represents an increase of almost $6 million over the $75,897,850 current valuation and is a principal factor in reducing the Oak Hills District tax rate by 46 cents from $18.44 this year to $17.98 next year (1960)."

Thus, it may be seen, that in many cases the circumstances creating the school problem also provide their own built-in answer—given competent administration and understanding support at the grassroots level. Yes, we know there are exceptions, but these too can be met through State-aid in those States where the people are determined not to surrender another responsibility and privilege of local self-government to centralized Federal bureaucracy.

Under the Federal aid system, the people will not only lose direct control of limiting the cost of financing their schools, but may ultimately lose the right to administer them through their locally elected boards of education. The people have abdicated many of their rights and responsibilities to the feudal benevolence of a faceless Washington. When they abdicate the right and responsibility of educating their children, they will have traveled beyond the point of return on the road to Federal bureaucratic dictatorship.

A Tribute to a Great Educator

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. GEORGE. Mr. Speaker, recently the high school principal of Moran, Kans., announced his retirement. Mr. I. T. Dirks, who could have earned much more had he abandoned the field of education, is loved and admired by all who really know him. I am happy, Mr. Speaker, that he intends to continue as a resident of the Second Congressional District of Kansas.

Because Col. R. L. Thompson recognized the contribution Mr. Dirks made to his community and because it is a well-deserved tribute, I ask leave to include the editorial which appeared in the Moran Sentinel of June 16 in the extension of my remarks:

THE ORDEAL OF PEDAGOGS—AND A TRIBUTE

During the years that I have given over to fomenting trouble, stirring up animosities, arousing fears, encouraging heresy, fostering recusance, denouncing Democrats and endorsing Republican nonsense, very few pedagogues have got their names listed in my book of Sir Galahads and Joan of Arcs.

The reason is easy to explain and it does not cast an invidious reflection upon their professional competence. Through the years my contacts with them were scanty and I thus got to know only a few of them intimately.

I have been told by professional grumblers and other such cranks that the generality of pedagogs are protean creatures easily frightened, jolly backslappers lacking in backbone and hence men and women of dubious usefulness in the world.

This estimate, which I incline to accept with misgivings, probably stems from the fact that birchmen are often forced to succumb to expediency in order to hold their jobs. The lines they follow are hard ones indeed. They are public servants without a political machine to keep them safely in office, and many of them find themselves constantly under the unsparing thumbs of irrational one-kid parents or a maiden aunt struggling heroically, but in vain, to make a man of a delinquent nephew.

If pedagogues do submit occasionally to upbraidings without a fight and take to the tall and uncut on weekends to escape the horror of tar and feathers, they cannot be blamed. I'd do the same thing myself just as I do it every week in getting out this organ of doubtful enlightenment. Like the pedagogue, every editor is at the mercy of the public and he soon discovers that he must not tread on sensitive toes if he hopes to survive.

But if some birchmen are timorous fellows, it is not true of them all. I. T. Dirks, who was the high school principal here for many years and who recently announced his retirement, was a notable exception.

During his years here I got to know him rather more than casually, and the more I got to know him the more I respected his independence and his talents as a teacher. He was as far removed from a milksop as a man can get and he could not be pushed around. Knuckling to the demands of an infuriated paterfamilias and running from a fight were as abhorrent to him as underwear is to a nudist.

Throughout his long career he refused to tolerate outside interference in the management of his schools, and he was able to defend this policy on solid ground. His objectives were always clearly defined, his rules simple and just and his requirements high but reasonable. As the principal it was his business to recommend the appointment of qualified teachers, to weed out incompetents, to maintain discipline and to steer students into fields of learning for which they had some talent. He succeeded magnificently on all counts save perhaps the last one. He always surrounded himself with a staff of ability, and many of his students went on to distinguish themselves in other institutions.

Mr. Dirks was always on cordial terms with his staff and the reason is not far to seek. He knew a capable teacher when he saw one and there were never any misfits on his staff to flub-the-dub and lower the scholastic standards. Proof of this may be found in the fact that his teachers always went to better jobs, not worse ones. The cases of Reese Pollard and Seth McClintock are recent examples. When they left here both men moved up, not down.

Like all realistic men, Mr. Dirks never sought to surmount the insurmountable or to remedy the irremediable. He entertained a few convictions concerning the academic life which ran counter to popular concepts but he kept them discreetly to himself. He once confided to me that he believed all schools were carrying athletics to an insane extreme, and that the time and money wasted on them should be put to a more profitable use. But he never committed the fatuity of trying to expunge what is now intrinsic in our educational system. Winning football and basketball teams are very dear to the hearts of all Americans, and he never attempted the futility of altering the unalterable.

He once told me that too many of his high school graduates were entering college who ought to be attending trade schools and he often deplored his inability to guide them into channels of learning that were not beyond their capabilities. "But some parents," he said, "believe their progeny are potential Shakespeares and Edisons, and there is nothing I can do about it."

Like all uncompromising men who follow what they conceive to be a sound and honest course, it was only natural that Mr. Dirks should leave some enemies along his academic trail. I have heard him excoriated by some very respectable people but these denunciations never altered my conviction that he was an extremely competent workman in a profession that is heavy laden with pitfalls, frustrations, and abominations. Like Grover Cleveland, he distinguished himself by the enemies he made rather than by the friends he kept.

With more than 40 years of teaching behind him, Mr. Dirks now enters upon a less strenuous and more peaceful life. With his septuagesima just around the corner, I am hoping that many more years of usefulness are spared to him.

Former Army Chief of Staff, Gen. Maxwell D. Taylor, Critical of Policymaking

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article by Mr. Jack Raymond which appeared in the New York Times on Wednesday, June 15, 1960:

TAYLOR CRITICAL OF POLICYMAKING—TELLS SENATORS LACK OF CLEAR GUIDANCE TO MILITARY IS A PERIL TO CIVIL CONTROL

(By Jack Raymond)

WASHINGTON, June 14.—Gen. Maxwell D. Taylor, former Army Chief of Staff, warned today that civilian control of the military was imperiled by the lack of clear national policies.

General Taylor, testifying before the Senate Subcommittee on National Policy Machinery, repeated the criticisms of the organization of the Defense Department that he has been making since retiring from the Army last year in self-described frustration.

He charged that the Nation's military chiefs received no clear guidance, that top-level planning was incomplete and that rigid budgetary considerations play an overriding part in developing military forces.

"As a result of the foregoing conditions, we have the strange phenomenon of the partial loss of control of the military in Government, where all parties, including the military, are dedicated to the principle of civilian control," General Taylor said.

SEES CONFUSION ON CONTROLS

Too often, General Taylor went on, the principle of civilian control has been "confused with the need for layers of civilians between the responsible military chiefs and the seats of decisionmaking authority."

True civilian control would assure military forces that could provide a flexible tool for defense and maneuver for the President and the Secretary of State.

But lack of clearly defined national strategy, vagueness of guidance, and obsolete methods of budgetmaking combine to make difficult, if not impossible, this meaningful kind of civilian control, General Taylor said.

The general testified that although he had not been a member of the National Security Council, he had "seen the end product" during his 4 years as Army member of the Joint Chiefs of Staff at the Pentagon.

NO CLEAR GUIDANCE

During that time, General Taylor continued, the chiefs did not receive "clear guidance" on the role of the military forces in carrying out the objectives of national strategic policy.

In response to questions by Senator JACOB K. JAVITS, Republican of New York, General Taylor agreed that the military leaders had been forced to "make assumptions" where concrete statements of military objectives should have been available. Thus, he indicated, military men took responsibilities that should remain in civilian hands.

General Taylor testified that in his experience the joint strategic objectives plan, developed by the Joint Chiefs, had "never been an effective document."

Senator HENRY M. JACKSON, Democrat, of Washington, is chairman of the subcommittee, a unit of the Government Operations Committee.

It has been holding hearings on the adequacy of the Government's organization to deal with the "cold war."

General Taylor said that he had been told that conditions at the Pentagon had improved since Secretary Thomas S. Gates, Jr., had taken over. The general served under Secretaries Neil H. McElroy and Charles E. Wilson.

Fifteenth Anniversary of the United Nations

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. ZABLOCKI. Mr. Speaker, I would like to take a moment to comment on a very significant anniversary—the 15th anniversary of the signing of the United Nations Charter which took place in San Francisco on June 26, 1945.

On that memorable day, the representatives of 50 nations affixed their signatures to the basic document of a new international organization, open to all peace-loving nations of the world on the basis of the principle of sovereign equality, and dedicated to the achievement and maintenance of international peace.

Four months later, on October 25, 1945, the Charter of the United Nations came into force, having been ratified by more than two-thirds of its signatories, including the five permanent members of the Security Council.

The purposes and principles of the United Nations Organization were outlined clearly in article 1 of the Charter. In brief, they were and continue to be as follows:

First. To maintain international peace and security.

Second. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples.

Third. To achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian character, and to promote respect for human rights and for fundamental freedoms for all.

Fourth. To be a center for harmonizing the actions of nations in the attainment of these common ends.

Much has transpired in the world since that memorable day 15 years ago. We have seen the United Nations Organization grow in membership, in prestige, and in the scope of the functions which it performs. Today, the United Nations is engaged in activities throughout the globe. Its programs serve and affect the lives of countless millions of people. Through its social, economic, educational, legal, and political activities, the United Nations is endeavoring to enlarge the area of freedom and order in the world, to assist the peoples of the various continents in realizing their aspirations for a better life, and to promote the maintenance of peace.

There is a difference of opinion in some quarters about the United Nations, about its endeavors and about its achievements. The facts, however, speak for themselves. In an uncertain and strife-torn world, divided by communism, the United Nations has tried to transcend political boundaries and to promote peace, order, and social welfare of the peoples of its member states. While the organization is far from perfect, it has done a better job with the tools at its disposal than most critics will admit. Its record on this score is clear and open for all to see.

In my opinion, the United Nations has proved itself to be an important instrument for promoting, on the international scene, the attainment of goals which are vital to all of us. The hopes of millions of peoples, aspiring to a better and a peaceful future, are centered upon it. I am hopeful that, in the troubled years that lie ahead, the United Nations will continue to exercise its constructive influence and enjoy success in its worthy undertakings.

Mr. Speaker, under leave to extend my remarks I include in the RECORD the text of an address by President Harry S. Truman, delivered yesterday in San Francisco at an observance of the 15th anniversary of the founding of the United Nations.

It is a very thought-provoking and forceful statement of some of the basic international problems of our day—and of the way in which the United Nations has and can continue to help in solving those problems.

There is one particular passage in President Truman's address which I would like to quote at this point. It reads:

In this nuclear age, no nation can live unto itself alone. There is no hope for any nation in isolationism or in imperialism. The United Nations is the best hope of mankind for deliverance from mutual destruction.

I commend this statement, and the entire text of President Truman's address, to the attention of the membership of this body:

TEXT OF PRESIDENT TRUMAN'S SPEECH ON THE 15TH ANNIVERSARY OF THE FOUNDING OF THE UNITED NATIONS

A most important development in within the last year has been the presentation before the United Nations General Assembly of a disarmament plan by the head of the Soviet Government, Nikita Khrushchev.

I thought it was the most important event of Khrushchev's visit because he considered the United Nations the proper place to deal with so vital an issue as disarmament. This is a forward step in Russian thinking about the United Nations. I regard this as a sign of the growth of the United Nations as a force in working out the problems of peace.

I would like to believe that the fact that he used the United Nations forum for the only concrete and public proposal of his visit is evidence of his esteem today for this international organization.

I hope that Khrushchev was not making just a grandstand play. But whether or not events reveal that Khrushchev made his proposal in good faith, the fact is that the United States is the one place where disarmament should be dealt with.

Disarmament, to succeed, should be a steady process of creating conditions which make it more and more difficult for any nation to break the peace. Effective disarmament should remove from the world not only the terror of nuclear weapons and guided missiles, but also the threat of mass armies.

INSPECTION CALLED KEY POINT

Effective disarmament means an open world with no secret armies, no secret war plans. If we are to achieve effective international control of armaments, we have to have every nation open to inspection.

This is what I said 5 years ago on the occasion of the 10th anniversary of the establishment of the United Nations. And in all the years since the founding of this international organization I have seen evidence of the continued need for service of the United Nations in the cause of peace.

New and ancient jealousies over sovereignty have made some of the work of the organization difficult and, at times, frustrating. As we have seen in Korea and in the Middle East, and as I hope we shall see in the Far East, the role of the United Nations has been more than theoretical and academic. It has been practical and effective. In my opinion, it has helped keep some explosive areas from plunging us all into a third World War.

I have felt from the very beginning, and my convictions have been confirmed by the experience of the United Nations to date, that we must have an international police force at the disposal of the United Nations.

The international police force must be strong enough to undertake such police action as the United Nations deems necessary to maintain the peace.

CHARTER'S SPIRIT PRESERVED

It is my belief that the sovereignty of no nation will be impaired. In reality, sovereignty of nations will be made more secure. The establishment of the international police force would require only the delegation of certain limited authority.

Time and experience will teach us just how much authority it will be necessary to delegate to the United Nations to make this international police force a more and more effective arm for helping keep the peace.

The United Nations today is a living institution. Like all living things, it follows a development of its own. Some of the things we put down on paper in the charter have not come to pass—some of the procedures originally planned have proved unworkable; but they have been replaced by new activities, new procedures, all within the spirit of the charter, that we did not foresee 10 years ago. This is the course of all written constitutions if they are to endure and meet the changing needs of the years.

Fifteen years ago in San Francisco all the nations represented agreed on the goal of world peace. They also agreed that to achieve peace would require determination and effort. On that occasion I said:

"If we had had this charter a few years ago—and above all the will to use it—millions now dead would be alive. If we should falter in the future in our will to use it, millions now living will surely die.

"It has already been said by many that this is only a first step to a lasting peace. That is true. The important thing is that all our thinking and all our actions be based on the realization that it is in fact only a first step. Let us all have it firmly in mind that we start today from a good beginning, and, with our eye always on the final objective, let us march forward."

The question of armaments has clouded the international horizon for many years. It grows more and more serious. Every year science places new and more terrible weapons in our hands. Every year the financial burdens of defense grow heavier and heavier. Every year the consequences of sudden attack and the perils of inadequate defense become more deadly. Today, the battles of World War II are almost as far behind us technologically as the battles of Napoleon or the techniques of Genghis Kahn. The use of force in international affairs today raises the threat, the almost incomprehensible threat, of total destruction, not only of cities and nations, but of all human life.

I earnestly hope that the time has come when we may break the deadlock on international disarmament.

A communique issued by President Eisenhower and Chairman Khrushchev at the conclusion of their private meetings at Camp David stated, among other things, that no disputes would be settled by force.

There was nothing new in this declaration that the Soviet Union was not already obligated to observe as a member of the United Nations.

The Charter of the United Nations embodies the obligation of the members not to use force except in defense of the charter. This is both a legal and moral obligation. It binds all the nations that signed and ratified the charter, even those that may be strong enough to violate it. It is a powerful, if intangible restraint on all the member nations. It is sustained by the mighty force of the moral judgment of mankind.

FREEDOM IS EMPHASIZED

Second only to peace in the United Nations Charter is the emphasis it lays on improving the standards of living of mankind and safeguarding the fundamental freedoms and the dignity of men. This work must be carried on at the same time that we strive to eliminate war. Indeed, this humanitarian program strikes at one of the main causes of war. It is a tribute to the framers of the United Nations Charter that they gave this objective such great importance, and set up machinery for pursuing it effectively even before the framework of international peace was completed.

One of the arguments that has gone on since the very beginning is that between the liberal constructionists and the strict constructionists. To the Soviet bloc, much that the United Nations has done is illegal, because it was accomplished in circumvention of the big-power veto. For this liberal interpretation, the United States is more responsible than any other nation, because the Uniting for Peace Resolution of 1960 made it possible to switch the center of gravity from the Security Council to the General Assembly. The General Assembly then took over the direction of affairs in Korea, because it was clear that when the Russians returned to the Security Council they would block the Korean program in the Council.

A few weeks ago, another step taken for a liberal interpretation from the chair laid the ghost of the double veto. Ten members of the Security Council were to set up an investigating committee for Laos and they wanted to determine that the setting up of such a committee was a procedural matter, because the Charter grants the Security Council the right to create subsidiary bodies to help the performance of its functions. The Russians insisted that they could have a veto in the vote to determine whether or not the matter was procedural. The Security Council by a vote of 10 to 1 swept such nonsense aside and thus laid the ghost of the double veto.

The United Nations has grown profoundly: First, through the liberal interpretation of the Charter. The second way in which the United Nations has grown is by the addition of new bodies and the expansion of existing functions.

One of the greatest inspirations given the United Nations was the point 4 program, which led to the expanded technical assistance program; the Paul Hoffman program for the Special Fund, and the agreement last fall to establish an international development authority as part of the International Bank (as recently suggested by Senator MIKE MONRONEY). Thus a last effort is now going on to help underdeveloped areas.

The agency for the peacetime use of atomic energy is another addition to the United Nations family of agencies.

Another argument that has gone on in the United Nations has been over the question of the freedom of dependent areas. It is not too much of an oversimplification to say that the argument is between the colonial-minded and the others. The Colonies in 1776 struck the first blow against the colonial system. Within the last 15 years, over one-fourth the population of the world has thrown off the yoke of colonialism. And some of these nations were helped to independence by the United Nations, such as in the case of Israel, Libya, and Korea. In most of the cases, the new nations have been welcomed into the United Nations, where they have found an opportunity for self-expression. Indeed, I think if this great revolt against the colonial system had occurred in a world of anarchy, the dislocations might have been quite serious.

CONSERVATIVE FEARS DISCOUNTED

There are those conservative people who are afraid of what the new states will do. But just as we had a right to make our own mistakes in 1776, and it looked as though in what John Fiske has called the critical period our mistakes would destroy us, so the other new states have a right to make their mistakes. It is true that with the admission of so many new states into the United Nations the United States does not have the automatic domination of the General Assembly, we will have no trouble in having a two-thirds majority with us. I think this has been demonstrated in the last few years. But I stress that we must be on the side of human freedom and our position must be right and, I might add, clearly expressed. So it is up to us to do right by the rest of

the world—free and slave or dominated by totalitarians.

As I think back over the past years, I am encouraged by what has been done in the economic and social field. But all our accomplishments to date are only a good beginning. There is much that remains to be done. Here is a challenge to the understanding, the generosity and the ingenuity of man.

We now take it as a matter of course that one nation should offer scientific instruction and technical advances to another, free, without expecting a return of any kind except the consciousness of being part of the brotherhood of man. What a tremendous step forward this is in the realization of our common international responsibilities. Fifty years ago, a program of technical assistance would have been considered completely visionary. Nowadays, the only real question is—how big should such a program be? This revolutionary change in public opinion is the result, at least in part, of the economic and social portions of the United Nations Charter, and the general acceptance of their underlying philosophy.

I am glad to see that technical assistance and economic development are a growing part of the work of the United Nations. While all international good works need not be confined to the United Nations, there are many situations in which this organization is the best channel for such international activities. I hope all the member governments will support these activities of the United Nations wholeheartedly and generously.

In this nuclear age, no nation can live unto itself alone. There is no hope for any nation in isolationism or in imperialism. The United Nations is the best hope of mankind for deliverance from mutual destruction.

FOUNDING SPEECH RECALLED

Will you please be patient with me while I repeat a statement or two from the speech I made here in San Francisco just 15 years ago? While I am no prophet nor the son of one, my viewpoint 15 years ago has not changed with regard to the United Nations, its effect on the peace of the world and the necessity for its existence to maintain that peace.

"The charter, like our own Constitution, will be expanded and improved as time goes on. No one claims that it is now a final or a perfect instrument. It has not been poured into any fixed mold. Changing world conditions will require readjustment—but they will be the readjustments of peace and not of war.

"There were many who doubted that agreement could ever be reached by these 50 countries differing so much in race and religion, in language and culture. But these differences were all forgotten in one unshakeable unity of determination—to find a way to end war.

"Out of this conflict (World War II) have come powerful military nations, now fully trained and equipped for war. But they have no right to dominate the world. It is rather the duty of these powerful nations to assume the responsibility for leadership toward peace.

"It [the United Nations] has set up machinery of international cooperation which men and nations of good will can use to help correct economic and social causes of conflict.

"This should be a cooperative enterprise in which all nations work together through the United Nations and its specialized agencies wherever practicable.

"Under this document, we have good reason to expect the framing of an international bill of rights, acceptable to all nations involved. That bill of rights will be as much a part of international life as our own Bill of Rights is a part of our Constitution. The charter is dedicated to the achievement and observance of human rights and fundamental freedoms. Unless we can attain those objectives for all men and women everywhere—without regard to race, language, or religion—we cannot have permanent peace and security."

Now here is what happened. The United Nations establishd a Commission on Human Rights, of which Mrs. Franklin D. Roosevelt, whom I appointed to the Human Rights Commission, was the first chairman. It has produced a Universal Declaration of Human Rights. This universal delaration was adopted in Paris on December 10, 1948, without a no vote. While the declaration was not ratified by the U.N. it has been incorporated into the Constitution of New States cited in U.N. resolutions and in court decisions. It has become a source of law, according to the U.N. Secretary General.

"If we fail to use it [the U.N.] we shall betray all those who have died in order that we might meet here in freedom and safety to create it."

"If we seek to use it selfishly—for the advantage of any one nation, or any small group of nations—we shall be equally guilty of that betrayal."

"The successful use of this instrument will require the united will and firm determination of the free peoples who have created it. The job will tax the moral strength and fiber of us all."

The U.N. is the permanent "summit." That's where conferences should be held.

U.S. Militarily Ready To Deal With Any Conflict, Gates Says

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. FULTON. Mr. Speaker, I am calling to the attention of my colleagues in the Congress and the American people a fine report of the statements of Secretary of Defense Thomas A. Gates, Jr., regarding the military capabilities of the United States, and particularly his excellent defense of the request by the Navy Department for additional aircraft carriers.

Under leave to extend my remarks in the RECORD, I am including this article from the Washington Post of Monday, June 27, 1960. The article follows:

U.S. MILITARILY READY TO DEAL WITH ANY CONFLICT, GATES SAYS

(By Jerry T. Baulch)

Secretary of Defense Thomas S. Gates said yesterday that "We're militarily ready and sound" to deal with either a small war or a major war.

"Our readiness is intact and sensible, and we can quickly deploy forces and augment forces if we need to do so," he said.

Then Gates said America's defense is based on its mutual-security program and he made an indirect plea for restoration of the $200 million the House cut out of the military aid outlay.

The Secretary also urged that Congress approve a controversial new aircraft carrier for the Navy and authorize more money for Bomarc antiaircraft missiles. Senate-House conferees, trying to reconcile different versions of the $40.5 billion annual defense budget, are still debating these two expenditures.

Gates expressed his views in reply to questions by Senator LEVERETT SALTONSTALL of Massachusetts, ranking Republican on the Senate Armed Services Committee, in an interview taped for radio-TV stations in the Senator's State.

NO MAJOR WAR EXPECTED

The Secretary summed up the military outlook for East-West relations in the light of the collapse of the summit conference and the U-2 spy plane incident, President Eisenhower's just-completed Far East journey and the anti-American rioting in Tokyo.

Gates said he does not believe the Russians are going to "start anything in the form of a major military crisis."

"They will continue to harass us," he said, "they will continue to talk, they will continue to step up their cold war activities, and perhaps, in some modest way, put pressure on us that might involve minor military actions."

Gates said America's defense program is planned on the basis that there would be "no substantive concessions" made to Soviet Premier Nikita S. Khrushchev.

CORNERSTONE OF DEFENSE

Then describing the mutual security program as a cornerstone of this Nation's defenses, Gates said:

"Our whole strategy is based on our collective security arrangements and the free world joining together with free world strength and determination.

"If we do not get the support of the mutual security program, we will have to prorate the cuts and do a less effective job, which would be harmful to these treaty obligations that are so essential to us."

In urging that Congress give the Navy another attack carrier, Gates said carriers provide the best means for the United States "to project its power, particularly in case of trouble." This is especially so, he said, in parts of the world, "where it is difficult to overfly countries, and where existing airfields are inadequate."

"And with these carriers already deployed—there on the spot," he said, "this is probably one of our great limited war weapons systems."

Gates said the carrier is a "much more flexible and multimissioned weapons system" than the Polaris-firing nuclear submarines will be.

Senator J. William Fulbright: "A Great National Asset"

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BRADEMAS. Mr. Speaker, I should like to call to the attention of my colleagues an excellent article concerning the distinguished chairman of the Foreign Relations Committee of the U.S. Senate, the Honorable J. WILLIAM FULBRIGHT.

The article, by the fine columnist of Newsweek magazine, Ernest K. Lindley, was published in the April 1960 issue of the American Oxonian. As Mr. Lindley concludes—

It is no exaggeration to say that FULBRIGHT is a great national asset. Under the seniority rule he can be chairman of the Foreign Relations Committee as long as he sits in the Senate and the Democrats have a majority. The voters of Arkansas permitting, his influence will continue to grow.

The article follows:

SENATOR FULBRIGHT, CHAIRMAN OF THE FOREIGN RELATIONS COMMITTEE

(By Ernest K. Lindley (Idaho and Pembroke, 1920), director, Washington bureau, Newsweek)

J. WILLIAM FULBRIGHT (Arkansas and Pembroke, 1925), the only Rhodes Scholar so far to sit in the U.S. Senate, became chairman of the Foreign Relations Committee on February 6, 1959. This advancement came just over 14 years after he entered the Senate, following one term in the House of Representatives, and just over 10 years after his initial appointment to this committee. The seniority rule, combined with Democratic casualties from death, defeat, and voluntary retirement, moved him from the bottom of the ladder to one rung below the top in 8 years. When the only Democrat who outranked him on the committee, the nonagenarian THEODORE FRANCIS GREEN of Rhode Island, decided that he could no longer carry the heavy burden of the chairmanship, FULBRIGHT succeeded to it.

FULBRIGHT has one of the best minds in the Senate. His speeches are well-organized, thoughtful, thought-provoking, and highly literate. He has long been an earnest student of world affairs. He is an orderly and efficient presiding officer and a penetrating inquisitor. His skill both as a chairman and as an examiner were first impressively demonstrated a decade ago when, as head of a Senate Banking and Currency Subcommittee, he conducted a thorough investigation of political and personal favoritism in the operations of the Reconstruction Finance Committee—much to the distress of the Truman administration.

As chairman, FULBRIGHT fixes the agenda of the Foreign Relations Committee. The schedule is heavy—perhaps two or three meetings a week in slack times and as many as two daily almost every day when mutual security or other large and complex matters are under consideration. FULBRIGHT'S deliberate, urbane manner, his intelligence, and his knowledge of the subject matter help to maintain a good working atmosphere around the large mahogany table in the committee room on the street floor of the Capitol. After closed meetings, he usually briefs the press, and the correspondents have found him accurate, fair, and generally helpful. The professional staff of the committee—numbering six—respect him and like working with him. He reads and absorbs their analyses and much else about world affairs.

At least potentially, the chairman of the Foreign Relations Committee can exert enormous influence on American foreign policy. What sort of foreign policy does FULBRIGHT favor? Before exploring that question, and to put the answer to it in perspective, we should first take note of at least four other points: (1) FULBRIGHT'S position in the Senate as a whole; (2) the present composition of his committee; (3) FULBRIGHT'S character; and (4) his concept of the role of the Senate and its Foreign Relations Committee in formulating and conducting foreign policy. I shall take these in order.

Although FULBRIGHT'S Senate colleagues like and highly respect him, he is not quite a member of the ruling "inner club." He has been a little too independent, is a little too intellectual, not enough of a manipulator or glad-hander, to be included in this group. In recent years he has been fascinated by LYNDON B. JOHNSON'S skill as a majority leader and, himself, has begun to essay some of the arts of intra-Senate politics and management. However, 13 other Democrats, as well as 5 Republicans, have seniority equal to or longer than his. By contrast, Arthur H. Vandenberg of Michigan was the senior Republican Senator when he became chairman of the Foreign Relations Committee. Walter F. George, Democrat of Georgia, was the patriarch of the Senate when he returned to the chairmanship in 1955. (He was already very senior during his early service as chairman in the Roosevelt administration before he stepped down to take charge of the Finance Committee.) Tom Connally, Democrat of Texas, although not quite so eminent, was an elder when he took the chairmanship and a tough, practical politician.

The Foreign Relations Committee normally includes headstrong men. At present it contains an unusually high percentage with their own fish to fry. Consider the Democratic side alone. Two, JOHN F. KENNEDY and HUBERT H. HUMPHREY, are aggressive candidates for the presidential nomination. ALBERT GORE of Tennessee is a potential candidate for the vice-presidential nomination—he made a late bid for it in 1956. MIKE MANSFIELD is majority whip. As LYNDON JOHNSON'S deputy and because he is thoroughly articulate, MANSFIELD appears frequently on radio and television and, when the Senate is in session, is interviewed almost daily by the press. JOHN J. SPARKMAN of Alabama was Adlai Stevenson's running mate in 1952. FRANK J. LAUSCHE of Ohio always has been a hardy independent. WAYNE MORSE of Oregon is the most unpredictable maverick in the Senate. This leaves, on the Democratic side, only the aged GREEN plus RUSSELL B. LONG of Louisiana and FRANK CHURCH of Idaho, both of whom have outspoken minds of their own. Moreover, as subcommittee chairmen, several of these men have made themselves authorities in various fields. Without even consideration of the Republican minority, this is obviously not an easy committee to lead or even to harmonize. Even the august George, under whom many of these same men served, seldom could unite it, although he usually could mobilize a majority. Certainly, with such a membership, Vandenberg could not have won the unanimous agreement which he invariably did on important matters.

It was MORSE who engineered the first specific defeat suffered by FULBRIGHT as committee chairman. MORSE, chairman of the Subcommittee on Latin-American Affairs, was bitterly opposed to the confirmation of Clare Boothe Luce as Ambassador to Brazil. FULBRIGHT, opposed as a rule to amateur or politically selected diplomats, did not feel that he could object to her, since she had acquired experience, indeed had been very successful, as Ambassador to Italy. A majority of the Committee stood with FULBRIGHT and the Senate confirmed her nomination. However, MORSE'S onslaught had injured her usefulness and she withdrew, pointing out that he was the subcommittee chairman with whom as Ambassador to Brazil she would have had to work. Then President Eisenhower nominated Ogden R. Reid, former publisher of the New York Herald Tribune, as Ambassador to Israel. Reid was totally lacking in diplomatic experience. FULBRIGHT therefore opposed him. MORSE swung around and supported Reid, and, in the end, he was confirmed. Although the issue was not major and although FULBRIGHT, believing as he did, probably would have acted as he did, even had he expected to stand alone, the experience was a reminder that the chairmanship of a committee such as this does not automatically carry with it the power to control.

FULBRIGHT is not, I think, fiercely ambitious or power-hungry. His Arkansas backstool stands as a bar to presidential hopes, even if he might otherwise harbor them. But, quite aside from that, he does not, I think, have the inward urge to dominate. It may be appropriate to recall here his pre-congressional career. Born in Missouri in 1905, he moved to Arkansas with his parents. He went to Oxford with an A.B., Phi Beta Kappa key, and football letter from the University of Arkansas. He took a second in modern history and won his half-blue in lacrosse. On coming down in 1928, he spent 3 years at his hometown, Fayetteville, seat of the University of Arkansas. In 1931, he entered George Washington University Law School in the National Capital. On receiving his LL.B. with distinction in 1934, he became an instructor in law at George Washington and an attorney in the Antitrust Division of the U.S. Department of Justice. In 1936, he returned to the University of Arkansas as a lecturer in law. Three years later he became president of the university. He was also for a time president of the family lumber company and investment firm. For several years, his biography in the Congressional Directory noted also: "lives on a farm near Springdale, Ark., and has been engaged in farming most of his life."

As a politician, FULBRIGHT has won four consecutive electoral victories: to the House in 1942, the Senate in 1944, 1950, and 1956. In Washington, he and his attractive and intelligent wife, Betty (Elizabeth Williams), have engaged in a very active social life. They live on Belmont Road, one of the finer residential streets. They have two daughters: Elizabeth, 24, a Bryn Mawr graduate, who is getting married in April of this year, and Roberta, 21, who attends the University of California.

Despite his varied nonacademic experience and interests, FULBRIGHT remains, in no small part, a reflective intellectual. He has long held that the Foreign Relations Committee is not equipped to formulate foreign policy, much less to take responsibility for its day-to-day conduct. With this must be coupled his profound distrust of a Government in which the President is of one party and Congress—or even one of its Houses—is controlled by the other party. After the Republican landslide of 1946, he felt so strongly about this that he publicly suggested that President Truman appoint a Republican Secretary of State and then resign, permitting the Republican to become President. (I don't think Mr. Truman has ever forgiven him for this.) FULBRIGHT agrees that a divided Government in 1947 and 1948 did, in fact, produce fine achievements in the foreign policy field—among other things, aid to Greece and Turkey, and the Marshall plan, and the Vandenberg resolution paving the way for NATO. He agrees that a divided Government has worked fairly well under Eisenhower and that, indeed, the voters may be said deliberately to have chosen such an arrangement when, in 1956, they simultaneously reelected Eisenhower and a Democratic Congress. Still, he considers a divided Government basically unsound and unlikely as a rule to work well, especially under a President lacking the background and qualities which have given Eisenhower an aura of nonpartisanship.

Add to these beliefs FULBRIGHT'S experience on the Foreign Relations Committee under such a powerful chairman as Senator George. Several times George committed himself to support an Eisenhower or John Foster Dulles policy without consulting his committee colleagues. On occasion, one telephone call from a man he trusted, such as Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs, would be enough to line up George. Although George's commitments did not automatically prohibit debate and dissent, they were inhibiting. FULBRIGHT, among others, often felt frustrated—he probably especially so because of his distrust of Dulles. (He considered Dulles rigid, sanctimonious, and, at times, casuistic.)

FULBRIGHT'S approach to bipartisanship or nonbipartisanship, consequently, is somewhat different from that of several of his recent predecessors. Like them, he believes in a nonpartisan treatment of foreign policy. He prefers "nonpartisan" or Vandenberg's

word, "unpartisan" to "bipartisan." In his address to the American Society of Newspaper Editors on April 18, 1959, he said:

"'Bipartisanship' has been used too frequently to cloak the absence of a fundamental national agreement and to serve as a sort of synthetic substitute for such agreement. When misused in this fashion it can have several pernicious results. Too many people are given a practical veto over policy. There is an inhibition on the kind of free debate out of which a fundamental national agreement emerges. And finally, policy comes to represent the lowest common denominator.

"'Nonpartisanship' does not mean the absence of debate on foreign policy. It does not mean the absence of criticism of those who are making—or not making—foreign policy. What it means is the absence of debate precipitated and carried on with a view to gaining a partisan advantage. It means the absence of criticism motivated by partisan considerations, the kind of reflex criticism in which a Democrat automatically denounces what a Republican has done, and vice versa. Under nonpartisanship, the opposition party supports or opposes the President on the merits of the policies, or lack of them, which he espouses. It does not oppose simply for the sake of opposition."

These sentiments could have been expressed by Vandenberg, George, and Green—the other Foreign Relations chairmen of recent times who have worked with an Executive of the opposing party. But they—especially the first two—were readier than FULBRIGHT seems to be to accept joint responsibility for specific policies and programs. Vandenberg insisted only that there be full consultation from the beginning and at every important stage. Gradually, while he was chairman, nearly all important policies except those pertaining to China and Palestine were brought under the bipartisan umbrella. (As much of his party, including Robert A. Taft, was still isolationist, Vandenberg could line up no more than one-third of it and seldom more than two-thirds. But he always produced enough votes to make a comfortable bipartisan majority.) And all the major programs of those years—and some when he was only the ranking minority member—bore his definite imprint. He did not hesitate to propose specific modifications and additions, some the fruit of his own thinking, others the adjustments he deemed necessary to obtain substantial Republican support.

How far FULBRIGHT could be persuaded to go toward accepting the sort of joint responsibility that Vandenberg—and, in a somewhat different way, George—shouldered has not, at this writing, been tested. No new move comparable to the Truman Doctrine, the Marshall plan, NATO, SEATO, or the Formosa Resolution, has been presented since he became chairman. He, of course, fully recognizes his committee's responsibility for treaties as well as in connection with the confirmation of sundry Presidential appointees. When the President calls him to the White House he, of course, responds. He likes to be kept well-informed by the Secretary of State and others responsible for our foreign policy. But he is not, I think, eager to take more responsibility than he must for specific policies.

Rather, FULBRIGHT stresses what he regards as a more fundamental function of his committee: to promote examination and discussion of basic problems. He has repeatedly expressed worry about the tendency of our policies to become stratified. He has raised many challenging questions himself, both in speeches and in examining Secretaries of State and other important witnesses. He has often said that the State Department could profit from the fresh thinking of others, especially in the universities. In July 1958, he took the lead in persuading the Foreign Relations Committee to authorize a review of our foreign policy by outside groups. The Senate appropriated the required funds. From this enterprise, under FULBRIGHT's direction, have come 21 studies by private organizations and educational institutions with specialized knowledge. The Council on Foreign Relations of New York prepared basic aims of U.S. foreign policy. Other groups reviewed separate geographical areas and special aspects, ranging from such mundane but important problems as administration, through the impact of military technology, to the relation of worldwide and domestic economic problems to foreign policy.

While spurring the thinking of the State Department and other policymaking and conducting agencies, FULBRIGHT has defended the professional career services. He saw their morale damaged during the McCarthy period. He saw honest reporting from the field and independent thought discouraged. His objective is to release the full abilities of the pros. It is to FULBRIGHT'S great credit that he vigorously assailed McCarthy and McCarthyism when nearly all his Senate colleagues of both parties were still afraid to do so. In the same spirit one of his major addresses near the close of the 1959 session was a devastating reply to "The Ugly American."

FULBRIGHT'S broadest usefulness until now has been as a good tutor, challenging assumptions as well as conclusions, spurring all concerned to think and think again. But he has been concretely creative also. As is well known, he conceived the plan to use sales of war surplus to finance international exchanges of scholars and teachers. (As he has often said, the idea was inspired by his experience as a Rhodes Scholar.) Since their inception in 1947, the Fulbright scholarships have enabled 23,000 persons from other lands to come to the United States, and 14,300 Americans to go overseas. If the interlocked Smith-Mundt scholarships and fellowships, which FULBRIGHT has diligently sought to expand, are included, the totals are even higher. The original sources of funds for the Fulbright system have been augmented by proceeds from the oversea sale of farm surpluses and by congressional appropriations. FULBRIGHT has made the protection and enlargement of these exchanges his No. 1 responsibility. At nearly every session, he has had to fight for funds. He monitors the enterprise down to small details. Last year he wrote in the Federalist (the George Washington University house organ): "My part in the establishment of the exchange program has been the most gratifying experience of my career in public service."

FULBRIGHT has long favored Western European political unification. At one time he wanted to make Marshall plan aid conditional on progress toward political union. On that he had some sharp exchanges with Secretary of State Dean G. Acheson. Again, in one of his major speeches in 1950, FULBRIGHT said: "The choice facing European democracies was and is just this: Federate or perish. And the task facing America is so to conduct itself that it will help nurture those tentative roots toward federation like Euratom and the Common Market that have managed to take hold—to nurture them with the object of creating a real European union."

In recent years, FULBRIGHT, like so many others, has paid increasing attention to Asia, the Middle East, and Africa. At the 1959 session he took the lead in framing legislation to give the Development Loan Fund a 5-year authorization. To the astonishment of him and his colleagues, the President, in a quick turnabout under pressure from the budget balancers, registered effective objection to that very constructive proposal.

On the central question of Soviet relations and negotiations, FULBRIGHT has urged greater flexibility without prescribing definite alternatives to the courses actually followed. His prodding, if it did not stimulate, certainly did not discourage the new trends in American tactics which set in after Dulles' death. He likes Secretary Christian A. Herter. He is closer personally, however, to Douglas Dillon, the able Under Secretary and former Ambassador to France, who is concerned primarily with economic policy. Dillon lives just across the street from FULBRIGHT, and they often get together informally.

In the domestic field, FULBRIGHT has generally the record of a moderate liberal, with due allowance for the special interests and prevailing attitudes of the people of Arkansas—which it would be politically fatal for him to oppose. Even now a threat hangs over him—the possibility that Governor Faubus will enter the senatorial primary against him in 1962.

FULBRIGHT is deeply worried about the total Soviet challenge and what he regards as our failure to muster our resources to cope with it. In his final speech of the 1959 session, he listed some of the things he believes we must do: Spend more on education—"not just a little more, but a great deal more." Arm ourselves better with both conventional and advanced weapons. Make the Strategic Air Command bases less vulnerable to attack. Put our foreign development loan program on a long-term basis and give it adequate financial resources. Build civil defense shelters.

"I don't know how much all these things would cost," he said. "I know we can afford them if we decide we want them badly enough."

The strength of his feeling came out in another passage in the same speech: "It is about time, I think, that we Americans recovered our traditional capacity to be outraged about ourselves. For if any people in human history had the means to win out over a willful adversary, yet failed to use its natural strength, we are that people. This country has the natural, the industrial, and the human resources to do almost anything it wants to do—provided it passionately wants to. It is nonsense to say we cannot afford it."

It is no exaggeration to say that FULBRIGHT is a great national asset. Under the seniority rule he can be chairman of the Foreign Relations Committee as long as he sits in the Senate and the Democrats have a majority. The voters of Arkansas permitting, his influence will continue to grow.

The Moscow-Peiping Argument

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. COHELAN. Mr. Speaker, in a recent article in the Christian Science Monitor, Correspondent Joseph C. Harsch suggests that our "somewhat egotistical" assumption that Mr. Khrushchev's recent actions are intended to influence U.S. politics may be in complete error and that an internal argument may, in fact, be the true cause. His outline of the possible nature of that internal argument is well worth our at-

tention and, under permission to extend remarks, I submit it for the RECORD.

STATE OF THE NATIONS—THE MOSCOW-PEIPING ARGUMENT

(By Joseph C. Harsch)

Dialectical arguments among Communists may have no more applied political meaning than the theological arguments of the Middle Ages which raged for centuries before John Huss and Martin Luther did something about the situation.

The fact remains there is a whacking great argument going on among Communist theologians, and it could provide a more important explanation of Premier Nikita S. Khrushchev's recent behavior than the somewhat egotistical assumption that he is meddling in U.S. politics.

The latest episode in this argument is the three-column article in Pravda June 12 which denounced "leftwing sectarian moods and tendencies" in general, and in particular those "who because they have power in their hands think they can introduce communism and avoid historic phases in its development."

The Pravda article taken by itself would be meaningless to any westerner. But it clearly belongs in sequence to an argument which was initiated in Peiping in April before the summit conference debacle and has been going on ever since.

The 90th anniversary of Lenin's birth fell in April. The Chinese Communist Party press used the anniversary as the excuse for a long series of articles which were out of line with Mr. Khrushchev's current policy. The opening article argued, for example, that a third world war would result in "several hundred million more people turning to socialism" and that "then there will not be much room left in the world for the imperialists while it is quite likely that the whole structure of imperialism will utterly collapse."

It seems relatively unlikely that Peiping would be thus openly supporting a third world war at a time when Mr. Khrushchev still was preaching coexistence unless there existed at least a dialectical difference of some importance between the two great Communist capitals. The issue was apparently the old one of whether a third world war would be good or bad for communism. Moscow has long contended that such a war is undesirable and unnecessary.

In April there was only the mildest rebuttal from Moscow in the form of a veiled rebuke, to dogmatists. May was, of course, the month of the summit. As June opened it was assumed that Moscow might swing into line with Peiping ideology and, of course, it did so to the extent of agreeing with Peiping that President Eisenhower was allegedly untrustworthy.

In early June Moscow ideologists took a hard swipe at deviationism in Yugoslavia which seemed to make the Yugoslavs the mutual whipping boy for both ends of the Communist axis.

But on June 8, just after Moscow had relaunched its revised disarmament proposals at Geneva, Peiping took another step to the ideological left which must have come as something of a jolt in Moscow. Liu Chang-sheng, member of the Chinese Central Committee and world roving mouthpiece of the Chinese governing clique, made a speech which virtually condemned the disarmament proposal as a publicity stunt and was viewed by Western experts as the sharpest attack ever made on Mr. Khrushchev in any Communist country.

One of Mr. Liu's contentions was that "only when the socialist revolution is victorious throughout the world can there be a world free from war." It sounded very much as though Peiping thought Mr. Khrushchev was on the run and that criticism of him was enjoying an open season.

Four days later Pravda hit back and hard. Incidentally, the argument on both sides has been based throughout on Lenin texts.

Conceivably all of this is comparable to the medieval arguments about the number of angels which can dance on the point of a pin. But it seems far more plausible to recognize that Mr. Khrushchev's whole foreign policy has been under serious attack within his own camp.

Mr. Khrushchev committed Communist heresy when he asserted that Mr. Eisenhower is a man of peace. He has been attacked repeatedly for that heresy. His defense became ideologically impossible when Mr. Eisenhower defended the U–2 flights. Pravda, June 12, was denying that "negotiations between the leader of socialist and capitalist countries is a deviation from the tradition of Marxism and Leninism."

The implication is that Mr. Khrushchev is far more concerned about his reputation for orthodoxy in the Communist world than about the identity of the next President of the United States. The charge of heresy is serious enough for any ordinary communicant of any ideological movement. It is intolerable to the head of the movement.

Where Now With Wheat?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. ROBISON. Mr. Speaker, with both political parties seeking to build planks into their 1960 platforms pointing the way to "a prosperous American agriculture," the only road toward that goal that has any real chance of success is still the road with the least political appeal. The experiences of the past 25 years have unfortunately suggested that farm programs that are economically sound are usually politically unacceptable. That was the apparent result again, here in this body, on Thursday, June 23, but it is still hard to explain the "politics" of the situation. Twice in the past 2 years Farm Journal, a leading farm magazine, has circulated printed ballots asking farmers across the Nation to choose among five possible courses of governmental action, all the way from complete governmental control of farming to getting the Government completely "out." The vote each time was within 1 percentage point of the other time—apparently no fluke, then. Some 55 percent of the farmers who responded both times voted in favor of getting the Government "clear out."

From the letters I receive from my farm constituents, and from the meetings I have had with their representatives, there is not the slightest doubt in my mind that the great majority of them also favor getting the Federal Government "out" of American agriculture. I have, as I have pointed out before, accordingly introduced a bill (H.R. 9781), which would accomplish just that, even though I have little hope of success. When my farm people ask me, "Why doesn't the Congress listen to us when we say we want again to stand on our two feet?", I can only answer that either the Congress doesn't believe the farmers mean what they seem to say, or it doubts the farmers' wisdom in taking such a stand as well as their ability to survive the rigors of a return to a relatively free market—one under which price supports would be used not to fix farm prices, but to realistically promote orderly marketing.

But still the Congress, or at least the majority party in control thereof, clings to unrealistic, unworkable, and economically disastrous production controls that are not controls, even though the compelling factors of depression and war are no longer present, and with a resulting destruction of markets, the piling up of unconscionable surpluses and the imposition of heavy burdens upon consumer and taxpayer. This would be bad enough in so-called "normal" times, but the fact that this course has coincided with the irreversible technological revolution that American agriculture has been experiencing has made it little short of sheer madness.

About four-fifths of American agriculture is still thankfully free of governmental controls, and it is no accident that this is the only area of the farming industry—and it is a major industry, today—that has been doing fairly well. It has been, rather, in the areas where government has been oversolicitous and has interfered the most that there are real difficulties. The No. 1 problem is, of course, the problem of wheat. Our surplus wheat stocks of over 1.3 billion bushels represent about 2½ times the annual U.S. consumption of wheat as a food. Our investment of around $3.2 billion therein is presently costing you and me and all the rest of us over a million dollars a day, every day of the year including the extra day of this leap year, just to store and pay interest and transportation charges on. Wheat has been effectively priced out of world markets, and when we have tried to even give it away we have run into substantial difficulties.

This intolerable situation comes close to being the major domestic legislative problem of the year. Prompt congressional action this year was necessary, and the urgency of the situation was such that all members should have been ready to make major concessions in their previous positions of policy in order to arrive at a compromise wheat solution that could become law. Such was not the case, however, and now we are right back where we started. Such a result might have been intended to create a hand-made "political issue" in some people's minds, but, as a Republican, all I can say is that if the Poage bill, even in its watered-down form as H.R. 12261, is the best farm program the Democratic Party can come up with, I, for one, will have no fears with respect to the "farm vote" next November.

Why can we not agree on what would seem to be the obvious fact that wheat production can never be balanced with effective market demand so long as increased production is encouraged by guaranteed high prices? Increasing price supports, as would have resulted under the loaded referendum for subtitle A of title I of H.R. 12261, based on

the clear lessons of the past, would only once again have stimulated a most natural incentive to increase the total yield even on reduced acreage, and add to rather than detract from our splitting surplus headache. As my colleague, the gentleman from Louisiana [Mr. McSWEEN], said in his well-reasoned separate views to the committee report on H.R. 12261, "the more productive farms will be driven to further efficiency as a means of survival, and the less productive farms will continue to close down at the present rate." Surely, this is not our aim, or, if it is, the highflung phrases we have heard from 1938 to date about helping the family farmer have been just so much eyewash.

We should seek, instead, to discourage excessive wheat production and, while I would have much preferred to terminate political tinkering with the natural laws of supply and demand once and for all, I was willing to concede that subtitle B of title I of H.R. 12261 might have helped to do just that, and was infinitely preferable to the program under which we now must operate. Subtitle B was practically word for word the wheat proposal formulated by the American Farm Bureau Federation, representing over a million and a half paidup member farm families in every State in the Union, and thus the largest general farm organization in the United States. The Farm Bureau is a voluntary nongovernmental organization wholly controlled by its members, representing nothing but farmers from every part of the country, producers of every kind of a commodity. Presumably, it was not easy for it to have arrived, by majority vote, at a plan acceptable to its members; having done so, however, I believe the Bureau merited the opportunity of seeing if it would work.

Now, at first glance, it would seem that they might have had that chance through the referendum proposal set forth in H.R. 12261 by voting their plan, subtitle B, into effect. But let us take a look at how that referendum would have worked. Only wheat producers working over 15 acres this year were privileged to participate in choosing between the so-called alternative proposals represented by subtitle A and subtitle B. That meant that over half of our Nation's wheat farmers could not vote. In New York State, for instance, since that is the area I was primarily interested in, there are 38,463 farms on which wheat is presently produced. Of that number, only 5,664 work more than 15 acres. This meant that if H.R. 12261 passed in its original form, 32,799 New York State small wheat farmers would be completely disenfranchised. I could not support something as un-American and undemocratic as that, particularly in view of the apparent fact that the large producers who would have controlled the vote would no doubt be the ones who would prefer, for obvious reasons, a continuing high, rigid price-support program.

Therefore, when the movement to cut out all but subtitle B of title I of H.R. 12261 failed, and the move to substitute the Senate wheat bill—S. 2759—which I would have supported though not with enthusiasm, likewise failed, there was no alternative but to vote down the monstrosity that H.R. 12261 then represented. There is yet time to act in a responsible fashion. I hope we will have that opportunity.

Under leave to extend my remarks, I now include the following editorials from the Binghamton (N.Y.) Press and the Christian Science Monitor, both from the issues of June 25, 1960:

[From the Binghamton (N.Y.) Press, June 25, 1960]

WHEAT BILL RIGHTLY BEATEN

Defeat of the wheat bill in the House, 236 to 170, is something for which consumers, taxpayers, and New York farmers can be grateful.

The bill would have increased wheat price supports from the present 75 percent of parity to 85 percent and reduced wheat acreage by 20 percent. The acreage reduction would have been of little or no effect against the incentive created by the higher price support.

According to estimates, the bill would have meant some $80 million a year in higher feed and production costs for New York's dairy farmers. It would have meant higher prices for milk for consumers. For taxpayers it would have meant higher taxes to support, store, and give away huge new wheat surpluses. A $3,500 million wheat surplus already exists.

The cost of storing agricultural surpluses valued at around $9 billion runs to $1,500,000 a day, which is money that could be better used for education, highways, defense or any number of more desirable purposes. Chief beneficiaries of the price-support program are not family-type farms but corporate and big acreage operations.

Despite huge Government expenditures to prop agriculture, farm prices, affected by huge surpluses, tend to drop. The agricultural appropriation for fiscal 1961 totals $4,005,222,683, or more than the cost of the whole Federal Government in the 1930's.

The farm price-support program creates a burden on the Nation that is as intolerable as it is fantastic. The only answer possibly lies in gradually reducing price supports to the point where they are no longer an incentive to huge overproduction. The wheat bill moved in the opposite direction.

[From the Christian Science Monitor, June 25, 1960]

FARM STALEMATE STANDS

Apparently Congress prefers a prolonged wheat surplus to a sudden shortage of votes in November. The House of Representatives has now rejected three different plans for curbing the surpluses which legislation now on the books encourages.

The Senate had passed a bill cutting wheat acreage by 20 percent. The Poage bill just defeated in the House will have made the same cut but "sweetened" it with an increase of nearly 15 percent in the price support level. Since acreage cuts have proved ineffectual in the face of rapid increases in per-acre yield, the Poage bill could even have induced more production. It was also faulty in other respects.

Estimates on this year's wheat crop indicate that about 200 million bushels will be added to the tremendous stores piled up in the last decade. The Senate bill might have cut this somewhat next year. Yet even bolder measures are required to reduce not merely the rate of increase but also stocks on hand.

The Eisenhower-Benson effort to check surpluses by lowering price supports has probably helped hold down excess production. But neither party appears ready to take the drastic steps needed. Mr. NIXON'S plan for a food stockpile would give the surpluses another name but not lessen their burden. Mr. KENNEDY, after backing lower supports, has switched to the high-support position and we have heard little from any other Democratic hopeful that is hopeful on surpluses.

But the House's unexpected rejection of the Poage bill indicates awareness that the wheat situation has become fantastic. Next year (not an election year) this should be even plainer.

A Report to Constituents

EXTENSION OF REMARKS
OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. PELLY. Mr. Speaker, with the adjournment of the 86th Congress comes a final responsibility of each individual Member to render to his constituents an accounting of his stewardship. I think it is recognized that we cannot please all the people all the time. However, we have the right and indeed the obligation to support and justify to the people how and why we voted the way we did and to explain our actions during each session.

In reporting to my friends and those who reside in the First Congressional District of my State of Washington, I am frank in saying I may not always have taken a popular position, but at least I did in good conscience vote the way I thought was proper. It is on this basis that I will return home and report personally on my record of public service this year.

Recently there has been widespread public criticism of Members of Congress over expenses charged to the Federal Government in connection with travel. Also, there is indignation over waste and extravagance in the way Congress spends the taxpayers' money for its own use.

Without pointing the finger at any colleagues, Mr. Speaker, I want to say I have supported itemized accounting and publication of all legislative committee spending. That a clear code of ethics for officials in all branches of the Federal Government has never been enacted, I deeply regret. I have sponsored such a plan so that conflicts of interest would be clearly defined. Public confidence for institutions of Government must be maintained. I am glad to say some progress in that direction has been made recently.

This is no holier-than-thou statement. Let the conduct of each Member stand on his own record in connection with improper practices. As for our legislative budget, I have always voted on the theory and firmly stated that the Congress could not expect to demand economy in the military and other agencies and departments of Government unless we ourselves set a good example in this respect. I regret to say that Congress has not always seen fit to practice what it has preached with regard to holding down expenditures.

Mr. Speaker, this is a presidential election year and even more than usual partisanship has colored and distorted views and political news and generated more preconvention political heat than light. However, I am glad to say that there has been a minimum of partisanship and politics in our traditional bipartisan foreign policy.

Your patriotism, Mr. Speaker, and that of certain other Democratic leaders has stood the difficult test of obvious opportunity. As always, in America in a crisis, the welfare of the country has taken precedence. I feel the Nation owes a debt, however, to you, Mr. Speaker, who never failed to respond when President Eisenhower and the Republican Administration needed your support in foreign affairs.

I think we underestimate the success and effectiveness of that foreign policy. There is more peace and prosperity in the free world today than at any time and more moral and military deterrent strength than at any time since the Marshall Plan was adopted. Meanwhile, Mr. Khrushchev and the Soviets have been smoked out for what they are, vicious conspirators whose sinister hope is to enslave all the peoples of this earth.

In domestic affairs, such as with farm legislation, in contrast to foreign affairs, political advantage and party politics have seemed to have been the overriding issues.

Speaking of our agricultural situation, I must deplore, as I have during the past session of Congress, that no legislation has been passed to reduce the inexcusable costs of farm subsidies or to end Federal controls. Our obsolete war emergency agricultural program must cease. It is a disgrace.

One of the major issues of the 86th Congress, of course, was the medical aid program for the aged.

The high cost of hospitalization and sickness cannot be ignored. Certainly the aged who are more subject to illness, especially catastrophic illness, and whose incomes are lower, must obtain health protection. With dignity, medical assistance must be available to the needy and I am confident the basic principles of socialized medicine need not be embraced to accomplish such assistance for retired people of modest or meager incomes.

Federal control of education continues to be a threat. A temporary school construction bill to help the States in the present emergency—if based on helping only school districts which have exhausted their own resources—is only dangerous in that it could lead to the States reducing their efforts and depending permanently on the Federal Government.

Certainly if the Federal Government attempts to finance and set standards for maintaining the schools, including salaries and curriculum, it could result in nationalization of our schools and give us the Russian system of regimentation and conditioning of youth for socialism. It could be as it was in Japan, Italy, and Germany under despotic dictators like Hitler.

Where school legislation, including a construction bill, did not meet my ideas of built-in safeguards against diminishing local responsibility, I have opposed and voted against it. Rather, I have consistently urged a return of tax funds to the individual States to spend as locally desired.

Now, Mr. Speaker, I want to mention inflation and the national financial picture. I have introduced a bill which would do much to solve a weakness in our system. There are two strong pressures on Members of Congress. One consists of groups favoring programs that entail Government spending and the other groups seek reduced taxes. If Congress favors and supports spending, it should pass a comparable increase in taxes. By the same token, if Members of Congress support less taxes, then we should vote against increased expenditures.

My bill would enforce this policy by requiring that Federal income and expenses be balanced. It would require a reduction of the huge national debt each year. In an emergency, by a record vote, Congress could waive this constitutional provision. Otherwise, we could not adjourn without a balanced budget, including a debt reduction.

Congressional committees this year favored programs requiring spending far in excess of the President's budget. When we establish new costly programs in excess of revenue, it is fiscal irresponsibility not to vote new taxes to increase revenue. I have been against that kind of spending—against so-called budget-busting.

Finally, Mr. Speaker, I should point up one national problem which remains unsolved and which especially affects the Pacific Northwest. This problem has to do with fishing and the proposed extension of the historic 3-mile limit. The Geneva Convention on the Law of the Sea sought to extend and widen the coastal sovereignty for fishing rights and would have taken away the historic right of Americans to fish outside the 3-mile limit off of Vancouver Island. Our Puget Sound fishing industry must retain that right. A settlement with Canada, therefore, must be arrived at before any international agreement is signed.

Another problem has to do with our west coast shipbuilding industry. A differential of 6 percent has long been the Federal policy in recognition of our higher costs. This only applies to the ships which are built for operation in the Pacific. Elimination of this differential could have an extremely adverse result on employment in Pacific coast shipyards.

In both the foregoing matters I take some satisfaction in that I was able to play a leading role in defending my industries and temporarily we have succeeded in holding the line. Meanwhile, I hope the fairness of our cause has been convincingly read into the record. I serve notice, Mr. Speaker, that we of the Pacific Northwest and west coast are convinced of the justice of our cause and therefore we will continue to resist efforts to harm west coast industries.

Our Washington State delegation, including our Senators, as always, have closed ranks regardless of political party and cooperated closely in all such matters that vitally concern the welfare of the State.

Finally, Mr. Speaker, let me assure my friends in the Congress that during the past session I have appreciated their cooperation. It is a great honor of course to serve in this House of Representatives and a double privilege to be associated with so many fine and able colleagues. In the four terms I have served here I have learned one does not gain in effectiveness as a Member of Congress by experience alone, but by a combination of know-how and friends. Again, I express warm thanks to those who have worked closely with me.

I feel constrained also to publicly express thanks to my constituents at home for the honor and extreme pleasure of representing them in the Congress of the United States. Shortly I hope to carry this message to them in person when I am back home.

So, Mr. Speaker, this concludes my remarks. I only hope my service has justified the confidence of those who voted to send me to Congress and justifies likewise the kind way in which my efforts in most every instance has been received.

Facilities for Capitol Pages Long Overdue

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. BENNETT of Florida. Mr. Speaker, an event of the past weekend points up the urgent need for proper facilities for our pages in the House of Representatives, and for the other pages on Capitol Hill. One of the pages who were attacked last Saturday was Michael Madigan, a young man serving here because of my appointing him. Ever since 1951 I have had a bill pending in Congress to establish proper housing, recreational, and other needed facilities for our pages. I have testified, along with other Congressmen, in a number of hearings in favor of such facilities. Polls have been taken among Members of Congress showing that, in the opinion of the vast majority, the establishing of such facilities is one of the most urgent needs of this community. Actually it is the most urgent need.

We have the responsibility for these young men whether we do anything constructive about it or not. Our responsibility does not diminish one iota because of our failure to act.

The current proposal before the committee is House Resolution 23 and reads as follows:

Resolved, That the Committee on House Administration is authorized and directed to rent or otherwise acquire a suitable residence, within a reasonable distance from the Capitol, to be maintained as a home for pages employed by the House, and to appoint an individual or individuals of mature years to act as supervisor of the home and to be responsible for its operation under rules and regulations made by the committee.

SEC. 2. Each page employed by the House shall be required to reside in such home unless he is authorized to live elsewhere by the committee. Pages employed by the Senate, with the approval of the committee, may reside in such home.

SEC. 3. The expenses of renting and operating such home shall be paid out of the contingent fund of the House on vouchers approved by the committee and signed by the chairman thereof. The committee shall establish such rates for room and board as it may deem appropriate to carry out the purposes of this resolution and to make the maintenance of such home, including the supervisor's salary, a self-sustaining proposition. The obligations for room and board incurred by each page shall be deducted by the House Disbursing Office from the compensation which such page is entitled to receive from the United States and shall be transferred to the contingent fund.

This is a modest proposal. Actually, if the Congress would approve it I believe that the funds for an adequate building could be secured from private donations. However, with the tremendous expenditures we are making on new developments on Capitol Hill, all probably well justified, there certainly should be no niggardly approach to question of erecting or renting adequate quarters for this purpose. Such structure would not have to be an expensive type of building but it should not be delayed any further. A newspaper account of the event of last Saturday is as follows from Sunday's Washington Post:

TWO HELD IN ATTACK ON FOUR HOUSE PAGES

Two 18-year-old youths were charged with robbery yesterday in connection with an attack on four 16-year-old House of Representatives pages.

Arrested were Willie L. Yelverton, of 1313 C Street NE., and Ronald M. Moore, listed at 211 Sixth Street NE. The pages identified them as members of a band of about 10 youths, armed with knives, who attacked them at Fifth and East Capitol Streets early yesterday, police said.

Yelverton denied being involved. Moore told of being with the group, but denied participating in the attack, police said. Other members of the group are being sought.

The pages, all of whom suffered minor cuts and injuries, were George Dozier, of Anniston, Ala.; Jack Thompson, of Fayetteville, W. Va.; Michael Madigan, of Jacksonville, Fla., and Arthur Kaspar, of Milwaukee. Dozier and Thompson live at 207 Constitution Avenue NE., and Madigan and Kaspar at 101 Fifth Street NE.

Dozier told police the gang took his watch and wallet containing $4.

What Is an American, Anyway?

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, the editorial, entitled "What Is an American, Anyway?" comes from the Maysville, Mo., Record-Herald, but has been reproduced with favor by the Bossier Press, Bossier City, La., edited by Mr. Ned Touchstone. It is very unusual and therefore I present it in this extension of remarks:

[From the Bossier City (La.) Press, June 24, 1960]

WHAT IS AN AMERICAN, ANYWAY?

(This editorial is from the Maysville (Mo.) Record-Herald. It is so appropriate and describes us Americans so well that it is reprinted here. We believe our readers will enjoy it as much as we have.)

He yells for the Government to balance the budget and then takes the last dime he has to make the downpayment on his car.

He whips the enemy nations and then gives 'em the shirt off his back.

He yells for speed laws that will stop fast driving, and then won't buy a car if it won't make 100 miles an hour.

An American gets scared to death if we vote a billion dollars for education—but he's cool as a cucumber when he finds out we're spending $3 billion a year for smoking tobacco.

He gripes about the high prices of the things he has to buy but gripes still more about the low prices of things he has to sell.

He knows the lineup of every baseball team in the American and National Leagues—and doesn't know half the words in "The Star-Spangled Banner."

An American will get mad at his wife for not running their home with the efficiency of a hotel, and then he'll get mad at the hotel for not operating like a home.

He'll spend half a day looking for vitamin pills to make him live longer—then drive 90 miles an hour on slick pavement to make up for the time he lost.

An American is a man who will fall out with his wife over her cooking then go on a fishing trip and swallow half-fried potatoes, burnt fish, and gritty creek water coffee made in a rusty gallon bucket—and think it is good.

An American will work hard on a farm so he can move into town where he can make more money so he can move back to the farm.

When an American is in his office he talks about baseball, football, or fishing; when he is out at the games or on the creek bank, he talks about business.

He is the only fellow in the world who will pay 50 cents to park his car while he eats a 25-cent sandwich.

An American likes to cuss his government but gets fighting mad if a foreigner does it.

We're the country that has more food to eat than any other country in the world and more diets to keep us from eating it.

A New Czech Exile Newspaper Understands and Fights Communism

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. BOSCH. Mr. Speaker, I should like to call the attention of Members of Congress to a new Czech exile monthly newspaper edited in Munich, Germany, by Mr. Milos Svoboda, a Czech anti-Communist refugee. The newspaper's name is Ceske Listy—Czech News—and its first issue appeared on June 1, 1960.

In an analysis of the abortive Paris Conference, the paper says that the aim of the Communist moves wrecking the Conference were to harm the United States in the eyes of the world and to influence the American elections against Mr. Eisenhower and Mr. NIXON. That this analysis was right was clearly evident in the happenings in Japan, which are merely a continuation of the purposeful Communist attacks against our President. The Czech News describes the Communist bosses as cool and calculating men and declares that the Reds did not make any mistake in Paris. They predict a summit conference will come 8 months later at which time the Reds expect to have new partners striving for coexistence, they want to force the participation of Red China in international conferences and want more trade and more coexistence. The Czech News regrets the way in which the big press write in the West using Khrushchev's moves against Mr. Eisenhower instead of calling for stronger anti-communism in the West. Had Khrushchev not known the way in which this press was going to write, he would not have dared to wreck the Paris Conference, says the Czech News.

It is gratifying to see one exile newspaper grasping the situation so soberly and rejecting the unrealistic optimism of other exile publications and organizations which have believed that the Reds have made mistakes while in reality they have again scored one of their big propaganda successes. We certainly need people who see the global danger of the sly Communist in a clear way.

In his introductory article, the former Czechoslovak Minister and General of the Army, Lev Prchala, chairman of the Czech National Committee in London, propounds the idea of Christianity and tolerance between the Czechs and the Germans. This outstanding exile, General Prchala, spent World War II in London fighting Hitler, but refused to return to the Czechoslovakia of the national front in 1945 condemning the communization measures taken in that land and opposing communism as strongly as nazism. Had the Czech people heeded the advice of this just and wise man, they would probably still be free.

The first issue contains an article written for the Czech News by the distinguished American writer, Gen. Charles A. Willoughby, former Chief of U.S. Intelligence in the Far East under General MacArthur. In a brilliant analysis of the dangers of coexistence, General Willoughby warns of summit conferences. The general quotes the words of Dmitri Manuilski about the "stupid and decadent capitalists" who would leap at another chance to be friends of the Communists and also Lenin's words that "promises are like pie crusts, made to be broken." General Willoughby, however, finds an encouraging sign in the fact that the victims of the Iron Curtain, the Czechs, the Hungarians, the Germans and others are finding a way together and that a broader principle emerges, the principle of freedom, friendly neighborliness, and self-determination for all.

In a message to the new newspaper, Lt. Gen. P. A. del Valle, of the U.S. Marine Corps, retired, declares:

The governments of the free world do not undertake sufficient steps against communism. The road to the preservation of our freedom and to the liberation of the enslaved peoples does not lead through summit conferences, negotiations, trade and friendship with the Communists. What the free world needs is an active warless policy of liberation using the means of an economic, political, journalistic, cultural and diplomatic offensive against world communism. Before communism can be removed without war in your country, its helpers in the free world must be removed.

Ample quotations are given in the newspaper from speeches of distinguished Members of Congress. The words of Senator THOMAS J. DODD are quoted demanding that the question of the captive nations be exploited as an offset against the Communist offensive. On this question, the West is on sure ground—legally, morally and politically. There is no issue on which the Kremlin is more sensitive or more vulnerable.

Senator ROMAN HRUSKA is quoted as demanding a firm policy on Germany. Berlin must never fall into Communist hands. Senator HRUSKA mentioned in his speech, quoted the Czech News, a letter by Maj. Gen. Julius Klein demanding a firm policy so that it be heard by Nikita Khrushchev who seems to have reached the false and dangerous conclusion that the free world is intimidated by his claims to power and supremacy.

Furthermore, the newspaper quotes words of Senator HUBERT H. HUMPHREY and Congressman GORDON H. SCHERER. Czech News reports the words of Communist leaders such as Lenin who said:

"Up to now we have won our victories over the world bourgeoisie because of its inability to unite," and words of Georgi Dmitrov: "The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

The Czech News contains many reports about Czech and exile life. One interesting article reports a meeting held as a common manifestation against Communist tactics at the summit meetings which was staged by the Ukrainian exiles in Munich, under the leadership of former Prime Minister of free Ukraine, the Honorable Jaroslaw Stezko, by the Hungarian refugees, the Anti-Bolshevic Bloc of Nations, the German Union of Expellees, and the Victims of Stalinism. A member of the Bavarian Landtag, Mr. Herbert Prochazka demanded that the German Federal Government support materially the political exile of the enslaved peoples. The resolution of the Anti-Bolshevic Bloc of Nations whose president is Mr. Statzko, demanded the expulsion of Red regimes from the UN and that the question of the liberation of the captive nations be put on the daily agenda of world politics.

Also the scientific part of the new paper, in which, for example, Dr. Rudolf Wierer, former university professor of Brno, analyzes the new Czechoslovak Communist constitution, and the cultural parts are interesting. The editor, Mr. Svoboda, stresses the importance of the Czech exile orchestra director Rafael Kubelik, formerly in Chicago and London, who is going to Munich in 1961 to direct the Munich Symphony Orchestra.

This new newspaper hopes to reach not only the Czech exiles, but also the old Czech settlers in the countries of the free world. It is a refreshing sight to see this new publication advocating concrete proposals of action against communism. The Czech News proposes to persuade the governments of the countries of the free world to forbid the transactions of Western currencies as donations to the Communist countries through the Red monopoly foreign trade organization Tuzek. The paper says that the Communists prefer Western currencies to simple gift parcels, but that they would admit simple gift parcels if the Tuzek operations are prohibited because they prefer gift parcels for their needy population to nothing. This is sound logic for fighting anti-Communist exiles and the organizations such as the Assembly of Captive European Nations and the Free Europe Committee with its radio free Europe could derive useful information in the field of anticommunism.

This new newspaper, the Czech News, which brings so many quotations of American statesmen and Members of Congress and which clearly sees the dangers of communism, and seeks to effectively fight the Communist danger, and which preaches freedom, justice and friendship between nations, including the Czechs, Germans, Slovaks, Hungarians, and others, really deserves the attention of Members of Congress and the moral support of all Americans.

Congressman Joseph Barr, of Indiana, Proposes Traffic Safety Legislation

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BRADEMAS. Mr. Speaker, I should like to congratulate my distinguished colleague and friend, the gentleman from Indiana [Mr. BARR], for having introduced legislation designed to increase traffic safety on American highways.

The bill introduced by the gentleman from Indiana, H.R. 12684, would prohibit the use in commerce of automobiles not equipped with certain automatic warning signal and running light devices.

The original suggestion that every car should have a light on the top at the rear which flashes orange or some other warning color the moment the driver takes his foot off the accelerator, thus giving the motorist behind a chance to slow down, was made by Lowell Nussbaum of the Indianapolis Star.

At this point in the RECORD, I should like to include an editorial dated May 21, 1960, from the Indianapolis Star concerning Mr. Nussbaum's thoughtful suggestion which Congressman BARR has in turn proposed for the consideration of Congress. The editorial follows:

THE NUSSBAUM EARLY WARNING SYSTEM

Lowell Nussbaum, columnist for the Indianapolis Star, has come up with an idea that we believe is one of the most constructive and workable suggestions for increased traffic safety that has been conceived in some time.

Nussbaum argues that one of the main reasons why we have so many of these "chain reaction" accidents, where one car slows or stops suddenly and another bumps into it and then the ones behind bump each other, is that there is no warning light, like a brake warning light, when the driver takes his foot off the accelerator. Many times the driver ahead will simply take his foot off the gas and slow down when he sees trouble ahead without putting on his brakes. Thus the man behind him has no warning that a sudden stop is in the offing. So Nussbaum suggests that car manufacturers install a warning light on the rear roof of all cars that light up, in orange or red or some other warning color, whenever the driver takes his foot off the accelerator. This would give warning to the drivers behind that the car ahead may be getting ready to stop. Nussbaum believes that if such an "early warning system" for cars were standard equipment, it would eliminate a lot of bumper to bumper accidents in cities throughout the United States.

Lowell's additional safety suggestion is to use the front half of this roof light as a white running light that would be turned on, and stay on as long as the ignition is on. It would warn cars coming in the opposite direction, or passing cars from the opposite direction, of the presence of an oncoming car. It would also warn drivers coming out of side roads who might not notice a light-colored oncoming car as well as they would notice a strong white light. This too, might make possible the avoidance of many highway accidents.

We think Lowell Nussbaum has a worthwhile idea here, one that would reduce traffic accidents and increase traffic safety. It is simple, inexpensive and could easily become standard equipment on all automobiles. We recommend it to the car manufacturers of the United States.

Local Reception Fetes Azores Official

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, southern Alameda County was fortunate in having a large number of people of Portugese descent come there in the period when the sod was first being broken. These people made a great contribution to our country and many of the outstanding citizens of our communities sprang from them.

Southern Alameda County was also fortunate in having Dr. Antonio de Freitas Pimentel, Governor of the District of Horta, Azores Islands, and his distinguished wife, recently pay a visit. The Hayward, Calif., Daily Review cov-

ered a reception given for them on June 15, that I make part of these remarks:

LOCAL RECEPTION FETES AZORES OFFICIAL

Dr. Antonio de Freitas Pimentel, Governor of the District of Horta, Azores Islands, and his wife were honored at a reception Monday evening at the Hayward home of Mr. and Mrs. Edward Massa, 20382 Mission Boulevard.

Some 25 leaders of the State's Portuguese colony gathered in the Massa gardens to welcome the Pimentels to southern Alameda County.

Both the Government official and his wife are distinguished physicians in the Azores where they maintain their own hospital on the island of Fayal.

THANK YOU TOUR

Their visit to the United States is an expression of appreciation on the part of the island people for aid given by this country 2 years ago when a volcanic eruption devastated vast areas of the Azores.

The Pimentel's host Monday evening was one of four delegates assigned by the Portuguese colony of California to deliver relief money raised by the group to the Azores.

Portuguese consul in San Francisco, who chaired the California delegation to the Azores, Dr. Vasco Futecher Pereira and his wife headed the list of leaders present at the reception to honor the Pimentels.

DIGNATARIES ATTEND

Among others in attendance were Antonio S. Bettencourt, Portuguese vice consul; Alberto S. Lemos, editor and publisher of the Portuguese Journal; Mr. and Mrs. F. F. Pimentel, Santa Maria, the Governor's brother and sister-in-law; Mr. and Mrs. Marcy deCosta of San Leandro, and Mr. and Mrs. Gabriel Moitozos of San Joaquin Valley.

De Costa, who has been decorated by the Portuguese Government, is chairman of the Portuguese section of the International Hospitality Committee.

The Moitozos sponsored more than 100 of the Azores islanders who were among 1,500 families permitted by special act of Congress to enter the United States on a nonquota emergency basis following the Azores disaster.

Joining the Edward Massas in welcoming the Pimentels were other members of the family, including their 12-year-old daughter, Valerie, and Massa's sisters, Aurea Massa, former Hayward High teacher, and Mrs. Frank Lenz and her husband, all of Hayward.

DINNER BEFORE

Michael E. Massa and his wife, Joan, joined his parents in honoring the Azores officials at dinner on the peninsula prior to the reception.

In California until July 2, when they will journey to the east coast, Governor and Mrs. Pimentel have been honorees at many civic and social events, including a reception given by Oakland's Mayor Clifford Rishell.

Guests at the Oakland reception included Col. N. M. Armstrong of San Leandro, who had been entertained by the Pimentels in 1955 in their home in Fayal.

The Crossroads of Destiny

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Honorable Roy M. Harrop, of Omaha Nebr., is the author of this article on William Jennings Bryan which I commend to the attention of the Congress:

THE CROSSROADS OF DESTINY

If William Jennings Bryan were here now. Why Congress has failed to balance the scale at abundance.

On March 19, 1960, many Americans will celebrate the 100th birth anniversary of Col. William Jennings Bryan, of the 3d Nebraska Regiment in the Spanish-American War, whose birthplace was Salem, Ill.; died in 1925 at Chattanooga, Tenn., and was buried in Arlington National Cemetery; he was one of our greatest statesmen, soldier, author, onetime editor of the Omaha World-Herald, and his own paper, the Commoner, lecturer, constitutional lawyer, Congressman from Lincoln, Nebr.'s First District in 1890, and Secretary of State during the first Woodrow Wilson administration.

Colonel Bryan was better known as the Great Commoner and silver tongued orator, and was three times the nominee of the Democrat Party for President of the United States. For over 30 years Bryan's voice was the Nation's conscience—a voice that was neither small or still on matters concerning Federal solvency, money, banks, economic security, the free coinage of silver, and other matters of national importance.

Commoner Bryan, peerless leader of the Democrat Party will always remain foremost in the hearts and minds of the advocates of States rights, did more than any other political leader when he proposed to restore the solvency of the United States of America, remove the mortgage shackles, placed on the people by the international moneychangers and international bankers, from the farmers and put the farming and livestock industry on a prosperous basis, remove the debt-wage slavery system from labor of the Nation, and provide the consumers with sufficient annual wages to buy the surplus products of the farming and other industry, restore peace and prosperity to the people of the United States and abolish financial panics and ruinous bankruptcy which follow these cycles of Federal deficit spending sprees and inflation and deflation of bank credit by the bankers of this country.

In 1896 he ran for President for the first time on the bimetallism issue—free coinage or silver (ratio of 16 silver to 1 gold dollar) at which time he delivered his famous convention speech, at Chicago, condemning the monopolistic gold standard of the Republican Party, when Bryan said to his opponents: "You shall not press down on the brow of labor this crown of thorns; you shall not crucify mankind on the cross of gold." The convention went wild with applause. At last the Democrats had found their champion, the Great Commoner. He also said: "We denounce the dollar, under the gold standard, as a robber; we denounce the issuance of notes intended to circulate as money by national banks as in derogation of the Constitution; we demand that all paper money be made legal tender for public and private debts, or which is receivable for dues of the United States, shall be issued by the Government of the United States." This would have made the Federal Government free from debt, interest, and taxation on our own medium of exchange, and restored Federal solvency.

In 1900 Bryan ran again for President on the issue of anti-imperialism and States' rights. This time he said: "We are opposed to this private corporation paper, circulated as money but without legal tender qualities and demand the retirement of all national bank notes as far as the Government paper or silver certificates can be substituted.

In the 1908 platform, Bryan advocated Government ownership of railroads, telegraph, and telephone and Postal Savings Banks as branches of the U.S. Treasury with every post office a bank. (Postal savings banks were later enacted into law without full banking privileges, serving only as a depository.) Bryan advocated that all postal savings banks should have full banking powers of deposit and withdrawal by check, operated solely by the Federal Government. He said: "We believe that insofar as the needs of commerce require an emergency currency, such currency should be issued and controlled by the Federal Government. (Today the privately owned Federal Reserve Bank System issues all the currency for the various national banks and receives all the profits from loans made by National Banks of the United States of America; they are exempted by law from payment of Federal income tax on these profits, and are responsible for our National Federal debt, now $295 billion, which is the present debt limit placed by the Federal Government.

Bryan, the Great Commoner, began his fight for popular election of U.S. Senators in 1890, signed the proclamation as Secretary of State in 1913. He championed the income tax law in 1892, the social security law; as Secretary of State, he put the official seal on the income tax law in 1913. He opposed Government by injunction, obtained a law guaranteeing a trial by jury in contempt cases; was author of the law compelling publicity of campaign expenses, demanded public ownership of railroads and proposed postal savings banks 10 years before Roosevelt took up the cause of the forgotten man; drew 30 peace treaties under which the United States took a step forward for world peace.

Bryan's contribution to his age was primarily his belief in the inherent dignity of man and his economy security as well as the solvency of the United States of America as brought out in the tradition of Thomas Jefferson and Andrew Jackson. This peerless leader opposed the trespassing on individual freedom by the Federal Government or corporate agrandizement. He said: "Monopoly is intolerable and indefensible." In millions of homes throughout the Nation his picture hung on the wall and he represented their hopes for the future, a defender, a personal godfather of the common people of the United States of America.

Colonel Bryan said the passage of the Federal Reserve Bank Act in 1913 was the work of Congressman Carter Glass, of Virginia, and Colonel House, of Texas, who was President Wilson's personal adviser; also assisted by Henry Clay Frick, Otto Kahn, Frank Vanderlip (of the National City Bank in New York), J. P. Morgan, Jr., A. Barton Hepburn, Barney Baruch, Paul and Felix Warburg (international Rothschild bankers), and Secretary of the Treasury, McAdoo. All of these men had their hands in to influence President Woodrow Wilson to put his stamp of approval on the bill which had been rewritten by Congressman Carter Glass and Colonel House of Austin, Tex. Bryan refused to sanction this bill as rewritten, and threatened to resign (which he later did) because this new bill authorized the privately owned Federal Reserve Bank, administered by private bankers, to issue private bank notes and make loans to the Government rather than to issue U.S. currency, as authorized under the Constitution, free from interest and taxfree. If Bryan's advice had been followed there would today be no Federal debt or regimentation of industry in America, we would not be a nation controlled by bankers, the people of this country would have economic security, peace and prosperity and we would have avoided World War I, World War II, the Korean war, which were mainly to bolster up topheavy financial structure and keep industry in operation.

Commoner Bryan, like Honest Abe Lincoln, believed in the solvency of the United States of America and said it was the duty of Congress to keep it that way regardless of political parties or international bankers. Byran once said: "Congress has the constitutional, sovereign right to coin money, regu-

late the value thereof and of foreign coin, fix the standards of weights and measures." At no place in the Constitution is it provided that Congress shall delegate its rights to private bankers (Federal Reserve Banks) to issue their bank credit currency and charge the Government of the United States interest thereon for the use of its own credit, or create a Federal debt to private bankers to be paid by taxation levied on the people. This is a crime against the people and future generations, to burden them with a debt which is not of their own creation and is intolerable and indefensible.

Colonel Bryan further told why Congress has failed when he said: "For generations Congress has been trying to balance our economic scale by destroying commodities to correspond with an insufficient money supply, thereby to raise the price level, in place of increasing our money supply to balance the scale with abundance—full production, full consumption, and full employment."

We are again at the crossroads of destiny with a debt burden in the colossal volume of approximately a thousand billion dollars, which includes the Federal debt, State, municipal, and private debts. Our Federal debt, caused by a cancerous growth of deficit spending—inflation and deflation monetary policies—has now reached the staggering sum of $295 billions, all of which is borrowed bank credit (not cash money), and foisted upon us by international bankers under the privately owned Federal Reserve Bank System, which must be paid through taxation by the people of the United States. The only alternative would be repudiation of all debts, unless the lawmakers in Congress take over the Federal Reserve Bank System as provided in the original Federal Reserve Bank Act, passed in 1913.

Col. William J. Bryan was a soldier and he would not forget the millions of draftees of all nations who laid down their lives in World Wars I, II, and the Korean war, who, not realizing they were the pawns of the scheme of international bankers to gain control of the world through their control of money and credit monopoly which has produced a debt-credit slavery system, under the one-world government scheme (the United Nations) did not realize they might spend the remainder of their lives in a foreign prison, and some are still serving sentences in Chinese Communist prisons.

If Commoner Bryan were here today, his conception of United Nations a world court would be far removed from an alien supergovernment composed of 15 members with only 1 U.S. member. He would not recognize an international flag, nor consent to reduction of the U.S. Government as a mendicant to peaceful coexistence with Dictator Khrushchev or international communism. He would never submit to a program of surrendered rights and policies. He would not agree to summit agreements which would transfer the right to declare war from Congress to the United Nations. He would never permit the submission of the Monroe Doctrine. He would stop foreign immigration until our labor is fully employed; he would discontinue foreign giveaways; he would hold fast to our control of the Panama Canal and our foreign possession; he would never submit to an alien court's jurisdiction over our domestic affairs in contravention of the Constitution of the United States of America or in violation of the Connally amendment, and any other question vital to our rights, liberties, and the pursuit of happiness.

Our problems today are equally grave and perplexing. Having reached the forks of the road, which way shall we Americans go? Standing between civilization and chaos, destiny is hidden here. There is no half-way ground. We must choose between the Communist scheme of peaceful coexistence under the United Nations one-world government, which would make slaves of the U.S. citizens, or adhere to our United States Constitution, that we may survive and live as freemen, and as Abraham Lincoln said that "Government of the people, for the people and by the people may not perish from the earth."

If Bryan were here today, he would adopt the same financial plan used by Abraham Lincoln in the War Between the States crisis when at his request, the Congress issued full legal tender currency (and there remains in circulation today $345 million of this full legal tender currency, good for all debts, public and private), and we believe Bryan would command Congress to exercise its legal option to purchase the Federal Reserve Bank System's actual capital of $304 million (as authorized in the Federal Reserve Act of 1913) and pay for this bank's actual capital with the issue of full legal tender currency (U.S. notes). Then it would be, as was originally planned by Senator Robert L. Owen of Oklahoma and William Jennings Bryan and other leading Democrats and Republicans in Congress at that time, a Government-owned reserve banking system, the capital owned by the U.S. Government (not by private national banks) and we would thereby pay off our burdensome national debt without taxing the people one copper cent, and we would be a free and independent nation, as our forefathers, George Washington, Thomas Jefferson, and Andrew Jackson, planned.

In colonial days, George Washington warned the American people "to beware of foreign entanglements." All of our wars have been financed by the Rothschild International Bankers as far back as the American Revolution, and today this Nation is hopelessly enslaved to this alien bank-credit system, which does not deal in real money, but in bank credit, a false substitute for money, and today our Government is paying over $11 billion annually to the money-changers for the use of its own credit, which we, the taxpayers, must pay for a medium of exchange to finance the economy of the United States of America in order that the free-enterprise system may survive under bankers monopoly.

Only the spirit of William J. Bryan, his love of the truth, his sympathy with humanity, his devotion to liberty and justice, based on the Constitution of the United States, his faith in God, in the eternal salvation of mankind, will bring the new "birth of American freedom" for which he pled * * * return to Congress its constitutional right to issue full legal tender currency, good for all debts public and private, pay off the national debt, build the Interstate and Defense Highway System through every State in the Union, and a transcontinental highway from Fairbanks, Alaska through Canada, the United States, Mexico and the Central American Republics to the Canal Zone of Panama, and repeal all Federal manufacturer's and retailer's excise tax on oil, gas, diesel fuel, passenger autos, trucks, buses, tractors, parts and accessories, tires, use of highway vehicles, transportation of persons and property and other related purposes, restore peace and prosperity.

This would provide jobs for our 5 million unemployed and an increased purchasing power so that the excess farm commodities may be consumed instead of becoming a surplus, warehoused (unsolved farm and labor problem) of goods and services which consumers cannot buy with becomes a penalty on taxpayers in the sum of $11 billions annually—reinstate democracy as the invisible bodyguard of liberty and justice, protect freedom of the press and freedom of speech, states rights, and preserve our representative form of government from the wrecking forces of ignorance, international world courts, inroads of international communism, and bank-credit-debt slavery system under the rule of the international bankers.

What America most needs today is a President endowed with the vision, courage, foresight and intelligence of William Jennings Bryan, who at this crucial point in our history would command Congress to exercise its sovereign powers as above stated. In conclusion, I would affirm two points: (1) Both men and women must be aroused to the necessity of restoring this country to solvency immediately (and the American people are not so aroused now) and (2) Congress must be made to realize that this effort is necessary on their part to save this Republic our economic security. Able leadership will appear when enough people care, demand and spend some of their money and time to protect their lives, property and families from cunning international Communists who would destroy this Republic—the last stronghold of freemen in the world today which William J. Bryan fought so valiantly for 30 years to preserve.

The author herein says he was a personal friend of William Jennings Bryan, and the statements made herein are from personal knowledge and from talks with Secretary of State Bryan while he was in Washington, D.C., during the Woodrow Wilson administration and of other periods during his lifetime at Lincoln, Nebr.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of June 25, 1960:

WASHINGTON REPORT

(By CONGRESSMAN BRUCE ALGER, Fifth District, Texas)

JUNE 25, 1960.

The social security amendments of 1960 passed by a vote of 381 to 23. I opposed the amendments strenuously in view of the acturial unsoundness of the present system, which continues to impose ever greater tax burdens on future taxpayers as we liberalize the program for today's beneficiaries. The system is not pay-as-we-go. The political gesture every 2 years before elections of "sweetening the pot" is a form of political bribery for votes, as I see it. The bill this year removed the 50-year age limit on disability benefits, changed from 18 quarters to 9 quarters (1 quarter equals 3 months) the work period necessary to qualify for coverage, raised benefits for dependents and survivors, extended coverage to physicians, ministers, domestic workers, State employees (by choice), and others. No provision to meet the added cost (tax increase) was suggested.

The major new section would provide medical service for the needy aged. This was a watered down version of earlier proposals such as the Forand bill and the administration's medicare program. This new medical aid is extended within the framework of the social security system, along the lines of the present public assistance program, and is optional to the State. The Federal Government will provide grants out of general revenues, to be matched by the States, the

Federal portion being 50 to 65 percent of the total.

Five of us Republicans on the Ways and Means Committee objected to any Federal program extending medical aid to the aged, largely because the area of need, and the level of such services already being extended at the local and State level are unknown to us. Three of us joined in a separate minority view, stating our objection to the actuarial unsoundness of the social security system as presently constituted. A lot of the arguments and misunderstandings about social security, I think, stem from the widely held belief that those drawing benefits paid for them during their working years, or that present workers are today contributing enough to finance their own benefits when they retire. This simply is not so, and never has been so.

Some examples (case No. 1:) An employee who, together with his employer, had paid in the maximum amount possible in social security taxes from the time the program began in 1937 until the first of this year has paid a total of $2,292. If he retires this year when he and his wife both reach 65, he'll start drawing on an annuity worth $31,200. Compare that with the $2,292 figure, the most anyone can have paid into the program to date (case No. 2:) An individual qualifying for a minimum benefit on January 1, 1960, could have paid in, with his employer, as little as $36 and could draw benefits expected to amount to $8,600. Who pays? Future generations, not the beneficiaries. How? By a gross tax starting with the first dollar earned, hardest on the lowest incomes—no deductions allowed. The social security tax for most will exceed income tax. (Case No. 3:) A farmer with net income in 1975, from self-employment, of $4,200 with a wife and two children and standard deductions would pay $276 income tax and $283.50 social security tax—with three children, income tax $156, social security tax $283.50. Still the program will be in the hole. Today, present beneficiaries will draw $65 billion more than they have paid in. The cost of present contributors as future beneficiaries, is unfunded to the amount of $300 billion to $600 billion. How high should taxes be raised to make the program sound? No one knows—but surely it is a study worthy of our attention. Otherwise, the program may collapse or be voted out by hard pressed taxpayers of the future. Instead, we continue to add unfinanced new benefits every election year. Twenty-three Members voted against the bill.

The House wrestled around in another effort to formulate an acceptable farm program, but got nowhere. The real point at issue is to whom a new farm bill must be acceptable. The Democratic leadership in Congress would like to woo the farm vote but must satisfy the administration's demand for a bill aimed at lowering surpluses born of subsidies. In wheat alone we now have stored 1.3 billion bushels, a 2½-year supply, costing $3.2 billion. Storage and transportation costs alone exceed $1 million a day. The leadership in Congress has thus far proposed only more control, regulation, and support schemes, when it's pretty apparent that Government controls, regulations, and support schemes helped to push the farmer into his present fix.

Billy Graham, in Washington for his crusade, spoke at a breakfast meeting to Members of Congress. Perhaps his message and his presence were best described by Reverend Elson when he called Billy Graham "the right man with the right message at the right time." Billy forcefully reminds us of the truth, and need for, the great lessons of the past, of our spiritual beliefs that stress individual initiative and responsibility. I was most happy when Billy told me he will be coming to Dallas in the fall for a crusade.

Distinguished Veterans of World War I of the U.S.A., Department of the District of Columbia, Washington, D.C., Adopt Resolution Commending Committee on Un-American Activities for Its Devotion to Duty

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a resolution just received and a letter accompanying same dated June 25, 1960, from the Veterans of World War I of the U.S.A., Department of the District of Columbia, Washington, D.C. Mr. Speaker, I am sure that you and almost each other of the Members of this great legislative body are also grateful, as I am, that this distinguished group of veterans of the wars of the United States have seen fit to commend the House Un-American Activities Committee and send forward this resolution:

VETERANS OF WORLD WAR I
OF THE U.S.A.,
Washington, D.C., June 25, 1960.

Hon. CLYDE DOYLE,
House Committee on Un-American Activities.

DEAR SIR: Enclosed is a copy of a resolution adopted by the 4th annual convention of the Department of the District of Columbia, Veterans of World War I of the U.S.A., on June 18, 1960.

This resolution was prompted by circumstances that demand strict vigilance. We hope it will assist in averting further attacks on the committee.

Respectfully,

ALBERT J. HERMAN,
Department Adjutant.

RESOLUTION ADOPTED BY VETERANS OF WORLD WAR I, DEPARTMENT OF DISTRICT OF COLUMBIA, WASHINGTON, D.C., JUNE 18, 1960

Whereas recent developments indicate an increased spread of Communist influence aimed primarily at the United States of America, threatening our democratic form of government and endangering our existence as a free nation; and

Whereas the freedoms we enjoy were secured and preserved at a great sacrifice of human lives and property, and deprivation; and

Whereas there is an apparent increase in un-American activities within our own borders which menaces our love of liberty; and

Whereas an effort was made to abolish the House Committee on Un-American Activities of which the Honorable FRANCIS E. WALTER is chairman, and which committee is vigorously pursuing its duties: Therefore be it

Resolved, That the Department of the District of Columbia, Veterans of World War I of the U.S.A., in convention assembled on this 18th day of June, 1960, go on record as commending said House Committee on Un-American Activities for its devotion to duty and to urge the Congress of the United States of America to continue this valuable committee; and be it further

Resolved, That a copy of this resolution be forwarded to the Honorable SAM RAYBURN, Speaker of the House, to the Honorable FRANCIS E. WALTER, chairman of the House Committee on Un-American Activities, and to each member of the committee.

Deterrence and Arms Control: They Go Together

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BRADEMAS. Mr. Speaker, one of the clearest and most intelligent statements of why it is essential for the United States to have both a powerful military defense and a sound policy of arms control at the same time is the following editorial, "Deterrence and Arms Control: They Go Together," published in the June 1960 issue of the National Amvet, published by the American Veterans of World War II and Korea.

Under unanimous consent I include this article in the RECORD:

DETERRENCE AND ARMS CONTROL: THEY GO TOGETHER

There is, understandably, considerable confusion in the public mind today about the simultaneous emphases on (1) second-to-none deterrent power and (2) arms control. Attainment of these two highly desirable goals may seem paradoxical to many. Yet it is distinctly possible, and extremely desirable, to achieve both. They, in fact, go hand in hand.

How?

It is indisputable that the United States must maintain impenetrable deterrent power. Such power, first of all, gives us security against the threat of enemy attack, because an enemy will be reluctant to commit aggression if we are known to have the capabilities to beat down the aggressor. Second and even more important, we must have the military and civil defense power to fend off attack, should an enemy strike.

We must leave to the experts the analyses of the quantities and types of weapons necessary for second-to-none deterrent strength. Closing the "deterrent gap," if such a gap exists, is extremely intricate because in this era weapons can become obsolete long before they have been produced, due to continuing scientific advances.

We must extend lead time between the drawing board and operational stages in order to hedge against obsolescence. Ultimately our fate must rest in the hands of the Nation's top scientific and military leaders acting under wise and judicious political direction.

Disarmament, on the other hand, means an end to the current, dangerous missile game, in which the great powers of the world continually and competitively build their stockpiles of bigger and more destructive aggressive weapons and stand poised for attack. With aggressive weaponry developed to its present capabilities, victory by thermonuclear warfare would mean rule over a graveyard. And it is reasonable to assume that if present trends continue, the weapons of the future would be even more devastating. The bleak end of the world pictured by Nevil Shute in "On the Beach" is by no means beyond the realm of possibility, if the missile competition progresses. And what value is victory, if there is no nation left to rule?

And yet the powerful nations of the world will not engage in effective discussion on disarmament and nuclear bomb test bans unless these nations are convinced that they have reached a military stalemate (mutual deterrence). At this point they can see that there is nothing ahead but mass destruction. Reduction of weaponry and peaceful competition on the world scene become the only viable alternatives.

While maintaining our strength we must pursue all efforts to halt competition in aggressive weaponry. We must try to divert our vast creative abilities to purposes that, instead of wiping out mankind, will enhance the health and happiness of mankind. We can concentrate on space exploration for peaceful purposes; we can harness the great forces of nature with atomic energy; we can find the causes and the cures which will eliminate disease; we can provide food, clothing, and shelter for the underprivileged peoples of the world; we can help the newly emerging nations find the avenues to national fulfillment through self-government; we can seek greater education for all to broaden appreciation and enjoyment of our years on earth.

We can do all this under the banner of competition. This can be valuable and healthy—perhaps particularly so—when the competitors are the mightiest nations on earth. We in America especially know the power of competition; we have grown strong and wealthy chiefly as a result of our internal economic and political competition. On a world basis competition can achieve even greater values if it is directed into peaceful and humanitarian channels.

And so it is that survival requirements command military defense and deterrence second to none in the world; and that mutually high military defense and deterrence, when achieved by the powerful nations, command a determined search for arms reduction and control. Thus, defense and disarmament go hand in hand as prerequisites to a world of peace with freedom.

Voluntary Weather Observers

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. ULLMAN. Mr. Speaker, there are many people who contribute every day to essential activities of the Government without receiving any pay and, in many instances without receiving much in the way of recognition for their services. One such group of largely unsung contributors to public service is the voluntary weather observers of the Nation.

Private citizens, as a matter of fact, have been serving our Government as voluntary weather observers since before the U.S. Weather Bureau was established. There are currently about 12,000 men and women in the United States who, without any compensation, take and record weather observations every day, making their records available to the Weather Bureau. Dr. Reichelderfer, Chief of the Bureau, has understandably called the observations an invaluable treasure to the Nation.

I am pleased to see, Mr. Speaker, that the Weather Bureau has instituted an award system to furnish public recognition of the service of such people. It has created the Thomas Jefferson Award for "outstanding accomplishment in the field of meteorological observations." The naming of this award after our third President is highly appropriate since he himself maintained an almost continuous record of the weather from 1776 to 1816.

Seven persons have been selected to receive the Thomas Jefferson Award this year, Mr. Speaker, and I am extremely pleased to say that one of these is Mr. Phil Brogan, of Bend, Oreg. Mr. Brogan has served long and faithfully as a voluntary weather observer. He has taken daily observations at Bend since 1923—37 years, without missing a single day. His outstanding fidelity in this service and his consistent accuracy and promptness in recording and reporting his observations is something he has every right to be very proud of.

I am gratified that the Weather Bureau is giving Mr. Brogan this signal recognition. It gives me pleasure to extend my own personal congratulations to him, and I wanted to give him this added recognition by calling the attention of my colleagues to his receipt of the award. It goes without saying that in so doing, I am joining the Weather Bureau in its expression of gratitude for Mr. Brogan's outstanding service to the community over the years.

The President's Attitude

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. COHELAN. Mr. Speaker, the following report by Columnist James Reston in the June 19 issue of the New York Times expresses in this writer's usual pungent manner the reaction of many to the official administration attitude following the breakdown of the summit conference and the more recent incidents in Japan. As Mr. Reston says, while we must maintain a constant, careful watch over Communist nations, "it is really too innocent to suppose that they will react to all this like Christian gentlemen" and, furthermore, "it is clearly not true that there was no other course that the United States could have followed." Under permission to extend remarks, I submit Mr. Reston's article for the RECORD:

THE PRESIDENT'S INTERVIEW ON THE "ST. PAUL"

(By James Reston)

WASHINGTON, June 18.—If anybody is interested in analyzing what is wrong with our diplomacy these days, he might get a clue from reading the dispatches of the reporters who saw President Eisenhower yesterday aboard the cruiser *St. Paul*.

"The President," reported Harrison Salisbury to the New York Times, "appears to be in robust health * * *. He sports a fine suntan * * *. Today he shows no sign of despondency over the Japanese development. One reason for this is that he regards the events as caused by circumstances over which he had no control.

"There is no sign that the President feels any responsibility over the course of events either at the summit meeting or regarding the Japan trip. He seems to believe that in both cases there was no other course that the United States could have followed * * *.

"Aboard the *St. Paul*, the President appears somewhat isolated from world news sources despite the most modern electronic media of communications available to him. By last evening, he had not had any report on world reaction to the Tokyo cancellation."

AN ODD ASSUMPTION

This is in some ways the most disquieting item of the week. For it indicates that the attitude of injured innocence and the habit of official self-deception persist despite two of the most humiliating diplomatic reverses in recent American history.

It is true, of course, that the President is not responsible for Mr. Khrushchev's savage bad manners in Paris, or for the weakness of the Kishi government, or for the barbarians in the streets of Tokyo, but it is clearly not true that there was no other course that the United States could have followed.

In fact, the President himself insisted for years on a totally different course of avoiding these high-level meetings unless they were most carefully prepared and a propitious atmosphere was assured. This was his policy from the 1955 summit meeting until it was suddenly reversed late in 1959 to provide for new meetings and new summits which on the President's own assurance gave very little hope of progress.

This, however, is not the point. The past is gone; but the habit of Presidential detachment from personal responsibility, and even from information about the opinion of the world, apparently remains, and that is a point of some importance.

We are engaged in a very rough business. We are establishing military bases on the fringe of the Communist empire and establishing bombers and rockets on those bases. We are justified by the aggressive policy of the Communists in doing so, but we should not be surprised if the Communists use every possible device to frustrate our efforts, particularly if we reflect on what we would do if they established rocket bases in Cuba.

COPS AND ROBBERS

No doubt we are convinced of our own good intentions toward the Japanese and even toward the Russians, but no nation is ever as virtuous in the eyes of other nations as it is in its own eyes, especially if the nation concerned has once invaded Russia and dropped atomic bombs on Japan.

We are getting into trouble because we are not seeing ouselves as others see us, and not seeing others as they actually are. We see ourselves, quite accurately, as the policemen of the world, trying sincerely at great cost to maintain order, decency and freedom in the world.

But robbers don't like cops and Communists don't like Western freedom or Western manners, and Communist students are not satisfied with chasing girls: they feed on Prime Ministers.

Accordingly, while it is essential to watch them very carefully, even if we have to fly over their hideouts to do so, and to establish bases to keep them from destroying the alliances, it is really too innocent to suppose that they will react to all this like Christian gentlemen.

In this kind of war there are bound to be reverses and there are bound to be mistakes. No doubt this is an unmitgated nuisance, but the facts have to be faced and anticipated.

During the last war, when Hitler complained that his armies were being hampered by the severe winter weather in the Soviet Union, Winston Churchill remarked: "No

doubt this is true, but after all Mr. Hitler should have known that it snowed in Russia."

Bill Cunningham—Man Among Men

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. PHILBIN. Mr. Speaker, when the famous newspaper columnist and radio commentator, Bill Cunningham, passed to his eternal reward the Nation lost one of its most patriotic and devoted sons; the newspaper profession one of its most brilliant luminaries and a multitude of Americans a beloved and loyal friend.

It was my high privilege and honor to know Bill Cunningham for many years. I first met him when he was All-American center on one of Dartmouth's greatest football teams. Later I watched his great career in the newspaper field unfold, until he became one of the most widely read columnists in the country.

Any words of mine would be entirely too inadequate and feeble to recount the greatness of Bill Cunningham and to recite his tremendous contributions to the American people and our Nation. His magnificent career stands out like a shining star. It encompassed broad fields of endeavor; it was as wide as humanity itself.

There was stark tragedy in Bill Cunningham's last days because he was stricken by a dread disease that sorely afflicted him and in a short space of time ended his mortal life. He was a strong, rugged, powerful man who seemed virtually indestructible, and his final sickness and untimely demise were almost incredible to those of us who knew him well.

Bill Cunningham was big and powerful in every way—physically, mentally, and spiritually. Strength was the very essence of the body, mind, and spirit. Though he had a will of iron, his heart and his sympathies were as light and tender as the gentle breeze of a summer day, and he loved his friends and his fellow man with an intensity that knew no bounds.

He was beloved by everyone who knew him and his vigorous personality came through with a friendliness, geniality, loyalty, and warmth that made him beloved as well as respected and admired by those who were close to him and by those who knew him.

Bill Cunningham was a great man and his love of country and his patriotism were a true inspiration.

He dearly loved his wonderful family which always played such a real part in his life. His devoted wife and his children were invariably uppermost in his mind.

He was a man of deep and unyielding convictions. He fought militantly for things he believed in, and he never hesitated to speak his mind, even though at times it meant bitter controversy.

He would never compromise his principles and always stood stanchly by what he thought was right and just. If, in the heat of battle bitterness developed, as it often did, he was the first to hold out the hand of reconciliation.

I had the honor to be a member of a small group of which Bill Cunningham was the central part that met just once a year in the beautiful home of my esteemed and able friend, the distinguished business and civic leader, Mr. George Wallace of Fitchburg, Mass. This club was comprised literally of only a handful of members drawn together by common interests in the problems of the country, by close personal ties, and by the delights of popular music in which members of the group were especially interested.

Bill Cunningham, among numerous accomplishments, was an accomplished pianist and organist, and on these occasions of delightful relaxation he would play for hours with zest and enthusiasm some of the old and new songs that he liked and our small group invariably joined with him to make these cherished days of gathering unforgettable experiences in our lives.

Now that Bill is gone our little group has decided as a mark of respect and affection to have no more meetings. We will miss him; the Nation will miss him; the newspaper business will miss him; the radio audiences will miss him. Most of all his loving family and his devoted friends will miss him. He was a man among men.

Bill Cunningham has left us all a great legacy—not alone of personality and genius and devotion to great causes and patriotism and love of country and love of his God, although all these things were sacred to him. But he leaves us perhaps, most of all, a legacy of supreme courage, a courage that never faltered, a courage that was unsurpassable, a courage that gave him strength, power, and resolution to fight for the things he believed in and to face every situation confronting him with intense fortitude and to stand alone unflinchingly and fearlessly, if necessary, as he did at the end when he battled with such admirable spirit and tenacity against the overwhelming odds of his last illness.

Another quality of Bill Cunningham's that stood out throughout his lifetime was his loyalty.

Loyalty to family and friends, to his beloved college, and to all the things he held dear was the trademark of this great, gallant, and devoted man who lived for something more than himself, who lived for his country, his family, his friends and who strove mightily and unselfishly in his journey through life to make the world a better place for his having been here.

Bill Cunningham's memory will be perpetuated in many places and in many ways, and it is especially fitting that his friends, supported most generously by the incomparable George Wallace, are establishing scholarships at his famed alma mater to keep his precious memory green, and to give help and inspiration to other boys who come along the pathway he once came to set their sights high, and to work and strive to advance themselves in life, not for themselves alone, but to help to shape a nation and a world in which all peoples may live together in freedom, peace and friendship.

Myriad indeed are the high tributes that have been paid to Bill Cunningham and profound the sorrow and the grief occasioned by his untimely passing. To his devoted family his lovely wife and loyal helpmate and his dear, loving children whom he cherished, I again tender my most heartfelt sympathy. Their bereavement is a most sorrowful one. But I am sure that the good Lord, in whom Bill and his family ever have reposed in their trust, will help, guide, solace and sustain them to bear their truly irreparable loss with that spirit of reconciliation, courage and fortitude that marked the life of their dear, departed one.

May Bill Cunningham find eternal rest and peace in his eternal reward. May the lesson and example of his courageous, devoted, constructive life serve for long to inspire our people and guide young Americans of the future.

Bill Cunningham wrote many peerless articles and delivered some tremendously impressive addresses of which more will be heard as years roll by. Because the headline of the article of his tribute to the famous "Iron Major," the outstanding football coach, his friend Frank Cavanaugh, was captioned, "He was a Man Among Men," I thought it would be appropriate to insert this writing as part of my remarks, because it so completely exemplifies and summarizes the role which Bill Cunningham himself played in his life and will continue to occupy in our memories—"He was indeed a man among men."

The article follows:

THE BEST OF BILL CUNNINGHAM—CAVANAUGH WAS A MAN AMONG MEN

(By Bill Cunningham)

They're about to launch the Frank Cavanaugh picture and some of us who knew and played for the celebrated Iron Major held a sort of memorial service for him last night over a big radio hookup synchronized with the official release of the film. I haven't seen the picture, but the publicity releases on it say that Pat O'Brien has done a memorable characterization.

Photographs of O'Brien as Cav look like photographs of O'Brien as O'Brien, but that won't make so much difference to millions. A beauteous young lady billed as Ruth Warrick plays the part of Mrs. Cavanaugh, and they say that the Cavanaugh boys, six of them in the Army, had a hard job getting oriented when they visited the studio while the picture was being made. They couldn't quite straighten out the sight of a pretty girl younger than they are playing the part of their mother.

CAV KNEW HOW TO BREAK THAT TENSION

The printed synopsis of the picture seems to say that the script holds pretty faithfully to the old coach's life story with the football emphasis upon his postwar career. A man who never knew him, and who never even saw him, wrote the scenario but he did a faithful job of researching and it could be possible that he did a better job because he never had come in personal contact with the subject he was handling.

Because of this, he could at least see the whole history objectively. Those who knew Cav mostly have the memory of some experience or experiences so deeply burned into them that the rest wouldn't get an honest chance. Cav wasn't a person you met and forgot.

The memories may be funny or serious. Sometimes they are of no particular importance, even, perhaps, in a story of his life. and yet it suddenly strikes the rememberer that they add up to something, that they do belong, and belong hard to any record of the man.

Psychology, for example—morale, they call it in wartimes. I don't know what he called it, or whether he called it anything. But there was almost nobody who more skillfully knew how to play on the emotions of young men faced with a hard physical chore. The following incidents, for example, add up:

I was a member of the last squad Cavanaugh coached at Dartmouth, and he was keying us for the Princeton game. We were to take the train next morning, and he had assembled us after supper for a last blackboard talk, a final mental rehearsal of plays and plans. We were in what I suppose you'd call the lobby of the big gymnasium. I remember the air outside was clear and frosty cold.

Cav went through the technical part of the talk, and then he digressed into how much this game meant to the prestige of the college, what we owed the college, and what we owed to ourselves. Cav always spoke in a deep organ tone.

As he developed this theme, you could have heard a pin drop in the place. Finally he was telling us what the game meant to the alumni, and in proof of this, he drew a big sheaf of telegrams from a briefcase and began to read them. Whether on the level or not, we never knew, but nobody thought to question their authenticity then. They came, or so he read, from all over America, from this alumni association and that from this famous alumnus and that historical athlete.

We were as tense as kids could be as he came to the end. Knuckles were white, faces were strained. It wouldn't have taken much to have broken us into tears. In fact there were tears on some cheeks.

"And now," our coach concluded, "this final message is from that great football enthusiast, Mrs. Frank W. Cavanaugh. It reads, 'You forgot to pay the rent. Please send $25.' That's all, boys. See you tomorrow."

In other words, he took us right up to the line drew us tight as fiddlestrings, and then skillfully snapped the tension with a laugh.

I never thought much about that passing incident until years later when a man told me what seems to me to be one of the great stories of the last war. It was of Cav's coming up to take command of a hard-driven outfit that had been holding a bleak and bloody sector for many days without relief. Long overdue for a rest, they were ordered, instead, to dig in for some more. Life was all mud and misery and clock-round danger. Cav suddenly arrived as their new commanding officer.

He evidently looked the situation over and it didn't take him long.

"Listen," he growled at his new command, "you so-and-so came over here to die. I'm going to make sure that you get the chance. I don't want to hear any more bellyaching. What do you think you rate—the Waldorf-Astoria? You're going to dig up those guns and you're going to move 'em to the top of that hill. And you're going to hold that hill come hell or high water. And if it's a little too muddy or a little too rough for some of you sissies up there step over into my dugout and maybe I can fix you up a cup of tea."

The man telling the story was a member of this dogged outfit. They had really been fighting like tigers. He said Cavanaugh promptly became the most hated man in France. Some of them even said they'd shoot him if they got an honest chance. All of them expressed the hope that he'd get it first.

But they moved, he said, and hate or no hate, they noted that Cav took for himself the most dangerous dugout. He also took for himself the most dangerous jobs. At regular intervals up with the supplies came generous rations of cognac. Nobody knew who ordered it, or who was paying for it. A long time afterward, they found out that Cav did. A long time afterward they remembered that for all the hard words, he was gentle with the wounded, certain of their food, that he worked relentlessly for their relief and finally got them out of there.

It was after the war at a reunion that they saw Cav next. He'd been wounded, decorated and had almost died, in the interim, but here he stood upon a platform before those same men again.

"The hardest thing I ever had to do," he said, "was to try to play the bully to great soldiers, and great Americans such as you were in France. The words burned my throat. I didn't dare look you in the eyes for fear you'd see that I was lying. But when I joined you, your nerves were raw, your fighting spirit had lost direction. You'd been left in there too long. You'd taken more than any human beings should be asked to take. You hated the job. You hated the war. You were hating everything in general and nothing in particular. I gambled on the chance that if I could concentrate your hatred upon me, could give you something definite and personal and present to hate, that you'd hate the job less and proceed to do it better.

"CAV CRIED AS THEY WRUNG HIS HAND

"It almost killed me, and I've been waiting all these years to tell you that I didn't mean it, that you were really great soldiers and that it was an honor to serve with you, even if I couldn't tell you so at the time. If apologies, gentlemen, aren't too long overdue * * *".

The man said the ovation almost tore the building apart, that Cav cried as they swarmed up to wring his hand, that they finally got him on their shoulders and I don't know what all.

But, shucks, don't get me started upon the subject of Cav. Whatever the movies did, it would be impossible to get it all. There was a man.

Nuclear Powered Aircraft

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. PRICE. Mr. Speaker, the feasibility of nuclear powered aircraft has long since been proven. Our concern now is with performance. Here the answers will come faster after we put the first atomic airplane in the air. Already there has been too much delay. I sincerely hope the Congress itself will not become an ally of an administration which has been distinguished by its lack of vision in regard to the atomic powered airplane.

If ever a program has been studied to death it has been the aircraft nuclear propulsion program. It seems that the only thing that will discourage the appointment of more committees to study the project will be the first flight of an atomic plane by the Soviet. We have had enough of committee studies—what we should do now is to give adequate support to the engineers and scientists actually working in the program and give them the go-ahead signal to put a plane in the air as quickly as possible.

I have been impressed with the work of Brig. Gen. Irving L. Branch, USAF, Assistant Chief of Staff, Development, for Nuclear Systems, and with his efforts to get the atomic plane off the ground. His predecessor, Maj. Gen. Donald Keirn, USAF vigorously supported an early flight program. General Keirn was an Air Force officer experienced in technical matters as an aeronautical engineer.

As a matter of fact those who know the project best agree unanimously that as an existing technology it is now technically feasible to test flight an A-plane—the Pentagon and the Bureau of the Budget notwithstanding.

I believe my colleagues in the House will be interested in the following article written by General Branch which appeared in the Army, Navy, Air Force Journal of June 25, 1960:

AEROSPACE NUCLEAR POWER

(The Journal is privileged to publish the following authoritative report on the nuclear aircraft propulsion program. "We are turning the corner in the effort to develop nuclear power for aerospace appliactions," the author declares.)

(By Brig. Gen. Irving L. Branch, USAF, Assistant Deputy Chief of Staff, Development, for Nuclear Systems)

By and large the most candid statement that can be made concerning the present status of our nuclear aircraft program is that we are concerned not with feasibilty, but with performance. We have long since proven the feasibility of nuclear propulsion for aircraft; we are now concerned with providing the highest possible quality in our initial performance. This does not mean to imply that we have conquered all of our technical problems, but it does mean that our technical problems are primarily those which limit the level of advanced performance that can be achieved with nuclear flight. Short of such advanced performance, we had earlier deferred our decision to demonstrate early nuclear flight.

Although the nuclear aircraft program has been plagued in the past with a series of reorientations and redirections, the hard work in the years of research and development has produced much valuable data. The program is now going forward based on a firm background of significant and important component and powerplant milestones and with an established directive for its initial goal for first flight. Based on this valuable background, successful attainment of our objective is assured. We are now embarked on a sound technical program, on a predictable time schedule to culminate in nuclear flight in the mid-1960's.

Roughly 14 years ago, the nuclear aircraft program began with little more than a few theoretical estimates, a basic understanding of what had to be accomplished, and a great deal of conviction.

Today, although the scope of its work continues to increase, the nuclear aircraft

program is but one of four distinct nuclear power programs under the technical management of the joint AF–AEC Aircraft Nuclear Propulsion Office.

In the past 5 years we have added the Rover nuclear rocket project, which is destined to ultimately provide NASA with a high power density, multiton payload rocket booster; the Pluto nuclear ramjet program which offers the Air Force a globe girdling, low level supersonic missile, and the SNAP (Systems for Nuclear Auxiliary Power) project, which will provide lightweight, compact, long-lived power supplies for advanced space missions.

SNAP will ultimately provide the electrical power to make interspace ionic propulsion systems practical. Rover has passed its first milestone, Kiwi A, a successful high temperature reactor experiment which was the first of several feasibility demonstration devices.

This program is confidently on schedule toward a flight device.

PLUTO is scheduled for its first demonstration reactor in the near future.

We have already achieved the succesaful operation of radioisotope-fueled SNAP power devices. The first SNAP reactor power device, SNAP 2, has already operated for several hundred hours at designed power. Concurrently the SNAP 2 system turbo-alternator, driven by mercury vapor, has operated successfully for over 1,000 hours. It only remains to mate these two components in order to demonstrate that a 3-kilowatt electrical power system, capable of unattended operation in space for 1 year is at hand.

Appraising the status of these programs we can confidently say today that we are turning the corner in the effort to develop nuclear power for aerospace applications. Although these programs continue to be a tremendous research effort, we are dealing more and more in terms of actual component development and fabrication. The expenditure in terms of time, money, material, and manpower has been tremendous. In the manned aircraft program alone, almost a billion dollars has been expended.

At times this expenditure has caused severe criticism of these programs; yet, when the programs are viewed in the larger context of the revolutionary technology that is being unraveled, the proportion between cost versus payoff becomes acceptable.

In the aerospace age that we are currently entering, nuclear propulsion technology offers a beginning where chemical propulsion technology appears to be severely pushing its limits. The nuclear component development and testing that we are successfully doing today is being performed within intrinsic material temperature environments of at least 1,000° to 2,000° beyond temperatures imposed on materials in chemical propulsion work. A single advanced Rover test device about the size of an office desk, will generate power equal to the power output of Hoover Dam.

The first nuclear aircraft, whether it be a development or a prototype aircraft, will be capable of sustained endurance in the air, up to 5 days or more. Nuclear systems are going to be large systems but they are going to provide large payoff for our efforts. In rocket applications the payloads will not be measured in pounds but in tons. Nuclear propulsion will be, in every sense, a heavyweight capability of enormous potential, in which these stated applications are only the initial concepts; yet, in themselves, they are startling enough to underscore the point that the payoff is, in truth, realistically proportional to the tremendous investment in their development.

We are, in fact, standing on the threshold of the nuclear propulsion era. When the first Wright aeroplanes were purchased by the Army Signal Corps, the most visionary of the planners could not guess at the full impact of what was to come. Similarly, it is difficult for us, today, to foresee the full impact of nuclear propulsion from the vantage point we occupy. To be sure, we have initial applications that are well defined.

We are planning for a first flight nuclear aircraft that has the potential for sustained air alert missions in the strategic force; we are planning for single stage nuclear rockets that can lift multiton payloads that can be matched only in part by enormous multistage chemical rockets. There are also definable SNAP applications. Satellite, as well as moon based and planet based stations, manned or unmanned, can be supported far better by the use of SNAP high capacity, long-lived, auxiliary power packages that can be transported in compact form through space.

The sheer potential of successful nuclear propulsion has transcended specific applications. Although the initiation of each of our programs were nurtured by the Air Force, in conjunction with the AEC, it became apparent that nuclear propulsion technology, be it for rockets, ramjets, aircraft, or space power, is of national importance. For this reason our programs are being guided from the agency level with Department of Defense, Atomic Energy Commission, and National Aeronautics and Space Administration interests included. Only in this context can our efforts be fully responsive to national requirements.

We as a Nation are firmly embarked on the penetration, exploration, and assimilation of space. The rate at which this effort will progress is debatable but the inevitability of the effort is unquestioned because the fundamental drive to seek out the unknown is deeply rooted in the nature of man. Whether military or nonmilitary agencies will mount the major portion of the effort is open to question. It is axiomatic that aerospace nuclear power will provide the ultimate means of doing the job.

Even Lincoln and Roosevelt Had Many Critics in the Press

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. WOLF. Mr. Speaker, many of my friends are disturbed by the contsant attacks made on me in the editorial pages of various newspapers in my district. They are disturbed by the concentrated efforts of some newsheets to do me great harm personally and politically. It is for this reason, Mr. Speaker, that I offer the following remarks.

Mr. Speaker, the great Civil War President, Abraham Lincoln, answered his critics this way:

"If I were trying to read,
Much less answer, all the attacks made on me,
This shop might well be closed for any business.
I do the best I know how, the very best I can
And I mean to keep doing so until the end
If the end brings me out all right
What is said against me won't amount to anything
If the end brings me out all wrong
Ten angels swearing I was right would make no difference"—Abe Lincoln.

Our great leader through the depression years and through the Second World War was Franklin D. Roosevelt. A researcher recently discovered that during his almost four terms as President, 97 percent of the editorials written about him were negative in nature. Yet not one single law enacted during his administration for the benefit of people has ever been repealed.

Being the object of criticism by some unfriendly members of the press may be the only similarity I have with these two great humanitarians, but even for this I am proud.

Regardless of the criticism which may be directed against me, I intend to continue working just as hard and just as honestly as I can for the benefit of my country and my district.

In Favor of Increased Communication With China

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, Editor Felsheim of the Bandon (Oreg.) Western World, in my district, quotes Editor Canham of the Christian Science Monitor with regard to recognition of Red China.

In my opinion the problem is increased communication for which many people use the word "recognition." I believe that recognition is by no means the first step and indeed is only an incident in establishing the kind of communciations which will help avert world war III and help prepare a way for reciprocal disarmament agreements ultimately.

Under unanimous consent I am including the text of Editor Felsheim's editorial from the April 14, 1960, issue of the Bandon Western World:

URGES RECOGNITION OF CHINA

Editor Canham, of the Christian Science Monitor, has urged that the United States extend diplomatic recognition to Communist China. Canham has put his finger on a controversial subject in the United States. Many citizens of this country feel that diplomatic recognition of a country is tantamount to approval of that country's government.

The British hold the opposite view. They believe they should recognize a force in being, or a fact that is accomplished, and that their diplomatic recognition of a country or a government of which they do not approve does not indicate approval of the form of government involved by any means.

Canham says that "since we cannot destroy the Peiping Government we must learn how to live with it."

He says that it is difficult for us to learn the true dimensions of the problem without carrying on diplomatic relations and maintaining whatever contacts are possible.

It is doubtful that anything will be done in the near future along the lines suggested by Canham. On the other hand, eventually the United States might come to the establishment of some sort of diplomatic contact with Red China.

Many Americans do not believe that the United States should recognize the Chinese Communists at this time. It must be admitted, however, that chances seem slim indeed that Chiang Kai-shek on Formosa can ever recapture the mainland. And it seems that the Reds there are in firm control.

In other words, it appears that the Reds will be in control for a long time, like the Reds in Russia have been, and that sooner or later if the United States wishes to carry on any contacts with China, even though disapproving of its form of government, it may be necessary to deal, officially, with the regime now in power.

Private Power Company Propaganda Advertising: False and Deliberately Misleading

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, for some time, a private electric power group, America's electric light and power companies, has been flooding the American press with full-page advertisements designed as blatant propaganda against legal public power systems in the United States. One of these recently appeared in U.S. News & World Report, for June 6, 1960, with the caption, "Would You Invest $10,000 To Lose $350 a Year?"

Now I would like to analyze this advertisement paragraph by paragraph to refute the false and deliberately misleading statements, recklessly dangled before the eyes of the American people. Such propagandizing, it is claimed by the private electric light and power companies, is an attempt to educate the citizenry in the proper point of view regarding public power. These advertisements are in fact nothing more than vicious misrepresentation and slander.

The advertisement following the caption starts out:

Doesn't make business sense, does it? Yet that is exactly what is being urged on the United States by the lobbyists for more Government-in-the-electric business.

Here's how it works. The advocates of Federal electric power systems want Government to spent $10 billion more on top of about $5,500 million of taxpayers' money already spent.

How the private power interests derived the figures $10 billion and $5.5 billion is not readily understandable. As far as can be determined, the total investment in Federal power programs is actually estimated at closer to $3 billion.

FANCIFUL FIGURES

Next the question of taxation is introduced into the picture as follows:

These so-called public power systems are exempt from all Federal taxation, and largely from any State or local taxing. On the other hand, $10 billion spent by independent electric companies would produce about $350 million yearly in Federal, local, and State taxes, at today's rates.

So the public power proposal boils down to hitting most taxpayers twice: Use their taxes to build Government power systems, and tap them for the share of taxes that Government systems escape.

These statements are gross exaggerations and misrepresentations.

Again, where did the figures of $10 billion and $350 million come from? No source or method of computation is revealed in the advertisement. Apparently, the method of deriving these statistics is that of the "big lie."

As to escaping taxation, the following quotation from an exhaustive study of Government and business by Vernon A. Mund stands in refutation:

The facts are that often public power pays its full share of State and local taxes in other ways.

Municipal utilities and public utility districts typically pay State taxes on gross revenues from retail sales, State sales taxes, regular State business taxes, State gasoline taxes, State generating license fees, industrial insurance, and unemployment taxes, in line with those paid by privately owned utilities. They also usually pay local business and occupation taxes and local franchise taxes. It is common for publicly owned enterprises to furnish services, such as street lighting, at little or no cost. On some occasions, moreover, they pay special gross-revenue taxes or make cash contributions to State and local agencies in lieu of property taxes. The value of such payments and services may fully offset the property tax burden which privately owned utilities must pay.[1]

PUBLIC POWER PAYS PUBLIC DIVIDENDS

There are numerous instances of the construction of local public buildings with moneys from the earnings of locally own utility systems:

One such example, is the municipal building of the city of Ilion, N.Y., which was erected by funds contributed by the municipal electric system. Although such a contribution would not appear in the income statement as a tax item, there is no question that, if this contribution had not been made by the municipal utility, it would have been necessary to utilize tax revenues in order to construct this civic improvement.[2]

Regarding the question of Federal taxation, it is true, of course, that publicly owned utilities are exempt from Federal taxation. But this is not the whole story, by any means. Take as an example the Tennessee Valley Authority, perhaps the most common target of private power interests. Rates for its electricity provide not only for all costs of rendering the service and State and local tax equivalents, but also yield net earnings for the Federal Treasury of more than 4 percent.

These net earnings give the Federal Government an interest return on the money appropriated for construction, as well as a return which is equivalent to Federal income tax payments. To quote from Mr. Gordon Clapp, a former director of TVA:

TVA is not required to pay Federal income taxes. This is logical, since TVA is owned by the Federal Government. All of TVA's income belongs to the Government. But if a share of TVA's power earnings, after setting aside the equivalent of interest, were earmarked for income taxes in the same proportion as for private utility companies, there would still be something left for a dividend to the taxpayers.

IMPORTANCE OF LOW-COST POWER

No fair-minded discusion of private and publicly owned powerplants should omit mention of the great expansion in industry and employment resulting from the availability of low-cost public power. Such industrial benefits inevitably broaden the tax base. Economic expansion in the Tennessee Valley and the Columbia Basin, for example, bears out this statement. It is difficult, of course, to measure exactly the increase in tax returns due to these Federal public power systems. However, Brooks Hays, Director of the Tennessee Valley Authority, estimates that since 1933 when TVA was inaugurated, $12 billion more have been collected in Federal taxes from residents of the TVA area than would have accrued to the Federal Government had pre-TVA conditions prevailed.

Furthermore, an attack on public power on the score of tax evasion is particularly uncalled for and malicious, since private utility companies in actual fact receive a huge subsidy in the form of tax reductions.

PEOPLE WHO LIVE IN GLASS HOUSES

For private power interests to sponsor an advertisement accusing public power systems of avoiding their share of taxes is an irony of ironies.

Through provisions for accelerated amortization and liberalized depreciation in the tax laws, private power firms are subsidized to the tune of hundreds of millions of dollars. During World War II, Congress enacted legislation to provide accelerated amortization of defense plants. Extraordinary expansion was needed in plant capacity to manufacture arms and munitions for the national defense. Quite understandably, the Federal Government stood ready to aid in financing such expansion.

The rapid amortization program provided that the cost of a defense plant could be amortized over a 5-year period instead of over its longtime useful life. The sum set aside for depreciation was deductible from income as a business expense. Thus the Federal Government largely paid the cost of the new defense plants by reduced taxes. Certificates of necessity were issued to industrial companies in authorization of rapid amortization. Some utilities were issued these certificates during World War II and the Korean conflict. However, the Office of Defense Mobilization began in 1953 to issue certificates of necessity for the ordinary expansion of powerplants. The 85th Congress put a stop to these manipulations. However, according to the Federal Power Commission and the American Public Power Association, because of rapid amortization, tax benefits of $1.5 billion have been amassed in the coffers of private utilities concerns.

WRITEOFFS FOR PRIVATE COMPANIES

But this is only part of the story left untold by those who complain of tax

[1] Mund, Vernon A. Government and Business. New York. Harper & Bros. 1955, p. 572.

[2] "More Power at Lower Cost," American Power Public Power Assoc. APPA Document No. 53-S-01 p. 17.

evasion. Liberalized depreciation allowances were written into the Revenue Code in 1954. Section 167 increased the amount of the cost of a plant that may be written off in the early years of its life for tax purposes. Therefore the tax bill of the company is reduced.

This is not all. Utility companies have approached State utility commissions to urge higher utility rates, and have based their estimates for such increases on a normal tax bill, not a tax bill which allows for liberalized deductions for depreciation.

And let us make no mistake about it, liberalized depreciation is a tax reduction, not a tax deferral, since the utilities have been experiencing unprecedented expansion in recent years. The stockholders in the utility companies, not the consumers of power, are reaping tremendous gains from these tax provisions.

The truth of the matter is this: the utilities are deriving huge profits from one of the most extensive subsidies ever handed out by any government. Reliable estimates place the Federal tax subsidy granted to private utilities through accelerated amortization certificates and liberalized depreciation practices available since 1954 at more than $10 billion.[3]

Next, the old, familiar, and false refrain appears in the advertisement:

> The tragic fact is that more spending for such Federal power programs would be unnecessary. The hundreds of independent electric companies are able and ready to provide for the Nation's electric needs. They've already proved they can supply plenty of low-priced power without using tax money to do it.

DEFAULT OF PRIVATE COMPANIES

The truth is this: Public power systems such as the Tennessee Valley Authority were constructed because private companies either would not or could not provide electricity at moderate cost. Referring again to the TVA, private interests believed that a wide market for the electricity generated by a system of dams on the Tennessee River could not possibly be developed. Today, TVA is having difficulty in meeting all demands for electricity.

The rates of publicly owned utilities are typically below the rates of private utilities. To quote again from Mund:

> Some 60 publicly owned utilities in the United States and Canada, in particular, sell electricity for residential use at rates under 1 cent a kilowatt-hour. This rate is fully 60 percent below the average residential rate in the United States.[4]

Rural electrification is another case in point. Modern methods of agriculture demand extensive application of electricity. The use of individual plants generating electricity on a single farm is prohibitively expensive. Should American agriculture then be penalized because private companies believe a program of rural electrification would be unprofitable? And in this connection it should be emphasized that rural electric cooperatives pay back every cent they borrow from the Federal Government for construction and operation of generating plants, transmission lines, and distribution systems, with interest.

MULTIPURPOSE DAMS

Then too, private companies rarely think in terms of multipurpose dams for flood control, irrigation, and national defense, as well as electric power for home, office, and industry.

The experience of waging World War II and subsequent inauguration of the new atomic and space age have proved the need for vast quantities of cheap electric power. For precisely this reason, atomic energy installations are located at Oak Ridge in the Tennessee Valley.

The advertisement winds up its propaganda by urging the reader to send for a booklet entitled "How Federal Government Electricity Affects the Businessman." This pamphlet contains, of course, further doses of the same type of half-truths and untruths as appear in the advertisement.

No such statements as those which are used to smear public power in a large, authoritative-looking advertisement in U.S. News & World Report and other publications should remain unrefuted.

Both public and private power have a place in the American economic system. And public power, legalized by the laws of the land, has a right to exist without continual harassment from private power interests using their ratepayers' money in a scurrilous campaign.

Toll TV

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an editorial on the subject of "Toll TV," by S. H. Fabian, president of the American Congress of Exhibitors, which appeared in the Film Daily, New York City, June 21, 1960. The editorial follows:

I pick up an out-of-town editorial today and it tells of the toll TV promise to supply the public with better entertainment. This, of course, is merely a semantic screen—to smother the issue, to befuddle public opposition against a nationwide scheme to force families to pay for something they now receive free.

Chet Bahn having offered me the hospitality of this space for comment pertinent to our business, I'll presume to do some public reflection about this better entertainment.

So I ask myself what is "better"? To guide my way, I look for roadmarkers. I like to latch onto specifics. To some folks "better" means "pay or die"—to others, the best is "wild strawberries." So I analyze the mechanics, or if you prefer, the electronics of better shows.

"Pay or die" opens in the larger seating capacities—"wild strawberries" in the midget houses, the toll TV pledge implies that the TV medium will cater to the lovers of the subtle, the ironic, the esoteric; i.e., to the minorities. Is this an honest commitment? Can you serve minorities through a mass electronic medium?

In theaters we can scale down from 4,000 seats to a 400 seater. An art theater with low overhead, and benefiting from word-of-mouth, can play to a profit with such minimum audiences week after week after week, satisfying creators, distributors, exhibitors, and customers with offbeat tastes.

How do you do this with a TV channel, when you need mass patronage for adequate payoff each time you project the feature?

Another angle: Who will make these better shows? Are there creative minds the studios cannot reach? Silly idea, isn't it, when Hollywood combs the world for talent?

Is it implied that free TV will not spend the necessary money, or make the effort? You couldn't defend that argument. Free TV has really been trying hard.

So toll TV has nowhere to go for a supply of better entertainment, except to artists and craftsmen who are doing their best now for theaters and free TV.

So much for the specious guarantee of better entertainment. Now let's look at the other side of the argument. It the toll TV programs won't be better, can they be worse? Look hard at the facts and the logic. And you must be suspicious of every claim of superior programs. You must suspect the bland assurance that toll TV justifies paid admissions in the Nation's living rooms for the type of diversion the set buyer now receives for free.

First. TV—free or paid—is a motion picture; a shadow show on a screen. It is a dwarfed, denigrated offshoot of the motion picture theater film; but a worse motion picture.

Second. If Hollywood starts selling new features to slot-machine TV it will be utilizing a highly developed cinemascope, Todd AO, 70mm, Panavision technique for a porthole size picture.

How long will it take the producers and directors to throw technical progress into reverse, reducing the scale and scope, the magnitude and genuine spectacular size of their productions to the diminished frame of the little coin box in the home pygmy proscenium arch? Another example of worsening; of the degradation of the motion picture art.

At this point the industry we have known, blooming with constantly improved skills, will be swiftly shrinking into a vestigial remnant.

My space is running out and I must choke off the urge to lift the curtain on the other fantasies and fables in the promised programing for entertainment fields other than feature film. Another time. Another expose.

Address of John J. Corcoran to South Dakota Department, American Legion Convention

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mr. MUNDT. Mr. President, in my home State of South Dakota, the American Legion recently held its annual convention. In my conversations with Legionnaires, and in correspondence with South Dakotans, I have heard many expressions that this was one of the most

outstanding State conventions held by the South Dakota department.

Among the many speakers addressing the convention was Mr. John J. Corcoran, director of the national rehabilitation commission of the American Legion.

It gives me a great deal of pleasure, Mr. President, to ask that the remarks made by Mr. Corcoran to the South Dakota American Legion convention be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Commander, distinguished guests, delegates to the 42d annual convention of the department of South Dakota, and fellow Legionnaires, may I begin by saying how happy I am to be here in South Dakota. It is a particular privilege to participate in this convention because of your department's prestige and stature in the national organization. The department of South Dakota is recognized as one of the great leaders of the American Legion. In membership, in rehabilitation, in all your endeavors, you lead and you set an inspiring example for others to emulate.

It is a pleasure to attend this convention for a reason that is of great importance to me and yet may not be readily apparent. I refer to the fact that this meeting as well as the very existence of the American Legion is a demonstration of patriotism. Let me explain.

It has always seemed to me that a characteristic if not an essential of greatness in a nation is the love of the people for the Nation. That love of course is called patriotism. Without it, the Nation declines. Patriotism is manifested in many and varied ways: respect for the flag, obedience to authority, willingness to offer one's life in defense.

There is another way in which the people demonstrate love of country, and this one has particular application here. It is the fact that they attribute a special status to those who defend the country in time of war. It is of course true that to defend one's country is a duty of citizenship. But since the beginning, nations have distinguished between those who did and those who did not perform that duty. And it must always be so. For as long as we suffer certain men to endure special hardships, special deprivations and special disciplines, we have established for them a special place in society which sets them apart from the rest.

This special treatment of war veterans is the Federal veterans program. I am convinced that patriotism and love of country justifies, yes, demands a sound and reasonable Federal program of benefits for those who served the Nation in time of war.

Legionnaires have undertaken to assure that there will be a sound and reasonable program. This is a heavy responsibility. We must always be fair to the veterans and to the country. We must consider both the need of the beneficiary and the ability to pay of the benefactor. We must establish and honor fundamental principles to circumscribe our requests lest we permit abuses and excesses which will jeopardize the entire program and constitute a disservice not only to the Nation but to the veterans themselves.

And this responsibility rests most heavily upon the shoulders of the American Legion because the American Legion is the largest and most influential veterans organization. And of course this burden is for you delegates to carry because you establish in your convention what will be the ultimate position of the organization.

If the past is any criterion, the American Legion will continue to be a responsible, conservative, effective force. The Legion's impact on the veterans program will continue to be constructive and forward-looking—as were its efforts that led to the GI bill of rights, a superior medical program, and so forth.

My visit to this great department reassures me that the leadership is in capable hands and that the challenge of the future will be met.

Helen Keller's 80th Birthday

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. BOLAND. Mr. Speaker, the prayer offered by our beloved Chaplain of the House at the opening of yesterday's session was particularly appropriate. Yesterday was the birthday of Miss Helen Keller. On this day, she reached the glorious age of 80.

Chaplain Braskamp's words of prayer applied magnificently to this fine woman—one of the greatest woman of this or any other time. "Almighty and everblessed God, may we accept this new day as a beautiful gift from Thy hand and a glorious opportunity for heroic endeavor to serve Thee and our generation faithfully. Grant that we may be wiser today because of the failures of yesterday and more trustful when we are assailed by fears which darken our way and dwarf our capacities."

Mr. Speaker, Helen Keller's whole life, it seems to me, has been tailored to fit these inspiring words of prayer.

Only rarely have there been people who have risen above geographic and cultural boundaries to become symbols of faith and goodness to all the world. Helen Keller, blind and deaf since infancy, has become such a symbol.

Through her courage, intelligence, and beauty of mind and spirit she has enriched the lives of many thousands of people, proving that physical handicaps need be no barrier to a full and rewarding life.

During World War II Miss Keller toured our military hospitals, bringing new hope to wounded, frightened men. She has reached beyond America, speaking for the blind in Australia, Canada, Egypt, France, Israel, Italy, Japan, Yugoslavia—in all parts of the world. Unable to see or to hear, she has yet been one of the most effective representatives of America to peoples abroad.

Many foreign governments have honored her. She was awarded the Medal of Merit by Lebanon, the Chevalier Legion of Honor by France, and the Southern Cross by Brazil. Civic, educational, and welfare organizations in the United States have also paid her homage.

Miss Keller has reached out to the suffering through her writings, including "Out of the Dark," "Let Us Have Faith," and "The Open Door." She expressed the foundation of her philosophy in the book "This I Believe," writing: "Belief in God as infinite good will and all-seeing wisdom whose everlasting arms sustain me walking on the sea of life. Trust in my fellow men, wonder at their fundamental goodness and confidence that after this night of sorrow and oppression they will rise up strong and beautiful in the glory of morning. Reverence for the beauty and preciousness of earth, and a sense of responsibility to do what I can to make it a habitation of health and plenty for all men."

These words speak eloquently of her innate nobility and generosity, qualities which have brought light into the dimmed eyes of others who share her blindness.

As she celebrates her 80th birthday, it is a privilege for me to join with many fellow Americans in expressing the gratitude and affection due Miss Keller as a great American, and a great human being.

Mr. Speaker, Helen Keller's 80th birthday was commemorated throughout the Nation and the world. Great editorial and news stories paying tribute to her appeared in newspapers in this country. Local communities joined in the acclaim of this marvelous woman. I am proud to cite my own city of Springfield, Mass., that proclaimed "Helen Keller Day" under the leadership of Mayor Thomas J. O'Connor, Mrs. Sidney Levy of the National Council of Jewish Women; Miss Anita M. O'Shea, chairman of "Helen Keller Day"; Dr. Honore E. Gaudreau, George Trelease, Rehabilitation Counselor for the Massachusetts State Division of the Blind; Mrs. Anthony Caputo, Paul Caputo, Miss Irene Duquette, home teacher for the Massachusetts State Division of the Blind; Mrs. Herman Carlisle, Robert F. Tuveson, and Miss Hazel M. French.

Commencement Address by Ambassador Herve Alphand

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. KEATING. Mr. President, I should like to draw attention to a significant address delivered on June 16, at the commencement exercises of City College, New York, by Ambassador Alphand of France. As we are all aware, the bridge of friendship that links our nation to our traditional friend and ally, France, has been both preserved and strengthened by the exemplary diplomatic skill and the admirable dedication of the distinguished Ambassador of France.

The spirit and content of this address made before the 1960 graduating class of City College only serve to confirm the high esteem Ambassador Alphand has won in the minds and hearts of those privileged to know him and his work. In view of the quality of this commence-

ment address, and of its significance for the times in which we live, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HIS EXCELLENCY MR. HERVE ALPHAND, AMBASSADOR OF FRANCE TO THE UNITED STATES, AT COMMENCEMENT EXERCISES AT CITY COLLEGE, NEW YORK, ON JUNE 16, 1960

First of all I want to tell you how much I appreciate the honor done to me today by City College. I know the important place your university occupies in the life of New York, this gate of America open on France and on Europe. As my friend Justice Felix Frankfurter, one of your most famous alumni, once said: "It is the peculiar glory of this college that, if Townsend Harris was its pioneer, rightly cherished as such, it is the people of the city of New York who were the real founders, who built it for the children of the city."

The kindness of your welcome and the warmth of President Gallagher's words of greeting bear witness to the affection that through me the College of the City of New York feels for France. By this I am deeply touched but not entirely surprised. I know that since its beginning in 1847 your college has remained faithful to the spirit of its founder in giving the French language a choice place in its curriculum. Each semester 2,000 students take French courses. Your college has invited French lecturers of the highest standing from Bergson to Jasinski, while it has associated its commencements with three of my predecessors: MM. Jusserand, de Laboulaye, and Henri Bonnet.

When I accepted Dr. Gallagher's kind offer, as Paul Valéry once did in an identical situation, I asked myself this question: "What shall I say to these young people? They know more than I do because they go to school, because they have prepared examinations—which afford men the only opportunity to know, for some days, something * * *." And then I tried to find out what in France could correspond in the life of a young man to the very moving ceremony of the commencement; although this word is French, it does not correspond to any similar manifestation marking the end of university studies in France. I thought then of the time in 1930 when I started on my career. I attempted to establish a comparison between the world situation of 30 years ago and the situation of today, between the opportunities offered to me then and those available to your young experience.

I thought that today, as of old, the world is raked with fears, is dreading a possible but unpredictable incident, is anxious as to what tomorrow might be. Is it really quite new? History teaches us that at all times the world has been in a state of crisis. And so it is that the United States has been in a state of crisis for 200 years and France for about 2,000 years.

We must admit however that the risks involved in these eternal crises have spread considerably. For if cruelty and violence nowadays are unfortunately as common as of old, the means of extermination placed at the disposal of man have become considerably more powerful. In 1930 the modern weapons were indeed terrible and murderous. As we say 10 years later, they made it possible for great morsels of Europe to fall under a totalitarian domination. Today the prospects are infinitely more terrifying as it would be possible for one of the two opposite camps to make a decision that would eliminate the greatest part of humanity in a few hours.

Besides the monstrous dangers with which the existence of scientific and atomic armaments is facing us, we must also admit that the threat of psychological disintegration of our civilization is today greater than it was 30 years ago. To be sure, nations have kept their same fundamental qualities; on this earth there are still Slavs, Chinese, Anglo-Saxons, Germans and Latins and it is, for instance, the national interests of Russia which are primarily responsible for the actions of the Soviet Union. But international communism, the cold war weapon used by Moscow, Peiping and their satellites, is infinitely more dangerous today than it was 30 years ago.

Its propaganda floods the whole world with delusions. One can see its effects in Cuba as in Guinea, in the incidents of Tokyo as well as in the heart of Europe.

The youth of 1930 could hope that a great portion of Africa and Asia would remain immune to war and to ideological strife. This is now out of question. Out of an obsolete colonialism, new nations are born nearly every month on each one of these two continents. This evolution corresponds fully to the expressed wishes of France and of the United States, traditional champions of the right of self determination for all peoples. But it is quite evident that in order to build in those nations a true democracy, a regime of individual freedom not to be mistaken for independence, to improve their economic status and raise their standard of living, these young nations must associate themselves freely with older nations which offer them brotherly and disinterested cooperation. Such are the objectives of the French "Communauté." Otherwise, we will see these African and Asiatic nations soon fall into chaos, opening the door to totalitarian regimes infinitely more oppressive than those they have known through the ages.

Thus, my friends, in a way, the prospects facing a young man entering life in 1930 could appear less hard and complex than the ones awaiting you today. And yet to what catastrophes the world was heading for, just a few years later. What sufferings and trials it had to go through. Ought we to believe then that you will have to dread even worse prospects from the life now opening before you?

I would not like, on this day of joy, to draw for you too dark a picture nor would I like to deprive you of hope. In the present situation, there are some comforting elements and I am convinced, as far as I am concerned, that if we know how to understand and use them, we shall be able to thrust aside the horrible threats imperiling the very existence of mankind.

First of all, one of the causes of world conflict which existed in 1930 has disappeared: I mean the danger of German imperialism. Twice since the turn of the century, the unbounded ambitions of Germany have thrown our peoples into tragic wars. We believe that such a threat does not exist now. This is a new fact and it is of major importance for peace that the two old enemies, France and Germany, have renounced the idea of destroying each other and have decided to cooperate together within the framework of European institutions, bringing together also Italy, the Netherlands, Belgium, and Luxembourg. Forever, these nations have banished hatred from their relations. They constitute a human, political, and economic unit organized for their mutual prosperity and defense. One hundred and seventy-five million men, heirs to a great civilization, have, within the Common Market, decided to associate their resources and create an economic entity comparable in strength to the two greatest, I mean the United States and the Soviet Union. Within the limits of this new union, goods, men, and capital will circulate freely. We expect that this association which, on the next 31st of December, will accelerate its pace, will bring to all nations involved an improvement in their living standards similar to what has benefited the American people.

This new formation will not in any sense constitute an autarchy. It will be liberally open to international trade; by its origin and its political principles, it belongs to the West. Consequently, it will try to avoid all frictions which might bring it into opposition against its European neighbors and notably England, and it will work in close cooperation with the United States of America. The methods of negotiation which have been set in Paris between the Six, the Seven, the United States and Canada give us the assurance that the aim will be achieved through an unprecedented expansion of international trade. The increased purchasing power of the Common Market countries will be an element of progress and equilibrium in the whole world especially as regards the countries of Africa, of Asia, of Latin America where they will be able to buy more raw materials and more foodstuffs. To my way of thinking, there is no factor more important for peace in the world today.

In the second place, I believe that the free nations are today better prepared than they were 30 years ago for the eventuality of a general war. First of all, because, militarily speaking, the profusion of pacts signed between the two wars were mostly legal instruments unimplemented by a coordinated organization as set up today by the Atlantic Treaty. The warnings given by Colonel de Gaulle who, with extraordinary vision, foresaw the exact nature of the 1940 war, were ignored by the successive French Governments. England did not begin to build planes and tanks until the day after Munich. Finally, the United States was isolating itself from its European brothers as if its vital interests were forever to escape this peril. We do not entertain such illusions now. Each one of our countries knows that it must individually and collectively prepare its defense, and that, in the absence of any general and controlled disarmament plan, there is unfortuantely no other way to avoid war than to maintain a balance between the forces confronting each other.

Psychologically also our peoples are not falling into the errors committed between the two wars. After the brutal breakdown achieved by M. Khrushchev at the Paris Conference, I am struck to see to what extent the Western World has been able to maintain its sang-froid. In the United States, I notice that, irrespective of parties, everyone agrees that one must avoid any show of weakness, any concession which, unless paid in return, would give our opponents the feeling that we are trying through appeasement to obtain peace at any price.

In other words, this spirit of submission to the totalitarian will which, from the remilitarization of the Rhineland of 1936 to the Munich Agreement of 1938, brought us directly to the Second World War seems to me to be absent today in the Western World. Everytime our rights, in any part of the world, are threatened by subversion or aggression, either at Berlin, in the Middle East, in Asia or in Africa, the Governments of the United States and of France have been the first ones to react with vigor. They believe that appeasement does not lead to peace with justice.

Such are, my friends, the shadows and the lights of the picture offered to our observation on this day of your commencement. It is a hard life, full of risks, but also a fascinating life that is open to you. Whichever career you will choose, you will have to use, so as to preserve the freedom which is so dear to all of us, not only the knowledge that you have acquired in this College, but also courage and character. As General de Gaulle said recently: "Competitive efforts are a necessity of life". It will take

much of wisdom on the part of men to avoid that these needed competitive endeavors turn into murderous conflict.

To conclude, I would like to attempt formulating the wishes which I am making so that the life which begins for you today be peaceful and so that the essential values of which our two countries have been the permanent defenders through many difficult trials, be preserved.

Above all, I believe that we must not permit totalitarian regimes to take any lead over us either in the field of modern weapons or in that of scientific achievement. This requires without doubt great financial sacrifices, a discipline which is in no way contrary to the rules of democracy and, finally, a better cooperation between all the countries sharing the same ideal. From this point of view it is right to note that, after the failure of the summit conference, the links which unite us and especially the relations between France, the United States, and Great Britain, far from being loosened, appear closer than ever. These relations must be harmonized in such a way as to avoid duplications and, as far as possible, any conflict of interests.

But if we reinforce ourselves so as to maintain a fragile balance between the two worlds, this does not mean that at the same time our policy should prove inflexible. In spite of failures, in spite of insults, in spite of temporary reverse we must constantly strive to bring the two camps closer together whatever their fundamental ideological differences. For France, this implies, as the President of the Republic stated a few days ago, three conditions:

The first one, the détente, that is to say, the practice of better international relations * * * without which catastrophic dizziness would conquer the mind."

The second condition is the search for a general and controlled disarmament preferably dealing, we feel, with the vehicles of death capable of transporting nuclear bombs and causing general destruction.

The third condition is the implementation of a common program for all the industrialized and well-endowed nations, aiming at saving underdeveloped countries from famine and misery.

My final wish is that, in all these great problems, France and the United States, friends and allies since the very birth of your great Republic, pool together their initiatives and resources—which are important—to save, whilst it is still time, the only form of civilization which makes it possible for men to live in liberty.

Song Entitled "Freedom"

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. McCLELLAN. Mr. President, very recently in a ceremony here in the Capitol Building, Mr. Harry Shalin, a District of Columbia author and composer, received a Freedoms Foundation at Valley Forge medal for his very beautiful song entitled, "Freedom." The presentation was made by Dr. Kenneth D. Wells, president of the Freedoms Foundation, and Dr. Frederick Brown Harris, Chaplain of the U.S. Senate.

Mr. President, the words of this excellent composition have a most meaningful and profound message for all Americans. The song serves as a very timely reminder that we must never take for granted the freedoms we enjoy in this country.

I, therefore, ask unanimous consent that the words of Mr. Shalin's song, "Freedom," be printed in the Appendix of the RECORD.

There being no objection, the song was ordered to be printed in the RECORD, as follows:

SONG WINNING FREEDOMS FOUNDATION MEDAL—1960

(By Harry Shalin)

We sing of love and fortune
And of so many scenes,
But do we sing of Freedom
And what this great word means?
Without this thing called Freedom
Enslaved our souls would be,
We'd find ourselves unhappy
And drag on bitterly.
Ever be mindful of this:
Your soul can only know bliss
When it is righteous and free,
When it can woo liberty.
So sing the songs of Freedom
Forever in our land,
And know that joy and Freedom
Go always hand in hand.

The High Cost of Federal School Aid

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. LAUSCHE. Mr. President, the concern of many Ohio citizens over the proposed Federal aid to education bill has been expressed in a recent editorial appearing in the Western Hills Press, a prize-winning suburban weekly, which reaches thousands of readers in Cincinnati.

Mr. A. Huneke, the editor, points out in this editorial that in many cases the circumstances creating the school problem also provide their own built-in answer—given competent administration and understanding support at the grassroots level. The editorial affirms that in Ohio local school districts are meeting the challenge of growing school populations without recourse to Federal handouts.

I ask unanimous consent that this informative editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HIGH COST OF FEDERAL SCHOOL AID

Advocates of Federal aid to education have a bill pending in Congress proposing appropriation of $975 million at the rate of $325 million for the next 3 years to finance new school building. This is based on the House Education and Labor Committee report indicating an annual requirement of 52,700 more classrooms for the period from 1960 through 1964.

Federal aid is justified in any area only on the premise that an essential need cannot be supplied by the local community. What is the record in this regard insofar as school building is concerned? We are told that in the past decade—without any Federal aid—the classroom additions have averaged 59,400 per year and that, since 1955, this average has been 66,900 classrooms per year.

Obviously the overall aggregate need has been met in recent years. But has the need been met in the States where it is most acute? This is a moot question which would be difficult to answer. However, it would appear that if the distribution has not been equitable, then the pending legislation is not the answer, for, under the proposed bill, 42 percent of the Federal tax money appropriated would go to only seven States. In addition to Ohio, these favored seven include New York, California, Pennsylvania, Texas, Illinois, and Michigan. Hardly the "neediest" States, we would say.

But to bring the problem closer to home. Western Hills school districts have not escaped the demand for additional school facilities nor have the taxpayers of these communities shirked their obligation in meeting the demand. Colerain Township may be cited as a typical example. The people of that community have generously approved eight separate bond issues aggregating over $4 million for school building, not to mention numerous tax levies for school operating purposes, since 1947.

Nor has this been an oppressive burden against which local taxpayers have rebelled. With few exceptions, they have approved each new request as it has been presented by their respective boards of education. Moreover, the soundness of the askings have been vindicated when the resulting tax rate has been substantially less than the estimated amount, indicative of conservative, knowledgeable financing based on a firsthand understanding of local needs and ability to pay. Indeed, because of increasing tax duplicate, in some cases there has been no net increase or the new tax rate has actually been less than that of previous years.

Thus on November 21, 1958, the Press headlined "Tax Rates Down in 8 of 11 Districts." The following story stated: "The tax rates announced Wednesday by the Hamilton County Budget Commission prove the exception to the rule that 'taxes never come down.' In 8 of 11 unincorporated political subdivisions in the seven western Hamilton County townships, the rates on which taxes will be collected in 1959 have declined."

Or again, as recently as December 10, 1959, the Press reported: "The largest single jump in tax duplicate in any western county political subdivision is that in the Oak Hills School District, where the duplicate is now estimated at $81,700,000. This represents an increase of almost $6 million over the $75,897,850 current valuation and is a principal factor in reducing the Oak Hills district tax rate by 46 cents from $18.44 this year to $17.98 next year (1960)."

Thus it may be seen that in many cases the circumstances creating the school problem also provide their own built-in answer—given competent administration and understanding support at the grassroots level. Yes, we know there are exceptions, but these too can be met through State aid in those States where the people are determined not to surrender another responsibility and privilege of local self-government to centralized Federal bureaucracy.

Under the Federal aid system, the people will not only lose direct control of limiting the cost of financing their schools, but may ultimately lose the right to administer them through their locally elected boards of education. The people have abdicated many of their rights and responsibilities to the feudal benevolence of a faceless Washington. When they abdicate the right and responsibility of educating their children, they will have traveled beyond the point of return on the road to Federal bureaucratic dictatorship.

The True Summit

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. WILEY. Mr. President, the Communist drive to conquer the world—by ideological as well as military, economic, and other means—creates a need for countering such a many-pronged offensive. More positively, we need to take the offensive, for example, on the ideological front. The day of passivity is gone. Unless we get out and sell the story of freedom to the undecided people, we may find that communism—holding out a carrot of material advancement while hiding the chains of spiritual and mental enslavement behind its back—will have succeeded, by such a ruse, in gaining control of many more peoples of the world.

For this reason, we need to continually reevaluate and further clarify not only our own goals and purposes but the effectiveness with which we are getting free ideas across in the to-and-fro battle of freedom versus communism.

From time to time, therefore, I always welcome the observations of individuals who see through the haze and the fog to remind us once again of our fundamental purposes.

In the June 27 issue of U.S. News & World Report, for example, David Lawrence has a most thought-provoking article entitled "The True Summit." Reminding us of fundamental—not superficial—issues, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TRUE SUMMIT
(By David Lawrence)

The mobs take over. Just as in Korea a few weeks ago, now in Japan their wishes prevail. Law and order vanish as passions rise and governments crumble.

Is this mob spirit spontaneous that sometimes sweeps free countries and renders them helpless?

We know that Communist agents, financed by Communist gold and trained in the art of "demonstrations," have infiltrated many Western countries, including our own.

We hear in America the voices of the partisan and the defeatist. They tell us American "planning" is at fault because the mobs forced the Japanese Government to cancel President Eisenhower's visit to Tokyo. They tell us that American "prestige" is damaged because a Communist-led mob compels a weak government in Tokyo to withdraw its invitation to our President.

But can American prestige really be damaged by Communist-inspired demonstrations?

Is our prestige dependent upon Communist caprice? Is this what "peaceful coexistence" is supposed to be? Is this what the advocates of "summit" conferences—in Britain, in France and in America—have been pressing the administration to accept as the basis of our policy?

We must brush aside the campaign oratory and the phrases of the partisan critics who see American policy at fault whenever the Communists perpetrate evil. We have doubtless made some mistakes. We have tried to be friendly to Khrushchev even as he was sabotaging us in other parts of the world and stimulating a movement to endanger our relations with Cuba.

We have tried to defend ourselves militarily by sending U–2 planes to detect Soviet preparations for surprise attack. Was it wrong for us to try to deter an attack by missiles that would carry nuclear weapons?

Clearly, we shall drift from crisis to crisis unless we make up our minds that the key to it all is in the hearts and minds of the peoples of the Soviet Union and of the other countries now under the domination of Communist imperialism.

We would not be worrying today over another world war if free governments were in control at Moscow and Peiping. Autocratic governments are nothing new in the world. They have disturbed the peace of mankind again and again.

President Woodrow Wilson taught us that it is not the people of a country but their autocratic government which becomes our enemy and makes the world unsafe for democratic institutions.

How do we get rid of autocratic governments? Only by military force, which, of course, means war? Surely the world can find a better answer. Humanity is certainly more resourceful now than ever before, especially since ways of communicating from people to people have been improved through scientific inventions and technological advances.

There is, of course, a valid approach through counterpropaganda—telling the story of freedom's cause by radio and otherwise. But there is an even more powerful influence which has never been fully exerted. It is the influence of the spirit of man himself. Jesus said: "God is a Spirit: and they that worship Him must worship Him in spirit and in truth."

Many of our clergymen and national church organizations, unfortunately, are so preoccupied with political and economic controversy on the domestic front that they have missed their opportunity to mobilize throughout the world the spiritual power of our Nation and of other nations. Must laymen head up the new crusade?

It matters little from which source comes the inspiration of men and women everywhere to seek God's guidance in these hours of crisis.

How shall we convey to the people behind the Iron Curtain that we have for them the love that Jesus proclaimed as the true basis for human relationships?

It is not that we should strive to persuade others to adopt our system of Government or our forms of worship. But we must try to meet the peoples of the Soviet Union at the altar of spiritual brotherhood.

We cannot undertake such a mission by proclaiming superior virtue—or by any "holier than thou" attitude. On the contrary, confession is good for the soul. As we concede our errors, we must try to extend the hand of sincere fellowship to those peoples who may wish to reveal their feelings to us. For it is under freedom rather than tyranny that the spirit of God can emancipate hundreds of millions of human beings who are the victims of totalitarianism.

We have worldly goods to share with our brethren. We can make unlimited sacrifices to gain world peace. For there is no crime like that of war in its massacre of the innocent.

We must reach out for God's guidance and seek the fellowship of the peoples of all countries as we turn to Him who presides over the destinies of all of us at the true summit.

Growth of the Economy

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. GOLDWATER. Mr. President, today we hear a great deal about "growthmanship," in regard to the growth of our economy.

The Wall Street Journal has pointed out in a very cogent way the dangers which will exist to our economy if the views of those who believe that the Federal Government has a direct and overbearing responsibility for this growth prevail.

On Monday, the Wall Street Journal published an article entitled "The Deadly Growth"; and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVIEW AND OUTLOOK—THE DEADLY GROWTH

We have lately been in the garden putting fertilizer on our shrubs and poison on our weeds. The fertilizer feeds a growth that's slow and sturdy. And, curiously, our weed spray kills by also stimulating growth. It makes the plants grow so fast they burn themselves out—and die.

So when the politicians start talking about the Nation's economy and how they are going to make it grow we are prone to ask: What kind of growth? The drugged and overstimulated kind? Or a growth that puts down roots deep and solid?

For a good many political candidates these days, ranging from Adlai Stevenson to Governor Rockefeller, tell us our economy isn't growing fast enough. They lament the fact that our growth rate is "only" about 3 percent a year while the Russian economy, depending on what statistics are used, is expanding at the rate of some 7 percent or 8 percent. And then they declare that we "must" expand faster or woe betide us in the race with the Communists.

Now there are a number of phony things about this argument. For one, percentage figures are meaningless without taking into account the base from which each is figured; and the base of the U.S. economy is many times that of Soviet Russia. For another, the argument suggests that Russia is already "closing the gap" with the United States. Yet as Vice President NIXON pointed out recently, 20 years ago Soviet production was about 45 percent of U.S. production—and today it is still only about 45 percent of ours.

But quite aside from the fallacies in measuring the relative growth of the United States and Russia, there is another disturbing thing about this argument. It assumes that growth, any kind of growth, is an absolute good, and then goes on to conclude that therefore anything that stimulates growth is good.

Mr. Stevenson has mentioned 5 percent as the necessary growth rate; Mr. Rockefeller talks of 6 percent; others have their own figures, mysteriously arrived at. But all those of this persuasion are united in insisting that the Government must do something to force the rate higher. And common to the prescription of each is more spending in the Government sector, more direction by the Government of spending in

the private sector. All to the feeding of the great god Growth.

Of course, stimulating growth temporarily is no great trick. The Government can multiply farm production by simply lifting its price supports. It can enlarge our oil production by squeezing tighter the controls against oil imports. It can stimulate the housing industry by easier money for mortgages. It can make many an industry boom by just pouring out enough paper money for roads, hospitals, schools, dams, power projects, or whatever captures the planners' fancy. In short, with sufficient doses of inflation it can give the whole American economy the exhiliration of frenetic activity.

But so far among the political candidates, Vice President NIXON alone seems to have given any thought to "what kind" of growth this would be. He too wants more growth and he does not reject Government activity to encourage it. But he spurns the idea of growth for growth's sake only.

"The growthmanship school," he observed, "argues that the Government should plan and manipulate the economy to arrive at an arbitrary, fixed percentage rate of growth. * * * They believe that Government spending regardless of its purpose spells growth and, therefore, is good in and of itself."

But the lesson of nature is that growth is not automatically good, in and of itself. And the lesson of history is that inflationary spending will, in Mr. NIXON's phrase, "wreck the economy, not expand it, because true growth is based on sound money, not phony money."

America will grow, we need have no fear of that. But we had best remember that growth is good only when its roots are deep and lasting. And never forget that a drugged growth can be deadly.

Cotton Textile Imports

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. GATHINGS. Mr. Speaker, the action of the U.S. Tariff Commission yesterday in holding that imports of cotton goods were not rendering or tending to render ineffective or materially interfering with the Department of Agriculture's programs is incredible. It establishes that the Commission refuses to recognize the clear intent of Congress as stated under section 22 of the Agricultural Adjustment Act and that Congress must act if we are to protect our economy against this rising tide of imports.

In 1956 I proposed legislation which had for its purpose limiting the quantity of manufactured cotton products within any tariff schedule which may be imported annually into the United States to a figure not to exceed 150 percent of the average annual quantity of such manufactured cotton products imported during the 2-year period then established as 1953 and 1954. Action was not taken on this legislation, although hearings were held, because it was argued by some that other actions—in some cases voluntary on the part of importers—would solve this problem.

It is evident that voluntary actions will not remedy this situation and that we cannot count on the Tariff Commission to protect our cotton growers and our cotton industry. Legislative correction is needed.

To further illustrate the scope of this danger to our cotton economy, I wish to include with this statement data compiled by the American Cotton Manufacturers Institute:

On June 29, 1959, the National Cotton Council filed a petition with the Secretary of Agriculture for relief from cotton textile imports under section 22 of the Agricultural Adjustment Act.

Two days less than 1 full year later, the cotton industry received the Tariff Commission's reply to the request for relief.

Here is what happened meanwhile:

Imports of—	Units of quantity	Annual rates	
		A year ago	Now
		Million	*Million*
Cotton cloth	Square yards.	164	497
Cotton yarn	Pounds	1	15
All textile manufactures.	Dollars	800	1,000

UPSURGE IN TEXTILE IMPORTS CONTINUES

A large volume of foreign-made cotton textile products is continuing to move into U.S. markets. These low-wage textile products include cotton yarns, unfinished cloth, and many varieties or types of garments.

Sharp increases in U.S. imports of cotton textiles have occurred since drastic reductions in U.S. textile import duties were made in 1955 during negotiations under the General Agreement on Tariffs and Trade.

In 1959 these imports reached new highs. Now we find these low-wage textile products are being shipped in from many countries which heretofore were not important factors in world textile markets. In addition to the traditional Japanese and European competition, U.S. textile mills now face an everwidening circle of low-wage competitors based in Hong Kong, India, Korea, Pakistan, and Formosa, as well as other countries which are developing textile manufacturing capacity.

The basic facts which portray the sharply increasing trends in cotton textile imports are reported in world trade statistics by the U.S. Department of Commerce. These historical trends of cotton yarn, cotton cloth, wearing apparel, and other miscellaneous textile manufactures are depicted in the attached tables and charts.

COTTON YARN

Cotton yarn imports have shown a precipitous increase since 1957. In 1958 U.S. imports of cotton yarn reached 835,000 pounds, the highest level since the Korean war years of 1950–51. However, in 1959 cotton yarn imports again increased sharply to a total of 1.4 million pounds, an increase of 65 percent. The latest Government reports covering the January–April period in 1960 indicate a 5.5-million-pound import level, or an annual rate for 1960 of about 15 million pounds of foreign-made cotton yarns.

These foreign-made yarns are coming from Brazil, the Netherlands, France, Switzerland, Spain, Portugal, Egypt, and Israel. The latest trade reports indicate that shipments of these yarns are currently continuing at high levels.

COTTON CLOTH

U.S. mills are confronted with a sharply increased import level of low-wage cotton cloth from foreign countries. The rising trend in cotton cloth imports is much like that in cotton yarn. From a level of about 73 million square yards in 1954, cotton cloth imports rose to 133 million in 1955, and to 168 million in 1956. They eased to 122 million square yards in 1957 with the imposition of the Japanese voluntary quota arrangement, but increased to more than 141 million square yards in 1958 as other countries began to capitalize on the U.S. market. An explosive jump to 241 million square yards in 1959 represented a 70 percent increase over the 1958 import level. If the first quarter of 1960 import rates are continued throughout the year, U.S. mills stand to lose almost one-half billion yards of production of unfinished cotton cloth alone to low-wage foreign countries. There appears to be no lessening in the buildup of textile manufacturing capacity around the world. Neither is there any cessation of the steady erosion of traditional U.S. domestic and export markets by textile manufactures produced under conditions below wage standards required by law in the United States.

APPAREL

Textile end products, such as apparel, are now being shipped into the United States in ever-increasing quantities from the low-wage countries.

This is a logical development in view of the low-cost advantages growing out of the differential in wage and working condition standards between the United States and foreign countries. The advantage gained from the production of yarn and cloth in low-wage countries is multiplied when it is finished and manufactured into end products. Additionally, their competitive edge is sharpened further by the raw material cost factor. Foreign manufacturers buy cotton, including U.S. growths, at prices about 25 percent below those U.S. mills must pay.

From a level of $47 million in 1954, U.S. apparel imports more than doubled in 1956 to $107 million. They continued to rise to $124 million in 1958, and increased sharply to $190 million in 1959.

The same incessant upward trend is indicated for 1960, and a careful appraisal of factors involved points toward the continuation of this trend in the years ahead.

For example, cotton shirt imports of 511,000 dozen in the first 4 months of 1959 compared to imports of 565,000 dozen through April of 1960. In 1953 these shirt imports were only 11,000 dozen. In 1954 they had risen to 211,000 dozen; and by 1956 they had increased to 1.2 million dozen. Cotton shirt imports in 1959 totaled 2.2 million dozen, which represented a rapid rate of increase.

Other examples of these trends are seen in the rise of cotton sport shirts from 1.3 million dozen in 1953 to 1.9 million dozen in 1959. Cotton trousers imports jumped from 1.8 million dozen in 1958 to 3.3 million dozen in 1959. Imports of cotton blouses and shorts sets doubled in the same period to reach nearly 1 million dozen sets.

TEXTILE MANUFACTURES

A significant change has occurred in the overall textile trade between the United States and the rest of the world. In 1947 U.S. textile exporters found a world market for $1.4 billion worth of textile manufactures while imports amounted to only about one-fourth of this volume. This net textile export balance diminished until by 1955 U.S. imports of textile manufactures of $585 million had grown to 95 percent of our $615 million export trade. By 1958 a net textile import balance was firmly established. U.S. imports of textile manufactures totaled $837 million in 1959 in contrast to exports of only $634 million. And the latest available statistical measurements of world trade in textile manufactures in 1960 indicate that these trends are continuing. Imports of textile manufactures are currently running at more than 140 percent of our export trade.

MANMADE FIBER FABRICS

Following the Korean war, U.S. imports of manmade fiber fabrics ran at more than 1 million pounds in 1953 and 1954. A steady rise in imports to more than 3 million pounds in 1957 was followed by a further increase to nearly 5 million pounds in 1958. In 1959, U.S. imports of manmade fiber fabrics shot upward at a heretofore unprecedented rate. Imports of these fabrics totaled 11 million pounds in 1959. This was more than double the 1958 level.

GATT

Currently the Government has included a number of textile items on its list of products to be considered for possible U.S. concessions in the next negotiations under the General Agreement on Tariffs and Trade.

Notably the list includes such cotton items as yarns, knit goods, hosiery, underwear, quilts and bedspreads and such synthetic or manmade fiber items as yarns, knit fabrics, and all kinds of apparel.

Naturally, the industry is planning to appear before the U.S. Tariff Commission and the Committee for Reciprocity Information in an effort to have textile items removed from the GATT list. Our position is that present tariff rates have failed to stem the flow of imports and there is no need to reduce them further for the purpose of stimulating world trade in textiles.

U.S. exports and imports of textile manufactures

The United States has changed from a net exporter to a net importer of textile manufactures since 1958. The excess of imports over exports has steadily increased from 6 percent in 1958 to an estimated 43 percent in 1960.

[Millions of dollars]

Year	Exports	Imports	Imports as a percentage of exports
1947	1,389	366	26
1948	848	497	59
1949	657	335	51
1950	517	451	87
1951	819	539	66
1952	660	513	78
1953	640	464	72
1954	621	440	71
1955	615	585	95
1956	629	648	103
1957	667	635	95
1958	663	637	106
1959	634	837	132
1960	[1] 700	[1] 1,000	[1] 143

[1] Estimated annual rate based on 1st quarter totals.

Source: Compiled by ACMI Economic Information Division from U.S. Department of Commerce data.

U.S. imports of selected textile products

Imports of cotton cloth in the first quarter indicate an annual rate for 1960 that is almost double the record high of 1959. Cotton yarn imports in 1960 are at an annual rate of 11 times the 1959 total.

Year	Cotton yarn (thousands of pounds)	Cotton cloth (thousands of square yards)
1947	783	15,969
1948	916	31,764
1949	262	19,743
1950	1,211	47,799
1951	1,457	45,779
1952	259	36,337
1953	198	64,300
1954	236	74,456
1955	142	133,252
1956	184	188,248
1957	161	122,496
1958	835	141,540
1959	1,381	240,765
1960	[1] 15,188	[1] 479,496

[1] Estimated annual rate based on first quarter totals.

Source: Compiled by ACMI Economic Information Division from U.S. Department of Commerce data.

Apparel imports

Apparel imports have risen sharply since 1954, doubling by 1956.

They increased more than 70 percent from 1957 to 1959.

	Amount (in millions)
1948	$24.1
1949	21.1
1950	28.5
1951	38.5
1952	39.0
1953	45.3
1954	47.0
1955	76.4
1956	106.8
1957	109.0
1958	123.7
1959	190.0
1960	[1]186.0

[1] Estimated annual rate based on 1st quarter totals.

Opportunities for Women in the Legal and Judicial Field—Address by Hon. Florence E. Allen, Senior U.S. Circuit Judge, U.S. Court of Appeals for the Sixth Circuit

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mrs. SMITH. Mr. President, at the recent national awards banquet of the General Federation of Women's Clubs on June 13, 1960, Judge Florence E. Allen, senior U.S. circuit judge of the U.S. Court of Appeals for the Sixth Circuit, delivered an outstanding address which I feel is worthy of the study and attention of every Member of Congress.

Because of the importance of this address by one of the greatest women in the history of our country. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OPPORTUNITIES FOR WOMEN IN THE LEGAL AND JUDICIAL FIELD

The subject assigned to me presents a wealth of possibilities. When I began to practice law in 1914 few women lawyers in the country went into court; now the entire field of professional activity has opened to the woman lawyer. Also the grant of suffrage to women opened the door to public office as in no other profession. Immediately after the vote was secured women who had been doing not only the leg work but the brain work of many and important public office, particularly in the counties, could and did become the head of the office, the clerk, the recorder.

Women today fill countless positions in the executive branches of Government, State and National. A woman has been a member of the Cabinet of the United States. Women have served with credit to themselves and to all women on municipal councils, State legislatures, and in the Congress of the United States, including our distinguished Senator SMITH of the U.S. Senate sitting here tonight. Women have won their spurs in representing the United States as ministers and ambassadors. Not all of these women were lawyers, but many of them were, and the nonlawyers possessed high governmental qualifications. Women judges have sat, not only in juvenile courts, but in courts of extensive municipal and county jurisdiction, in a State court of last resort, in various Federal courts, the Tax Court, the Customs Court, the district court, and the U.S. Court of Appeals.

It is important and proper that women who have legal training and are otherwise qualified should have opportunities for careers which put to the best use their education and experience. But I shall speak tonight of the broader opportunity which faces women lawyers and judges today. This is a time when we have to raise our sights and reappraise opportunities all along the line. In the present world crisis it is hardly fitting to satisfy ourselves with the fact that women today may enter lucrative employments in one of the time-honored professions. As we consider national and international situations we realize that the woman lawyer is needed by America and by the world as never before.

She is needed by the country for her training enables her to join with men in teaching citizens and particularly the youth coming on, the meaning of the Constitution of the United States. When our forefathers declared in the Preamble (the first written statement in history as to the purpose of erecting a government), that the United States was being founded "to establish justice" and "to secure the blessings of liberty to ourselves and our posterity," they were not using idle words. They were using words that Americans must understand. Justice is not, as certain people believe, a system under which they get what they want. Justice is a system under which they get the thing that they are entitled to have and others are entitled to receive the same. Liberty does not mean the license to commit cruel murder "for kicks"; liberty means that you and I live unregimented, unrepressed, unbrainwashed, with freedom to choose our calling or profession, to choose our place of living, to choose our friends, with the right to develop ourselves just as plants grow in the sun. Some Americans have forgotten these simple but basic truths. The lawyer is needed to help call Americans back to the fundamentals, both through his own integrity and idealism and by his teaching. And what does this situation open up for the woman lawyer? It opens up a mighty privilege and opportunity. We should accept this challenge with eagerness and courage because of the widespread movement in the world to attack the ethical basis of law. The extent of this challenge is not realized.

Those of us in the free countries who have devoted ourselves to the profession of law inherit glorious traditions upheld by principles which lie at the very base of civilization. Nothing so marks off the man from the beast; nothing so demonstrates the divine element in humanity as the desire for justice found in ancient peoples, in remote tribes and in civilized countries of the world. It has been voiced by prophets, legislators, and judges for many centuries. "What doth the Lord require of thee?" said Micah. "He hath shown thee, Oh man, what is good and what doth the Lord require of thee but to do justly, to love mercy, and to walk humbly with thy God." This desire for justice demonstrates the ethical basis of law. Why did the Ten Commandants declare: "Thou shalt not kill." Because it is wrong to violate the rights of others. As Andrew Jackson, one of our Presidents who was also a judge, used to charge his juries, "Do right between these parties. This is what the law always means."

I shall not attempt to recapitulate the basic ways in which the law has aided in es-

tablishing justice and freedom. It is not too much to say that, while freedom from invasion could be established by repelling invaders, freedom and justice for the individual could not possibly be secured without the enactment of law defining individual rights and obligations. Since the time of Hammurabi and since the bringing of the Ten Commandments down from Mount Sinai, civilization has realized that there must be law in order to protect the rights of individuals, the family, and the community. Certain basic principles have developed. One of them is that we shall secure justice more completely under a rule of law than under a rule of men. Another is that individuals shall be equal before the law. Most important of all, the law in its gradual development has always expressed an ethical purpose.

All of this has been a slow growth through the centuries but, as historians counted the gain, they rightly felt that tremendous advances had been made. And then, all at once, freedom and justice were destroyed before our eyes, first by Hitler and the Nazis and then by communism. We saw the horrors not only of war, but also of the gas chambers, of slaughter of groups like the Polish officers at Katyn. Not only has life been ruthlessly destroyed but human rights have been utterly disregarded through the concentration camp and the hideous system of forced labor. Countless millions throughout the world live in terror because of "thought control" imposed by despotic governments. The little Chinese tailor who casually remarked that "the cloth was not so good as formerly" is subject to a charge of wrong thinking, of being deviationist and antirevolutionary. And this is a charge carrying a sentence of forced labor or even death. We know now the cruelties of the denunciation process in which men and women supplied with printed forms for the purpose are urged, under heavy penalty of refusal, to accuse their friends, their neighbors, their fathers, their mothers, their wives, their husbands, their children. Through vast areas of the world freedom and justice have been destroyed, and why? Because Stalin spoke, the Politboro spoke, and Mao Tse-tung speaks, and that is the law. Today in vast and powerful countries we have the rule of men, not of law, and so in these countries freedom and justice are abolished.

In Soviet Russia, Vyshinsky and Undrevich, in their book on Soviet law attack the idea of penologists who "hold the view that the purpose of a court is to apply the law and to apply it uniformly to all classes of society." They thus ring the death knell for equality before the law. To hold such a view, according to Vyshinsky, is to "ignore the task of stamping out our class enemies" and "to emasculate the class content of judicial practice." As Vyshinsky states: "The law of the Soviet regime is a political directive and a judge's work is not to apply the law according to the requirements of burgeois legal logic, but to execute the law unwaveringly as an expression of the policy of the party and the government." In a later passage it is explained that "the Soviet State openly repudiates the political independence of judges * * *. We openly require our judges to carry out the policy of the proletarian dictatorship * * *." Thus openly is abandoned the principle of justice applicable to all persons, even against the state itself. Written constitutions purport to establish freedom of speech, of public meeting, of the press, of association, etc.: but the laws as interpreted set aside these constitutional declarations. This is in accord with Soviet law, for, as declared by the Law Institute of the Academy of Science in Moscow, a party directive has the force of law. This explains why in Russia, the government is so willing to ratify treaties. It is bound only by the directive of the party. If the directive conflicts with the constitution, or with the treaty, or with any express law, the directive of the party controls.

I am aware that in certain directions Russia has relaxed the rule of terror and the abuses of the secret police. But eminent political scientists recognize that this rule as to judges still is in force.

In these days then, when we see the ethical basis of law attacked, when we see government of men, not of laws, government which openly repudiates the equality of men before the law, their right to personal freedom, their right to work at whatever calling they choose, when, in a word, the principles of justice are discarded in powerful countries, we as lawyers, face a specific challenge. It is not enough for us to enjoy employment in a luctrative, learned, and honorable profession. It is not enough to practice law ethically. We have to help teach the coming race the ethical basis of law. We have to fight as lawyers against the movement to abolish the conception of right and justice which lie at the basis of civilization.

The Constitution of the United States, a landmark in organized law, was not only written by lawyers but its purpose and meaning were explained by lawyers. Never before in history had such a pamphlet been issued to the world as the Federalist. Never before has such a legal classic been written at the founding of a government. The very reason it was written was that lawyers recognized their obligation in this crisis to teach and lead the people. Hamilton, Madison, and John Jay in eloquence as simple as it was profound, explained the various proposals of the Constitution and their significance in the building of that Union so essential to the maintenance of peace and freedom. In these distinguished essays they won the support, not only of Washington and Jefferson but of the man in the street. It is not too much to say that, if the Federalist had not been written, if Hamilton had not explained the Constitution to New York, and if Madison had not performed a similar service in Virginia, the Constitution would not have been adopted.

Exactly the same public service is demanded of lawyers and of laymen today. Unless we inspire the coming race with a conception of the ethical basis of law, the precious freedom built up through the centuries will inevitably be destroyed. The ethical basis of law implemented in the free countries is the real defense against communism. And to the protection of this ethical system of law every member of the bar, and every true American, is called. This is today at once our challenge and our mighty opportunity.

The Great White Fleet—A Step Forward Toward World Peace

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mr. KEATING. Mr. President, the recent tragic disasters in Chile and other manifestations of nature's wrath around the world have served to focus attention once more on the proposal to establish a Great White Fleet. A vehicle for the creation of this great humanitarian armada is Senate Concurrent Resolution 66, which I am proud to be one of the cosponsors.

In my view, this mercy fleet could carry to the corners of the world a message of America as it really is today—dedicated to helping people everywhere to build healthier, happier lives. It is my hope that the recent tragedies in Chile and elsewhere, regrettable as they are, will help speed progress on this proposal which can mean so much in the cause of world peace and understanding.

The man who first suggested the Great White Fleet, Comdr. Frank A. Manson, recently delivered an interesting address on this subject. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WHITE FLEET

(By Comdr. Frank A. Manson, U.S. Navy, before the London International Chapter of the National Defense Transportation Association, London, England, May 17, 1960)

I am fully conscious of the honor it is to address this distinguished group of Anglo-American executives and their guests. It is with pleasure and humility that I discuss the White Fleet, a topic close to my conscience, and the one which you chose for me.

This being my first public statement on the White Fleet since Life published the original proposal last July, I feel particularly rewarded to exchange views with a group of transportation authorities. Economic transportation is one of the keys to the success of the White Fleet, the economic transportation of one nation's strength to another nation's weakness.

Undoubtedly many of you have not heard of the White Fleet until this moment. Therefore, I think I should begin by briefly describing what it is. Since this is an Anglo-American audience I should also say at the outset that the White Fleet idea was first presented to the people of the United States. Some people have asked why I did not take the original proposition to something like NATO, SEATO, or to the United Nations and call for the creation of a worldwide White Fleet. I did not have sufficient data from countries, other than my own, to conclude that this would be a feasible proposition. I had no inkling how such a thing would be received and furthermore, I felt it was prudent to see what my fellow citizens thought of it before I presented it elsewhere. Although I felt in my heart that American reaction would be favorable I had no way of knowing for sure. Nor did I know what the reaction would be in newly developing countries. So much currently is facing humanity. Essentially the White Fleet is a new instrument for harnessing America's strength potential into her mothball fleets to help make the benefit of civilization available to the newly developing countries.

In view of such programs as the Marshall plan and point 4, which to my mind symbolize the real care of U.S. thinking, I did not consider that the White Fleet represented a radical departure from past U.S. efforts.

A White Fleet of mercy ships is something tangible. It is something that people, regardless of their education or station in life, can see and comprehend. Its only motives are humanitarian and these motives are easy to understand. They are difficult to distort, and this, I feel, will be of increasing importance as we move into the sixties.

The exact composition of the White Fleet will vary depending on the mission. Its overall capability will include ships designed to render assistance in such fields as elementary education, agriculture, nutrition, medicine, various types of engineering specialties, electrical power and research and these are by

no means all. The ships will be combat loaded to fight the many human problems which beset newly developing countries. The long-range missions is to help people who want to help themselves and become self-supporting.

The real purpose of the White Fleet is to render technical assistance in areas of continuing need. Additionally the White Fleet should prove helpful in times of disaster and crisis such as those brought about by floods, earthquakes, and storms. While dramatic, I do not envision that the disaster capability of the While Fleet will provide its most important function. In the first place, the U.S. Navy, which is now deployed worldwide, has demonstrated time and again that it can render emergency assistance within a matter of hours to virtually any spot in the world. This type of emergency service is already in being and would hardly provide the best utilization of the White Fleet. In some instances, such as Agadir, the Navy might call for the assistance of the White Fleet after it has handled the most urgent part of the situation.

Many people have asked me whether a White Fleet would have been useful at Agadir in view of the tremendous emergency support rendered by the military and civilian personnel of many Western countries. I went to Agadir in connection with my official Navy duties and frankly I don't see how the rescue operations during those first few hours or first few days could have been greatly improved. The French Navy, with a base at Agadir, began rescue operations within a matter of hours as did the U.S. Navy and U.S. Air Force. Soon the military and civilian forces of other nations were sending various types of assistance. We sent out a call for clothing and food from our Naval headquarters in London and the response was so overwhelming and the tonnage so great that a ship had to be sent from Norfolk to make the final delivery.

But the military forces could only stay in Agadir during the most agonizing part of the emergency. They all had their jobs to do and they had to return to their assigned military duties. A French doctor at Agadir who knew of the concept said the White Fleet would have proved most useful after the military forces had completed the dramatic rescue operations.

The situation today in Agadir appears most appropriate for a White Fleet operation. The city is in shambles, about 90 percent destroyed; it is without electric power or a water system. Most of the survivors are living in tents—24 canvas cots to a tent. Many of the people still walk half dazed about the countryside. There are no schools. The medical clinics and maternity wards are nothing more than canvas cots on the bare earth. The people are in need of a continuing supply of the basic necessities until they can get themselves organized once again. The city of Agadir is in need of technical assistance—and this will be so for some time to come. In fact there is virtually no White Fleet capability envisaged which could not be utilized in Agadir because virtually everything was lost. But Agadir is only one part of Morocco where the White Fleet could serve a worthwhile purpose.

I use Agadir as an example because public attention has been recently directed there. There are literally hundreds of situations in Africa, Asia, and South America that lend themselves to a White Fleet solution.

Now a few words about the future of the White Fleet. The idea continues to grow in the United States and throughout the Western World. Only recently I received a letter from a friend in Africa enclosing a clipping of a ship recently acquired by the Indonesian Government to fight against yaws. It is a floating dispensary and its only mission is to examine the population for yaws and treat all the cases which it finds. This is very heartening to know that such a ship is now in existence. A few weeks ago a poultry processing group in the United Kingdom contacted me regarding the feasibility of installing some sort of a poultry processing unit in the White Fleet. They said they thought it would be possible and effective. Then only a few days ago I received a letter from a manufacturer here in London and I quote from his letter. "I have reread the Life article on the White Fleet and am more than ever assured of the importance of this concept of aid to stricken areas. I can say on behalf of my company that we pledge what support we can give to you and the American organizers of this effort. * * * While the material support we can give will necessarily be small compared to the vastness of the enterprise—it could be important. Our Dexion material is a fundamental basis for building almost anything." I had never heard of Dexion material until I received this letter. I have subsequently investigated the material and discovered they can build anything from a school desk to a medical clinic. Actually it is what I call a man-sized erector set and it is such a marvelous idea that I am surprised it was not thought of years ago. In any event, I am delighted with this generous offer and am forwarding it to the White Fleet sponsors in the United States.

The first ship to sail from the United States will be the SS *Hope*, as the sponsors of the White Fleet and those responsible for Project Hope have joined forces. I am confident that this ship, whose first call is Indonesia, will emphasize the urgency of the White Fleet. I personally hope that the next White Fleet ship will be an LST, a landing ship tank. It is inexpensive to activate and operate and can gain access to most any coastal area. It can be multipurpose, carrying an assortment of capabilities and be most useful in numerous situations. Other types of amphibious ships and merchant hulls should be considered for the White Fleet. Some people have suggested that the nuclear-powered merchant ship *Savannah* would make an excellent White Fleet flagship. I do not know of the plans for *Savannah* but feel that this suggestion is worth consideration.

A few people have thought that I advocated Defense Department sponsorship of the White Fleet and budgetary support from the U.S. Navy. I have never entertained this thought nor would I recommend it. In fact I feel that such a policy might prove self-defeating. To organize and operate a White Fleet at the expense of military and naval preparedness would be foolhardy. Our defense funds are needed to meet the very real military challenge confronting the Western World. Financial support should come from civilian sources.

As to the long-range implications of the White Fleet, I am reminded of the recent talk with one of England's most gracious and talented people. As we walked about his estate looking at the beautiful gardens and trees he said that the White Fleet had brought to mind three people he knew who had planted gardens. One man had planted his garden studiously, with the careful planning of an industrious banker. He walked the grounds many times before he spotted the first plant. When he had finished his planting his garden was beautiful, it was professional, but it had required a rather long period to complete the project. The second man had planted his garden with a reckless abandon of a Johnny Appleseed. While there was no particular design or discernible pattern to his work he had utterly blanketed his estate in beautiful flowers. The third man that he knew lived near the Scottish border. He had planted no flowers at all. Instead he had torn down the old buildings and replaced them with beautiful stone structures. My friend told this man that these structures should last for a generation and the man replied, "I intend for them to last for at least three generations." "But where are your flowers?" my friend asked. The man replied that he had no flowers and he pointed to a group of small trees and stated "I planted trees instead. There is something about trees which reflect a man's faith in future generations. There is something about trees that is indestructible."

Gentlemen, I would like to close with the suggestion that what my friend said about trees also applies to the White Fleet. There is something about this plan that suggests faith in future generations and the indestructibility of ships. I have said many times that I have no illusions that the White Fleet will bring peace in one sweeping movement. Peace can only come a bit at a time, but one step forward is worthwhile and I am confident that the White Fleet is a step forward.

Africa on the Move

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mr. MUSKIE. Mr. President, on March 28, 29, and 30, Mrs. May Craig published three columns which were printed in various Maine newspapers.

In the first, Mrs. Craig tells of Ethiopia's rich products and customs.

In the second, she recounts an unprecedented conference with his Imperial Majesty, Haile Selassie, Emperor of Ethiopia.

In the third, she describes the Republic of Sudan as a "benevolent dictatorship."

Mr. President, I ask unanimous consent to have these three articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—COFFEE WAS ONE OF ETHIOPIA'S FAMOUS SPICES

(By May Craig)

ADDIS ABABA.—If you drink the best mixtures of U.S. coffee, you get Ethiopian coffee blended into it because this is the home of coffee, originating in the province of Kaffa, and was one of the famous "spices" for which ancient Ethiopia was famous. The country is rich in rivers, forests, minerals. There is power in the Blue Nile as it drops 5,500 feet through gorges sometimes 4,000 feet deep before it gets to the plain of Sudan where it meets the White Nile at Khartoum. She has fertile soil, abundant seasonal rainfall, year-round growing season. It is no wonder Mussolini tried to take Ethiopia to feed the Italians as he set up collective farms in the green hills that rim the Northern Mediterranean opposite Italy. Since history began, there have been struggles for land, food, cattle—now for minerals and oil.

The language here resembles Hebrew, Arabic, and other semitic languages, since the origin of the people is Hamitic and Semitic. The language is called Amharic, and English is the second language. When we asked our Ambassador, Don C. Bliss (Vermont, Dartmouth), whether any of his staff spoke the language, he said his wife did.

and two are learning. There is great criticism in foreign countries because we send people who do not speak the language. Mr. Bliss said this is very difficult and it was not necessary for us to speak it. But the Soviet Embassy has people who speak it. They turn out reams of literature, give away food, are busy as bees. They have one of the largest staffs. Congress is careful of our money and economizes on Africa. We have given probably $100 million in credits to Ethiopia, in all, but we must have "projects" approved in advance and account to Congress for it. The Communists can say: "What do you want? We'll give it to you on easy terms." The Soviets do not always produce as promised, their work is often shoddy, and the recipients usually find strings attached when it is too late. But this takes time, and time is running out.

The Ethiopian calendar is not like ours, but like the Jewish. It starts the year in September and is about 7 years and 8 months behind our calendar. It is divided into 12 months of 30 days each and 1 month of 5 days. The country is near the Equator so day and night are the same length and sunrise is the same time the year round. The 24-hour day is divided into sunrise and sunset instead of midnight and midday as we do.

Going back to our too-little assistance here—the U.S. Information Service is so skimped that they could not keep the American-trained librarian and now have an Ethiopian who is well-educated. But it would be better to have an American to greet and help the crowds of Ethiopians who come.

We are back to brushing our teeth with bottled mineral water and there is nothing more loathesome than toothpaste and mineral water—it foams in your mouth. "Don't take a drop of the tap water in your mouth," our resident American friends warned. "Don't eat anything raw." Bananas you peel yourself—holding it in the skin stripped to the bottom as you eat. Peel oranges or apples, open your own eggs. I am wrapped in the magic protection of my immunization shots and the array of antimalaria, antidysentery pills that I brought with me. No mosquitoes here but I spray the bedroom with repellant just to discourage anything else that might come around, including the small black ants that have eaten a hole through the wooden frame of the window. This is a romantic-looking hotel, suitable to the country, set in lovely gardens, with huge roses in bloom, but it is not what Americans call comfortable. They never put enough lights in the halls anywhere in the world as we do in America, and it is an engineering feat to find the keyhole.

But everybody is so kind and obliging, they do everything to make us happy. There are Ethiopian helpers on every floor, only the bells often do not ring. The lights often fail, so we all have candles and matches in the room. In Nairobi when I went to dinner with one of the consulate people whom I have known round the world, not only the lights went out but the electric stove, too, so dinner was 3 hours late. But from my window I can see the distant mountains, the air is cool, the flowers are gorgeous, and I am steeped in thinking of the great ancient history of this country and these people. Americans are so young. Minor annoyances—my navy blue shoes are now polished black; toast is cold and hard.

Jouncing along good, then dusty roads a hundred miles to enormous sugarcane plantation and mill, run by efficient Dutch who built up in Indonesia and were thrown out with nothing, starting again here. If the monarchy should fail, despite the solid power of the present Emperor, or the Communists get it eventually, these Dutch will be out again, as are so many in Cuba, Congo, Guineau, and other African nations.

Africa on the Move—A Truly Royal Man Holds an Unprecedented Conference

(By May Craig)

Addis Ababa.—This day I have seen a truly royal man—His Imperial Majesty, Haile Selassie, Emperor of Ethiopia, the oldest continuing kingdom in the world. Not only does he have great dignity, there are lines of care in his face, of the responsibility of an absolute monarch, a country torn by shifting tides of change in the world, especially in Africa on the move. The Italians took Ethiopia in World War II, part of the Italian and German war to win the world, and he was in exile. His people are devoted to him now, especially because they are deeply religious and he is the religious head of faith too. Billy Graham was here a few days and was well received and made some converts. There are all religions, though the major religion is Coptic Christianity. There is a new Seventh-day Adventist Church building; the American YMCA and YWCA are active—though the women, not veiled, are beasts of burden in rural areas and unconscious of the freedom they might have.

We have a stake here, and all the free world. Pushed out of Northern Africa, British, French, Americans would like bases here in this friendly country, but it treasures its independence and stands with "the movement for the liberation of all African peoples," His Majesty told us at an unprecedented press conference. Never before, has he given so long an audience, nor answered questions from journalists. The questions were restricted to six, the general tenor of which was given to his officials a few hours before the press conference, but we selected what we wanted to ask, and ranged over recognition of Red China, her membership in the U.N., whether she should have the China seat in U.N.; possible acceptance of Soviet assistance; possible war with Somali over borders; economic situation here, along with education, etc.

His answers, given through an interpreter, though he speaks English somewhat (French fluently) were not definitive. To the Communist China question, for instance, asked by your correspondent, he said he hoped the great powers at the coming summit meeting would reach some agreement on membership of Communist China in U.N. and recognition of the plain fact that it is a great, populous nation. He did not say whether or not he intends immediate recognition but implied it by saying it is not a question at the moment. A long talk with his foreign minister, who has been Ambassador to the United States, brought out hopes that the two Chinas might reach some conciliation, perhaps there might be two Chinas in the U.N. as members, but with neither necessarily occupying a permanent seat in the Security Council.

Our reception by the Emperor was formal and magnificent. Before we went in we went to see 30 royal lions in cages, with many cubs of various ages. They were truly wonderful, some grizzled with age. On the steps of the royal palace on a chain, with two keepers, was a lion, and we had our pictures taken with him; some of us, not me, even touched him, despite warnings of the keepers. We waited two by two in a great hall, thick with rugs, illuminated by glittering cutglass chandeliers reflected in mirrors, with beautiful window draperies, and two large throne chairs, topped by red velvet draperies, with golden crown overall. Then we went upstairs to another great hall, where there were rows of chairs for us before another less-formal throne chair. The Emperor came, straight and dignified in uniform, with rows of medals, hardly any gray in the abundant black hair and beard. He is of a pale gold color with fine high features, very thin.

One by one, we were introduced by name to the Emperor by Marcel Durlaux, our tour director, for whom this press conference was really a triumph. Then we were seated, the Emperor read a statement in his own language, which was translated and we were given copies. Then the six of us chosen to ask the allowed six questions rose one by one, addressed him and spoke. I was fourth with my triple China question. He answered quite at length to each, pausing for the interpretation.

Then he rose and, with some of his ministers led us into another magnificent hall, where a collation was spread on a white linen covered table. Waiters passed trays of champagne, and the Emperor chatted informally with some of us, introduced by his Minister of Protocol. He gave me some extra time because I saw him when he visited Washington and because I am a Washington correspondent. Also he spoke of "General" and President Eisenhower who helped drive Mussolini and Hitler out of Africa.

During the day we visited the handsome university endowed by the Emperor, one of the most modern I have seen. Yeshi I. Taffesse, sister of one of the staff at the university spent 2 years studying in the United States, 1 year at Fryeburg Academy in Maine. We saw the magnificent Jubilee Palace, celebrating 25 years of the Emperor's reign; our Vice President Nixon was the first foreign honor guest to stay there. It is the official guest house. Opposite the grounds is rising African House, which will house the U.N. economic mission, African conferences—one coming in June—and U.N. or other international meetings. Incidentally, while we have no missile base here we do have a small Army base, mostly radio, for communications—very valuable.

While the African nations are friendly with Israel and receive much technical know-how from her in industry and agriculture, and wish the Nasser hostility to Israel about the Suez could be settled, they do not foresee it now. Yesterday we visited their prized Koka hydroelectric plant on the Hawash River, rising in Ethiopia and flowing into the Blue Nile, which will give needed power and irrigation water to make this arid but deep topsoil bloom like a rose. One generator is operating; the rest ready in a year and a half. The contractor is Italian. After the war, the Emperor said there should be no revenge from a Christian nation. The Italians are building the dam as reparations, with some money from the Ethiopian Government. The King owns many enterprises here. He has a monopoly on production and sale of liquor, which helps his budget. He promised a constitutional monarchy and it is now underway, but he is and will be the absolute monarch. What comes after? Who knows?

Africa on the Move—Republic of Sudan Is a "Benevolent Dictatorship"

(By May Craig)

Khartoum.—The Republic of Sudan is the largest country in Africa—a million square miles. Its first known settlements date back to 5,000 B.C. It has conquered and been conquered; it has been beaten in war, overrun, occupied. Turks, British, Egyptians had it in recent times. It is Moslem and Arab predominantly. In February 1953 an Anglo-Egyptian agreement was signed beginning a 3-year period of self-government under international supervision. In January 1954, the Sudanese Parliament held its first meeting. In 1955 all foreign troops left. In 1956 the two governments recognized the Sudanese as a fully independent sovereign state. The flags of Britain and Egypt were hauled down and the Sudanese flag went up. It is one of the few peaceful revolutions of our times.

It is now a "benevolent" military dictatorship. Its President is Ferik Ibrahim Abboud, who is also President of the Supreme Council of the Armed Forces of the Republic, Prime Minister, and Minister of Defense. The people, who range from coal black to light brown are deeply patriotic.

They gave us copies of the music and words of their national anthem:

"We are the soldiers of God, soldiers of this our land; ready for any challenge; we shall never betray our call; in the face of death itself our souls are in God's hand; we count our country's glory the greatest prize of all. This is our land, so dear, whose flag flies brave and clear; oh, sons of this Sudan, this is a sign for you, to shoulder hard your tasks and do your duty true."

In a little booklet they gave us about the Sudan, it begins: "This is the story of a people, a desert and a river. Today the people are independent, the desert is fertile, and the river utilized. In Sudan the Middle East ends and Africa begins." It is this linkage of Arab-Moslem Middle East and north Africa with middle, southern, and western Africa that makes the Sudan so important to the peace of the world. They belong to the Arab League, but they want to remain a separate nation, friends with all. They are Mediterranean and they are African.

The White Nile and the Blue Nile come together here in a great confluence to form "The Nile." I sit now on the balcony of a hotel in Khartoum overlooking the Blue Nile. Our group has just come from an unprecedented press conference with the President in his long, low, large, white palace, built by the British Lord Kitchener. It fronts on the Nile Road under a double row of great trees which meet in an arch, along the Blue Nile, near the confluence. We had to submit our questions in writing the day before, and he spoke to us through an interpreter, a tall, dark, intellectual man, with the scars of tribal gashes, gained in his young manhood, on both cheeks. Several of the officials had these—as we have seen all over Africa—sign of how recently they have come into the modern world. The President did not have the scars.

We asked when there would be free elections. He replied—when current survey shows the people are ready and capable. Their long close relations with Egypt and Britain have given them many capable and educated leaders. The President is one of the few African leaders who spoke freely and cordially of their gratitude to the United States for its help in development of their country. "They are frankly neutral, they wish to be friends with East and West—they will not accept any help that is not clean and good." There are Communists here, but they are under control of this Government. We passed the Soviet, Communist China, and Yugoslav Embassies—one of the few times I have seen the Red China flag flying—red ground, one large white star with four small stars in a semicircle around it. They have not "officially" accepted aid from the Soviet. A Soviet delegation was here last year but did not offer "cash loan," the President said, and so no application has been made to the Soviet by the Sudan.

The President said that the recognition of Communist China was by a previous Parliament before he took over. However, he said, it was the manifest desire of both countries to recognize Red China and "we saw no reason to reject it." Asked if he was satisfied with American aid, he smiled and said that they are grateful, do not want to "talk figures;" need more, of course, for rapid progress but realize that "we are at the end of the camel train" in comparison to American aid to other countries.

He hopes the cold war will soon be over—"It benefits nobody." The Sudan, as most—not all—African countries, is angry about the French atomic bomb tests in the Sahara. The Sudan is near the desert, and has protested to the French Government and the United Nations, which, he said, "ignored us." They are for freedom for Algeria, completely—and the French atomic tests solidify feeling against the French.

Statement Released by the Organization, Soul of America

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. JOHNSON of Texas. Mr. President, a new departure in efforts to further understanding between citizens of this Nation and the people of the world has recently been undertaken.

The project is sponsored by a private, nonprofit educational organization—Soul of America. It utilizes tape-recorded "living letters" which it exchanges between the students of high schools in 100 American cities and similar schools abroad.

The goal of this commendable program is explained in a statement recently released by Soul of America, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEW ORGANIZATION ANNOUNCES "LIVING LETTERS" TAPE EXCHANGE BETWEEN SCHOOLS IN 100 AMERICAN CITIES AND SCHOOLS IN OTHER NATIONS

WASHINGTON, D.C., June 3, 1960.—The Soil of America, a private nonprofit, educational organization concerned about the image of America which is projected to the rest of the world today announced sopnsorship of a plan for the exchange of tape-recorded "living letters" between high schools in 100 American cities and similar schools in other parts of the world.

Under the plan high school students in this country would "talk" their letters to their counterparts in other nations. In return students in other parts of the world would send taped replies to high schools in the United States.

Initially it is planned to established such an exchange between this country and the USSR and Latin America. The first living letter will be tape recorded this summer and will be offered to a school in Moscow under cultural exchange terms which will provide seciprocity if accepted.

The announcement was made at a meeting of the Soul of America in Washington, D.C., by Harry H. Semmes, president of the new organization. Mr. Semmes pointed out that "this is in accordance with the President's recent statement after the summit collapse when he stated that we must "* * * improve the contacts between our own and the Soviet peoples, making clear that the path of reason and commonsense is still open if the Soviets will but use it."

Mr. Semmes described the purpose of the Soul of American as being "* * * to remind Americans, particularly the youth of America, of the basic concepts on which this country was founded and belief in which stimulated the growth and character of the Nation, and to inform our countrymen of the necessity of making known to the people of this world the true beliefs upon which our freedoms are founded.

"We believe that this should be done with humbleness and modesty, but without apology, and that it should be made known that the important thing, about America is not what we have in terms of material wealth, but what we are in terms of human liberties."

In announcing the formation of the Soul of America organization, Mr. Semmes made public an exchange of letters between the organization and President Eisenhower and Senate Majority Leader LYNDON B. JOHNSON.

President Eisenhower in his letter to the organization stated in part:

"I am highly gratified by the concern and conviction which bring Americans together to stimulate increased awareness of America's idealism and spiritual heritage and to seek ways of imparting throughout the world a greater knowledge of America's character. This purpose is close to my heart. It underlies much of the work of the present administration, an example being the programs carried out by the various people-to-people committees. Each effort to the same end can contribute significantly to presenting the true picture of America to the world."

Senator JOHNSON in his letter stated:

"I would like to congratulate you on the concept and formation of the Soul of America. I believe that you are setting forth on a most worthwhile venture, and I think you have an opportunity to make a truly significant contribution to your country.

"In these troubled times, I am afraid that continuous talk of arms and defense tends to make us overlook what is truly important. It is this: that all of our planes, guns, and men under arms, important though they may be, are only the shield to guard what is really the heart of America—our sacred heritage of liberty."

The Filipinos Demonstrated Warm Affection for America in Their Welcome to President Eisenhower

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. MARTIN. Mr. Speaker, we have all followed with interest President Eisenhower's recent visit to certain Asian countries and we read with pride the warm and affectionate welcome extended to him by the people of the Philippines. According to the press it was an unprecedented reception, unprecedented in numbers—about 3 million Filipinos cheered and shouted their welcome in a tumultuous parade; unprecedented in spontaneity—Filipinos came from all over the islands by every means of transportation and at their own personal expense; unprecedented in sincerity—the crowds all but swamped the presidential car and all security arrangements were brushed aside.

It fills the American heart with pride that the Filipino people should have thus shown their loyal friendship for us. In a sector of the world where neutralism has found adherents and where recent developments have not been of an encouraging outlook for us, it is refreshing to have this Philippine token of good will and gratitude. It is good for the American people to realize that true friendship is a thing of the heart, that it cannot be imposed or bought. The Filipinos showed this in Bataan and Corregidor. This was in war. In peace,

whatever disappointments they may have had, whatever grievances they may have, whatever suspicions they may harbor, justified or not, that their friendship is being taken for granted by us, the fact is that when they had the opportunity to show to the world their esteem and affection for the American people, they showed it as nobly as they did in our darkest days during the Pacific War.

President Carlos P. Garcia, as their able and worthy spokesman, expressed it so beautifully in the following two eloquent addresses which, in the words of a distinguished American editor were "the words of a statesman and couched in flawless English that would have done honor to the prose of Woodrow Wilson."

The first one was delivered at the state dinner which the President of the Philippines and Mrs. Garcia gave in honor of President Eisenhower at Malacañang Palace:

Mr. President, in a powerful story by Ambrose Bierce, I recently read the thrilling account of a regimental line of battle awaiting the order to advance. As only Bierce's pen can describe it, the reader sees the long line, quiet, perfect in its precision, each officer and soldier at his post, each superbly disciplined, alert and ready. Then in beautiful flashbacks, the author sketches in the background, behind the lines, tumult among the supply trains, orders and counterorders, medical corpsmen and others running in all directions, in short a kind of disorderly order. The storyteller ends his story with one felicitous sentence: "The men who do not fight are never ready."

I recall this story tonight not only because our distinguished guest of honor was once a military leader but because there is a moral that I would like to draw from it.

Under this roof, Mr. President, many a great foreign dignitary had been entertained but never one with your record of service to the world. You have been the supreme commander of the most powerful army ever mustered together under one command in recorded history and you have led them as the legions of freedom to victory and to immortality. This was in war. In peace, you have been twice elected to the highest post in the gift of the American people and under your leadership, America has shown she can rise to great heights because your vision and statesmanship have summoned her to dare and to achieve.

We are engaged today in a life and death global struggle against communism. Your recent efforts to relieve world tensions and reach an agreement that can lead to peace have been unfortunately frustrated—I hope only temporarily. But deep as the impress your war record has left in history and high as your place is on the roll of your country's statesmen, posterity, Sir, will honor you more for the unrelenting struggle that you are waging for peace. Your serenity and unruffled poise in the face of abuse, your dignity and restraint, your stubborn determination to continue to reach your goal despite obstacles in your way—your life indeed has been a life of constant fight—ready to lead the world once again to victory and to peace.

If we are to win in the struggle in which we are now engaged, we must avoid in our free world disunity and disorder as depicted in Ambrose Bierce's flashbacks. The time for unity is now and the Philippines is ready to join its efforts, modest though they be, with that of like-minded nations, in concord and harmony, to fight for peace, that it may not be said of them: "The men who do not fight are never ready."

Cardinal Newman once aptly said: "Men are guided by type, not by argument; that some winning instance must be set before them or the sermon will be in vain and the doctrine will not spread."

Mr. President, you are the type and the winning instance to inspire the free world to follow and emulate.

Ladies and gentlemen: I ask you to rise and drink a toast with me to this century's indomitable fighter for peace, the President of the United States.

The second one was delivered at the dinner given by President Eisenhower at the American Embassy in Manila in honor of President and Mrs. Garcia:

Mr. President, I am grateful to you for your kind and generous words. If your visit to the Philippines, these 3 days that you have been with us, the acclaim that you have received from the vast and unprecedented multitudes wherever you have been seen, the spontaneous demonstrations from our people of their esteem and admiration for you, have given you a spiritual lift, Mr. President, you have made us very happy indeed.

The hundreds of thousands of smiling Filipino faces that were turned toward you had only one message. They saw in you the image of the American people. The nuances of international politics they care very little about. But they know that the United States is engaged in a struggle against a danger that threatens their country, too. They know America is their friend. Many of them are still alive who fought for American ideals of freedom and democracy which are also ours, in Bataan and Corregidor as did their forbears in Tirad Pass and Balintawak. In your person they saw embodied the prestige and principle of the United States. In a mass plebiscite of unprecedented popular demonstration they once more cast their vote of confidence in the United States.

You have seen a people that have risen out of the debris of war and have established a democratic government and have maintained it despite the difficulties and handicaps of postwar reconstruction. You saw Manila soon after the Second World War and you compared the devastation as second only to Warsaw. The grit and determination of our people you have seen as evidenced by the material progress of our country. Much remains to be done but we are happy that you came and saw what has been accomplished and you will return to the United States better acquainted with our needs and our problems.

Your bold venture in personal diplomacy we admire. It is in your character to dare where others would hesitate. But our harassed world needs venturesome spirits with the vision and the courage to blaze new trails to achieve the peace humanity must have if we are to survive. Our people are behind you in your purposeful undertaking and we wish you, Mr. President, godspeed.

In a few moments you will be departing from our shores. You are going forward in your adventure because in the words of President Theodore Roosevelt you are among those who do not "shrink from the hard contest, where men must win at the hazard of their lives and at the risk of all they hold dear." That is the courage and the statesmanship that is the need of today and you go, Mr. President with the hopes and the best wishes and the prayers of the Filipino people.

Ladies and gentlemen, let us drink to the health of the traveling symbol of the highest values that freemen treasure: freedom, the dignity of the human individual, and peace—the President of the United States.

In President Garcia's welcome speech to President Eisenhower, there is expressed such loyalty to American ideals of freedom and democracy that it is difficult to understand how some American newspapers in the past could have doubted even in the slightest this Filipino leader's strong and abiding friendship for the United States. Here is a true friend of our country speaking:

The Philippines and the Filipino people bid you and your distinguished party warmest welcome.

As the humble spokesman of this nation so graciously honored by your visit, I would like to give voice in the greatest measure possible to the immeasurable feeling of affection and esteem that beats so spontaneously in our hearts for you and the great American people.

I recall with a deep sense of gratitude the visit that it was my privilege to make in the United States as your guest 2 years ago. I am happy that you have honored us with this return visit and I express the hope that we can make your stay with us a treasured memory that you will always cherish in the same manner that you made my sojourn in Washington an unforgettable experience.

Here, Mr. President, is a nation that stands for all that America stands for in the way of the greatest human values—freedom, democracy, and the brotherhood of men. These are the ideals that bind your country and ours together, and with them the other nations of the world striving sincerely to win world peace with justice and honor for all.

You had been in our midst before. Indeed, at one time you lived with us, worked with us, and dreamed with us the life to which we aspire—a national aspiration that was our inspiration and article of faith during the long dark moment of the last World War. When we welcome you, therefore, at this time, we feel and we wish you to feel that it is a welcome home.

BATTLE OF BATAAN RECALLED

Welcome home, Mr. President; welcome, America, whom the Filipino people hold closest to the heart. This is an affinity forged in common principles, common ideals, and common experience in war and in peace. I need not recount again the history of this affinity, for it is already well known. The story has been told in the course of half a century, culminating in the apocalypse of Bataan and Corregidor and the apotheosis of Philippine independence following victory for the free world.

But the victory remains to be made complete. And you, Mr. President, come to our midst in the course of a continued quest for the just peace that will endure. We assure you and the great American people that you lead, as well as the free nations that have identified themselves with the great cause, that the Philippines is and will ever be a staunch friend and ally over the vicissitudes of time.

You will be long remembered by our people and other free peoples in Asia for your patient, passionate, and unrelenting quest for a permanent and just world peace in whose environment man may finally subdue such age-old adversaries as ignorance, disease, poverty, and vice and fulfill his highest dignity. We realize that sinister forces keep trying to undermine this grand effort for world peace, but we believe that in the end a gleaming white tower of world peace and brotherhood will rise sturdy and strong upon the firm foundations that America has laid under your leadership.

We in the Philippines know that there are dark clouds hovering over the world, including over our own land, because of the Communist offensive. The collapse of the summit conference in Paris has of late intensified the cold war. That you have not been disheartened or dismayed is a summons for the free world to rise to greater heights than heretofore reached. We are with you, Mr. President, as your friend and ally in the great

cause that as freemen we are pledged to defend with all our might and main in complete identification with the rest of freedom-loving and peace-loving humanity.

Around you here today, Mr. President, are the Filipino people, of whose ovation my voice is but a part. See the sincere friendship reflected in their faces. Hear them thunder welcome. And with them and us are also the representatives of the foreign community in Manila, friends too who are with us in the cause of true peace and true amity among nations.

Welcome home, Mr. President. We remember you as the Army officer who came to us way back in 1935 to help us organize our national defense. You are not a stranger to these multitudes who today are acclaiming you. You have made lasting friendships among them. We have watched with increasing pride your rise in your people's esteem as though you belonged to us also.

We look at you as the champion of everything that we cherish nearest and closest to our hearts. By this popular manifestation we hope to impart to you the message that in the Philippines, America has a peerless friend and among the Filipinos she will always find a people who are one with her in ideals.

You are at home, Mr. President, as if you were among your own. And in this spirit, let me open our doors and to you with a full heart in our national language—"Tuloy po kayo sa amin [Welcome, sir, to our home]."

Mabuhay. [Long life.]

Appropriately, President Eisenhower responded with these words:

Mr. President and my friends of the Philippine Islands:

This is indeed for me a homecoming. As I circled over your city I saw the old familiar sights of the Laguna de Bay, the Baguio mountains and the Pasig River, and finally this lovely coastline along which your city lies. Indeed, these sights aroused in me sentiments and emotions that no eloquence of mine could ever adequately express.

I worked among you for more than 4 years. I came here as an assistant to General Douglas MacArthur and only yesterday morning, of possibly—my days are getting mixed up—2 days ago, I called General MacArthur and had a conversation with him about these islands, and this section of the world that he knew so well, and he asked me to convey to you his sincere conviction—strengthened with the years—that always there will be unity between the Philippines and the United States of America. And he asked me to convey to you—Mr. President, and to your people—his warmest greetings and his best wishes for your continued welfare.

The last time that I was enabled to come to see your country was just after the conclusion of World War II. I then saw a city wrecked and living in destruction—everything torn to pieces. As I flew over the city today I saw what Philippine courage, Philippine energy, Philippine endurance, and stamina could accomplish.

Manila is as beautiful as ever it was before—and more so. All over your country the ravages of war have been repaired, by your refusal to surrender to despair or to lose faith in your own destiny.

As I looked at these familiar sights, there was one thing, of course, that was missing: So many of my old friends of the years just preceding World War II, they are gone. So many of them paid the price that freemen have been called upon to pay again and again for the defense of freedom, for the right of living as human people of dignity, to stand straight under their God, and bow the knee to no one else.

I pay tribute to those great heroes, and to all who fought with them and beside them—both American and Filipino. I hope in a symbolic way to pay my respects when I go to some of the cemeteries where they are buried.

But to you, the living, and among you are many of my old friends, I affirm again the determination of the United States to live with you as a true partner in defense of those ideals of liberty and human dignity in which we alike believe.

Between us, just as always it has been the case between members of a family, are some problems to be discussed and to be talked about and to negotiate. But the negotiation and those conferences take place in a spirit of common dedication to ideals that make us true partners. Therefore, no petty differences of any kind can ever tear apart these two great countries, which are certain together to march down the lane of the future—free, proud, prospering, and always friends.

Thank you very much.

The New York Times, in an editorial entitled "Triumphant Start," speaks fittingly of the Philippine reception as spectacularly successful and called it "the true voice of Asia." The editorial follows:

TRIUMPHANT START

President Eisenhower's tour of the Far East has had a spectacularly successful beginning in the Philippines. Many more than a million Filipinos lined up between the airport and the center of Manila to bid him a welcome that surpassed anything seen in the Philippines before.

This was again the familiar Eisenhower, beaming, buoyant, the personification of friendliness and sincerity. The thunderous cheers and waving banners that greeted him and hailed him as "champion of democracy" were, of course, first of all, the acclaim of a friend, an ally and a member of our own family now grown to independence. But they were more than this. They represented the true voice of Asia which, for all its longing for peace and, in some quarters, neutrality in the great conflict of our days, instinctively sees in the United States the defender of freedom and human dignity.

In this respect the Philippine welcome represented a rebuff to the propaganda campaign unleashed against the United States and President Eisenhower personally by Premier Khrushchev and Chairman Mao. It also conveyed a rebuke to the exponents of that campaign in Japan who would separate that country from other free Asian nations.

This aspect of the reception lifted the speeches exchanged between the Philippine and the American Presidents above the diplomatic courtesies usual on such occasions. It gave depth and emotional impact to President Garcia's declaration that the Philippines are and will continue to be stanch friends and allies of the United States in defending freedom and democracy. It gave importance to President Eisenhower's reciprocal pledge that no "petty differences," such as often arise between members of a family, can divide us. That the President conveyed like sentiments from General MacArthur, liberator of the Philippines, added a special touch of grace to the event.

Mr. Speaker, who is this man, the President of the Philippines, who at times has been misrepresented by a sector of our press? An Associated Press dispatch, published by the New York Herald Tribune of June 14, 1960, says:

MANILA, Tuesday, June 14.—Carlos P. Garcia, 63, President Eisenhower's host today, is a blend of tough politician and dreamy poet.

The Philippine President has never lost an election in the jungle of Philippine politics, along a path that took him from the House of Representatives to Senator, Governor, Vice President, and President.

Mr. Garcia was the Vice President of the Philippines under President Magsaysay. His favorite activity is chess. He took over after Mr. Magsaysay was killed in an airplane crash in 1957.

The President himself has never been accused of dishonesty in office. Recently, Mr. Garcia has been taking a tough line toward wrongdoing.

Mr. Garcia indorses Mr. Magsaysay's feeling of pro-Americanism, although his "Filipino first" policy has been misconstrued in some quarters as anti-American.

An incident at a private dinner for Filipinos who once studied at American universities gave a good illustration of this.

Several speakers told of the early days of American rule in the Philippines, when they were bright young men inbued with the ideal of Philippine independence. They intimated that the United States had been slow in granting it.

Mr. Garcia was annoyed at the tone of some of the speakers. He threw away his prepared speech and told his audience, which included only one American, that he had stood and watched the Filipino flag go up and the American flag come down over Manila July 4, 1946.

He said he looked around at the war-devastated city and thought the the Americans could have delayed the promised grant of independence on the ground that the country had been wrecked by the war.

"But they kept their promise, and gave us our independence when they said they would." Mr. Garcia said. Then he banged his fist on the rostrum and fairly shouted:

"That is the America I know, and love."

President Eisenhower's visit to the Philippines was really a show of confidence in the leadership of this pro-American Filipino who refused to surrender to the Japanese during the war but preferred to risk his life with the resistance movement. The joint communique of the two Presidents shows the support that President Eisenhower has pledged to give the efforts of the Garcia administration to industrialize the Philippine economy, the steps taken to foster closer friendship with the Philippines' Asian neighbors, to modernize the Philippine Army, and to defend the Philippines "automatically" in case of enemy attack.

The communique follows:

President Eisenhower, at the invitation of President Garcia, paid a state visit to the Philippines on June 14 to 16, 1960, returning the visit of President Garcia to the United States 2 years ago.

President Eisenhower recalled his personal association with the Philippines extending over a period of many years. As the first President of the United States to visit the Philippines while in office, he expressed his deep sense of satisfaction that he had been afforded this opportunity to attest to the admiration and affection which the Government and people of the United States feel toward their Philippine allies.

President Garcia, on his part, viewed the affection shown to President Eisenhower by the Filipino people as a grateful remembrance of the latter's tour of duty in the Philippines some 25 years ago and their admiration for his military leadership in the Second World War and his dedicated labors for a just and lasting world peace.

The visit afforded President Garcia and President Eisenhower, together with other officials of both governments, an opportunity for a frank and cordial exchange of views on matters of mutual interest. In a review of the international situation and of the bi-

lateral relations of the two countries, the two Presidents—

1. Reaffirmed the bonds of friendship and mutual understanding which have historically joined the Filipino and American Governments and peoples.

2. Noted the problems facing the free world at the beginning of the new decade and discussed the possibility of increased tensions in view of recent statements by Communist leaders in Moscow and Peiping. They renewed their determination to support the work of the United Nations and the objectives of the United Nations Charter in the interest of true international peace and progress based on justice and the dignity of the individual.

3. Assessed the continuing threat to peace in the Far East posed by Communist China. They reaffirmed the importance of regional co-operation in insuring the independence of the nations of Southeast Asia. They emphasized the important role of the Southeast Asia Treaty Organization in furthering such cooperation and in developing a sense of regional solidarity; and they noted with satisfaction the contribution being made by the Philipines toward strengthening its ties with its Asian neighbors.

STRESS CLOSE PLANNING

4. Noted that President Eisenhower's visit and the warm response thereto by the Filipino people provided renewed evidence of the strength and vitality of the alliance between the Philippines and the United States and of its essential contribution to the security of southeast Asia. To promote the continuing strength of the alliance and to enable the Philippines to discharge its obligation thereunder, they emphasized the importance of close military collaboration and planning between the appropriate authorities of their countries. They further expressed the view that this close military collaboration and planning should be aimed at the maximum effectiveness in formulating and executing United States military assistance programs and in furthering Philippine defense capability in the light of modern requirements.

5. Noted the recent meeting of the Council of Foreign Ministers of the SEATO held in Washington and expressed satisfaction with the continuing effectiveness of the SEATO as a deterrent to Communist agreement in southeast Asia. They were also gratified that the Washington conference had given attention to the economic objectives of the SEATO, recognizing the importance of economic cooperation between and among the members.

ASSURANCE RENEWED

6. Recalled the provisions of the Mutual Defense Treaty. President Eisenhower, on his part, renewed the assurance he had made to President Garcia in Washington that under the provisions of this treaty and other defensive agreements between the Philippines and the United States and in accordance with the deployments and dispositions thereunder, any armed attack against the Philippines would involve an attack against the United States forces stationed there and against the United States and would instantly be repelled. It was noted that this understanding was included in the agreement reached between the Secretary of Foreign Affairs of the Philippines and the Ambassador of the United States on October 12, 1959.

7. Noted with satisfaction the considerable progress that had been made in talks between the Secretary of Foreign Affairs of the Philippines and the Ambassador of the United States toward settlement of problems arising from the presence of U.S. bases in the Philippines. They expressed confidence that the few remaining problems will be similarly resolved to the mutual satisfaction of the two governments.

8. Reemphasized the importance of strong, stable economies in furthering the objectives of peaceful development in the free world. President Eisenhower expressed his gratification at the evident progress which has been made in the Philippine economy, including notable advances in industrialization. The contribution which the U.S. aid programs have made and will continue to make to Philippine economic development was emphasized. In recognition of the economic interdependence of all nations in the modern world, they discussed opportunities for increased private investment and expanded trade between the two countries in a climate favorable to free enterprise and to the free movement of capital.

President Garcia and President Eisenhower concluded that the exchange of views and the renewal of personal associations made possible by President Eisenhower's visit will further strengthen the traditional ties between the two countries and will contribute significantly to the advancement of their cooperative efforts on behalf of peace and progress in this vital part of the world.

Expressive of the feelings of the American people whose reaction to the Philippine reception is one of heartfelt gratitude to the Filipino people and to the leadership of President Garcia under whose direction the arrangements for the welcome were made, is the following editorial of the Arizona Republic printed on June 19, 1960, entitled "Our Real Allies":

OUR REAL ALLIES

President Eisenhower said the size of his reception in the Philippines last week had not been equaled "at any time, anywhere" in his travels around the world. In contrast with the rioting Japanese mobs in Tokyo, some 2 to 3 million friendly Filipinos in Manila cheered themselves hoarse for the President and demonstrated their friendship for the United States.

You would have to go back 60 years in history to find the genesis of President Eisenhower's amazing reception in the Philippines. After an accident of war had dropped the islands into our laps, President McKinley declared the United States had no intention of remaining permanently sovereign in the Philippines. Instead, he said, the United States would train the Filipinos in the art of self-government and would give them their national independence when they were ready. That promise was kept on July 4, 1946, and nothing since has seriously affected the unity of American-Philippine relations.

One reason why the Filipinos like us so much is that we never showered them with foreign aid. Roughly a thousand American school teachers went to the Philippines on the U.S.S. *Thomas* and other Army transports in 1901 and 1902, but their salaries were paid by the Philippines. Americans served as governors general, as supreme court judges, and as secretaries of public instruction until the Philippines achieved commonwealth status in 1935, but they, too, were paid for by the Filipino—not the American—taxpayer. It is true that the United States has been generous in war damage payments and trade arrangements with the Philippines since World War II, but that is because the Japanese destroyed the Philippine economy in their efforts to hurt the United States. The Filipinos stood by us in the war, and we obviously owed them a boost in rebuilding their economy.

It would be a mistake, nonetheless, for Americans to take the Filipinos for granted. We must respect the pride of the Filipinos, and we must never forget they are citizens of a sovereign nation. We should not demand more favorable conditions for American military personnel in the Philippines than in Japan, for instance. We should pay off the rest of the war damage claims which we originally accepted. We should continue to make Export-Import Bank loans available.

For it is quite possible that the Philippines will soon become our only reliable ally in the Far East. The Kishi government in Japan could fall at any time. The successors to the Rhee government in Korea have not made clear where they stand. Chiang Kai-shek is a true friend, but no one can say what will happen to Formosa after he dies. India, Burma, and Indonesia are neutralist at best, pro-Communist at worst. Thailand, Laos, Vietnam, and Cambodia have more propaganda than strategic value. Malaya's position is always dependent on Chinese-controlled Singapore.

We need the Philippines, and the Philippines needs us. We should continue to build on the firm foundations laid during six decades of united effort. President Eisenhower's visit to the Philippines is the brightest spot in what so far has been a grim journey.

Mr. Speaker, as a fitting conclusion may I include in my remarks the following address by Gen. Carlos P. Romulo, Philippine Ambassador to the United States, which he delivered several days ago at the annual dinner of the 4th Marine Division held at the Shoreham Hotel and printed in the Sunday Washington Star, in which he eloquently and substantively analyzes the significance of President Eisenhower's tumultuous welcome that the Filipinos accorded him, in the light of recent events in Paris, in Moscow, and in Japan:

As you know I have just returned from the Philippines where I witnessed the unprecedented welcome, unprecedented in number and in warmth, given by the Filipino people to your President. It was a moving spectacle to see 3 million of my fellow countrymen anxious to show, in a tumultuous demonstration of esteem and affection, their faith in the United States. It brought to my mind other unforgettable scenes—the foxholes of Bataan where our starving, malaria-ridden, poorly equipped Filipino soldiers fought and fell for the American flag.

Many years have elapsed since the war. An uncertain peace had followed. A new danger had arisen to threaten freedom. Because of this new menace and because of America's growing responsibilities as the leader of the free world, it was felt in many quarters in the Philippines that in America's effort to make new friends, old friendships at times seemed to be taken for granted and even former enemies appeared to be given preferential consideration over former allies.

I have repeatedly given voice to this feeling of my people in my public utterances here in the United States. At the same time I always underscored the fact that despite this, I was certain that the Filipino people's friendship for the United States is steadfast and unswerving, that because we share your faith in the ideals of freedom and democracy, we can always be depended upon to show that faith in any supreme test.

The summit conference was brazenly scuttled by Stalin's successor. An invitation previously extended to President Eisenhower was abruptly withdrawn. Another invitation to visit another country was causing tension, riots, and bloodshed, and a government was about to fall. America's prestige was at stake. Here then was another challenge for the Filipinos to show their faith in your people. They accepted the challenge—and from the moment President Eisenhower landed on Philippine soil until he left 3 days later, because to them your leader is your

Nation's image, the Filipino masses from the barrios and hamlets and towns spontaneously gathered in Manila and the reception they accorded the President of the United States has made history. It was the Filipino way of telling the world that its faith in America is whole and unimpaired. This, may I emphasize, is the essence of loyal friendship.

What is the moral to be drawn from this? Your press can overplay the riots and the snake dances and the subversive and hate slogans to the neglect of other newsworthy events in friendly countries; you can magnify the importance of security treaties and get lost in discussions as to whether ventures in personal diplomacy and goodwill visits are useful or not; you may mistakenly favor countries which you believe are potentially useful industrially and militarily to you in the future; but in the long run, what really counts because it is abiding and is not subject to political expediencies of the moment or to Communist blandishments, is for you to have friends, friends tested and true, who whenever the showdown comes can be trusted to stand up and be counted on the side of freedom and human dignity.

Let America ponder these recent events, and if I have any message for you tonight it is to invite you to indulge in a searching national introspection that you may be able to distinguish hereafter between fair-weather friends and those who believe in you, as we in the Phillipines do, because of the identity of our democratic and libertarian ideals."

Department of Justice Undercutting Principles

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. THURMOND. Mr. President, on June 27, 1960, the Times and Democrat of Orangeburg, S.C., began carrying for its readers editorial correspondence by one of the South's and the Nation's most talented newspapermen, Col. W. D. (Bill) Workman, Jr., author of the bestselling book, "The Case for the South." In keeping with his usual eloquent editorial writings, Colonel Workman penned for the Times and Democrat an outstanding column which merits the attention of the Nation. It is entitled "Department of Justice Undercutting Principles." I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF JUSTICE UNDERCUTTING PRINCIPLES
(By W. D. Workman)

Like the Supreme Court, the Department of Justice should stand above all as a pillar of the law. But it, too, is joining the Court's effort to undercut vital principles of American jurisprudence.

The Supreme Court did its most damaging work in 1954 when it virtually junked the doctrine of stare decisis in arriving at its school desegregation decision. Now comes the Justice Department with an onslaught against the equality well-established legal concept that civil rights are individual rights—to be asserted by the individuals concerned.

Attorney General William P. Rogers, armed with the authority of the 1960 Civil Rights Act and motivated by the 1960 presidential contest, is dispatching his minions throughout the South in what tacitly are admitted to be fishing expeditions for voting law violations. Registration records in county after county are being examined by agents of the Federal Bureau of Investigation—not on complaints by aggrieved citizens, but on grounds of questionable data compiled and publicized by integrationist organizations.

Undoubtedly there have been in the South, as elsewhere, instances of denial of the right to register and to vote. Furthermore, it should be acknowledged that Negroes in some times and places—not all— have been discriminated against in their efforts to participate in elections. Such instances provide the basis for proper legal action to correct abuses and safeguard the right of qualified persons to vote irrespective of race.

But at the same time, a great deal of the lack of Negro voting strength stems from a vast indifference to things political. Negro students of the problem have themselves admitted that. Witness, for example, this statement by James T. McCain, who reported on "The Negro Voter in South Carolina" in a 1957 Howard University study:

"Even though discriminatory tactics are still being used against the Negro to keep him from taking part in politics in South Carolina, this plays only a minor role in keeping those who can qualify from getting registration certificates and voting. * * * Apathy and the lack of political consciousness restrict the use of the ballot by the Negro more than any other factor."

A year later, Florida State University Prof. Elston E. Rhoady observed: "We may well have reached that plateau in the development of greater Negro participation in politics which demands greater efforts by Negroes themselves."

And from the executive secretary of the National Association for the Advancement of Colored People, Roy Wilkins, has come this comment:

"The examinations of the present scene (1957), buttressed by historical data running back to Reconstruction days, indicate that the Negro voter's fate is in his own hand. Every contributor (to the study or "The Negro Voter in the South") and commentator mentions apathy as a factor in the low rate of registration. * * * The point is that Negro citizens must prepare to present themselves in numbers to be qualified, and that that preparation is their responsibility."

Yet in the face of what often is a monumental apathy, the Attorney General's Office seems determined to develop data which somehow can be made to make the white southerner liable for his Negro neighbor's indifference. The absence of legal complaint of wrongdoing seems beside the point, for the Justice Department stands ready and eager, although unasked, to intervene in behalf of the uncomplaining citizens.

The long-range implications of this attitude are sinister. If the Justice Department can enter the local scene to search out and persuade local citizens that their rights are being abridged with respect to elections, where will it end with respect to other matters? The courts heretofore have stood as temples of justice to which the aggrieved individual might turn in his need. Will they now become tools of the Federal Government for implementation of whatever political philosophy might hold sway in Washington at a given time?

The trend is away from the English law and toward the Roman. The common law concepts which have given Germanic, Anglo-Saxon, and American people a pattern of law based upon the will of the people seems to be withering. In its stead is growing the philosophy of Roman law, which is handed down from above and which reflects the dictatorial outlook of the authoritarians who rule: "The law is what we say it is."

The Department of Justice sails more readily into this swirl of legal change by virtue of the turbulence stirred up in 1954 by the Supreme Court. Until then, it was held that matters once settled by judicial decisions provided precedents upon which laymen and lawyers alike could rely in meeting similar situations. In gutting that doctrine, the Supreme Court acknowledged that it was departing from legal precedents and was leaning upon sociological advices.

Thus, from actions both by the Supreme Court and now by the Justice Department, the Federal Government enlarges its growing role as "big brother" to countless Americans who neither seek nor need this fraternal despotism. A new pattern of jurisprudence is emerging—one which admonishes the citizen to depend, not upon established law, but upon all-powerful Government, for the protection of his rights, whether these be real or fancied.

American Deciduous Fruit Industries Feel Effects of European Import Restrictions

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. RANDOLPH. Mr. President, at a time when many government officials and economists are seriously concerned with the problem of the balance of U.S. payments, it behooves us to examine the import restrictions imposed by some European countries upon American commodities.

This refers especially to the continued severe restrictions against the importation of American deciduous fruits, a condition which imposes serious hardships upon the apple and pear orchardists in West Virginia and other States.

Many of these restrictions operate in violation of the rules of the General Agreement on Tariffs and Trade which calls for the removal of such barriers with the improvement of the balance of payments position of the countries in question.

This problem is considered in more detail in statements presented earlier this year by the U.S. National Fruit Export Council and the apple and pear industry to the Departments of State, Agriculture, and Commerce.

Mr. President, I ask unanimous consent that these statements be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered printed in the RECORD, as follows:

STATEMENT OF THE APPLE AND PEAR INDUSTRY, FEBRUARY 10, 1960

Europe has historically imported substantial quantities of fresh apples and pears. U.S. exports of apples to Europe for the 5 years prior to World War II averaged 8,563,000 bushels, or about 15 percent of the fresh crop; pear exports averaged 2,008,000 bushels, or about 45 percent of the winter pear crop.

The European market was an integral part of our normal market and merchandising plans. It was not merely a surplus disposal program. Orchards were planted and practices followed to fill the demands of this market.

To aid in developing this export market, the industry sponsored legislation which was enacted as the Apple and Pear Export Act in 1933. This act fixed minimum standards for the export of U.S. apples and pears to assure that only good quality fruit is exported. This is essential because our costs are much higher and we can compete in the export market only on the basis of high quality.

The trade barriers that have been erected have seriously disrupted our normal market pattern.

In Western Germany the apple and pear industry must wait from year to year to find out whether imports of apples and pears will be permitted. Frequently the action has been taken at such a late date in the season that little benefit is derived. In order to effectively merchandise our crops, we must be able to make necessary plans and take certain steps well in advance of harvest. While our own industry operates under uncertainty, other European countries have access to the West German market.

In France, imports of U.S. apples and pears have been at a bare minimum and only under extremely difficult situations. Generally, we have been denied access to the French market. This season France has programs for importing apples and pears from the dollar area. However, this is only for this season and is not liberalization. At the same time, France established a 30,000-ton quota for apples from Common Market countries to be imported prior to the general opening date of February 15, 1960. The U.S. apple industry was not offered the opportunity to compete with the Common Market countries. Furthermore, it was a well-known fact that supplies were very short in these Common Market countries and they were importing from the dollar area.

The United Kingdom has established a northern hemisphere quota for apples without too much apparent consideration of the domestic crop. Only 20 percent of this quota is permitted to be imported prior to January 1. This is strictly protectionism. This restriction in 1959 resulted in inadequate supplies prior to January 1, which resulted in extremely high prices to the United Kingdom consumers. We could have exported a great many more bushels to the United Kingdom if this restriction was not in effect. Furthermore, their system of licensing has resulted in not all of the licenses being used and we believe representation should be made in this particular.

In closing, we wish to emphasize that every continental European country continues to prohibit imports of fresh apples and pears from the dollar area until local supplies are practically sold out.

STATEMENT OF THE U.S. NATIONAL FRUIT EXPORT COUNCIL, FEBRUARY 10, 1960

We are the representatives of the U.S. National Fruit Export Council, an organization comprising all of the fruit export interests of the United States—including producers, packers, processors, and export shippers.

We are here today to remind you that most European countries are still imposing quantitative restrictions against the exports from important segments of the U.S. industry, and to advise you that we think these remaining trade barriers to U.S. fruit exports should be terminated now.

For the past 12 years representation of our industry have continually sought access to our traditional markets abroad. We have stressed the discriminative nature of these restrictions, which have encouraged foreign competitors, while barring U.S. products.

You and other departments of the U.S. Government have recognized the hardships which these barriers created, and which were supposedly due to the shortage of dollar exchange. You have repeatedly reminded us that under the rules of the GATT these foreign countries were obligated to remove these barriers as soon as their balance-of-payments position warranted.

As foreign economies have improved there has been some relaxation of trade barriers against U.S. fruits by European countries. However, these relaxations have usually been applied to fruits not produced by these countries or their dependencies, such as dried fruits, tree nuts or, in some instances, citrus fruits.

At the present time most European countries continue to impose quantitative restrictions against the exports of important segments of the fruit industry. In practically every instance these remaining restrictions are designed to protect local growers, or producers, in affiliated countries, and there has been no discernible tendency for such barriers to be reduced.

In the fresh deciduous fruit field every continental European country continues to prohibit imports of fresh apples and pears from the United States until European supplies have been sold out. In the canned deciduous fruit field, the United Kingdom, France, and Italy sharply limit or completely prohibit imports. Individual examples of barriers to protect arrangements with other territories or countries are provided by the United Kingdom's restrictions on fresh and processed grapefruit (and Japan's restrictions on raisins). Further details will be submitted by the industries most directly affected. Each of these remaining restrictions prevents U.S. fruit exporters from sharing in a market which has demonstrated a desire for U.S. fruits.

Within recent months the International Monetary Fund has found that the industrialized countries of the world, particularly in Western Europe, can no longer be considered to have balance-of-payment problems. These foreign countries are obligated to terminate now each of these restrictions under the rules of the GATT.

Our industry is not seeking price support or even assurance of exports. It is only seeking an opportunity to compete on the basis of price and quality in important foreign markets. This market was built and can be sustained only on the basis of quality. Conditions now warrant that this opportunity should be provided and the U.S. Government should insist that the unjustified and arbitrary barriers to trade in U.S. fruit and fruit products should be removed and should take the necessary steps and procedures to accomplish this objective.

SUMMARY

I think you will agree that the need is most pressing and the time most opportune.

1. All departments of Government appear to be in agreement as to the necessity for improving our adverse balance of trade.

2. We must have action now before the countries representing the European Common Market and the European Free Trade Association solidify and incorporate present restrictions into their respective trade policies. We must not let that happen.

Water—Key to Our Survival

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mr. MUNDT. Mr. President, the South Dakota Wildlife Federation conducts an annual essay contest for schoolchildren in my State. Essays are written in conjunction with National Wildlife Week.

The recent issue of the South Dakota Wildlife News, an informative monthly publication edited by Don McDowell for the federation of which Ellsworth Brown is president contains the 1960 winning essay.

In calling attention to this excellent discussion of our most precious resource, water, I wish to point out that the author, and winner of the wildlife federation essay contest is an eighth grade student in Yankton, S. Dak., Miss Ann Sattler.

I ask unanimous consent to have this excellent essay printed in the Appendix of the RECORD as it was printed in the South Dakota Wildlife News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From South Dakota Wildlife News, June 1960]

ANN SATTLER WINS SOUTH DAKOTA WILDLIFE FEDERATION ESSAY CONTEST

(Ann Sattler, eighth grade student at Yankton Junior High, has been named winner of the South Dakota Wildlife Federation essay contest for 1960. The annual contest is sponsored by the South Dakota Wildlife Federation in connection with National Wildlife Week, observed this year on March 20–26, with Howard Ahrendt as State chairman. Ann also won first place in the Lady Ikes of Sioux Falls essay contest.)

WATER—KEY TO OUR SURVIVAL

"And the Spirit of God was moving over the face of the waters * * * And God said let the waters bring forth swarms of living creatures."

So the Bible relates how water was the key to the door of life for all living creatures, from the smallest animals to man. And since that first day animals and human beings have become increasingly dependent on water.

Let us see what is behind the doors opened by the key of water. From the earliest ventures of travel attempted by man, to modern present-day transportation, water has always been one of the most important methods of transportating people and cargo. Water has been used for irrigation of crops and plants since times of ancient Egypt when waters of the Nile were used to transform that arid land to fresh greenness. Irrigation has become increasingly important over the years. In the United States it has brought the dry, bleak deserts into bloom and produced many useful crops. Modern homes and cities gulp fantastic amounts of water—far more than ever before in history. Industries, increasing in number, size and impotrance, are also very thirsty for water. Indeed, industry consumes 60 billion gallons of fresh water each day. Finally there is the healthful enjoyable recreation provided by water, which most of us take for granted.

"Fine," someone says, "so there's no problem. We have many uses for water on which all life depends and we seem to have a good supply of it. So we have no problem."

But if this person would stop to look around, and reason, he would realize that the key called water is slowly rusting or wearing out. In other words, with all this pure water being used, but not conserved by purification after use, our living waters are slowly dying, being polluted. That is, much water is being lost to use by contamination of two kinds; silt from soil erosion and unwanted wastes (sewage and industrial wastes).

Silt, one enemy in the water pollution army, must be battled chiefly in rural agricultural areas and localities where soil is exposed or where clearing is taking place without thought of leaving land cover or wilderness and wildlife areas. When bare soil is eroded, it frequently washes into the streams and rivers.

The thirsty factories that drink up gallons and gallons of pure clean water return nearly the same amount of now highly polluted water to the source. Millions of homes add to the water contamination with body wastes, dishwater, bathwater, etc.

"Oh, well," the optimist brushes off our problem of pollution, "I have heard that water has the ability to purify itself by means of the natural water cycle.

Yes, water has the ability to purify itself—up to a certain point. This self-purification of water is a part of the delicate balance of nature, but of necessity is limited and cannot possibly care for the tremendous quantity of silt and wastes pouring into our water today. So unless artificial purification is employed our water will rapidly become unfit for drinking, irrigating growing foods, recreation such as swimming and fishing and for wildlife use. People, animals and plants would all be without the essentials of life.

Fortunately, some thoughtful citizens have taken it upon themselves to become well-informed on the pollution problem. More important, many are doing something about it. All cities have treatment plants to purify water going into the people's use but not all have facilities for purifying the polluted water leaving their cities. Many States are working on the problem. Some States are banding together to meet the problem where their pollution problems overlap. Some industries are diligently trying to meet the responsibilities by treating their own waste products. The control of erosion is widely and intelligently practiced in many places. These are all steps in the right direction, but there is still much to be done to meet our responsibility to preserve the life of water, which first gave life to us.

We are in a race against time. We must wisely save waters before pollution destroys them. Perhaps, knowing the facts, people will soon unite to have laws passed to adopt a water purification plant for decontaminating water before it is sent back to the sources of water supply. This is a responsibility for each of us—every person in his home, each farmer, businessman and profesisonal man, and every industry. This is a problem for each community. We, the people, must promote united effort against the water pollution army.

Our economic keyring is provided with this important key to survival—let's work together to keep it bright and useful by fighting the effects of erosion and pollution. Let us heed the warning in Lord Byron's poem.

"Til taught by pain, men really know not what good water's worth."

Water is truly the key to our survival.

South Carolina: A Portrait

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. THURMOND. Mr. President, in the May 1960 issue of South Carolina magazine there appeared an article which I feel very accurately describes why we South Carolinians are so proud to be South Carolinians. The article, entitled, "South Carolina: A Portrait," was written by the able and talented associate editor of the News and Courier of Charleston, S.C., Mr. Anthony Harrigan. So that the readers of the CONGRESSIONAL RECORD might get a better understanding of why we South Carolinians are as we are and are so proud of being as we are, I ask unanimous consent that the article be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH CAROLINA: A PORTRAIT

(By Anthony Harrigan)

How is it being a South Carolinian? It really isn't necessary to ask that question. Lowcountrymen and upcountrymen are always saying how it is. In the columns of country weeklies, at political speakings, on the long piazzas at Charleston, and under the tall pines that brighten the red clay hills above Edgefield, South Carolinians are busy telling their story. They are like lawyers in a courtroom where the air is alive with tension. South Carolina is a cause.

If you are thinking about the way a living is earned, a South Carolinian is being a tobacco farmer on a flat strip of land in the Pee Dee, a lawyer on Broad Street in Charleston, settling a business deal over a cup of coffee in a cafe; a millworker in a modern windowless plant on the outskirts of Anderson, a banker in Greenville who raises cattle as a sideline. South Carolinians earn their bread and rice, cowpeas, and sivvy beans, barbecue and country ham, in a hundred different ways.

South Carolinians aren't as rich as Floridians or Virginians. On the other hand, they aren't frightfully poor these days; they aren't talking poor mouth. If the golden weed isn't as golden as it was a few years back, if the wages paid in Japanese cotton mills are causing mill doors to close in some Palmetto State communities, if the pink tide of shrimp is running richer in the Gulf of Mexico than off Folly Beach and Beaufort, still things look pretty bright.

The sea of pines that drowns entire landscapes, once burned over and white with dust, represent healthy bank balances in many county seats. The grey, weathered shacks, once part of the South Carolina image, are coming down or are obscured by green oats in fields once white with cotton. Thousands of new businesses—motels under hoary oaks or at the edge of creeks named after Indian tribes, fabricating plants in the pineland, brick plants, and papermills—all represent a sizable stake in the present and firm hopes for the future, widening horizons in cities, farms, and suburbs.

Many an eloquent son or daughter of the Palmetto State has told in print how it is being a South Carolinian. Ambrose Gonzales, DuBose Heyward, W. W. Ball, Josephine Pinckney, Herbert Ravenel Sass, Ben Robertson, and scores of others have set down their respective definitions.

In their definitions is a common image of the Palmetto State as a State of fierce loyalties. This is South Carolina, they say: incredible courage and independence, struggle against fantastic odds, resistance to alien ideas. South Carolina has bred heroes, masters of statecraft, philosophers. It has channeled good blood into the life of the Republic, and spilled much of its own blood in defense of the American heritage. South Carolina has also bred demagogues, lived under scalawag rule. It has enjoyed government by aristocracy, and suffered kakistocracy, rule by the worst class. Bold men, fighters, hellraisers—they have been the chief breed in the Palmetto State.

That is how it is—being a South Carolinian. And what is it that characterizes their outlook in life? The common denominator can be seen in the State's fiery politics, for the hallmark of South Carolina politics from Calhoun to the present day is adventurous realism. The faith of their forefathers is more meaningful to them than the shibboleths of modernism, the slogans of herded people in big cities. There is a boldness about South Carolina's political thought, a willingness to travel lonely roads of history and a determination to follow their own cussed bent, not the route of expediency—all of which is peculiarly South Carolinian.

William Watts Ball once spoke eloquently of this Carolinian breed: "There are gentlemen and scholars, there are elders and deacons, there have been crooks and skinflints, roughnecks and drunkards, cardplayers and dancers, repentant sinners and brethren strong in prayer. * * * They have been good soldiers and some of them heroes: others, loafers. * * * They have never taken a beating lying down, and they get up most unexpectedly. * * * There is good blood in the worst of them and bad blood it were better not to stir. * * * They are strong and not altogether lovely. Damn them, they are my people. I am one of them, thank God."

Success Story of Keith Kahle

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. JOHNSON of Texas. Mr. President, I know of no attribute more universally admired in America than that of success. I speak of the success that stems from tenacity, an honest will-to-win; success that crowns the efforts of men willing to get out of bed earlier and work later than other men; success made possible by America's system of free enterprise.

The success story of Keith Kahle, a native Oklahoman and now a proud Texan, exemplifies the potential of growth and progress that is all America's.

Sparked by unswerving determination, Keith Kahle has nurtured an idea into one of the Nation's great feeder airlines. It is now an integral part of America's air transport system.

The story of Keith Kahle's notable achievements in his chosen profession was recently detailed in the North Star, an Oklahoma City, Okla., newspaper. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEITH KAHLE PERFORMS AN AIRLINE MIRACLE IN 10 SHORT YEARS

(By J. Landis Fleming)

If Central Airlines, conceived in Oklahoma City and born in Fort Worth, only a short decade ago, doesn't eventually become one of the largest feeder airlines in the country, it won't be the fault of Keith Kahle, founder-president, who is about as well

known in Oklahoma City aviation circles as he is in the Texas city.

As a Central fan from way back, we journeyed to Fort Worth last week (via Central, naturally) to track down this Kahle and observe firsthand the man who has guided this successful outfit from the beginning. We met him shortly after 9 a.m. in his office in Central's magnificant new operations building at fabulous Amon Carter Field.

Approximately 5 hours later, we knew the secret of Central's success. It is Keith Kahle, one of the most fascinating persons we have ever met. Back from a trip (via Central), he bounced into the office, picked up a phone to see how many passengers were flying that day, then checked on the weather. When it appeared that Central would set a passenger record, he sent a memo to each station, "Chance to set record today. Good luck. Let's don't lose 'm."

Flying down Friday morning we became, without knowing it, a part of a red letter day for Central. For on that day Central established an alltime record since the firm started operating in September 1949. Friday a total of 777 persons flew in Central airplanes. And if you don't think that is remarkable, listen to Kahle, as he puffs on his inevitable cigar and talks about the early days, not so long ago, when he had nothing but a dream.

It all began, actually, 7 years before that September of 1949, when Central flew 54 passengers. "Most of them were my relatives and close friends," Kahle chuckles. He finished high school at Norman, and in 1932 received a degree in mechanical engineering at Iowa, majoring in aeronautics and journalism. In 1932, he learned to fly at Oklahoma City's Will Rogers Field. Actually, he made three efforts to start an airline before he finally succeeded, and it was sheer determination and persistence that finally made Central a reality.

The first attempt, which involved Kahle, Jerry Sass, W. C. Lewis and three others, now deceased—F. C. Hall, Billy Hightower, and Leslie Fain, ended in failure. Then, in 1942, when Kahle was doing public relations at Tinker Field, he started work on his first exhibit for the Civil Aeronautics Board. This took 2 full years, and Friday he dragged it out to show to us. It has hundreds of pages, and weighs 28 pounds. The exhibit contains complete factual information about every city proposed for the route.

It took 2 more years to get the certificate. Oklahoma City's Guy Marchant put up the money, and Luther Bohanon came in as legal counsel. The name "Central" was coined one night in Denver's Brown Palace hotel, during a snow storm, where the three had met. Bohanon was in the service, stationed near Denver. The list of those who encouraged and helped Kahle contains many familiar names—Robert S. Kerr, then Governor; aviators Bennie Turner and Wiley Post; Moss Patterson, and Stanley Draper.

Kahle's office was in the Commerce Exchange Building, which also housed the city chamber of commerce. It was then 1946, and all appeared rosy. Then Marchant sold out, and Kahle was back where he started, except that he had a certificate to start an airline, but no money. He started a trek all over Oklahoma, looking for a million dollars to go with his certificate. Many he talked with are minor stockholders today. Others wished they had listened.

At that time every airline in the country was operating in red ink. "I was ready to fly," he recalls, "and even a kite would have looked good." No one but Kahle and Draper thought that Central would ever get off the ground. Finally Kahle ran across Fort Worth's F. Kirk Johnson, president of the Ambassador Oil Co. and today Central's board chairman. And he sold him. Financing allowed for single motor planes only, so back to Washington went Kahle, where he managed to get the regulations changed.

Senator Elmer Thomas and many others helped him there, and he got permission to use the single-motor planes and fly only in daylight hours and in good weather. The firm bought Beechcraft Bonanzas, which would carry the pilot and three passengers. So, in September 1949, 7 years after he had started making his exhibit for the CAB, the first Central plane took off from Fort Worth with Kahle and his friend Stanley Draper aboard. It was bound for Oklahoma City but ran into bad weather and got only as far as Dallas.

Today, a little more than 10 years later, Central carries 16,000 passengers a month, using the old reliable DC–3's connecting 36 cities in 6 States. Late this year the line will carry its millionth passenger, and to date Central planes have flown more than 27 million miles, with 159 million passenger miles on the record. There has never been a fatality.

Kahle recalls that Tom Wren, with CAB, told him, "Why get into the airline business? Then your troubles will just begin." "At the time," he says, "I thought, how stupid can a man be?" Many times he remembered what Wren told him. Kahle became well acquainted with the late Tom Braniff, whom he says helped him a great deal with advice. In 1950 the small Beechcraft planes became inadequate for the growing business, and the DC–3's were purchased. Today the line owns 15 of these "workhorses of the air," considered by many to be the safest craft flying.

Last August Central moved into its fine new operations building and a big modern hangar and maintenance building, at Amon Carter, built by the city of Fort Worth at a cost of $1,800,000. Central is paying this out on a long-term basis. In front of the operations building flies Old Glory and the flags of the six States where Central operates, presented by the Governors.

We toured the maintenance building, where Central has its own upholstery department, sheet metal and welding shops, printing shop, etc. Here is carried a huge inventory—thousands of spare parts, nuts, bolts, screws, and the myriad items needed to keep the planes in the air and on time. Motors and planes are completely overhauled at regular intervals. Every employee knows Keith and loves him. Espirit de corps is high, because the employees seem to sense that Kahle lives and breathes Central.

Here is the nerve center of the line, where, by radio and teletype, dispatchers keep track of operations, and know every minute where every plane is, where it is going, and its fuel needs.

Kahle's hobby is his work. In his office and outside in the reception room walls are lined with hundreds of pictures, and they tell the story of this remarkable man and his baby, "Central." He is a man who makes friends, keeps them, and appreciates them. He laughs at his speech impediment, which causes him to stutter when he gets excited. This actually adds to his charm.

He keeps in touch with all departments, and keeps one eye on the weather. His employees know exactly where they stand. He minces no words and says what he thinks. He is bursting with pride for Central, and his pride is justified.

"What is the future of Central?" we asked him. "How high is the sky?" was his quick answer. Right now Central is asking to double its mileage, and, following 2 years of hearings in Washington a decision will be made in the fall. Arrival of the jet age has proved to be a boom for feeder lines. The big airlines want to pull out of the smaller cities. For instance, American is asking to leave Joplin and Springfield, Mo., and Central is asking to pick them up.

Following the Kansas-Oklahoma decision in the fall, another series of hearings will begin, in which Central is asking for service to Austin, Houston, Santa Fe, Albuquerque, Alamagordo, El Paso, Midland, and intermediate points. If this expansion is granted Central will be ready with new equipment. Going to bat for Central at the hearings have been Senators MIKE MONRONEY and BOB KERR and friends of Central from all six States.

Central works closely with the communities it serves, and new service is the signal for a celebration. Kahle tells of the time a girl in one of his offices in a small town told a visiting Congressman, "Our airline is on time." "That made us feel proud," he says, "when she said 'our airline.'"

If Keith Kahle had found a local backer, back in the early days, chances are that Central's $250,000 a month payroll would be in Oklahoma City today, instead of Fort Worth.

Talking about the firm, Kahle emphasizes that "90 percent of Central's success is due to our board chairman, F. Kirk Johnson." We didn't get to meet the chairman, but we have a feeling that he would make the same remark about his president.

We did ask a number of employees about their president. "Keith Kahle? He's a wonderful man. He works harder than any of us. He is Central." This was the gist of the answers. He works as hard as any of the 495 employees, and he expects the same of each of them. He has been able to instill in each of them a pride in their line and its future, and that's what builds great institutions.

Keith Kahle is living proof that determination pays off. He wanted an airline, and he got an airline. And Central Airlines today personifies the man who heads the firm. His attention to detail, his boundless enthusiasm and energy, his pride in the firm, and his determination to make Central the best feeder line in the country, are evident in the immaculate appearance of the equipment, the efficiency and courtesy of the personnel, the on-time schedules, and in the steady growth and progress of Central.

The story of Keith Kahle and Central Airlines is a modern success story. But it didn't just happen. It was made to happen, because this man knew what he wanted, and he never became discouraged enough to quit. Central Airlines today is a monument to an amazing man, Keith Kahle.

Lippmann of Growthmanship

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. PROXMIRE. Mr. President, in this morning's papers Walter Lippmann discusses with his usual high skill the central issue of America's economic growth and the responsibility of Government officials, including Members of the U.S. Senate for it.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GROWTHMANSHIP

(By Walter Lippmann)

Last week at St. Louis the Vice President announced that "we are now engaged in

what will become, before this year is out, a major national debate over the subject of economic growth." Who will be debating with whom and about what? According to Mr. NIXON, while we are all in favor of growth, the critics of the administration, namely Governor Rockefeller and the leading Democrats, are not to be taken seriously. For they are playing "the most fashionable parlor game of our time—a game that might well be called 'growthmanship.'"

Just why do these playboys spend so much time and energy on a mere parlor game? It is because they realize the great importance of our slowed-down rate of growth. At our rate of growth in recent years we are unable to meet our public needs, to add to our defenses, and at the same time to keep on increasing private investment and to keep on raising the civilian standard of life. We have been producing less than we need and less than our economy is capable of producing.

From 1953, which marked the end of the Korea war boom, through 1959, the average rate of increase of output has been only 2.4 percent. The average is low because in those 7 years there were two recessions. The net result was that the average rate of increase was less than the average, 3 percent, from 1870 to 1930. Yet in these 7 years of sluggish growth, the country has had the capacity—it has had the labor, the capital equipment, and the technical know-how—to grow at the rate of at least 4 percent.

It may not seem like a big difference, to grow at an average rate of less than 3 percent or to grow at an average of 4 percent. But in an economy of $500 billion, it makes an enormous difference. Each percentage point of increase is about $5 billion, and so the difference between our recent average rate of 2.4 percent and the 4 percent which we are quite capable of is the difference between adding $12 billions a year and adding $20 billions a year to our wealth.

We have a rapidly growing population. At only $12 billions increase, we cannot spend more on defense and on our public needs—such as education and urban redevelopment and scientific research—without reducing the improvement in, perhaps without cutting back, the civilian standard of life. But a 4 percent with $20 billions, we can afford to do the things that reasonable men, including as we shall see the Vice President himself, think should be done.

That is why concern with our growth is not a parlor game.

Judging by his St. Louis speech, Mr. NIXON does not understand the problem. For after scoffing at the popular interest in growth, he concludes his own speech with a broad general endorsement of a large spending program. That, at least, is what he calls it when Governor Rockefeller and the Democrats propose the same kind of program. Under his auspices it ceases to be a spending program and it becomes "investment in the public sector."

He would invest in "our public education establishments, in our national transportation system, in the renewal of our rundown urban areas, in the development of our natural and human resources, in providing imaginative new leadership for the exciting scientific and technological revolution which will dramatically change the whole character of life in America and the world in our lifetime."

He goes on to say, as if he thought he were Nelson Rockefeller, John F. Kennedy, and Hubert Humphrey rolled into one that "timidity in these areas would be as detrimental to the national interest as timidity in private investment."

In this extraordinary passage Mr. NIXON has adopted the domestic program of his opponents. But there is still a difference between him and the Democrats and Governor Rockefeller. He does not say, and assuredly he does not know, how to pay for the expensive program which he now advocates for it cannot be paid for unless there is a substantial rise in the average rate of growth except by cutting down on private investment and on private consumption. So if Mr. NIXON wants his promises to the voters to be taken seriously, he will have to learn to play the parlor game of growthmanship.

There is one other feature of the speech which calls for a few words. In a long passage Mr. NIXON talks about the Soviet rate of growth, which he puts at 8 percent and our own which he puts at 3 percent. He then says that the opposition critics are proposing to raise the American rate to that of the Soviet. If the critics do that, they are exaggerating. A sustained average rate of 4 percent would be ample for us. Mr. NIXON says, too, that the critics think, as Mr. K. apparently believes, that the Soviet economy will by 1970 catch up with and surpass the American.

No serious American student of this subject agrees with Mr. K. What the serious critics say is that the Soviet economy is about half as big as the American and that its rate of growth has recently been at least twice that of the American. This means that the annual increment of new wealth—which is available for military and civilian purposes and for private consumption—is about as large in the Soviet Union as in the United States.

(Thus, call the U.S. economy 100 and the U.S.S.R.'s 50. If ours grows at about 3 percent, there is an average increase of 3. If theirs grows at 6 percent, there is also an increase of 3.)

Now, with equal annual increments, the Soviet Union directs a larger portion than we do to national purposes. To understand the significance of this Mr. NIXON need go no further than to the studies of the CIA and the testimony of Mr. Allen W. Dulles:

"The major thrust of Soviet economic development and its high technological skills and resources are directed toward specialized industrial, military, and national power goals. A major thrust of our economy is directed into the production of the consumer-type goods and services which add little to the sinews of our national strength. Hence, neither the size of our gross national product nor of our respective industrial production is a true yardstick of our relative national power position. The uses to which economic resources are directed largely determine the measure of national power."

Review of Farm Problems

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28, 1960

Mr. WILEY. Mr. President, as we recognize, the problems in agriculture continue to seriously challenge us. In the face of such a complex situation, I always welcome the ideas of individuals attempting to find a valid explanation for the current conditions and thus provide a framework within which to seek more realistic solutions.

Recently, I was privileged to have forwarded to me a letter by Marvin A. Schaars, chairman of the Department of Agricultural Economics at the University of Wisconsin. Over the years, this great university has been a fountainhead of original thinking and new ideas.

In reviewing the agricultural situation, Chairman Schaars points out, among other things, the difficulties of farmers making "a go of it" in a so-called free market when he "has to buy many production goods in a largely protected market; that is, protected by patents, trademarks, tariffs, fair trade laws, minimum wage laws, organized bargaining associations, subsidies of different kinds, and so forth."

As a thoughtful analysis of one aspect of the complex problems confronting us in agriculture, I ask unanimous consent to have excerpts of the letter printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

I share your view that the family operated farm has certain economies, especially if unpaid or lowly paid family labor is considered as part of this economy, and that large scale, incorporated, commercial farms faced with fixed operating costs such as those for feed and labor also have certain diseconomies. Unfortunately, however, we still have too many family operated farms that are just too small in crop acres, that don't have the 120A, 200A, or even 250A of tillable land on their farms, as you mentioned in your letter, to provide the basis for a decent family income.

There is no question that many more farmers would have been forced out of agriculture before now if it had not been for the price support program. One can hardly expect one sector of our economy, namely agriculture, to sell in a free market and make a go of it when the same sector has to buy many production goods in a largely protected market; i.e., protected by patents, trademarks, tariffs, apprentice rules, unemployment insurance, fair trade laws, minimum wage laws, organized bargaining associations, subsidies of different kinds, etc. I do not criticize American labor, American industry, or American commerce for having taken steps to protect their own interests—regrettably, farmers as a group have not been able to do this sufficiently well by themselves in their cooperative marketing, purchasing, and service organizations and have been virtually forced to seek governmental intervention, as some other sectors of our economy have done, in their behalf. The idea that we still have a freely competitive market, a so-called laissez faire economy, is, of course, a myth—for many it is neither free nor is it fully competitive. Instead, it is a combination of monopoly, considerable regulation, and some free competition in production and distribution.

Agriculture is in an especially difficult position under these circumstances. Senate Document No. 77 has this to say:

This report shows that farm prices would fall substantially and production would continue to increase by about 2 percent per year if all acreage controls (except tobacco) were removed and price supports were at levels which would permit an orderly reduction of currently excessive stocks of storable agricultural commodities over a 7- to 10-year period.

Increased marketings would result in average farm prices of about 90 cents per bushel for wheat; 80 cents a bushel for corn, with other feed grain prices in proportion; $3 per hundredweight for rice; 25 cents a pound for cotton; $15 per 100 pounds for beef cattle; $11.20 per 100 pounds for hogs; $3.60 per 100 pounds for milk at wholesale; $2.60 per 100 pounds for milk for manufacture; 29 cents a dozen for eggs; and 15 cents a pound for broilers. Production and prices are shown in tables 6 and 7 of the Department's report.

As estimated by the advisory committee realized net farm income would drop to $7

billion by 1965, about 46 percent below the 1958 level.

• • • • •

You will note that a committee from the college also favors a program of restricting expansion in production of milk as one step toward better prices for milk net at the farm.

Sincerely yours,

MARVIN A. SCHAARS,
Chairman, Department of Agricultural Economics.

"Back-Country" Tour by Publisher Reveals Lush Sylvan Beauties of Southern Region of West Virginia; Charles Hodel Reports on Interesting and Unique Trip

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. RANDOLPH. Mr. President, much has been written about the economic difficulties of coal-producing areas of West Virginia—especially southern counties. Too little has been said or placed in writing about the scenic grandeur and the natural potential of what Publisher Charles Hodel of the Beckley (W. Va.) Post Herald and Raleigh Register so vividly described as "the lush sylvan beauties of this southern region of West Virginia—on June's first Sunday."

Mr. President, it is a privilege to ask unanimous consent to have printed in the Appendix of the RECORD the story, "Southern Region Offers Superb Scenic Route," by Mr. Hodel and published in the Sunday morning, June 19, 1960, editions of the Post Herald and Raleigh Register.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTHERN REGION OFFERS SUPERB SCENIC ROUTE

(By Charles Hodel)

More definitely than ever before in my 50 years in Beckley, there were revealed to me on June's first Sunday the lush sylvan beauties of this southern region of West Virginia—at its superb best, of course, at this season of the year.

The revelation came in the company of three friends, former Judge Winton A. Riffe, of Beckley; Deputy Sheriff Wesley Thompson, of Coal City; and Emerson Mills, one time county jailor, who lives at Odd.

Judge Riffe and Deputy Thompson, (by prearrangement) picked me up at home at 9 a.m. They brought me back at 4:30 in the afternoon, having cruised all the back-country between Odd and Bramwell during the elapsed 7½ hours.

All the way, mostly over dirt roads, it was one of the most wonderful experiences I have ever had.

Leaving Beckley, we stopped at Odd (by way of Ghent) for Mr. Mills. Thence through Egeria and a view of the beautiful and fertile countryside of that area; which could be rich agriculturally, but for lack of all-year access roads.

Moving on south over twisting rural roads (not shown on maps, but all familiar to Judge Riffe acting as navigator), we entered an enchanted land of hills and dales that for pristine beauty cannot be exceeded anywhere.

For all its ruggedness, that area (and much more of this southern lobe of West Virginia) is simply incomparable in its early June lushness and splendor. And that marks it also as land of great agricultural potential.

As we rode along in the brilliant sunshine of the ideal June day, Judge Riffe and Mr. Mills named perhaps a half dozen old-timers who had in the past extracted great fortunes from large farms.

We passed through one of the flat tops from which the whole range of mountains takes its name. It is known as Bluff Mountain (3,536 feet). With very little dirt moving, a plane landing field could be developed there. But perhaps, in the interest of tourist enjoyment, no part of this unsullied region should be disturbed—except for the laying down of better access roads.

Burtons Gap and Clarks Gap were also traversed, affording prospects of steep verdure-clad slopes, frequently topped by bald peaks locally referred to as "tater hills."

Through devious windings over hill and down dale, lush and beautiful at every turn, we drove all the way to the original Flat Top and traversed it—another site for an easy airport of several crisscross runways, should it ever be deemed necessary or desirable.

Riding on, we passed through McComas, a sight of a different sort. McComas was one of the biggest and most impressive coal mining operations ever developed in West Virginia. A double tipple served mines in the mountains on both sides of a deep hollow. Now a veritable ghost town, there are still evidences that its onetime population of 3,000-plus was well housed. Some of the nice houses are still standing and occupied. Places where others stood are marked merely by tall brick chimneys.

From McComas we moved on over more back country roads in the direction of Bramwell. Fifty years ago what with the fabulous Isaac T. Mann living there in a splendid house and heading one of the Nation's three strongest banks, also located there, Bramwell was a magic village. It still boasts more beautiful homes than equal population.

From Bramwell we turned back, again over secondary or even lesser roads, but still with magnificent spectacles of nature at every turn.

Pinnacle Rock Park was encountered. And we passed through Bluewell. Thence we ascended Old Flat Top, with its altitude of 3,400 feet, up from Windmill Gap, and marking the junction of boundary lines of the three counties of Mercer, McDowell, and Wyoming. Here lies a great expanse of fertile and therefore productive soil, more or less neglected. It is from that area that the whole range of heights—including Bald Knob (3,250 feet), Huffs Knob (3,566 feet), and White Oak (3,000 feet), and Freezeland (3,360 feet) mountains, in Raleigh County—derives its name.

The purpose of the trip was to acquaint the writer with the possibility of putting down a superbly scenic two-lane hard surface on the route we took and on across the peaks of White Oak and Freezeland mountains, to Meadow Creek on New River.

Judge Riffe had often talked of taking such a trip—firm in the conviction that such a road would at once attain fame as one of the finest tourist drives in the United States. He's right.

At the end of the drive with an old friend and two new ones, I was, and am, in full concurrence.

Jobs for Older Workers

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. KEATING. Mr. President, the Department of Labor, under the vigorous and farsighted leadership of Secretary Mitchell has for a long time been endeavoring to dispel some of the doubts and misconceptions which are prevalent as to the abilities and competence of older workers. The Department has released a number of detailed and thoughtful statements indicating the high performance records of older workers who have considerable work experience and job know-how at their command.

This is indeed a worthwhile undertaking. Older workers have contributed greatly and will, I know, continue to contribute greatly to our Nation's economy. It is a tragedy when, on the basis of certain unwarranted preconceptions, workers in this group are prevented from getting the type of jobs for which they are fully qualified. I know that the Department of Labor will continue in the excellent work which is being done to disprove the frequent and harmful allegations which make it difficult for older workers to obtain top jobs.

I want to call attention today to an editorial entitled, "Oldsters' Dilemma," which recently appeared in the Rochester Democrat and Chronicle and which strongly and enthusiastically supports the efforts of the Department of Labor to dispel many of the myths and prejudices which have grown up as to the abilities of older workers. I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat and Chronicle, June 22, 1960]

OLDSTERS' DILEMMA

Secretary of Labor James P. Mitchell believes that the true older worker story—that of ability and competence—has not been adequately told. Unfortunately, the myths about the older worker obscure the real story.

Mitchell's recent statesmanlike analysis of the older worker's plight should be enlightening to Rochester with its high ratio of older residents and its industries' deep involvement and interest in the subject.

The Department of Labor took into account most of the usual objections to hiring older persons and countered with results of pertinent studies.

Is the older employee really less productive? Studies in 26 plants showed very little difference and when there was a difference it often was in the senior worker's favor.

Is the older worker less flexible? Psychologists found that in the working world a mature person learns differently from, but as well as, a younger one. In addition, from experience, he can select, value, and conserve and can grasp principles faster than the younger worker.

Won't the older worker be out of date in the missile age? This implies a misconception. Skills were found to be interrelated; a man who can do one job well easily adapts his skill to a new challenge.

Mitchell says group generalizations applied to older workers usually are hokum. The Labor Department is pushing a nationwide program to help dispel the myths and prejudices that frustrate older workers. But this is a local as well as a national problem. It is Rochester's concern because, as Mitchell puts it, "ability is ageless."

Text of President Eisenhower's Report on His Far East Trip

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. WILEY. Mr. President, in his speech last night, President Eisenhower, as illustrated on his Far Eastern trip, again demonstrated the will, courage, dedication, and devotion to duty for his country, regardless of personal danger, that has been reflected in his life in peace and war.

Even the events in Japan, disturbing as they were, had positive effects for the free world. These include:

Highlighting the Communist failure despite frantic efforts to cause rejection of the United States-Japanese Treaty;

Demonstrated that personal diplomacy far from being dead, was so successful that the Communists of Moscow and Peiping spared no expense and effort in whipping up, and paying for, the demonstrations in Japan;

Reflected the fact that Khrushchev withdrew the invitation for President Eisenhower to visit the Soviet Union provides further evidence of the success of the personal diplomacy of the President—in Asia, Europe, Middle East, South America, and the Far East; and despite the fact that the Communists stirred up trouble in Japan and other nations in the Far East, as they have done elswhere in the world—warmth and friendship literally poured out to greet President Eisenhower as the leader of our great country.

Having done an outstanding job of again serving the best interest of the people in the free world, President Eisenhower deserves the deep gratitude and respect of the American people.

Mr. President, I ask unanimous consent to have the text of the President's remarks as printed in the Washington Post and Times Herald this morning, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 28, 1960]

TEXT OF EISENHOWER'S REPORT ON HIS TRIP

My friends, I have just returned to Washington from a trip to the Far East. It has been a trip so marked by events of significance that I shall try this evening to give you a simple background of fact, against which these recent events can be viewed in perspective.

To begin, a few personal observations on the trip I have just concluded:

First, American relations with the Philippines, Taiwan, Korea and Okinawa have been strengthened.

Second, the people of these Far Eastern lands took advantage of the opportunity given by this visit to demonstrate anew their long and ardent friendship with and for the people of America. The American people are gratified, I am sure, as am I, by these heartwarming demonstrations.

Third, the ratification of the Mutual Treaty between the United States and Japan represents an important victory for the free world—a defeat for international communism.

BACKGROUND OF TRIP

And now, let's look at the background of this trip—and the others I have taken in the interest of world peace.

This trip was planned as one of a series which have, in total, taken me nearly around the world, to 27 nations of Europe, the Middle East, south Asia, north Africa, the Americas, and the Far East. Those nations I have visited during the last 10 months have populations reaching an aggregate of over a billion people.

To understand where these visits fit into the overall foreign relations of this Government we must go back to 1953, to the time when I was assessing the world situation with the late Secretary of State Dulles, preparatory to my assumption of the office of the Presidency.

At that time, we recognized that the Communists had, for some years following the conclusion of World War II, taken advantage of the chaotic aftermath of conflict—and of our own self-imposed military disarmament—to indulge in a continuous campaign of aggression and subversion in Asia and eastern Europe.

They had disrupted the lives of millions of free people, causing lowered living standards and exhausted economies. China and its half-billion people had been lost to the free world. The war in Korea, then in condition of stalemate, still dragged on.

ONE ESSENTIAL FACT

We began our studies with one essential fact before us. It had become clear, by 1953, that the accumulation of atomic weapon stockpiles, whose use could destroy civilization, made resort to force an intolerable means for settling international disputes. Only in the rule of law, which meant the attainment of an enduring peace with justice, could mankind hope for guarantee against extinction.

With these facts in mind we concluded, and have since been guided by the conviction, that there were several things which we should do simultaneously, all of them in conformity with the ideals expressed in the charter of the United Nations.

It was, and is, mandatory to present before the world, constantly and vigorously, America's great desire for peace and her readiness to sit at the conference table to discuss specific problems with anyone who would show an equal readiness to negotiate honestly and in good faith.

This we continue to do in spite of difficulties such as the regrettable action of the Soviet delegation in walking out of the 10-nation Disarmament Conference at Geneva this morning. But, from the very beginning we have made it clear that until real progress toward mutual disarmanent could be achieved, our first concern would be to keep our own defenses strong, modern, and alert.

We tried to identify all those areas in the world where serious trouble could erupt suddenly, and developed suggestions for correcting the causes of unrest and of enhancing stability in such localities. Through cooperation with our friends, we have succeeded in removing causes of friction in many of these areas.

PERSONAL CONTACT SOUGHT

In support of these purposes, we have sought, from the beginning, frequent personal contact with responsible governmental officials of friendly nations. Indeed, we have felt it wise, also, to seek to improve communications between ourselves and the Soviet Government. Akin to this effort was one which has come to be called the people-to-people program—a completely new type of venture in international relations which has been amazingly successful.

Along with these objectives, we have constantly striven to devise better methods of cooperation with our friends, working out with them programs by which together we could improve our common security and raise living standards. Our mutual security program has been and is a vital means of making such cooperation effective.

To carry out the purpose of proclaiming and demonstrating to the world America's peaceful intentions, we first made a number of policy statements and a series of concrete proposals that might lead to fruitful discussions with the Soviets.

As early as April of 1953, I suggested disarmament talks with the Soviets and pledged that I would urge the United States to apply a substantial portion of any savings realized through mutually acceptable disarmament to the improvement of living standards in the less developed nations.

Later that year I proposed, before the United Nations General Assembly, that we devote all discoveries in atomic science to peaceful uses. Nineteen months later at Geneva I suggested the open-skies method of mutual inspection.

INVITATIONS ISSUED

In the meantime, the Secretary of State set out tirelessly to make calls on friendly governments and to strengthen collective security. In return, we issued invitations to heads of state to visit America and her people. Other good-will visits were concurrently made by the Vice President and other personal representatives.

Many heads of government or state responded promptly to our invitations to visit this country. In the past 7½ years, more than 70 heads of state and Prime Ministers have come to the United States (some of them several times) in visits extending from a few days to some weeks. In this respect the period has been without precedent.

Other visitors are to come in the near future. Indeed, tomorrow we shall be honored by the arrival in Washington on such a visit of the King and Queen of Thailand, and later in the year the Crown Prince and Princess of Japan, and the King and Queen of Denmark.

I early began to receive urgent invitation to make return visits to the countries whose heads had paid us the courtesy of coming to see America and our way of life.

Many months ago we concluded that I should personally accept some of these invitations, as opportunity should present itself. Secretary Herter, first as Under Secretary of State and later as Secretary of State, enthusiastically concurred. Oversea visits by me, all of us felt, would be a strong support of other successful programs.

VALUE OBVIOUS, HE SAYS

The great value resulting from these journeys to 27 nations has been obvious here and abroad. Throughout the world there has been opportunity to emphasize and reemphasize America's devotion to peace with justice; her determination to sustain freedom and to strengthen free-world security through our cooperative programs; her readiness to sacrifice in helping to build the kind of world we want.

These visits involved, of course, valuable conversations between heads of state and government, as well as the promotion of understanding among peoples.

However, except for so-called summit and the NATO heads-of-government meeting, none of my visits has been planned or carried out solely as a diplomatic mission seeking specific agreements, even though discussions have invariably involved important issues.

Incidentally, I believe that heads of state and government can, occasionally, and preferably on an informal basis, profitably meet for conversations on broad problems and principles. They can, of course, also convene to give solemn approval to agreements previously prepared by normal diplomatic methods.

But heads-of-government meetings are not effective mechanisms for developing detailed provisions of international compacts, and have never been so considered by this Government.

GOOD WILL ASPECTS

On the other hand, the good will aspects of a visit by a head of government can frequently bring about favorable results far transcending those of normal diplomatic conferences. They have resulted in the creation of a more friendly atmosphere and mutual confidence between peoples. They have proved effective in bringing closer together nations that respect human dignity and are dedicated to freedom.

Indeed, it seems apparent that the Communists, some time ago, reached the conclusion that these visits were of such positive value to the free world as to obstruct Communist imperialism. Thus they have sought every possible method to stop them. Through their propaganda they bitterly opposed my entry into the Philippines, in Taiwan, in Okinawa, in Korea, and, of course, Japan.

In Paris last month they advanced false and elaborate excuses for canceling my invitation to visit the Soviet Union, when all that was necessary to say was that they found it inconvenient to receive me.

With their associates in Peiping, they went to great lengths and expense to create disorders in Tokyo that compelled the Japanese Government to decide, under conditions then existing, that it should revoke its long-standing invitation for me to visit that sister democracy.

These disorders were not occasioned by America. We in the United States must not fall into the error of blaming ourselves for what the Communists do; after all, Communists will act like Communists.

CLEAR PROOF OF VALUE

One clear proof of the value, to us, of these visits is the intensity of the opposition the Communists have developed against them.

Respecting Japan, in spite of the outrageous conduct of a violent and disorderly minority, I have been assured that the people there were, in overwhelming majority, anxious to welcome me as a representative of a nation with which they wished to cooperate and to have friendly relations.

Of course, the basic objective of the Communist-inspired disorders in Tokyo was to bring about the rejection by the Japanese Government of the treaty. That the Communists were defeated in their frantic efforts to prevent ratification of that treaty speaks well for the future of Japanese-American relations. Obviously that signal defeat for international communism far outweighs, in importance, the blocking of my scheduled visit.

Another purpose of the Communist-inspired riots in Tokyo was to weaken confidence between our people and to persuade the United States to change its basic policies toward Japan. It would be a tremendous victory for international communism if we were to permit the unhappy events of the past several weeks in Japan to disrupt our economic relationships with that nation; or to weaken the feeling of friendship and understanding which unites the vast majority of the Japanese and American people.

Japan has once again become a great nation. Over the postwar years she has painstakingly created a new image of herself, the image of a responsible, peaceful, and cooperative free-world nation, mindful of her obligations and of the rights of others. Japan has made a fine record in the United Nations as well as elsewhere on the international stage.

SEEK TO BUILD LINKS

Since the loss of mainland China to the Communists in 1949, the need to link the other nations of the Far East with the United States more strongly, in their mutual interests, should be apparent to all. We seek, and continue to build and strengthen these links, with Japan as well as with the other countries, by actions of many kinds—of which my recent trip was but a single example. In the present circumstances, a Far Eastern policy of "waiting for the dust to settle" will not meet the free world's need.

The other free countries of the Far East, small in relation to the massive area and immense population of Red China, can survive in freedom and flourish only in cooperative association with the United States and a free Japan.

Through our aid programs, through our bilateral and collective defensive arrangements such as SEATO, through our very presence in the area, we help them greatly. And a free and friendly Japan can reinforce this American effort, as indeed she is already doing through aid programs of her own.

Because of the Prime Minister's necessary withdrawal of his urgent invitation of last winter for me to visit Japan on June 19, I was of course unable to meet with the Japanese Government and people or to bring to them assurances of American good will.

This was disappointing, but we should not forget the favorable effects of visits elsewhere in the Far East, as well as the final approval of the Japanese-American Treaty by both Governments. Moreover, the general improvement that has come about through exchanges of visits by friendly heads of government is recognized and appreciated throughout the free world.

I wish that every one of you could have accompanied me to Manila, Taipei, and Korea and thus witnessed for yourselves the outpouring of friendship, gratitude, and respect for America. The throngs of people there, like the many millions who, during earlier journeys, lined the streets of great cities in the Mideast, Europe, north Africa, South America—as well as in Canada and Mexico—had one overwhelming message for our Nation.

MESSAGE TO NATION

That message, expressed in glowing faces, friendly shouts, songs, gaily painted placards, and homemade signs, was that they wanted to be partners with the United States. They share our ideals of dignity of man and the equality of all before the law—they believe in their God; they believe that the American people are their friends. They believe that Americans are sincerely devoted to their progress which means so much to them, and which is so evident on every side.

These demonstrations have been inspiring to all who have not closed their eyes and minds to their meaning. Moreover, the leaders of the free peoples I have met here or abroad have assured me, privately and publicly, that they approve of America's purposes and policies, even though details of implementation are frequently subjects for discussion or negotiation.

They have expressed the hope that visits to their countries by the senior officials of our Government might be of greater frequency. They have shown me evidence of their marked material progress through American cooperation. They have testified to the reborn hope and restored confidence of their peoples.

Let me stress, however, that all the profit gained by past and any possible future trips will be quickly dissipated should we Americans abandon our present course in foreign relations or slacken our efforts in cooperative programs with our friends.

This is what the Communists want. It is imperative that we act with mature judgment.

We must recognize their tactics as a deliberate attempt to split the free world, causing friction between allies and friends. We must not fall into this trap; all of us must remain firm and steadfast in our united dedication to freedom, and, to peace with justice.

Above all, we must bear in mind that successful implementation of any policy against Communist imperialism requires that we never be bluffed, cajoled, blinded or frightened. We cannot win out against the Communist purpose to dominate the world by being timid, passive, or apologetic when we are acting in our own and the free world's interests.

We must accept the risks of bold action with coolness and courage. We must always be strong, but we must never forget that peace can never be won by arms alone; we will be firm but never truculent; we will be fair but never fearful; and will always extend friendship wherever friendship is offered honestly to us.

FINAL, PERSONAL WORD

Now a final, personal word—

So far as any future visits of my own are involved, I have no plans, no other particular trip in mind. Considering the shortness of the time before next January, and the unavoidable preoccupations of the few months remaining, it would be difficult to accept any invitation for me, again, to go abroad.

But so long as the threat of Communist domination may hang over the free world, I believe that any future President will conclude that reciprocal visits by heads of friendly governments have great value in promoting free-world solidarity.

And this I assure you. If any unforeseen situation or circumstances arising in the near future should convince me that another journey of mine would still further strengthen the bonds of friendship between us and others, I would not hesitate a second in deciding to make still an additional effort of this kind.

No consideration of personal fatigue or inconvenience, no threat or argument would deter me from once again setting out on a course that has meant much for our country, for her friends, and for the cause of freedom—and peace with justice in the world.

Thank you and—good night.

The Lebanon Enterprise Honored by the the Kentucky Press Association

EXTENSION OF REMARKS

OF

HON. FRANK CHELF

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. CHELF. Mr. Speaker, for the second time in 3 years, the Lebanon Enterprise, in my hometown of Leba-

non, Ky., has been named by the Kentucky Press Association as the best of the State's large weekly newspapers. The award, a repetition of the honor which came to this paper in 1958, was announced at the Kentucky Press Association's annual midsummer meeting at Cumberland Falls State Park in Kentucky and a plaque which goes to each year's winner was accepted for the Lebanon Enterprise by George Trotter, coeditor with Paul Crowdus of the paper.

This year's award marked the third time the Enterprise has been judged Kentucky's best. The first such award was in 1925, when the paper was owned and edited by the late Oliver Kelly, Sr. The Enterprise finished second in 1956, won in 1958, and repeated this year.

I take great pride in commending this newspaper for this outstanding and unique record. Since it is my hometown newspaper, I know its editors, publishers, owners, employees, news policies, and editions extraordinarily well. These well-deserved honors provide eloquent testimony of the magnificent contribution it is making not only to our county seat town of Lebanon and our county of Marion, but also to our State of Kentucky and the Nation. The unusual recognition of being named the best large weekly newspaper in the State, for the third time, is further proof of the uniformly high esteem in which it is held by its local readers and the general public on a more far-reaching scale.

Each editor and each person connected with this splendid organization deserves and has earned rich praise for an important part in the achievements of this courageous, progressive, and remarkably fine newspaper. Mr. Speaker, I am proud of the Lebanon Enterprise.

Equalization of Pay of Retired Military Personnel

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. GOLDWATER. Mr. President, recently Congress passed legislation to equalize the retirement pay of its own Members. I find no particular fault with that; but I do find fault when we do not take equal interest in equalizing the pay of retired military personnel.

Almost 3 years ago I attempted to amend the bill based on the Cordiner report, so as to include retired officers' pay; but I was talked out of that, here on the floor, by the promise that hearings would be held on a similar bill which would be introduced in this Congress.

Mr. President, both the junior Senator from Washington [Mr. JACKSON] and I have introduced such measures to make adjustments in the pay of our retired military personnel; but I am sorry to have to state that up to the closing days of this session, no consideration has been given to those measures.

Mr. President, in connection with this subject, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "By Way of Contrast," which was published on June 27, in the Washington Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BY WAY OF CONTRAST

The alacrity with which Congress has passed legislation to equalize retirement pay of its own members is in sharp contrast with the foot-dragging which has marked its consideration of a bill similarly to equalize the pay of retired military personnel. The Associated Press reports that the congressional pension measure "swished through the House under circumstances indicating that Members didn't desire a detailed explanation." The bill previously had been approved by the Senate in a slightly different form. It now awaits the President's signature.

The legislation, in addition to sweetening certain pension benefits, would eliminate an inequity which has prevented Members who left Congress before October 1956, from taking a deferred annuity at age of 60 instead of the present 62 after 10 years of congressional service. The deferred annuity plan heretofore has been available only to Members who retired from the legislative body after the 1956 date.

We are all for such equalization as well as for adequate retirement benefits in general for Senators and Representatives—as we have stated on many occasions in the past. We are also strongly in favor of equal treatment for retired officers and enlisted men of the armed services. Under an ill-advised economy provision of the 1958 Military Pay Act, however, all servicemen—most of them combat veterans—who retired before the act became effective are receiving substantially less retirement pay than those who have retired since that date. The discrimination here is just as unfair as the discrimination which has existed with respect to congressional veterans who left before October 1, 1956.

Yet, although the House, to its credit, has approved the equalization of military retirement pay, the Senate so far has failed to act. In fact, the bill still is stalled before a Senate Armed Services Subcommittee. Is equity for retired public servants to be limited to those have served in the Congress?

Friendship of Chile

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. JACKSON. Mr. Speaker, several months ago a series of tragic natural disasters brought death to a large number of our neighbors in the Republic of Chile. The United States moved promptly to bring to the assistance of survivors food, medicine, and whatever else was required to assist the Government of Chile during and immediately following the earthquakes and tidal waves. It was another example of putting the theory of the good neighbor into practice, and the actions of North American personnel in Chile were such as to win for them the gratitude of all who witnessed our people in action. Furthermore, the bonds of friendship which have long existed between the people of the United States and Chile were strengthened beyond measure.

Under leave to extend my remarks in the Appendix of the RECORD, I should like to quote briefly from a broadcast on May 29, 1960, by Radio Emisoras Nuevo Mundo, Santiago, Chile, in Spanish to Chilean audiences:

The gratitude of the Chilean people manifests itself in eloquent spontaneous affection for the crews of the U.S. planes.

Soldiers, nurses, aviators, and others who tour the city have witnessed innumerable demonstrations of affection and gratitude. They are usually surrounded by Chileans you want to talk to them. Last night, as the Americans did the rounds of the restaurants and public places in the capital, they were given ovations. A few entered a restaurant, and those present immediately stood up and greeted the Americans with a standing ovation. At another restaurant on the same street, the public, by way of expressing their gratitude, burst into spontaneous singing of the national anthem.

The Yankee boys, among whom were several colored officers and soldiers, entered night clubs and were immediately bombarded with offers of treats. Some accepted courteously, others would decline with a very moving explanation: "Excuse us, please, but we must get up early tomorrow to work." Several persons, upon hearing their explanations, were so moved that they shouted loudly: "Viva Uncle Sam." "Viva the United States." For a fact, they were all up bright and early, working actively at the loftiest mission of peace.

Mr. Speaker, Chilean Minister of Interior Sotero del Río reported to the Chilean Chamber of Deputies on June 3, 1960, on the earthquakes and the help given by foreign countries. The aid given by the United States was singled out as a gigantic effort of cooperation.

On June 8, 1960, the U.S. Ambassador to Chile received the following message from the Chilean Chamber of Deputies—official text should be obtained from the Department of State:

The Chamber of Deputies, in a session occurring on June 1, officially recognized the fraternal and generous cooperation that your Government has so kindly lent to Chile in connection with the painful catastrophe which has occurred in the country. The Chamber resolved on this same occasion to transmit to your Government by means of Your Excellency the statement of unanimous recognition and gratitude for the spontaneous, selfless and opportune collaboration which has been appreciated by the Chilean people in all its noble significance in moments of such grave affliction facing this nation.

The High Cost of Federal School Aid

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. SCHERER. Mr. Speaker, the Western Hills Press from the Cincinnati area is one of the outstanding community newspapers in the country. Its fine and capable editor, Albert H.

Huneke, has written an excellent and most thought-provoking article on the subject of Federal aid to education in the June 23 issue.

In view of the fact that this is one of the so-called must pieces of legislation before the Congress, it is my feeling that every Member of both the House and Senate should have the opportunity to read what the Western Hills Press has to say on the subject.

The article follows:

THE HIGH COST OF FEDERAL SCHOOL AID

Advocates of Federal aid to education have a bill pending in Congress proposing appropriation of $975 million at the rate of $325 million for the next 3 years to finance new school building. This is based on the House Education and Labor Committee report indicating an annual requirement of 52,700 more classrooms for the period from 1960 through 1964.

Federal aid is justified in any area only on the premise that an essential need cannot be supplied by the local community. What is the record in this regard insofar as school building is concerned? We are told that in the past decade—without any Federal aid—the classroom additions have averaged 59,400 per year and that, since 1955, this average has been 66,900 classrooms per year.

Obviously the overall aggregate need has been met in recent years. But has the need been met in the States where it is most acute? This is a moot question which would be difficult to answer. However, it would appear that if the distribution has not been equitable, then the pending legislation is not the answer, for, under the proposed bill, 42 percent of the Federal tax money appropriated would go to only seven States. In addition to Ohio, these favored seven include New York, California, Pennsylvania, Texas, Illinois, and Michigan. Hardly the neediest States, we would say.

But to bring the problem closer to home. Western Hills school districts have not escaped the demand for additional school facilities nor have the taxpayers of these communities shirked their obligation in meeting the demand. Colerain Township may be cited as a typical example. The people of that community have generously approved eight separate bond issues aggregating over $4 million for schoolbuilding, not to mention numerous tax levies for school operating purposes, since 1947.

Nor has this been an oppressive burden against which local taxpayers have rebelled. With few exceptions, they have approved each new request as it has been presented by their respective boards of education. Moreover, the soundness of the askings have been vindicated when the resulting tax rate has been substantially less than the estimated amount, indicative of conservative, knowledgable financing based on a first-hand understanding of local needs and ability to pay. Indeed, because of increasing tax duplicate, in some cases there has been no net increase or the new tax rate has actually been less than that of previous years.

Thus on November 21, 1958, the Press headlined "Tax Rates Down in 8 of 11 Districts." The following story stated, "The tax rates announced Wednesday by the Hamilton County budget commission prove the exception to the rule that 'taxes never come down.' In 8 of 11 unincorporated political subdivisions in the 7 western Hamilton-County townships, the rates on which taxes will be collected in 1959 have declined."

Or again, as recently as December 10, 1959, the Press reported, "The largest single jump in tax duplicate in any western county political subdivision is that in the Oak Hills school district, where the duplicate is now estimated at $81,700,000. This represents an increase of almost $6 million over the $75,697,850 current valuation and is a principal factor in reducing the Oak Hills district tax rate by 46 cents from $18.44 this year to $17.98 next year (1960)."

Thus, it may be seen, that in many cases the circumstances creating the school problem also provide their own built-in answer—given competent administration and understanding support at the grassroots level. Yes, we know there are exceptions, but these too can be met through state-aid in those States where the people are determined not to surrender another responsibility and privilege of local self-government to centralized Federal bureaucracy.

Under the Federal aid system, the people will not only lose direct control of limiting the cost of financing their schools, but may ultimately lose the right to administer them through their locally elected boards of education. The people have abdicated many of their rights and responsibilities to the feudal benevolence of a faceless Washington. When they abdicate the right and responsibility of educating their children, they will have traveled beyond the point of return on the road to Federal bureaucratic dictatorship.

Foreign Policy and National Defense

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 28, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Worse Than No Policy at All." The editorial was published in the Phoenix (Ariz.) Gazette of June 23, and deals with the propriety of the U–2 flights and the necessity for them.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORSE THAN NO POLICY AT ALL

While this Nation's espionage activities are primarily a matter of defense policy, they have recently been linked closely with foreign policy as well. In fact, the most spectacular and profitable espionage activity of all, the U–2 spy flights over the U.S.S.R., terminated as a result of pressures during the summit blowup. These pressures came not only from Soviet Premier Nikita Khrushchev, they came also from our own allies who were under threat of Soviet retaliation if bases in their countries were used again for the U–2.

It is the termination of the U–2 flights, and their very important defense significance, that must be reconsidered now as a major tactical detail in the long overdue reappraisal of foreign policy. If U.S. foreign policy continues so sensitive to fear that we cannot employ a superior means of detecting a sneak attack, then our defense itself is potentially crippled.

Ever since the first Soviet sputnik went aloft in 1957, this Nation has struggled with doubts about its future defense position. These doubts led first to a national psychology bordering on defeatism, and then to waves of defense spending mania in Congress. Fortunately the budget-boosting attempts were held in check. But there was little checkrein on political criticism of the administration's defense policy. The charge of "lagging defense" was revived with every fresh international crisis.

It took the U–2 spy flight incident of May 1 to reveal that the Soviet Union itself has a serious weakness in defense. Diplomatically and politically, a great deal was made of the incident. Not enough was made of the tremendous contribution to U.S. security from nearly 4 years of such flights prior to the May 1 failure.

One of the most complete reconnaissance files any nation ever had on the war potential of an adversary was amassed during those years. All that has been stopped now, and resumption by the Midas and Samos space spy vehicles is perhaps 2 years away.

The U–2 flights kept us safeguarded against possible Soviet preparations for attack. They were an invaluable forewarning system in our concept of deterrent defense. With U–2's reconnaissance information, our Strategic Air Command bombers ran much less risk of being caught on the ground. Since the U–2 flights were stopped, SAC has had to go on partial airborne alert.

Eventually Midas and Samos will provide the forewarning even more effectively. But they are not yet dependable. Still, the launching of a test Midas last month had significance even beyond its military promise. It provided proof of the defense development that had been going on during much of the time that the critics had been agitating for a revision of the defense program.

Defense gains like the U.S. breakthrough in reconnaissance are useless if foreign policy puts a ban on them. If the U–2 was important during the past 4 years, as it certainly was, it is even more important now. Yet, through what must be recognized as our own and our allies' default, Khrushchev has succeeded in eliminating one of our best advantages.

If our allies cannot face the risks that Western security presents, then the United States must find other ways, such as U–2 takeoffs from carriers, to resume reconnaissance that may mean vital protection. A foreign policy that puts chains on defense is worse than none at all.

Spend Where Needed

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mrs. ST. GEORGE. Mr. Speaker, we will soon be hearing once again about the Federal employees' pay raise recently passed by the House of Representatives.

The following letter from a civil service employee is of great interest at this time. The letter appeared in this morning's Washington Post and points up a well-known fact, that we will soon have to face in this country, namely, that we cannot go on forever having guns and butter.

The letter follows:

SPEND WHERE NEEDED

I write this letter as a Government civil servant. My chief source of income is my Federal salary.

Congress has recently voted at 7½-percent pay increase for classified civil servants. This increase was approved at a time when the Government is being forced to make such decisions as: (1) Should funds be devoted to better missiles for space exploration, or to oceanographic research? (2) Should the Air Force spend funds for supersonic bombers, or

hardened missile sites? (3) Should the Navy spend money for missile submarines, or hunter-killer submarines?

Yet all these things are needed if we are to regain our military supremacy, the loss of which we have just begun to feel in recent weeks. Nonetheless, Congress has decided that the civil service is worth 7½ percent more than it was 2 years ago, when a 10-percent increase was granted. Since the cost of living has not risen that much, the increase cannot be justified on grounds of inflation.

I do not understand wherein the civil service has become so valuable to the Nation, but in this period when money is ammunition and survival, I suggest that as a matter of patriotism (if I may use this chauvinistic and obsolescent term), we forego the increase at this time, and spend the money where it is needed.

FREDERICK W. NAGLE.

PRINCESS ANNE, VA.

"Tiger" Teague: Hard-Hitting, Honest, and Able Chairman of the Veterans' Affairs Committee

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, OLIN E. TEAGUE, chairman of the Committee on Veterans' Affairs, is a hard-hitting, honest, and able leader. He is liked and respected by his colleagues. They heed his words when he speaks on the floor of the House or when he writes them letters like the one I am including hereafter.

A veteran who was wounded in action during World War II, "TIGER" TEAGUE is a sympathetic and conscientious Member of Congress. He is also a responsible and informed legislator. He knows that this House is not going to give a hundred-dollar-a-month across-the-board pension to all veterans of World War I, regardless of need, at a cost of almost $2 billion.

His letter of June 20 to me and other Members of the House speaks for itself. I commend the letter and the enclosure to the attention of all persons who are willing to consider the facts about the proposal embodied in H.R. 9575:

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D.C., June 20, 1960.

DEAR COLLEAGUE: I am receiving inquiries concerning the discharge petition on the bill H.R. 9575.

This is the measure which seeks to provide a $100 a month pension to all veterans of World War I, regardless of need, who served for 90 days or more. The first year's cost is estimated at $1,040,384,000. An identical bill to H.R. 9575 and more than 100 other pension proposals were before the Committee on Veterans' Affairs when it reported the bill last year which became Public Law 86-211. This law will become effective July 1, 1960. It will give increases to more than 1 million veterans, widows, and children. The Veterans' Administration is placing the new program in operation now. A change as proposed by H.R. 9575 would completely disrupt the pension program. Public Law 86-211 passed the House with only 34 votes against it. There were six votes against it in the Senate and the bill was supported by the American Legion, VFW, DAV, and AMVETS.

I am enclosing a copy of an editorial which appeared recently in the National News, the official paper of the Veterans of World War I of the U.S.A., Inc. Please note that the editorial expresses the opinion that an unlimited pension, with no needs provision, such as is proposed by H.R. 9575, is not justified. (I do not have additional copies of the editorial.) Of course, there is no doubt there are some who support an unlimited pension, regardless of need, but this is not the viewpoint expressed in the editorial and such a program has not been supported by the American Legion, VFW, DAV, or AMVETS.

Sincerely yours,

OLIN E. TEAGUE,
Chairman.

[From National News, April 1960]

AN UNTENABLE POSITION

The editor of the National News in this issue of the paper proposes to set forth in type his views on the pension program of the veterans of World War I. It should be carefully noted that the sentiments expressed represent only his thinking and he does not in any manner want to infer or imply that his views are shared by any of the national officers of the organization.

The Louisville mandate on pension legislation is unrealistic, unworkable and threatens the prestige of the veterans of World War I which has taken years to build.

The mandate completely ignores the advice of experienced congressional leaders who have the best interests of the veterans at heart. It proposes a pension of $100 per month for all veterans of World War I regardless of length of service or present income.

Every pension law on the statute books was initiated with small monthly awards and then the amounts were increased over the years. The first Civil War pension law provided for payments of $6 to $12 per month if the veteran served 90 days or more. These rates were gradually increased so that by 1947, the amount payable was $90 per month.

The first provision of pensions for those men who served in the war with Spain was adopted June 5, 1920, and the amounts were set at $12 to $20 per month depending upon disability. Increases over the years brought the amount payable to the present rate of $101.59.

This was the formula recommended to the delegates to the Louisville convention but unfortunately they were confused and ill-informed when the resolution was brought up for a vote and the present mandate was adopted to the extreme regret of many delegates who had serious doubts as to the logic of endeavoring to push such a proposal through the Congress.

Now it is apparent that their misgivings were well founded. It is rare indeed that a Member of Congress can be found who will make a forthright statement that he will vote and work for a pension of $100 per month for every veteran of World War I, regardless of length of service or income. Chairman TEAGUE at the hearings on March 15, warned that a measure of this description faced a long and rocky road in the Congress. Other Congressmen have not hesitated to express their opposition to this type of legislation. They resent being asked to sponsor such legislation and have been honest and frank in advising the leaders of the veterans of World War I that a measure of this description can be enacted into law.

Your national commander faces a momentous decision. Should he adhere strictly to the Louisville mandate which he has been informed has absolutely no change of passage or should he endeavor to secure some benefits for our aging buddies and later seek liberalizing amendments that would ultimately bring us in sight of our goal. The writer prefers the latter course.

There Were No Ghostwriters at the Alamo

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

THERE WERE NO GHOSTWRITERS AT THE ALAMO

(By Russell Birdwell)

Very soon the two great political parties of the United States will nominate their candidates for President. One of these men, by a vote of the people, will be assigned the awesome duties of the White House: civilian leader of the Nation, Commander in Chief of all its Armed Forces and keeper and director of its nuclear weaponry.

Who are these men who seek the most formidable job, the most responsible job on earth? But more important: who is the one man who, after the political merry-go-round has stopped, will hold in his hand the gold ring of victory?

Do we know him? Have we ever known him? Will we ever know him?

Who has written his speeches? Who—or what board of ghostwriting strategists—has fashioned the phrases, molded the thoughts, designed the delivery, authored the image, staged the presentation, put the political show on the road to win the larger number of votes?

Who is the actor reading the script?

Or, in this moment when eternity could be closer than ever before, is there a statesman who for the sake of a vote is not all things to all men; a man who will put America back on the high road of security and accomplishment, without fear or favor or compromise; a man who wants to do the job that must be done and to hell with friend or foe who would have it otherwise; a man who knows that the American softness must be hardened; a man who knows that when our house is in order no man will ever dare to trespass.

In short, a man.

There is a growing anxiety among the people to have straight answers. They don't want the handiwork of the opinion molder. They have had a bellyful of payola, influence peddling, quiz show rigging, the ghostwriting of political speeches—symptoms of a pallid public morality.

They are finished with the great deceptions.

They wait impatiently, as the free world becomes smaller and smaller, for a return to the honest, courageous, clear-cut standards of frontier days—the days of America's birth and greatness; the days when the noblest utterances of man came unrehearsed.

There were no ghostwriters at the Alamo. Only men. Among them Col. David Crockett, who was 50 years old; Col. James Bowie, 40; Col. William Barret Travis, 26.

These men left a legacy for all who prize freedom above tyranny, individualism above conformity. They had gone to Texas to carve out new lives. Their ranks included men from 18 States and 6 foreign nations.

Their foe was a Mexican dictator, Gen. Santa Anna, at the head of an army of 7,000 well-equipped, well-trained troops, who in 1836 sought to crush the growing State of that faraway land now known as Texas. Santa Anna crossed the Rio Grande River, invaded San Antonio. His first target was the Alamo, a mission built in 1718 by Franciscan Friars and manned in the year 1836 by 185 volunteer citizen-soldiers. Presumably an easy target: 185 against 7,000.

The dictator did not realize that his enemy were not a common breed. He faced hard-living, hard-loving, hard-fighting believers in freedom.

Let us look now at the words of a few of them. Their own words.

Defeated for his fourth term in the U.S. Congress, Crockett announced: "You all can go to hell—I'm going to Texas."

And then he rode 1,500 miles on horseback to Texas, not yet a part of the United States, and in his diary he wrote:

"I promised to give the Texans a helping hand in their high road to freedom. If there is anything in the world worth living for it is freedom. Early this morning the enemy came in sight, marching in regular order and displaying strength to the greatest advantage in order to strike us with terror. That was no go. They'll find they have to do with men who will never lay down their arms as long as they can stand on their legs."

In 1834, 2 years before Colonel Crockett rode into the Alamo with his followers "to hit a lick against what's wrong and to say a word for what's right," he toured the New England States as a U.S. Congressman and while visiting in Boston he wrote:

"We then went up to the old battleground on Bunker's Hill, where they were erecting a monument to those who fell in that day-break battle of our rising glory. I felt as if I wanted to call them up, and ask them to tell me how to help protect the liberty they bought for us with their blood; but as I could not do so, I resolved on that holy ground, as I had done elsewhere, to go for my country, always and everywhere."

After entering the Alamo Colonel Crockett wrote to his children in Tennessee: "I hope you will do the best you can and I will do the same. Do not be uneasy about me—I am with my friends * * *. Your affectionate father, Farewell, David Crockett."

As the Santa Anna hordes pounded against the mission that had become a fortress, Colonel Crockett wrote in his diary: "We are all in high spirits though rather short of provisions for men who have appetites that could digest anything—but oppression."

Land was cheap in Texas in those days—it was selling for 12½ cents an acre. But the price of freedom and liberty came high. Before the Alamo fell Crockett wrote: "We will go ahead and sell our lives at a high price."

Col. James Bowie, in words remembered by Mrs. Susanna Dickinson (she and her 3-year-old daughter with a little Negro boy were the only survivors of the glorious disaster), said: "I prefer to die in its ditches rather than give up an inch of Texas soil to a dictator."

When word of Jim Bowie's death reached his mother she said: "So Jim is dead. I bet they found no bullets in his back."

Col. William Barret Travis, the young South Carolina lawyer entrusted with command of the Alamo by Gen. Sam Houston, in a letter to Texas' Gov. Henry Smith:

"We are ill prepared for attack, yet we are determined to sustain it as long as there is a man left. Death is preferable to disgrace. Should Bexar (San Antonio) fall, your friend will be buried beneath its ruins. I shall not surrender or retreat."

The situation hopeless, Colonel Travis gave his men a way out just before the final onslaught: "Any of you who wish may leave with honor. Here on these ramparts you have bought a priceless 10 days of time for General Houston. You are brave and noble soldiers. God bless you."

No man gave up his post. All gave their lives, after killing 1,700 and holding the enemy for 13 days. The precious time bought enabled General Houston 46 days later at San Jacinto to win Texas' liberation.

There were no ghostwriters at the Alamo. Only men.

Depletion Allowance Senate Amendment to Tax Rate Extension Act of 1960

SPEECH
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. MOELLER. Mr. Speaker, I wish to go on record as opposed to the minerals depletion allowance Senate amendment to the Tax Rate Extension Act of 1960. This amendment will adversely affect the clay products industry in my district, as well as other areas in the great State of Ohio, which is the largest clay products producing State in the United States. This industry is already operating at a reduced rate and will be curtailed even more as the result of this amendment. Most of the clay products producers in Ohio are small businessmen—the largest clay pipe producer in Ohio has sales of only $12 million per year.

As we all know, our Ways and Means Committee held extended hearings on this proposal and it was concluded that no legislation involving depletion matters would be considered this session of the Congress. Every Member of this House knows that under our Constitution, tax legislation is initiated in the House of Representatives after appropriate hearings and study by the Ways and Means Committee. For the Senate to inaugurate tax legislation is an improper seizure of the prerogative of the House of Representatives and unconstitutional.

Reports of the amount of tax loss to the Treasury, if this amendment were not enacted, are grossly exaggerated. To begin with, a clay producer is limited in the amount of depletion he can take under the law. Also no depletion allowance can be taken unless the clay producer shows a profit and then it is only 50 percent of the net income. If the Congress feels that the depletion rate has been excessive, the House Ways and Means Committee had ample opportunity to reduce it during the hearings held prior to this session of the Congress. To undertake a remedy by this means is without due process and a complete disregard of our legislative process.

I realize we are in the last days of this Congress and the adjournment rush is on. However, this is no license to vote on legislation without proper deliberation. The damage to this industry has been done and our only recourse is to consider remedial legislation during the 87th Congress. I plan to join with my colleague, FRANK T. BOW, in sponsoring a bill to remedy the injustice that has been done.

Onion Trading

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, on August 28, 1958, a bill to abolish futures trading in onions was signed by President Eisenhower.

In November 1959, after court tests of the measure, futures trading in onions ceased on the Chicago Mercantile Exchange and on all other commodity exchanges.

The passage of the onion bill marked the first time in history that the Congress had enacted a measure to prohibit futures trading on an organized commodity exchange, although between 1880 and 1930 more than 200 bills were introduced.

When this matter was considered in the House on March 13, 1958, I stated that this measure helps no one, neither the farmer nor the consumer, and that it would be mistake to pass it.

Many of the Members of Congress will remember the campaign against futures trading in onions. It was well organized and, at times, was so intensive in character that it became hysterical.

The principal complaint against futures trading in onions was that this trading depressed prices. It did little good to argue that onion prices always had been highly volatile in nature.

Nor did it curb the opponents of futures trading to point out that the per capita consumption of onions has not increased in the past 20 to 30 years. But since 1949 the production of onions has increased 35 percent more than the rise in population.

Nor did it avail to have oniongrowers tell the committees of Congress that they used futures trading to protect themselves from the unpredictable and drastic changes which frequently took place in onions.

One of the most articulate of these, Chester W. Kempley, onion producer of Montello, Wis., told the House Agriculture Committee:

> If the Congress approves a measure to end futures trading in this commodity, I will lose the privilege of insuring my crop against a possible decline in prices. I will have to assume the entire risk of those unforeseeable changes in price which affect most commodities. Since there is no Government floor for onion prices, I will be thrown to the wolves.
>
> With today's high fixed costs of production, hedging has become a most valuable privilege, the continuance of which could mean life or death to the grower. Without it, many of us could be wiped out by a couple of consecutive bad years.

The pleas of growers who used the exchanges to protect themselves made little impression. The chorus that low prices and price declines were the fault of futures trading rose higher and higher.

One argument against futures trading in onions was that the commodity was

perishable and, therefore, not adaptable to trading. I never quite grasped this argument, but it was made.

During the hearings on the onion bill it developed that the only study conducted by the Department of Agriculture indicated that futures trading lessened price fluctuations and contributed to price stability in the commodity.

The survey was made by the Division of Agricultural Economics, Agricultural Marketing Service, USDA. The gist of it was contained in this statement:

Price variability is best measured in short-time periods, such as month to month, or, if feasible, on a week-to-week basis. Of price variability data herein measured, the month-to-month changes in the cash price of onions in the 1930–40 period and 1947–55 period are probably the most valuable. This analysis showed that a significantly greater average month-to-month variation occurred in the 1930–40 period than in the 1947–55 period.

Once again, we went right ahead to outlaw futures trading—and do away with low prices in the onion industry.

What has happened since futures trading in onions ceased?

The aftermath has been some of the lowest prices in recent years.

It is evident that the solution for the troubles of the oniongrowers is not the abolition of futures trading.

Let me quote some of the prices since November by comparison with prices in other years:

Average monthly prices per hundredweight

Year	January	February	March	April	May	June	July	August	September	October	November	December	Season average price
1957	2.20	2.55	2.55	4.35	4.55	4.90	2.85	1.75	1.65	2.00	2.10	2.20	2.85
1958	2.45	3.10	5.00	5.50	2.65	2.50	2.45	2.20	2.30	2.50	2.70	3.25	3.39
1959	4.50	5.00	7.70	7.90	3.85	2.40	2.70	2.80	1.90	1.90	1.80	1.60	2.41
1960	1.50	1.30	1.60	2.50	------	------	------	------	------	------	------	------	------

May prices are not yet available, but all indications are that they will be well below average prices for the month for the past 3 years.

In February, 1960, the Food Research Institute at Stanford University published a comprehensive study of futures trading in onions. The study is contained in the February bulletin of the Institute.

For those interested, I would advise that they get the February bulletin and study the article, "Price Effects of Futures Trading" by Holbrook Working.

Like the study by the Department of Agriculture, the Stanford study concludes that futures trading promotes price stability in onion prices, the inference being that such trading is in the interests of the producers.

We have then this aftermath of the action in banning futures trading in onions:

First. Extremely low onion prices, contradicting the primary argument relied upon in the campaign against trading.

Second. The power of the Congress has been employed to outlaw a legitimate business and one which, on the basis of the record, served a most useful purpose.

Third. The attention of the onion industry, and of those interested in its welfare, has been diverted from the real problems of the industry which must be dealt with on a practical basis if the situation of the onion producers is to be improved.

Fourth. The abolition of futures trading in onions has injured all commodity exchanges through a precedent which indicates that they are conducting their operations on sufferance.

Mr. Speaker, we live in a most dangerous period, a period when propaganda and agitation are weapons employed systematically and effectively against democracy and free enterprise. This is all the more reason for us to keep our heads, to proceed on the basis of logic and reason rather than emotion and prejudice.

From one standpoint, abolition of futures trading was a minor matter, one with comparatively little effect. From another, it is disturbing and raises questions as to our own ability to conduct our affairs in an orderly, calm, and logical manner. We were, in my opinion, stampeded into an unwise act. This entire episode has some most disturbing implications.

I have heard it said that if the commodity exchanges had done away with abuses and had cooperated with the Congress and the onion growers, the abolition of futures trading in onions never would have taken place.

I do not defend abuses on the commodity exchanges any more than I defend abuses and excesses in any industry. But the remedy is not to kill the business concerned; granted, of course, that the abuses can be eliminated.

I think we made a mistake when we killed futures trading in onions. I said so at the time. I think the developments since then prove I was right.

There is no equity in singling out futures trading in onions for death, while leaving futures trading in potatoes and in many other commodities untouched. All the arguments made against futures trading in onions can, for example, be made against trading in potatoes.

Yet today we deny the onion farmer the means of protecting himself through futures trading. We grant that protection to the potato farmer and other farmers whose products are traded in on the commodity exchanges.

Not that I advocate further action toward the abolition of futures trading. Quite the contrary. I think we should take steps to restore futures trading in onions. This is the way to correct a mistake and to undo a wrong.

Observes 50th Year as Pharmacist

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. FLOOD. Mr. Speaker, in the Plain Speaker of Hazleton, Pa., on Monday, June 27, 1960, there appeared an extremely interesting feature on Mr. C. Roy Johnson, of Hazleton, who is currently observing the completion of 50 years of pharmacy. In reading this story, I was particularly impressed with the estimation that Mr. Johnson made regarding the number of prescriptions which he has filled during the past half century—500,000. I am wondering if this figure establishes a national record for one pharmacist. At any rate, it is interesting to contemplate and Mr. Johnson is to be warmly congratulated for the extremely fine record which he has established in both business and in the community life of the city of Hazleton. As a further extension of my remarks, I include the above-mentioned feature article from the Plain Speaker:

C. ROY JOHNSON OBSERVES 50TH YEAR IN PHARMACY

Remember the time when the accepted cure-all for black eyes was leeches?

Or the street corner medicine peddlers who attracted wide-eyed crowds by tossing handfuls of half dollars?

C. Roy Johnson, celebrating his 50th year in pharmacy, has these and many other remembrances of an age in which pharmacy consisted of a pill board, mortar and pestle, some 50 concoctions, and a strong leaning to old wives tales.

Sitting recently among the 5,000-odd preparations necessary for his pharmaceutical trade today on West Broad Street, Johnson reminisced over the golden anniversary of his profession and recalled a pertinent point:

"The Hungarian leeches were best for black eyes. Not the American leeches, because they were less efficient."

Despite the fantastic advancements made in drugs, some of the oldtime remedies still are available, Johnson points out.

Annually, the Johnson Pharmacy sells about a dozen 2-ounce bottles of skunk oil at 50 cents a bottle, dog fat, and goose oil. What use do his customers make of the skunk oil? Mr. Johnson, proffering a capless bottle to prove there's no odor, shrugs his shoulders.

One of the veteran pharmacist's prized possessions is a frame containing eight prescriptions written by now deceased doctors of the area. The costs of the prescriptions, dutifully recorded on the faded papers, range from 25 cents to under a dollar.

Such prices do not exist today, Mr. Johnson admits, because of the high prices of new drugs. Some capsules in the Johnson Pharmacy, as in other drugstores, range as high as 75 cents each. "Research costs money," he explains.

Johnson estimates he has filled some half million prescriptions in his 50 years, and—in answer to those of us who often try to decipher them—admits a telephone call sometimes is necessary to a doctor to explain his prescription writing.

The mortar and pestle still are a part of the modern drugstore, but most compound-

ing now is done by pharmaceutical supply houses, assuring the utmost degree of accuracy, Johnson explains.

The intriguing operation of the hand-operated pill board—which, strangely, produced uniformly rounded pills, is adeptly told by him.

After leaving Hazleton High School, he was graduated from Hazleton Business College. Favoring his strong inclination to pharmacy, he acquired work as an apprentice in 1906 to Nathan N. Lewis, who had a pharmacy on the southeast corner of Broad and Wyoming Streets. Under Lewis' tutelage, he became a qualified assistant pharmacist and entered the Medico Chi College Department of Pharmacy, where he graduated with honors in 1910.

Not being certain of employment in Hazleton, he took—and passed—the New Jersey and Pennsylvania State board examination. After graduating, he returned to Hazleton and was given employment by Frank Furman, then manager of the Frank & Barber drugstore.

After a short time, Nathan Lewis offered him a 50-percent interest in his pharmacy. Johnson accepted.

The store was then moved from Broad and Wyoming Streets to 35 East Broad Street and operated under the name, Sunnyside Drug Store. During the following year, Mr. Lewis built a building at 437-439 West Broad Street and then a branch store was opened at that address.

In 1914, Lewis & Johnson disolved partnership, with Mr. Lewis continuing at the Broad and Pine Street store and Mr. Johnson taking over the West Broad Street location. In 1915, Mr. Johnson purchased the vacant lot at 347 West Broad Street and constructed his own storeroom and apartment which he occupied in April 1917. It was at this new store that the first electric neon sign in the city of Hazleton and first all electrically cooled soda fountain in the city were installed.

As the Johnson Pharmacy grew, he acquired the store of Harry Andes at 571 Alter Street which was later moved to its present location at 580 Alter Street in the building purchased from the Slovak Greek Catholic Union.

In 1934, Mr. Johnson opened a store in Weatherly managed by Henry Miller. He operated this store for several years and then sold it to one of his former employees, LeRoy Lamont, who still operates it.

The Johnson family of pharmacists consists of C. Roy Johnson and his two sons, Roy E. Johnson, who manages the Alter Street pharmacy, and Don F. Johnson, who with his father, manages the Broad Street store.

In another step forward in 1955, Johnson purchased the old Holman building which adjoined the Broad Street store. The building was razed and the area paved to provide parking space for patrons.

Looking back over the many thousands of prescriptions on file, Mr. Johnson notes the many physicians who were practicing medicine in town a half century ago who have died. Among them were Doctors Alexis, Brosius, Bittner, Buckley, Bendick, Casselberry, Corrigan, Carter, Cook, Doolittle, Dyson, Dietz, Dessen, Danzer, Fagan, Grala, Gayley, Gaughan, Harrington, Hoffman, Hanlon, Hutchison, Hunsicker, Jones, Kaufman, Keller, Kochczynski, Lonshore, Lathrop, Leckie Jr., McGeehan, MacKellar, Owens, Pierson, Pierson Jr., Smith, Scott and Struthers.

Among the pharmacists who served during this period were H. J. Andes, Donald Brown, Frank Eble, Frank Furman, Peter Gabrio, Cal Hughes, Charles Haines, Earl Henwood, Bruce Hicks, Willian Krell, Jacob Krause, Nathan Lewis, B. C. McNeil, Guy Mumaw, Fred Schimpf, Ben Traux, Richard Thomas, Elwood Walk and the late George Waschko, who was a classmate and close friend of Mr. Johnson.

Mr. Reece: American

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. LOSER. Mr. Speaker, having unanimous consent to extend my remarks in the RECORD, I call attention to the great tribute paid our colleague, the Honorable CARROLL REECE, the Representative from the First Congressional District of Tennessee.

Thousands of east Tennesseans converged on Roan Mountain last Saturday to honor their first son, veteran Representative CARROLL REECE. The occasion was "CARROLL REECE Day," in commemoration of the Johnson City Republican leader's career of public service, which has covered four decades, and for his contribution toward the growth and development of the First Congressional District.

Mr. Speaker, this memorable occasion was arranged as part of the annual Rhododendron Festival, and on this occasion Congressman REECE was saluted by more than 600 letters and telegrams from Members of the Congress and governmental leaders across the Nation, including the President and Vice President.

Mr. Speaker, it is appropriate, I believe, to call attention to CARROLL REECE'S outstanding record as a member of the American Expeditionary Forces during World War I. He was a battalion commander and is the holder of the Distinguished Service Cross, Distinguished Service Medal, Purple Heart, and French Croix de Guerre. In addition to this, he was cited for bravery by both General Pershing and Marshal Petain of France.

One of the South's great newspapers, the Nashville (Tenn.) Banner, in its editorial columns paid a great tribute to Mr. REECE and I am happy to bring this recognition to the attention of the House of Representatives of the United States of America. The editorial follows:

MR. REECE: AMERICAN

A vast majority of Tennesseans are able to put aside political partisanship and pay honor to a deserving native son, regardless of his political affiliations.

This refusal of Tennesseans to put party above the man has manifested itself twice in recent years. Though predominantly Democratic, the State gave President Eisenhower a majority in both 1952 and 1956.

And this independence is being exhibited today at Roan Mountain where B. CARROLL REECE, Tennessee's Mr. Republican, will be the guest of honor as thousands gather for the colorful Rhododendron Festival.

The tribute will follow the format of the TV show, "This Is Your Life," and will trace the highlights of Mr. REECE'S long and successful career which is marked by success not only in the political arena, but as a businessman and soldier.

Mr. REECE is a politician, in the finest sense of the word. He is being recognized today upon completion of 40 years' service as U.S. Representative from Tennessee's First Congression District.

Congressman REECE is a party man and proud of it. Today he is serving as chairman of the Republican State Committee and he speaks with a strong voice in national party councils. During one of the few breaks in his long congressional career, the East Tennessee legislator was national GOP committee chairman.

Today he serves as president of two banking institutions and as chairman of the board of a third. Mr. REECE also is a lawyer, having graduated from nearby Cumberland University.

And Tennessee has had few sons who have served in the Nation's Armed Forces with such distinction.

A battalion commander with the American Expeditionary Forces during World War I, he is a holder of the Distinguished Service Cross, Distinguished Service Medal, Purple Heart, and French Croix de Guerre. He was cited for bravery by both General Pershing and Marshal Petain of France.

He is now 70 years old. His political career began at 30. The Congressman is a candidate for an 18th term in the House of Representatives. He has never lost a Republican primary election and only once lost a congressional race, but at that Mr. REECE was only sidelined for one term. He won the next election.

During his lifetime the veteran Congressman has received many honors, but this recognition today by his fellow Tennesseans must rank with the best.

The Banner joins in the salute to Congressman REECE who is able to put aside political partisanship in favor of Americanism.

Tenth Annual Observance of National Catholic Youth Week, October 30 to November 6, 1960

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following article calling attention to the 10th annual observance of National Catholic Youth Week from October 30, 1960, through November 6, 1960. The theme for the week is:

RESPONSIBLE YOUTH—AMERICA'S STRENGTH

The National Council of Catholic Youth, sponsor of the week, is to be congratulated for so correctly assessing the value of our young people, and for calling so strongly on them during this trying epoch.

The United States of America rightly concerns itself with the marshaling of its moral and material resources. The importance of youth in this process is awesome. Their impact not only upon the realization of our national dreams but also upon the extension of freedom and justice in all the nations is critical.

The use of our tremendous national wealth, our moral presence in the world, our whole society and its institutions; soon these will be the everyday businesses of our present-day youth.

Two chief considerations suggest themselves. The first is that we as a Nation are blessed with young people the vast majority of whom reflect already the very responsibility on which we must rely. To these young people we owe commendation and generous encouragement of their efforts.

The second consideration is that at the risk of repetition we must impress more and more forcefully on our youth a deep understanding of their present and their future responsibilities as an integral part of our

Nation. Further, we as adults must not only expect but also exemplify the integrity, the energy, the idealism asked of our young people.

National Catholic Youth Week specifically involves the 7 million young people—teenagers, university students, young adults—represented in the National Council of Catholic Youth. They, and their counterparts in all American society, deserve our congratulations, as do the competent and unselfish adults working with them. I ask the attention of the entire public to this great week, and the support of the public for all those private programs devoted to the development of an able, spiritually strong and resourceful youth.

In Praise of HUAC

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. SCHERER. Mr. Speaker, Mr. James J. Matthews, of Arlington, Va., wrote an excellent letter to the editor of the Washington Post, which was published in its June 22 issue, with reference to the House Committee on Un-American Activities. I feel that both the Members of the House and Senate should have the benefit of Mr. Matthew's objective and well-reasoned analysis of the work of the committee.

The letter follows:

IN PRAISE OF HUAC

I am writing in connection with several articles that have appeared in your newspaper concerning the operation of the House Committee on Un-American Activities. Your constant attack on the committee combined with those emanating from Eleanor Roosevelt, son James, Bishop G. Bromley Oxnam and others have created in my mind a sincere curiosity about the committee, its procedures and its methods.

To see for myself what really was going on, I attended the committee hearings concerning Communist activities among seamen groups on June 7.

I notice an obvious inadequacy of coverage of these hearings in your paper, although you voice your criticism with first-page emphasis. Perhaps in an air of "academic freedom," you would like to know something of the operation of this committee which you have so freely lambasted in the past.

The events which I witnessed on June 7 would sicken the heart of any American citizen, regardless of political philosophy. The identified Communist witnesses called to testify behaved more like violent animals than human beings. One such witness, who identified himself as a student, acted in complete contempt. He yelled in defiance of the request that he lower his voice. In a smart-aleck attitude, he moved his witness chair back into the audience and on one occasion called a Congressman on the Committee, "fellow" and attempted to turn the committee hearing into a mockery of congressional procedure.

During his testimony, a group of young people in the room, delegates from the Youth To Abolish the House Un-American Activities Committee, insisted upon loudly applauding the witnesses and jeered and carried on a harassment of Staff Director Richard Arens. Apparently the young students had arrived as a result of a meeting held in New York City at the Woodstock Hotel 4 days prior to the hearing at which they had decided to outdo the noisy protest the committee had experienced in San Francisco.

Through the efforts of the Capitol Police, the students did not achieve their goal, although at one point during the testimony, two of the group had to be forcibly ejected from the hearing room.

I am greatly disappointed in what I had assumed was a correct and fair appraisal of this committee by your paper. You have attacked it repeatedly, stating that it served "no legislative purpose," then you bury in your back pages an extremely sketchy account of a typical committee hearing which, by the way, was receiving testimony concerning H.R. 11580 a legislative bill introduced by Committee Chairman FRANCIS E. WALTER, to protect the security of this country's merchant ships.

The shocking, and I am not one who is easily shocked, behavior of witnesses at the hearing I attended should be seen by every conscientious American. The violent defiance of the committee was more obnoxious and contemptuous than, but quite reminiscent of, the behavior of Khrushchev and Castro in their frequent attacks on President Eisenhower and our country itself.

It is indeed unfortunate that if you have a deadly axe to grind, you have chosen the Committee on Un-American Activities as your prime target. Your newspaper, so free to state alleged abuse of "academic freedom," is guilty of abuse—that of neglecting its public duty of covering news for news' sake, and not for personal and political reasons.

May I suggest that in the future, you give more coverage to the productive work of the committee. Perhaps in this way you can prove to the public that if the committee is bad, it is so on its own merits, after a careful and fair weighing of the facts involved. I believe you are fearful of the public's decision, should they be totally informed.

JAMES J. MATTHEWS.

ARLINGTON.

Congresswoman Frances P. Bolton Honored

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. BETTS. Mr. Speaker, on Sunday, June 26, the Veterans of Foreign Wars, Department of Ohio, presented to Congresswoman FRANCES P. BOLTON, 22d District of Ohio, its outstanding citizen award at its department convention in the Commodore Perry Hotel, Toledo, Ohio.

This award was presented to Congresswoman BOLTON for her legislative activities in behalf of servicemen in World War I, World War II, and the Korean conflict. The immediate cause for nomination of Congresswoman BOLTON for this award, among her many legislative accomplishments, was her untiring efforts in the Congress and with officials of the Veterans' Administration and the many interested veterans' groups in the construction of the new VA General Medical and Surgical Hospital in Wade Park, Cleveland, Ohio. Her activities in behalf of the construction of the Veterans' Administration Neuropsychiatric Hospital, Brecksville, Ohio, was also cited by the V.F.W. committee which selected her as the recipient of this award.

The citation, presented by John F. Choffey, past Cuyahoga County council commander, V.F.W., in behalf of John Fyre, Department of Ohio commander, reads:

Veterans of Foreign Wars of the United States, the Department of Ohio, awards this citation for outstanding citizenship to FRANCES P. BOLTON, who has served her community, State, and Nation for many years as a loyal citizen. Faithfully devoted to her country's needs, she stands a worthy example to young and old for sacrifices beyond the call of duty.

Mrs. BOLTON's friends, both in and out Congress, look with pleasure and pride upon this recognition of her efforts and devotion to the veterans of her district and the Nation. We note that the award specifically commends here outstanding citizenship, which I am sure her colleagues will regard as a true measure of her distinguished service in Congress.

Communications Act Amendments, 1960

SPEECH
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1898) to amend the Communications Act of 1934 with respect to the procedure in obtaining a license and for rehearings under such act.

Mr. SPRINGER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think one of the things that has been lost sight of is what the Committee has been trying to do as the result of 78 days of investigation last year and this year. There are essentially three things the Committee has been trying to do.

First, we have been trying to come up with this bill today, which commonly has been known as the payola bill. That is one part of what the Committee has been trying to do. Second, we have had under consideration the matter of what ought to be done, if anything, with reference to networks. And, the third thing has been ex parte hearings. All of this is covered under three bills now under consideration by the Committee of which the principal one seems to be H.R. 4800, on which we have held weeks and weeks of hearings plus executive committee meetings.

Today we are talking about just the payola bill. If anything is going to be done with networks, it seems to me that ought to come up under a separate matter; it ought to be considered separately; it ought to be gone into separately, just as we have gone into the question of payola and just as we are now going into the question of what ought to be done about ex parte contact hearings. So, we ought not to get sidetracked from

the principal thing we are trying to undertake here today, and that is to dispose of the one thing that we have under consideration, and that is payola.

If anything is going to be done constructively as the result of these extended hearings, which I repeatedly mentioned on the floor, we will have to do it in some kind of orderly fashion. In my opinion, this whole question of networks and what ought to be done about them ought to be taken up separately and considered separately, and we ought to hold hearings on them separately.

I know how deeply the ranking minority Member has felt about this problem, and I certainly respect him for it, but if we are going to take these matters up and accomplish anything we will have to consider each matter on its own merits and concentrate on each issue in some orderly way.

I would like to read how the gentleman from Michigan has defined "network" in his amendment, and I quote:

"'Network' means a person or organization which, as a part of its regular business, by contract or agreement, express or implied, with two or more affiliated broadcast stations, offers or supplies program service to such stations under prescribed conditions for the purpose of effecting a coordinated broadcast of identical programs by such stations."

Now, as you turn to section 343, of the gentleman's amendment, titled "Authority To Regulate Networks," I quote as follows:

The Commission shall, from time to time, as in its judgment, the public interest, convenience, or necessity may require, (1) classify television and radio networks, and (2) issue such rules and regulations with respect to each such class of networks, as the Commission may determine to be necessary or appropriate to assure that the policies, practices, and activities of such networks shall not adversely affect the ability of broadcast licensees to operate their stations in the public interest.

From this I assume that the gentleman intends to have classes of networks, all of which will be regulated by the Commission. In my opinion, this part of the amendment is so complicated that I do not know how it will work. And certainly it is not definite enough for me to get an understanding from this quick reading as to what the effect of the gentleman's amendment would be upon an affiliate of two or more stations.

This brings me back to my original point, that in a matter so involved as what should be done about networks, we ought to have hearings on this in detail. Nothing could be more disastrous to America than to have the networks become involved in regulations which would not be definitely in the public interest. I certainly will do my part insofar as any regulation is necessary, but it does appear to me that there ought to be further hearings, in order that we may be certain that what we are doing is in the public interest. Today, on the spur of the moment is not the time to undertake all of the involvement set out in the amendment from the gentleman from Michigan.

Ohio's Fair Election Laws

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. MOELLER. Mr. Speaker, during this, my first term in Congress, I have sat in these Chambers and listened to hours of debate concerning voting rights of certain classes of our society. I am pleased that the 86th Congress has taken constructive action in protecting the voting rights of all of our citizens, and enacted legislation which will extend presidential voting rights to residents of the District of Columbia. There is, however, still another class of citizens who annually are denied the right of casting their ballots for the men and party of their choice. I am referring, Mr. Speaker, to those who must change their legal residence, thus resulting in disenfranchisement. I am proud that my own State of Ohio has considered this problem, and taken the necessary steps to assure her citizens the right to vote. I would like to bring to your attention the following editorial from one of the leading newspapers in my congressional district, the Ironton (Ohio) Tribune, which describes the procedure practiced in Ohio assuring all citizens a voice in the presidential election:

ANOTHER OHIO ADVANTAGE

Two publications which arrived in our morning mail recently carried crusade-type articles on the temporary loss of franchise in presidential elections by the millions of Americans who move from State to State.

Both decried the failure of States to correct the situation, charging them with being behind the times. One admonished moving families to look over election laws carefully, seeking loopholes through which they can evade legal restrictions and cast their national ballots next November. The other proposed a complicated electronic brain system that would dispense voting licenses to citizens.

Strangely, both articles indicated their authors are behind the times because neither mentioned Ohio, which this year inaugurates the procedure by which new residents who are otherwise qualified to vote may cast their ballots for President and Vice President.

Ohio is the first State in the Union to adopt such a provision. It was approved as a constitutional amendment in the 1958 general election and the enabling legislation to put it into effect this year was passed by the last general assembly.

According to Secretary of State Ted W. Brown, the State's chief election officer, officials of many other States sent quick congratulations to Ohio when the word got out about what had been done. They are reported to be studying the system for incorporation into their own election laws.

While we're on the subject, we should point out that the Alliance League of Women Voters claims credit for originating the idea. It is a fact that a Stark County legislator, State Senator Ed Witmer, sponsored the necessary legislation in the general assembly.

The new move is typical of Ohio's position on elections. Our laws are considered to be model ones in many respects. Officials and interested citizens alike are constantly on the alert for ways to make them better.

So to those elsewhere contemplating moves this summer, we offer this bit of advice: Don't try to evade outmoded election laws and don't fall for a plan that requires expensive machinery. Just move to Ohio.

The Future of Our Territories

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. O'BRIEN of New York. Mr. Speaker, for the past 6 years I have had the pleasure of being chairman of the Subcommittee on Territorial and Insular Affairs. During this period we have witnessed the enactment of many items of legislation; the most important being the granting of statehood for Alaska and Hawaii.

Recently we have had opportunity to give more consideration to our offshore flag areas, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands. Members of the subcommittee visited each of these areas during the past year preparatory to studying their legislative needs. We fully expect to present legislation for floor consideration early in the 87th Congress. In fact we have a bill pending in the Rules Committee which would provide for territorial deputies to the House of Representatives from Guam and the Virgin Islands. I am hopeful for early action on a similar bill in 1961.

Mr. Speaker, a short time ago I asked the Secretary of the Interior, who has administrative responsibility for our offshore areas, except Puerto Rico and the Canal Zone, for his views on the long-range needs for our territories. Secretary Seaton's answer dated June 14, 1960, is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., June 14, 1960.

Hon. LEO W. O'BRIEN,
House of Representatives,
Washington, D.C.

DEAR MR. O'BRIEN: You recently requested that we send to you our views on a long-range approach to the problems of various offshore possessions. I hope the following discussion will be of some assistance to you.

Our foremost objective is the attainment of self-government for each of our remaining territories. Because of varying circumstances inherent in each area involved, the method, the time element, and the degree of self-government that may be achieved, will differ somewhat.

With respect to the Virgin Islands and Guam, our two remaining organized, unincorporated territories, it is our fervent hope that the Congress will approve legislation granting them nonvoting representation in Congress as recommended by the President in his budget message of last January. This Department has urged favorable action on the legislation now pending. However, although such legislation has recently been acted upon favorably by the House Committee on Interior and Insular Affairs, to date

it has not yet been passed by either Senate or House.

Despite the shortness of time remaining in the present session, I still hope it may be possible for Congress to enact legislation of this type this year.

Following the enactment of legislation for representation in the Congress, it is our view that careful study should be given to permitting the people of Guam and the Virgin Islands to elect their own Governor.

How soon such a step may be taken will depend upon developments during the next few years, particularly upon the growth of political maturity of the people in each area. In addition, we believe that such a grant of authority would have to be coupled with special provisions to take account of the following problems:

1. The financing of the local governments under a regime of full local self-government. At present, the governments of the territories are financed to a major degree by the diversion into their treasuries of what are truly Federal revenues. Whether such diversion of Federal revenues could appropriately be continued, in whole or in part, on the present basis would have to be determined, and if so, in what manner.

2. The protection of the Federal interest after there is no longer a federally appointed Governor. The Federal interest in our remaining territories is large and continuing, and we believe it must be protected through some appropriate mechanism, even though full self-government on the local level may be granted. In that connection we believe the "Federal interest" should be more precisely defined than it has been in the past.

3. The maintenance of a close liaison between such local governments and an executive agency of the Federal Government.

With respect to American Samoa, it was possible a few weeks ago to take the greatest step forward politically in more than 60 years of American administration. I refer to the promulgation on April 27 of the Constitution of American Samoa, a basic framework of government developed primarily by the Samoan people themselves. It was gratifying to me to be able to be present personally in American Samoa on that occasion to participate in the ceremonies on behalf of the U.S. Government. It is our hope that after functioning for a period of about 5 years under the Constitution it will be apparent whether or not American Samoa, as a next step to self-government, is ready for organic legislation and a change in its political status to that of an organized, unincorporated territory.

Some experience with the new structure of government for American Samoa, and with the provision of nonvoting representation to the Virgin Islands and Guam, should place us in a better position to judge what further steps forward should be taken, and how soon. We hesitate to be too specific at this time, particularly since any additional actions should depend in some degree upon consultation with the peoples of the areas affected.

The above statements represent our views at this time with respect to Guam, the Virgin Islands, and American Samoa. The development of such long-range programs for the Trust Territory of the Pacific Islands is far more complicated because of the wide diversity of cultural, social, and economic interests present in this geographically scattered area. Nonetheless, in the past few years substantial progress has been made in self-government through the chartering of municipalities, the establishment of district congresses, and the creation of an Inter-District Advisory Committee to the High Commissioner. This progress we intend to encourage at every step. It is our view, however, that it would be premature at this time to hazard specific conclusions as to the future governmental organization that should be established for the trust territory on a long-range basis.

Sincerely yours,

FRED A. SEATON,
Secretary of the Interior.

New Jersey Lynch Attempt of Negro: Another Case of Yellow Journalism

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. WILLIAMS. Mr. Speaker, last month a 17year-old Negro was almost lynched by a mob of white people in Irvington, N.J., following the boy's attack attempt on two white girls.

Characteristically, the Newark newspapers did not reveal the racial identity of the persons involved. If this incident had occurred in a certain section of the United States, race would have played an important part in the news account; but most of the northern newspapers suppress news of racial conflicts in their own communities. Such is a disgraceful fact.

It is understandable that the residents of Irvington would be outraged over a Newark Negro's rape attempt against local white girls but it is inexcusable for newspapers to suppress facts while sanctimoniously editorializing on similar events elsewhere.

Under leave to extend my remarks I include misleading articles from the Newark-Star Ledger, Newark Evening News, and Irvington Herald. They follow:

[From the Newark (N.J.) Evening News, May 27, 1960]

BOY'S "ATTENTIONS" END IN ARREST

A 17-year-old Newark youth was arrested at gunpoint in Irvington last night after he was chased several blocks by 15 men for being aggressive toward 2 teenage girls, police reported. The boy was in Essex County Youth House today pending charges.

Police said the youth admitted following the girls, 16 and 17 years old, for several blocks about 10:30 p.m. and then putting his arm around the younger one. Their screams attracted a group of men who began chasing the boy in 17th Avenue. Sgt. Ira Tompkins and Detective Eugene Osieja, patroling the area, entered the chase and stopped the boy near the Newark line.

[From the Newark (N.J.) Star-Ledger, May 28, 1960]

ATTACK SUSPECT RESCUED FROM IRVINGTON MOB

(By Sylvan Davis)

An angry mob of more than 100 persons, yelling "kill him" and "let's get him," surrounded a 17-year-old youth as 2 Irvington detectives escorted him into a police car yesterday after he tried to attack 2 high school girls.

The detectives warned the irate crowd to keep its distance as they pushed their way toward the police car with their prisoner. Then they locked themselves in and drove off to police headquarters.

The girls, 16 and 17, said the youth followed them for several blocks, then suddenly grabbed one of them around the waist at Grove Street and 22d Street. The second girl tumbled to the curb as she tried to fight off the assailant.

Their screams frightened him off, and also attracted a group of boys standing nearby. Some 15 teenagers chased after the fleeing attacker.

Detective Sergeant Ira Tompkins and Detective Eugene Osieja, cruising the area, spotted the chase. They caught up with the youth at 17th Street and arrested him at gunpoint.

Then they drove him back to the scene of the attack, where the girls identified him. By this time, the crowd had swelled to more than 100.

They surrounded the suspect and the detectives, yelling threats as they closed in.

The detectives hustled the youth back into the car.

After he was questioned at headquarters, the suspect was transferred to the youth house to await action of juvenile authorities.

[From the Irvington (N.J.) Herald, June 2, 1960]

ACCUSED YOUTH AWAITS HEARING

IRVINGTON.—A 17-year-old Newark youth, accused of accosting an Irvington girl as she walked with a girl friend at Grove Street and 22d Street at 10:30 last Thursday night, has been sent to the youth house in Newark to await appearance in juvenile court.

Detectives Sergeant Ira Thompkins and Eugene Osieja, cruising in the area, said they heard girls screaming and spotted the lad as he was being chased by a group of boys who were also attracted by the screams. They arrested the youth at 17th Avenue and 21st Street.

The boy told them he had been walking and had followed the girls, 16 and 17, for a block when he grabbed the younger one by the waist. She told police she fell trying to push him away. He was frightened away by their screams, police said.

A small crowd gathered as the detectives escorted the youth to the patrol car.

Dedication of Paterson, N.J., Heliport

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. CANFIELD. Mr. Speaker, my home city of Paterson, N.J., marches on. I know that my colleagues in the House of Representatives will be glad to read the following editorial which appeared in the Paterson Evening News on Thursday, June 23, 1960:

THIS IS A GREAT AND HISTORIC DAY FOR PATERSON

This is a historic day for Paterson and all of us should feel a sense of exhilaration as the events unfold.

Paterson Heliport is being dedicated, military and civilian helicopters float in Greater Paterson skies and land on the first Government-city port of its kind in America.

So there is profound reason for the pleasure Mayor William H. Dillistin reflects as he presides over the dedication of what will

some day in the not so distant future be Paterson's important link with the world travel.

Even as he proclaimed the formal adoption by the city of its heliport hard by the Passaic Falls where Alexander Hamilton envisioned America's first industrial city, the mayor recalled with feeling the late Mayor Edward J. O'Byrne's role in joining with the dedicated civic leaders who pressed for this port. It has been a long fight to achieve the result but today was payoff day in sweet satisfaction.

The significance of the heliport dedication is heightened by its alliance with the fourth anniversary of Forward Paterson, composed of community leaders who are dedicating their very lives to the purpose of rebuilding Paterson.

While this is Forward Paterson today, all of us share in the gratification of the community wide planning which will make for a greater tomorrow. That goes as well not only for the faithful city planners who have joined in the enterprise, but to organizations like the Greater Paterson Chamber of Commerce, whose energetic secretary, Ed MacEwan, exemplifies the working spirit of the chamber.

And, too, interlocked into the get-up-and-go spirit of this great day, is the commercial development fund, an offspring of the chamber and representing the progressive merchants of downtown Paterson. With energy, industry, and ingenuity, they have tied Heliport Day into Transportation Week, and buses and other vehicles traversing this north Jersey area herald the mercantile advantages of downtown with bright-hued signs calling all to come to Paterson to shop.

Similarly, with the city jumping in all this activity, today comes reassuring word to the Paterson Housing Authority that shortly, Federal officials in Washington will soon be giving formal approval to the plans to remake the greater part of our downtown city. This is wonderful news, and when the formal ratification comes through, we will be on our way to the new and greater Paterson.

This city, as Mayor Dillistin so appropriately points out in his heliport address printed elsewhere in the News tonight, has a record for vital and historical firsts. Today is another in a long series.

Paterson is on the move. If you have not yet caught the spirit, get it neighbor, big things lie ahead. Make yourself a part of the team.

Address by Hon. Francis E. Walter, of Pennsylvania, at the Annual Communion Breakfast, Pocono Catholic Missions

---

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. FLOOD. Mr. Speaker, it is with great pleasure I present the speech of my distinguished colleague and my friend and neighbor from Pennsylvania the Honorable FRANCIS E. WALTER to the Pocono Catholic Missions.

A great American, he speaks as our outstanding authority on the evils of communism and it is good to know that this excellent address was delivered before a Catholic church society, a bulwark against the encroachment of atheistic communism:

ADDRESS BY CONGRESSMAN FRANCIS E. WALTER, DEMOCRAT OF PENNSYLVANIA, AT THE ANNUAL COMMUNION BREAKFAST, POCONO CATHOLIC MISSIONS, BARTONSVILLE HOTEL, BARTONSVILLE, PA., JUNE 26, 1960

In the invitation which Reverend Galligan extended to me to speak this morning, he suggested as a subject "The Imminent Danger of Communism." The subject is based on a premise which, I regret to say, has not even at this late hour been accepted in certain quarters; namely, that there is an imminent danger of communism.

If communism is only an economic system set up for the production and ownership of things, how could it be inherently evil and an imminent danger? If it is only an economic system, the evil of communism must, at most, be that it doesn't work as well as some other system of production and ownership. If this is the case, surely those who live under it will sooner or later recognize this and change the system and those who do not have a Communist system will reject it.

Over the centuries there have been many instances of communal ownership of property. In America the Indian tribes practiced a form of communal ownership which might loosely be characterized as communism, spelled with a small "c."

J. Edgar Hoover, the Director of the Federal Bureau of Investigation, titled his recent book about Communists in the United States "Masters of Deceit." He might well have pointed out that the term "communism" is itself a deceit when applied to the international conspiracy which began with Karl Marx, which has since been headed by Lenin, Stalin, and Khrushchev, and which has caused more human suffering than any force in all history.

No, communism, spelled with a capital "C," when applied to the force which has its tentacles in every part of the world today, does not characterize just another economic system.

What is it then? It is a conspiracy of a relatively few fanatics who deny the existence of God and of all moral values and who are bent on the enslavement of every man, woman, and child in the world. The objective of these fanatical few, who regard themselves as the vanguard, is not conversion of the world to the ideology of communism in the way that the Christian missionaries converted the heathens to Christianity. Their objective is conquest by force, stealth, intrigue, and subversion

The most appalling fact of this generation is the failure of the free world to grasp the fundamental nature of communism. Communism is not just a political organism within the generally accepted meaning of that term. It is not just military aggression of a particular nation or group of people.

Communism involves an ideology, but it is more than an ideology. It is a dynamic system aimed at the destruction of all moral and spiritual values and of any society built on them. It is a scheme for total regimentation and control of every body and mind in a universe conceived to be exclusively governed by materialistic forces.

One of the basic fallacies of some of the leaders of the free world in attempting to cope with communism is to regard it as just another form of government which can be voted in or out at the will of the citizenry. This is precisely what the Communists would have the free world believe, but the facts are otherwise.

There has never been a single country taken over by the Communists with the knowing approval of its subjects, and once in power, Communists have never relinquished control except where they were ousted by force. Communism generally follows the same basic pattern which in essence consists of, first, softening up its prey by deceitful propaganda; second, subversion; and third, force.

The success of the Communist conspiracy in any of its operations is in direct ratio to the intensity of the efforts by trained, disciplined Communist agents who, compared to the number of free people, are always relatively few, though they now number a worldwide fifth column of some 33 million. It is no more possible for free people to coexist peacefully with these dedicated revolutionists than it is for the body to coexist peacefully with cancer.

Now, let us consider the specifics of my theme—the imminent danger of communism. In pursuing this theme, I could generalize by quoting the testimony of FBI undercover agents who have appeared before the Committee on Un-American Activities and who have stated that the Communist operation on American soil now is more deadly and dangerous than ever before in the history of this Nation. I could likewise quote the testimony of those experts on international communism who have consulted with our committee and who portray the frightening picture of Communits encroachments over the world. The Communist series of military successes, diplomatic triumphs, riots and propaganda victories in the total warfare which they are waging are sobering to all men dedicated to freedom.

If I should attempt to describe each of the many areas of Communist activity, both over the world and in the United States, which in the aggregate constitute the imminent danger with which we are faced from communism, it would necessitate literally weeks of time. I should then be obliged to discuss Communist activity in virtually every segment of our society in which Communist agents are now operating. I would have to recount the facts respecting the increasing flood of Communist propaganda, to detail the startling truth regarding Communist political subversion, to trace the activities of Communist lawyers in an operation which we call legal subversion, to describe the activities of Communist agents who are now in our defense facilities, as well as many other areas of Communist activity, each one of which is a part of the Kremlin's total warfare against its only formidable enemy—the United States of America.

Permit me then to dwell exclusively on just one phase of the Communist operation, namely, espionage. The simple fact is that the international Communist conspiracy has built and now maintains and operates the largest, most extensive espionage machinery in the history of the world. In just this one phase of Communist activity, its range, techniques and acomplishments are so extensive that I can only give samplings in an attempt to portray its imminent danger.

On the very day last September when Khrushchev addressed the United Nations with an appeal for total disarmament, two Soviet United Nations officials were arrested by the FBI in Springfield, Mass., while attempting to get classified information on U.S. defense from an American citizen.

At the time Khrushchev was blustering about the U-2 incident, I was in Europe and ordered the release of testimony taken by the Committee on Un-American Activities sometime earlier from Lt. Col. Frantisek Tisler, former military and air attaché of the Czechoslovakian Embassy in Washington who defected last July.

In this testimony, Tisler revealed that he had been given military intelligence training before coming to the United States in August 1955; that, in the final instructions given him before he came to this country, he was told over and over again that his title as attaché was merely a cover for his role as an espionage agent; that while he served ostensibly as attaché in the Embassy, he was actually chief of the Czechoslovak Military

Intelligence Directorate Residentura, with its headquarters in the Czech Embassy, and that five officers worked under him in gathering military intelligence in the United States—four in the Embassy and one at U.N. headquarters in New York City.

His job, Colonel Tisler testified, was, and I am now quoting his exact words, "to personally recruit American citizens to act as agents and, in their agent capacities, to furnish me with intelligence on classified materials related to the U.S. military developments."

He also said that his office facilities in the Embassy were "used to house my records and equipment, which I used for clandestine intelligence purposes."

He revealed that the Czech Ambassadors to the United States were aware of his espionage activities and those of his staff as well, and that his staff people were not the only espionage agents operating out of the Embassy. He stated that the Czech Ministry of the Interior also had a residentura in the Embassy and a suboffice in New York, and that, during the years 1955 to 1959, while he was attaché, 45 percent of the Czech Embassy staff and the U.N. delegation in New York were engaged in intelligence activities.

At the time this testimony was released, I emphasized that the U-2 incident "must not distract the attention of the world from the wholesale espionage, sabotage and propaganda operations conducted by the Communists in every country of the free world."

In March of last year, our committee released the testimony of Petr S. Deriabin, a former officer of the Soviet secret police. Deriabin informed our committee in this testimony that the K.G.B., formerly known as the M.V.D.—which is responsible both for foreign espionage and the internal security of the Soviet Union—has 3,000 officers in the Moscow headquarters of its espionage operations and 15,000 of them scattered around the world. He testified that the Soviet Union uses embassies, consulates, trade missions, cultural and scientific exchange groups, the news agency Tass, refugees and alleged defectors from communism to infiltrate its agents into foreign countries.

He identified a Major Zagorsky, who had recently visited the United States a a member of a construction delegation, as a man who had worked with him at the Moscow headquarters of the M.V.D. The same was true, he said, of Lt. Col. Aleksandr Kudriavtsev, who came to this country with the Moiseyev Dancers and took curtain calls with them at the end of their performances. He also identified Metropolitan Nikolai of the Russian Orthodox Church, who visited this country in 1956 as part of a religious delegation, as an agent of the M.V.D.

Deriabin testified that the G.R.U., the military intelligence branch of the Soviet Union, had many more agents scattered around the world than the M.V.D. and that 60 to 70 percent of the representatives of Tass, the Soviet news agency, are M.V.D. agents.

Still earlier last year, our committee released a report called "Patterns of Communist Espionage." In it was revealed a dozen recent cases of Soviet espionage activity and recruiting attempts that had not been previously disclosed. Most of them were cases in which Soviet secret police agents had attempted to blackmail into espionage persons in this country who had relatives behind the Iron Curtain or who had recently visited Iron Curtain countries to see the members of their family and relatives.

This report named seven so-called diplomats attached to the Soviet Embassy in Washington who have been expelled from the United States for espionage. It named five more who had been identified as having engaged in espionage, even though they were not declared persona non grata by our Government. It named five members of the Soviet U.N. delegation who had been expelled from the United States for spy activity, six persons attached to satellite embassies who had been asked to leave this country for the same reason, and four others as persons who had been identified as M.V.D. agents, although they had not been caught in any espionage activity while serving in this country.

The same report also quoted excerpts from the testimony of nine former high-ranking officials and agents of the Soviet secret police, all of whom have defected from the Soviet service and have testified, in effect, that every Soviet embassy, consulate, and official delegation is a nest of spies. On May 24, U.S. Ambassador Lodge submitted a memorandum to the United Nations which gave details on the espionage activity of 11 Soviet diplomatic personnel who, in the last 7 years alone, have been expelled from this country for spying.

It is apparent from these facts that no nation has ever abused diplomatic privilege the way the Soviet Union has in its efforts to steal the secrets of every free nation on the face of the earth.

Many people think that our security agencies need worry only about Communist espionage in this country. Our committee report revealed, however, that the Soviet Union and its satellites also conduct intense espionage activity against American embassies, consulates, and diplomatic officials in all Iron Curtain countries. To penetrate our security safeguards in these establishments, they use blackmail, bribery, sex, narcotics, and every device which devilish minds can contrive. All servants employed by the U.S. Embassies in Iron Curtain countries are cleared for such service by the M.V.D. and are forced to report everything they can learn in the course of their duties. Listening devices are concealed in every imaginable hiding place. American diplomats behind the Iron Curtain can never be sure when it is safe for them to talk without their conversation being recorded even when they are out in the open and can see that there is no one near them. In one case we know of, Communist agents concealed a transmitting device in the heel of a U.S. military officer's shoe.

On May 13, the West German Ministery of the Interior made its annual report on spy activity. This report revealed that in the year 1959, 3,051 persons in West Germany admitted that they had spied for Iron Curtain countries. It is estimated that there are now 16,000 professional Communist spies in West Germany, plus many more "part-time" agents. Since the end of World War II, over 15,000 Red agents have been arrested in that country. In the first 4 months of this year, 820 more were arrested.

Yet Khrushchev had the blasphemous gall to say in reference to Communist espionage at the time of the U-2 incident: "As God is my witness, my hands are clean and my soul is pure."

Does the man who runs a spy apparatus of such magnitude—and is such a hypocrite—have any right to put the United States on the defensive in the court of world opinion on the subject of espionage?

Khrushchev, to use Shakespeare's phrase, "doth protest too much."

Just a few months ago, on February 8, 1960, FBI Director J. Edgar Hoover testified as follows before a House appropriations subcommittee:

"Our investigative coverage has clearly disclosed the continuing threat to the security of the Nation from the espionage efforts of the Soviets and their satellites."

Mr. Hoover then requested that he be permitted to go off the record while he discussed with the House Members, in some detail, the facts about current Soviet espionage in the United States.

In his testimony before the same subcommittee last year he said that the Soviet Union's "peaceful coexistence" campaign "has opened the door for foreign-directed espionage on an accelerated scale"—and then added:

"Our investigations have clearly disclosed an overall expansion of Soviet bloc intelligence activities against the United States. There has been a predominantely widespread use of 'legal' agents operating under the guise of diplomatic status. There are indications, further, of a general tightening-up of the organizational structure of the Soviet intelligence apparatus. There can be little doubt that this increasing pressure of foreign-directed espionage activity will continue with added emphasis for an indefinite future period."

What about the other side of the coin? Khrushchev charged that the United States violated international law and Soviet sovereignty by flying in the air space above Soviet territory without its permission.

In the past, there was general agreement that each nation was completely sovereign over all air space above its territory. There was no height limitation. This was in the days when planes could fly only at what we now consider very limited altitudes.

An element generally recognized in international law influenced the acceptance of this principle. This was the ability of nations to enforce their claimed sovereignty. Antiaircraft guns in those days had sufficient range to reach any aircraft. No planes could fly so high that they could not be hit. Nations could therefore control all air space above their territories. There was no question about their ability to enforce the sovereignty they claimed.

This concept in international law—of sovereignty being determined largely by the ability of the sovereign to control and enforce its rights in specific areas—is a concept of long standing. It was this principle which, many years ago, led to the recognition in international law of the extension of a nation's territorial rights 3 miles into the high seas. This, at the time, was the range of a cannon ball—and thus the general limit of a nation's ability to enforce its sovereignty with coastal guns located within its boundaries.

What is the rule of international law today on the subject of air space sovereignty? Actually, there is no clear-cut law at all on this subject. What we do know with certainty, however, is that the old concept of unlimited air space sovereignty is no longer accepted. This can be readily proved by the number of manmade satellites now circling the earth at varying altitudes and regularly passing over many nations in their orbit. Since these satellites were launched, no authorities on international law and no leaders of nations have claimed that this country's or the Soviet Union's placing them in orbit was a violation of any nation's air space.

Today, in the latest development of this kind, our country has the Tiros and Midas satellites circling the earth. These are taking pictures continuously. No one has ever seriously charged that this is a violation of international law or national sovereignty.

We know that before long this country, the Soviet Union, and probably other nations as well, will have manned space vehicles in orbit. No one has as yet suggested that these will violate any nation's air space.

What does this mean? It means simply that the old rule of unlimited sovereignty in air space is, as I said before, no longer accepted—and that what is accepted is that a nation's sovereignty ends at some altitude above the earth's surface.

What is this altitude? Is it 100 miles? Apparently not, because satellites orbit at that height without protest. It must be lower.

Is it 50 miles, 25 or 10? On this point, there is no international agreement or law. Therefore, until some agreement is reached, we must rely on general principles of international law to find a reasonable answer to this question.

The principle that obviously applies here is the old one of sovereignty being limited by a nation's ability to enforce it. So far as we know today, no nation has the ability to enforce air space sovereignty at a height of 12 miles or more above the earth—the altitude at which the unarmed American U–2 reconnaissance plane flies.

It would therefore appear that, according to accepted principles of international law, the U–2 flights over the Soviet Union were neither a violation of international law nor of Soviet sovereignty.

I think it is about time that America stood up for its rights in this case and hurled Khrushchev's charges back in his teeth. Principles of international law are on our side—and not his. It's about time we stopped feeling guilty and apologetic about legitimate steps we must take to protect ourselves from destruction at Khrushchev's bloody hands.

We have been retreating too long before the tyrants in the Kremlin on issue after issue. It is time we called a halt before we find ourselves where retreat will no longer be possible.

Yes, Reverend Galligan, and friends, there is an imminent danger from communism. There is also an imminent danger which comes from our own indifference, our failure to grasp the fact that there is an imminent danger from communism.

Red Dust Settles in Cuba

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article about the Marxist-Leninist infiltration of Fidel Castro's tyranny in Cuba. The article is the work of an experienced career diplomat, Dr. Emilio Núñez-Portuondo, who served as President of the Security Council of the United Nations. His judgment has been confirmed by events.

Certainly, both the Monroe Doctrine as well as the Declaration of Caracas—1954—preclude the conquest of any American Republic by an Asiatic or European power. Soviet China and the Kremlin, defying the Monroe Doctrine and the Inter-American Doctrine of nonintervention, are establishing a most dangerous domination of the Fidel Castro dictatorship. The entire Western Hemisphere, including Canada, has a right and duty to defend itself.

KHRUSHCHEV AND CHOU EN-LAI IN HAVANA

In our issue of last November 30, on returning from our trip to South and Central America where we gathered opinions of U.S. friends, we reported:

"We are afraid, our friend continues, that the officials concerned with Latin American affairs in the State Department are not prepared to effectively combat the maneuvers of international communism, because up until now they have never had to meet a situation such as the one now existing in Cuba. It is a mistake to consider that what is happening in Latin America is a political movement of the old Latin American school. It is time to request the services of specialized experts in combating communism that must be available, not only in the State Department, but in the CIA and the FBI, as well."

When we wrote this, it was not our purpose to offend the officials of the Latin American Section of the State Department. After so many years of fighting international communism, we are convinced that it is not an easy task to correctly estimate the magnitude of their power to maneuver and simulate. It is our thought that without a great deal of experience acquired from the study of the problems created for the world by international communism, it is certainly imprudent to gain this needed experience at the expense of Latin American problems.

If the behavior and reactions of the Communists, mainly Russian and Chinese, are analyzed as if these were normal persons who think in accordance with the Christian ethics of western civilization then a very serious error is committed. Our sense of duty, sharpened by a lifetime devotion to the cause of the free world, compels us to repeat that we have become alarmed ever since observing that U.S. officials in charge of studying the civil war of Cuba have failed to realize that the Fidel Castro movement is nothing more than a new maneuver, the greatest effort to date of Moscow and Peking to subject Latin America to its sphere of influence.

Our alarm increased when doubt was expressed as to Castro's militant communism and it was argued that members of the Rebel Army were not Reds because they wore religious medals—which was, of course, a deliberate effort to deceive the foolhardy. Clearly, we have a completely Communist regime in Cuba today at the command of Moscow and Peking.

We shall not let up on our warning that Cuba is a more clearly defined Communist regime than Poland, and it is more subjected, unconditionally so, to Russia and China than Yugoslavia.

On November 30 we also wrote, "What do the Soviet Union and Communist China want? Patience, to be sure. Every day that passes is useful for the achievement of the goals of international communism. Communization will proceed in Cuba. The government will continue to take over private property and perfect its technique of repression. The efficiency of the armed forces, until now, practically nil, will be increased. And what interests Soviet Russia and Communist China even more, other Latin American countries will attempt an imitation of what has transpired in Cuba.

"On the other hand, Fidel Castro is taking full advantage of the infinite patience of the Government in Washington. He has become the hemispheric leader of international communism and of the anti-United States campaign in this part of the world. His name, it must be confessed, has become the symbol of rebellion against a great nation, the champion of modern imperialism, according to the propaganda of Moscow and Peiping. The passage of time brings him many advantages."

Well-informed persons tell us that the ideas expressed by some Washington officials on meeting the dangerous Cuban situation have passed through three stages. The first, as the Communist Government was getting started, consisted in doing, convinced as these officials were that with the passing of time the many mistakes and blunders committed by Castro would wreck Cuba, and this would serve as a very painful experience to the other Latin American states which would now receive the favors previously bestowed on Cuba.

This method could never work for Cuba. It has never worked anywhere. The United States tried it already, first in Soviet Russia 40 years ago, and then Red China, just 10 years ago, without favorable results in either case.

Rumors are circulating (we haven't been able to confirm them sufficiently to report them as fact) that the second stage consists of inter-American action within the framework of the OAS, but the formation of an inter-American army will not contain one single American soldier or marine. The authors of this plan also advise that the U.S. Government will in no case take the initiative for joint action in Cuba. A Latin American government will have to take the first step.

Naturally, this plan is doomed to failure. How will an inter-American army be formed without containing a single citizen of the only great military power in the Hemisphere? Even so, one would expect that the United States would at least take the initiative, inasmuch as it is the leader nation of the Americas and the one most directly affected by the existence of a Moscow-Peking-dominated Communist regime, only 90 miles from its shores.

The third stage is immediate and total economic blockade to prevent Cuba from receiving one single article of commerce from an American nation. As a result of the consequent bloodletting, it is argued, the Castro government will be quickly overthrown and the country will then recover rapidly.

The technique of economic blockades did not even function in Napoleon's time when he established a continental blockade against England. It was equally ineffectual in the case of the Soviet Union, Communist China, and Nationalist Spain. On the contrary, a blockade would facilitate the rapid communization of the island and its foreign trade would pass to the Communist countries on a barter basis. We have already seen that great quantities of Russian oil have reached Cuba; the same with articles that one never imagined would be sold there, such as Russian cigarettes and matches.

It was also argued by Communists and fellow-travelers that concerted action in Cuba would obstruct the Summit Conference. Well, the Summit failed, not because of Cuba, but because one of the Russian objectives is to afford time to Cuban Communists to firmly establish themselves in power.

Action against Fidel Castro and his comrades could create problems in Berlin, Korea, and Formosa, it was also said. This is a favorite argument of American Reds and sympathizers designed to give more time to their Cuban cohorts. Cuba will not present any problem regarding Berlin, Korea, or Formosa as long as the Russians and Chinese are convinced that the Western powers are determined to maintain their rights at any cost. And Khrushchev has declared that he will not bring up the Berlin problem for another 9 months.

Acceptance by Khrushchev and Chou En-lai of Fidel Castro's invitation to visit Cuba, and Castro's statement over TV last week to the effect that the Cuban economy is tied only to the Communist states are far more important happenings than could ever transpire in connection with Berlin, Korea, or Formosa.

The significance of these events cannot be lessened by statements, attributed by U.S. dailies to the State Department officials, indicating doubts that Khrushchev will visit Cuba and asserting that the Russian and Chinese bosses will be coldly received by the Cuban people because they are Catholics. What will become of these doubts if Mr. K. and Chou do in fact go to Cuba? Are they completely unaware of the machinery used by the Reds to fabricate triumphant receptions? Poland is more Catholic than Cuba

and both of these gentlemen received a hero's welcome there.

We are not trying to impose a criterion. Perhaps we write only for history, the supreme judge of the acts of public men, the judge of us all. But we are obliged to warn, once again, that if urgent action is not taken immediately to apply the Declaration of Caracas and the Monroe Doctrine, all of Latin America, absolutely all, will shortly fall into the jaws of international communism and become converted into slaves, not only of Moscow, but of Peiping.

To consider the tragic Cuban problem as a local phenomenon is the greatest of all errors. History will judge accordingly.

THE CATHOLIC CHURCH STANDS UP TO FIDEL CASTRO

After the pastoral letter of Monsignor Enrique Pérez Serantes, Archbishop of Santiago de Cuba, reported on in our last issue, was released, it was obvious that the other bishops of Cuba would declare their position in connection with Fidel Castro's Communist regime.

On June 2, Monsignor Eduardo Boza Masvidal, Auxiliary Archbishop of Havana, delivered the strongest Church criticism yet directed against the Fidel Castro Government and its domestic and foreign policies.

He warned in effect that "The state has no right to control the means of expression, to impose thought control, foment class warfare or usurp private properties."

The prelate described the arbitrary confiscation or expropriation of private property as "nothing less than robbery." He emphasized that neither a police state nor a welfare state "is acceptable to Christian theology." "Also unacceptable," he added, "is the state based on the extremist point of view of absolute liberalism, socialism, or communism."

Monsignor Boza Masvidal censured the attitude of the Revolutionary Government respecting the United States, saying "nationalism should not be based on hatred for any other people in the world."

The Archbishop echoed the warning against communism made 2 weeks back by Santiago's Archbishop, Msgr. Pérez Serantes, warning the Cubans that "Christian doctrine is against all imperialism."

The prelate spoke at closing ceremonies of the spring semester of the Pope Pius XII Institute of Social Studies at Villanova University, of which he is the rector.

His speech covered 14 points which are now being debated, defining the Church's position on such subjects as wealth, education, nationalism, the confiscation of property and "functions of the Christain state."

We were sure that the Catholic Church would confront the Communist regime of Fidel Castro, as we predicted. The church cannot give in to Communist regimes, not only because they are atheistic, but because in denying man's free will they convert him into a machine in the service of the state. Surely the other bishops will follow the example set by Perez Serantes and Boza Masvidal.

For those unfamiliar with the practices of international communism, we must warn that the actions of Cuban Catholic officials will not suffice to bring about the termination of the Fidel Castro regime. It is true that in Argentina, Colombia, and Venezuela, church action was decisive, but we must not ignore two circumstances that do not pertain to the Cuban situation.

The first, that Peron, Rojas Pinillas, and Perez Jimenez were Catholics and Fidel Castro is not; and even more important, in Argentina, Colombia, and Venezuela, existed dictatorships, but they were not Communist regimes. In these countries you had regular armies composed of Catholics, and in Cuba you have popular militias and an army composed of Communists.

The case of Cuba is the same as Poland, Hungary, and Yugoslavia, which have predominantly Catholic populations but which have not been able to free themselves from the Communist regimes, in spite of hundreds of pastoral letters and sermons in defense of democratic principles.

The Catholic Church will become the church of silence if material help is not given the Cuban people to put into practice the aspirations of the church, to put an end to the slavery to Moscow and Peking. We hope that the experts who announce exultantly that the Cuban Catholics alone will take care of Castro and his comrades will reflect that since this has never happened in any other country, it does not seem likely that it will happen in Cuba.

Independent Somalia

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. MURPHY. Mr. Speaker, freedom and independence have been the ultimate goals of all individuals as well as nations, irrespective of race and religion. In a very general sense, man's long and uneven progress through the ages may be reckoned by the degree of freedom in which he has lived and enjoyed life. For that reason freedom and independence may be regarded as man's noblest aspirations.

After the First World War many new states were set up in Europe, and the free peoples in these states did well until they became casualties in the last war. Since the end of that war the spirit of freedom has fared rather badly in Europe and in many other lands, and Communist totalitarian dictatorships set up there have shown utter contempt for it. Fortunately, however, in the case of many African peoples it is different. It is encouraging to find that within the last dozen years about a dozen African peoples who have not known full freedom for a long time, have already attained independent status, and many more will join them in the near future. Somalia is one of the latest of these which became independent on June 27.

The new state Somalia, with a population of about 700,000 people in an area of about 70,000 square miles, in East Africa, south of the Red Sea, has been a British protectorate since 1887. In general they have fared better than other Somalis under other governments, but still they wanted to be independent and masters of their own destiny. And the British Empire, in the process of evolutionary dissolution, agreed to their independence. This agreement was honored yesterday, on June 27, when Somalia proclaimed its independence as a sovereign member of the family of nations. Within the next few days the Italian Somaliland will also become independent. It is hoped that then the two former British and Italian Somalilands will unite and form the larger Somalia, as it is envisaged and planned by the present leader of today's Somalia, Mohammed Haji Ibrahim Egal. Upon the union of the two Somalilands, the new state Somalia will have about 2 million inhabitants with a territory as large as Texas, 265,000 square miles. But regardless of its size in area and the number of inhabitants, today we salute the new state Somalia, the independent and sovereign Somalia in East Africa.

As a member of the Subcommittee on Africa of the Committee on Foreign Affairs, of which the great statesman from Pennsylvania, Dr. MORGAN, is the dynamic head, I, with the other members of the subcommittee, chairmaned by the gentleman from Illinois [Mr. O'HARA] and including the gentleman from Missouri [Mr. CARNAHAN], the gentleman from Michigan [Mr. DIGGS] the gentlewoman from Ohio [Mrs. BOLTON], and the gentleman from Indiana [Mr. ADAIR] extend heartiest greetings and best wishes to the new sovereign nation.

Resolution Adopted by the Louisiana Legislature Relative to Offshore Oil Production

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

HOUSE CONCURRENT RESOLUTION 45

Whereas the recent decision of the Supreme Court of the United States denying rights of this State to its lawful wealth from the production of oil from submerged offshore lands has resulted in the application of one rule to other States and a different rule to the State of Louisiana, which is clearly discriminatory and based in law upon the justification of ancient treaties which never contemplated the production of minerals from such areas; and

Whereas the result of the drawing of one set of seaward boundaries for the States on the coasts of the Atlantic and Pacific Oceans and of another set of boundaries for those on the coast of the Gulf of Mexico with each of the States upon the Gulf of Mexico having different boundaries, has been the allowance to all of the petroleum producing States except Louisiana of all or at least the major portion of the coastal production area; and

Whereas this discrimination against one of the States is unwarranted in a nation comprised of States of equal rights and dignity; and

Whereas this particular discrimination against the State of Louisiana causes a discriminatory reduction of revenue to the one State out of all of the petroleum-producing States which has the greatest expense to afford roads, schools, law enforcement, judicial process, and the other benefits of State and local government to the petroleum industry and the citizens engaged in making their livelihood therein because of the swamp and marsh coastline of the State which extends across virtually the entire coastline for an inland depth in many areas of as much as 100 miles; and

Whereas the economic burden upon the State of Louisiana of providing the normal

and necessary State and local governmental facilities for the petroleum industry and its employees and equipment, such as roads, schools, and law enforcement, is greatly in excess of the burden of other coastal States having a more accessible coastline; and

Whereas the loss of revenue from petroleum production from the area which other States are allowed to receive, will necessitate the State of Louisiana being unable to provide the necessary facilities for assisting the petroleum industry to expand and develop the petroleum resources of our tidelands, with the resultant loss to the entire Nation of the benefits to be derived therefrom: Therefore be it

Resolved by the House of Representatives of the State of Louisiana (the Senate thereof concurring), That the Louisiana Senators and Representatives in Congress are hereby urged and requested to take all measures within their lawful powers to obtain the restoration to the State of Louisiana of the revenue derived from offshore mineral development and operations which other coastal States are allowed; be it further

Resolved, That copies of this resolution be sent to each Louisiana Senator and Representative in Congress.

Godless System

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. PHILBIN. Mr. Speaker, under previous consent to revise and extend my remarks in the RECORD, I include therein a recent article from the Bulletin, a weekly survey of German affairs issued by the Press and Information Office of the German Federal Government entitled "Guide to Atheism."

This article discusses the shocking antireligious and irreligious teachings of communism in the Soviet zone of Germany where, as elsewhere in the Communist world, the state arbitrarily interferes in church matters.

Distributing any antireligious books to young boys and girls is a customary Communist technique practiced wherever communism continues its propaganda and that is throughout the world. The design is to poison these young people against religion, against the most precious beliefs of their home, family, and nation.

One of the foundations of Marxism is antireligion and bitter opposition to belief in God. If the Communists had their way, they would establish Godless atheistic Communist forces in every nation where they are able to gain a foothold.

Meanwhile under doctrines of free speech and free press, religious-minded people are forced to tolerate a virtual barrage of propaganda derogatory to religious faith, religious philosophy, religious belief, and religious activities.

The article, by citing specific instances of antireligious propaganda, forcibly brings to our attention the extent to which the Communist world goes in order to discredit those who believe in God and embrace fundamental values of religion and morality and to indoctrinate the young and the people.

This practice must be strongly denounced. Our political system is based on freedom and gives to every person the right to his or her own religious beliefs. This does not mean, however, that we give to Communists or other persons the right to assail, attack, disparage and derogate the sacred beliefs of other people.

I hope that the American people will continue to recognize the hatred of communism for religion, personal liberty, human freedom and the moral standards and ethical values and religious beliefs of Western civilization. So long as this kind of spirit and activity exists in the world, our great Nation must be prepared to protect its security, its institutions and its way of life.

And by all means, we must let the courageous West German people know of our admiration and support for their stanch, fearless fight against antireligionists and allied Communist enemies of freedom, justice and decency.

A government based on hatred of God is evil and it cannot survive in the long run. And a government that teaches atheism to the young is certain to wallow in the fleshpots of materialism and wither in degeneration and decay.

The article follows:

GUIDE TO ATHEISM

Everywhere in the Christian world, young people will shortly be taking their first communion. In the Soviet zone of Germany, the inhabitants are Christians no less than elsewhere. But there, the state interferes in church matters. It has forced 95 percent of all young people to take part in a "youth dedication ceremony" instead of the religious ceremonies.

On the occasion of the "youth dedication ceremony," each boy and girl is presented with a book. Its title is "From the Other World to This—A Guide to Atheism" (Vom Jenseits zum Diesseits—Wegweiser zum Atheismus). It assures its young readers that the church serves "the ruling classes" by "subjugating the workers".

In the book's very first chapter, under the heading "Superstition," the following sentences are found:

"The word superstition is generally taken to mean belief in supernatural forces, such as soothsaying, card-reading, star-gazing, etc. Such forms of belief differ from religion in that they are not organized into religious communities. They are, however, no less widespread.

"To this day, the bourgeoisie scientists have not been able to distinguish properly between religion and superstition. Instead, by evasion and prevarication, they have tried to prove that religious concepts are not a part of superstition but differ from it fundamentally.

"Both superstition and religion came into being because of man's apparent inability to explain natural and social phenomena. Both mirror reality erroneously, in fact fanatically, and proceed on the assumption that there are supernatural beings and forces.

"Both result from the circumstance that the suppressed and exploited classes seem to be powerless against the ruling classes in an order of society based on exploitation; by utilizing religious and superstitious notions, the ruling classes can make religion and superstition serve in suppressing and subjugating the workers.

"The rulers and exploiters have an interest in keeping the workers superstitious; they want them to remain confused in their concepts of reality, so that they will not discover ways of solving their problems but will continue to rely on God, the stars, or a talisman."

The attack contained in these statements is, of course, directed specifically against the Christian religion. The implication, however, is that an atheistic crusade against every religion in the world is taking shape in the minds of the Soviet zone's propagandists.

Commemoration of Baltic Genocide Day by American Estonians, Latvians, and Lithuanians

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the American Estonians, Latvians, and Lithuanians assembled at the Baltic Freedom Meeting in Boston, Mass., in protest against the violent occupation and annexation of the Baltic States of Estonia, Latvia, and Lithuania by the Soviet Union 20 years ago:

RESOLUTION ADOPTED BY AMERICAN ESTONIANS, LATVIANS, AND LITHUANIANS ASSEMBLED AT BALTIC FREEDOM MEETING, LITTLE OPERA HOUSE, BOSTON, MASS.

Whereas 20 years ago, June 15–17, 1940, the Soviet Union violently invaded and occupied the Baltic States of Estonia, Latvia, and Lithuania, and thereafter illegally incorporated them into the U.S.S.R.; and

Whereas by this unprovoked aggression the Government of the Soviet Union committed an international crime; and

Whereas 19 years ago, June 14, 1941, the Government of the Soviet Union started mass deportations of the Baltic people of all walks to slave labor camps in Siberia and other remote parts of the U.S.S.R.; and

Whereas by this inhuman deed the Government of the Soviet Union committed a crime of genocide against the Estonian, Latvian, and Lithuanian nations; and

Whereas by signing the Charter of the United Nations and later by adhering to the Universal Declaration of Human Rights and the Convention on Prevention and Punishment of the Crime of Genocide, the Government of the Soviet Union has assumed explicit obligations as regards individual's right to life, freedom, personal security, and human dignity; and

Whereas in violation of all these explicit obligations, expropriation, exploitation, slave labor, suppression of human rights and fundamental freedoms, Russification, terror, murder, overt and covert deportations are being continued in the Baltic States by ruthless Soviet occupation forces; and

Whereas we free Estonians, Latvians, and Lithuanians are conscious of our responsibility toward our subjugated nations behind the Iron Curtain, we feel dutybound to speak out for those in captivity in protest against genocide and inhumanity in the Baltic States under Communist tyranny; and

Whereas we are deeply concerned about the weakness of the U.S. foreign policy in the face of ever marching Soviet aggression that allows Soviet Union's Premier Nikita Khrushchev even to offend the President of the United States without any fear of retaliation: Now, therefore, be it

Resolved by American Estonians, Latvians, and Lithuanians assembled there, That—

(1) We accuse the Government of the Soviet Union of committing and continuing an international crime against the Baltic States of Estonia, Latvia, and Lithuania;

(2) We demand that the Government of the Soviet Union withdraw its military and political occupational forces from the Baltic States;

(3) We appeal to the Government of the United States to strengthen its foreign policy as to the Soviet Union and world communism as well;

(4) We request the Government of the United States to undertake all necessary and appropriate ways and means to speed up the long delayed liberation of the Baltic States as well as the other captive nations.

God save Estonia, Latvia and Lithuania.

I Pledge Allegiance

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. GIAIMO. Mr. Speaker, section 1001(f) of the National Defense Education Act requires students who receive loans under the statute to sign an affidavit disclaiming subversive intentions. I firmly believe that the national distrust implicit in this singling out of the academic community has no rational basis and remains as an unwarranted reflection upon the parents and teachers of the students who apply for such benefits.

The utter futility of such affidavits has been widely recognized and, indeed, was recognized by Congress last year when it repealed a similar requirement in the Labor-Management Relations Act.

I wish to call the attention of this House to an editorial that appeared in the Meriden Record, of Meriden, Conn., on June 25, 1960. It is simple, direct, straight from the shoulder and worthy of consideration by this body. Therefore, I ask that this editorial be inserted into the RECORD at this point:

I PLEDGE ALLEGIANCE

The controversial "loyalty oath" requirement for students who benefit from the scholarship provisions of the National Defense Act is moving toward repeal, at least in its more objectionable part. The requirement that had students in many of the Nation's leading colleges and universities protesting and threatening boycott of the program has been deleted by the Senate and is now awaiting action by the House. If the Representatives agree with their colleagues in the upper House, an end will be written to one of the sillier attempts of Congress to enforce paper loyalty.

The act as it still stands requires students who qualify through need for the scholarships to take what has been labeled the "loyalty oath." This consists of two parts, one an oath of allegiance to the United States and the other an affidavit disclaiming subversive intentions. Nobody objected overly much to the pledge of allegiance; after all, that goes on in most every schoolroom across the Nation every morning, or should. But the disclaimer of subversive intentions was, it was claimed, a direct insult, and one which could not be tolerated by the scholastic community.

Repealed by the Senate is this subversive intentions bit, while the pledge of allegiance remains intact. This makes good sense; the pledge is a reminder, routine but by no means unhealthy, that any student, or any other member of the community for that matter, should be glad to renew. The disclaimer of subversive intentions, on the other hand, is worse than useless. Certainly it wouldn't stop any real subversive from his designs; such protestations are ineffective for such a purpose. But it would serve—and has served—to irritate out of all proportion those loyal but touchy intellectuals and students who feel that they and the educational system have been singled out for unfair question.

The whole fracas is one of those pieces of congressional stupidity that never should have happened. The House should concur quickly with the Senate action so that the whole unhappy business can be finished and forgotten.

Integration in Kentucky

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commencement address by Paul G. Blazer, Kentucky State College, Frankfort, Ky., May 29, 1960, chairman, executive and finance committees, Ashland Oil & Refining Co., Ashland, Ky.:

INTEGRATION IN KENTUCKY

There are very few places in this country where there is so little display, as in Kentucky, of those unfortunate attitudes which account for the existence of so-called minority groups. This is true as regards matters pertaining to religion as well as races. In Kentucky, bigotry and racial prejudice are confined largely to people of limited education. Kentucky leaders in education, religion, industry including labor, commerce, agriculture, and communications appear to be unusually free from such prejudices. In this favorable climate of understanding and mutual consideration, Kentucky, while quietly making such gratifying progress in integration, has been able to avoid the racial tensions which have marred both southern and northern communities. In view of the accomplishments to date, there would appear to be little likelihood here of the disturbances and accompanying bitterness which have wrought such disaster in other States.

Much of the credit for the progress in Kentucky must be given to those Negroes who have provided outstanding leadership for their people. This is especially true of their educational and religious leaders. I get the impression that, despite opposition, their views continue to have general acceptance among the rank and file of Kentucky Negroes. All of us must recognize the importance of these leaders retaining their positions of leadership in the face of radical influences imported principally from outside our commonwealth. We can help them most by enabling them to prove that their reasonable attitudes are meeting with success.

College students have figured extensively in both the international and national news pertaining to political and racial differences. Young people, under the influence of skilled propagandists and agitators, lend themselves easily to disorders which often are little more than the normal expression of the rebellion of youth against authority. Any agitation which can capitalize emotionally on that characteristic of young people has little difficulty in making the headlines, as we have witnessed in many foreign countries.

Prejudices involving various races exist in many areas of the United States but, looking ahead over the years, I believe all of us must concern ourselves principally with problems relating to the economic, political, and sociological adjustments of the American Negro. We can assume that the Negro population will continue to increase and that their fields of occupation will expand, accompanied by financial ability to live in better residential areas. Due to existing prejudices, these legitimate accomplishments and aspirations will cause continuing racial tensions.

There is no easy solution. The problem is a challenge to all of us. We can't just sweep the whole affair under the rug. We must avoid extremes, but we must make progress. There will be those who are too impatient for action; others will resist all efforts toward progress. Both kinds of extremists tend to defeat their own purposes.

I feel very strongly that all of us must work toward the attainment of racial equality in education and economic opportunity. To the extent that is accomplished, many of the other problems can be solved more easily. Within all races there exists class consciousness, which has its roots in disparities in educational and living standards. These disparities aggravate all other prejudices.

When various European nationalities were immigrating to this country in large numbers, they found it necessary to take lower paid jobs with resulting lower living standards. Many of us can recall when they were referred to disparagingly and accorded scant recognition. With their attainment of economic equality and educational development, those national origins have ceased to be significant. In much the same manner, the bitter prejudices against Orientals existing a generation or two ago on our west coast are largely disappearing.

Prior to the turn of the century, when the Jews were being persecuted in eastern Europe and coming to this country in such great numbers, there was extreme discrimination against them in this country. This has been almost obliterated as the grandchildren of those immigrants, who often were almost penniless and poorly educated, have now gained positions of leadership in education, finance, entertainment, and other fields of endeavor.

It is interesting to note that, down through the centuries, Hebrews, through their own choice, have avoided intermarriage and thus have retained their racial and religious identity. In spite of a mixture of racial and religious discrimination against them, they have maintained their racial pride and are solving their problems in a manner which well could be emulated by all minority groups. For example, I am told that certain country clubs, to which only Hebrews are eligible, probably are the most expensive and, from the standpoint of difficulty of admission, are the most exclusive in the country. These clubs, of themselves, are of little importance; I mention them only to illustrate that our Hebrew friends, through the establishment of their own social, cultural, and philanthropic organizations, are not content with endeavoring to emulate any other group. They have adopted their own high standards of accomplishment in order to give full expression to their remarkable talents. They are not limiting their goals by thinking only in terms of equality.

If, through the development of similar racial pride and a determination to maintain racial identity, the American Negroes can establish challenging goals of attainment which will permit full expression of their unusual talents in many fields, their

problems will be lessened and the fears of many people, as to certain Negro objectives, will prove to have had no substance. A positive program of that character would alleviate the frustrations which doubtless exist today on the part of many young Negroes.

I presume responsible Negro leaders recognize that the elimination of every social barrier would be tragic for all concerned. There is a widespread fear that complete social integration between the Negro and other races would mean, for all practical purposes, the assimilation and absorption of the other races into what is today referred to as the Negro race. Any marked development in that direction would result in violence and a disastrous conflict.

The often used words "racial equality" should be taken to mean equal human rights and particularly an equality of opportunity for educational, economic, and social advancement, using the word "social" in its broadest sociological meaning and not in a narrow sense. Unfortunately, certain commonly used phrases, and especially those pertaining to racial matters, are confusing because they are not clearly defined and have different shades of meanings to different people.

Viewed as a whole, and acknowledging instances to the contrary, the American Negroes are continuing to make tremendous strides. Only a 100 years ago they were regarded in the eyes of the law, and in practice, not as persons but as property to be disposed of at the will of the owners. Their competition as slave labor is reported to have depressed the standard of living of non-slave-owning white people in the South. Even after emancipation, much the same situation existed and, doubtless, some of the bitter feeling today in certain sections of the South reflects those early economic factors. Regardless of wishful thinking, old prejudices cannot be eradicated quickly; radical, coercive action only intensifies them and makes more difficult the attainment of legitimate objectives—objectives in which the substance must be regarded as more significant than the form.

In my opinion, the most urgent goal of the American Negroes should be to gain better and more widespread education for their young people. The availability and the quality of their education is far more important than whether it is obtained in schools that are segregated or integrated. I strongly support integrated education. If practiced beginning with the lower grades, it should be accomplished more easily. Long-range, such integration, in the absence of violence, should greatly lessen racial prejudice. In much of Kentucky the issue of integration in schools no longer exists.

Integration in the schools of Ashland, where I live, has been practiced progressively over a period of years without, so far as I know, a single unfortunate incident. Integration started from the first grade and is to be completed through all grades in 1962 when the Booker T. Washington Grade and High School will be abandoned. All Negro senior high school students now receive a part of their instruction at Ashland's central high school. Some of them are attaining outstanding scholastic records. One of the most highly regarded Negro teachers in Ashland is instructing white students principally. Much credit is due C. B. Nuckolls, principal of the Booker T. Washington school, who has contributed to the intelligent local leadership in which members of his race take pride. In fact, the entire community is highly pleased and proud of the success of the Ashland integration program which has been made possible by many years of friendly racial relations under good leadership.

Integration in education in Kentucky has been aided by the leading Kentucky newspapers. The most prominent Negro educators have supported the conservative program of progressive introduction. It is my impression that most Kentucky colleges have accepted integration in principle. It is being practiced extensively in the larger colleges. I believe this quiet, continuing accomplishment in our Kentucky schools will be duplicated in other fields of racial relations, provided the extremists do not gain more influence. Each race has its share of extremists, and it is in these extremists that the danger lies. Fortunately, unlike other States, integration has not become a partisan political issue in Kentucky.

Certain important labor organizations made a genuine contribution toward economic equality for Negroes when they voted approval of admission to their affiliated organizations on terms of equality. The implementation of that policy is making headway. Industry in Kentucky is moving cautiously in the same direction. Progress is determined by local sentiment of rank and file employees which is not the same in all geographical areas. I am confident that gradually Kentucky Negroes will be given positions of increasing responsibility. Education and outstanding individual achievement play an important part. It is less difficult to integrate a Negro scientist into a group of research workers than a young Negro woman into an office clerical position. School integration should improve the personal attitudes which influence employment discrimination. The personal attitudes to which I refer are usually inherent and largely beyond the control of the individual. People, when questioned regarding their prejudices, often say they do not know why they feel that way. Since it is principally an involuntary, subconscious prejudice, it can be altered only gradually. While usually the prejudice is dormant and scarcely evident, a minor incident caused by too rapid change can lead to widespread bitterness and thus destroy years of progress.

It has been said that, in the South, Negroes, as individuals, may be regarded with affection and esteem, even though they are not similarly regarded as a group, whereas, in the North, the situation is the reverse in both respects. I am uncertain as to the complete accuracy of that statement, but it probably has sufficient validity to support my personal opinion that racial problems and their solution vary widely in different areas; courses of action appropriate for one community may be inappropriate and highly damaging to racial relationships in other communities. Organizations working for racial equality often defeat their purpose by failure to recognize that fact. Generalizations in such a delicate, psychological field are dangerous. Personally, I believe the lessening of racial inequities can best be facilitated by a frank exchange of ideas at the local level in connection with a careful appraisal and recognition of the attitudes in the individual communities.

Pursuing that thought, I am confident that present community and individual attitudes in Kentucky, on the average, reflect greater understanding and are far more conciliatory than in the Deep South or in those areas in the North where are substantial Negro populations. We must make certain that we do not lose any of the ground we have gained. If we can avoid the introduction into Kentucky, from either the North or the South, of extreme attitudes which certainly have no place here, there will continue to be a lessening of individual prejudices. Just as the young people of our generation are much more tolerant than their parents, the next generation should have better mutual understanding. There will continue, however, to be many problems which must not be neglected and toward the solution of which all of us must proceed cautiously but constantly.

You young people who are now graduating from Kentucky State College are the chosen few. You will be faced with great responsibilities because of your greater opportunities. You should keep foremost in your minds the importance of personal achievement.

I urge each of you to develop your abilities to the utmost. If you should be one of those from your group who can emerge as an inspired Kentucky leader, comparable to Dr. Whitney Young, Dr. Rufus Atwood, Publisher Frank Stanley, Attorney Charles Anderson, Dr. Atwood Wilson, Mrs. Murray Walls, Dean Kathaline Carroll, or State Representative William Childress, you will contribute more to the advancement of your people in Kentucky than a dozen extremists who believe progress can be attained by arousing emotions and stirring up trouble.

I am aware of the unhappy events that your college has experienced recently which resulted in the destruction of your gymnasium. This points up what can happen when youth becomes misguided and I emphasize that, given the same ingredients, it could happen anywhere. The job of all of you now, administration, faculty, alumni, and friends, is to rid your minds of the sorrows of the past, and get along with stronger preparation for the future. For 74 years this college has served the youth of this State and it will continue to render even greater service in the future.

Our State is justified in replacing destroyed facilities and proceeding in orderly manner with other planned improvements. I have no doubt but that the college can arise out of the recent unfortunate situation even stronger and more serviceable than it ever was before, for it is out of hardship and adversity that man develops and grows strong.

You will be faced with the necessity of making many important decisions. In order to avoid mistakes, you will have to separate the important considerations from the unimportant. You must be guided only by the fundamentals which have substance and permanency. Your education, supported by good character, hard work, and confidence in yourself, should assure success.

I am sure you are aware that in order to gain equal recognition, you may have to do better than others. Often that is an additional challenge and not a disadvantage. More people fail because of lack of incentive to give their best than because of obstacles. Circumstances are sure to provide obstacles, but you must develop your own incentives and self-confidence. Remember strength and courage often come unexpectedly when they are most needed.

The necessity for building an independent social structure to accompany the anticipated rapid progress of Negroes in all fields of endeavor should provide an attractive challenge for you young graduates to whom we in Kentucky will look for the future leadership of your race.

Results of a Poll in Fifth Congressional District of Ohio

EXTENSION OF REMARKS

OF

HON. DELBERT L. LATTA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. LATTA. Mr. Speaker, recently I conducted a survey of my district on several issues before the Nation. In order to apprise the House of the thinking of the people of the Fifth Congres-

sional District of Ohio on these important matters, I am inserting the results of this poll in the RECORD.

The questions and the percentage of "yes" and "no" answers to each question given by the people of the district in the questionnaire are set forth below:

1. Should such an anticipated $4 billion surplus develop, do you favor a reduction in our national debt ($290 billion) before a tax reduction? Yes, 79 percent; no, 21 percent.

2. Do you favor legislation to permit the Federal Government to intervene in a labor dispute affecting the Nation's economy after the 80-day cooling-off period has expired? Yes, 78 percent; no, 22 percent.

3. Should labor unions be subject to the antitrust laws? Yes, 84 percent; no, 16 percent.

4. Do you favor an increase in postal rates to put the Post Office Department on a self-supporting basis? Yes, 57 percent; no, 43 percent.

5. Do you favor an additional increase in your social security tax to cover hospitalization and surgical benefits for the aged? Yes, 36 percent; no, 64 percent.

6. Should the income limitations be removed from our social security laws? Yes, 44 percent; no, 56 percent.

7. Do you favor repeal of the constitutional amendment limiting the Presidency to two terms? Yes, 29 percent; no, 71 percent.

8. Should the benefits of the GI bill be made available to our peacetimes servicemen and women? Yes, 39 percent; no, 61 percent.

9. Should the income limitations be removed from our veterans' pension laws? Yes, 38 percent; no, 62 percent.

10. Do you favor the Senate-passed bill to provide Federal aid for school construction and teachers' salaries? Yes, 36 percent; no, 64 percent.

11. Do you favor President Eisenhower's use of "personal diplomacy" in an attempt to settle world problems? Yes, 75 percent; no, 25 percent.

Communications Act Amendments, 1960

SPEECH
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1898) to amend the Communications Act of 1934 with respect to procedure in obtaining a license and for rehearings under such act.

Mr. ANFUSO. Mr. Chairman, I should like to tell the gentleman that, in my opinion, this is a worthwhile measure and I believe that it deserves the unanimous support of the House. It is like voting against sin or against crime.

All of us well remember the hearings conducted by the Special Subcommittee on Legislative Oversight, under the chairmanship of the distinguished gentleman from Arkansas [Mr. HARRIS], last year and also this year, when the abuses involving payoffs or payola were uncovered. I want to commend the committee for bringing these abuses out into the light and for suggesting the necessary corrections.

It seems to me that the broadcasting industry, and television in particular, is still not fully aware how much harm it has done to itself by these abuses. It will take years before its prestige and honor is reestablished in the public eye. People have lost confidence in television, regard it with cynicism, and in numerous instances have learned to ignore it. The American public does not like when it is so taken for granted and its trust abused.

I regret this state of affairs. The broadcasting media should and could be a great source of public enlightment, entertainment, and education. It is still not too late to make them so. Abuses such as payola should be eliminated and outlawed for the benefit of the industry and the American people, and the sooner that is done the better it will be for all concerned. To permit this type of racketeering to exist only makes a laughing stock of our broadcasting industry in the eyes of our own people and visitors from abroad.

I may not be present for the final vote since I am leaving soon to keep a speaking engagement, but I should like to utilize this opportunity to state my views and to urge my colleagues for affirmative action on the bill.

Health Care of the Aged—Who Pays the Bill?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Harvard Business Review for January-February 1960. Written by Gaston V. Rimlinger, it presents an impartial discussion of the facts about health care of the aged:

HEALTH CARE OF THE AGED—WHO PAYS THE BILL?

(By Gaston V. Rimlinger)

(Business, already shouldering the costs of social security, sees another burden to be lifted, and needs to figure what its part should be.)

Are incomes from the best commercial health insurance policies adequate in view of the rising health costs of the aged?

Should health benefits for retired employees be kept on a voluntary basis, or made compulsory as part of the social security system?

Is it inevitable that industry will be called on to increase greatly its contributions either to private or governmental programs of health insurance for retired employees?

How can the employee best be encouraged to pay during his years of greatest productivity for the higher medical benefits he will need in his declining years?

While pensions plans and social security for aged citizens have become an accepted part of the American scene, payments under both private and Federal plans are insufficient to support retired persons when sickness strikes them. Coupled with the astronomical rise in ordinary living costs has been a skyrocketing of medical and hospital charges—expenses which retired citizens naturally incur more than any other group, simply because they are older.

The question of what can be done to provide adequate medical care for retired employees is a nagging problem to businessmen. The problems relative to caring for the aged extend far beyond what used to be considered the employment relationship; today employers know that they must find a satisfactory solution quickly. These questions no longer are the concern only of businessmen with a strong sense of social responsibility. They arise at the management-labor bargaining table and often form a considerable part of union contract demands. Speculations regularly take place in Congress relative to placing compulsory health insurance for the aged under the social security system, necessitating, of course, sizable regular contributions from all businesses. In one way or another, today's businessman will have to help provide for the health and well-being of his employees long after they have ended their active employment with his company.

Some of the most recalcitrant problems raised by the steadily mounting pressure to provide more adequate health protection for elderly citizens lie in the areas of underwriting and financing the costs of such protection. In examining the nature of these problems and in surveying proposed alternative solutions, this article seeks to offer a brief from which executives can decide for themselves the most efficient way to support health care for employees.

MULTIPLE PROBLEMS

Here are some of the major reasons why the search for a solution has assumed increased urgency:

1. The aged population, commonly understood to comprise those who are 65 years old or over, is increasing and will continue to increase both absolutely and relatively to the total population. The number of aged rose from just over 3 million in 1900 to over 15 million in 1959; the figure is expected to surpass 21 million by 1975. Of the total population, only 4 percent in 1900 were over 65 years old, but it is estimated that the figure will be around 10 percent by 1975.[1]

2. Accounting in part for this increase in population has been a scientific revolution in medicine in the last 50 years which has considerably lengthened the span of life and virtually eliminated some dreaded diseases. Although the most dramatic impact of these advances has been felt in the younger years (23 years, for example, have been added to life expectation at birth since 1900), recent developments in surgery and antibiotics are highly significant in the field of geriatrics.

3. The increased number of aged and the medical revolution, combined with a rising standard of living, have produced a wide spread concern with the problems of the aged. These forces engender, moreover, a significant transformation in our social attitudes toward the economic and medical welfare of our senior citizens. Never before have there been so many publications, conferences, research projects, and organizational experiments that deal with these problems.

4. The most immediate pressure intensifying the feeling that "something must be done quickly to meet the health cost of the aged" is the threat—or promise—of Federal compulsory health insurance within the framework of the social security program. The sections providing for such an insurance system were stricken from a bill (H.R. 9467) introduced by Congressman AIME FORAND in 1957. However, he introduced a new bill

Footnotes at end of speech.

(H.R. 4700) containing essentially the same health provision in the 86th Congress. Hearings held on this bill in July 1959 brought no further action, but it is expected that this election year will provide an excellent opportunity for the enactment of its major provisions.

5. Many aged persons are unable to finance their health expenses because their health costs are considerably higher than average while their incomes are considerably lower. Underneath this simple explanation lies a host of interrelated issues and implications relevant for a longrun solution of the financial problem.

UNABLE TO PAY

As a group, aged persons have low incomes which can be directly related to two general causes: (a) the growing gap between total-life and working-life spans, and (b) the inadequacy of existing pension arrangements. Retirement, forced or voluntary, and lack of employment (or employability) account for the fact that in 1958 only one in every five persons aged 65 or over had any income from employment compared to one in every four in 1948. Aged persons drawing benefits from social security and related public programs increased from 20.2 percent to 68.2 percent between 1948 and 1958. Despite a vast increase in public benefits, and notwithstanding similar improvements in private pensions, there were still 8.8 million aged persons in 1957 with cash incomes of less than $1,000.[2]

In addition to incurring higher average health costs than the population as a whole does, the aged must pay rising physician, hospital, and pharmaceutical charges out of incomes that are frequently fixed or nearly so.

The U.S. National Health Survey for 1957 to 1958 confirms earlier findings on the higher incidence of illness and disability among the aged. Bed-disability days and restricted-activity days per person were found to be over two times higher than for the entire population and about three times higher than for the 25- to 44-year age group. The number of days per 1,000 persons spent in short-stay hospitals (excluding such institutions as psychiatric and tuberculosis hospitals) was nearly twice as high for the aged as for the average of the population. The same group saw physicians 6.8 times per year per person against an average of 4.8 for all ages.[3]

The causal relation between illness and low income must be remembered too. Those aged persons who are in the work force lose over twice as many workdays per worker per year as the average of all workers—causing a significant drain on their incomes. Also, a low income status often implies inadequate housing and nutrition, as well as a lack of preventive care, all of which aggravate medical conditions and increase health expenses.

Employment opportunities, pensions, savings, and price stability are significant factors bearing on the aged's ability to pay for health protection and are, to a greater or lesser degree, subject to the joint or separate actions of management and labor. To assess the significance of these factors, however, we must have some idea of health costs and of available methods of meeting them. In this latter area management can and has made direct contributions to the solution of the aged's health cost problem, but current efforts are not commensurate with the scale of the task.

FOOTING THE BILL

In considering how health costs are financed, we shall disregard the significant amount of free care given elderly patients by their physicians and focus on actual charges. Disregarded, also, are unmet health needs, which can be quite substantial. A national survey conducted in 1953 under the auspices of the Health Information Foundation indicates that aged persons who incurred health expenses paid, on the average: $233, hospital bill; $74, physician; $42, medicine; and $61, other medical items (e.g., appliances, nurses).[4] A sample study of aged recipients of social security in 1957 shows that 6.6 percent of the beneficiary couple had medical expenses of $1,000 or more.[5]

How are these charges met? And what is the role of various agencies and organizations in meeting them? Comprehensive information on how payment is made for the health expenses of the aged is not readily available. moreover, the picture is continually changing. The safest generalizations that can be made are these: (1) health insurance so far plays only a minor role in defraying such medical charges, and (2) the vast majority of aged persons bear the financial burden of their health charges without assistance from either relations or welfare agencies.

According to the 1957 survey of social security beneficiaries, only 14.4 percent of married couples and 9.2 percent of unmarried beneficiaries had some of their medical costs met by insurance. Of the couples without insurance coverage, 85.5 percent were also without assistance for the payment of their medical bills from welfare agencies or relatives. Of the couples with insurance, 89.6 percent were without outside financial help; some of their health bills simply remained unpaid. Medical debts increased for 3.8 percent of the couples without insurance benefits and for 15.1 percent of the couples with insurance benefits.[6] (The latter group most likely had mainly hospital and surgical expenses which are relatively high, but for which insurance is more common.)

These data generally confirm the findings of a 1952 survey of aged persons in Rhode Island. Only about 10 percent of the Rhode Island aged incurring medical bills had insurance benefits; 11 percent had help from relatives and 8 percent from public assistance.[7]

EMPLOYEE BENEFITS

A cursory examination of how the health bills of the aged have been met in the recent past can easily lead to unduly pessimistic conclusions. The situation is more promising, at least for the future, especially if one focuses on efforts to deal with the issue.

But as far as management and organized labor are concerned, they have only begun to recognize the burden of health expenses on old and retired workers. The inclusion of benefits for retired workers and dependents in collectively bargained health plans is a recent development, and its extent is not fully documented.

A study by the Bureau of Labor Statistics of 300 health and welfare plans, covering 40 percent of all workers under such plans in late 1955, shows that 67 of them (covering 1,784,000 workers) extended hospital benefits to retired employees; and 58 (covering 1,745,000 workers) extended surgical benefits; and 35 plans (covering 1,491,000 workers) extended medical care benefits. Similar benefits were available to the dependents of the retired workers in about 80 percent of the cases.[8] This development is vastly important, but the great majority of the active workers under health and welfare plans still lose their protection on retirement. And among those who keep their benefits, slightly less than 25 percent suffer reductions in benefits on retirement.

From the financial viewpoint, the arrangement under these plans was less favorable for retired than for active workers. In less than one-half of the plans the employer covered the entire premium cost for the retired worker, and in only about one-third of the plans did he cover the entire premium cost for the retiree's dependents. In about one-fifth of the plans the employer shared the premium costs with workers.

It is important to note, however, that "although a substantial proportion of the plans required the retired worker to pay the entire cost of hospital, surgical, and medical benefits if he wished to continue coverage for himself and his dependents, the retired worker gained the advantage of group-rate participation which otherwise would not have been available to him."[9] In this manner, by allowing the retired employee to continue as a member of the group, the employer and active employees can make a significant contribution toward increasing the availability of insurance protection to their retired colleagues. The cost of insurance for each active member, of course, will have to reflect the shared higher expenses of the aged subscribers.

A word of caution must be entered against an increasingly widespread tendency to use statistics on the percentage of persons covered to mean the percentage of persons with adequate health protection.

Coverage usually does not mean that all expenses are covered. There remains great room for experimentation in this area, but progress is being made as far as can be concluded from the most recent information which seems to indicate that plans are gradually being liberalized as experience is accumulated. A 1958 digest by the Bureau of Labor Statistics of 100 collectively bargained health and insurance plans—admittedly not necessarily a representative sample—shows that 45 of the plans extend hospitalization, 40 extend surgical benefits, and 26 extend physician's benefits to retired workers.[10]

Employee health plans fall into the general category of voluntary insurance. The important question of what the role of such plans will be in the future depends on three factors: (1) the general effectiveness of voluntary insurance in providing health protection for aged people; (2) the accessibility of such insurance to individuals not covered by employee plans ("accessibility" includes not only the availability of appropriate policies but, as well, the ability of the retiree to pay for them); and (3) the availability of protection through governmental measures. The character of industry's future responsibility for the health care costs of the aged is determined to a large extent by the development of workable private versus public methods of insurance.

VOLUNTARY INSURANCE

According to recent estimates, about 40 percent of the group 65 years old and older throughout the country possess some form of medical, surgical, or hospitalization insurance. Taking hospitalization insurance alone, the New York Department of Insurance estimated that 65 percent of the State's senior citizens were without coverage in 1956. This does not mean, of course, that the remaining 35 percent were fully covered. although most people with hospitalization insurance also have surgical insurance.

Insurance against doctor bills not related to surgery is much less prevalent, however. These bills are of lesser importance on the average but by no means unimportant on a restricted budget. And, in this connection, it is worth noting that the more restricted the budget, the less likely is the possession of health insurance. The 1957 survey of aged social security beneficiaries shows that of the couples with incomes of $5,000 or over, 66.5 percent of the husbands and 70.1 percent of the wives possessed hospitalization insurance. For husbands and wives with a family income of less than $1,200, only about 20 percent had hospitalization insurance.[11]

In spite of the fact that the aged still represent the largest group not covered by health insurance, considerable progress has

---

Footnotes at end of speech.

been made in recent years. A comparison of the 1951 and 1957 surveys of aged social security beneficiaries shows that those with some health insurance rose from 23 percent to 43 percent in the 6-year interval. A large share of the credit for this remarkable progress is due the Blue Cross-Blue Shield plans. Of the estimated 6 million persons 65 years old or over with hospitalization insurance in late 1958, about 3½ million were covered by Blue Cross.[12]

Progress in voluntary insurance coverage depends not merely on ability to pay for it but also on the availability of insurance. Both factors are affected to some extent by company policies. An indication of the significance of the availability aspect is brought out by the fact that most of the aged members of both Blue Cross and Blue Shield enrolled originally at their place of work and continued their coverage after retirement.

The majority of the Blue Cross-Blue Shield plans offer continuation of benefits to members regardless of age, but most of them place an upper age limit on nongroup enrollment, which makes it impossible for an aged person independently to acquire insurance. Older people who are able to convert their previous group contract to an individual policy and those who are still able to acquire nongroup coverage often find, even under the Blue Cross-Blue Shield plans, that their rates are about 15 to 20 percent higher than those for group coverage. Blue Cross-Blue Shield plans have been liberalized in recent years, but some of them still restrict benefits for aged nongroup enrollees, especially for preexisting, chronic medical conditions.

Restrictions can be eliminated completely with group enrollment, a fact demonstrated by the Health Insurance Plan of Greater New York which insures against the full cost of comprehensive care, without loss of benefits for those who convert to individual contracts on retirement. Commenting on the New York plan in a recent HBR article, Edwin J. Grace cited the advantages of such comprehensive care, that is, care for the insured both in and out of the hospital. Such a plan of preventive medicine, Grace feels, will facilitate early diagnosis, effective medical treatment, and reduce unnecessary surgery and ensuing hospitalization.[13]

TOWARD FLEXIBILITY

In addition to these advances by nonprofit organizations, insurance companies have made efforts in recent years to provide more effective health insurance for the aged population. Since 1952 an increasing number of group policies with individual conversion features have been made available to employers. Younger persons are offered policies permitting coverage to more advanced or unlimited ages. Companies have begun to issue, as well, both group and individual insurance to older people.

Another new development, still in the experimental stage, but introduced by three major companies, is the issuance of individual policies which become paid up at age 65. Unfortunately, there are no figures available on the number of persons covered by these different commercial policies or on the actual amounts of benefits they provide. It should be remembered, however, that these are indemnity plans which pay fixed sums of money for specific illnesses, usually calculated to be somewhat less than expected cost.

Although the availability of commercial insurance for aged persons is definitely improving, restrictive practices should not be overlooked, since such practices can make insurance deceptive. The New York State Department of Insurance has reported that within the State in 1956 only about 22 percent of those covered by group health insurance contracts had the right of conversion to individual contracts at retirement or other termination of employment. Such conversions, furthermore, usually entailed substantially higher rates as well as a reduction of benefits. Its findings on individual policies are even more startling, for here only a "little more than 1 percent * * * are noncancelable or guaranteed renewable for life."[14] New York has been more concerned than most States with legislation prohibiting cancellations because of age or high health costs of the beneficiary. Information concerning the frequency of such cancellations and nonrenewals in the country at large is not available.

ROLE OF GOVERNMENT

Government at all levels is already paying a substantial share of the medical bills of the aged population. No attempt will be made to enumerate the governmental agencies concerned with providing or financing helath care. Similarly, contributions by philanthropic organizations cannot be examined. Note, however, that most of this care is available only to indigent and medically indigent groups (those who are self-supporting except for medical expenses), or to specific categories of individuals like aged war veterans, retired military personnel and their dependents, aged beneficiaries of workmen's compensation, and aged inmates of penal and certain long-stay health institutions.

Without minimizing the value of the services provided for these sepcial categories, the most important governmental medical assistance to the aged is for patients on relief, individuals who meet a needs test. Here progress also has been made in recent years, but lack of central information on local, county, and State activities makes it impossible to obtain a clear, up-to-date account of the situation.

Until 1950, Federal funds granted the States for old age assistance could not be used to make direct payments to suppliers of medical services, although the cost of such services could be included in computing the amount of the public assistance granted the recipient. An amendment to the Social Security Act in 1950 permitted States, under certain circumstances, to use Federal funds to make direct payments to suppliers of medical services, instead of giving the money to the needy person and letting him decide whether or not to pay his medical bills. This amendment gave more flexibility to the States, but its general significance was greatly limited because no additional Federal funds were provided and because medical assistance to the indigent in many States is mainly a local, not a State responsibility. More Federal money and more convenient methods of matching Federal and State funds were made available to the States by amendments to the Social Security Act in 1956 and 1958.

In spite of improvements, and belying the popular notion that in America the very poor as well as the very rich get the best medical care much remains to be done to furnish the needy with care comparable to that available to those who can afford to pay. This is one of the main conclusions reached by a comprehensive study of medical care for the needy, made in 1956 under the auspicies of the Bureau of Public Administration of the University of California. It notes that "except for 12 States, public medical care programs are limited, and the public welfare recipient who is ill must rely on the good will and free services of physicians and voluntary hospitals."[15]

THE ROAD AHEAD

This is a particularly appropriate time, in view of the still unsettled status of proposed financial measures, to look ahead, evaluate various alternatives, and try to anticipate the future role industry will play in this area.

There is little doubt that in the years to come employers will assume a greater share of the financial burden. During the last 10 years, developments in pension and benefit plans have laid the groundwork for this extension of fringe benefits. Many of the arguments advanced in support of pension plans can be applied to health plans for retired employees. Moreover, whether he does it alone or with his employer's assistance, it is most sensible for the individual to pay for the high health expenses in his later years of life when his income is highest, preferably during his most productive years.

There will always be some disagreement, as in the case of other benefit plans, over how much expense should be borne by the employee and how much by the employer. But this is not the crucial issue. The main controversy in recent years is whether health benefits for retired employees should be kept on a voluntary basis or made compulsory as a part of the social security system. In the latter case all employers would contribute to the aged's health expenses; under the voluntary system, management and labor retain a choice of how they will allocate the wage bill.

No attempt can be made here to deal with all aspects and implications of the complex question of voluntary versus compulsory insurance. But any answer must take into account the potentialities for success and the problems connected with either approach. It will be useful, therefore, to examine briefly the case for and against compulsory insurance under social security and the potentialities and problems inherent in the extension of voluntary insurance.

COMPULSORY INSURANCE

The 1959 version of the Forand bill, like its 1957 predecessor, provides aged old-age, survivors, and disability insurance beneficiaries with up to 60 days of free hospitalization a year, up to 120 days a year of combined free hospitalization and nursing home services, and full payment for the cost of surgical services. To finance these services the social security tax on both employers and workers would be raised one-fourth of 1 percent of taxable wages starting in 1960. The patient would retain free choice of physicians, hospital, or nursing home, and these would receive payments according to rates stipulated in agreements with the Secretary of Health, Education, and Welfare.

The program outlined by this bill is not just another amendment to the Social Security Act; it represents a development of major significance—evident from the strong reactions it has evoked. The American Medical Association has called it a revolutionary proposal and has declared its strong opposition to it. The American Hospital Association has been inclined to compromise: It feels that some Federal measure is necessary to relieve hospitals of serious financial strain, but finds the compulsory aspects of the Forand bill unsuitable. Others reported to be in opposition to it are the American Farm Bureau Federation, the National Retailers Federation, the U.S. Chamber of Commerce, the life and health insurance industries, and the National Association of Manufacturers. The AFL–CIO, on the other hand, is strongly in favor of the bill as an initial step toward more thorough coverage.

Aside from strong objections raised as a matter of principle by interested parties against any kind of compulsory health insurance, a number of cogent arguments have been advanced. The most weighty, in my opinion, is the danger that the lack of any provision for care outside of hospitals and nursing homes will further increase the bias, inherent in many of our present voluntary insurance arrangements, toward use of these facilities for illnesses that could be treated

Footnotes at end of speech.

more cheaply at home or in the doctor's office.

Another argument is that, viewing progress in voluntary coverage, the bill is a hasty and irrevocable measure which will undercut the possibility of a solution through voluntary efforts. Others are concerned about the longrun impossibility of limiting the amount and kind of protection provided—they see socialized medicine wedging in and fear that it will not be feasible to restrict the program to the aged once it is enacted. Some fear it will be impossible to predict and keep costs under control. Finally, there are many administrative problems that have unfavorable implications for good medical practice.

None of these arguments is entirely without foundation, and if the goal is a perfect system, the enactment of the bill will vindicate its critics. Whether its potential shortcomings are greater than the potential weaknesses of voluntary insurance is not mainly a matter of facts but of the values we attach to facts.

Assuming that we are willing to make whatever sacrifice is necessary to assure that adequate care is accessible to our seniors without undue financial hardship to them, then it is a matter of determining the suitability of voluntary measures to achieve this end. Those who argue most strongly in favor of the Forand bill center their case on the inability of voluntary methods to provide what we desire. A recent AFL–CIO press release argues that the best commercial policies now available are not nearly good enough. Nelson Cruikshank, the director of the AFL–CIO department of social security, gives essentially these arguments:

1. Commercial policies are expensive and their cost has to be borne by the older persons alone.

2. Aged couples have to face these costs at a time of rapidly declining ability to pay.

3. The vast bulk of health expenditures are not covered by the available indemnity policies, despite their cost.

4. The policies lapse if the holder forgets to submit his premium within a stated period.

5. There is no protection against Statewide premium increases in fees or against cancellation of a plan.[16]

POTENTIAL OF VOLUNTARY PLANS

Some of the foregoing weaknesses apply mainly to commercial indemnity health insurance purchased by aged persons. What are the promises of company health plans for retired workers, paid-up-at-65 commercial or nonprofit plans, or special nonprofit plan policies to be purchased after retirement?

Company health plans cannot hope to cover more than a fraction of the aged population. Moreover, the great majority of these plans provide only limited protection against health care expenses. Most of these plans have ceilings on covered expenses, not only to reduce the cost, but because costs of comprehensive care are difficult to predict. In fact, the more comprehensive the coverage provided, the more unpredictable are costs. Companies and insurance underwriters are understandably reluctant to guarantee the cost of an unknown quantity of services far into the future—a future subject to changing price levels and advancing medical technology. They are on much safer ground if they limit their future commitments to specified maximum figures. Even then, companies have an additional interest either in not hiring a worker past his fifties or in not including him under the plan.

Considerable extension of coverage might be possible by allowing more retired workers continued participation in the group plan of the active workers at their own expense. So far, experience with this approach has not been promising. For instance, only a small percentage of those with conversion privileges under the Health Insurance Plan of Greater New York choose to continue their coverage, even though individual premium rates are only slightly higher than group rates. Many more, undoubtedly, could afford it. There is a serious need for educating older workers to be fully aware of their insurance needs.

ALTERNATE SOLUTION

The outlook for voluntary, reasonably comprehensive coverage other than company health plans is not too encouraging. The insurance industry suggested a paid-up-at-65 indemnity insurance, but it presents difficult underwriting problems. Actuarial experience will have to accumulate before the extent of feasible coverage can be determined. Even more than company health plans, this kind of policy has to limit the range of benefits in favor of cost predictability, at least for the time being. And, unless a person purchases this kind of policy early in life, it necessarily would be expensive. This is not an argument against the policy, but against its immediate significance even as a limited solution to the problem of the aged.

From the medical profession have come several interesting suggestions regarding the adaptation of Blue Cross-Blue Shield to the requirements of the aged population. One of these, the paid-up-at-65 Blue Cross-Blue Shield plan, has not received much encouragement from those responsible for its management. The major objections again center on the problem of longrun cost predictability, on the additional problem of financial management created by the necessity of accumulating large reserves, and on the problem of adverse selectivity.

Blue Cross-Blue Shield are service plans and are based not on individual experience rating but on community rates. This means that the high costs of care for the aged members would raise rates somewhat for all members of a given group, and very heavy aged membership could make participation unattractive for healthy young people, who might be able to find cheaper coverage elsewhere. Blue Cross-Blue Shield would risk having an excessively high number of expensive members.

Distributing the costs over the productive years is not the only method of lessening the financial burden in the later years of life. An alternative approach, reported in "Medical Economics," [17] involves a special Blue Shield contract for aged persons at substantially reduced rates. To make such contracts feasible, participating physicians agree to provide care for the aged at fees that are said to average about 40 percent of ordinary charges. Already in effect in Iowa and under discussion in a number of other States, this plan is not without serious problems and objections. Opponents point to the danger of setting a pattern of very low rates for special groups and to the difficult position for doctors having a predominately aged clientele. It is pointed out, also, that hospitalization, the major expense, could not be adapted to this plan.

CONCLUSION

The debate on the health care problem of our senior citizens has reached the point where important, far-reaching decisions are inevitable. On all sides the access to adequate medical care for the aged, as for the rest of our society, has come to be recognized as some kind of basic right akin to the right to elementary education. Financing the aged's care is only one of a number of difficult problems in this issue, but one which is of particular importance to industry and labor. Its importance is seen most clearly when the problem is considered in terms of the two basic ways of allocating the health costs: either when they arise in the later years of life, or over the productive life cycle. Experience amply demonstrates the undesirable consequences of attempting to meet the costs when they arise. Frequent consequences are financial hardship, unmet health needs, and/or the need to rely on public or private charity.

In spite of the great difficulties of predicting the costs of health care at some date far into the future, measures must be taken to distribute these costs over the productive life cycle of the individual. It seems inevitable that industry will be called on to increase greatly its share of this financial burden facing the individual. Most likely, the increased contribution will take the forms of both expansion of company health plans and extension to retirees, and of increased payroll taxes to provide for health benefits under social security. Notwithstanding the considerable technical problems of providing hospitalization and surgical benefits under social security, the very difficulty of cost prediction itself, as well as the essentiality of these benefits, would seem to recommend the social insurance method.

But this does not eliminate the role of employee plans and individual policies. Even if hospitalization and surgical services are provided under social security, there will still remain a need—to provide protection for nonsurgical doctor bills. In this field company health plans and individual policies would be likely to continue as an essential supplement to the social security provisions, in a manner similar to the supplementation furnished by company pensions and individual annuities to the income from the Federal old-age, survivors, and disability insurance benefits programs.[18]

With conscious effort on the part of industry, labor, and an enlightened public, the task of providing for every citizen's health needs in his old age can be accomplished. We have the foundations for a comprehensive private-public insurance system; now we must build on that for completely adequate health care at a reasonable cost to all.

Mrs. Beatrice Majors Van Vleet Burns, of Hawaii

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. INOUYE. Mr. Speaker, one of the things we are most proud of in American history and in present American life is the pioneer spirit. Every one of us likes to feel that he has this spirit in one form or another.

Recently, Mr. Speaker, I have come across a most fascinating book concerned with this spirit. It is called "Hoofbeats of Destiny: The Story of the Pony Express." Its author is Robert West Howard, and it appears in paperback. This is at once a scholarly and vivid story of the pony express and of the men who founded it. The hero of this book is not Russell or Waddell—two of the men who ran the line—or even Wild Bill Cody. The hero of this book is the third man who really ran this line, and whose dream it really was that this line should exist. His name was Alexander Majors. By the men who rode the horses, who drove or rode with the wagons, who ran the relay stations and the telegraphs—by these men and by all who knew him he was called, in a spirit of love and respect, "Ol Gospel." Today still the name of Majors is a proud one in several parts of the country, especially in the State of Nebraska.

But, Mr. Speaker, it is another Majors whom this book brings to my mind and to whom it gives me an opportunity to pay tribute. This is a Majors who lives in Hawaii and who is known and loved by very many Members of this Congress. I speak of course of the wife of Hawaii's last Delegate to Congress, Mrs. John A. Burns, the former Beatrice Majors Van Vleet, who is a close descendant not simply in blood but in real spirit of the great man who founded the pony express.

Upon reading this book I kept thinking how much Mrs. Burns would enjoy reading it and how proud she would be. But even more than this I kept thinking how proud and how delighted old Colonel Majors would have been had he been alive today and had the pleasure of knowing Mrs. Burns. For the same qualities he displayed—his integrity, his wonderful human warmth and sense of humor, and his ability, in the face of adversity, to grow in these qualities rather than lose them—these are some of the same qualities that endear Mrs. Burns so deeply to everyone she meets and that make her regarded as the first lady of Hawaii in the hearts of so many Members of this Congress.

Mr. Speaker, I know that many Members of Congress will enjoy reading this book and that, upon reading it, they will think as I did of the woman for whom we have such warm affection and respect, Mrs. John A. Burns, Mrs. Beatrice Majors Burns, of Hawaii.

Opposition to H.R. 12419 by New Jersey Department of Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. AUCHINCLOSS. Mr. Speaker, recently on the Consent Calendar there appeared H.R. 12419, which was passed over without prejudice on June 24. This legislation provided that before a State could use pesticides or other chemicals designed for mass biological controls, they would have to consult with the Fish and Wildlife Service and with State wildlife agencies. Such legislation is opposed by the Department of Agriculture of the State of New Jersey. In order to explain the State's position in this matter, I am pleased to include in my remarks a letter, dated June 27, I received from the Honorable Phillip Alampi, Secretary of Agriculture of the State of New Jersey, which reads as follows:

STATE OF NEW JERSEY,
DEPARTMENT OF AGRICULTURE,
Trenton, N.J., June 27, 1960.

Hon. JAMES C. AUCHINCLOSS,
House of Representatives,
Washington, D.C.

MY DEAR MR. AUCHINCLOSS: I am sorry I have not had the opportunity to consult with you at length in regard to H.R. 12419.

The objection of this Department can be summarized in that the proposed legislation places primary emphasis upon the protection of fish and wildlife, thus subordinating other values vital to our national welfare, such as the production and marketing of food and fiber, the management of our forest resources, and the public health.

Whenever it has been necessary for this Department to engage in a large scale pest control program, with or without the cooperation of the Agricultural Research Service, we have never failed to consult with our Department of Conservation; specifically the Fish and Game Division.

You will, no doubt, find that the U.S. Departments of Agriculture and Health, Education, and Welfare have also consulted with the Fish and Wildlife Service of the Department of the Interior before initiating such programs.

In November 1954 an insect, known as the white-fringed beetle, capable of as much damage in this State as the Japanese beetle, was found in Vineland on 350 acres of agricultural land, involving 15 property owners. It was necessary for this Department, with the assistance of the Agricultural Research Service to treat that land in the spring of 1955 with a very heavy concentration of an insecticide. Our division of fish and game was consulted. A few birds were killed, but this damage was certainly not significant and if it had been necessary to treat that land with concentrated sulphuric acid in order to eradicate the beetle from this State, even that measure would have received serious consideration. The potential damage by the pest was such that almost any measure would have been justified for the welfare of the people of this State. The insect was eradicated and all of our people have benefited from that effort.

Surely, we are all aware of the current threat of eastern encephalitis in New Jersey. Some extraordinary measures might be necessary to protect the lives of our people. In spite of this priority based on human health, the fish and game interests of this State are represented on an interdepartmental committee which is planning and carrying out the 1960 program. The mosquito is the vector of this disease, and there is every indication at the present time that song birds provide an important reservoir of disease. We all hope that it might never be necessary to deliberately reduce the song bird population. But, if at some future date, such a measure would have to be taken, how could the Fish and Wildlife Service possibly give its blessing?

As I read report No. 1786 to accompany H.R. 12419, I am not convinced that the Fish and Wildlife Service favors the measure. The objections of the Departments of Health, Education, and Welfare and Agriculture are well outlined. We see no benefits to be gained by this legislation and are of the opinion that it could do much harm in the orderly development and execution of programs for the benefit of all the people.

Kindest regards.

Sincerely yours,

PHILLIP ALAMPI,
Secretary of Agriculture, State of New Jersey.

Spirit of Paderewski: Challenge to Our Times

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. DERWINSKI. Mr. Speaker, Saturday, June 25, in solemn ceremony at Arlington National Cemetery, Postmaster General Arthur E. Summerfield, delivered a memorial address commemorating the great achievements of Ignacy Jan Paderewski.

In these troublesome international periods it is well for us to dwell upon the accomplishments of a man such as Paderewski, who combined in his lifetime musical genius, deep devotion to

his native land and dedication to true world peace.

The great respect in which Paderewski is held is shown by the fact that he is one of the first to be honored in the champion of liberty commemorative stamps. Great credit is due the Vice President of the United States, the Honorable RICHARD M. NIXON, through whose guidance and appreciation of the contributions Paderewski made to the world, that this stamp was included in the series, and is to be issued October 8.

The Postmaster General's address follows:

THE SPIRIT OF PADEREWSKI: CHALLENGE TO OUR TIMES

This is a solemn moment for me, as I know it is for you.

I am deeply honored to join with you in paying tribute to Paderewski on this centennial commemoration of his birth.

I want to congratulate Mr. Witkowski, the Paderewski Foundation, and the Polish American Congress on organizing this moving tribute to a great statesman and a great musician.

My assignment today is not an easy one. It is difficult, if not impossible, to reflect, in words, the towering stature of this man who walked among us during my youth and early manhood.

It is, I believe, fitting that we commemorate this man in the Valhalla of American heroes. Here, with us, are his bodily remains. But today we note and rededicate ourselves to his spirit.

Only a handful of those whose home and citizenship were in other countries lie here. Yet, if there were only one from a foreign country, it would be appropriate that he be Paderewski.

Around him sleep scores of thousands of Americans who have given their lives to build, preserve, and strengthen our country.

They would understand the passion that ruled Paderewski throughout his life in his devotion to his native Poland.

He would understand those buried here, who gave their final measure of devotion to the principles of freedom and independence.

They rest together in good and honored company.

All Americans who feel a profound love for Poland, and recognize the great contributions of the Polish people to American freedom, understand her pride in claiming Paderewski as a son. But the Polish people would be the first to recognize that he belongs to more than Poland. Through his genius, he belongs also to America and to all mankind.

For Paderewski was a genius in the truest sense of the word, and he dedicated his genius to the highest ideals in the worlds of both art and statesmanship. Beyond that, Paderewski displayed a genuine nobility of person, and a truly Christian strength of character.

No one who has seen him can ever forget the majestic head and inspired face. Nor can we forget his dignity of carriage, which often seemed to make him grow twice as tall. It was his spirit, however, that shone through, and is remembered by all of us here today.

A longtime friend of Paderewski's once said of him: "He had boundless vitality. When he came into a room, the lights seemed to go up."

It was this inner light—this inner fire—that sustained him through his 81 years of life, and won him the admiration and reverence of all who prize the ideals for which he stood.

Few now living can remember the blaze of glory with which he burst on the American musical scene, that night in Carnegie Hall 69 years ago.

But no free peoples will ever forget the courage and devotion to country which he displayed so remarkably at the Paris Peace Conference in 1919, and as the first Prime Minister of a reborn, independent Poland.

Paderewski knew war, revolution, and tyranny even as an infant. As the merest child of 3, he saw his father cruelly thrust into prison by the Russian oppressors in revenge for his courage in aiding the Polish patriots who fought to throw off the yoke of their eastern conqueror.

One must believe that this horror-stricken little boy had burned in his heart a sight which laid the basis for his determination in the protection of his native land.

In this faith in his beloved Poland, he perservered to the last hours of his life—never faltering—just as he perservered in seeking perfection in his musical skills, his poetry, and his role as a composer.

But his guide throughout his life was love for man. If freedom and independence demanded war and revolution, he did not waver. But his genius was in building and creating, rather than in violence and destruction.

It was the mark of this great man that when he composed the war hymn for the Polish soldiers in World War I, the battle song carried the phrase, "My errand is not of hatred, but of love."

Similarly, in the period after World War I it might have been the easy path to distract the Polish people from their problems at home by turning to war against the Russians.

Paderewski's hatred for the Bolsheviks was no less than that of his countrymen, but he nevertheless chose the harder path of recreating a new Poland—of rebuilding its economy and its society.

Always he was guided by what he knew was in the best interests of the cause of freedom and independence of Poland.

Once Paderewski was asked who was the greater—the statesman or the artist. Without hesitation, he replied "the statesman," and then gave a definition of the term which applies so accurately to himself:

"I speak of that man of state whose courage, morality and wisdom open for humanity a greater path of destiny; of those rare spirits which, voicing the innermost hopes and visions of the race, mold the future and hold up the torch for life."

Truly, he was a statesman.

I have talked of Paderewski, the man; of some of his achievements and his principles.

But what were the motivating forces that made this man's life an object of admiration and respect for his own people, and for free people throughout the world? Wherein lay the inner spiritual strength that sustained him?

Like so many men of genius who contribute so much to mankind, Paderewski was possessed of a wide range of noble qualities of character. Yet, in reviewing his life, I am impressed by certain ones that stand out as an index to his success.

And I am struck also by the fact that these are characteristics that have marked the men of leadership throughout the ages.

Paderewski, early in life, developed to its fullest extent the stout moral pillar of self-discipline. Throughout his life this was reflected in a strength of character that was like a beacon light to others.

It supported him in the days of the Paris Peace Conference, when he sat in the councils of the victorious allies, and worked without ceasing to secure justice and freedom for the Polish people.

Paderewski had unwavering determination in the face of adversity. He dedicated himself unhesitatingly to a cause, no matter how hopeless it might seem at the time, or what hardships it may have inflicted on him.

Paderewski was not concerned with superficial prestige, with bluster or flamboyance. He was a gentleman to the core, in appearance, in manner, and in deed. It is clear from his life that he did not believe that erratic appearance marked the great musician, any more than he believed erratic behavior was the mark of the statesman.

Paderewski had an abiding and vital religious faith. It was a real, living presence in all the actions of his life.

When he returned to the concert stage at the unprecedented age of 62, he was fearful of what the passage of time had done to his skills. Told by his sister that he had never played better, Paderewski replied, simply, "Yes, God was with me all the time."

His sincere, lifelong religious belief won him the friendship of many distinguished churchmen of his own Catholic faith. It also won him the admiration and respect of millions from other faiths, who saw in Paderewski the living example of the Christian statesman, the Christian artist, and the Christian human being.

From the depths of his religious faith, no doubt, sprang Paderewski's quality of selflessness. He served his people always—himself never.

No one can forget the example he set for leaders of free countries when, in the fall of 1919, he voluntarily stepped out as Prime Minister of Poland.

Paderewski could easily have assumed control of his wartorn nation as director, but he felt that he had done his duty. He had served as the unifying force, as no other man could have done, to draw together the Polish people in their first, faltering steps toward existence as an independent nation.

When this was done, he turned the reins of power over to others. He sought not power, but a free native land.

Paderewski was possessed of an innate generosity. Less than 5 years after first visiting the United States he established an award to encourage American composers.

Throughout his life, he was a continuing benefactor of the young of his native Poland and of our own country. He encouraged them to develop their resources, in the study of music, language, and philosophy.

It was Paderewski's generosity with his own personal fortune, during and after World War I, in fact, which required his return to the concert stage in 1922.

But when I speak of his generosity, I do not mean only of his worldly goods. Far more important, Paderewski was generous with himself. Early in life, Paderewski coined a motto which he adopted as his own: "The Fatherland first, art afterward."

This was his real generosity. He gave of all his talents to the cause he felt most right and important.

We must remember that Paderewski made fortunes many times over through his skill as a musician. I would hazard the guess that he was the highest paid concert artist of his age.

Yet he hesitated not an instant before turning to the service of his country when he was needed. Without regret or fear, he turned his back on the piano and all the material riches it had earned for him.

He saw his duty as a man of genius, and directed his efforts toward helping his Polish people toward independence, and in guiding them into being a free, self-sustaining nation.

Again, when the conquerors from both East and West devastated Poland in 1939, Paderewski gave fully of himself. Almost 80 years old, he journeyed to France to accept the Presidency of the Polish Parliament in Exile, and once again fulfill his destiny to unify and lead the Polish people in their fight for freedom.

He was a sick man, and could well sense that shouldering this tremendous burden of political leadership could constitute his death warrant.

He nevertheless answered this call to duty, giving his physical powers, his heart and soul,

and his genius without sparing, in answer to the summons of country and conscience.

It is because of this lifelong service to his country and to the principles of freedom that I have directed the Post Office Department to issue special stamps in the "Champions of Liberty" series, honoring Paderewski.

The special stamps will be placed on sale for the first time on October 8, here in Washington, D.C.

This event will coincide with our remembrance of the great contributions made by the Revolutionary War hero, General Pulaski, to our American cause of independence.

Living in today's troubled world, we have an obligation to ourselves and our fellowman to study the qualities that made Paderewski great, and to emulate them in our own lives.

The free world cries out today for leaders and for citizens who will put moral principle first, and accept their responsibility to ward off the forces that threaten our way of life, whether external or internal.

We need today men of Paderewski's self-discipline and courage, who will not retreat before threats, who will not be bullied, who will be confident that a just cause is worthy of any sacrifice.

Too many national leaders, both then and today, would seek the easy way out, of compromise and appeasement.

Often we forget, what Paderewski knew so well, that justice is its own strength. It requires only men of character and courage to take a stand and emerge victorious.

Paderewski's dedication to a cause, surpassing any thought of himself or his own personal glory, is a trait of character so essential in these times of tension.

We have seen a recent example of this in the dignified and unselfish manner in which President Eisenhower has carried himself.

But too often we see the opposite—a man retreating and maneuvering, determined to protect not the cause for which he stands, but only himself.

As we remember this great man, today, we should rededicate ourselves to the abiding Christian faith that sustained him.

Finally, if there is but one lesson we can draw from Paderewski's life, and one element of character to which we pay tribute, it is the generosity of spirit which he displayed.

We live today in times that test the intellect, the moral courage and the dedication of every man.

Abroad, we face the blackest tyrannies—more ruthless and deadly than civilization has ever known.

In our own ranks, too often, we face self-interest, moral cowardice, and retreat.

If we are to survive—and survive we will—we must study well the example left to us by such giants as Paderewski.

We must learn and believe, as he did, that the phrase, "Right makes might," is not an old-fashioned, out-of-date slogan.

We must feel, as he felt, that devotion and dedication to a just cause cannot but succeed in time, if we carry ourselves with determination and confidence.

We must believe, as he did, that the freedom of mankind is the highest value, and pledge ourselves to do our utmost to achieve it.

Above all, we must draw the lesson from this great patriot that the first, and all-compelling duty of genius, is to his fellow man.

Let no one who has ever heard or seen Paderewski, has read about him, or has heard of his role in history, say: "My business is too important to take time for public affairs," or, "I am devoted to the world of arts and cannot be bothered with political life," or "I am too busy taking care of the home," or any of the other thousands of excuses we in public life hear every day from those who will not contribute their talents to the all-important mission of making this country, and every country in the world, a place in which man can live in freedom and dignity.

Late in life, Paderewski said: "The vision of a strong and independent Poland has always been the lodestar of my existence. Its realization is the great aim of my life."

Paderewski's vow was to his native land. We know from this heroic man's career that he would have taken the same vow to protect his fellow man, wherever oppressed and persecuted.

In respect for the immortal soul of the man who lies here with us, I urge that we take—each of us—this same solemn pledge—that we dedicate ourselves to pit all our talents, abilities, and energies, as he did, to achieving strength, freedom and independence for our fellow man, in whatever country he may live, or in what state of bondage he may now be.

With courage, with determination, and with the strength borne of confidence in the justness of our cause, we shall accomplish our mission.

With God's help, we shall go forward to the final victory, when every man can say with pride, "I am free."

The United States' Presence

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. WRIGHT. Mr. Speaker, it is not often, particularly in recent days, that an emotional expression of warmth and gratitude comes our way. It is one of the ironies of history that from our implacable intent to do good springs the most puzzling paradox of our society. People benefiting most from our generosity are sometimes those criticizing us most severely.

For this reason it was like a breath of clean, fresh air to read the moving remarks of Rev. P. Prudencio de Salvatierra, Chilean priest. Not since the people of a war-recovered Austria proclaimed their thanks and eternal indebtedness to the American taxpayer has our own sacrifice on behalf of others been so warmly received.

I urge us all to read the stirring remarks of the Chilean priest:

(Translated from El Diario Ilustrado, Santiago, Chile, June 7, 1960)

THE UNITED STATES PRESENCE

(By Rt. Rev. Prudencio de Salvatierra Capuchin)

(Translation by A. M. Swenson)

The world is aware of the power and the vast physical resources of the United States. In Chile, however, we now have tangible proof of the generous spirit of the United States. We have felt the heart beat of that nation, her compassion, her abnegation and her efficiency.

For us the hour of thanksgiving has come; the time has arrived to sing praises to that great people. Our voices, though broken by emotion, echo the gratitude of countless thousands of victims for the great nation to the north. Our dictionaries are inadequate in the light of U.S. generosity. Though we do not wish to ignore or minimize the important contributions of other sister nations, we do wish to express our thanks to the United States at this time.

From the moment that disaster struck, even while tremors subsisted, we could see the huge Globemasters approaching to render aid. These ships became intimate friends with our clouds and our mountains. Landing heavily on our uneven strips, they were unburdened of their cargo of hospitals, ambulances, tents, clothing in extraordinary quantities, foods and medicines, doctors and nuses. Those giants of the air seemed to carry inexhaustible supplies. From them, mountains of help were literally unloaded as they flew in and out of the disaster area.

Smiling young men, perhaps a bit disconcerted, thronged our streets in friendly groups. The simplicity which characterized them was that of people who seemingly have accomplished nothing extraordinary. Yet the applause, admiration, and gratitude followed these men wherever they went. They were uniformed young men. Some were officers who knew what they were about and yet breathed cordiality. Others were pilots, nurses. Among them could be seen weather-beaten faces, eyes fatigued by lack of sleep, the evidences of sore feet tired out by well-doing.

In the extensive area covered by the earthquakes, these American young men were angels of kindness, the friends of the suffering ones, of the desperate, the capable engineers of the urgent piece of work at hand.

They did not know our language. But they did not need to know it. There is a universal tongue, an Esperanto of love, which loosens grammatical bindings and does away with vocabulary limitations, a language which speaks directly to the eyes, to the blood, to the needy and the hundry. How well we all understood these young men. How well we translated their every move.

To be near one of these young Americans was a comfort. It imparted a sense of security. It was as a gift of Providence. They had brought everything and were ready to undertake anything, not excluding the most heroic of sacrifices. Where has the United States gotten that human potential, those fresh and manly souls, that eagerness and rapidity to be of service in a time of need? Have we not been told repeatedly that Yanqui imperialism lacked feeling? That Yanqui imperialism was only interested in enslaving and oppressing the nations of the world?

American friends, don't carry back to your homeland the bitter remembrance of some politicians nor the unjust and ironic headlines which appeared in some of our newspers. Forget them. Forgive them. You are above this vileness which has barked as you went by. The anguish of our people has touched your heart and you have come to this distant Chile to lend us your strong arm and open your bountiful hand.

What better song could we sing to your nation than to acknowledge and give thanks for her presence which stood for hope in these dark days and for her noble unselfishness?

Chile will not forget. Chile will never be able to forget these days and the part played by the United States amid the ruins and tears of people so crushed. In each Chilean heart there is a monument of appreciation erected to all of our friends.

Reservation-Style Operation Bootstrap

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the

CONGRESSIONAL RECORD three articles with relation to Operation Bootstrap, written by Helene C. Monberg and carried in the Daily Sentinel, Grand Junction, Colo. These articles are most factual and present the problems encountered in attempting to offer an inducement for industry to locate on Indian reservations.

After many years of living on an Indian reservation, working with Indians and with Indian problems, I am convinced that this is the only solution to the problem and I hope a program can be developed which will meet all objections and yet present a sufficient inducement that some industries may provide employment for the Indian people on their own reservation areas.

The articles are as follows:

[From the Grand Junction (Colo.) Daily Sentinel, June 16, 1960]

RESERVATION-STYLE OPERATION BOOTSTRAP GETS WIDESPREAD SUPPORT FROM INDIANS

WASHINGTON.—Operation Bootstrap, reservation style, legislation to bring industry to Indian Reservations, received enthusiastic support from dozens of Indian tribes at hearings held by the House Indian Affairs Subcommittee here this past week.

About 30 tribes as far east as Wisconsin, as far South as Mississippi and as far West as Arizona enthusiastically endorsed bills by Representatives E. Y. BERRY, Republican of South Dakota; DON SHORT, Republican of North Dakota, and ODIN LANGEN, Republican of Minnesota, designed to offer some opportunity for reservation Indians other than farming.

The Quechan Tribal Council of the Yuma, Ariz., Indian Reservation, put their support for the legislation in a tribal resolution as follows: "It has been demonstrated that industry has not been inclined to look to Indian Reservation areas for plant expansion even though there are large pools of employment on almost every reservation. It has been demonstrated in Puerto Rico and in many foreign countries that tax incentives have proved to be the inducement necessary to get industry interested in locating in these areas. Therefore, we firmly believe that Operation Bootstrap, reservation style is the answer to our problem by providing tax inducements to bring industry to Indian Reservations and to provide jobs for reservation Indians who otherwise would have no chance for employment."

BERRY, who lives on the Standing Rock Sioux territory in South Dakota, introduced his Operation Bootstrap, Indian style bill in 1959 after a visit to Puerto Rico in 1958, where he saw the Puerto Rican Operation Bootstrap program in operation. Congress in 1950 passed a bill giving Puerto Rico a Commonwealth status and exempting the island, once known as the poorhouse of the Caribbean, from U.S. individual and corporate income taxes, excises, estate and gift taxes and permitted it to retain proceeds from its customs duties. Then, with the inspired leadership of Gov. Luis Muñoz-Marín, Puerto Rico inaugurated its Bootstrap program under which 600 industries have located in Puerto Rico in the past decade. They are exempt from municipal, corporate, partnership and personal income taxes for 10 years; from taxes on dividends and profits for 7 years, and from taxes on property from 5 to 10 years.

The benefits under Puerto Rico's Operation Bootstrap has been far more than economic. Literacy rates have shot up. Life expectancy has been lengthened by 22 years. Death rates and infant mortality rates have been more than halved. Per capita income has increased from $121 to $480 annually, and now stands second only to oil-rich Venezuela in Latin America.

Using the Puerto Rican Bootstrap as his prototype, BERRY drafted a bill which contains the following features:

1. Indian tribes would be authorized to set up corporations which would build plants to sell or lease to industrial firms on a long-term basis, subject to the approval of the Secretary of Interior. Plant construction funds would come from tribal funds, or from Federal or commercial loans to the tribal corporations.

2. Firms which took over these plants on the reservation would be completely exempt from Federal, State and local taxes for 10 years.

3. They would be able to amortize their property eligible for depreciation on a 5-year schedule.

4. They would receive a deduction from any Federal tax for 5 years in an amount equal to three times the annual welfare payments paid to an Indian prior to his industrial employment.

5. They would receive Government aid in conducting on-the-job training for Indian employees.

Three days of hearings on the Berry-Short-Langen bills brought out the following advantages in such legislation:

1. It would give Indians an opportunity to make a living on their reservations by some means other than farming. BERRY testified that only about 13 percent of our entire population, Indian and non-Indian alike, is successful in farming and ranching.

2. It would enable Indians to stay on their reservations and still improve their standard of living. The Bulova Watch Co., which employs about 80 Chippewa Indians from the nearby Turtle Mountain Reservation in Rolla, N. Dak., and the Simpson Electric Co., which employs 100 Indians at a plant located on the Chippewa Indian Reservation at Lac du Flambeau, Wis., have found this to be so. At the Rolla plant most of the workers have replaced their shacks with modern homes, they have kept their homes up, and have generally bettered their home and living conditions, according to Father Hildebrand Elliott, whose parish is the Turtle Mountain Reservation.

3. It would permit reservation Indians to swap a relief check for a weekly pay check, as Berry puts it. Indian and non-Indian witnesses alike agreed that most reservation Indians who are on relief are sick and tired of a handout existence, and are willing and eager to work.

4. It would improve the morale of reservation Indians and cut down the crime rate. Without any chance for other than a mere subsistence existence, many Indians on reservations lapse into an outlook of utter hopelessness, the South Dakota Department of Public Welfare stated. Father Elliott said that if reservation Indians "were given work * * * they will have a higher degree of self-respect. They will not feel like beggars, and they will not act like beggars * * * receiving handouts." North Dakota officials credited a drop of almost 60 percent in juvenile delinquency on the Chippewa Reservation to the fact that most Indians are employed. Crime rates are also down there.

5. Indian workers make excellent workers when given the opportunity to work. Rolla reported that its Indian workers had shown high intelligence, finger dexterity, good eyesight, excellent muscular coordination and patience. Furthermore, their absentee and turnover rates are completely satisfactory and lower than the national average," reported Robert Schwebel, general manager of the Rolla plant.

[From the Grand Junction (Colo.) Daily Sentinel, June 17, 1960]

OPERATION BOOTSTRAP FINDS ROAD ROUGH IN BRINGING INDUSTRY TO RESERVATIONS

WASHINGTON.—House hearings on Operation Bootstrap, reservation style, legislation designed to bring industry to Indian reservations, brought out some serious roadblocks in accomplishing such a desirable objective.

Three days of hearings before the House Indian Affairs Subcommittee here this past week indicated that neither the administration nor many members of the committee believe it is a totally practical program.

The legislation is sponsored by Representatives E. Y. BERRY, Republican, of South Dakota, DON SHORT, Republican, of North Dakota, and ODIN LANGEN, Republican, of Minnesota. It would permit Indian tribes to set up corporations which would be able to use tribal funds and government loan programs to build industrial plants on their reservations, with the approval of the Secretary of Interior. Firms which took over the plants would receive substantial tax concessions for 10 years. The Government would provide on-the-job training for the Indian employees.

On the surface, the legislation appears to be so desirable that it would seem strange that the Government had not already put such a plan into effect. But it raises some major policy considerations. Among the most important are the following:

1. Would Operation Bootstrap become a means by which industries would take flight from areas where they are now operating to avoid taxes and high wages by setting up shop on Indian reservations where they would not have to pay taxes and could pay low non-union wages to Indian employees?

The Berry bill is patterned on the industrial Bootstrap Operation in Puerto Rico under which that Commonwealth has lured 600 industries to the island under tax concessions. New industry was not created in Puerto Rico. Industry merely shifted from the United States to Puerto Rico under the lure of cheaper labor, cheaper rent and land cost, plus the advantages of no Federal income tax.

2. Would Operation Bootstrap become just another long-range Indian subsidy? Representative WAYNE N. ASPINALL, Democratic, of Colorado, pointed out that any industry which moved to Indian reservations was likely to be motivated by the idea of making profits rather than by the idea of helping the Indian. He feared that once such a program got in operation, it could last 300 years, because Indians would try to keep open uneconomic plants that would not otherwise locate on Indian reservations.

3. Would Operation Bootstrap victimize Indian tribes by bringing in fly-by-night operations which would leave the reservation as soon as the tax incentives were lifted? There is no past experience to guide Congress in this regard, because so few industries are located on reservations. But testimony by Marvin J. Sonosky, an attorney representing several Dakota Indian tribes and the Shoshones of Wyoming, indicated that a South Dakota tribe had an unfortunate experience in this regard several years ago. A fly-by-night outfit put in a toy factory on the reservation, he said. The tribe put up a small sum of money in a subsidy. The Bureau of Indian Affairs paid for vocational training for the Indians to be employed and gave the factory a substantial subsidy. When the training was over, it just disappeared, Sonosky testified.

4. Would Operation Bootstrap result in discrimination? Representative JACK WESTLAND, Republican, of Washington, pointed out a problem it would raise in his district. He said, "I have an Indian reservation where Union Oil Co. is going to establish a refinery.

Just a mile or so away on non-Indian land Standard Oil Co. of California is going to build a refinery. Would you grant a tax exemption to Union, and not to Standard of California because one is on a reservation and the other is not?"

5. Would it overcome the general impression that Indians are not good workers? Robert W. Miller, of Public Relations Research Associates, Inc., who has made quite a study of the problem of industrial employment of Indians, told the committee that he had found the majority of industry is very leery of employing an Indian even when Indians are available for employment. Potential employers tend to regard an Indian as a drunkard, dishonest, worthless, and not to be trusted, Miller said. Indians who have been actually employed by industry generally have proved to be good workers, he pointed out.

6. Where would the leadership come from to make such a program a success? ASPINALL pointed out that, to the extent Puerto Rico's Operation Bootstrap has been successful, it has been due almost solely to the inspired leadership of Gov. Luis Muñoz-Marin, who made it possible and who has been able to carry it on in spite of handicaps. The Bureau of Indian Affairs has been unsuccessful in its efforts to move industry to border Indian areas, and no outstanding leader has emerged among the Indians themselves to spur on such a program.

7. Would it upset the socal pattern of Indian life? Both in the Rolla, N. Dak., plant which employs Indians and in the Puerto Rican Operation Bootstrap program many of the employees are not men but women. Father Hildebrand Elliott, whose parish is the Turtle Mountain Reservation on which the Rolla plant is located, said of this situation: "Nearly all women are working, but the men in the house, not having work, have to look after the family, if they are looked after.

"This has been the occasion sometimes of family disagreements. Although the natural order of things means that the man of the house should be the breadwinner, it is not totally bad because the women tend to save their money to improve the lot of their family."

[From the Grand Junction (Colo.) Daily Sentinel, June 23, 1960]

REWRITTEN BOOTSTRAP BILL WILL BE GIVEN IN NEXT CONGRESS

WASHINGTON.—Operation Bootstrap, reservation style, will return to Congress next year in a new legislative garb.

That's the word of Representative E. Y. BERRY, Republican, of South Dakota, author of the bill, following hearings on his controversial measure earlier this month before the House Interior Committee.

The bill is designed to bring industry to Indian reservations, and it has the enthusiastic support of about 30 tribes across the country. The bill as drafted by BERRY is obviously in need of redrafting and he knows it.

He said in an interview with the Sentinel: "The hearings were very useful because they pointed out some of the drawbacks in the bill. They laid the groundwork for action on such a program in the next Congress. I intend to rewrite the bill to make it as simple as possible, and to introduce the new bill draft the first day of next session.

"There is no question as to the need for a program to try to bring industry to Indian reservations and border areas. Relocation alone cannot do the job. With proper safeguarding, and under carefully controlled conditions, I believe that some industries would be ready, willing and able to locate on or near Indian reservations to take advantage of Indian skills," BERRY stated.

BERRY faces three major hurdles in redrafting his bill. He must redraft it so that it does not materially cut into tax revenues, thereby incurring the opposition of the Budget Bureau and the U.S. Treasury. He must not make it a bait for industry to take flight from other parts of the country; otherwise he will incur the opposition of New England and Middle Atlantic congressional delegations. And he must not make it a bait for industry to seek low-cost nonunion labor, thereby incurring the opposition of the labor unions. He must walk in a very thin line.

Meanwhile BERRY has continued to receive and to put in the CONGRESSIONAL RECORD editorials from all over the country in support of his bill. He put into the RECORD on June 1 an editorial from the Grand Junction Sentinel which stated that Operation Bootstrap was one of the few large-scale Indian legislative proposals presented to Congress in recent years that makes sense.

The Hustling Hustler

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. WRIGHT. Mr. Speaker, I am taking the liberty of asking the printing in the RECORD of an article which appears in the magazine Combat Crew, which is the official publication of the Strategic Air Command.

In the June 1960 issue of this publication appears an article by the commander of the 43d Bomber Wing concerning our first supersonic bomber, the B–58 Hustler.

Having had the privilege of flying in the Hustler at twice the speed of sound, I can personally attest that there is no more vibration or sense of stress on this piece of equipment at 1,400 miles an hour than one would expect in a fine automobile on a well-engineered highway at 60 miles an hour.

Colonel Johnson, the author of the article, is an ace pilot who distinguished himself in World War II and Korea and his observations should be encouraging to all of us concerning this most modern and most sophisticated weapons system in our SAC arsenal.

The article follows:

THE HUSTLING HUSTLER

(By Col. James K. Johnson, commander, 43d BW, Carswell AFB)

"Canopies closed; second station seal the canopies."

"Roger, canopies sealed."

"Pilot to ground, stand by to start engines."

"Roger, sir, ground crew standing by; clear to start No. 2."

Not long ago I went through such a procedure on my first B–58 ride. I was naturally enthused about the prospect, although when I received my assignment to command the first B–58 tactical and training unit in SAC, I had viewed it with mixed emotions. As a pilot I was anxious for the opportunity to fly SAC's first supersonic bomber at twice the speed of sound, as my fighter background had given me a taste for speed and maneuverability. On the other hand, some tales were floating around about the revolutionary B–58 which, if true, would give any individual food for thought and consideration. Now that I'm in the B–58 program and checked out in the aircraft, I find that such tales are untrue and that the aircraft is everything a crew member desires. It is for that reason that I decided to write this article; and when Maj. "Skip" Young, editor of Combat Crew, offered me this space in the magazine, I jumped at the chance.

It is my firm conviction that the B–58 is an excellent aircraft and has a definite place in our combat inventory. Some of you reading this article will have the opportunity before long to join the B–58 program as formal aircrew instruction began in the middle of May 1960 at Carswell Air Force Base. Therefore, I shall attempt to give you a general overall view of the aircraft and its systems, cite the qualifications required for aircrews, and describe the training program.

The B–58 is a small aircraft as we have come to think of bombers. It is only 97 feet long, with a wing span of 57 feet. Its empty weight, without pod, of approximately 52,500 pounds rises sharply to gross better than 80 tons. It has the familiar delta wing and wasp waist fuselage of the F–102 and F–106. This, in turn, introduces several flight characteristics which are relatively new to most bomber pilots although now SOP for supersonic aircraft.

Like the B–47, the B–58 has a flight crew of three, but a defensive systems operator is used in lieu of a copilot. In addition to his ECM activities, the DSO operates the remote controlled tail turret and acts as a performance engineer. Crew members sit in tandem in separate compartments, entrance to which is gained by overhead canopies.

Four General Electric J–79–5 engines, each providing 10,000 pounds thrust at military, furnish the go power. This thrust rating per engine is increased to 15,600 pounds, with maximum afterburner under standard sea level static conditions.

In addition to the sleek design and the 60° sweptback delta wing, the most noticeable feature of the aircraft is the externally attached pod. This free-fall bomb pod is carried on pneumatically actuated hooks beneath the fuselage of the aircraft. The pod is designed to carry a warhead and has the added capability of containing fuel to supplement the aircraft's normal fuel supply. When released over the target, the 57-foot pod follows a natural ballistic trajectory. One of the prime purposes of the external pod is to avoid the necessity of providing internal fuel and weapons storage facilities which must be carried home as empty volume to the detriment of supersonic performance.

The first thing that will strike you old bomber pros when you inspect the cockpit is the absence of a control wheel. In its place you will find a stick. Remember those days? The four throttles fit comfortably in the left hand and the rest of the instruments and controls have been logically placed and are easily accessible. All instrument and control panels have been angled to face the pilot. Another feature borrowed from the fighters is the caution and warning panel. In case of specific malfunctions, a yellow or red master lamp will glow on the pilot's front instrument panel. A separate panel at the pilot's right side will illuminate, highlighting the specific malfunction such as battery discharging or aft pump 10. The red or yellow color of the lamp indicates the seriousness of the malfunction.

The flight characteristics are excellent, and response to controls is positive and instantaneous. An excellent feature associated with the flight-control system is the autopilot. The majority of us are familiar with autopilots but usually think of them as an aid to the pilot on long hauls to assist him in

maintaining constant headings and altitudes. Attitude, however, is the basic mode of this autopilot system and is in effect at any time the system is engaged. Therefore, the autopilot may be engaged with the airplane in any desired pitch or roll attitude within the limits of the reference table gyros, and that attitude will then be maintained. A variety of other modes of operation are available, including speed, altitude, heading, and approach.

A unique feature of the Hustler is known as control stick steering. A trigger switch on the control stick grip deactivities the aileron and elevator autopilot servos, allowing the pilot to manually reposition the aircraft without removing his hand from the stick. Upon release of the trigger, the autopilot automatically resumes control, utilizing the new attitude selected as a basic reference.

Up to now I've been talking a great deal about the aircraft from a pilot's point of view. But the other crew members are just as enthusiastic as the pilot about the aircraft and its subsystems.

The navigator, or second station operator, will find that his station is quite comfortable. And unlike many aircraft he has flown in, this one is warm for all crew members, eliminating the constant arguments over who's got the heat—or the cooling, for in a supersonic aircraft cooling is equally important. Displayed immediately in front of the navigator are all the controls and indicators for his integrated navigation-bombing system, the AN/ASQ-42. This system consists of a Doppler radar set, electronic altimeter, astrotracker, computation and stabilization system (inertial), search radar, automatic ballistics computer, and a malfunction detection and switching system. The complete system can guide the aircraft over a great circle course to any desired destination without visual reference and with a minimum of radio-radar transmissions. The navigation mode is used during the entire mission except while on the actual bomb run. Automatic radar photography can be accomplished whenever the system search radar is not being used for navigator checks.

The primary navigation set is basically a Doppler inertial system, using an astrotracker for a standard heading reference. The position of the aircraft, together with destination and intermediate fix points, is cranked into visual counters in terms of specific latitude and longitude.

While the aircraft is en route, the course and position are continuously computed by a precise dead reckoning operation. Periodic search radar sighting may be made over known fixes to check the accuracy of the dead reckoning computations, allowing for en route adjustments. The aircraft attitude is sensed by the inertial elements while the altitude is obtained by a radio altimeter. All radiating equipment may be operated intermittently, if desired, or kept off for as long as 5 hours without seriously degrading the system accuracy. Transverse coordinate operation is provided for accurate polar navigation, and a map comparator screen, located adjacent to the search radarscope, displays radar map pictures for inflight comparison.

Another unique system is provided the navigator in the form of an automatic data-handling system which records pertinent flight information for in-flight reference and postflight evaluation. Known as the inflight printer, this system receives data from various sources throughout the aircraft and records the information on a paper tape. Such informtaion as time, present latitude and longtitude, ground track and speed, and "D" values (difference between barometric and radar altitudes) are automatically recorded as often as once a minute or upon demand.

The third station operator, or defensive systems operator, is similarly well equipped. The controls to his countermeasures equipment are located conveniently in front of him, as is the radarscope for the tail turret. As I mentioned before, the DSO is also the gunner and thus controls both active and passive defense capabilities. In addition to these duties, the DSO has assumed many other responsibilities involving his close coordination with the other crew members. He and the pilot work as a team through all checklist procedures and record all pertinent data on appropriate records. He is the performance engineer for the crew.

On the B–58 this function has become particularly important due to the vital necessity of maintaining precise CG locations. Fuel is stored in the wings, pod, and fuselage between the crew compartment and the tail turret. CG is maintained by transferring fuel from one tank to another, the same, as in most aircraft, and is normally controlled by an automatic system which senses the fuel weight in each tank. Due to the wide speed spectrum of the B–58 from subsonic to mach 2, it is necessary to move the CG considerably to maintain proper balance for various airspeeds. The fact that hundreds of miles of flight range can be lost through improper CG management emphasizes the requirement for rapid and precise fuel transfer. Although actual fuel transfer is the responsibility of the pilot, it is the duty of the DSO to monitor and advise him as to how much fuel is to be transferred and into which tanks.

One problem that has always been with us and is becoming more acute in the B–58 is proper interphone voice procedures. Each crew member must remember to speak slowly and distinctly in order to insure that immediate and proper understanding is made. Too many times we find that individual crew members do not fully comprehend what the other man is trying to say in time to take positive action within the short period allotted for the many functions in today's high speed airplanes. This failing is just as true of old hands as it is of brand new crew members.

Annex I to SAC Reg 51–19 spells out the individual requirements necessary to join the B–58 program. They are relatively high at the present time, although a large number of the personnel within SAC meet them.

A pilot must possess a minimum of 1,000 hours total jet flying time, of which 500 hours must have been flown since he was upgraded to aircraft commander status in a SAC multiengine bomber/recon jet aircraft, and he must have been an aircraft commander for at least 1 year on a SAC senior or select crew.

The navigator is required to have 500 hours in a SAC multiengine bomber/recon jet aircraft and must also have served for 1 year on a SAC senior or select crew.

The DSO must possess 200 hours in a SAC multiengine jet aircraft or be a qualified phase V capsule EWO officer.

The B–58 checkout training program follows the general rules of most aircrew programs in that it consists of three phases of training—academic, simulator, and flying.

The aircraft commander course is 60 training days in length, or approximately 3 calendar months. The first 30 days are devoted to academics, followed by 30 days of flight instruction. Flight simulator instruction for the pilot begins early during his academic training, and at least one-half of the missions will be completed prior to his first B–58 flight. The flight simulator assumes an even greater role in the training program than ever before, since the majority, if not all, of the B–58 flights for students are in a solo status.

For the first time in Air Force history a flight simulator rather than a system trainer is available for instruction of crew members other than the pilot. These flight simulators have the added capability of being electrically tied together to provide a crew mission trainer.

The TF–102, trainer version of the Convair delta wing fighter, is presently used as an airborne training vehicle. The individual pilot-student and his instructor will have an opportunity to fly together and practice the exaggerated nose-high takeoffs and landing of a delta wing aircraft, together with afterburner operations and supersonic flight. TB–58's are now being manufactured and the first is due for delivery in June. As the TB's become available, such training will be given in them rather than in the TF–102's.

The navigator and DSO each receive extensive training in their specialties. The navigator attends a 6-week prerequisite course on the bomb/nav system at Mather AFB prior to coming to Carswell. The DSO likewise attends a 6-week training course on his equipment, but in this case it is conducted at Keesler AFB. A 1-week training period for live gunnery fireout on the OQ range at Schilling AFB is planned in the near future. Both the navigator and DSO will receive 20 days of academic training at Carswell. Flight training for these crew members consists solely of B–58 sorties and will vary from six to eight missions dependent upon the availability of TB–58's for pilot instruction.

In these paragraphs I have attempted to describe the B–58 Hustler and the road that lies ahead for her crews. For those of you who are to come to the B–58 program, I hope that it will be a very short time before you, too, hear the words—"Canopies closed. Stand by to start engines."

Winning Essay in Contest Sponsored by Propeller Club

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. THOMPSON of Texas. Mr. Speaker, my distinguished colleague, and very warm friend, the Honorable THOR TOLLEFSON, recently addressed the Propeller Club of my hometown of Galveston, Tex.

There his attention was invited to an exceptionally fine essay which won a nationwide contest sponsored by the Propeller Club of the United States.

The winner was Miss Mimi Bender, of Galveston. The essay which won the award is very significant and shows a study and a grasp of our Merchant Marine which I wish were shared by every Member of Congress.

I commend it to each one of you and to the American public as part of your required reading.

[From the Galveston Tribune, May 28, 1960]

WINNING ESSAY IN CONTEST SPONSORED BY PROPELLER CLUB

Below is the essay which won for Miss Mimi Bender, daughter of Mr. and Mrs. Stacey Bender, a free cruise to the Mediterranean in a nationwide contest sponsored by the Propeller Club of the United States. Announcement of her achievement was made

at the Martime Day dinner Friday night in the Galvez Hotel.

She will sail from New Orleans on a ship of the Central Gulf Lines at a date yet to be determined.

Miss Bender has been accorded other honors as a student at Ball High which she entered as a freshman in 1956 the year she came here with her parents from Baltimore when her father was named director of trade development for Galveston Wharves.

She is president of the Pan American Forum, manager of Ball High a capella choir, treasurer of the Pep Club, and this year was chosen as one of the 20 students comprising the "Good Fellow" group. She is also a member of the National Honor Society.

Mimi was the founder of St. Mary's infirmary Junior Auxiliary, consisting of 35 girls, and is currently the president.

She plans to enter Christian University in the fall, specializing in nursing and education.

The subject of her winning essay is "How the American Merchant Marine Contributes to the Prosperity of the United States."

ESSAY BY MIMI BENDER

"Representing the circulatory system of our life's blood, the American Merchant Marine plays a vital role in serving the vast industrial system that is the foundation of the prosperity of our Nation.

"With four major coastlines comprising the longest seacoast of any nation in the world, and with serious domestic and world responsibilities, we must have a sound, progressive and continuous shipping policy in order to protect and foster our Nation's foreign commerce. America's shipping contributions to a flow of commerce are for the most part unseen except by those who live in seaport cities; however, although we may never actually see an American merchant vessel, our way of life and even our very lives may depend on it.

"The U.S. Merchant Marine totals about 3,000 ships, of which about 1,000 are privately owned and 2,000 are Government owned. As of January first of this year, only 939 merchant ships were actively in use. Half of those ships, roughly 450, are the liners that carry cargo in the U.S. foreign trades. Close to another 100 dry cargo ships offer liner service in what is called the domestic trades. The remainder of the U.S. merchant fleet is composed of ships that engage in tramp-type operations, such as tankers and bulk carriers. The average expense of operating an American cargo ship varies between $2,200 and $2,500; whereas a foreign-flag cargo vessel can operate on as little as $1,200 per day. The cost of construction and operation of vessels under our flag is far greater than any foreign flag because of the vast difference in living standards.

"Our dependency

"With less than 10 percent of the world's population, we use more than half of the world's rubber, manganese ore, iron ore, zinc, copper, and lead. For all these commodities we are dependent on foreign sources of supply for about 25 percent to 86 percent of our consumption. The automotive manufacturer needs some 208 products from 56 foreign countries to fabricate a modern vehicle. Our airplanes, diesel locomotives, tractors, agricultural and industrial machinery all have components imported-ocean borne.

"Agriculture, food processors, wholesale and retail outlets, domestic transportation, rail, barges, trucks, and ships, our pantry shelves—all are concerned with the availability of that versatile metal—tin. Think of the part the can opener plays in the average American home. Consuming about 85,000 tons of primary tin annually, America produces only 0.1 percent of the world's supply. Canada and Mexico produce a fraction; however, the bulk of raw tin comes from the mines of Bolivia and Asia. All by ocean carrier.

"Imports to increase

"All U.S. imports will be increasing much faster than U.S. exports during the next decade. The volume of our raw material imports will increase in direct proportion to our increased industrial expansion. An increase in all our imports will provide dollars overseas to finance our exports. At present the United States exports about 10 percent of its entire production.

"A quarter of our cotton production is worn in every corner of the earth; a third of our wheat and half our rice help fill empty stomachs of the hungry overseas; a quarter of our tobacco is smoked in foreign lands. The merchant fleet guarantees to U.S. industry a continuing flow of essential imported raw materials avoiding paralysis in our mills and factories. Unless we have sound basic laws relating to our shipping, we can't maintain a fine fleet of American-flag ships, and we can't overcome the competitive economic problems which are inherent in our higher standards of living.

"Economic leader

"Our Nation is the economic leader of the free world. The American merchant marine is the vital link that binds our Nation with all the free farflung places where American ideals for world cooperation need to be known and need to be understood. Unless we keep American ships on the seas in sufficient quantities, those peoples will not know ideologically, commercially, or culturally. Vice Adm. E. L. Cochrane has said, 'Our strength in world affairs is only as great as our maritime strength.'

"Historically, America has looked to its merchant marine in every military crisis. Government studies have emphasized the Nation's need for a strong merchant marine, capable of turning instantly to military service. In World War II if it had not been for the bridges of ships, our Government, our people, and our liberty would have gone down to ignominious defeat. Hot wars have been won by bridges of ships; cold wars can be prosecuted successfully in this same manner.

"Merchant marine goal

"Increased quantities of American merchandise moving in American ships is the goal sought by the merchant marine. A healthy flow of commerce, and a resultant strong economy are necessary to our Nation's welfare. American vessels on regular foreign trade routes are subsidized by the American taxpayer. But these same vessels pay their way, and in taxes returned to the Government, analyses, taking into account every phase of impact, have proven the operation to be virtually self-supporting.

"America needs to ply the trade lanes of the seven seas. Furthermore, America needs more and faster cargo ships. Our standard of living is operating against us when we build ships with higher priced labor and sail ships with high-priced seamen. But the need is great. We have assumed, willingly, the mantle of free world leadership, and it is our great responsibility to gird our loins with ships to provide economic independence, and a strong reservoir of trained manpower to build and run them should a greater need arise. Is our commercial economy directly paying part of the bill for maintenance of a strong merchant fleet? If our ships cost more to build than those of other nations, what is the cost of the built-in defense aspects to our foreign commerce? With the American merchant marine carrying only 15 percent of our Nation's foreign commerce, labor management and maritime technologists must collaborate in order that this essential phase of our national interest may prosper."

Effect of Importation of Shirts on the Domestic Economy

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. SHIPLEY. Mr. Speaker, the effects of imports of shirts on the economy of the United States is most serious, resulting in the millions of dollars' loss in local, State, and Federal taxes, an increase in unemployment and welfare costs, decrease in millions of yards of goods in the purchase of domestic textiles with much less raw cotton purchased from the growers. Southern Illinois is a wonderful place to live and industry has no small part in making this possible. Increased imports, particularly from Japan and other Asian countries, is of serious concern to our textile industry which should not be subjected to this unfair competition.

In the textile industry there is serious concern regarding increased imports, particularly from Japan and other Asian countries. It seems to me that there is adequate cause for alarm.

Approximately 5,775 persons in Illinois apparel and related products industry worked for firms engaged in the manufacture of men's and boys' furnishings in 1956. Imports into the United States of men's and boys' shirts and nightwear totaled $6.9 million in 1956. Last summer the Executive Board of the Amalgamated Clothing Workers of America reported that imports of shirts had increased eightfold since 1954 most of the increase coming from the Far East. This may sound like a small amount, but from March to September 1959 in the small sector of cotton shirts imports from Hong Kong increased sixfold. In February 1960 an estimate was made that such shirts were coming into the United States from Hong Kong alone at a rate of 30 million shirts a year. With Japan we have set a quota on imports of cotton shirts at a level about 1 million dozen a year. The segment of Hong Kong producers agreeable to a quota have demanded a figure higher than that of Japan. Present estimates indicate that the ratio of imports from Japan and Hong Kong equals 12 percent of U.S. production. Fears have been expressed that Japanese and Hong Kong quotas will be ineffective because other low-cost areas such as Formosa, Portugal, and Spain will immediately increase their exports to us. In 1958, 1.5 million dozen shirts were imported; the total for 1959 jumped to 2.41 million dozen.

Apparently we need a worldwide quota or some equalization of cost legislation to permit our shirt producers to compete with these low-cost foreign producers. The Clothing Workers' report I have cited above warned that "many thousands" of jobs in the textile industry are in jeopardy and I concur with their sentiment.

Imports are causing serious concern in our country. While exports increased only slightly less than the gross national product between 1950 and 1959, imports increased by 8 percentage points more than the increase in gross national product.

Dun's Review has recently completed a survey of the effects of imports on our economy. Both the members of their president's panel—representing 175 of the Nation's leading companies—and a random selection of 300 small manufacturers expect more serious competition from foreign imports in the next 5 years. Most of the panel members and the smaller companies polled believe that lower labor costs, less overhead, foreign government export subsidies and low ocean freight rates account for the difference in costs. Many trace it primarily to lower wage costs although there is diversity of opinion here. I am sorry to say that close to 40 percent of the presidents of large corporations on the panel reported that they plan to launch more foreign operations: licensing arrangements, new plants and expanded facilities abroad, joint operations with oversea manufacturers, and purchase of foreign concerns. I do not know how many of these are located in Illinois or if any are in my district, but I do know that this means the export of jobs from our borders and import competition. The smaller businesses must rely on increased efficiency, new products, automation, and greater production. The increase in imports of finished manufactures, which in 1950 constituted about 18 percent of total consumption imports, accounted for about 34 percent of import transactions in 1959. Together with semimanufactures they accounted for over half of U.S. imports by value. This is a grave portent for my congressional district and for the State of Illinois.

For all these reasons, I feel that concrete action should be taken immediately to alleviate such conditions.

Water Pollution

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. McGINLEY. Mr. Speaker, the State of Nebraska has passed cooperative legislation to implement the program to eliminate water pollution. They have carried on a very effective information service to many of the communities of the State who have in turn set up their own taxing schedules to raise the proportionate amount of local contribution for the improvement of sanitary facilities.

It is my pleasure to introduce a resolution that was adopted unanimously by the Nebraska Water Pollution Control Council at the June 10 meeting in Scottsbluff, Nebr.:

Whereas the Nebraska Water Pollution Control Council is gravely concerned that the development and use of the Nation's water resource be such as to serve the greatest good for the greatest number; and

Whereas there exists attitudes and policies in Federal agencies and in the Congress which discount important and essential values inherent in Federal water impoundment works because these values are of a nonreimbursable nature and/or classification; and

Whereas the development on these nonreimbursable values are the only direct benefits the great majority of American taxpayers can realize from Federal water impoundment works: Therefore be it

Resolved, That the Nebraska Water Pollution Control Council urges its congressional representation, the National Congress, and the several Federal agencies concerned to sponsor and support policies and legislation which will give nonreimbursable public values equal consideration, in both weight and financing, with reimbursable values in all Federal water impoundment works; and be it further

Resolved, That the council urges greater coordination between governmental agencies concerned with nonreimbursable as well as reimbursable values throughout the planning and development of these public works to the end that multiple use of the Nation's water resource may be truly achieved and that all the citizens who support these public works through taxation and otherwise may realize all public values inherent therein.

More Support for the Point 4 Youth Corps

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. REUSS. Mr. Speaker, the proposal to establish a point 4 Youth Corps to enable young Americans to participate in public and private technical assistance programs abroad at a soldier's pay continues to draw favorable comment and support from all parts of the Nation.

As part of my remarks today, I should like to offer for the RECORD two of the most recent examples of public interest in the program. First, I offer an article by George W. Oakes titled "Point 4 Youth Corps for United States," which appeared in the editorial section of the Washington Sunday Star on June 26, 1960. Following this article, I offer the text of the resolution favoring the point 4 Youth Corps offered by Frank Wallick and adopted by the Wisconsin State Democratic Convention, Sunday, June 26, 1960. I commend both to the attention of my colleagues:

[From the Washington Sunday Star, June 26, 1960]

POINT 4 YOUTH CORPS FOR UNITED STATES

(By George W. Oakes)

Our foreign aid program may be rejuvenated by a novel proposal written into the new law—a Point 4 Youth Corps.

Sensing the relatively unexplored opportunity for enthusiastic Americans just out of college to participate in the economic aid program and the potential contribution they could make abroad, Representative REUSS, Democrat of Wisconsin, sponsored the innovation in the recently signed mutual security law. A corps of several thousand young Americans are envisioned to serve voluntarily at a soldier's pay in public and private technical aid missions in the underdeveloped countries. The President is to select a university or nongovernmental research group to make specific recommendations for the formation of the Youth Corps. Most of the funds for this study will come from private foundations, with $10,000 from the Government if Congress passes the appropriation later.

Many critics of the foreign aid program have pointed to its excessive emphasis on military aid—guns, tanks and superhighways—or the "militarism-encased-in-concrete approach." Others have publicized the impact of poorly selected personnel overseas on the people we are trying to help.

Encouraged by the successful experience of private organizations using young people in underdeveloped areas, Mr. REUSS believes that more trained young Americans actually out in the field, teaching modern farming methods, operating malaria control, maternity and child-care programs, setting up rural schools, and helping in village development projects like elementary sanitation and water supply, can prove to the peoples of Asia and Africa that the United States is genuinely interested primarily in their welfare and not merely in our defense.

EXPERIMENTAL FARM

For example, two men of International Voluntary Services, a church organization interested in technical aid programs abroad, operated a 33-acre experimental farm in Egypt under an International Cooperation Administration contract so well that, after the Suez crisis blew over, the Egyptian Government not only requested the men to return but asked for more.

Also, the House Foreign Affairs Subcommittee, after criticizing many aspects of the aid program in Vietnam, highly praised the experimental station set up by young American graduates of agricultural colleges. Living in quonset huts in the hill country, these workers taught the natives new planting methods and the best use of 5 acres of land and a water buffalo they had been given. The committee report said "this kind of program is helping the little people to help themselves."

When in Cambodia, Mr. REUSS met a team of four young American schoolteachers—a young Negro man from Chicago, an Italian girl from Brooklyn, and two Southern Baptists. They were going from village to village organizing village schools and were given a most appreciative welcome by the illiterate natives.

The plan for the new Youth Corps is to attract college students—both men and women—particularly those specializing in agriculture, education, public health, and public administration, for a 2-year tour of duty. On graduation they would be given a 3- to 6-month course of specialized instruction, stressing languages and technical training. There is a possibility that these volunteers would be credited with the usual period of military service, as has been done for those participating in the International Voluntary Services program.

PAY LIKE MILITARY

Each volunteer would be paid on a modest scale of compensation, perhaps $60 a month in addition to expenses. Selection would be on the basis of enthusiasm for such grassroots jobs and way of living, plus the ability to work successfully with ordinary people in the underdeveloped areas. At first the aim would be to recruit about 1,000 in the

next 2 or 3 years, with a goal of perhaps 10 times that number. There are now 6,000 Americans abroad engaged in the foreign aid program under ICA. It is estimated that $50 million annually would send 10,000 Youth Corps members into the field.

The State Department has been skeptical about the practicality of the plan, largely because it may involve new administrative problems in addition to its present ones. However, foreign aid officials believe that a Youth Corps could be integrated into the existing operation possibly by placing it under semiprivate control. For example, contracts might be made with universities specializing in these fields to choose the candidates and even to operate the program with Government administrative support. The young people would be supervised by competent older administrators and technicians now serving in the economic aid program.

Nevertheless, there may well be a problem of fitting recent college graduates into the economic aid program. For one thing ICA policy has been to use nationals of the country for some of the tasks which the Youth Corps would perform. Also, many underdeveloped countries have urged the ICA to send high-ranking and experienced men from university faculties in the United States. In fact, some of the most successful university-directed programs in the underdeveloped areas have not included those below the rank of associate professor.

STUDENTS ENTHUSIASTIC

College students seem enthusiastic about participating in frontier living overseas. More than 400 students at Lehigh University have sent Mr. REUSS a petition stating their willingness to serve. The United States National Student Association, representing some 1,300,000 students in 375 colleges and universities, is mobilizing support for the Youth Corps idea. In Washington, Dean Ernest S. Griffith of American University's School of International Service believes he will have 10 to 20 candidates available for the Corps when the school reaches its full enrollment, especially in Africa, where youth is an advantage in dealing with the natives.

Quite a number of outstanding college graduates are now applying for jobs in underdeveloped areas. For example, Sam Bowles, son of Representative BOWLES, Democrat of Connecticut, who recently graduated magna cum laude from Yale, will leave shortly to take a 2-year job as a history teacher in one of northern Nigeria's secondary schools.

RESOLUTION FAVORING POINT 4 YOUTH CORPS OFFERED BY FRANK WALLICK AND ADOPTED BY THE DEMOCRATIC PARTY OF WISCONSIN

Whereas America's young people are basically talented and idealistic;

Whereas America's oversea economic development programs often lack close identification with people;

Whereas Congress HENRY REUSS has introduced a study proposal for a point 4 Youth Corps and this program has been adopted as part of the Mutual Security Act of 1960;

Whereas New York Times correspondent James Reston writing on America's national purpose has said: "If the main war is the battle in the underdeveloped areas, Why not offer talented young men of draft age the option of using their brains in the civilian service in Indonesia, rather than sentencing them to Army kitchen police in Hoboken?": Be it therefore

Resolved, That the 1960 Wisconsin Democratic Party Convention in Milwaukee wholeheartedly approve of the Reuss-Neuberger point 4 Youth Corps as a practical way to harness America's idealism in the only war we seek—the war against illiteracy, disease, hunger, and poverty—among the uncommitted, emerging nations of the world.

The Condition of Man in the Age of Science

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. UDALL. Mr. Speaker, I would not relish the chance to read the thousands of commencement addresses which were delivered at our colleges and high schools this month. I have had the great pleasure of reading one such address, however, and its wisdom is so penetrating, yet simple, that it deserves a wider audience than it had at my alma mater, the University of Arizona, at Tucson on June 1.

The address was made by Dr. Joseph Wood Krutch, former professor of English and dramatic literature at Columbia University, and author of books on drama, literature, nature, and man. Two of Dr. Krutch's most recent books, "The Measure of Man" and "Human Nature and the Human Condition," indicates his continuing consideration of questions which have been the preoccupation of philosophers.

It was to such a question that Dr. Krutch addressed himself at the commencement in Tucson early this month—that in a world which can give money, fame, and power, the only security an individual can have is his own honor, and this he can only give himself. Dr. Krutch does not say that individual morality is lower today than in previous generations, but he is profoundly disturbed by our growing lack of shame in the usual moral indiscretions common to man. The burden of the Krutch address was that, without personal integrity and self-respect in the age of science, man—who may, or may not, survive the vast destructive power he has created—will almost certainly lose his humanity.

Mr. Speaker, perhaps we should ponder the words of this man of wisdom and goodwill, Dr. Joseph Wood Krutch, of Tucson, Ariz.:

When an old man has an opportunity to address a youthful group on so traditional an occasion as this it is certain that some platitudes will fall on impatient ears.

You will, then, not be surprised if I begin with some very familiar ones, my excuse being this: I would like, in the end to make one deduction from these platitudes which is not as commonly emphasized as I think it should be.

But the platitudes must come first. This, as you well know without being told as often as you are told, is an age of science. Also one in which science has come to mean more and more the techniques for acquiring power. We call it power to control the forces of nature, but we are becoming increasingly aware that it means also power over human life—including, unfortunately, power to destroy it on a large scale—on so large a scale that it may involve the destruction of ourselves as well as of our opponents.

In one way or another these platitudes will be the theme of a large proportion of the commencement addresses being delivered this week in hundreds, perhaps thousands, of schools and colleges. On the one hand, thousands of young men and women are being urged to devote themselves to science as the great need of our time and urged to do their part in making our Nation strong. At the same time, a probably lesser but still an immense number of young people are being warned of the dangers as well as the promises of technology and not a few are being urged to avoid an exclusive stress upon it. They are being told that philosophy, ethics, religion, and the arts are an essential part of the human being and that we neglect them at our peril.

Those who stress the dangers as well as the promises are not always querulous old men. Among those who sound a warning are some who have been most deeply involved in expanding science themselves. Here for instance, is a singularly brief, trenchant statement from a great atomic physicist, J. Robert Oppenheimer: "Nuclear weapons and all the machinery of war surrounding us now haunt our imaginations with an apocalyptic vision that could well become a terrible reality: the disappearance of man as a species from the surface of the earth. It is quite possible. But what is more probable, more immediate, and in my opinion equally terrifying, is the prospect that man will survive while losing his precious heritage, his civilization, and his very humanity."

Now what is this "humanity" which Mr. Oppenheimer is afraid we may lose? Is it simply poetry and music and art? Can we keep from losing it by insisting that all students, even in scientific institutions, take courses in the romantic poets and music appreciation? Well it is partly that and the proposed remedy is good as far as it goes—which isn't really very far.

In more general terms the issue is much larger. It has also, of course, something to do with our increasingly greater, our almost exclusive stress, upon wealth and power as the only things worth having, upon, for instance, our willingness to accept what we call a high standard of living as necessarily the equivalent of what philosophers used to call the good life; it is materialism as all this is somewhat platitudinously called. Insofar as we lose interest in things other than material goods we are at least becoming less like human beings of the past, and in that sense we are indeed losing our humanity.

But what I have in mind and want to talk about this evening is something which seems to me even more characteristically and exclusively human than arts, letters or an appreciation of nonmaterial goods. You may call this something by the dull platitudinous word "morals," though I should prefer to call it "the strong clear sense of good and evil as the most important realities of the human being when we contrast him with the animal or the machine."

If I say this I hear from you an almost audible protest. "You do not mean to imply," I can almost hear you exclaim, "that we are not today deeply concerned with morality." Surely ethical questions are among those of which our society is most deeply aware. Has any other age ever talked so much about "social justice"; ever professed so much concern for the submerged common man? Has any other ever appeared to take more seriously "human rights"—political and economic rights, the rights of racial minorities, the rights of colonial people, et cetera? Do we not acknowledge as no age before this ever did our responsibility for what we are calling for the first time "one world"? Isn't ours the great age of social conscience as obviously as it is the great age of science? And is not conscience at the very base of morality?

All this I readily grant. But I am also aware of a strange paradox. It is often said—and my observation leads me to believe it true—that this seemingly great growth in social morality has, oddly enough, taken place in a world where private morality, a sense of the supreme importance of purely personal honor, honesty, and integrity seems

to be disappearing. Beneficent and benevolent social institutions are administered by men who all too frequently turn out to be accepting "gifts" which are bribes more or less disguised. The world of popular entertainment is rocked by scandals; college students put on their honor cheat on examinations; and candidates for the Ph. D.—in social as well as in other studies—hire ghost writers to prepare their theses.

Again I seem to hear an objection. "But haven't all these things always been true? Is there really any evidence that personal dishonesty is more prevalent than it always was?" I do not know. Perhaps they are not actually more prevalent. What I do know is that there is an increasing tendency to accept and take for granted such personal dishonesty. The bureaucrat (and the disk-jockey) say, "Why, yes; I took presents but I assure you I made just decisions anyway." The college student caught cheating does not even blush. He shrugs his shoulders: "Everybody does it and besides I can't see that it really hurts anyone." Recently a reporter on a New York newspaper stopped six people on the street and asked them if they would consent to take part in a rigged television quiz for money. Five of the six said "Yes." Yet most of the five, like most of the college cheaters, would probably profess a strong "social consciousness." They may cheat but they vote for foreign aid and enlightened social measures.

Jonathon Swift once said: "I have never been surprised to find men wicked but I have often been surprised to find them not ashamed." And it is my conviction that though men may be no more wicked than they have always been they are less likely to be ashamed—which, by the way, they call being "realistic."

Why are they less ashamed? I think that the answer is to be found in the student's reply: "Everybody does it, and, besides, it doesn't really do any harm." Precisely the same thing was said in many newspapers about the TV scandals. And if you look at this so common pronouncement you will see what lies behind the breakdown of private morality as opposed to public; of personal honor as opposed to social consciousness. If everybody does it, it must be all right. Honest, moral, and decent mean only what is usual. This is not really a wicked world, because morality means mores and usual conduct is the only standard.

The second part of the defense, "It didn't really hurt anybody," is equally revealing. Didn't hurt anybody means didn't do that abstraction called society any harm. The harm it did the bribetaker and the cheater isn't important. It is purely personal. And personal as opposed to social decency doesn't count for much.

Sometimes I am inclined to blame sociology for this paradox. It has laid too exclusive a stress upon social morality and tended too often to define good and evil as merely the socially useful or its reverse.

I opened for instance, a widely used college textbook of psychology at the chapter headed "Morality." It is a very brief one, and in it I read: "We call a man moral when his actions are in accord with the laws and customs of his society." No qualification follows, no suggestion that a thing may be evil even though sanctioned by law and custom. Certainly no hint that under certain conditions a man should be called moral only when he refuses to do what a bad law permits or an evil custom of his society encourages.

If you accept this psychological concept of morality as no more than mores, then you are logically compelled to assume, for instance, that in Nazi Germany a man who persecuted the Jews was a moral man and one who refused to do so was immoral, since persecution was certainly both the law and the custom in the society of which he was a part.

I doubt that the author of this textbook would have followed his logic to that extreme. But he gives no reason why one should not do so. And he certainly implies that a student may cheat on examinations and a public official accept gifts without ceasing to be moral provided only that cheating and bribetaking are common practices of his group and his colleagues.

What social conscience and social morality leave out is the narrower but very significant concept of honor—as opposed to what the sociologists prefer to call socially desirable conduct. The man of honor is not content to ask merely, "Will this or that hurt society," or "Is it what most people would permit themselves to do." He asks, and asks first of all, if it would hurt him in his self-respect, would dishonor him personally; and he is not moved (as the cheating student is moved) by the argument that it would not hurt society or, even perhaps, that since it would help him get the job he wants, it would enable him to do good and is thus truly moral though the old fashioned might call it dishonorable.

Two generations ago the world was genuinely shocked when the Imperial German Government dismissed a solemn treaty as a mere scrap of paper. Today, we merely shrug when a government breaks a treaty. Statesmen are not expected to be men of honor. Only to do whatever seems advantageous to their government.

The cheating student has come to believe—by some sociologists he has even been taught—(1) that immoral means simply "socially undesirable" and (2) that whatever everybody does is permissible since, after all, "moral" means no more than "according to custom."

When some scandal breaks in government or journalism or business or broadcasting the usual reaction of even that part of the public which can still be shocked is to say that it could not have happened if there had been adequate laws supervising this or that activity. But is it not equally true that it could not have happened if a whole group of men, including the supposed guardians of public morality had not been devoid of any sense of the meaning and importance of individual integrity? May one not go further and ask whether any amount of "social consciousness" or any amount of government control can make a decent society composed of people with no conception of personal honor or dignity?

It was a favorite and no doubt sound contention of early twentieth century reformers that "playing the game" as the gentleman was supposed to play it is not enough to make a just society. But the time has come to add that it is, nevertheless, indispensable.

I hold that the so called "social conscience," unsupported by the concept of personal honor, will create a corrupt society. But suppose that this is not necessarily true. Suppose that no one except the individual suffers from the fact that he sees nothing wrong in doing "what everybody does." Even so, I still insist that for the individual himself nothing is more important than this personal, interior sense of right and wrong and his determination to follow that rather than to be guided by either "what everybody does" or merely the criterion of "social usefulness." It is impossible for me to imagine a good society composed of men without honor.

I shall not labor the point any further. But I will assume the privilege of a commencement speaker to give advice; and what the advice comes down to is this: Do not be so exclusively concerned with society, and "social conditions" as to forget your own condition. You are your own self and you cannot shift the responsibility for that self to "world conditions" or the mores of your civilization. This is your burden and it is also your ultimate resource.

The time may come when you lose hope for the world. But it need never come when you lose hope for yourself. Do not say "I will do what everybody else does." Be, if necessary, a lonely candle which can throw its beams far in a naughty world.

And I say this not only because I think that in the end it best for society. I say it first of all because it is the best and happiest course for you yourself. If you must be pessimistic about the world and believe society corrupt, then do not see in that any reason why you should be corrupt yourself. Be scornful if you must; but base your scorn on the difference between yourself and what you think deserves your scorn.

Some will say that if you do this you run the risk of spiritual pride. But I think the world could at the present, do with a little spiritual pride here and there because there seems to be so little of it about. You will be told that you run the risk of thinking yourself wiser and better than the common run of men. But I hold that preferable to being content not even to try to be better and wiser than they are.

You may think that personal integrity and self-respect are not what you want more than anything else. You may say to yourself that putting them first would make it too difficult to get along in the world; that you would rather have money, power, fame or even, you may smugly say, the chance which money, power, and fame will give you to "do good in the world." But if you do say any of those things you will be making an unwise choice; you will be surrendering something which cannot be taken away from you to gain something which can be taken away and which, as a matter of fact very often is.

We hear it often said that what present-day men most desire is security. If that is so then they have a wrong notion of what the real, the ultimate security is. No one who is dependent upon anything outside—money, power, frame, or what not—is or ever can be secure. Only he who possesses himself and is content with himself is actually secure.

No matter how bad the world may become; no matter how much the mass man of the future may lose such of the virtues as he still has the fact remains that if you alone refuse to go along with him, if you alone assert your individual and inner right to believe in and be loyal to what your fellows seem to have given up; then at least you will still have retained that humanity which Mr. Oppenheimer fears we may all lose.

A Perfect Administration?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the following editorial by David Lawrence entitled "A Perfect Administration?" which appeared in the July 4, 1960, issue of U.S. News & World Report:

A PERFECT ADMINISTRATION?

(By David Lawrence)

Judging by some speeches, inside and outside Congress, that are getting headlines nowadays, there is a perfect way to run the foreign policy of the United States.

The critics have encouraged us to believe that the way to win the "cold war" is to

elect a President next time who will know in advance what the Communist regime in Moscow is planning and will promptly take just the right action to defeat its purposes.

This, to be sure, is a very large order. It assumes that the President will always be in perfect health, that he will never need any time off for recreation—especially, that he will never play golf—and that, with a telephone at his bedside, he will be able at any hour of the night to issue orders to his thousands of subordinates. Indeed, it is asserted that the President should know what military pilots are taking off for any destination throughout the world every minute of the day and night. He should, it is said, be able to suspend any airborne alert which our bombers occasionally fly in an attempt to get warning of the enemy's preparations for a surprise attack.

The President should also be tuned in—legitimately, of course, and not through any espionage device—on the deliberations at the Kremlin. He should be able to regulate his oversea trips so that he will not run into such a dilemma as he did in Paris or Tokyo. In fact, the President is to know in advance the temper of the mobs that are gathering in any foreign country to demonstrate against our prestige. Above all, he is to be an expert in diagnosing the psychopathic aberrations of a Khrushchev.

More than this, the President must never fail to spend enough money to keep us ahead of the Russians in everything—from missiles to professors of science and all other categories of education. One ingenious way to accomplish all this supposedly is to use Federal funds to increase the number of classrooms in the country and, of course, raise teachers' salaries.

If anyone so much as mentions the budget as a possible barrier to big spending programs, the President is to rise up to denounce budget considerations as old fashioned or as thwarting our national purpose.

Money, we will be told, grows on trees. Anyone who thinks that a perennially unbalanced budget will produce inflation and a 10-cent dollar is to be given a simple and pious lecture about the need for a 5-percent increase annually in our national growth. This presumably will at once dispel all fears of fiscal chaos.

Under the perfect administration, to be sure, the chairman of the Senate Foreign Relations Committee will conduct our foreign policy, and the Secretary of State will take his instructions from Capitol Hill, despite the fact that the Constitution says this is solely an executive responsibility.

As for domestic problems, by waving a magic wand, we will have just the right wages, the right prices, and adequate receipts from higher taxes. The Government would regulate all business.

The perfect administration will regard as outmoded any protest decrying all this as destructive of private initiative. Instead, the slogan is to be "more spending for more growth, and more government in more business." Anyone who objects will be called a misguided disciple of big business or an old fogey who is far behind the times. The demand is for bold and imaginative ideas no matter what they cost. Taxpayers are to be dubbed "illiberal" if they object to paying more taxes while their dollars shrink in purchasing power.

As for money spent abroad, the foreign countries receiving it are to be given constant aid and yet do nothing for the United States in return. Our military bases there are to be regarded as superfluous and as annoying to the Communists—hence they would be withdrawn, as recommended by Moscow. If this brings us to a posture of isolation, then it will be urged that we quickly get more missiles and intercontinental bombers, even if it costs many times what our allied bases cost us now. As for our allies, they are expected to enjoy these disengagement policies, comforted by the thought that all this is peaceful coexistence.

What candidate can assure the perfect administration? If any would-be nominee cannot do it, his campaign promises, whatever they are—even before the conventions take place—must be held up to scorn. Only someone with the ability to awe Communists into immediate acquiescence in, if not submission to, our demands should theoretically be given serious consideration by the delegates of the two national conventions.

Will the American people be misled into believing that Utopia is just around the corner and that, if only we will give up all our armament, including nuclear weapons, the lion and the lamb will lie down together? Fortunately, the average voter has plenty of commonsense, and he will recognize that the perfectionists are really partisans who are overplaying their hand.

Collapse of American Foreign Policy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting report which is contained in the following Dan Smoot report for June 27, 1960:

COLLAPSE OF AMERICAN FOREIGN POLICY

In January 1957 (after the Eisenhower administration revealed that it had invited Tito of Yugoslavia to visit the United States), Congress formally registered stern disapproval: neither Congress nor the people considered Tito a proper guest for this country, because of his association with the crimes of Nikita Khrushchev.

In 1959—without letting Congress or the people know until it was too late for protests to be effective—Eisenhower invited the chief hangman himself to visit America.

Shortly after his triumphal tour of America, Khrushchev visited Communist China. In Peiping, Khrushchev told Chinese Communist leaders:

"If enough people follow Eisenhower, we will get what we want, over a great deal of opposition from some quarters. He is most discreet and does not bring up unpleasant subjects like some of the American warmongers."

Seven months later, May 1960, Khrushchev at Paris turned on his "discreet" friend, the President, saying he was not a proper guest for the Soviet Union, calling him names, humiliating him and America in the eyes of the world.

Khrushchev's henchmen in China and Japan immediately pressed the advantage which international communism had gained in its campaign to disgrace America. The Communist Party in China poured money into Japan to finance demonstrations against Eisenhower's proposed "good-will" trip to Japan.

As if hypnotized, or dazed by their stunning defeats, Eisenhower and his policymakers and all their internationalist supporters, both Democrat and Republican, in Congress and out, insisted that Eisenhower had to go to Japan: his trip was necessary to American prestige.

The Communist riots in Japan became increasingly bloody and sinister.

On Sunday, June 12, 1960, when President Eisenhower departed from Washington for the Far East, he was asked about the possibility of canceling his visit to Japan; rioting in Tokyo was, by then, dangerously out of control. The President said bluntly that he was going to Japan—that he would not be stopped by "hostile agents."

On June 17 (June 17 in the Far East; June 16 in the West) Communist leaders in Tokyo said 300,000 would be mobilized for demonstrations on Saturday, June 18, to protest Eisenhower's scheduled arrival the next day. The Prime Minister of Japan (Nobusuke Kishi) acceded to the Communists' demands: He canceled President Eisenhower's visit.

News of the cancellation was released to the world hours before the President himself knew about it. He received the news (with surprise and dismay) while reviewing a parade in Manila. James Hagerty (the President's press secretary) admitted that President Eisenhower had been given no forewarning of the cancellation and knew nothing about it until he heard about the newspaper account.

On June 17, 1960, the President left the Philippines, sailing under severe military alert intended to protect him from the Chinese Communists. He headed for Formosa, despite the heavy Communist bombardment of Quemoy (which his good will visit prompted), while the Western World expressed alarm and the Communist world gloated.

The New York Times news service, in a dispatch from Hong Kong, said:

"Although the United States' loss of face in the Far East as a result of the cancellation of Eisenhower's trip to Japan will be enormous, observers here believe that it will be relatively insignificant compared with the prestige Red China will gain, not only in the uncommitted countries of Asia, but also in Communist parties—legal and underground—throughout the world."

The Soviet newspaper, Izvestia, said:

"The events of these days should have proved to Eisenhower, even if he is blind and deaf, that the Japanese do not wish to see him on their soil, that he is not only an unwanted guest, but he is like a man who forcibly wants to break into another man's home."

A United Press International dispatch from London said:

"There was deep concern in Western diplomatic circles over the effect of the cancellation, on Eisenhower's personal prestige and that of the United States, and, consequently, the entire Western World."

An Associated Press story from Washington said:

"Official Washington Thursday viewed as a diplomatic catastrophe the cancellation of President Eisenhower's visit to Japan.

"The event—and the forces which brought it about—threaten the future of the United States-Japanese alliance.

"The northern anchor of the allied security system in the Far East is thus endangered.

"At the moment, it's anybody's guess where Japan will stand in the cold war, once the current upheaval is over.

"Soviet Premier Nikita S. Khrushchev and the chieftains of Red China won a stunning victory in their cold war campaign to cut down U.S. prestige and destroy the system of alliances and foreign bases which constitute the free world's forward defenses against Soviet-Chinese Communist power."

Thus, the crashing collapse of American foreign policy was evident to the world. Indeed, that collapse has been evident for several years. The events of May and June 1960 merely compelled everyone to admit it.

The Cleveland Report on Red China

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

A FRESH APPRAISAL: THE CLEVELAND REPORT ON RED CHINA

(By Emil Brunner)

(Emil Brunner, one of the most influential of living Protestant theologians, was born in Winterthur, Switzerland, 1889. From 1922 to 1953 he taugh theology at University of Zurich, except for a year as visiting professor at Princeton Seminary (1938–39). After teaching for 2 years at International Christian University, Tokyo, he retired and is living in Zurich. His writings are in the recent tradition of continental neoorthodoxy.)

You have asked me to convey my opinion about the Cleveland message. This I wish to do, indeed, feel I must do at the behest of conscience, and is what I would have done even without your request. I wish to state the result of my painstaking examination before any further commend: I am utterly alarmed at this message. The ground for my reaction is explained in the following pages.

I shall begin with the most important postulate of the Cleveland message, and which is also discussed at greatest length therein, namely, the demand that Red China be received into the United Nations. The Cleveland message is right insofar as it affirms that the U.N.O., the nucleus of a future international order which is to replace the present international anarchy, must be given our complete support. That it is an anomaly for the most populous nation on earth not to be represented therein is something to which many are acutely sensitive even on our side, and the wish to correct this anomaly through the admission of Red China to the U.N.O. is therefore very understandable and quire debatable. But we must not overlook the fact that such a change in the U.N.O. probably would result in its losing what prestige still remains to it, as well as the complete loss of its capability to accomplish even a part of that for which it was founded. Yet I do not wish to address myself to this challenge in itself, but rather to place it in the context of the total complex from which perspective this and other questions must be considered.

The world today stands over against two terrifying dangers: that of total nuclear war and that of world bolshevism. The Cleveland message speaks of the first of these in well-chosen and persuasive words. Total nuclear war means nothing less than the total obliteration of the greater part of mankind. That which the Cleveland message has to say in this regard receives my committed agreement. We cannot even conceive any real idea of the horror of such a total war. It actually surpasses one's conceptual powers. No individual can imagine what conditions, what destruction of human life and material goods such a war would bring with it.

It is probable that the greatest part of the earth presently occupied would scarcely be habitable in the wake of nuclear war, and that the few still living would face a future burdened with a horrible mortgage of sickness and a heavily damaged progeny. Who would want to say a word vindicating such a war?

SILENT ON DANGER

However, the Cleveland message is virtually silent about the second danger, and this is ground for the sharpest counterargument. The Western World must also hear from the church concerning why such tremendous efforts are expended for military preparedness and why its governments so determinedly promote such preparedness. This can only be the case in a situation of alarming danger making such preparedness a necessity. The church must tell the world what she for the most part does not know, namely, what bolshevism in its aim for world domination is actually like.

Any judgment about this danger actually has nothing to do with separating "evil" peoples from the "good," as the Cleveland message expresses it. For bolshevism has not come to power anywhere in the world through a movement of the people, but since its beginning in Russia it has been imposed upon large masses of people against their will by a small minority.

It is undoubtedly necessary to evaluate the original motive of the Communist revolution in its positive signification. The power of this movement can only be explained if we understand it as a rebellion against the social injustice in the world, particularly as to the manifestation of the extreme wealth of the few on the one hand and the poverty (beyond the comprehension of Western man) of great masses of people on the other. Communism originally wished to create justice and a humanly significant existence for all. But a system has been made out of this praiseworthy motive which has exchanged its ideals for the most extreme antithesis. This system we call bolshevism. So-called communism is not a political or an economical system comparable to others but a system which wishes to conform the whole man. The totality of human life on earth is its ideology, and it is in a position to accomplish its aim through centralized, highly organized and fearful power. In the power realm of this totalitarian communism, there is no possibility of withdrawing from this process of systematically compelled molding or even to undertake anything against it. Wherever this power once is established, it becomes the definitive tribulation of the ensnared people. In earlier times there was a possibility to revolt against a tyrannical system. But under the totalitarian Communist dictatorship, subsequent to the establishment of the perfect power organization, with its all-knowing secret police service and the universarrly present coercive powers, no such possibility exists. This is the new element in the total state—and the Communistic is merely the most highly developed and thoroughly designed total state. Every other form of totalitarianism, for example, that of Hitler, is by comparison with the communistic, pure dilettantism.

THE NEW IMAGE OF MAN

Bolshevism is above all a refined mechanism designed to shape man in its own image. It alone possesses the schools, it has an absolute monopoly over the press, the theaters, the cinema, radio, and television. One of its most effective methods is the withholding of knowledge of what other people think and the kind of life they live from the peoples over whom they have control. This is achieved by means of the Iron Curtain, for example, through employment of the dictatorially controlled press to mislead the enslaved people. The Communist state rears very person from kindergarten to university according to its program, which is thought out to the minutest detail. Moreover, this educative process is distinguishable from ours in that through its instruction and training it so shapes the ensnared persons that they, subsequent to the completed process of this education, are really no longer able to think otherwise, nor do they wish to do anything other than that which this power wishes. Not only is all criticism of the system forbidden—and this prohibition is actualized through gruesome punishment—but the brainwashing is so psychologically determined that the individual actually thinks and wills to do that which the system thinks and wills. Any other thinking and willing is eliminated.

We have heard all kinds of things about the relaxation of the thought-control terror. But this is merely an illusion, for communism will only allow as much opposition as will not strike at its heart. When the latter become apparent, however, its suppression is fundamentally gruesome and without scruple. Inasmuch as there are in Russia today a few persons who internally oppose the system, this is but a sign of the fact that the process of dehumanization has seen considerable progress. This education process has not yet been so fruitful in the satellite States, first, because the internal opposition was stronger than in Russia (which never has known anything but a despotic order), and second, because the isolation from the rest of the world via the Iron Curtain was not so easily accomplished. But so much more brutal was the implementation of the power arm when the freedom movements became apparent, as in the case of the East German workers' class, and in Poland and Hungary.

The system of Communist totalitarianism is saturated with the idea that the whole world is to become Communist and with the will to assist this inevitable process through the power of the Kremlin. Communistic totalitarianism has had the fixed plan, since the time of Lenin, to subjagate completely the world under its system, without war if possible—through the excitation of internal unrest, and through the formation of Communist parties whereby it can intervene as the power which comes to the help of the "freedom fighters," as it did with great success in China; as it has attempted recently in Lebanon (though it did not prevail, thanks to the alertness of the American foreign policy); as it now is trying to do in Iraq; or, if there is no other way and no favorable prospect, through conquest, as it actually did in Hungary and Poland and even earlier in the Baltic States; as it attempted in Korea in 1950 and as it recently has done with success in Tibet. How systematic and cunning is their work could be elucidated by various statesmen (cf. M. de Gaulle in this regard, about the Indians mustered in Paris in order to be planted in Algeria as freedom fighters).

AMERICA IN 1978

Some years ago, a timetable of an influential Communist leader was disclosed in which we read: "1960, all Asia communistic; 1964 all Europe; 1978, all America and thereby the whole world." This is fundamentally not a new idea, but the old statement of Lenin: The road to Paris is through Asia. This plan does not necessarily imply war; but if the Western people (the capitalists and imperialists) are not wise and determined, the Kremlin in alliance with Peiping can achieve these goals, step by step, virtually unnoticed. Its tactic is not the stupid "all or nothing" but the shrewd "always a bit forward toward the inevitable goal of Communist world dominion." Pressure concentrated upon this objective is as constant as that of an expanding glacier, but the separate steps can be modified depending upon the solidity of the defensive measures which they may meet.

Bolshevism has achieved a great deal. In 1939, 17 percent of the total surface of the earth was under Communist control, which meant about 9 percent of the total world

population and 10 percent of the industrial potential. Today the same figures are: 20 percent of the total surface, 35 percent of the world population, 33 percent of the industrial potential. And this immense advance of the slave system took place in a period of 18 years. It would have been even more stupendous but for the alertness of American foreign policy and the preparedness of the Western World.

But what is meant by Bolshevist world domination? The picture drawn by most of even the well-informed is far too optimistic—for two reasons. First, the Communist system, after its victory, could drop all restraint, which it must still utilize as it still must consider world opinion. How unrestrained it can be has been impressed upon us by the brutal suppression of the Hungarian revolt. Second, not until total communism is victorious will its true character be manifest: atheism is its basis, moral nihilism the result, the total robotization of mankind is the inevitable consequence. One hears it asserted again and again that the issue of godlessness is not so serious: witness the fact that Russia still has churches and even theological seminaries. But suppose we consider the lot of the churches under a victorious Bolshevist system. There would be no churches or Bibles any more except for those that a few of the courageously faithful, at risk of life, would have in hiding. To what end victorious bolshevism presses can be seen in the people's communes in Red China. The Chinese family, the greatest social force of world history, is in a very brief period being demolished and the individual is being made a workhorse in the ant kingdom.

Communism is the system of consequent inhumanity, which it must be as the system of programmatic atheism.

"GOOD" VERSUS SOUL DEATH

If one asserts to the contrary that communism has also accomplished much good, it must be conceded good in the sense of industrialization, in the raising of living standards, in the freely accessible and gratuitous (Communist) education, in technical performance—but all of this is nothing in comparison with the death of the soul of man. The free development of the soul, a free faith and hope, free action according to conscience—these can never be conceded, for they would attack the system at the roots and destroy it. If people are satisfied with being well-fed workhorses, they may then permit the Bolshevist danger to overtake them. But so long as they still have freedom of thought and faith, so long as they consider love and humanity more worthy than technically sophisticated apparatus, so long will they fear communism and detest it as the greatest delivery that has yet made its appearance on the scene of human history. It is, in a word, an antigodly, anti-Christian system.

It should therefore have been the first duty of a national council to explain the nature of this devil to all Christians and to strengthen the will of them to say: "To this system, I and above all my children and grandchildren will not be subjugated." Their divine destiny is at stake. We have here to do with all that which in actuality concerns our faith: that man finds God in His Word and that he loves his neighbor inasmuch as God has first loved us. Of all this there is not a word in the Cleveland message. But all sorts of wishful thinking is strengthened among the people, namely, that things are not really so bad with communism; surely the good in it will come to the fore; it is definitely not so belligerently oriented, and so forth. The Cleveland message has neglected the fact that communism is a devilish system which can allow no correction of itself without mortal danger to itself. It is therefore a system which cannot permit any constitutive improvement at any point of importance. To the contrary, the system has perfected itself, both in the sense of self-perpetuation and in that of the systematic seizure of all that will serve it, yet without harm to itself. Thus it has made no backward step in its plans for world dominion and the realization thereof.

A FATEFUL PROPHECY

Once these two terrible dangers have been set over against each other, the question must be put as to which of the two is the greater—the unleashing of a nuclear war by accident (for an intentional initiation is as good as excluded), or the danger of world bolshevism? Before the question is answered, we must first establish the fact that it was singularly the nuclear preparedness of the West that has hindered the advance of bolshevism since 1945. We are thankful for this preparedness, for that alone has kept us out of the bolshevist soul-murdering machinery.

The will for the extension of the Communist rule has always been before us and has been recognizable. But it pursuance of the rapid expansion of its rulership, as had been the case with its crushing of China and its conquest of East Europe, was hindered through the nuclear arming of America and by the founding of NATO. What would be the result of a weakening of the Western front through, say, a progressive atom death campaign? That this came out of Moscow, was planned by the Kremlin, was already announced by Manuilsky in 1931 at the Congress of the Comintern: "We will begin by stirring up the most theatrical peace movement that has as yet existed. Electrifying proposals and extraordinary concessions will be made on our side. The capitalistic lands, stupid and decadent as they are, will be so inspired as to assist in their own downfall. They will fall into the trap of the proferred opportunity of a new friendship. And as soon as they are deprived of their defensive protection, we will smash them with our clenched fist." Now it is the churches of America who are misleading the American people "to fall into the trap" inasmuch as they depict the terror of atom war but not that of the dominion of communism. German church leaders have acted similarly on earlier occasions under the slogan "Against Atom Death." But they do not know that they are thereby promoting the causes of the Kremlin.

POSSIBILITY VERSUS CERTAINTY

But is not the alternative the factual irruption of the most fearful catastrophe, total nuclear war? A distinction must be made at this point. The expansion of Bolshevist control consequent to the abrogation of the preparedness of the West is an absolute certainty, the irruption of nuclear war consequent to accident is pure possibility. Thus we say what we must next elect: to remain firm in our defensive posture. That we therewith hope for a less dangerous resolution than the pursuance of military preparedness is dear to every Christian. Perhaps personal visits to Russia and China may help a little. Perhaps a change of position by the Russian people will still come to pass. That the satellite peoples still shared in complete opposition to the Communist regime is a matter of record as we saw in East Germany in 1953, Hungary in 1956, and Poland of which we know through the inner events which occurred in the Hungarian struggle for freedom. The most important thing is the unqualified determination to stand firm in the military preparedness of the West while refusing to fall prey to the contemporary noises of peace from Moscow. This is the one thing that will impress the lords of the Kremlin. What Khrushchev and Mikoyan desire with their paraded bonhomie is nothing other than the anesthesia and paralysis of the alertness of the West and its most probable disunifications. Our only chance to surmount this terrible danger over mankind is through our clarity of vision, firmness of will, and unity. The Cleveland Message says nothing about all three points. That is why it is a calamity (Unglück) that can only be partially improved by prompt exposure of its weaknesses and through powerful counterpropaganda by the church.

Pacifism has already played an ominous role several times in recent history. While it sweetens the thoughts of the opponent so that military preparedness and the defensive will no longer exist, it makes the pacifist cooriginator of war against his will in that it inspires the attacker to unleash a war. I hold this to be eminently plausible in regard to bolshevism. The weakening of the defensive power of the West is therefore a direct support of the expansion of bolshevist rulership.

We have to do with a fearfully dangerous, powerful and shrewd antagonist. Every concession immediately benefits the power growth of world communism. That is why the Christian must hold fast with all those who have come to know the diabolical character of bolshevism, in order to guard mankind from this greatest of social evils: from this soul-destroying system of fundamental inhumanity. The slogan of the Christian must be: in love and faith, firm in opposition.

Resolution on "Metro" Government

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION ON "METRO" GOVERNMENT

Whereas during the 1930's a collection of organizations—financed by tax-free foundations, and devoted to the ideal of government by experts, gathered around the University of Chicago—which with foundation money built a home for them at 1313 East 60th Street, Chicago. Today, virtually all the drive for "Metro" government, as well as the experts who do the governing, comes from "1313"; and

Whereas Metro government is the core of a movement to establish in the United States a Soviet-style arrangement—dividing the nation into metropolitan areas—each governed by an appointed expert; in direct violation of the constitutional provision that each State shall have a republican, or check and balance form of government; and

Whereas the California interlock to the Metro "complex" is through the California Commission on Interstate Cooperation, which since its establishment in 1939 has paid a yearly assessment to (as determined by) the Council of State Governments, housed at 1313 E. 60th St., Chicago. The League of California Cities is an organization member of "1313's" Committee for International Municipal Cooperation U.S.A.; and

Whereas a radical tax proposal to implement the urban renewal scheme was proposed by the League of California Cities; the tax geared to operate at State and local levels. The local funds are provided by tax-allocation bonds to be paid off by pledging all the anticipated increase in tax revenue expected by redevelopment. This LCC prepared scheme, which the "planners," and politicians promise "won't cost the taxpayers

a dime," has become nationally known as the "Sacramento Plan," and appears in identical language in both the California Community Redevelopment Law (Secs. 33950–54) and State Constitution (art. XIII, sec. 19). It legally empowers the redevelopment "authority" or agency to authorize bonds in any amount desired, yet it is not held liable, apparently, for the debt created. Additionally, the redeveloped or "renewed" area's tax contributions bypasses the municipal government (which provides the municipal, or city services) and is allocated direct to the redevelopment agency; and

Whereas the Metro-drafted "model" constitutions, charters and laws, which are sloganeered as "strengthening the government," are, in fact, disguised proposals for the abolishment of constitutional rights, and for the overthrow of our form of government by interstate compact: Therefore, be it

Resolved, That Pro America, California Chapter, Santa Monica Unit urge the California Legislature to sever existing governmental relations with "1313," its affiliated agencies or organizations, and that no further appropriations to these said agencies be authorized: Be it further

Resolved, That an investigation by appropriate committees of both the State and Federal Governments be instituted for the purpose of determining the degree of danger inherent in the "Metro" collectivist philosophy (which already has and continues to infiltrate our dual governments at all levels) as antagonistic to, and the antithesis of, our republican—or check and balance—form of government, erected as an institution of, by and for the people.

Resolution unanimously passed, March 2, 1960, by vote of membership.

Cape Cod

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. PHILBIN. Mr. Speaker, while I am strongly in support of a suitable bill to protect the magnificent natural resources and advantages of lovely, historic Cape Cod in my home State, I think it is most essential that any such measure should contain adequate safeguards for the State, various communities, and private owners.

Sometime ago when I introduced the very first of the measures for the proper protection and development of Cape Cod, I had in mind a thorough exploratory study and appraisal to delineate the problems and try to solve them. I was not committed then, and I am not committed now, to inflexible specific provisions in this legislation. In fact, I think that flexibility and agreement should be among the desirable aims of any law or laws enacted by the Congress for Cape Cod.

In a general sense, I believe it should be the objective of any legislation of this character to minimize rather than to maximize the amount of community and private land to be taken for the project.

Secondly, I would look with extreme disfavor upon technical provisions of any bill which would arbitrarily wash out certain community and private lands and real estate holdings, by immediate or suspended condemnation proceedings without first striving for common ground and agreement between the parties.

I see no reason why a policy of taking land and buildings in wholesale lots and over widespread areas against the will of the inhabitants, the communities, and possibly the State of Massachusetts is necessary to carry out the fine objective of the conservation of Cape Cod. Actually, it would appear that apart from the taking of limited areas of presently unimproved and unused land which can, I think, be agreed upon, relatively little other land and few homes and buildings need to be taken, or should be taken, by the Government in the furtherance of the project.

I think it is unquestionably true that careful study of the area by Government experts and by the committee would disclose the fact that it would be comparatively easy to secure substantially full agreement upon this legislation that would not involve extreme interference with community and private property on the cape.

As I see it, the objectives of the legislation are clear or should be clear: to conserve these great natural resources for the people, and to prevent deterioration of this beautiful area by cheap commercial exploitation that would besmirch, if not destroy, the natural beauties of the Cape.

As Congress moves to carry out sound and wise conservation policies, or in fact any policies that involve interference with community, State and private rights, we should, I think, exercise great care and discretion in order to implement commendable objectives in such a way that their accomplishment will work least interference with and detriment to the people who reside in affected areas. If this standard is applied in the case of the proposed Cape Cod program it will in the long run bring salutary results. It will conserve the Cape's natural beauties for the people.

I appreciate the deep interest and work on this project of our able and distinguished friend, Congressman HASTINGS KEITH, as well as the contributions of our able and distinguished Senators from Massachusetts, Hon. JOHN F. KENNEDY and Hon. LEVERETT SALTONSTALL. At a recent meeting of the Massachusetts House delegation, Congressman KEITH gave a very fine exposition of the progress and status of present plans and possible agreements. After listening to his able talk and explanations, I got the distinct impression that a substantially satisfactory agreement could be worked out on the basis of zoning laws and selective use of the property involved that would permit a practical bill and a workable program.

I am sure that the committee is desirous of enacting a reasonable, helpful and constructive bill for the protection and improvement of Cape Cod. I hope and urge that any legislation reported to the House will be predicated on agreement and will avoid unreasonable confiscation of property and the encouragement of undesirable conditions on the Cape.

Let me compliment the House Committee on Interior and Insular Affairs upon the careful consideration it has given to this matter. I thank the learned chairman and all the members of the committee for the opportunity given me to present my views.

In conclusion, I may say that I have every confidence that the very able and distinguished chairman and members of this great committee of the House will give penetrating and equitable consideration to the problems posed by the pending bill.

In that way, I sincerely believe that satisfactory solutions can be found to conserve lovely Cape Cod so that its beauties, advantages and historic shrines can be secured for the people of this generation and for posterity.

Address by Charles H. Silver, President, Board of Education, Upon Receipt of Special Award at Dinner of Public School 20 Alumni Association, June 8, 1960, Hotel Commodore

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I am pleased to insert an address made by the Honorable Charles H. Silver, president of the board of education of the city of New York at a dinner of New York Public School 20 Alumni Association. Many well-known people, including Senator Javits, Harry Golden, George and Ira Gershwin, Paul Muni, Edward G. Robinson, and others were students of this old building in my congressional district. The board of education is planning to create a new Public School 20 in the same area but I am certain the old Public School 20 will be remembered with fondness and warm regard by its former students.

The address follows:

When I was appointed to the board of education, almost 9 years ago, my initial action was to visit several schools.

The very first one I inspected seemed to be inspecting me as I entered its doors. It was Public School 20. And for just a few trembling moments, a little boy had come to school late—more than 50 years late—and I stood there with a lump in my throat and my heart full—as it is now—of long and tender thoughts that almost defy expression.

Where had it gone—that crowded half century of busy days tumbling after each other through all those years? So much had changed. So many dear faces had vanished forever. Yet, right outside, the streets were very much the same, and I was still there among those wildly shouting, madly racing youngsters.

And Public School 20 was very much the same except that the seats had shrunk, the walls had closed in as the whole room dwindled to a miniature of what I remembered.

I stood in the center aisle where the sliding doors opened to join all the classrooms into a single large assembly; only it wasn't large any more. I heard the voices of my young classmates raised in the old songs, murmuring the early prayers and pledges of allegiance. And I knew that I was standing in a special place, a shrine not only of my own remembered youth, but of the young hopes and dreams of a brave new world.

For Public School 20, as a first step in the making of Americans, took in the newly arrived immigrant children and the children of immigrants, taught them the beginnings of wisdom, the joy of freedom, and the privilege beyond price of being American citizens.

I was one of those children. I sat on the hard benches, listening wide eyed to the story of those who founded this blessed land of opportunity. I joined the chorus of voices that sang, "My country, 'tis of thee, sweet land of liberty," and learned the meaning of that magic word.

What a little boy learns he never forgets, and I will never forget Public School 20, which taught me the precious truth that the most important title in the world is "citizen"—"citizen of the United States."

So it was that I came back to our old school—and so it is that I come back to you tonight, with a humble heart and gratitude that wells up, together with tears of remembrance. For I am deeply mindful of the honor that you are doing me and through me to the many thousands of our school graduates who have added glory to its name. They constitute an honor roll of talent and achievement that few great universities could match.

Yet, ours was but a small elementary school, almost engulfed by the overwhelming masses, the sounds, sights, and unceasing ferment of the lower east side.

Others may wonder how it was that such a steaming cauldron of poverty and overpopulation could have cradled such great gifts—such men as George and Ira Gershwin, Jack and Ben Javits, Harry Golden, Paul Muni, Edward G. Robinson, Irving Caesar—and so many more that the list seems endless.

Others may wonder, but we know. We were there and we witnessed the odds in the struggle for survival. We know that the obstacles were so great that it took strength and courage, that extra spark of ambition, that extra strain of energy to rise above the squalor and temptations of the street, to keep your eyes and hopes and dreams on the things beyond, for which we or our parents had come to America.

Perhaps, the greatest spur of all was the inner conviction that we were carving out a new frontier, just as surely as the pioneers who won the West. There, on the east side, we were building a better world for our children. We studied, worked, and strove to rise above our environment, to make something of ourselves for their sakes.

But I sometimes wonder whether the generation which has inherited our efforts is not too busy enjoying the fruits to do any plowing and planting of its own. I wonder whether we are now coasting, instead of climbing. Are we allowing our triumphs to tarnish along with the ideals that gave our Nation vitality, integrity, and moral purpose?

We were crowded and uncomfortable in those early days on the east side. Yet, in spite of discomfort and need, so many individuals found the resolution and desperate energy, that had given our country its own special caliber and bred its greatness. We must never become too satisfied. We must not let down our guard.

Give us restless men and women. Give us young people eager to meet new challenges. Give us healthy discontent and a determination to wrestle with the world as it is and to bring it nearer to what it ough to be.

There may be some who lament that the spirit of Public School 20 has vanished, now that it no longer serves elementary school purposes. They are wrong. The Public School 20 we know, remains. It is here in this room and in the hearts of all of you.

Public School 20—and the things it represents—can never die. A school is great because of teachers and students and the riches of mind and soul they bring to its making. We alumni know best of all that Public School 20 was never just a cold and lifeless structure. It was you and I and the many thousands who carry its lessons with them, an eternal burning torch of love and allegiance such as few men bear for their alma mater on higher levels of learning.

Public School 20 lives. And I give you this pledge as president of your board of education, returning in spirit to those narrow halls and crowded benches where we first met—that I will make every effort to see that a notable new Public School 20 rises on the lower East Side.

This new building will inherit a great tradition. You want it—and you will have it.

This promise I give you, knowing that it will be made possible by the constant help and encouraging support of a man who, like his revered father before him, continues the tradition of such east side pioneers in the field of enlightened social legislation as Henrietta Szold and Meyer London. With his help, the new Public School 20, will rise, with its unique and remarkable history, to the expanding pattern of our city's school construction as part of the world's greatest system of public education.

I refer, of course, to that determined champion of learning, and the best friend our children ever had, our mayor, Robert F. Wagner.

You have given me these unforgettable moments to hold dear among the most gratifying memories of my life.

Here, tonight, I truly feel that I have come home. I am again near the sheltering arms of my sainted parents. Once more I am hurrying through the crowded lanes of noisy pushcarts to be with my schoolmates. And I am proud to be among you, proud that I am part of Public School 20, and that Public School 20 will always be part of me.

Our school has affected posterity. It has produced men of such knowledge and influence that their words and deeds guide the destiny of mankind.

Knowing the depth of my feeling from our school, a friend of mine given to poetic expression was inspired to write the following lines.

"You found your faith upon the noble tie
That joins all men in brother love secure;
In honor great, in aspiration high,
In worthy deed, in thought and purpose pure.
We, who have gone before, await the day
When Public School 20 stands a school again,
And in some great tomorrow we can say:
Send forth to make a better world—its finest men."

Let me close then, as I began—with a heart full of gratitude and a humble thank you.

Capitol Pages

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. BROOMFIELD. Mr. Speaker, Washington newspapers carried stories yesterday about the stabbing, robbing, and beating of four Capitol pages not very far from these Chambers.

We all hope for the speedy recovery of those who were attacked by a large gang, and that their personal property is recovered.

More graphically than any words uttered on this floor, this incident points out a shortcoming in our present method of housing, supervision, and possibly selection of our pages who perform such valuable service for us daily.

Earlier this year, I introduced H.R. 11741 to correct these shortcomings. This bill was referred to the House Administration Committee and to my knowledge no action has been taken by the committee to bring this matter to the floor of the House for our further consideration.

There is no denying that certain parts of Washington, despite its beauty, its culture, and its history, are rather rough places for boys to spend their formative years. It is even more evident that the chances of a boy staying out of trouble under these conditions are decreased considerably if he is without adequate supervision and he is permitted to roam the streets of this large city at any hour of the day and night.

Yet this is the situation in which Capitol pages find themselves.

They can live where they will, despite the fact that the Congressional Hotel is only a short distance from the Capitol and has ample facilities to provide adequate housing for these boys.

They are under no supervision, and in fact are not even required to attend school if they are here for a relatively short time.

They are free to live in private homes scattered throughout the city, to come and go as they please, to study or not study as they see fit.

They are selected not on the basis of merit, or competition between those who are most qualified, but on the basis of political patronage.

There are no enforced study periods, only limited counseling and guidance and plenty of opportunity to get in trouble.

I hope that my colleagues will take heed to the warning which has been given us by this latest incident, and that we will enact legislation which will make the housing, the supervision, and the selection of our pages more realistic and more fair to all concerned.

There is no reason why our pages could not be a nucleus for education and training in politics in the best sense of the word. Surely, the facilities are readily available in our Nation's Capital for such education in our history, our traditions, and our heritage of freedom.

The schedule we demand of our pages is almost overwhelming, our requests at times approach the impossible.

The least we can do is to see that our Capitol pages have every opportunity to make the most of this experience, that they are firmly grounded in the basics of government and that they are well-acquainted with our Nation's underlying strength of purpose and ideal.

Let us not wait for a truly tragic incident to force our hand in this matter.

Let us take steps to insure that adequate housing, adequate supervision, and selection of pages, is forthcoming for these young men who are of such value to us in the performance of our tasks.

"Civil Defense—An American Tradition" Prize-winning Essay by Anna Kaye Koontz, Hume, Mo.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. RANDALL. Mr. Speaker, today it becomes my privilege to ask that there be made a part of the RECORD the full content of a prize-winning essay in the State of Missouri upon the subject, "Civil Defense—An American Tradition." This is part of the national essay contest sponsored by the Ladies Auxiliary of the Veterans of Foreign Wars in which the winners in each State competes in the national finals.

It makes me very happy and proud to announce the winner for the State of Missouri is Anna Kaye Koontz, who is a resident of Hume, Mo., in Bates County, which is a part of the Fourth Congressional District. Miss Koontz is the daughter of Mr. and Mrs. Ted Koontz. Her father is in the drug business in Hume. This spring, Anna Kaye was graduated from the Hume High School. She had the honor of being salutorian of her class, and throughout her high school career engaged in many extra curricula activities. She plans to enter the University of Missouri this fall. Miss Koontz was sponsored by VFW Auxiliary No. 4110 of Rich Hill and Hume, Mo. In this auxiliary, Mrs. Mary Northrup of Rich Hill is the essay chairman and has been for the past 6 years. Mrs. Northrup is a department officer of the State of Missouri, Ladies Auxiliary of the VFW and is now in her 12th year as president of No. 4110.

I note from the essay that Miss Koontz points out that the concept of civil defense was first announced when our country was very young. She then proceeds to present the analysis that here in America government is really each of us, and then goes on to distinguish between the types of disaster—natural or peacetime, and manmade or wartime. The conclusion of her essay most appropriately observes that there must be a continuity in the program and that civil defense is everybody's business.

It is my considered opinion that Miss Koontz is deserving of the highest congratulations upon her effort and that Mrs. Mary Northrup equally deserves special commendation for her years of effort and devotion to this annual contest. The prize-winning essay follows:

CIVIL DEFENSE—AN AMERICAN TRADITION

Ever since the beginning of our country, Americans have found it necessary to guard carefully their freedoms, homes, and families against civil emergencies. It was while America was still young and perhaps to a certain extent still unsettled that "Civil Defense—An American Tradition" was born. The importance of being prepared against disaster of any nature was recognized by the early Americans and by a strong desire within their hearts they were impelled to action. They set forth to form a government which would provide for this common defense. Since the Constitution has come into effect, it has been a traditional responsibility of the Government to provide for this common defense.

Yes, it is a responsibility of the Government to provide a civil defense program for protection against disaster, but who is the Government? In America we have a democracy, a government by the people, for the people? So in answer to the question, Who is the Government? it is you. Every citizen of the United States is a part of the Government, and thus the civil defense responsibility is placed in the hands of the people. It is a privilege to be a part of a democracy-ruled country, so do not shirk the responsibilities. We, the Americans, must keep in mind the importance of being prepared against disaster just as our early forefathers did when they wrote the Preamble to the Constitution and stated that "We, the people of the United States, in order to * * * provide for the common defense. * * *" The American tradition, civil defense, must not be cast aside. We must realize that as long as there is a need for a strong military defense we also need a strong civil defense to protect us from disaster.

There are two basic types of disaster, the natural disaster and the manmade disaster. Let us take a closer look at manmade disaster. In this age of rapid weapon development we must recognize the fact that manmade disaster can happen here. The thoughtless attitude that manmade disaster cannot happen here is far too numerous among our citizens. At the present, Russia and the United States are challenging each other, testing which nation has the more highly scientific developments of weapons, homes, educational systems, and even governments. This great contest has been kept on reasonably friendly terms, but if it were not it could prove dangerous. It was proved during the 1954 tests in the Pacific that just one nuclear explosion could seriously threaten the lives of every unprepared person by radioactive fallout within an area of 220 miles in length to a varying width up to 40 miles. Fallout from one test explosion spread over 7,000 square miles of the Pacific Ocean.

What is this fallout that everyone should be concerned about? It is the radioactive particles produced by nuclear explosions, that fall to earth from the upper air. When the bomb explodes, large quantities of soil, stone, and debris are drawn up into the ascending cloud. After mixing with highly radioactive material released by the bomb, particles fall back to earth and produce radioactive contamination. This is very dangerous because it can cause serious illness or even death to humans. It can also cause damage to crops and livestock. An attack by manmade disaster is a distressing thought.

Now let us consider the natural or peacetime disaster. It can destroy our home and families just as a military battle can. The force of a great flood can quickly cut river channels where main streets stood, acting as a vandal, robbing us of our own possessions. Even the most local of disasters—the tornado—can strike many communities causing millions of dollars worth of destruction in a single night. And hurricanes can hurl their devastating winds and rain on coastal regions making an unpredictable course of destruction.

In the face of this destructive duet—natural and manmade disasters, we must be prepared to protect our homes, families, and freedoms. There are five steps to safety everyone should know in the event of disaster:

1. Warning signals and what they mean.
2. Your community plan for emergency action.
3. Protection from radioactive fallout.
4. First aid and home emergency preparedness.
5. Use of Conelrad (control of electromagnetic radiation 640 or 1240 kilocycles on standard AM radio).

In keeping with our Government's traditional responsibility set forth in the national plan for civil defense, mobilization is the continuity of government program. This is a plan which stipulates the course of action State and local governments must take to survive a nuclear attack, and continue to protect life and property. The continuity of government programs is well underway. The national plan for civil defense and defense mobilization states:

"Civil defense is the responsibility of each citizen and of all governments—Federal, State and local—with the Federal Government having the role of direction and coordination of the total national effort."

Civil defense, the American tradition takes on a new and different meaning in this nuclear age. It is the challenge of this time of every American citizen to build an essential civil defense system. What you, as an American citizen need most for fighting in this challenge to prepare for disaster, is knowledge of the nature of the threat—knowledge of self-protective measures to meet the threat, and confidence in your Nation's ability to overcome natural or manmade disasters. Do not forget, civil defense is everybody's business.

Summitry Is Dead; Good Riddance

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following editorial from the Jackson Citizen Patriot, Jackson, Mich., June 22, 1960:

SUMMITRY IS DEAD; GOOD RIDDANCE

The era of high-level personal diplomacy is dead at the hand of a President who seemingly had little use for it.

His Secretary of State spoke the last words over the institution of summitry, born in the time of Franklin D. Roosevelt and suffering its last fatal illness in the international events of the past few weeks.

Expiring with it is the theory, embraced by many persons, that chiefs of state can get together, talk things over, and iron out all the ills of this troubled world.

But nations are not like two neighbors involved in a dispute over a line fence who can compose their differences in a few words.

The processes of diplomacy have been built up through centuries of exeprience. Certain ways of doing things have been found best. In the rush to adapt the processes to the age of air travel the summit concept was born.

Presidents have used good will trips and consultations with friendly chiefs of state with excellent results. The type of personal diplomacy represented by Mr. Eisenhower's tour to the Philippines and Formosa and his almost casual conversations with President de Gaulle and Prime Minister Macmillan is

valuable and we are not certain it should be abandoned.

But where delicate and controversial negotiations with a real or potential enemy, such as the Soviet Union, are involved, face-to-face diplomacy, practiced by the heads of nations, is totally without value unless the spadework is done through normal processes.

Roosevelt first proved that at Yalta where the free world lost its shirt and Truman underscored it when he lost his pants at Potsdam. President Eisenhower did not do well at the Geneva conference.

He was reluctant to agree to go to Paris unless some progress on East-West negotiations was produced at the lower levels of diplomacy. He was pressured into it, perhaps, by Prime Minister Macmillan of Britain and by those in America who believe that it is possible to deal with the Russians.

Maybe the President erred in not standing his ground. But now that the collapse of the Paris meeting before it started and the Japanese incident, which marred his good will trip across the Pacific, have demonstrated the drawbacks of this type of diplomacy, he does not hesitate to call a halt.

It is likely that his successor in office, be he a Democrat or a Republican, also will shun summitry.

The argument as to its usefulness has been closed out. Any President who consents to its revival in the absence of a startling change in world conditions, will confess to a dangerous naivete.

Nixon on Agriculture

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. QUIE. Mr. Speaker, an informed commentary on the recent farm speech by Vice President NIXON appeared in a recent issue of the Red Wing Republican-Eagle, Red Wing, Minn. To my view, this newspaper has correctly appraised the Vice President's position and I call this article to the attention of my colleagues:

NIXON ON AGRICULTURE

There were hints and echoes in presidential candidate NIXON'S North Dakota farm speech Monday that sounded pretty promising to us. Surely, "we should not dig in and fight the battle over farm policy in the entrenched positions we have occupied over the past 5 years." Certain it is that "beating Secretary Benson around the head on the one hand or damning the Democratic Congress on the other will not help the farmer." American farm families do indeed deserve much better.

One major encouraging note was NIXON'S explicit recognition that the line of approach toward getting supply of farm products back in line with demand in the marketplace is to take farm resources out of production. Thus NIXON—by implication, at least—took his stand for the much expanded soil bank which Governor Rockefeller, Farm Bureau, Congressman QUIE, and other have all been supporting. This—rather than more high price supports, more production controls, more regulation on acreage and planting—is definitely the right direction to move.

The second major note we found encouraging was NIXON'S call for a joint undertaking of all the surplus-producing nations to get food surpluses into the hands and mouths of the world's hungry. This must be generally along the lines of the "food for peace" ideas Senator HUMPHREY has been espousing for years, but the international approach is different. The difficulty of avoiding injury to normal commercial farm markets should not be underestimated, but all our Christian and ethical convictions require us not to sit by with spoiling food surpluses on our hands while other human beings suffer from malnutrition. And such handling of food that we Americans can't eat should be looked upon not as a dole to undeserving people but as a way to give them the strength, the energy, and the basic physical health to do the huge building jobs of schools, transportation, and industry that urgently need doing in all the backward countries.

NIXON will need to be much more detailed and explicit as the election campaign begins, and he apparently intends to be. But this North Dakota speech spells out the most clearly to date his general program for agriculture. He obviously will not go down the Farmers Union road of highly regulated, tightly controlled farming but neither will he keep Benson and Benson thinking around the U.S. Department of Agriculture. He believes that government must help farmers work their way out of their problems, and he is eagerly searching for new ideas and new approaches.

Let's Not Give Away Antarctica

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. PILLION. Mr. Speaker, there is pending before the U.S. Senate for its ratification the Antarctic Treaty concluded between the United States and 11 other participating nations. This treaty, on the face of it, would prohibit the use of the Antarctic for military purposes and for nuclear testing. One of the signators to this treaty is Soviet Russia.

I consider it proper and necessary that the citizens of the United States be warned of the actual and real purposes and effects of this treaty:

First. There is no reason to believe that the Soviet will honor this treaty except and unless it serves her purposes to do so. The history of treaties signed by the Soviet proves conclusively that the Soviet will repudiate and avoid the obligations of this treaty whenever it suits her self-interest. The Yalta Treaty, the Potsdam Treaty and the hundreds of other treaties that the Soviet has failed to honor and deliberately violated are conclusive proof that any treaty with the Soviet becomes a dangerous delusion on the part of the United States.

Second. The United States, by reason of its own public opinion and its respect for world opinion, will attempt to honor this treaty while there is no reciprocal assurances that the Soviet will also do so. This treaty will result in the United States immobilizing herself in the Antarctic while the Soviet will be free to use the Antarctic for military and political purposes.

Third. The United States, by engaging in this treaty, is giving up its preeminent claims to the Antarctic and indefinitely postponing its claims to sovereignty and the perfection of its legal rights to the Antarctic.

Fourth. The Antarctic treaty will legitimatize Russia's presence in the Antarctic and give encouragement to her continuing trespass and the build-up of this area for its political-strategic-military purposes.

Fifth. A number of the 12 nations who are participating in this treaty are not the proper parties in interest and have no legitimate or direct claims to the Antarctic. This treaty, instead of leading to a settlement of the sovereignty to the Antarctic, will further compound and confuse the claims of the various nations to this vast area. The United States has nothing to gain by this treaty and everything to lose. The Soviet has nothing to lose and all of the Antarctic to gain.

I would like to insert a comprehensive and very fine article on this subject by Mr. George Fowler which is contained in the June 30 edition of Human Events:

LET'S NOT GIVE AWAY ANTARCTICA

(By George Fowler)

In discussing Alaska, Americans sigh with relief and thank Providence for "Seward's Folly"—our purchase from Russia in 1867 of the rich and strategic territory that became our 49th State.

We shudder at the thought of a 20th century Red Alaska, with its rich mineral resources being shuttled to Soviet ports and its airbases aimed against Washington and New York, rather than Moscow or Peiping.

Yet the Eisenhower and previous administrations have taken a long winter's nap regarding the highly strategic continent of Antarctica—a potential horn of plenty from the standpoint of natural resources. The President has supported a treaty to internationalize Antarctica and there is danger that it will be ratified by the Senate as the lawmakers rush toward the end of this session.

Last November, in Washington, representatives of 12 nations having Antarctic claims, the Soviet Union included, met and signed this treaty. It guarantees nonmilitarization of Antarctica and allows for freedom of scientific investigation by all nations. Fine words—but the Stars and Stripes were planted in Antarctica in 1821 by an expedition headed by Capt. Nathaniel Palmer of the U.S. Navy. In 1839 Lt. Charles Wilkes mapped 1,500 miles of Antarctic coastline during his exploration, establishing it as a continent.

On the basis of American expeditions—we have explored more of Antarctica and mapped greater portions of its mammoth expanse than all other nations combined—international law experts maintain the United States is entitled to claim four-fifths of the entire continent. Officially, we haven't claimed an inch.

The late Adm. Richard Byrd, famed South Pole explorer, testified before Congress in 1954 regarding this gargantuan oversight: "Ask any schoolboy 'Who owns the South Pole?' and he'll turn to an American geography book or the World Atlas, where the map of Antarctica is cut up into some half dozen pie slices that start from the pole. The name of the nation claiming each slice is clearly printed. Yet nowhere is the proud name of the United States."

But, are we really out much by passing off our rights to this great white land of frost, peopled mostly by amphibious seals and penguins, where the temperature drops to 120 degrees below zero at its barren surface?

Needless to say, you can't power jet-age projectiles on whale oil; but Antarctica sports more than the world's largest mam-

mals. Before his fifth and last South Pole expedition Admiral Byrd stated: "I have been connected with four expeditions to Antarctica for our country and each time we returned with new convictions that the so-called useless frozen real estate (just about what opponents of the Alaska purchase were murmuring a century ago) at the bottom of the world is actually a treasure house of fabulous riches.

"Its wealth is waiting to be used when our own resources—which we have been and still are expending so recklessly—are exhausted. Unlike the North Pole, Antarctica is no sea of floating ice, but a continent of 6 million square miles of land—almost as big as the United States and Europe combined. A sheet of glacial ice covers most of the rock, except where mountains that rise as high as 15,000 feet pierce the icy landscape.

"It was on the side of one of these mountains that I saw a vein filled with enough coal to supply the whole world. Other explorers and I have also brought back to America evidence that invaluable deposits of oil, copper, silver, molybdenum, iron, gold, and even uranium lie beneath the age-old ice just waiting to be tapped. This untapped reservoir of resources is vital to America's future. But perhaps as important is the strategic value of Antarctica."

We know that atomic energy can be used to melt Antarctic ice in order to uncover the continent's hidden treasures. Modern mining techniques can master the task of unearthing these minerals. From a military standpoint even the layman realizes that, in this era of atomic submarines and man's increasing ability to function in sub-zero weather, due to scientific strides, the determined efforts of an enemy nation to physically control strategic parts of the continent and employ it as a fortress capable of choking our maritime lifelines in time of war are an alarming possibility.

The establishment of Russian military bases in either frozen or ice-free portions of Antarctica could raise havoc. Red submarines operating out of Antarctic pens would be in easy reach of South America in one direction and Australia in another. Red missile launching pads in Antarctica would be in range of Argentina, Chile, and perhaps areas as far north as the Panama Canal.

Yet in spite of this danger we are in the midst of a Mexican standoff regarding Antarctica largely of our own making, due to the timidity of men in high places who desist from claiming their Nation's due in an age of high crises. At last year's 12-nation Antarctica conference we agreed to "freedom of scientific investigation" on the part of all nations. Does this mean that anyone, the Soviets included, can send in scientific and technical teams, come upon large quantities of mineral wealth, chop them out and ship them home, while the Nation with a right to the lion's share of Antarctica's riches sits on its haunches and watches?

The treaty guarantees nonmilitarization. Does this mean that the Russians, guilty of breaking a thousand international agreements, will refrain from constructing military installations in an unpopulated continent with a million hiding places?

There is little wonder that Senator FRANK LAUSCHE, Democrat, of Ohio, called the language of the treaty "nebulous," and Senator ERNEST GRUENING, Democrat, of Alaska, said that "while the language of the treaty seems unduly vague, it is clear that no rights of the United States to Antarctica are recognized, nor could they be, once the treaty is ratified."

Certainly the activities of the United States in Antarctica have given this Nation a stellar claim. American sailors, scientists, and explorers have suffered and died establishing our rights. The Government has spent between $100 million and $300 million on Antarctic exploration. During Operation Highjump alone (commanded by Byrd in 1946–47), a naval task force of 4,000 men charted 1,700,000 square miles of the continent—900,000 of which had never been seen before.

In a letter to Secretary of State Herter shortly before last year's 12-nation agreement, Congressman JOHN R. PILLION, Republican, of New York, scored our Antarctic policy. Wrote PILLION: "It is inconceivable that the United States allow its preeminent status in the Antarctic to be reduced to the same level as those nations with little or no valid interest in this continent.

"This self-destruction of our interests can only lead to chaos and obstruction to the orderly free development of our political and economic interests in the Antarctic. Our experiences with the Soviet in the Yalta and Potsdam agreements should serve as sufficient warning not to again commit political suicide."

Knowing the character of Communist Russia, what is to stop her from setting up Antarctic space stations under the "freedom of scientific investigation" clause of the agreement? South Pole experts maintain Antarctica is one of the most suitable sites on earth for such ventures. The South Pole is a firmly fixed point, in contrast to its Arctic opposite number. For space-tracking purposes any object in the southern half of the sky surrounding the earth would be continuously visible to Antarctic tracking antenna.

Could not the Russians at some future date turn their scientific efforts into big gains for their geopolitical, military, and strategic interests? Not that things aren't bad enough already. The United States, with paramount legitimate interests, occupies three permanent Antarctic stations. Russia, with little legal right on the continent save through the noodle-spine largesse of Uncle Sam, who seems to have lost his beard, maintains four permanent stations that we know of.

Consistent with their gigantic gall, the Russians are exploring parts of Antarctica claimed by such as Norway and Australia, mapping areas and renaming mountains and mountain ranges. The Russians boldly claimed the entire continent in 1950, although they had shown no real interest in it until after World War II. Even kindergarten children and Hyde Park matrons must realize by now that any "12 nation agreement" the Reds sign will have little bearing on the expansionist designs of the Kremlin.

Bills have been introduced and shelved in Congress calling for the United States to claim what is rightfully hers. Patriotic organizations, chambers of commerce and South Pole experts have vainly beseeched Presidents, the State Department, and Congress to take some interest in this problem before the Russian bear gobbles up the Antarctic.

But the timid souls of political prominence continue their America Last-ism regarding this frozen gem at the bottom of the world. It doesn't take a foreign affairs wizard to scan Russia's past performance chart and figure out what capers our groin-kicking opponents will pull in Antarctica if we don't get hopping down there. It now stands for the U.S. Senate to act in our enlightened self-interest by rejecting the treaty and for the next administration to take a fresh look at the need to assert our Antarctic rights.

CPA's for Public Office

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article which appeared in the June 1960 Journal of Accountancy.

In my view, the call this article makes for accountants to become more active in public service is very pertinent and timely:

CPA'S FOR PUBLIC OFFICE

In Spokane, Wash., a member of the institute who is a candidate for the city council made this statement in a televised campaign speech:

"As a certified public accountant, I represent a profession whose members ordinarily do not seek many public offices. Perhaps the highly confidential nature of our work and the exactitude with which it must be performed make us reluctant to become involved in political issues. However, in the fields of business, industry, U.S. Government service and education, a certified public accountant is a member of every good management team. Many fine CPA's are presidents of large publicly held corporations. The Secretary of the Navy, the Director of the Budget and the Comptroller General of the United States are all certified public accountants."

CPA's do have exceptional qualifications for public office, and it is regrettable that so few of them seek it. The only CPA's holding elective offices of national prominance at present are the Governor of Rhode Island and the mayor of Los Angeles. A few CPA's have been Members of Congress, but there are none at present, although the Honorable GLENARD P. LIPSCOMB of California is a registered public accountant.

A few, but still too few, have been running for and winning such offices as membership in State legislatures, city councils, and school boards, where their ability to understand finances and budgets gives them a special opportunity to render genuine public service.

While there are nearly four times as many lawyers in the United States as CPA's, and admitting that legal training has some special value for legislators and administrators of the law, the contrast between members of the legal and accounting professions in public office is still startling. In Congress, approximately two-fifths of all the Members are lawyers.

Many law firms encourage their younger men—and partners, too—to be active in politics. CPA firms might well do the same, whether or not many of them actually seek public office. Last year an editorial in the American Medical Association News said:

"Physicians, like other professional people, have a responsibility to take an active interest in politics, to urge competent men to run for office, to become well-informed voters, and to express their views to their elected representatives on pending legislation.

"If the professional men of America do not become more active in goverment and politics and do not join in concerted resistance to further inroads on local authority and initiative, they will be doing less than citizenship demands of them."

CPA's share this responsibility of citizenship, either to become candidates for office or to take an active interest in political affairs in their own communities.

Whether the subject under discussion is the Federal budget or the cost of a new school, CPA's will be listened to with respect by their friends and neighbors. If they are willing to make a little effort, they will find ample opportunity in either of the major political parties to make a constructive contribution to citizenship education and clarification of basic issues.

Candidates of both parties agree that the greatest internal threat to the United States of America is fiscal irresponsibility, although they disagree violently as to what is responsible and what is not. In this area particularly, members of the accounting profession can help to promote sound thinking.

Working through either party, according to their personal preference, certified public accountants have a unique opportunity to persuade other citizens why they should vote, and vote intelligently. In this year particularly, they will find in most communities a warm welcome if they volunteer for political activity. If they accept the opportunity and the obligation to contribute to public enlightenment in the political arena, they can exert a tremendous influence for better government.

Statement of the West Virginia Glass Workers' Protective League Before the Tariff Commission

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA

Tuesday, June 28, 1960

Mr. MOORE. Mr. Speaker, the plight of the glass industry of the United States in the face of cheap imports from foreign countries is well known to the entire membership of the House. Unless immediate relief is given, the glassworkers of America will be in the same predicament as those workers in other industries such as pottery, chinaware, etc., who no longer have jobs because of the stiff competition these imports have occasioned.

The West Virginia Glass Workers' Protective League have been given an opportunity to file a statement with the Tariff Commission in which they plead the case of these many workers. They have stated their situation so well that I respectfully request permission to have it reprinted in the CONGRESSIONAL RECORD for the benefit of my colleagues. I trust they will take an opportunity to review it and consider the bleakness of the future of these folks unless something is done quickly to reduce these imports and their devastating effects on America's industries:

STATEMENT OF THE WEST VIRGINIA GLASS WORKERS' PROTECTIVE LEAGUE BEFORE THE TARIFF COMMISSION

Mr. Chairman, the West Virginia Glass Workers' Protective League, whose membership is composed of American flint workers and flat glass workers, deeply appreciate the opportunity to submit a statement to this distinguished committee.

In West Virginia, as well as throughout the United States, the people are wondering how much longer we can help support the rest of the free world.

In West Virginia, 38,000 workers have exhausted their unemployment compensation benefits; 282,675 more are receiving surplus food. We firmly believe this is caused by automation and importations. While we can condone automation, we bitterly oppose importations. It is hard to reconcile ourselves to a situation whereby we are unemployed with no prospect of immediate employment, while foreign workers are busily engaged in producing goods that we formerly produced.

Unless relief is given soon, it is inevitable that many of our members will go the same way as the pottery workers, watchmakers, the workers in the bicycle, hardwood-plywood, chinaware, camera, textile, sewing machine, typewriter, clock, and the clothespin industries.

We are bitter against our present reciprocal trade agreements that allow hundreds of thousands of boxes of window glass to be imported to this country every month while our members are walking the streets waiting for a tank, that has been shut down because the warehouse is full of boxed glass, to start operating again.

Since the trade agreements program was enacted in 1934, tariffs have been reduced 75 percent. It would definitely aggravate the situation if imports were allowed to take an even larger share of the already declining market.

Seventeen countries are now exporting window glass to this country. We do not concur with the State Department's philosophy of appeasement of other countries in order to hold their friendship at the cost of the American worker. We can go all over the world saving is from communism, but we may come home to find it here. Many of the thousands now unemployed in the glass industry, lost their jobs as a direct result of importation, and they are unhappy about it.

Because foreign glass sells 25 percent less, almost all of the eastern and western seacoast has been lost to our domestic manufacturers of plain sheet glass. With the opening of the St. Lawrence Seaway, ships from all over the world will be emptying their cargoes in Chicago, Detroit, Milwaukee, Toledo, and the Buffalo area. It is a matter of record that the very first ocean-going vessel to reach Chicago, the *Prins Johan Willem Frisco*, carried a cargo which included window glass. Having lost almost all of the eastern and western markets to imports because of the difference in prices (25 percent less) we now face the same situation in the Great Lakes area.

We cannot visualize how the the American workman and the American businessman may be helped by making it more attractive profitwise for an American manufacturer to close his plant here to make investments abroad. Our present unfair Reciprocal Trade Agreements are doing that very thing. We believe a reappraisal of the tariff situation certainly is called for, but not to the detriment of the American glassworkers. Many European and Asiatic countries have less unemployment than we do here in the United States.

The American glassworker is being outwaged by cheap foreign labor. The basic average hourly wage of the Japanese glassworker is about 26 cents an hour; the Italian, 36 cents; the French 47 cents; the German, 55 cents; the English, 70 cents. The American basic average hourly wage is $2.22 an hour. The combined average wage of the foreign glassworker is 47 cents an hour. Does the State Department expect the American glassworker to live on $3.76 a day?

Statistics on importation of window glass (S.S.E. boxes) to this country are as follows:

Year:	*Imports*
1948	15,953
1949	76,081
1950	546,671
1951	1,526,121
1952	611,545
1953	1,610,212
1954	1,390,366
1955	3,372,710
1956	5,527,110
1957	3,635,295
1958	5,170,333
1959	8,640,656

In 1955 imports captured 14.4 percent of our domestic markets. In 1956, imports captured 18.3 percent; 1957, 19.8 percent; 1958, 20.3 percent; and in 1959, imports increased to 34.1 percent of our domestic markets.

The beginning of 1960 found the flat glass industry operating at approximately 55 percent of its total capacity. Today, in the United States, two window glass factories are completely closed. The Fourco Glass Co., which operates three factories (two in Clarksburg, W. Va., and one in Fort Smith, Ark.) is now operating at 52 percent of its total capacity, with 41 percent of its employes laid off. An average of over 720,055 boxes of window glass enter this country each month. This 720,055 boxes equal the normal production of the Rolland Glass Co., its Adamston flat glass division, Clarksburg, W. Va.; the Harding Glass Co., Fort Smith, Ark.; the Blackford Window Glass Co., of Vincennes, Ind.; and the factories of the American-Saint Gobian Corp., in Arnold, Pa., and Okmulgee, Okla.

The American Flint Glass workers over a period of years have lost considerable ground. It was pointed out that automation was the reason for the lack of employment in the handmade division of the industry, but we find, today, that the automatic machine division of the industry is feeling the pressure of imports.

In the past few years there has been a definite decline in the number of employees in hand plants. Several plants have gone out of existence. Among them the Paden City Glass, Paden City, W. Va., the Cambridge Glass Co., of Cambridge, Ohio, and the A. H. Heisey Co., of Newark, Ohio.

In 1958 imports of glass in the category totaled $11,989,055. The leading source of imports was West Germany.

In 1958 exports of machine-made table and kitchen glassware totaled $4,321,412 (Canada, $1,861,700), and those of handmade table and kitchen glassware $396,150 (Canada, $293,000), these categories including most glass tableware and novelty ware. Exports of machine made tumblers, drinking glasses, and stemware were $3,665,150 (Canada, $1,728,600). Exports of heat resistant cooking glassware totaled $1,951,712 (Canada $1,595,600).

Exports were approximately $1,654,353 less than imports.

We, therefore, urge the Tariff Commission to consider the critical plight of the American glassworker. If we may reiterate, any further cuts in tariff on any glass could well be the end of one of America's oldest industries.

Appendix

Social Policies for the Aged in a Democracy

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. McNAMARA. Mr. President, I should like to have printed in the Appendix of the RECORD remarks of my brilliant and forthright colleague from the State of Oregon, WAYNE MORSE, on the occasion of the 13th Annual Conference on Aging, held at the University of Michigan this week. In his speech on the first day of that conference, June 27, the Senator from Oregon [Mr. MORSE] has outlined, in his typical scholarly fashion, the background to the emergence of the aged in our country as a national matter, and not merely as a group with the same conditions and problems the relatively fewer numbers of senior citizens experienced in previous generations. He shows, too, that despite the cries of alarm by the "standpatters" among us, the Nation can afford much more than it is now contributing to the dignity and well-being of our growing numbers of retired men and women.

And finally, and much more to the immediate issue before us, the Senator from Oregon [Mr. MORSE] reminds us that all of us, young and old, have a stake in the decisions that must be made today—especially concerning the protection against medical care costs during retirement.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOCIAL POLICIES FOR THE AGED IN A DEMOCRACY

(Remarks of Senator WAYNE MORSE, University of Michigan, 13th Annual Conference on Aging, Ann Arbor, Mich., June 27, 1960)

It was a great honor and pleasure for me to receive and accept your invitation to participate in this Conference on Aging at the University of Michigan.

When Clark Tibbitts, of the Department of Health, Education, and Welfare contacted me about this conference, I was particularly anxious to come. Clark Tibbitts' father-in-law was president of Reed College out in my State several years ago, and I have memories of many pleasant associations with his family.

But it is pretty hard for a Member of Congress to try to tell you anything about this subject matter that you do not already know.

The Senate Committee on Labor and Public Welfare, of which I am a member, has established a Subcommittee on Problems of the Aged and Aging, under the outstanding chairmanship of my good friend from Michigan, Senator PAT MCNAMARA.

The great work which Senator MCNAMARA has done as chairman of that subcommittee should come as no surprise to anyone in Michigan or for that matter to anyone in the country who knows PAT MCNAMARA. He is a great humanitarian with a tender but realistic understanding of human welfare problems. He meets my definition of a constitutional liberal, namely, one who seeks to translate into legislation the human rights guarantees and private property guarantees of the Constitution.

We have a long way to go in the United States before we can say truthfully that we have lived up to the constitutional liberalism of the great liberals who wrote the Constitution. We should never forget that our Constitutional forefathers made clear that the primary objective of our system of self-government is to promote the welfare of people. They taught the lesson that I fear many in our generation need to learn, namely, that the only true wealth we have is human wealth. The most precious values we have are human values. The wealth of America is to be found in our people, not in our Wall Street, smokestacks, factories, mercantile empires, and other material things. They are but instrumentalities with which to serve the general welfare of our people within the procedural checks and balances of our constitutional system.

PAT MCNAMARA understands this and as a great liberal legislator, seeks to put it into practice in the Senate of the United States. I shall always be proud of the fact that I campaigned for his election in 1954 in Michigan and I shall always stand ready and willing to be of any further assistance that I can to this great liberal from Michigan. He must not be lost to the Senate of the United States and I am confident that the people of Michigan will share that point of view in November 1960.

Likewise, I am pleased to be associated with the junior Senator from Michigan, Senator PHILIP HART. He is another forward-looking liberal of the Senate. It is my prediction in Ann Arbor tonight that as the years go by, he will make a great record for himself and Michigan in the Senate of the United States.

I have followed the hearings and reports of Senator MCNAMARA'S subcommittee very carefully, and I am impressed by the extent to which it has called upon you people here today for information.

Of course, some of us in the Congress have looked for years to Wilber Cohen for guidance on social security matters; we still do. He is one of the Nation's leading experts in the field and we hardly know how to act on a social security matter in Congress, without the services of Professor Cohen.

Professor Donohue is another major source of light and guidance to Congress on problems concerning the aged.

So if I were to report to you on the hearings and findings of this particular subcommittee, I would be in the position of quoting back to you many of your own words.

EMERGENCE OF THE AGED AS A MINORITY

But the Subcommittee on Problems of the Aged has carefully canvassed the Nation in seeking both expert opinion and personal experiences concerning the pattern of life in America for those 45 and over.

It has produced the most comprehensive and valuable survey of this subject available to Congress.

The very establishment of this subcommittee in the Senate is part of what the subcommittee report of last January calls an evidence of growth in national interest in problems of the aged. The meeting you are having right now is an evidence of it, as is the proposed White House Conference on Aging scheduled for next year.

Unlike most of America's minorities, the aged are emerging as a distinct minority, rather than being absorbed. You are all familiar with the social and economic changes in this country which are steadily separating people 65 and over from the younger population. This development is found, as our subcommittee report notes, in housing, employment, income, health needs, and in a kind of social ostracizing of the aged, insofar as family life is concerned.

The three-generation family is rapidly disappearing in America. The reasons for that are an interesting and not altogether inspiring commentary upon our values. Among the reasons for it are economic and medical technologies which, of course, are not entirely subject to a moral judgment.

But the subject I am here to talk to you about concerns a social policy toward the aged. That implies more than just an objective study of what our mores are in modern America toward the aged; it calls for some thought about what they should be.

But in order to make any value judgments, we first have to know what the facts are. That is why the Congress and the Nation is so indebted to the University of Michigan and similar centers elsewhere in the country for the social and economic information they can bring to Congress on this subject.

A second factor in the increasing awareness of the problems of aging is the simple increase in the number of people 65 and over. From 4 percent of the population in 1900, the 65 and over group was almost 9 percent in 1958, and will be well over 10 percent of the population for the next several decades. The rise in their numbers has coincided with the isolation of the aged as a group.

NATURE OF THE PROBLEM

I would like to summarize for you some of the other factual situations which our subcommittee has found, and which must be the framework of any future policy toward the aged.

Although it has not rated first in the attention given it, I would mention, first, the changing employment status of the labor force, not only among those 45 and over, but for all Americans. This is the rising participation of Americans of working age in the labor force and the declining participation of those over 65. A higher percentage of people under 65 and especially under 45, are working today than ever before.

The entry of women into employment largely accounts for this increase. But among men and women over 65 fewer are working than ever before, and it seems likely that the trend will continue. In 1900, 37 percent of this group was working; by 1950, only 26 percent was working; and by 1975, it is estimated that 17.5 million men and women over 65 will be outside the labor force and only 4.5 million in it, or 20 percent employed.

Together with declining employment goes a sharp decline in income of those over 65. Already the lowest income group insofar as age is concerned, their income problem is likely to worsen unless some steps are taken to do something about it.

As our subcommittee pointed out, the fact that more people of working age are working should dispel alarmist views about the few having to support the many, since the ratio of working people to nonworking people remains favorable. It certainly shows that our economy can sustain measures to aid the aged, if it continues its present determination not to employ them in gainful occupations.

With the drop in their income goes the change in housing, in medical care, in social activities, and similar shifts in living patterns which have come to mark the over-65 as a minority group.

WHAT SHOULD OUR POLICY BE?

I think that our policy toward the over-65 minority group must be dictated by a consideration that there are some respects in which this group wishes to remain distinct from the rest of the population.

Many of them do not in fact want to work. To some extent, this desire is conditioned by illness or some disability.

To a great many others—if they have sufficient income—retirement is a time to put aside many life-long responsibilities and enjoy oneself. Some men and women among the over-65 group prefer to remain with others of their own age, and some experiments in housing for the elderly have been notably successful.

Because it is impossible to say that the elderly have a uniform desire to be reabsorbed into the three generation family and the economic patterns they knew in their own youth, we must have some alternative policies for the aged.

First, I think it is important to break down the barriers to their gainful employment, for those who wish to be employed. Discrimination due to age is just as unpleasant and unjust as racial or religious discrimination or any other kind which ignores capability.

Driving people out of the labor force is an ugly and undesirable thing. I am proud of the fact that my State of Oregon has one of the seven State laws aimed at curbing discrimination based upon age. We need more such State laws, and we need a firm Federal policy to knock down these barriers among employers who work under contract to the Federal Government.

In short, those who wish to continue working after reaching retirement age should have the opportunity to do so.

But we must also make it possible for them to retire. The social security structure of today is still tied too closely, in my opinion, to the concept in which it was originated. As a depression-born institution, it was intended to provide a minimum subsistence to the elderly, so they would be encouraged to retire and make room for younger workers in the scarce number of jobs available. Its benefit system was inadequate even by depression standards, and our standards of what is a desirable standard of living are much higher today.

In my opinion, social security should now be elevated into the kind of retirement system on which people 65 and over can live in reasonable comfort.

Certainly it should include health insurance. As the first Senator to introduce a companion to the Forand bill in the Senate, I have been amazed by the rapid ascendence of this proposal as a political issue.

In 1958, I offered my bill as a floor amendment to the modest boost in social security benefits which was passed at that time. Only two Senators even joined in the discussion of my amendment. We could not get a rollcall vote on it; it was rejected by a voice vote with only a handful present.

Two years later, it is at the head of everyone's list of domestic issues in the 1960 campaign.

POWER OF THE POLLS

This brings me to a final point: The most practical way for the aged to make known their views is through political action. It is fine to put all the figures together in committee reports, but the universal language most clearly understood by most politicians is not the language or facts or logic, but the language of votes.

Had not the enthusiasm and interest in the Forand bill been communicated to Members of Congress through letterwriting, poll taking, and similar means of expression, it would not now be the issue it is even though the need for it remained the same.

I have pledged on many platforms that I shall see to it that the voters have the benefit of a Senate rollcall on the Forand-Morse bill or on the NcNamara bill before the November election. I have already prepared my original bill as an amendment to the House-passed social security bill, substituting the insurance plan for the public assistance plan of medical care.

When we have had a vote on it in the Senate, the voters will be in a much better position to pass judgment in November. Because the House of Representatives was unable to adopt anything more than the public assistance health plan, I do not expect that our insurance proposal will make much headway in conference with the House, even if it is adopted by the Senate. But it will provide the foundation for another try next year.

There was a time when the "ham 'n egg" issue was big in California, and possibly Florida, but not elsewhere. That is no longer true. As the aged have emerged as a distinct minority, their power at the polls has also become greater.

What today's young and middle-aged citizens expect out of life in their own declining years is also a factor which must make itself felt. But they must become conscious of the political connection between how they vote on election day now and the kind of policy which they will live under in their old age.

Adoption of a progressive and enlightened social policy requires both education and political action. Education on the subject has been advanced considerably in recent years; I hope the day of political action is not far off.

A Doctor's View

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. DAGUE. Mr. Speaker, my good friend and constitutent, Mr. Donald MacLean, of Berwyn, Pa., has asked me to bring to the attention of this House a letter written recently to the editor of the weekly publication of the Philadelphia County Medical Society. While some of us may not agree with Dr. Daly's statement in its entirety it certainly raises many provocative points which should be thought through. The letter, as follows, is comended to your careful consideration:

EDITOR, PHILADELPHIA MEDICINE:

How any physician can favor social security is beyond my comprehension. By favoring this socialistic monstrosity, he denies all the principles organized medicine has proclaimed for years. How silly to oppose State medicine, support the Jenkins-Keogh bill and then beg to be included in social security.

Apparently the propaganda of the physicians' committee for social security is being accepted as factual.

It is said that this plan is actuarially sound. This is untrue. It is not insurance, it is a Federal dole financed by taxes. The Supreme Court considered it a "relief" program when, on May 24, 1937, it declared the legality of the Social Security Act. The scheme is not actuarially sound—and particularly unsound for the new entrant. A new entrant can expect to pay a tax of $1.69 for every $1 promised in benefits. This is completely contrary to the claim that it is a sound investment for the young physician.

It is claimed that under social security physicians have the same rights and guarantees as in an insurance contract. This also is untrue. Social security has no guaranteed benefits. There is no contract with the Government for the relief payments. The social security law states (sec. 1104) "the right to alter, amend or repeal any provision of the act, is hereby reserved to Congress." Again you are at the mercy of irresponsible politicians facing election. Under an insurance plan, an individual has a contract with the insurance company and has certain guaranteed rights written into his policy.

It is claimed that social security for physicians is a better buy than legitimate insurance. This is also untrue. Computed on the first $4,800 on earned income, a self-employed person is taxed $216 a year. If a doctor invested $216 a year until the average retirement age of 69, after working 40 years, this fund would contain more than $35,000. If he used only the annual interest (6 percent—some mutual funds pay this and better) without touching the principal, he would have an income of approximately $170 a month. He would still collect this amount even if he continued to work; unless he were 72 years old, he couldn't collect a social security dime if he earned more than $100 a month (G.P., March 1960—p. 79) or if he decided on insurance, he could use the same amount as the annual cost of social security to purchase a life annuity averaging $216 a month after he reached 65.

It is only commonsense that physicians should reject and resist social security because they cannot ask for this socialistic measure and oppose socialistic medicine. If social security is right for physicians, then it follows that socialized medicine is right for their patients.

There are enough men of nobility in our ranks who still and will continue to strive to realize the ideals inculcated by their illustrious teachers. One must fear that the future belongs to the "gimme's" and the "something for nothing" characters who forget that there is no such thing. The politician takes your money and some of your liberty. The end is national catastrophe.

Those who will not read history are bound to repeat the mistakes of the past. Hard facts mean nothing to the liberal and the socialist. Germany cast off much of her socialim for free enterprise and is now the most prosperous nation in Europe. England is decaying rapidly in wealth and spiritual courage. Sweden, with the "womb to the tomb care," has the highest suicide rate. Hardship and freedom—yes, freedom to starve—made America great. It developed rugged characters, independent in mind, jealous of the encroachment of the omnipotent state and their symbol was the rattlesnake—"Don't tread on me." But the politicians have conditioned the people to a giveaway philosophy—they have sown the wind and we will reap the whirlwind.

JOSEPH A. DALY, M.D.

The Power of Prayer

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. STENNIS. Mr. President, our colleague the Senator from Oregon [Mr. LUSK] has been with us only a short time, but he has impressed all of us most favorably with his fine knowledge of public affairs, his profound judgment, his deep knowledge of the law, and his wise decisions. Accordingly, he has influenced legislation as well as made friends and gained the utmost respect of all of his colleagues.

The Senator from Oregon delivered a most impressive and worthy talk to a group of Senators at a special meeting this morning. His remarks have been reduced to writing and should be shared with our colleagues and the people of the Nation. Accordingly, I ask unanimous consent that the remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE POWER OF PRAYER

I have taken for my subject this morning "The Power of Prayer," and for my text two passages from Mark. The first is:

"In the morning rising up a great while before day, He went out and departed to a solitary place, and there prayed." Mark I: 35.

And the second:

"He went a little further and fell on His face and prayed, saying: 'O my Father, if it be possible, let this cup pass from me; nevertheless, not as I will, but as Thou wilt.' And He cometh unto the disciples and findeth them asleep and saith unto Peter, 'What, could you not watch with me one hour? Watch and pray, that ye enter not into temptation; the spirit indeed is willing, but the flesh is weak.'" Mark 36, 39–44.

On these two occasions, as on others, our Lord taught us to pray by example. On another, He taught us how to pray, when, in answer to a question of a follower, He recited what is known as the Lord's Prayer—the perfect prayer, it may be said, because of its total acknowledgment of man's feelty to God: "Thy kingdom come; Thou will be done, on earth as it is in heaven."

Someone has written that—

"Prayer is the peace of our spirit, the stillness of our thoughts, the evenness of recollection, the seat of meditation, the rest of our cares, and the calm of our tempest; prayer is the issue of a quiet mind, of untroubled thoughts; it is the daughter of charity and the sister of meekness."

The question arises—For what shall we pray? For material success, for victory in war, for our eternal salvation?

Surely, the last must be the supreme desire of all who profess belief in God and the immortality of the soul. And so little children are taught to lisp at their mothers' knees, "Now I lay me down to sleep. I pray the Lord my soul to keep."

The poet, Tennyson, has the dying King Arthur say:

"I have lived my life, and that which I have done
May He within himself make pure; but thou,
If thou shouldst never see my face again,
Pray for my soul. More things are wrought by prayer than this world dreams of.
Wherefore let thy voice
Rise like a fountain for me night and day.
For what are men better than sheep or goats
That nourish a blind life within the brain
If knowing God, they lift not hands of prayer
Both for themselves and those that call them friend?
For so the whole round earth is everywhere
Bound by gold chains about the feet of God."

We pray for good health, for success in a business venture, for a safe voyage. But some pray only that they may become better men and women. Of this sort is the sublime prayer of St. Francis of Assisi:

"Lord, make me an instrument of your peace; where there is hatred, let me sow love; where there is injury, pardon; where there is doubt, faith; where there is despair, hope; where there is darkness, light, and, where there is sadness, joy. O Divine Master, grant that I may not so much seek to be comforted as to comfort; to be understood, as to understand; to be loved as to love; for it is in giving that we receive; it is in pardoning that we are pardoned, and it is in dying that we are born to eternal life."

The skeptic scoffs at prayer and sneers that prayers are never answered, that the loved one for whose restoration to health we pray, dies; that so many, notwithstanding their prayers, fail to reach the goal in life upon which their hearts are set, but instead are victims of poverty, disease, and the thousand and one ills that flesh is heir to.

But if one who is not a theologian may venture an answer to these men of little faith, it might be said that their objections are based upon a misunderstanding of the Christian's conception of God's relationship to man. We believe in the infinite goodness and wisdom and the omnipotence of God; that he is the creator and we the creatures and hence that his will, not ours, shall be done. Prayer is an act of faith. The inarticulate major premise of every good prayer is submission to the will of God; and the paradox of misery in the world on the one hand and a God of infinite goodness, who created the world, on the other, is resolved by the Christian's faith that obedience to the will of God is the greatest of all good. Indeed, the devout prayer of the Christian, the humble prayer, such as that of the publican who stood afar off and beat his breast and cried out, "Lord be merciful to me a sinner," such a prayer is itself a good, for "Who rises from prayer a better man, his prayer is answered."

The birth of Christ was heralded by the angelic choirs singing of peace to mankind. The word "peace" was frequently on the lips of the Saviour. But there is no peace in the world today and the prayer of the peoples of the world, whether uttered or not, are for peace, for the warding off of the threat of destruction of our civilization that hangs over our heads like a pall.

It was to secure this peace that the United Nations was organized in the fond hope that it would provide a forum in which disputes among the nations would be settled without resort to arms. It is yet to be demonstrated that through this or any other similar machinery peace can be preserved. In the meantime the world stands armed as never before in history, and the peoples of the world spend their substance on weapons of unbelievable destructive power.

The philosopher may say that all of this is the supreme example of the folly of mankind. So perhaps it is. But we are caught in the fell clutch of circumstance, and we must deal with it; and no more fearful responsibility ever rested upon the shoulders of men than the responsibility of statesmen and leaders of peoples to avert the threatened disaster and to set our feet upon the path that leads to peace.

We say that the enemy is Godless, and so indeed are the leaders of the enemy, but can this truthfully be said of their people? We boast that we are followers of Christ, the meek and humble Christ who died on a cross to save mankind, but should we not do a little soul searching to find if our lives match our professions, if our faith is a living thing, a thing of substance, and not mere words. The King in Hamlet knelt down to pray, but could only despairingly exclaim:

"My words fly up, my thoughts stay down below.
Words without thoughts never to heaven go."

And so it is with too many of us. If not sworn enemies of God, we are too often neutralists. We do not believe in our hearts in the providence of God.

Christ said, "Ask and you shall receive." May I suggest, Is not this an acceptable time to storm the gates of heaven with our prayers for peace, or, rather, should I say, for the means of achieving peace? There must be some better way to that goal than arming for war. Christ in the Garden of Gethsemane said to his disciples, "Watch and pray." We are not indeed called upon to bare our breasts to the sword of our enemy. It would be wrong not to prepare to defend ourselves against aggression. But while we watch we can also pray—pray for the turning back of the tide of immorality that tends to corrupt our society, for the increase of understanding and the spirit of charity among us, and, for our leaders, that God may open their hearts and enlighten their minds and strengthen their hands for the stern tasks that lie ahead. So we may hasten the coming of that "one far off divine event to which the whole creation moves."

Defense Procurement

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the June 24, 1960, Washington Evening Star.

The editorial is representative of the growing voice for improved procurement and supply procedures in the military departments to end waste of the taxpayers' money.

As indicated in the editorial, much of the current move against procurement waste was spearheaded by the action of the House Appropriations Committee which in the fiscal 1961 Defense appropriations bill, reported April 29, 1960, recommended a 3-percent, across-the-board reduction in procurement appropriations as a positive move toward taking immediate steps in this regard. The editorial follows:

[From the Evening Star, June 24, 1960]

FAR FROM SATISFACTORY

In approving recommendations of the Senate Appropriations Committee on the De-

fense budget, the Senate also has given the Pentagon a well merited rebuke for its lethargy in consolidating supply and procurement services. As the Senate committee has pointed out, the progress of the Defense Department in reducing costly waste of dollars intended for weapons and other equipment is "far from satisfactory."

The overlapping and duplication of services in the fields of material buying and distribution have been strongly criticized in the past by the Hoover Commission, the Comptroller General and several congressional committees. Now the Senate appropriations group has added to the chorus of condemnation with this comment: "The committee notes with grave concern the numerous and admitted examples of waste and duplication in defense procurement which have been reported to this and other congressional committees. The audit reports of the General Accounting Office show that these are not isolated examples; rather they underscore the urgency of integrating the supply systems and service activities of the military departments—repeatedly expressed as the intent of Congress. The committee calls on the Department of Defense to take immediate and vigorous steps to integrate its procurement and supply service activities in order to provide maximum utilization of the defense dollar."

The House, as a spur to such consolidation, cut the procurement appropriation by 3 percent—pointing out that much more than this amount could be saved by an efficient and effective merger of buying services. The Senate restored this cut—but, in effect, has backed its committee's demand for a prompt end to waste. Whatever the final action by the conferees, both Houses of Congress now have served notice that they expect drastic supply reforms—reforms which it has been estimated could save the Department more than a billion dollars every year. The savings could buy a lot of additional security for America.

Address Delivered by Father Patrick J. Nooney, National Chaplain, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. MUNDT. Mr. President, I have obtained an address by Father Patrick J. Nooney, of St. Joseph's Parish in Struble, Iowa, who is also national chaplain of the Veterans of Foreign Wars. This speech, recently presented in Yankton, S.D., in observance of Loyalty Day, points out the disaster that lies ahead for this Nation if we continue to pursue materialistic self-seeking pursuits and do not reawaken ourselves to the true understanding of our values.

I ask unanimous consent to have Father Nooney's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LOYALTY DAY SPEECH GIVEN BY FATHER PATRICK J. NOONEY, NATIONAL CHAPLAIN, VETERANS OF FOREIGN WARS, AT YANKTON, S. DAK., ON MAY 3, 1960

Last Sunday, May 1, thousands of Americans participated in Loyalty Day parades and ceremonies sponsored throughout the Nation by the Veterans of Foreign Wars. We still find it necessary to talk about loyalty. And why?

Listen to this statement made by the Chinese Communist intelligence about the 7,000 American boys imprisoned in North Korea during the recent war: "The American soldier has weak loyalty to his family, his community, his country, his religion, and to his fellow soldier. His concepts of right and wrong are hazy and illformed. Opportunism is easy for him. By himself he feels frightened and insecure. He underestimates his own worth, his own strength, and his ability to survive. He is ignorant of social values, social tensions, and conflicts. * * * He is insular and provincial. He fails to appreciate the meaning of, and the necessity for, any form of organization or discipline."

If only 50 percent of this is true, it's still a sad analysis of those American boys who never grew up to be men. The record bears out the Communist report. One out of three was guilty of collaborating with the enemy, and 1 out of 7 was guilty of serious collaborating, and 21 soldiers remained voluntarily with the enemy. All of this, without the use of brain washing.

After thoroughly studying this situation, the U.S. Army found with our soldiers, an almost universal inability to adjust to a primitive situation—and a regrettable lack of the old Yankee ingenuity. It was also the result of some new failure in the childhood and adolescent training of our young men—a new softness. The whole physical routine of Army life seemed to collapse in the prison camps. Survival of the fittest became the law. Finally, in 1955, the President of the United States found it necessary to spellout for the U.S. Army the new code of conduct for captured prisoners of war.

There is a good deal of confused thinking prevalent today on what loyalty is, and to whom, or what, we owe loyalty. It is unfortunate that we must have a Loyalty Day. Every day should be Loyalty Day. This loyalty of which we speak should be directed first of all to God and His never-changing laws. It should include patriotism—love and respect for country, community, and neighbor.

Not too much is being done to offset this poor thinking on loyalty. The strength of the members of the Veterans of Foreign Wars and other groups like it, is needed to reawaken the American people to a true sense of values. We need to learn, once more, that some values do not change—not everything is relative.

LOYALTY DAY

Years ago, President Theodore Roosevelt said: "Americanism means the virtues of courage, honesty, justice, truth, sincerity, and hardihood—the virtues that made America." "The things that will destroy America," he prophesied, "are prosperity-at-any-price, safety first instead of duty first, the love of soft living and the get-rich-quick theory of life." It seems that today our major loyalty is to the dollar sign and payola is accepted in the business world as well as in radio and television.

Former President Herbert Hoover says: "We are in the midst of an increasing moral slump, as witness the increase in major crimes." Last year, one-half million young people were arrested and 250,000 of them are proven, hardened criminals. Our annual crime bill runs into the millions and for every dollar given to any church, we spend $12 on crime. While the young people involved in these figures are but a small minority of the Nation's youth, the problem is a large one.

We can hardly believe that integrity and moral strength are increasing, when we see, daily, the exposure of municipal corruption and the improper operation of some home loan, meat, and fuel-oil businesses. A recent article in Parade magazine states the following facts: "In Chicago, police conspire with a thief to loot the very same business establishments they are paid to protect. In Los Angeles, a high-school adviser is charged with urging his students to get ahead by stealing, and promises one of his pupils $500 to rob a jewelry store. In Brooklyn, N.Y., the district attorney reveals that inspectors from the bureau of weights and measures have accepted bribes, so that dishonest butchers and oil companies can cheat customers. Dozens of diskjockeys confess to taking payola to plug recording, frequently the worst music in the Nation, before a gullible public. In New York college students allegedly have cheated on exams and obtained degrees by hiring ghost writers to turn out their theses, term papers, and exams—paying from $50 to $3,000 in fees. A congressional hearing exposes rigged TV quiz shows. When confronted with the shocking evidence, network executives say, in effect: 'We didn't know what was going on.' There are a number of crooked labor leaders robbing their membership blind and hiding behind the fifth amendment every time a congressional committee seeks to expose them."

Are these isolated instances of greed, negligence, and dishonesty? Or do they indicate a definite trend toward cheatsville and amorality? Can it be that money, not love or service, has now become the dominant motive and yardstick of achievement in our society? Have we, since the end of World War II, lost our ideals, our sense of responsibility, our sense of discipline, and striving? Have we lowered our standards all along the line?

Hundreds of generations ago, Plato wrote: "What is honored in a country will be cultivated there." Is it possible that in our country, we have been honoring the dollar sign and the pleasure men, all out of proportion? We are all the victims of our environment and heritage. And for the past 75 years, we in this country have made lions of our millionaires and gangsters, to the disadvantage of our poets, scientists, politicians, and teachers. Witness the low salaries of educators and scientists. Perhaps we should rewrite Plato's statement applied to our culture: "Who is publicized in a country is frequently emulated by its younger generation."

What can we do about all this? Is this the era in which our basic goal is personal security, personal security in terms of money—regardless of how acquired? Or is this just a passing stage of moral laxity, brought on by a prosperity we cannot handle?

If we have overhonored and overglorified material wealth, then we must balance the scales. Children must be taught that success is a job well done, that a man feels rich when he writes a good poem, composes a good song, builds a sturdy bookcase, save a human life. A man is a success who serves well and honorably. Success in America must not be measured in dollars alone. According to the latest poll, most people now think it is. So, at this point of our history, we are long on dollars and short on idealism. When people were poorer, other real values were more appreciated, i.e.—religion, truth, freedom, and loyalty.

The Veterans of Foreign Wars and their auxiliaries and other groups have done a fine job of sponsoring Boy Scout troops and other youth projects to interest and train our young people for right living. But there still is not enough basic training received from the home, school, and community to insure [the] fundamental loyalties and objectives. Our national leaders have repeatedly stated that American youth, compared to European youth, are soft, both physically and mentally.

Are we failing our youth in not setting higher standards? We are too inclined to

take the easy route of getting our entertainment over television, rather than reading on our own, or properly developing the mind and body. The problem of pornographic and indecent materials available on newsstands is largely ignored, in spite of repeated FBI reports that show increases in such materials, are paralleled by increases in crime. In trying to give our children all we did not have, we have gone too far. Many young people have too much, too soon—too little appreciated.

Patriotism is not something confined to ancient history. It should be instilled in young people in their homes and schools. We need to place more emphasis on owning and displaying the flag. All citizens must become more interested in their schools, including the curriculum and standards of conduct. Parents should clamp down on unrestricted use of the car, and the too-early, unsupervised recreation of their children. How will we react when the next torch is lighted, and we need to send soldiers to another part of the globe? We won't be loyal to God and country without training, and we cannot train our people after war is declared.

We must get back to sound fundamentals. We must instill in our youth a real sense of God; a sense of direction; a knowledge of right and wrong; a sense of responsibility to God, country, and neighbor; a sense of mission or vocation; and a sense of urgency. Now is the time to do what we are supposed to do, whether it be as a student in a school, or a worker on a job. Our duty is to ourselves and to the next generation. We must convince all citizens that the freedom we enjoy is worth fighting and dying for, or else we may not be able to keep it.

Dr. Tom Dooley, who rates seventh on the list of 10 most admired Americans, and who works in Laos, 5 miles from the Red China border, said this in an address to students: "It is a very special kind of world we live in. * * * And in this new kind of world, we need a new kind of man. We don't need men and women who are just physically tough and strong. What we need now are men and women who are morally and spiritually strong. We need men who have a terse and succinct understanding, a complete and total and simple understanding of their God * * * and not only must they possess this * * * but they must be able to articulate this. * * * All around the imprisoned world it is now a stark and proven fact that only if a man possesses the strength of belief and understanding of his God * * * only with that power, will he live and without that power, he will die."

Reminder and Warning

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. DERWINSKI. Mr. Speaker, 4 years ago today in the industrial city of Poznan, Poland, the spontaneous peoples revolt took place against the Soviet-imposed Communist government. This revolt brought about significant internal changes in Poland. For a period, the government, aware of widespread resentment against rigid Communist doctrine, eased many of the socialistic programs in the country and for this period, at least, the spark of freedom was rekindled behind the Iron Curtain.

The last 4 years have seen, however, a slow but steady return to the normal tyrannical administration that is inherent in any Communist government.

It is well for us to make much today of the Poznan occurrence, since it demonstrates to the world the instability of the Soviet slave empire—especially the lack of popular support which is a basic Soviet weakness in the satellites.

The Polish people along with their unfortunate neighbors in Czechoslovakia, Rumania, Hungary, Bulgaria, Yugoslavia, Lithuania, Latvia, and Estonia, and, for that matter, in the Ukraine, are all passionately waiting for the day that freedom which they hold so dear will once again be theirs. I believe that we should take constant note of the internal disunity that exists behind the Iron Curtain where strongly nationalistic people are held under the bondage of communism—attempting to replace their traditional Christian heritage with the atheistic dogmas of international communism. Certainly, they shall not succeed, and it is well for us at this time to look forward to commemorating Captive Nations Week here in the United States to display, again, our constant sincere interest and respect for the oppressed peoples in Communist lands, and, as I have indicated, with our help, the spark of freedom will remain and will some day shine forth in all its splendor.

Mr. Speaker, at this point, I include with my remarks, a statement of the Anti-Communist Confederation of Polish Freedom Fighters, and urge the Members of both bodies to give it their careful attention:

REMINDER AND WARNING

Four years ago, on June 28, 1956, the world once again was horrified at the news that Poznan suffered death and torture from the hands of Soviets; namely, the worker, common man and even innocent children.

The news spread into the entire world that Poland, demanding bread and freedom, emerged into streets of Poznan, and as an answer received a salvo of communistic muskets and death.

Throughout the entire world messages were sent and hour after hour, the press, radio, radio and television brought news enumerating new facts. Many protests were issued, motions were made and resolutions formed thus giving honor to the heroes of Poznan. The historic uprising of Poznan was indeed heard around the world.

Everything in this world passes and is quickly forgotten, and so the Poznan bloody affairs slowly died out and was also forgotten. The world is very quick to forget an event that had just yesterday made an impression upon it.

Nevertheless, Poznan became a symbol of Poland demanding its freedom, and the name "Poznan" with its heroic act, demanding independence behind the Iron Curtain became an echo and a petition as well as a call for freedom and a protest against the tyrannical rule of communism.

No one was able to quiet the lips of the suffering people of Poland, and thus was heard the real voice of the enslaved nation of Poland rebelling against its enslavers.

The blood of the heroes of Poznan cannot have been shed in vain. It was able to arouse a strong reaction in the world 4 years ago; but today it is already forgotten. Therefore, it is necessary that on the anniversary of this brave act we once again recall it when the Communists continue to encroach upon the spirit of freedom. The world must again be reminded and made to realize the fact that the situation which faced Poland yesterday coexistencial politics become a reality for the Western countries and among them may be enumerated America.

In the bloody days of the revolution in Poznan, Poland admitted that she is an ally of America and not a satellite of Soviets. In the international arena, Poland appeared as the friend of many nations. Poland is aware of its historical mission, its part in awakening and directing the way to freedom by means of sacrifice and war. Poland cannot and must not be forgotten and disregarded.

Poznan reminds the world of the wound which had been inflicted by Communists to freedom, to morality and, in general to the natural rights of every human being, which were established by the civilization and culture of human and historical development. The Soviets took over the west-central countries of Europe and brought into them a government of terror and oppression.

Poznan again calls to us but this time with a voice of warning to the conscience of all Western civilization: the blood of the Heroes of Poznan urges us to increase our vigilance, to avoid any coexistence between America and communism. The blood of the Workers of Poznan is the voice of Poland crying out that there must come an end to all dictatorial rule of Kremlin. The blood shed upon the streets of Poland is eloquent testimony that peace and coexistence with the Communists is a false illusion. The Blood of Poznan is proof positive that Poland will never permit herself to become communistic. And although she had again been partitioned for the fourth time, thus finding herself she is enduring courageously the present enslavement and she believes firmly that justice shall triumph and that God's providence rules and watches over her. If the Communists go too far, she will undertake such tragic acts as the Poznan.

Speaking of the tragic revolutions and giving due honor to the heroes on the fourth anniversary of the Poznan uprising, it is necessary that we prove that with the bloody enslavers of the oppressed nations, the West, namely America, always searches for the truth for the sake of her own and happiness makes no tragic mistakes for which someday we must bear the consequence and maybe even have to pay in blood.

That is why the Anti-Communistic Confederation of Fighters for Freedom for Poland in the U.S.A. reminds America today that the Soviets together with Hitler's Germany were the only nation which was excluded from the League of Nations for their acts of aggression, terror, and revolution. During the 40 years of communistic oppression, thousands of communistic spies were caught at treacherous acts. Khrushchev shouted in the Chaillot Palace in Paris, that he caught a robber at his action. The entire world was overcome and bewildered with the language and actions of Khrushchev, the Soviet dictator, toward the President of the United States of America. It is unfortunate that the political leaders were unable to reply to Khrushchev to the effect that the robber and murderer at all times is no one else but Khrushchev, himself. His bloody hands are bathed in the blood of the millions of innocent victims butchered behind the Iron Curtain.

That is why the Parisian lesson finally opened the eyes of the West showing who Khrushchev is and what his aim is. But already we forget about this sad lesson and once again we yearn to shake the hand of the Budapest bloody butcher. The maniacal policies of Hitler became the ideal of Soviet politics. Khrushchev used Hitler's brow-beating strategy in 1955 in Geneva, and as a result once again there was bloodshed for thousands in Asia. These gangster tactics failed however in Paris, thank be to God. And the world was thus saved from another

Teheran and Yalta. That is why America must abandon all talks and agreements with the Communists.

Therefore, on the fourth anniversary of the revolution in Poznan, the members of the Anti-Communistic Confederation of Fighters for Freedom for Poland in U.S.A. appeal to the conscience of the leaders of America to breakoff all negotiations and talk of coexistence with the communistic murderers. We appeal in the name of the good of the West. Let us remember that: Freedom is something that cannot be divided. Either the entire world benefits from it or no one possess it at all. What a paradox that the colored people are obtaining their freedom and love of independence are imprisoned under Soviet imperialism. Either the world will realize this fact and see through the false communistic front and awaken at last to bring about freedom for all or else we shall be forced to die under communistic aggression.

We the members of the Anti-Communistic Confederation of Fighters for Freedom for Poland in U.S.A. believe that the West will awaken and change its policy toward the Soviets thus making our voice heard and respected.

In the crucial days of the beginning of World War II, spokesmen for the United States and Great Britain inspired us with declarations like these:

"We are fighting to save Poland's independence; we are fighting in defense of freedom; we are fighting for peace; we are meeting a challenge to our own security; we are defending the rights of all nations to live their own lives, and fighting against substitution of brute force for law as the arbiter between Nations; we are fighting today against violation of the sanctity of treaties and disregard of the pledged word; we are fighting today for the preservation of Christian principles; we are fighting as our fathers fought to uphold the doctrine that all men are equal in the sight of God; we are fighting for democracy and against the bloody communism."

In the light of such magnificent utterances, how could they have permitted gallant Poland, to taste "defeat to victory"?

The criminal injustice done to Poland must be undone.

On this fourth anniversary of the heroes in Poznan, may there exist within our thoughts, a place for those who calling for bread and freedom gave their lives upon the altar of freedom.

Long the strong American Nation live. May there exist a friendship between Poland and America.

Let there exist a true friendship among all nations and may world peace become a reality.

May the American Nation live, who for hundreds of years of its history has sacrificed in the service of peace and freedom.

"My True Security — The American Way"—Essay by Miss Crawford Meginniss

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. SPARKMAN. Mr. President, I desire to direct the attention of my colleagues to a prize-winning essay written by Miss Crawford Meginniss, of Dothan, Ala. Her essay, entitled "My True Security—The American Way," was entered in the national contest which, as Senators know, is sponsored annually by the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co. The purpose of the contest is to promote initiative and self-reliance among American youth.

In the contest a winner is chosen from each State; and from the State winners three are chosen to receive scholarships to the colleges of their choice.

Miss Meginniss is the Alabama winner. Her essay is an excellent one, and I urge all my colleagues to read it.

Accordingly, Mr. President, I ask unanimous consent that the prize-winning essay which Miss Meginniss has written be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

MY TRUE SECURITY—THE AMERICAN WAY

Security is symbolized by safes, vaults, and lockboxes, and can also be seen in the cold, gray stone and steel bars of a penitentiary. The security of the Nation is in the hands of the military—a bomber pilot of the Strategic Air Command, an alert radar operator on the DEW line, a naval officer with eyes fixed on the periscope of an atomic submarine, a sentry at a barricade between East and West Berlin. Government employees are classified as good security risks or poor security risks after a thorough investigation of their background, their associates, their living habits. Security is also the terms applied to secrets of state as well as the precautions taken to safeguard them.

It is not without significance that stocks and bonds are called securities. In making loans, bankers and financiers usually require collateral for security.

Individuals are constantly seeking security for themselves and their families. The usual means to achieve what they consider security is the acquisition of material wealth—personal and real property.

Others seek security through education and training in order to develop their capacities for attaining the greatest possible material success. There are also those who look for security by attaching themselves to an organization or a group which they believe to be strong enough to protect them from real or imaginary threats. Frequently, for the sake of security, they are willing to sacrifice freedom of choice, initiative, and individuality.

Thus security can mean many things to different people. Certainly the desire for security is universal, and, on the whole, a not unworthy desire. Since in this world we are set in the midst of so many and great dangers, the search for security is a natural part of life.

The question is: Where is real security to be found? Governments rise and fall; the passings of the great civilizations of Egypt, Greece, and Rome, all testify that there is no certain security in any state—even in our own United States. Armed might offers no lasting security, for no success of arms has ever produced lasting peace.

The accumulation of material possessions is a weak basis for security, since many fortunes, which were built up with great effort over many years, have been wiped out overnight. Even the best education and training cannot insure security, for injury, loss of health, or the lack of opportunities to use such training might interfere.

The "gang spirit" which strives for security by organization, societies, orders, parties, and the like, leads to the subjugation of personal freedom and the animalizing of the spirit. No human organization can offer real security, for they, too, are shortlived and doomed to destruction.

It should be obvious that lasting security is not to be found in anything temporal or mortal, but only in the abiding and the eternal. Therefore, the security of any nation, any people, any individual is of value only when it has its roots in those ideals, those values, those principles which never die.

My personal security then must be founded upon a strong faith—faith in God, the God of battles, the God of history, the God of creation, the God concerned not only with the limitless reaches of space, but also with me, my hopes, my fears, my potentialities, and my shortcomings.

Therefore in the presence of so much insecurity, I will attach myself to Him, and will strive to make His will—my will. And in the storms and stresses of this life, my prayer will be:

"Change and decay in all around I see.
O Thou Who changest not, abide with me."

An Objective Appraisal of Karl Detzer's Article on "Our Great Highway Bungle" in the July Reader's Digest by Gerald Bogan, Executive Secretary of the Iowa Good Roads Association

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. SCHWENGEL. Mr. Speaker, all Members, I am sure, received a reprint of the Reader's Digest article on "Our Great Highway Bungle," written by Karl Detzer and appearing in the July issue. If they read the article, they would be disturbed by some of Mr. Detzer's statements.

Mr. Gerald Bogan, executive secretary of the Iowa Good Roads Association, was disturbed and saw fit to take issue with Mr. Detzer's objectivity in this article. On June 20, he wrote the editors of the magazine and pointed out some of the shortcomings in Mr. Detzer's reporting. Since this letter will probably never be printed in the Reader's Digest, I am asking unanimous consent that it appear in the Appendix of the RECORD so that the Members who are deeply concerned with this program, will have the benefit of Mr. Bogan's observations. The letter follows:

GENTLEMEN: As a regular and faithful reader of your magazine and one who always has admired the manner in which controversial subjects have been objectively handled, I was shocked and dismayed to read the many unobjective statements in "Our Great Big Highway Bungle" by Karl Detzer in the July 1960 issue. It is quite obvious in reading the article that Mr. Detzer either does not know the facts or chooses to ignore them. It also is evident that he set out to prove a point and proceeded to do so regardless of the facts. Let's examine some of the statements:

"The official figure was quietly raised to just under $40 billion." Can Mr. Detzer honestly believe that the figure could be "quietly" raised with the Congress of the

United States in session almost constantly since the passage of the act in 1956?

"Relocating railroads that lie in the path of the new roads." Is Mr. Detzer so ignorant of the facts that he does not know that where railroads lie in the path that they are bridged by some sort of separation?

"Shovels out money." What honest reporter would use such language when he should know that Congress makes the appropriations to the various States on the basis of a formula which has been approved by Members of the Congress?

"From there on the States take over and they (the States) decide how much money they need, how much right-of-way to buy, where and at what price. They decide the type of paving, how thick the surface should be." Any reporter who took the time to investigate would know that there are certain standards which must be met to qualify for any Federal aid and that the standards have been approved by the American Association of State Highway Officials in concert with the Bureau of Public Roads.

In his remarks about the "lonely Nevada interchanges," why didn't Mr. Detzer find out why the interchanges were approved by the State of Nevada, and supposedly its Governor? Perhaps there is a reason, which does not meet the eye, or perhaps the plans are for the future. The point is, Mr. Detzer should have tried to find out, if he is a good reporter, why the interchanges were designed and placed as they were.

The story said that new superhighways were being built "shoulder to shoulder with existing toll roads." Nowhere in the article did Mr. Detzer cite examples where there was actual construction of roads which parallel existing toll roads. Why did he not cite examples?

Why pick on Omaha? Why not any of the nearly 125 cities listed in the "General Location of National System of Interstate Highways, including all additional routes at urban areas designated in September 1955?" He could have purchased such a book for 55 cents from the U.S. Government Printing Office and would have found out that not only are routes being built into and through but also around urban areas. These were authorized by Congress and not by a bureau in Washington. Had Mr. Detzer taken the time to look into the record of public hearings on interstate construction in such States as Iowa he would have found testimony, which has not been refuted, that on the basis of vehicle-miles of travel the interstate routes in the urban areas are the cheapest to build. He also must be aware of the fact that Congress has been in session since 1956 and has had 4 years to correct a mistake if the language in the original act giving equal consideration to local traffic was not what the representatives of the people wanted.

If Mr. Detzer had been a thorough reporter he would have discovered that it was Congressman FRED SCHWENGEL, of Iowa, who first suggested a watchdog committee. He also would have read Congressman SCHWENGEL's speech on the floor of the House, May 26, in which he pointed out that while most select committees have not more than a one-vote margin for the majority party that in the case of the Blatnik committee there is a 2 to 1 majority. Isn't it possible that there would be a cry of politics under these circumstances? Mr. Detzer, if he had taken the time, would have found that Congressman SCHWENGEL suggested that perhaps men trained, not as labor investigators, but as engineers, should be assigned to the committee for a thorough study of the engineering weaknesses of the interstate program.

A good reporter would have pointed up not only the failings of the program but its good features as well. While it is true that a dramatic divorce gets more attention than a 50-year marriage, a reporter has some responsibility in citing the good as well as the bad, unless he is fighting for "a cause" and is propagandizing instead of reporting. How about the 25,000 contracts on the Interstate program in which there has been no "skullduggery"? This is not to suggest that misuse of public funds should not be called to public attention; it is to suggest that we "shouldn't burn down the barn just to get rid of the rats." Why didn't Mr. Detzer point out the life saving features of the Interstate System? I'm sure there is dramatic evidence even on the short stretches of the new superroads that have been completed of how much safer they are than conventional highways. Here in Iowa, the rate on the conventional State primary system is 5.99 deaths per million vehicle miles, while on the short stretch of the Interstate open in the State it was only 3.42 deaths per million vehicle miles last year.

Mr. Detzer's charge that the Bureau of Public Roads "has been inept" doesn't stand up under close examination. While it may be true that there are some isolated cases in which there has been ineptness, in the great majority of the cases the record shows that there has been great skill in handling the biggest highway building job in mankind's history. "Perhaps it is time not to go ahead," says the article. Is Mr. Detzer really suggesting that the connected sections of the Interstate System should be abandoned? Certainly he can't be serious. If the Congress does take such drastic action there is no question that many States would be forced to continue the projects as State highways because of demand.

The larger question, however, is "why the article?" Does Reader's Digest, which has been a leader in honest, objective, and fair reporting, call the Detzer article "fair"? It sounds more like a campaign document for someone. If there is to be an assessment of blame it must be placed squarely at the feet of the Congress, and the Congress has been in session and is now in session and could make any corrections deemed necessary. Reader's Digest owes it to its fair-minded readers to present the good of the Interstate System * * * what it means in savings of life * * * in reduction of operating costs of cars * * * in transportation of goods. I hope Reader's Digest will print such an article and soon. As a former newspaperman and press association reporter I know that those on "the desk" have just as much responsibility as the reporter. And the Reader's Digest editors cannot escape the blame for the Detzer piece.

Sincerely yours,

GERALD BOGAN.

Columns Written by May Craig

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. MUSKIE. Mr. President, on March 31 and April 1, Mrs. May Craig published two columns which were printed in our Maine newspapers.

In the first, Mrs. Craig cites the need for foreign capital in the country of Sudan.

In the second, she describes the ancient and the modern blend of Tunis.

Mr. President, I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—SUDAN IS SENSITIVE TO NEED FOR FOREIGN CAPITAL

(By May Craig)

KHARTOUM.—Principal crop here in Sudan is cotton, which they export—the Soviet Union buys much of their export cotton. We do not need it. They grow an unusually fine long staple cotton and we buy some of that. They have recently floated a loan from the International Loan Fund to build a large textile plant but this will supply their own people—and not all of its own demand, so Maine and other American textile areas need not fear influx of textiles from here—though the Japanese will lose some of their textile market here.

"We are on the move economically," the Sudanese Minister of Information told us at a press conference. They need to stop being a one-crop cotton country, to diversify their agriculture and get more industrial development. They are sensitive to their need for foreign capital and will make the climate here favorable to it. One official said large Russian credits, underline credits, have been made available in the recent weeks. The Loan Fund is providing $10 million for the textile plant and private capital $14 million. It will begin operation in 1961, under American management to start—"so efficient the Americans are," they said, but they mean to learn. It is this moderation that makes this dictatorship suitable for the development of the country, for the time being, though there have been several small revolts against it. This is an important strategic area for the West and we like it better than the sudden unprepared freedoms of some of the other countries who say frankly they know they are taking a risk but they want to be free at any price. Here they are independent of any foreign domination. Their dictator is their own.

The construction of the high dam on the Nile by Egypt, now begun with Russian aid, will not benefit the Sudan, nor hurt, except that it will mean a large artificial lake above the dam. Egypt will help resettle the Sudanese ousted from the land to be flooded by the lake. This country is varied—it runs from desert to jungle, north to south; from Egypt and Ethiopia on the Mediterranean and the Red Sea to the center of Africa and this makes it akin to all of them. About 60 percent of the people are Moslem, speak Arabic; the southerners are Nilotic, Pagan, and Christian, few Moslem. There is freedom of religion, we saw Coptic and Catholic Churches. The press is controlled and though there may be free expression of political opinion, it may not be printed hostile to the government.

There are many beautiful mosques with graceful tall minarets: men in turbans, veiled women, though not all. American and English signs; Cocoa-Cola and Pepsi-Cola buildings on opposite sides of the same street; Shell oil; British Haig & Haig; Singer sewing machines with treadles. Men will sew you a garment up right there on the sidewalk. Camel beer is a frequent sign—local product. There is free medical aid for the poor; private for the rest. The population is 26 million, small for so large a country.

We are away from mineral water for the toothpaste—have thermos bottles of boiled water in our rooms, the tap water still taboo. We struggle with the boys as they still call them here, who clean the rooms, bring coffee when the desk wakes us by telephone. We are two to a room, but it is large and airy, with shuttered windows, big wooden-bladed

fan in the ceiling, worked from the wall switch. We struggle with the money for which we get brutally low exchange, as everywhere on this trip. We have to take whatever they choose to give us for our dollars. Though gratuities are included in the tripfee paid by our papers, radio-TV companies, you can't beat the tip system which is worldwide from Orient to Paris, from Middle East to Africa and if you want more than minimum service, there is the outstretched hand or the beseeching eye.

The price of post cards, to which Americans are addicted, is 13 to 14 cents each; if you expect them to get to the United States under 6 weeks, you have to put on airmail stamps at 25 cents each, which runs into money.

Ramadan, the sacred month when all Moslems over 19 years of age fast from 2 a.m. to sunset, is now going on. Our guide on the bus told us this afternoon that he had not eaten since the previous midnight. Ramadan upsets the economy, people sleep in the day when they can, eat and celebrate at night. American residents here said the Sudanese are conservative, calm; the government says it will make this into the usual democratic pattern eventually, does not say when.

The people are so absorbed in interior problems that they do not bother too much about exterior problems, are not as passionate and exigent as in the African countries trying still to get away from colonialism. The Yugoslavs do more business here than other of the Communist bloc—and they are not international Communists. They talk the Communist "philosophy" along with the trade, of course. We ought to send more Americans here in various capacities, so the Sudanese will know us personally, our coming caused great interest and we got the warmest welcome—and the press conference.

AFRICA ON THE MOVE—TUNIS BLENDS THE MODERN AND THE ANCIENT

(By May Craig)

TUNIS.—Our long journey west from Egypt to Algiers started with more weather trouble. We did not see President Nasser until 10 o'clock at night. It was getting on to midnight when we got to the airport. There we found weather bad in Tripoli, capital of Tripolitania, one of the three provinces of Libya. We waited and waited—then back to the hotel—minus our baggage which was already packed on the plane. Fortunately we got our hotel rooms back, and spent the night in bed, which was better than being cramped into a small plane. Next day we took off, but the delay meant we missed the program arranged for us in Tripoli, only saw our foreign service officers at the airport. However, we stopped in Bengasi in Cyrenaica, another Libyan province, and there one of our Tripoli officials met us with the literature they had prepared for us—in Tripoli they would not let the literature through customs, so our Embassy people had just come to Bengasi with it. This is evidence of the restrictions on freedoms in these countries which call themselves free. Newsweek magazine is banned in Egypt. President Nasser said that Newsweek had reported that U.N. Secretary General Hammarskjold had spoken "hardly" (meaning harshly) to Nasser about transit restrictions through the Suez Canal. "One does not speak 'hardly' to the President of the United Arab Republic," he said proudly.

Flying for hours over the terrible desert, edged by the blue, blue Mediterranean, passed over ancient, historic ground, where the Phoenicians, Carthaginians, had their early civilizations, where cities are built on ruins of cities. The Romans had North Africa for centuries; Mussolini tried to regain the green hills back of Bengasi which was the breadbasket for imperial Rome and might have gained prosperity and living room for his people of Italy if he had not gone madly into war with Hitler.

Tunis is a mixture of modern and ancient, is trying to build up tourism for her treasuries of history. But until they can prove to tourists that they can be comfortable, drink pure water, eat safely, they will not have much luck. Here I have had my first touch of the prevalent dysentery, but had the drugs to get over it fast. We have had considerable minor illness and bruisings and nausea on planes. Several of the group have left to prolong their trip in Europe.

You really should see us as we straggled in late last night; several of the men have spears, swords, bows and arrows, wrapped up in brown paper; packages of all sorts, draped with cameras and flight bags, the lady with the fur coat is justified here because it is chilly. No heat in the rooms; when I asked the hallboy to turn on the heat in the radiator he shook his head. "It is summer."

Looking forward to the imbroglio in Algeria, backward to the dilemmas which face the former colonies struggling to be free, one is somewhat pessimistic about the near future. There is practically civil war in the Belgian Congo, where the three rival candidates for bossman when freedom comes June 30, are fighting tribal and political wars. Joseph Kasavubu, with whom I lunched, has moved his family across the Congo River to the Republic of Congo, which is still in the French community; he says his southern areas should stay out of federation with the rest of Congo. Belgians, forced out, are outraged lest British and French get more influence, especially down toward the coast, which is richer. In southern Congo are rich copper mines and there is movement to leave the Congo federation and join up with Rhodesia which would like the copper, diamonds, uranium this move would provide. Southern Rhodesia is thinking of leaving the federation. Nasser would like Tripoli and Libya to join the U.A.R., but they have just struck "oil so sweet you could almost use it for gasoline" and Tripoli wants all the money from its development. The King of Tripoli is old and ill; his heir apparent does not show evidence of being able to hold the country in an era when monarchies are on the way out. When one says "Africa is on the move," one must add that it has indeed got on its horse, but it is riding off in all directions.

President Habib Bourguiba of Tunisia is forward looking, wants to industrialize his country to raise the standard of living. He is bucking Ramadan, the month-long Mohammedan fasting, which means eating all night, sleeping, or too weak to work in the day. It defeats efficient industrial competition. All the orthodox are against him and he may fail. A few miles out from the city of white stucco, with blue doors and ornate wrought-iron fancy window guards, are the ruins of ancient Carthage, which the Romans did indeed "delenda est." It makes one seem to temporary, so ephemeral, as one stands by the Sphinx in Cairo which looks with the calm detachment of 5,000 years on the strutting men of today; on the ruins of Carthage which once ruled the world. There is a World War II American cemetery here on a hill looking out of the lands they died for.

On the way to Carthage we passed handsome houses on the blue Mediterranean where French and Americans live. Arabs were tearing down a solid wall and some pillars—entrance to the gardens of the French consulate. This is for a road right through the vast private estate of the consulate. France has protested—but the men were working—it will be down and the defiant road built before anybody can do anything about it. Are French soldiers to die uselessly for this estate?

Federal Bureau of Investigation—II

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. DEVINE. Mr. Speaker, the following article is the second of a series appearing in the Columbus, Ohio, Dispatch relative to the fine record of the world's greatest law-enforcement agency:

WASHINGTON.—J. Edgar Hoover, Director of the FBI, and his men must maintain constant vigilance. Lawlessness is never at rest and can only be combated by swift, decisive action.

Such was the case of an Arkansas fugitive who stood in an alley and carefully drew a bead on a pursuing FBI agent.

The agent dived behind a telephone pole, and the bullet splattered harmlessly into a garage door 12 inches from his head.

Shooting from behind the pole, the agent put a bullet into the left index finger of the fugitive and later remarked that the fugitive's hand was just about over the heart area when he was hit.

The shot temporarily stunned the fugitive; blood gushed. But one of the queer tricks of fate, the fingerbone had deflected the bullet from the heart area. He turned and ran up the alley at full tilt. Two agents continued the pursuit.

This story began at Arkansas State Prison where George Henderson was serving a term of 9 years for armed robbery. He had a long criminal record and had been arrested by the FBI in Baltimore several years earlier. With the help of his common-law wife, Henderson escaped.

Arkansas authorities requested FBI assistance under the fugitive felon statutes. A large-scale search covered most of the States in the East and Middle West.

FBI investigation led from Ashland, Ky., to Dayton, Ohio. Dayton agents were alerted that Henderson might soon appear there. Alert agents spotted Henderson and his wife. A dizzy pursuit followed through Dayton streets at speeds up to 70 miles an hour.

Henderson made a turn into a side street. It was a dead-end road. He abandoned his car and fled in one direction, his common-law wife in another.

During the chase, additional FBI help had been summoned by radio. The help arrived and reinforcing agents captured the common-law wife.

Some time later, a Dayton housewife sent a letter of praise to the special agent in charge of the FBI at Cincinnati.

She said she was aware the FBI was entrusted with protecting the civil rights of citizens. She had now seen an example.

She was in her dining room attending to her canary when she heard voices outside. Looking out she saw an individual across the street taking refuge behind a tree. He was bleeding and had a gun in one hand. On her side of the street, there were two individuals, later identified as special agents of the FBI.

She was certain that a gun flight was about to take place. She heard all of the conversation. In order to avoid a further fight and possible bloodshed, the agents persuaded Henderson to lay down his gun, walk across the street and surrender. He ultimately was convicted in Federal court in Dayton for his assault upon a special agent.

Special agents do not talk about their work. In this instance, however, the housewife related that she was well aware of the

earlier gunfight in the alley. After Henderson had been wounded, he had turned and fled up the alley, presenting a sizable target to agents who easily could have shot and killed him. The FBI did not wantonly take life, and agents, at risk to themselves, caused an armed fugitive felon to surrender voluntarily. In her opinion this was a great tribute to the FBI, characteristic of the services rendered daily to the community and country.

Frank Lawrence Sprenz on March 2, 1959, robbed a bank at Hamilton, Ohio.

Practically all bank robberies come under FBI jurisdiction. The Federal statutes cover banks established under the laws of the United States, members of the Federal Reserve System, those chartered by the United States, and those insured by the FDIC, institutions insured by the Federal Savings and Loan Insurance Corporation, and Federal Credit Unions. Sprenz had chosen a bank insured by the FDIC, which was located close to an airport.

At the time, Sprenz was a badly wanted individual, recently being added to the prominent "top 10" list of FBI fugitives.

Although the FBI has wanted notices in its files for approximately 91,000 fugitives, it is impossible to request the public to cooperate in seeking all of them. Consequently, the FBI has arranged to designate certain badly wanted individuals as members of the top 10 group. Sprenz was added to this elite group a short time before. From the Hamilton bank, Sprenz escaped with approximately $26,000 in currency.

He drove to the nearby airport and stole a plane owned by a flying club.

His problems began immediately. Only a few feet off the ground, Sprenz was disturbed and his vision obscured by dollar bills flying around inside the airplane. This was a most inappropriate time because as a part of the takeoff, it was necessary for Sprenz to give close attention to the pitch of the propeller, the retractable landing gear, and certain other aeronautic responsibilities.

In every walk of life, decisions are unavoidable. Sprenz was no exception. He had the alternative of taking care of aircraft duties or recouping the money blowing around the plane and through the open door. Sprenz visualized that chasing him could become a very popular sport if he failed to close the door. He made his decision, closed the door, scooped up the currency, stuffed it into a sack, and then looked after the aircraft itself.

In a little while, he was able to relax. Sprenz was now ready to cool and soothe his nerves. His first move was to turn on the radio to the standard broadcast band. Sprenz claimed he picked up a Columbus radio station. The first announcement which greeted his ears was "The Federal Bureau of Investigation reports the robbery of a bank in Hamilton, Ohio, and identifies the robber as Frank Lawrence Sprenz, one of the FBI's top 10 fugitives." Sprenz later said he was thoroughly disgusted and switched off the broadcast band and turned on the pilot's wavelength.

Sprenz settled back for a steady report of weather conditions and other matters of interest to pilots.

Within a few minutes, an alert was sounded and the Civil Aeronautics Authority by radio cautioned all pilots as follows:

"The Federal Bureau of Investigation urges all pilots to be on the alert for Frank Lawrence Sprenz, the fugitive identified as having robbed a bank at Hamilton a short time ago. Sprenz has also stolen an aircraft identified as follows: Red and white Beechcraft Bonanza, and the number of this aircraft is N–2829–V."

Sprenz glanced out the window and commented to himself, "By golly, that's the right number."

He switched off the radio and concluded his best move would be to quickly ditch the plane and not proceed to Pennsylvania as planned, where he had a car waiting. Sprenz abandoned the stolen airplane at West Lafayette, Ohio, and took a cab to Coshocton where he purchased a car.

But he underestimated the skill and tenacity of the FBI. A dizzy chase began with the FBI at times as close as 20 minutes behind him. During the next 33 days this chase continued throughout the Midwest, the Eastern States, to the Pacific coast, and to the Southwest.

Exactly 33 days after the Hamilton bank robbery, Sprenz was in custody and en route to Cincinnati, Ohio, to face a Federal court for the Federal crime of bank robbery.

In subsequent interviews with special agents, the full background of Sprenz was reconstructed. Sprenz said he always had abhorred publicity.

As a matter of fact, on three consecutive weekends while he was a resident of Seattle, Wash., he had spent his time trying to counteract unfavorable publicity. According to Sprenz, he went from post office to post office tearing down from walls "wanted flyers" issued by the FBI.

Then, said Sprenz, "the FBI did a dirty trick." It issued the large poster-size wanted flyers by the millions * * * too many for him to destroy. He left Seattle.

At an early age, Sprenz was affiliated with a youth organization. He said he had no interest in youth activities but this group had a link trainer in the meeting hall. He viewed the link trainer as his opportunity to learn to fly. Now he could encounter on the ground the basic problems that an aviator might experience.

Throughout his service with this youth organization, he spent his time at each meeting in the link trainer.

As a result, Sprenz, in the course of his criminal activities, stole an airplane at Toronto, Canada, and crashed it at Baltimore, Md. On another occasion, he stole an airplane at Scranton, Pa., and flew it to New Hampshire. Both of these thefts were in violation of Federal law prohibiting the interstate transportation of stolen aircraft. The theft of the airplane at Hamilton, Ohio, was not a Federal violation as he did not cross a State line.

All of his life he had wanted money. After the Hamilton bank robbery, he was sitting on the sands of Oregon watching the Pacific Ocean.

Nearby in a motel he had nearly $22,000 in good, hard cash.

"But of what use is money," thought Sprenz, "I cannot send it to my wife and children, I cannot use it on myself—it is useless."

Sprenz thought how much he would liked to have changed places with himself a few years ago.

He concluded he should go to Cuba and join the revolutionary forces. While en route to Cuba he crashed his plane in Mexico and brought about the chain of events resulting in his capture.

Special agents were also interested in the two dozen cars he had stolen or purchased with stolen funds. Sprenz confided he had always been taught the importance of living in a frugal fashion. Therefore, he said he never spent more than $200 or $300 for an automobile because all he desired was transportation.

He enrolled in an eastern university to learn public speaking. "After all," said Sprenz, "a man in my status, as a fugitive, needs to be able to influence people and to contact them in the most favorable way. Therefore, I felt that public speaking would be an asset to me."

While he was in the Hamilton County jail at Cincinnati, Sprenz appeared bronzed and in perfect health. He held up his pants and demonstrated how much weight he had lost. One agent commented to him. "Frank, it appears as though you are ready for the Olympics.".

Sprenz replied, "Yes, at Atlanta." Actually, Sprenz did not go to Atlanta, but was confined by the Federal Government at its maximum custody institution at Alcatraz, Calif.

The ability to meet, work with, and understand people at all levels is characteristic of the FBI.

It is a part of the intensive training inspired by Director J. Edgar Hoover. Versatility is one of the basics of FBI operations. Some fugitives have a sense of humor and an appreciation of human nature as did Sprenz. The FBI deals with them all impartially and fairly. The FBI realizes that temporary lighthearted humor may quickly change to deep-seated viciousness; any ruse which suits his purpose is the armor of the escape-minded criminal.

Natural and Industrial Resources of West Virginia

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. BYRD of West Virginia. Mr. President, the future of my State of West Virginia lies in its industrial growth. Although the State is small in geographic area and population, we have the natural and industrial resources to enable us to attain an industrial complex.

There are those who continually strive to examine and, subsequently, promote the State's promising aspects. Regarding these efforts, I would like to call attention to a series of editorials appearing in the Huntington (W. Va.) Advertiser from June 22 through 25, 1960.

I ask unanimous consent that this series be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

STATE NEEDS UNITED EFFORTS TO SPEED INDUSTRIAL GROWTH

(First of a series)

The group of Southern States that includes West Virginia is continuing to move forward among the most favored of the country for business and industrial development.

The 1960 edition of the Blue Book of Southern Progress reported that in the 1954–59 period business volume in the 15 States rose from $206.13 billion to $287.30 billion.

Manufacturing output value climbed from $53.13 billion to $79.58 billion. The number of active manufacturing enterprises reached 65,100 with a total employment of 3.770 million persons.

Payrolls jumped from a 1958 total of $43.294 billion to a 1959 level of $51.190 billion. The volume of wholesale trade increased from $59.831 billion to $65.886 billion.

The extent of expansion of the chemical industry during the year was indicated by the gain of 354 in the number of articles in the chemical research field originated in the South. The total reached 3,905.

The largest gain in the number of articles was made by Tennessee. Other States cov-

ered in the report were Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Texas, Virginia, and West Virginia.

Even the fast pace of development should quicken in future years, the publication predicted. The consensus of 75 business, professional, and educational leaders quoted was that the next decade would offer the greatest opportunity for industrial growth in the South's history.

But for those of us who live in West Virginia neither the story of past progress nor the prospect of future developments is so bright. During the last 10 years the State was one of only four in the country that declined in population.

The major cause was the shrinking employment in the coal mines. To meet growing competition from other fuels the mines reduced production costs by installing more and more efficient machinery that made fewer and fewer men necessary.

Naturally a great many who lost their jobs in the mines moved to other States where work was available.

Even the decline in population does not tell the entire discouraging aspect of the story. Despite the loss of a great many people, there are still about 70,000 in the State who are able and willing to work but can't find jobs.

Mine employment will also probably shrink still further. Production may rise with the expanding population and the discovery of new uses for coal through research but new machines may supply the demand even with smaller manpower.

To provide work for the thousands who will never again return to the mines it will be necessary to develop new local industries and to attract others from the outside.

Solving this problem is essential not only for progress but for providing funds to make possible an acceptable standard of education, construction, and maintenance of highways and the other governmental services that the State must have to avoid becoming a hopelessly backward area.

The picture is not entirely dark. There are garden spots such as this area even in the desert of despair reported in a series of magazine articles.

New industries are going into production, others are under process of construction, and still others are in prospects. There are numerous favorable factors for industrial expansion in West Virginia, as in the other Southern States.

But there are also handicaps. Overcoming them will require a united and continuous effort of officials, private citizens, and organizations on a local and State level.

Means of overcoming them and taking advantage of the promising opportunities of the decade ahead will be considered in later editorials of this series.

ZONING OF LAND IS NECESSARY TO SAVE SCARCE PLANT SITES

(Second of a series)

West Virginia's greatest obstacle to industrial development is its mountains. The rugged Allegheny chain that sprawls from the eastern border across a large part of the State does not offer enough level ground for many extensive industrial operations.

Even where a plateau provides a place for a plant, surrounding mountains make the development of essential transportation facilities almost impossible.

For the most part railroads have to follow the valleys, and to permit even a reasonably safe grade, highways have to twist and turn up and down the high peaks and ridges.

Building roads through such mountainous sections also lays an additional burden upon the State because of heavy engineering and grading costs.

For these handicaps there are, of course, some compensations. There is an abundance of timber on the mountains that affers material for woodworking operations.

Such industries have been recommended as especially suited for the State.

Research offers the possibility of discovering new byproducts of coal that will trigger the development of entirely new lines of industry. The blacktop material now under test in Kentucky and Pennsylvania for road surfacing may also be suitable for building purposes.

Plants for producing and fabricating the material for its numerous purposes could absorb much of the surplus labor now existing in the mining sections.

The greatest opportunities for expanding the economy of the eastern part of the State probably lie in the encouragement of tourist travel. The rugged mountains and picturesque gorges are strong attractions especially to those accustomed to level country.

Providing more conveniences and more recreational facilities, marking historic spots and building better roads will draw many more visitors to the State and greatly increase the amount of money they leave behind.

The benefits would extend to this section and all along the Ohio River. The valley's beauty has been celebrated in song. There are also numerous spots of historic interest, such as the site of the Battle of Point Pleasant, recognized by many historians as the real beginning of the Revolution.

The land along the Ohio and its tributaries also offers the strongest attractions for industrial development. It has an abundant supply of coal, natural gas, electric power, and water for transportation or plant operations, and it is close to the big markets of the East and the Middle West.

But the limited number of available sites calls for special efforts to save them from less profitable use through an extensive program of zoning by the State and the communities.

Such a program is now underway in Huntington and Cabell County with the cooperation of the West Virginia Economic Development Agency. Similar efforts are needed in Wayne County and others along the Ohio and its branches.

Federal aid for the work is available through the Economic Development Agency for counties having a population of less than 50,000.

Making land available for industrial development also requires extensive community efforts to keep prices down and even optioning or buying available sites.

Here suitable tracts have been purchased by the Huntington Industrial Corp. The Appalachian Power Co. owns a considerable acreage at Apple Grove. The railroads have also acquired locations along their lines, and this week the PCT Co. bought 350 acres east of the International Nickel Co. plant.

Encouraging the opening of smaller industries often involves the offer of a suitable building. This too takes extensive community efforts, such as those of the chamber of commerce and its affiliate, the Huntington Industrial Corp.

These activities of organizations and governmental agencies must also be accompanied by the cooperation of various segments of the population to build the kind of State and community that an industrial corporation wants.

The location not only must be suitable for profitable operations but pleasant as a home for those who run the plant.

How Huntington and West Virginia rate in this respect will be considered in the next editorial of the series.

PUBLIC ATTITUDE BIG FACTOR IN ATTRACTING NEW INDUSTRY

(Third of a series)

Those who complain most because the Huntington area and other favored sections of West Virginia do not attract more industries should really take a large part of the blame upon themselves.

They and their neighbors and all private citizens who make up public opinion have in the long run more influence in determining the kind of State and community they have than do the officials themselves.

For they choose the officials. And without public support officials cannot create the manmade attractions that will induce industrial survey teams to choose a particular location for a plant.

An instance of public failure to support an effort to make this area more attractive to industry occurred when Huntington voters rejected a proposed excess levy for capital improvements at the May primary election.

The refusal was attributed largely to dislike of the current city administration that submitted it rather than to opposition to the improvements themselves.

That may have been true, but if it was, the people only cut off their noses to spite their faces, for the proposed improvements were not for the benefit of the administration but for the public.

At any rate, this instance illustrates the need of reasonable cooperation between public and officials for improvements that in themselves constitute progress and will encourage further progress.

The city administration has an opportunity at this time to show its willingness to encourage industrial expansion by removing the present gross sales tax from factory products shipped out of the State.

Regardless of the merits of arguments for or against the tax, city council could at least show a friendly attitude toward industry by granting the pleas of the plant executives who have protested that the charge hurts business and cuts employment.

The loss of revenue would not be too serious, and it would be more than offset by council's contribution to what is called a good business climate.

The State also could make its climate more genial for business and industry by extensively overhauling its makeshift tax structure. The mere fact that it wanted to remove inequities would be a favorable sign.

To provide the kind of climate an industrial corporation needs all elements must cooperate in the spirit that flows from the realization that their interests are identical.

The public attitude is composed of the separate attitudes of various segments of the population. Especially important is the attitude of working people.

Temperamental, unreasonable or domineering labor leaders can do more to keep industry from a State or a community than perhaps any other single influence.

The officials of a desirable corporation do not want bootlickers for workmen nor favoritism from government. They want man-to-man friendliness and fair give-and-take relationships in personal and community activities.

They are more than willing to carry their share of the load of progress, and they want to live among people who are progressive.

It is not difficult to determine just how progressive a community is. The most obvious sign is perhaps the condition of the streets. But industrial teams go much further.

They investigate the churches, the school system, the cultural attractions, the recreational facilities, the response of the people to the annual charity appeal and all the factors

that determine whether the community is a desirable place to live.

They do not even overlook the intellectual level of the people who will be their neighbors.

Other factors influencing the location of industries in this area and in the State will be considered in tomorrow's editorial of this series.

BETTER HIGHWAYS GREAT NEED IN GETTING STATE INDUSTRIES

(Last of a series)

The scarcity of desirable sites for new industries in West Virginia should spur the public and officials to more intensive efforts to increase the attractiveness of those that do exist by improving the area surrounding them.

City, county and State zoning programs to save available sites from less desirable uses were discussed in an earlier editorial of this series. Programs are now underway in Huntington and Cabell County in cooperation with the West Virginia Economic Development Agency.

Similar efforts are especially needed in Wayne, Mason and Putnam Counties in this area and in other counties along the Ohio and its tributaries that offer the most favorable conditions for industrial development.

In addition there should be local, State, and even Federal programs in these areas for all possible improvements that will encourage industrial corporations to select the sites offered.

Among the most important improvements needed are modern highways. This applies particularly to the Ohio and Big Sandy Valleys in this area but also to numerous other sections suitable for industrial operations.

Even close to Huntington there are potential plant sites that can be shown only by asking an industrial survey team to walk part of the way. This has a doubly adverse effect.

It raises a psychological handicap because of the inconvenience it causes those making the inspection. This in turn tends to feed any suspicion that the community itself is not progressive.

More important still, a road is essential even for hauling construction materials while a plant is going up. One is also necessary for trucks and for employees' cars after operations begin.

Having to build a road to a site increases the cost of the plant to the company.

And even without that addition, Huntington has a higher than average level of construction costs. This in itself is no inconsiderable disadvantage.

It results partly from the gross sales tax that goes on the original contractor's price and then on that of each subcontractor and even sub-subcontractors.

This is another reason for removing or at least revising the State gross sales tax law.

High construction costs also apply to residences for executives and workmen that a new plant would bring to Huntington. Complaints about the high price of homes were heard from a great many of the employees transferred here from Richmond, Va., by the Chesapeake & Ohio Railway a year or two ago. Quite a few of the newcomers moved to Ohio.

Cost of housing can be an important factor in rejecting a proposed site for a plant. It can also be an obstacle in the growth of any city. No doubt it was at least partly to blame for Huntington's loss of population during the last decade and its drop to second place among West Virginia cities.

Its tendency to encourage residential developments in Ohio has also increased the need of a loop from Interstate Highway 64 with two bridges across the river.

A loop connecting with U.S. Route 52 in Ohio would relieve the heavy traffic congestion on the bridge at Sixth Street and would encourage residential and industrial developments in both States.

If the Federal Government declines to include the loop in the interstate highway program, residents on the two sides of the river and their States must somehow devise means of building a greatly needed new bridge here.

These and similar improvements in all the State's sections suitable for industrial expansion would not fail to attract the attention of corporations looking for plant sites.

If accompanied by all the other essential improvements in the various factors included in an industrial survey, they would relieve local and State agencies of the need of "selling" locations.

Industries would come in on their own.

International Development Association

SPEECH

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11001) to provide for the participation of the United States in the International Development Association.

Mr. McDOWELL. Mr. Chairman, I rise in support of H.R. 11001.

The purpose of the International Development Association is to bring about a better means of financing our mutual security program through cooperation with our friendly allies who are ready to acknowledge their responsibility in financing this new international loan agency.

It is a modern truism that we live in a world of crisis and that the United States is called upon to accept greater responsibility than any other nation. Our wisdom, will, efforts, and actions quite literally may determine the future of mankind—at the extreme may determine whether mankind has a future.

I do not rise simply to repeat truisms. Rather I fear that this truism has become such an intimate part of our lives that we have managed to thrust it from the forefront of our consciousness. I fear that we cannot tell a truly pressing crisis in our foreign policy when we encounter one. We simply react with the feeling that all this has been said before; dismiss the crisis from our minds and go about our daily routines. But we are indeed in the midst of a most serious crisis in our foreign policy. It is essential that we look it full in the face.

Walter Lippmann, perhaps the most distinguished commentator of our times, summed up our situation when he wrote last week of the pressing need for an "unavoidable reappraisal, which must in many ways—to use the words of John Foster Dulles—be agonizing." Such a reappraisal is long overdue. The need for it cries out. But are we about to engage upon one? As I listened to the President in his address to the Nation on Monday night I had the impression that nothing could be further from his mind.

The problems pressing upon our Nation's foreign policy are so many and so difficult that I could not attempt to even touch upon them all. But some are more pressing than others and most deserving of our immediate attention.

One is our military posture. We have drifted from a position of decided superiority to a point where we are not only challenged, but where we may very well be becoming a second-class power. I do not wish to reopen the enormously complex arguments surrounding the missile gap. It is sufficient to note that such a gap does exist in favor of the Soviet Union and that the gap will reach a peak in the ensuing year or two. This is an immensely serious matter. It is not dissolved or washed away by citing what we may do or hope to do sometime in the future. Nor can we banish the specter by recalling America's moral strength. Nor is it removed by pointing to hopes for a balanced budget. This missile gap could prove so important to our country that in a few short years our concern with a balanced budget may seem a rather bad joke.

This decline of our military posture has already produced critical results in NATO, the keystone of our foreign policy. The full effect is hidden as the organizational facade of NATO continues unimpaired, but the heart and soul of NATO is rapidly being eroded away. I am reminded of C. Northcote Parkinson's rule of thumb by which one can identify decayed organizations by the very perfection and flamboyance of their facades and structures.

What has happened in NATO is that the key strategy upon which the treaty organization was founded has been outdated by time and changes in weapons systems. NATO's heart is the commitment of the United States to come to the aid of Europe, and to do so successfully. This was a feasible strategy when we had a monopoly of nuclear weapons and a decided military superiority. But these conditions no longer exist. Now Europeans, of the most responsible and pro-American sort, ask whether we would indeed come to their defense when this would be tantamount to our committing suicide. If the Soviet Union attacks Europe, they ask, would the United States retaliate on the Soviet Union, knowing as we now do, that that retaliation against Russia could bring down upon us Soviet missiles that might cause 40 million American dead. No amount of public talk about our commitment to NATO answers this question. It is a very good one. We can hardly blame Europeans for asking it, or for answering that the answer is in the negative. What is needed is a vigorous and immensely difficult, indeed agonizing, reappraisal of our whole military strategy toward Europe and NATO; a reappraisal inevitably linked with our total military posture.

In Asia we have had a policy of encircling the Communist bloc with a string of military alliances and military bases. So long as we had a monopoly of nuclear weapons, very strong arguments could be made for this policy. But it is now in need of radical reappraisal.

Asia, the Middle East, Africa, and other underdeveloped nations of the world

present a problem for the United States, completely different from that in Europe. In Asia the main currents are pressing for swift and sweeping change in the spheres of both politics and economics. Asians consider these changes first priorities, whatever we may think of them.

The United States has long been the symbol—worldwide—of the struggle for independence from colonial rule, of democracy, and of freedom linked with economic well-being. These things appeal enormously to Asians, Arabs, and Africans and it has been our policy to repeat them over and over. Our words have encouraged others to seek our goals with our support. But our actions have belied our words. Our emphasis upon military alliances, military bases, and military aid has inevitably placed us in a position of giving our strongest and fullest support to the maintenance of the status quo at all costs. Is it any wonder that American influence and American prestige has declined when we have persisted in urging these people to seek democracy and freedom while using our concrete influence and strength to prevent change in the oppressive status quo? Clearly this is a major facet of our foreign policy which most urgently needs reappraisal.

Events have caught up with us. The Government of Korea under President Rhee had the fullest and most complete support of the United States. It was overthrown by Korean young people because that Government was dictatorial and corrupt. Fortunately for us, those students still admire us. Students everywhere do not. In Turkey, the Army with wide popular support moved in to end an increasingly dictatorial government which we had long supported. In Iraq, 2 years ago, we had a much sadder experience with the overthrow of a government which we had hoped would provide a keystone to the Baghdad Pact. In Japan, there is great popular admiration and support for the United States, coupled with equally great and popular antagonism to our policy of drawing Japan into a military alliance involving military bases in Japan. Most Japanese dread the idea of being caught between nuclear powers in a conflict which they could only lose, and lose totally.

Our economic and technical assistance programs have produced some success. But they have moved falteringly and we have been quick to subordinate them to outdated military considerations. It is clear that one of our most pressing tasks is a complete reappraisal of our aid to Asia and other underdeveloped countries; a reappraisal running to the very roots of our policies.

In foreign policy timing is of exceptional importance. Small matters let slide tend to become crises, and crises let slide tend to become disasters. Walter Lippman has suggested that the President is uniquely qualified to undertake the badly needed reappraisal in the last months of his term in office. Surely it is true that the President is held personally in unparalleled esteem and could, if he would, launch such a reappraisal. But all the signs are that no reappraisal is to be forthcoming. We are instead offered the President's willingness to undertake still further personal "goodwill" journeys throughout the world. What is needed is the leadership right here in this city to begin the monumental and agonizing task of reappraisal, including reappraisal of "goodwill" tours by our Head of State.

In this quadrennial election year every pressure is against a serious reappraisal—every pressure but the most important and vital—the precipitous crisis in our foreign affairs. The Nation must find leadership with energy, drive, imagination and will to move forward. We have stood still and lulled ourselves far too long with fables that all the world loves us and all the troubles are just stirred up by nasty little minorities. The race in this world is to the strong and the swift. It is to those willing to make sacrifices and to those willing to combine wisdom with the energetic pursuit of successful and proper courses.

Let the Truth Come Out

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. HARTKE. Mr. President, reasons for keeping the American people adequately informed on foreign policy were outlined in a recent column in the Daily News written by Peter Edson.

I think it is worthy of the serious consideration of my colleagues and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET THE TRUTH COME OUT
(By Peter Edson)

President Eisenhower's report on his Far East goodwill tour tries to put the best possible face on what happened. He accentuates the positive accomplishments in Korea, the Philippines and Taiwan. The negative aspects of canceling his scheduled visit to Japan are conveniently blamed on the Communists.

This looking on the silver lining of every international cloud is apparently what most American people want to hear. They do not like disturbing news which infers that the United States is anything less than perfect.

Thus, when critics of the administration decry the fumbles over the U-2 spy plane incident, the breakup of the summit conference, the withdrawal of invitations for the President to visit Russia and Japan, there is some protest from people who don't like that kind of talk.

"We have the best communications system in the world," the protestors expound in effect. "Whatever we say about ourselves is broadcast to every country on the globe. Why should we advertise the fact that we have made mistakes?

"And why should the Senate Foreign Relations Committee issue a report publicly criticizing the administration's handling of the U-2 plane incident and the summit breakup? The newspapers, radio, and TV ought to keep still about such things," they say.

When it is asked if censorship is wanted to prevent such self-criticism the answer is, "No, there shouldn't be censorship—except maybe in time of war. But this is cold war. And the newspapers should voluntarily lay off anything that makes America look bad."

And as if by afterthought, it is sometimes added that, "You never catch the Russians admitting they do anything wrong."

But the answer to this argument in favor of suppression of criticism of America is not necessarily found in what the Russians do or don't do. Better answers are found in Korea and Turkey, which have just gone through bloodless revolutions.

Both these countries exercised strict censorship under Korea's former President Syngman Rhee, Turkey's President Celal Bayar and Premier Adnan Menderes. Public criticism of their governments was strictly prohibited.

If there had been freedom to criticize in both Turkey and Korea, many of the mistakes of the past 15 years would not have been made. There would have been better government. It would not have been necessary for university students to riot and force the overthrow of corrupt administrations.

Trying to suppress unpleasant facts or gloss them over does not correct old mistakes or prevent new ones.

The democratic way is to let the truth come out, in the best traditions of George Washington and the cherry tree.

How You Can Vote for Freedom

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. ABBITT. Mr. Speaker, earlier this week Americans for Constitutional Action gave wide circulation to an article by the chairman of its board of trustees, Adm. Ben Moreell, U.S. Navy, retired, entitled "How You Can Vote for Freedom." I wish to call the attention of the House to this article because it not only contains a frank statement of the basic purposes of the organization which Admiral Moreell heads, it is an appeal for a return to constitutional government and the concepts of the Founding Fathers of this country. It is also an appeal to the millions of voters who will go to the polls this year to help stem the drift toward statism and so-called welfare state programs.

Americans for Constitutional Action is a citizens group which established headquarters in Washington in early 1959. It is governed by a board of trustees of outstanding Americans, among them being Ben Moreell, chairman, Washington, D.C.; Charles Edison, treasurer, West Orange, N.J.; Bonner Fellers, vice chairman, Washington, D.C.; Felix Morley, secretary, Gibson Island, Md.; Howard Buffett, Omaha, Nebr.; Edgar N. Eisenhower, Tacoma, Wash.; Ralph W. Gwinn, Pawling, N.Y.; Herbert Hoover, New York, N.Y.; Robert W. Johnson, New Brunswick, N.J.; Allan B. Kline, Western Springs, Ill.; Walter B. Martin, Norfolk, Va.; Philip M. McKenna, Latrobe, Pa.; Mrs. R. Templeton

Smith, Pittsburgh, Pa.; Loyd Wright, Los Angeles, Calif.

Admiral Moreell, as I am sure all Members of Congress know, was organizer of the war-famed Seabees. He has had a brilliant career as an engineer, an industrialist, and has served the country repeatedly as a member of some of the most important investigative groups.

HOW YOU CAN VOTE FOR FREEDOM

(By Adm. Ben Moreell (CEC), USN (Retired))

Americans for Constitutional Action was conceived, developed, and brought into being by a group of citizens who believe that these United States now face a crisis of such major proportions as to jeopardize their survival as a Federal Republic, and our future as a free people.

The basic and critical issue is freedom of the individual. We of ACA believe that free enterprise, freedom of speech, of worship, of assembly, and all other freedoms are but reflections of this basic freedom. Impair any freedom and you are sure to hurt some individuals.

The degree to which we have departed from the ideals of the Founding Fathers, which were derived from their belief in a Government of strictly limited powers, is indicated by the gigantic growth in size, scope and power of our national Government, with a corresponding shrinkage of State sovereignty and personal liberty.

The Second Hoover Commission revealed these pertinent statistics:

1. In 1910 the Central Government cost the average American family $38 per year; in 1955 it had grown to $1,600, or 42 times. (Today the cost per family is $1,748.)

2. During this same period the population increased only 81 percent; i.e., less than double, but the debt of the Central Government grew from $1 billion to $275 billion. (It is now $288.8 billion.)

3. Government employees, civilians only, increased from 324,000 to 2,362,000, or almost seven times. (There are now 2,353,000.)

4. The budget of the Central Government grew from $639 million to $65 billion, or 100 times. (For fiscal 1960 it is $78.4 billion.)

5. The Central Government now owns about one-fourth of the land acreage of the continental United States. (Government ownership is still growing.)

6. In 1955 it owned and operated some 3,000 different kinds of business and commercial enterprises in competition with its own citizens.

The history of human liberty, as Woodrow Wilson reminded us, is the history of the limitations placed on governmental power. As government expands, the liberty of every one of us contracts.

It is clearly evident that the American people and their once free institutions have been engulfed by the so-called welfare state and its protagonists.

How did this come about? It was accomplished legally, by majority vote of legislators, elected to the U.S. Congress, who conceived it their duty to promote omnipotent government by taxing and spending and making more and more of our citizens dependent upon government for their livelihoods and even many personal needs.

Those legislators are proponents of enhanced and centralized political power at the expense of individual rights. This is socialism, the natural forebear of communism.

The end products have been onerous taxation, politically engineered inflation resulting in a sharp decrease in the purchasing power of our money (some 55 percent since 1933), moral confusion and the decline of personal liberty.

We have devised the ACA-index to provide accurate data on the voting records of all Senators and Representatives during the past few years. By means of this index one can tell which of our legislators have consistently voted for individualism and personal freedom and against collectivism and coercion. Some of these distinguished statesmen are pictured in this folder; there are others, but the total number is alarmingly small.

The fundamental purpose of ACA is twofold. It is first, to reelect those legislators who, by their voting records, have shown their dedication to the principles of constitutional conservatism. They have advocated arresting and reversing the current movement toward "welfare statism," centralized government, regimentation of the economy, expropriation of private property, onerous taxation, and debauching our currency. Secondly, ACA proposes to elect other constitutional conservatives who will unite effectively with those now in office to achieve their common ends.

ACA is vigorously pursuing this purpose throughout the country. We must make a maximum effort now.

Congratulations to Green Bay Press Gazette on Its 45th Anniversary

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. WILEY. Mr. President, throughout the history of the United States, our newspapers, as well as other information media, have played a vital, indispensable role toward creating a better-informed citizenry in our Republic. We recognize, of course, that the lifeblood of a republic depends upon a well-informed citizenship.

Across the country, the people in communities large and small look to their local or regional newspaper for: News of local, State, national or international significance; special features of interest to the reading public; information on civic, educational, cultural, spiritual or other topics; entertainment; and a wide variety of other informational services.

For creative effort in providing this kind of citizenry for our country, our newspapers deserve the commendation and deep gratitude of the people of our country.

Today, I welcome the opportunity to pay tribute to one such outstanding newspaper in Wisconsin, the Green Bay Press Gazette, celebrating its 45th anniversary.

Over the years, the Gazette has established a constructive record of high standard reporting and editorializing, as well as in presenting a broad gamut of features and other information to its readers.

Through its excellent services, it has written a unique page in history of progress for Green Bay and surrounding communities. For its outstanding contribution to a better life for its readers and the citizens of these communities, the Gazette, I believe, deserves real commendation as well as congratulations upon its 45th anniversary.

Recently, the Gazette published a fine article by Jack Rudolph reviewing the history and progress of this outstanding publication. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESS-GAZETTE BIRTHDAY SOON—45TH ANNIVERSARY

(By Jack Rudolph)

The Press-Gazette observes an important anniversary next Wednesday. Forty-five years ago, on June 29, 1915, the first issue of the paper was published, following the merger of the long-established Green Bay Gazette and the youthful but anemic Free Press.

The new enterprise was the outcome of a newspaper war between its predecessors that had driven both close to the wall. Their groggy condition had paved the way for a completely new deal under the direction of two young newcomers to town and a well-known local attorney.

The latter was Victor I. Minahan, member of one of the most influential and colorful families in Green Bay's history and brother of Drs. Robert E. and John R. Minahan. A highly successful lawyer, Minahan had founded the Free Press, although he took no part in its actual management, nor did he become active in the Press-Gazette for another 15 years.

The newcomers were John K. Kline and Andrew B. Turnbull, a pair of ambitious young newspapermen from Saginaw, Mich. Kline was the editor and Turnbull business manager of the fledgling Press-Gazette.

Minahan had launched the Free Press in May 1914, invading a field the Gazette had monopolized since the suspension of the venerable Green Bay Advocate in 1906. The only reason he gave for getting into the business was that he felt the city was big enough for two daily papers.

NOT BIG ENOUGH

He was wrong. The Gazette had become stuffy and self-satisfied and needed a jolt, but the plain truth was that Green Bay was not large enough to support competing dailies. The attempt nearly killed both.

The Free Press, which began publication on May 14, 1914, was a good paper, much more aggressive, modern, and newsworthy than its stodgy rival. However, after a promising start it failed to live up to Minahan's hopes. He once ruefully declared that the best month it ever had in its 14-month existence cost him $1,100.

Although it never came close to breaking even, the Free Press hurt the Gazette even more. By early 1915 both were virtually on the ropes, although neither realized how close to a knockout the other actually was.

Both Minahan and N. C. Pickard, publisher of the Gazette, were fighters and neither would give in. At this point Kline and Turnbull entered the picture, thanks partly to the persuasiveness of one of Green Bay's most enthusiastic drumbeaters—Capt. John A. Cusick.

SAGINAW NEWSMEN

Kline was then managing editor of the Saginaw News and Turnbull advertising manager of the U.S. Graphite Co., of Saginaw, but anxious to get back to the newspaper field where he had previously spent 15 years. They had worked together on the News and had dreamed of running their own paper. Both being young and not too opulent, however, their sights were set somewhat below anything the size of Green Bay.

Early in 1915 Cusick, a Green Bay real estate promotor and developer of Bay View Beach, called on them in Saginaw, apparently at the instigation of Minahan and others who were concerned about the situation here. Neither Kline nor Turnbull actually jumped for Cusick's bait, but they came

to Green Bay, looked the situation over and took an option on the Free Press.

Back in Saginaw—before they made the downpayment—they began to cool off. The Free Press, they felt, had possibilities, but they weren't sure of the wisdom of coming into a strange community while a long-established rival was still in the field. On another trip to Green Bay they informed Minahan the deal was off unless the Gazette could be picked up, too.

The latter wasn't convinced Pickard was ready to quit but Turnbull had a hunch he might. Turnbull had heard a rumor the Gazette had once been offered for sale for $125,000 and he suggested Minahan make Pickard the same offer—although neither had any idea where they would find that kind of money.

MADE THE DEAL

Minahan caught the Gazette publisher in his office one morning when Pickard was feeling low and the latter accepted the offer. Surprised but determined not to let his competitor off the hook, Minahan hurriedly drew up an informal option on a piece of scrap paper and bound the agreement with every cent he had in his pockets, about $25.

Raising the $125,000 as well as the initial payment on the Free Press plus enough to get the show on the road took considerable scrambling, but the new owners made it. The Press-Gazette made its bow at the end of June and hasn't missed an issue since.

Things were touch and go at first. Turnbull recalls with a grin how he would wait in his darkened office on Saturday nights for his subscriptions collectors to report in to see if he had enough to meet the next payroll. He didn't dare turn on the light.

The Gazette-Press fight had depressed advertising rates murderously, and the Press-Gazette had to raise them again to survive—a touchy business. The break came when John Baum, owner of Baum's Department Store, agreed to the increase and talked other merchants into going along, an action for which Turnbull is still vehemently grateful.

Because of inherited conditions, the Press-Gazette lost money in its first months. By the end of 1915, however, it had not only made up the lost ground but ended the year modestly in the black.

MOVED TO CHERRY STREET

The first issues were published from the old Gazette building at Adams and Pine Streets—now the Architects Building—but shortly after the merger it moved to the Free Press plant on Cherry, just west of the alley behind the recently razed Elks Club. The building is gone now but its site, currently a parking lot, is marked by a crumbling terrazzo tile entrance with the name "Free Press" still visible.

The Press-Gazette published from there until the present building was occupied in 1924. When opened, the new plant was one of the most modern small newspaper spreads in the country, a distinction it still enjoys, although it is no longer small.

To maintain the distinction through 36 years of expansion and mounting circulation, the building has undergone extensive alterations, culminating 5 years ago in the addition of a third story. From it today a force of over 200 people daily issue a paper that runs as high as 64 pages with a paid circulation nearing 44,000.

In 45 years the paper has had only three editors. Kline occupied the post until his sudden death in 1930, at which time Minahan emerged from the background to take over the desk. He continued as editor until he died in 1954. Leo V. Gannon, who joined the staff as a reporter in 1922, then stepped into the editorship.

Turnbull, only survivor of the original triumvirate, is president of the corporation, whose official title is the Green Bay Newspaper Co. He also held the position of publisher from Minahan's death until he relinquished it just a few weeks ago.

Next Fall as a Prelude to the 50th Anniversary of Naval Aviation To Be Observed During 1961 the Navy's "Blue Angels," a Precision Flying Demonstration Team, Will Be the Subject of "The Blue Angels" Television Program Consisting of 39 Half-Hour Dramatic Adventures

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. VAN ZANDT. Mr. Speaker, news headlines and broadcasts have made crystal clear to the American public that this Nation cannot afford a moment's relaxation in the fullest development of its defensive powers. In many areas of the world, the U.S. Navy is the first bulwark for peace on behalf of the world's free peoples. And to the Nation, maintaining naval aviation superiority is a matter of absolute necessity.

Given the maximum material facilities possible, the American Navy nevertheless places its ultimate reliance on its manpower. This tradition of faith in its personnel is symbolized today by the U.S. Navy's Blue Angels, a precision flying demonstration team that has won the profound admiration and respect of millions.

These flyers and their teammates serve as an inspiration to the youth of our country in this age of airmindedness. The Blue Angels contribute substantially to the program of bringing the highest types of young men into the Navy's service.

I am privileged now to inform my colleagues in the Congress that, next fall, many additional millions of people will be made aware of the flying accomplishments of the Blue Angels through the mass medium of television.

I want to commend California National Productions, a subsidiary of the National Broadcasting Co., and its NBC Television Films Division for undertaking such an important work. Titled "The Blue Angels," CNP is now in production of 39 half-hour dramatic adventures with the cooperation of the U.S. Navy. Mr. Sam Gallu, former naval officer who saw active service in the Pacific throughout World War II and previously distinguished himself in television with the "Navy Log" series, is producer-director of the forthcoming "Blue Angels" program.

In particular, I wish to commend Mr. Earl Rettig, president of CNP, for dedicating his company to this important television series.

"The Blue Angels" television series will be seen throughout the United States at a most propitious time beginning this fall. It will debut shortly before the Navy begins to commemorate the 50th anniversary of the birth of naval aviation; the half-century mark will be officially observed all during 1961.

An End to Measles

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. HARTKE. Mr. President, we hear of the great amount of medical research being done to help conquer the dread diseases of the world, including cancer, polio, heart disease, and so forth. Sometimes we neglect to hear about other types of medical research.

The Pitman-Moore Co., of Indianapolis, Ind., through research has been trying to find a vaccine to conquer the measles. Progress has been made and research is continuing. While we usually think of measles being a child's disease, adults suffer from them also, and at times this can be very dangerous. The research of the Pitman-Moore Co. will continue and we all hope that it will result in success.

I ask unanimous consent that the editorial from the Indianapolis Times of Sunday, June 26, 1960, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN END TO MEASLES

When the oldtimer grouses about how soft today's youngsters have it, and how things were when he was a boy, he usually brings up the measles.

Everybody got them in those good old days, he says.

Well, many youngsters get measles today. It's no fun and never was. It's an uncomfortable, and sometimes a very dangerous, disease.

Nobody will complain if tomorrow's youngsters don't get measles.

It looks as if they won't, thanks to the scientists of the Pitman-Moore Co. here.

The vaccine developed by the Indianapolis drug firm—while it still needs more development—promises to make the future days much better than the good old ones for countless children.

Mothers all over the world will be grateful to Dr. Anton J. F. Schwarz, Dr. Philip A. Boyer, Lowell W. Zirbel, and Dr. Charles J. York.

They work in a field demanding unending patience, absolute discipline of thought, and an enthusiasm for truth.

Credit in huge doses must also go to Pitman-Moore.

Research of this kind takes a great investment in time, people, brains, and money.

To start such a venture means to take a great risk of failure, of loss on the investment. Not all research pays off.

When it does—and a company takes a bold step in medical science—it stands to make a healthy profit, and deserves it.

Pitman-Moore took the risk.

All indications are that the world's children will reap the real profits—freedom from measles.

A Friend Departs

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1960

Mr. DADDARIO. Mr. Speaker, a change of command occurs this week in the Nike antiaircraft defenses surrounding the Metropolitan Hartford area. Col. Vester M. Schultz is relinquishing command and it will be assumed by Col. John Lanterman.

I had the opportunity to meet Colonel Schultz during his stay at the Nike headquarters in New Britain and I also know of the esteem in which he is held by the people of New Britain. An expression of that esteem is contained in an editorial which appeared in the New Britain Herald and which I offer for the RECORD. It is entitled, "A Friend Departs."

Colonel Lanterman, who recently paid a courtesy call on me, appears to be a fine officer and I am sure the continued efficiency of the 63d AAA Group will reflect his able leadership. Both men strike me as the finest of dedicated career officers, and I am happy to pay tribute to them now. Commanding a combat organization in fixed installations near major metropolitan centers such as Hartford and New Britain in my district is a relatively new development in American history, and our officers have had to display outstanding qualities of leadership in adjusting to many problems. I want to pay a personal tribute to Colonel Schultz and to wish the best of luck to Colonel Lanterman.

The editorial follows:

A FRIEND DEPARTS

New Britain will be bidding adieu to a respected military friend next month when Col. Vester M. (Dutch) Shultz, head of the 63d Artillery (Nike) Group, is transferred to Washington, D.C.

The city's relationship with the local unit has always been an amicable one and the friendly, cooperative manner of Dutch Shultz has done much to cement that relationship. His handling of the sometimes ticklish problems which arise between the military and the civilian could well serve as a model for his successors.

A recent example was the speedy resolution of a situation that could have resulted in strained feelings, but didn't. Helicopters landing at the local base were a source of irritation to nearby residents. Mayor Kremski and the colonel quickly got together and arranged to have the copters land at the parking lot adjacent to Willow Brook Park—away from New Britain Homes.

The speed and good will in which these arrangements were made are typical of the way in which Colonel Shultz has conducted himself while in New Britain. There can be little complaint about his brand of public relations which are well worth emulating.

While we cannot help but feel a certain sense of loss at being deprived of a tried and true friend, at the same time we share in the feeling of pride which he must feel at being chosen a member of the Operations Research Office, a joint military-civilian organization that studies and evaluates modern warfare methods.

Knowing the spirit and outlook which he brings to his work, we know that he cannot help but be successful in his new endeavor. Nevertheless, we wish him a bountiful share of good luck.

Cancellation of the President's Contemplated Trip to Japan

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. SPARKMAN. Mr. President, in a recent issue of the Augusta (Ga.) Herald appeared an article entitled "Augustans Think Upset Trip Heralds Dark Hour for United States." I ask unanimous consent that the article, including the various quotations in connection with it, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUGUSTANS THINK UPSET TRIP HERALDS DARK HOUR FOR UNITED STATES

Does the cancellation of President Eisenhower's planned visit to Japan mark the darkest hour in U.S. diplomacy since the Korean crisis?

Key Augustans, with reason to have special insight into the situation, were asked this morning. They seemed, generally, to say the affirmative.

Here are their comments:

Hugh G. Grant, who served in the U.S. State Department some 10 years under the late Secretary Cordell Hull just prior to outbreak of World War II, and who was U.S. Minister to Albania and Thailand, had this to say:

"The cancellation of President Eisenhower's visit to Japan points up the fact that U.S. foreign policy is bankrupt and has been since World War II.

"We have squandered billions of American dollars in remote places around the world to buy friends and allies including Japan, which we rehabilitated after the war; and we have fewer friends than ever before.

"Eisenhower's visit to Japan should never have been planned in the first place. It played right into the hands of the international Communists just as did Eisenhower's agreement to go to the summit in Paris with Khrushchev.

"President Eisenhower should return to Washington in a hurry and devote his attention to the Communist conspiracy right here at home, and our back door in Cuba, rather than in faraway places.

"A thorough housecleaning in our foreign and domestic policymaking is imperative, and now."

Student riots in Japan aimed against Eisenhower and the Kishi regime definitely do not represent the attitude of the Japanese people, in the opinion of the Reverend Charles B. Macmurphy, who just 2 years ago was teaching English in a Lutheran boys high school in Kumamoto, Japan.

"I hope none of my boys were in it—but that I couldn't be sure of," he said.

"To understand this student uprising," Macmurphy said, "you would have to get a picture of Japanese today.

"In the universities all kinds of ideologies run rampant. It is a part of their culture, Japanese children, subservient to their parents while growing up, are permitted to be absolutely free in their thinking in the universities.

"Any kind of group can come in to promulgate their own kind of thinking. The Communists have steadily been making hay through these susceptible, suddenly freethinking young Japanese.

"That is why more missionaries—preachers and schoolteachers—are needed to work with these Japanese students.

"The students, inflamed by Red doctrines which tend to make them think they are giving all for Japan, will fight for this ideology. They are very Japan minded."

Macmurphy pointed out that the mature Japanese, as a whole, has no "Hate America" attitude. Instead, America is highly admired and regarded.

The young Lutheran minister, who was ordained last Sunday at Resurrection Lutheran, plans to go back to Japan as a missionary next spring after attending the Lutheran School of Missions in Chicago this fall.

Brig. Gen. Howard M. Hobson, Fort Gordon commander, pinpointed the problem as a Communist tactic, and urged a resurgence of national strength:

"Recent activities in the Far East, particularly in Japan, indicate clearly that the stated aims of communism have not altered or changed, and that they will continue in the future to exploit every means at their disposal to further their cause of world domination.

"Thus, it behooves us, as American people in all walks of life, to call upon our strength, moral, economic, and military, to bolster our continued national defense to defend our Nation and our way of life. We realize that we couldn't defend this Nation without the Reserve, the National Guard, our STRAC units, and our other members of our Military Establishment.

"We have continuously fostered the one-Army concept, molding these elements into an effective fighting team. We must continue our unity of effort and purpose, cooperation between industry, the military, the private citizens and Government, to form a solid front."

The sentiments of Augusta's Chinese community was summed up by Prof. C. H. Lam, who was born in Canton, China:

"The cancellation of Ike's trip was a bad thing, because relations between the United States and Japan will break pretty soon as a result. The Premier is now scared by the Communist demonstrators. These Communists do not represent a majority of the Japanese people. Most Japanese people like the United States better than Russia, because the United States has helped them in business and industry, and other ways:

"They know what has happened in China. The Chinese people have nothing to eat. The Chinese mainland is in bad shape, and many people are suffering.

"I am glad Ike is going to Formosa," continued Lam. "His trip will make the people very happy. The people in Formosa are like the people in the United States—they stick together."

Spyros J. Dalis, professor of world economics and politics at Augusta College, expressed agreement at the minority power of the Communists in Japan.

"To my estimation, the cancellation was a catastrophe to our diplomatic efforts. Our prestige has suffered a tremendous loss because only a small minority (about 4 or 5 percent of the Japanese population) has upset the plans of a nation like Japan and

the efforts of Eisenhower to establish good will.

"What took place was a return to old aggressive Communist techniques to discredit the office of the President of the United States. The cancellation was a good thing for Ike's personal safety. However, if I were President of the United States, I would have made the trip even if my life was at stake. The loss of prestige is too great a price to pay, when Japan's 100 million people are being led by only 200,000 to 300,000 Communists."

A different view was held by retired Gen. R. O. Barton.

"Thank God Eisenhower is not going. I was concerned for his safety, and it is not impossible that some fanatic or Communist will try to get him in Formosa or South Korea—I'll be glad when he gets back to home ground.

"He was wise to plan these goodwill trips, because he has had such a tremendous reception wherever he's been. Nobody could see ahead to this near revolution when the trip was set up several months ago.

"I have never been too enthusiastic about foreign aid. The Marshall plan, which was instituted during Truman's regime, works under the theory that it is better to reconstitute countries rather than allowing the Communists to exploit them.

"As far as the effect on future diplomatic relations is concerned," General Barton commented, "I'm not too sure of the outcome. I'm inclined to hope that the world will realize two things—Ike's integrity and intense desire for peace and the reduction of armaments, and a discovery of Communist-inspired false propaganda."

Ghana Attains Republic Status, July 1

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mrs. BOLTON. Mr. Speaker, July 1 marks a significant date in the lives of the 6 million citizens of Ghana. On that date their young nation will become a Republic, with Prime Minister Kwame Nkrumah assuming office as its first elected President. Under the new constitution, executive powers will be vested in the President as head of state, with the Ghana Republic retaining membership in the British Commonwealth.

Establishment of the Ghana Republic with its embodiment of the concept of African unity comes just over 3 years since independence was first attained. It was my great privilege to have attended the independence ceremonies as a member of the U.S. official delegation, headed by Vice President RICHARD NIXON. I am advised that the current delegation is composed of Deputy Under Secretary of State Raymond Hare, Ambassador Wilson Flake, and James H. Lemon of the District of Columbia. Included among the list of unofficial representatives from the United States will be Claude A. Barnett of Chicago, director of the Associated Negro Press, Inc.; Dr. Horace Mann Bond, dean of Atlanta University and Mrs. Bond; Dr. Leo Hansberry of Howard University, Washington, D.C., and Mrs. Hansberry; and Walter A. Phillips, president of the board of trustees of Lincoln University, the U.S. institution of which Prime Minister Nkrumah is one of its noted international alumni. The Very Reverend Francis B. Sayre, Jr., dean of the Washington Cathedral, will preach in Accra on July 3. All of this group have been long-time friends of Ghana and active in programs affecting that country and much of Africa.

Mr. Speaker, on the occasion of Ghana's emergence as a Republic, I should like to extend my congratulations and good wishes to all her people.

The accompanying excerpts are from the June 24 oversea release of World News Service of Chicago:

GHANA BEGINS NEW ROLE AS REPUBLIC ON JULY 1

ACCRA, GHANA.—In the hurly-burly of Africa's current political climate, July 1 is a significant date. That is the day Ghana becomes a republic.

There will be no immediate change discernible in Ghanian life. Though the 6-million-plus citizens of Ghana will take time out to celebrate the holiday properly, they will not linger long over the celebration. Instead they will quickly return to the daily routine of building up the strength and substance of their young and dynamic nation.

But the changeover to a republican form of government will have far-reaching effects on Ghana, Africa, and the rest of the world. For this is the next step in the democratization of Ghana.

The major difference that will occur in Ghana during the 4-day celebration—from July 1 to 4—is that Kwame Nkrumah displaces Queen Elizabeth II of England as head of the Ghanian nation. In becoming a republic, Ghana follows the path blazed in the British Commonwealth family by India and Pakistan.

Thus, republicanism for Ghana and the establishment of an African as the chief of state is a natural evolutionary result of Ghanian nationalism and the basic African desire to depart from the tradition of European colonialism. And since Ghana will retain its membership in the British Commonwealth, its leaders will still recognize the Queen as head of the Commonwealth, but not of Ghana.

In essence, Ghana has achieved sovereignty in fact and theory with a bloodles revolution that has kept Great Britain friendly to Ghana in a turbulent time when bitterness could so easily have been generated.

Coincidentally, the July 1–4 celebration of the emergence of Ghana as a republic falls precisely on the 184th anniversary of America's Declaration of Independence from British sovereign rule. This Declaration of Independence on July 4, 1776, was part of a bloody war which gave birth to 13 loosely-coordinated States that later fused together and became the present United States of America.

While the future of the pan-African ideal of a United States of Africa cannot be predicted, conditions for the eventual realization of this dream are better in Africa today than they were in America in the latter years of the 18th century.

Certainly President-elect Nkrumah of the Ghana Republic has long been the builder of the Pan-African dream. As head of the sovereign state of Ghana, he will have the opportunity and occasion to speak out more forcefully than ever to promote a United States of Africa. This, to many, is the significance of the Ghana Republic.

Nkrumah undoubtedly will undertake to further his and Ghana's mission as a focal point for pan-Africanism, when he delivers his inaugural address from the balcony of State House. There will be many other events, including a giant fireworks display and nationwide radio broadcasts, as well as receptions and state ceremonies.

Attending the celebrations of the Ghana Republic will be representatives—both official and unofficial—from all nations of the world.

Food for Peace: Friend Winner

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. WILEY. Mr. President, historically, the United States has accomplished more—in terms of helping its neighbors to live better—than any nation in history.

In making such recognition, I emphasize that this is not entirely self-laudatory; and I recognize that we can still further improve our programs for cooperation with other nations of the globe.

At this time, however, I would like to refer to a specific program which has not only served to fulfill a great humanitarian purpose but also to make friends for the United States; that is, our food-for-peace program. During the last 5 years, the food-for-peace efforts have included shipments of over $9 billion worth of foodstuffs to countries around the world. In many instances, these actions were lifesavers for the recipient countries—often suffering from shortages of food from droughts, natural disasters or other adversities.

Recently, the Christian Science Monitor published an informative article by Neal Stanford entitled "Food for Peace: Friend Winner." Reflecting the splendid way in which various programs have served to fulfill not only humanitarian needs but also to make friends for the United States, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOOD FOR PEACE: FRIEND WINNER

(By Neal Stanford)

Food for peace is a multi-billion-dollar operation, over $9 billion in 5 years, or nearly $2 billion a year.

Food for peace (if you have forgotten) is the Madison Avenue title for Public Law 480, passed in 1954. It began as a straight farm-surplus-disposal program. It has now become a major factor in U.S. foreign economic policy.

Food for peace allows sale of surplus farm products for foreign currencies. It provides disaster relief abroad. It contributes food packages for distribution the world over through such agencies as CARE. It permits exchange of surplus U.S. food items for strategic foreign supplies.

This column, however, is primarily concerned with its disaster relief operations, which in 5 years have reached the neighborhood of some $500 million in emergency help. This is a side of food for peace in which Americans can take especial satisfaction.

Food disaster programs undertaken in the last year include:

1. Shipment of some 26,500 tons of wheat and grain sorghums to Ethiopia, where crops had virtually been destroyed by drought and locusts.

2. Shipment of some 8,000 tons of wheat to Libya, principally in the Province of Tripolitania, which suffered drought conditions.

3. Further shipments of wheat and rice to Morocco and Tunisia to continue a refugee-feeding program.

4. Provision of some 2,000 bales of raw cotton to two American voluntary agencies which are having it manufactured into 80,000 comforters for free distribution to the needy on Formosa.

5. Provision of 6,000 tons of rice to typhoon victims in the Ryukyu Islands.

6. Shipment of nearly $4 million worth of flour, wheat, and nonfat dry milk to Japan, which was hit by a typhoon last September.

7. Shipment, for the fifth year, of some $5 million in wheat flour and nonfat dry milk to Italy for its child-feeding program.

8. Shipment of 1,600 tons of corn to Austria to complete a program of assistance to Hungarian refugees.

9. Shipment of 5,000 tons of barley to Jordan in connection with a drought relief program.

And the latest disaster relief programs undertaken by the United States, under Public Law 480 cover earthquake relief for Chile and Agadir.

Among the first programs of this kind undertaken was one in 1955, when Communist Yugoslavia, suffering a drought, was sent $43 million worth of bread grains.

Over 42 countries have been helped in this disaster relief program in the past 5 years. In Europe: Austria, Czechoslovakia, both West Germany and East Germany, Hungary, Italy, Spain, Yugoslavia.

In Africa: Ethiopia, Ghana, Guinea, Libya, Malagache Republic, Morocco, and Tunisia.

In the Near East and South Asia: Afghanistan, Ceylon, India, Iran, Jordan, Lebanon, Nepal, Pakistan, Sudan, Turkey, Yemen.

In the Far East and Pacific: Cambodia, Formosa, Japan, Korea, Laos, Ryukyu Islands, Vietnam.

In Latin America: Bolivia, British Honduras, Costa Rica, Guatemala, Haiti, Honduras, Mexico, Peru, Uruguay.

The surplus commodities used have varied with the needs of emergencies: bread grains, coarse grains, fats and oils, dry beans, milk and milk stocks, rice, raw cotton.

It has already been explained how it happened that U.S. food relief under this disaster program got into Communist Yugoslavia. It reached Soviet-occupied Germany, Czechoslovakia, Hungary through a Danube flood relief program administered on a regional basis.

Congress has authorized over the years up to $800 million in surplus commodities for disaster relief, and recent amendments have authorized the spending of some $300 million more a year on this kind of program, plus carryover.

The ICA (International Cooperation Administration) is responsible for administering this program. But it of course falls under the overall supervision of the White House Food-for-Peace Coordinator, Don Paarlberg, a special assistant to President Eisenhower. His job is really that of expediter rather than operator—to break bottlenecks. In title II of Public Law 480, which centers on disaster and emergency relief, that is of prime importance.

Disaster relief, it is true, accounts for only about 5 percent of the whole food-for-peace program, but it is the best friend-winning operation in all of America's foreign economic policy.

Air-Conditioning and Refrigeration Institute

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. BROYHILL. Mr. Speaker, a couple of years ago I took occasion to comment on a booklet prepared by the Air-Conditioning and Refrigeration Institute showing how vital and essential the products of the industry that association represents have become to our modern American way of life—not only at home, in our offices, and in our factories, but in protecting the health of our people.

Because it is a relatively new industry, the air-conditioning segment of the so-called mechanical refrigeration industry—and air conditioning is, after all, the application of mechanical refrigeration to the spaces in which we live and work—had suffered for many years because of the lack of standardized rating systems, which sometimes resulted in unrealistic claims for the job that certain equipment would do for its purchasers.

The manufacturers of air-conditioning equipment realized that this caused confusion on the part of potential users of their products, and decided to do something about it. What did they do? They set up a certification program, under the aegis of the trade association of the industry, the Air-Conditioning and Refrigeration Institute, and today the producers of more than 90 percent of all unitary air conditioning in the country have signed contracts to participate in this program.

Unitary equipment, as defined by the ARI under the program, does not cover room air conditioners (which are not a part of the certification program), but does include all types of central residential equipment, as well as many commercial and industrial units, ranging up to 135,000 B.t.u.h. capacity. B.t.u.h., incidentally, stands for British thermal units per hour. British thermal units have been established, under the program, as the only true measure of cooling capacity, although the term "tons" may be used equivalently—that is, when 1 ton is used to represent not more and not less than 12,000 B.t.u.h.

This program gives assurance to the purchaser of residential air conditioning that the unit he buys bearing the ARI seal of certification will perform according to the rated standards of the institute. It means that it is subject to grueling tests by an independent laboratory under contract to ARI to make certain that the rating is correct. The testing laboratory selects certified units at random from distributors' warehouses, and puts them through the tests for capacity and other performance characteristics.

I am happy to know that the air-conditioning industry has established this self-regulating program to assure purchasers of their products. It is another example of free enterprise at work under our American system. Here is an industry that recognized the need for regulation and certification but did not wait for some Government regulatory agency to step in.

I would like to salute the industry and the Air-Conditioning and Refrigeration Institute, which represents it, for this forward-looking step in behalf of the American public.

Dr. Milada Horakova

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. DODD. Mr. President, 10 years ago Monday, June 27, 1950, Milada Horakova, one of the noblest women of our time, died on the gallows in Communist Czechoslovakia. It is fitting that we in this body should observe this tragic anniversary because, in death, Milada Horakova became a legend to her people and a symbol to freemen everywhere.

Both before and after the war Milada Horakova was internationally known as one of Czechoslovakia's foremost women. She was an uncompromising idealist. When the Nazis occupied Czechoslovakia, she joined the underground and risked her life to help people who were on the Gestapo's wanted list and to aid the families of Nazi victims. For this she paid with 5 long years in Nazi concentration camps. But solitary confinement and mental and physical tortures failed to break her spirit.

When Dr. Horakova was liberated by the American army in May 1945 she and her family returned to Prague. Immediately, she threw herself into the struggle again—this time against the Red fascists. She was elected president of the Women's National Council of Czechoslovakia, and she was also elected to membership in the Constitutional Assembly.

In February of 1948, the Communists seized power in Czechoslovakia of course—under the protective bayonets of the Red army. Dr. Horakova resigned all her public offices in protest and went underground once again. She did her utmost to keep the opposition alive by maintaining contact with the various democratic political leaders.

On September 27, 1949, she was arrested. For 9 months she was completely shut off from the world. Finally, in June of 1950, she was brought before a so-called people's court together with 12 other victims accused of opposition to the Communist regime.

Milada Horakova's final words to the Communist court will live in the minds of freemen forever, together with the words of Nathan Hale and Patrick Henry.

Under the new concept of law we are called traitors—

She told the court—

but we still know that if we had freedom of action again we would act no differently than we have acted all our lives, truly serving the noble ideals of liberty, democracy, social progress, and humanity. That loyalty is now considered treason. We stand here unshaken, while expecting the severest penalty. In this most trying moment it takes strength and the realization that we were not alone in our action, that our cause will not die with our going. There are men abroad in the free world who will win our battle and prove that our cause was just. I shall gladly accept this punishment, this sacrifice, knowing that it will strengthen the nation in resisting communism.

Mr. President, I wish to draw attention to the fact that the 10th anniversary of the execution of Dr. Milada Horakova was observed Tuesday evening in Washington at a meeting in Pierce Hall at 16th and Harvard Streets NW. This meeting being sponsored by the Czechoslovak National Council of America, the Czechoslovak Society of America, and other Czechoslovak organizations. The speakers were Dr. Peter Zenkl, former mayor of Prague, and Mrs. Jana Feierabend.

Mr. President, as a modest tribute to this noble woman, I ask unanimous consent to have printed in the Appendix of the RECORD, the text of an article entitled "Milada's Living Heroism," by Mila Lewis.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILADA'S LIVING HEROISM

(By Mila Lewis)

It was soon after Milada Horáková took her law degree that I came to know her—an attractive, vivacious girl in her twenties. Her pleasant and dignified personality stood out in any gathering; she was well read, loved good plays and music, dressed tastefully, was happily married, and doted on her little daughter.

She was excellent in her work at the social welfare department of the city of Prague, and a fine organizer, who readily accepted responsibility. She also worked as a volunteer in the Women's National Council, the central body which represented most women's organizations working for equal rights and professional opportunity, for better housing and standards of living in the young Republic. There was nothing fanatic about Milada, though her devotion to the nation and her pride that she could work hard and effectively in the new democratic atmosphere after liberation showed in every act. There was nothing bombastic about her, no gloating after praise or successful drives and encounters in the arena of public affairs.

Democratic ideals and relations were so deeply rooted in her that she never betrayed them through 5 years of terrorism and humiliation in Nazi prison camps. On returning home at the end of the war, unbroken and full of determination, Milada had immediately to accept election as president of the Women's National Council, succeeding Senator Plaminkova who had been executed by the enemy in that same war for national freedom. Our first council president had trained Milada for that responsibility through years of labor, the tough school of legal and parliamentary work for equality, the finesse of international relations. For years she was chairman of the legal section of the National Council and in 1937 was elected vice chairman of the women in law section of International Business and Professional Women. All of us on the board recognized Milada's qualities of leadership; her election was unanimous.

Although most who returned from the horrors of Nazi imprisonment required months to recuperate, Milada threw herself into work at once. Although she bore the physical scars of manacles and torture the rest of her life, one remarkable phase of her personality was utter lack of self-pity. She never looked back or expressed regret at the price she had paid—her eyes were always forward. She realized very soon that Czechoslovakia had thrown off one conqueror only to face another equally determined, unscrupulous and brutal—but rather more subtle and deceitful. This led her into national politics as a member of Parliament for the largest democratic party—that most devoted to the policies of Presidents Masaryk and Benes. Here she met the Communists at every turn, knew their perfidy and intrigue at first hand—both at the City Hall and in Parliament.

She met them even in the Women's National Council, for two members of the board, her fellow students at law school, had turned fanatical Communists who harried Milada at every step and undermined her work. When in Prague in the fall of 1947 I telephoned her and arranged for a visit. The Reds were riding high that time, operating with all the power of the U.S.S.R. behind them. Her first words were "I must see you before you go to the council office, but where can we meet without being overheard? My home is out because you would be marked. We will meet on the street and go for a walk—that is the only safe place. To an observer from peaceful America that was a sign of what hopeless odds the democrats faced—when a member of Parliament had no place to sit down safely for a talk with a friend she had not seen for 8 years. But Milada and others who were actively involved in the struggle never lost hope, no matter how restricted their freedom or how wily their opponents.

Those 2 hours walking the streets with Milada were a vivid lesson in Communist methods and fanaticism. For instance, one of her women classmates, and colleague in the National Council, now a judge, had recently taken her to task in utter seriousness, "It is high time that you came over to us; drop those Western ideas and your friendship for imperialists, while there is still time. I warn you as a friend that if we win we must arrest you and if you are brought into my court, I must sentence you to death for all you have done to undermine the regime." In horror I stood stock still and stared at Milada. She knew the threat was made in earnest, and also knew what had happened to thousands of Czechs who resisted the Reds. She showed no sign of hesitation—much less, of fear.

My only plea was: "Milada, it is time you went abroad, where you can work just as effectively for the country." In spite of all arguments I had used with Plaminkova years before, her reply was the same. "No, my girl, I could never leave them now. There is a lot of work to do, and every one of us is needed to help win the election which come next May. That is just why the Reds are so furious—they already see they cannot win a majority."

I asked, "And what if the elections are never held? What if they pass some law or take some step to make elections impossible, or declare the results invalid?" Her reply was the same as that a great Prague editor gave my husband "Oh, that would be unconstitutional. The elections must be held and must be free because only a free state can live and be worth living for." As she left me finally, Milada said "Don't worry about us. We will fight right back at them."

And fight she did—in all sorts of ways. They all fought hard and openly on through the rough days in February 1948, when the Reds took over the government with armed brigades of factory workers, took command of the police to throw officials bodily out of ministries, when employee committees had their own employers arrested and seized their property, jaintors took over direction of hospitals and schools in the name of the party, and scores of thousands of ordinary citizens were herded into mines and concentration camps on unsubstantiated charges that they were anti-Communist, were hoarding food, or had served in Western armies during the war.

Milada was one of a group of 13 who were given a theatrical trial to demonstrate the power of the regime. All her friends followed with horror the progress of that trial on trumped-up charges, faced with no evidence except generalities by a virulent prosecutor, with no defense save courage. One can only imagine what excruciating days and nights she suffered when, as someone wrote after the Battle of Guadalcanal, even the bravest fear being murdered—only the crazed deny it.

Shortly before the court passed sentence she declared "Under the new concept of law we are called traitors, but we still know that if we had freedom of action again, we would act no differently than we have acted all our lives truly serving the noble ideals of liberty, democracy, social progress and humanity. That loyalty is now considered treason. We stand here unshaken while expecting the severest penalty. In this most trying moment we take strength from the realization that we were not alone in our actions, that our cause will not die with our going. There are men abroad in the free world who will win our battle and prove that our cause was just. I shall gladly accept this punishment, this sacrifice, knowing that it will strengthen the nation in resisting communism."

My True Security—The American Way

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. STENNIS. Mr. President, recently a nationwide essay contest among high school students was sponsored by the Jaycees, the U.S. Junior Chamber of Commerce, on the subject, "My True Security—The American Way."

Mr. President, at both the State level and the National level that contest, a considerable educational scholarship was offered. They were won by Stephen L. Beach III, of Murrah High School, Jackson, Miss., the son of Mr. and Mrs. Stephen L. Beach, Jr.

I invite this outstanding essay on this unusually timely subject to the special attention of my colleagues and to the attention of the American people. At a time when we need a sense of direction and a solid sense of security, as well as strict adherence to the true American way, it certainly is gratifying to have such a splendid essay as this come from a young man 17 years of age. It is refreshing as well as inspiring to us to read and to share his thoughts.

Mr. President, I therefore ask unanimous consent to have the essay printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

MY TRUE SECURITY—THE AMERICAN WAY

(By Stephen L. Beach)

An ostrich with its head in the sand is seeking security. Whether it be the false security of the ostrich or the more rational security of man, the very concept of security is that of protection, of defense. It is a negative approach. It is the antithesis of action and accomplishment. Here are three examples:

The French built the maginot line. They thought to sit behind this great defense secure from military attack. But when attack came, it went around the ends of the maginot line and France fell—a victim of its own preoccupation with security.

Because of a similar attempt at security, Ole Miss lost its 1959 season football game to L.S.U. The Rebels, having scored a field goal early in the play, adopted a defensive style of play behind the shield of that 3-point lead and went on to defeat under the offense of the Tigers. However, on New Year's Day when these teams met again in the Sugar Bowl, security was not the watchword. There, an offense that never let up throughout the game, carried Ole Miss to overwhelming victory.

Our Lord, Jesus Christ, emphasized the do-nothing quality of security in the parable of the talents. A master, leaving on a journey, entrusted to his three servants certain talents to be cared for during his absence. Those who received 5 talents and two talents doubled their trust and, on the return of the master, were praised as "good and faithful servants." Not so the servant with whom only 1 talent had been left. He "digged in the ground and hid his lord's money." He adopted the safe, the secure way; and he returned the 1 talent to his master. But the master chided him as "thou wicked and slothful servant."

Life and literature are filled with such examples. Can we draw a lesson from them? It seems fair to conclude that when an individual, or a nation, becomes so preoccupied with security, of and for itself, he, of necessity, abandons the concept of opportunity; for security and opportunity are opposed. Those, so preoccupied with security, have crossed the crest of the hill and are on the way downward to mediocrity and oblivion.

This Nation was built by men and women seeking liberty and freedom of opportunity. There was no security in this then savage land for them. They faced only insecurity, privation, cold, hunger, want, and danger. But they did not wait for government or society to give them security from any of these—to safeguard them from attack or nature's harshness. They had the goal of freedom in their eyes and, as they sought and attained that goal, they created their own security—a security such as the world had never known before.

For myself, then, I reject the false security of paternalistic government. I refuse to forfeit the game of life for the craven security offered by some ism, foreign to the traditional and proven American way. Instead, I take my stand among the ranks of those dedicated to preservation of the liberty and freedom of opportunity won for us by our forefathers. In that atmosphere of freedom I, too, shall seek opportunity—opportunity to serve my country, my State, and mankind, as well as myself. I ask only the right of opportunity to rise as high and go as far as I can by my own efforts. I ask only the right of opportunity to shoot at the moon—perhaps to fail—but the right of opportunity to pick up the pieces and try again. And if, in that atmosphere of liberty and freedom of opportunity, I utilize my talents, however few they may be, with all the prudence and diligence of which I am capable, I will win the game of life. I will develop the self-reliance, that will be my true security—the American way.

Farmers Ride the Gravy Train, but Everybody Else Gets the Gravy

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. HRUSKA. Mr. President, the Goehner Grange held its regular meeting on June 27, Master Burdette Batcheller presiding. The guest speaker for the evening was Stanley Matzke, who addressed the assembled members on the subject, "Farmers Ride the Gravy Train—but Everybody Else Gets the Gravy."

Mr. Matzke now lives in Hastings, Nebr., where he served as public relations officer for the Central Nebraska Public Power & Irrigation District. However, he practiced law for many years, served in Nebraska's unicameral legislature for several terms, and was farm editor for the Lincoln Journal, in addition to owning and operating farmland of his own.

The thoughts he set out in his speech on Monday evening are worthy of note, since they are the product of many years of activity and thought devoted to the subject.

Mr. President, I ask unanimous consent that the text of this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARMERS RIDE GRAVY TRAIN—BUT EVERYBODY ELSE GETS THE GRAVY

(Comments by Stan Matzke, Hastings, Nebr., before Goehner Farmers' Grange, Goehner, Nebr., June 27, 1960)

What the farmer needs most in this critical time of readjustment in farming is an understanding of the true situation of agriculture on the part of the consumers of his products and the businesses and industries with which he does business. But what nonfarmers are getting are untrue, unfair, and ofttimes vicious brainwashings from national publications, magazines, propaganda sheets, political handouts and too often from individuals, officials, and organizations who are supposed to represent the farmers of our Nation. Many elements of our economy which are to a great extent living off the farmer, in order to further exploit agriculture or, perhaps, to allay their sense of guilt, have become almost hysterical in publicizing and spreading untruths and mistaken notions about farming and our whole agricultural industry. But for the most part criticism of farmers is due to lack of understanding and misconceptions about agriculture.

Here are some of the mistaken notions about farming with which the public, and particularly the food consumers of our Nation, are being constantly bombarded:

The focal point of these tirades of misrepresentation for the past 5 years is that farmers are being subsidized, with the implication that the farmer is living the life of Riley while collecting his Government checks at the expense of the taxpayers and food consumers of our Nation none of whom would ever think of accepting a subsidy or a handout.

The fact is that the greatest subsidy that one segment of our economy has ever received from another is that which consumers have received from farmers over the past 50 years in the form of abundant, high-quality food at prices which are comparatively the lowest the world has ever known. This subsidy has been extremely costly to our farm population—in long hours of hard labor; in denying themselves of ordinary comforts, conveniences, and advantages; in denying their children cultural and educational opportunities and in their inability to become financially stable so that they can weather the hard times which always come.

This subsidy flowing from the farm to our nonfarm people is constantly getting heavier. In terms of working time required to purchase it, food in our Nation has become the cheapest the world has even seen. Compare what 1 hour of work would buy in 1929 and in 1957, according to the U.S. Department of Agriculture. In 1929 the wages for 1 hour of work would buy 6.4 pounds of bread, in 1957 the same 1 hour of work would buy 11 pounds of bread. Here are some further examples of what the wages for 1 hour of work would buy in 1929 and 1957:

Nineteen hundred and twenty-nine: 1.2 pounds of steak, 7.8 pints of milk, 1 pound of butter, 1.3 pounds of bacon, 1.1 dozen of eggs, 17.7 pounds of potatoes.

Nineteen hundred and fifty-seven: 2.2 pounds of steak, 16.6 pints of milk, 2.8 pounds of butter, 2.8 pounds of bacon, 3.7 dozen of eggs, 36.3 pounds of potatoes.

In 1946 the typical market basket of food cost $767 of which the farmer got $397. By 1957 the cost of this same market basket of food had gone up to $1,010, an increase of $243 of which increase the farmer got a mere $3. In other words the consumer paid $243 more for his market basket of food and the farmer got $3 more, while his operating expenses and costs of living were skyrocketing.

The reason that food prices remained fairly stable during the past 7 years is that while processing costs, marketing costs, and profits went up, prices of farm products to the farmer decreased 20 percent. Had farm prices gone up at the same rate as other cost-of-living items we would have had food and clothing prices about 25 percent higher than we have had. This would have resulted in consumers paying some $65 billion more for their food and clothing than they did during the 5 years from 1952 to 1957.

Another aspect of this situation is what many economists call the "hidden subsidy," moving from our farms to our city and urban population. For much of the past 100 years the rural areas of our Nation have furnished the human resources which have made our Nation industrially, politically, socially, and morally strong. In ever-increasing numbers our young men and women leave the farm before they are 25 years old. Today more than half are following this trek to the cities. This means that farm families and farm communities rear, feed, clothe, shelter, and educate these young people throughout their nonproductive years. Then they head for the cities and urban areas which get the beenfits of their talents and their earnings and taxes. One out of every three adults living in our cities, towns, and villages today was reared on the farm. Migration resulted in a net transfer from farms of 6 million persons in the 1920's; 3.5 million in the 1930's; nearly 9 million in

the 1940's; and during the 1950's, in spite of a high birth rate on farms, migration has reduced our farm population another 3 million. This constitutes a contribution, at the expense of our rural people, to the strength, vigor, and talent of our Nation so great it cannot be measured. This steady stream of human resources moving from our rural areas to the cities is a subsidy which added to the subsidy of abundant, low-cost food also moving from our farms to our urban areas, is a burden which in times past has put agriculture through the financial wringer and will again unless it is curtailed.

It has been the operator of the family sized farm who has borne the brunt of this subsidy to the urban and consuming public. Changing agricultural technologies, mechanization, large commercial and corporate farm units, and the administration of Government farm programs over the past 7 years have put the family farm under additional disadvantages. These farm programs from their beginnings in the early 1930's until a few years ago helped to some extent to equalize the disadvantage of the family sized farm operator instead of skimming the cream of the farm program money for the storage, processing, transportation, packaging, and allied industries which handle farm produce, with huge payments for the large "farm companies," individually and corporate owned, which are rapidly becoming more numerous and larger.

Which brings us to another mistaken notion. The generally accepted one, even among farmers and farm organizations, that Government farm programs are entirely outmoded. It has been during the last 25 years of farm programs that this Nation has built its agricultural productivity to a point unmatched by any nation in the history of the world. It is a terrific story of efficiency and economy which has produced ever mounting output from fewer and fewer farmers to meet the needs of an increasing population eating better and better. Never have so many been fed so good, by so few at so low a cost. Our farm programs, ineffective and misdirected at times as they have been, have played a part in bringing this about. Changes in our farm program are highly necessary. Especially changes which would make the farmer the beneficiary of at least a major part of the huge sums being spent which are now going to the corporations and companies which store, process, package, and distribute agricultural products. The welfare of our agricultural plant is as important to our Nation as is our industrial, military, and armaments program. A 24-hour shortage of food would do more than anything to convince the American people of this fact. And unless we, with proper farm programs, protect the bargaining power of the family-sized farm operator and keep him in the business of producing, the day will come when there will be no more family-sized farms.

The family-sized farmer doesn't close up shop when things get rough as the company farms do when profits fall below a net of 6 percent after taxes. When times get tough the farm family deprives itself of all comforts and conveniences in an attempt to get along—but it keeps on producing. The telephone is disconnected, the daily newspaper is stopped, trips to town are curtailed to once a week, farm youths are taken out of college, Dad and the older boys find a part-time job in town—but they keep on farming, and producing, and it is this production which results in abundant, low cost food. That's why allowing the price of farm products to drop way below parity hasn't curtailed production. Industry keeps up prices by shutting down an assembly line or a factory, labor withholds its services to force higher and higher wages, but the farmer is at the mercy of every other segment of our economy.

But while labor, with the help of Government, has been able to protect its share of our national income, we must remember that increases in wages are largely spent for things which the farmer produces, for meat and milk and eggs and bread, and are hence much less of a deterrent to the farmer's welfare than increases in profits, dividends, managerial salaries, and interest rates, which do not to any great extent increase the recipients food consumption.

Contrary to much of the antifarmer propaganda, farming is not like any other business. The fact is that production of agricultural products is much different from any other enterprise. The farmer, unlike the businessman, can control neither the supply of his product nor the price he gets for it. Nature, always unpredictable, to a large degree determines both the farmer's output and his income. The industrialist adjusts his product to a predetermined demand and produces it in a factory unaffected by rain or drought, ravages of plant and animal diseases, or bugs or pests. The farmer sells his product wholesale at a price set by the buyer and buys the things he needs at retail at a price set by the seller. Industry controls its prices by limiting production and labor protects its income by giving or withholding its service.

One favorite misrepresentation frequently heard is that "farmers are responsible whenever food prices go up at the grocery store." Hundreds of examples can be cited to show the falsity of this notion, as in the past number of years retail food prices have risen while the price the farmer received for the specific items declined. The farmer's share of the food dollar has been going down and down; currently it is about 39 cents of each food dollar spent by the consumer. The cost of food to the consumer has been reduced by the efficiency and economy of the farmer, but it does not show up at the corner market. If the farmer gave his wheat away the cost to the consumer of a loaf of bread would be reduced only about 2½ cents, but would not be as the saving would be absorbed in costs and profits of processing and marketing.

Yes, the farmer is accused of "riding the gray train," because of so-called Government subsidies, while other segments of our economy insist they are getting no Government assistance. This is perhaps the widest variation from the true facts of any of the mistaken notions about agriculture. In the past 50 years, for every $1,000 this country has spent for subsidies, the farmer has earmarked for him $5, only a fraction of which he has actually received. Government aids to business and industry over the past 20 years have added up to some $47 billion, while the cost of all farm programs and farm supports has amounted to just one-eighth of that amount. While metropolitan newspapers and national magazines publicize and editorialize on the $5 billion annual farm subsidy they never point out that a large portion of that budget never gets anywhere near a farmer, but for the most part is for the benefit of the Nation as a whole, for industry or the consuming public. Almost $1 billion carried on an export program for the purpose of winning good will abroad; $19 million is for Federal meat inspection for the benefit of meat consumers; $150 million carries on a school lunch program; $234 million for foods donated to foreign countries; $120 million for running the U.S. Forest and Park Service, including recreational facilities for 45 million touring citizens each year. And of the amounts used to purchase farm products each year very little gets down to the family-sized farmer. After the big individual landowners, farming companies, and corporations get their share, the processors, packaging and tin can manufacturers, middlemen, etc., all with income and profits at an alltime high, whittle the family farmer's share down to where the program is of little stabilizing value to the operator of the average family-sized farm. The farmer is riding a gravy train—but everyone else is getting the gravy.

And always there is the comfortable assumption held by so many that the farm problem is solely the farmer's affair—"Let him fry in his own fat." We had a terrible example of what can happen to our Nation if we allow our agricultural plant to crash on the rocks of bankruptcy as we did in the 1920's. The rest of our economy came tumbling down in short order. Today with almost 40 percent of our Nations' labor force working in agriculture or for agricultural-related industries and with farmers furnishing a multibillion dollar market for industry and business, the result of a collapse of our agricultural plant would be disastrous to our economy. The only solution which farm critics have to offer is to do away with farm price and production controls, get the Government out of agriculture and set the farmer free to produce, market, compete—and go broke. As a Nation we cannot afford to again ignore the effects of the consequences of this approach. Should the farmer operate in a free economy it would be free on one side only. Prices farmers would receive would drop to disastrous levels while nonfarm industries with effective methods to control their production and maintain prices would continue to flourish—until it would be too late. Farmers by the very nature of their operation must look to Government for economic bargaining power in their attempt to get a fair share of the Nation's income. Otherwise they are on their way through the financial wringer with resulting bankruptcies, mortgage foreclosures, tax delinquencies, and curtailed buying power which soon will affect the entire Nation. For farmers to operate successfully with no Government program it would be necessary to strip business and labor of the advantages they have through governmental protection and granted powers, monopolies, subsidies, fast tax writeoffs, depletion allowances, income tax advantages, tariff protection, patents, copyrights, Government grants, artificially fixed interest rates, and dozens of other aids they receive from Government.

The farmer is the victim of his own efficiency, which although it has contributed much to our Nation at large has left the farmer holding the sack. A century ago one person in farming provided food and fiber for himself and three others. Today one farmworker provides for himself and 20 others. If farmers farmed today as they did in 1940, the consumer's food bill would be at least $13 billion a year higher than it now is. In all fairness one might ask, "Which is better, to have a surplus costing everything around $3 billion a year in taxes, or to charge the consumer $13 billion more a year for his food?"

In 1950 there were 25,058,000 people living on farms. That's 16.6 percent of all of us. Now, 8 years later, though population has increased, there are some 5 million fewer farmers. Only 12 percent of the total population, and recently Dr. Sherwood O. Berg, of the University of Minnesota, told the conference on patterns in rural education, held at the University of Nebraska, that by 1975 only 7 percent of our population will be farmers. And remember that of these left on the farms many are nighttime farmers holding down offfarm jobs to make both ends meet. In 1957, for example, one-third of the net farm income came from off-the-farm jobs. The family sized farm operator is trying desperately to continue his tremendous contribution to our national economy—but the odds are against him.

In answer to a recent USDA announcement that 96 percent of our farmland is

still operated in family sized units, a friend of mine described a typical Nebraska family farm. The farm consists of 1,000 acres, all under irrigation, tremendous improvements, and equipment, owned by a man and his wife and 3 children—a family farm. Dad and mother live in Florida to where they retired from the contracting business, one son is a New York lawyer, another is a San Francisco doctor, and the daughter is the wife of a Chicago banker. The farm is operated by a professional manager and a few hired men and seasonal Mexican stoop labor.

And this example isn't too far fetched. Recently a central Nebraska farm went up for sale at an estate sale—1,237 acres. Five farmers were at the sale wanting to buy parts of it to set up sons and sons-in-law in farming. One California resident purchased the entire tract and it is operated out of a city office with a few seasonal hired men. The trend to large holdings and corporation farming, together with the continual drain on the small farmer, can mean the end of family sized farming—and what then?

I predict that the end of the family sized farm will mean either the end of low cost food—or this Nation will go hungry. Unless farm produce prices are raised far above their present levels hard times will come even to big farming, and when things get tough these farming companies will do like those who rushed into poultry, broiler, and egg production, a few years ago, they'll shut down regardless of who or how many go hungry. They'll not keep on producing, like the family sized farm operator, regardless of what it may cost them in reduced income. They'll let the lands lie idle and the buildings empty. You can't turn agricultural production on and off like an assembly line or a factory.

The basic question which must be answered before we can begin to solve our farm problems so as to best serve all our people is—"Is the family sized farm operation worth saving?"

And before we answer that question let us ponder long and well what will happen when our business communities and our industries are deprived of the business which is generated by a farm family living on every farm and ranch, buying the multitude of things which they need?

And let us seriously consider what will happen to our Nation when it is deprived of the economic, social, moral, political, and cultural influences which under our traditional pattern of family agriculture had their roots down on the farm.

Not a Blackmailer

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Not a Blackmailer," printed in the Washington Evening Star of June 29, 1960, dealing with references by Governor Williams of Michigan to certain alleged political blackmail on the part of Senator JOHNSON of Texas to win the Democratic nomination for President.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT A BLACKMAILER

Senator LYNDON JOHNSON blames the summer heat for Gov. "Soapy" Williams' suggestion that the majority leader had resorted to a form of political blackmail in an effort to win the Democratic nomination. This is too charitable an explanation.

Governor Williams, who is backing Senator KENNEDY for the nomination, made his accusation on Sunday in answer to a press conference question. The Governor said one of Walter Reuther's lieutenants told him Senator JOHNSON had threatened to block health benefits for the aged if the Michigan Governor were to announce his support of Senator KENNEDY. This is vicious stuff—especially so since Mr. Reuther, one of the Governor's stanch political allies, says the accusation "has no basis in fact."

Furthermore, Governor Williams cannot plead lack of opportunity to find out whether his charge was true. For he said on Sunday, June 26, that he told Senator KENNEDY about this alleged threat prior to June 2. Why didn't he ask Walter Reuther whether it was true before smearing Senator JOHNSON?

This Williams effort is cut from the same political cloth as the insinuation by Franklin D. Roosevelt, Jr., during the West Virginia primary, that Senator HUMPHREY was a slacker in World War II. This is dirty politics, and it is a bit surprising that the "liberals" seem so undisturbed by it. If Mr. NIXON were the offender their roars of outrage would be heard from Maine to California.

Reds To Employ Rough Methods

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. LAUSCHE. Mr. President, I have had the pleasure of reading a series of three editorials on the subject of the recent collapse of the Paris summit meeting, and the resulting challenge facing us in the free world.

These editorials were written by the very able editor and publisher of the Indio (Calif.) Daily News, Mr. Virgil Pinkley, and as a series, appeared in that newspaper on the dates of June 14, 15, and 16, 1960.

Mr. President, Mr. Pinkley is a scholarly writer on this subject, and writes from observation and knowledge acquired from 25 years of experience covering news around the world.

Mr. President, in order that the important views of Mr. Pinkley may be made available for reading by all Members of Congress and others, I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PUBLISHER REPORTS REDS TO EMPLOY ROUGH METHODS, MORE THREATS

(First of a series)

(By Virgil Pinkley)

The Soviets and their Red Chinese Communist allies have decided to intensify the cold war. Coexistence has become nothing more than a slogan. It was attempted, and seen from the Kremlin's viewpoint, it was a failure.

The new Communist line is to be rough and tough with the United States and Western Germany, to be critical of Prime Minister Harold Macmillan of Britain and President Charles de Gaulle, of France; and above everything else, to go for President Eisenhower in the most violent manner, morning, noon, and night.

There will be more threats, more bullying, more power politics attempted by Moscow and Peiping in a worldwide drive to whipsaw free and neutral nations.

MORE SUBVERSION

Propaganda and subversion will be greatly augmented.

A return is being made to the classic Red techniques and doctrines as practiced by Lenin and Stalin.

We never should have expected basic Communist principles and goals to change. Seen from the Kremlin's position, why should they? To alter the worldwide Communist program would change greatly the planning, teaching, and practices of years. This is something the Red leaders do not want, any more than they are willing to give up the Iron Curtain.

The decision to wreck the Paris summit meeting was taken some weeks in advance of the actual conference. The U-2 plane incident provided the Russians with exactly the excuse they desired. It was the perfect vehicle to use. The episode was the ideal platform from which to work. Had this development not occurred, some other pretext would have been employed.

Why?

There has been growing disbelief in the Kremlin that coexistence would produce the results Nikita Khrushchev believed he could obtain. He really did not want coexistence or the results such a policy could bring if honestly and fairly applied. His idea was to use the coexistence theme as a new facade behind which to work, a Communist smokescreen, a new and clever propaganda approach. It was to cloak real Red aims which continue to be, to cause strife, bring about discontent and eventually to lead to world power.

Khrushchev believed his program could weaken NATO, drive wedges between the United States and our allies, bring about divisions between the administration in Washington and the American people and that it might lead us to abandon or reduce the importance of overseas bases. It was designed to induce the West to drop its guard, to cut back on military strength and security—generally to lull us and the free world into more complacency. In short, to soften us up even more and make Communist advances more certain, and to accelerate the global Red drive for conquest and power.

We tend to forget the Soviets and their Communist followers think in terms of entire continents and centuries.

Two-and-a-half years ago Nikita Khrushchev got the go-ahead from the Kremlin and the Presidium to try and sell coexistence. Some powerful elements, especially the military, and more specifically the Red marshals doubted the program. But they had agreed to Khrushchev's authority as the No. 1 man in Russia.

He did not, and he has not, however, achieved the same individual power won over the years by Josef Stalin. Khrushchev has to consider more the desires and wishes of the party, the Red marshals, international communism—especially the branch which operates in Peiping—and the Russian people themselves. They want more consumer goods, and a higher standard of living—things Khrushchev promised as he threw Georgi Malenkov from power.

So Mr. K. went abroad and came to Amerika to sell sweetness and light called coexistence.

When he returned from the United States and the so-called Camp David spirit the Red marshals confronted him with the repeated flights of American observance planes over Russia. The Red defenses apparently were unable to prevent our high and fast flying jets from roaming back and forth across Soviet territory.

It was an open admission of Russian security weakness. This situation only underlined the importance and value of the U.S. strategic bombing forces now and for some years to come.

The Red marshals were angry. They are fatalists. And we should remember that they are more oriental than occidental. They demanded action.

In addition, Khrushchev had been trying to retire some 200,000 Red army officers. They resented being returned to civilian life. As officers they enjoyed special privileges and great prestige. They were a favored class. In most cases their civilian income did not match their salaries and special benefits as officers.

So Mr. K. faced opposition from within. This situation reflected itself in speeches he, Marshal Rodian Malinovsky and other top ranking Reds made in the weeks immediately before the summit conference. And then the U-2 incident burst upon the world.

(Editor's Note: Second of a series)

(By Virgil Pinkley)

Just before Nikita Khrushchev's airplane left Moscow for the ill-fated Paris summit meeting there was an ad hoc gathering of the Soviet Presidium held at the airfield.

The final script which Mr. K. was to read and enact in Paris was reviewed and agreed upon. Marshal Rodian Malinovsky, Red Defense Minister, was present. Throughout the entire Paris sojourn and the hours spent in East Berlin while en route back to Moscow, Marshal Malinovsky stayed leech-like right at the side of Premier Khrushchev.

The arrival of the Russian party in Paris on Saturday, May 14, 2 days before the conference was to open, gave the tipoff. Khrushchev was stern and cold. Malinovsky's attitude was the same.

Almost at once the Russian leader asked for an audience with President Charles de Gaulle, the host for the conference. In no uncertain terms Khrushchev denounced President Eisenhower and called him many vile names. He asked President de Gaulle to repeat his statements and to leave no doubts in Mr. Eisenhower's mind that the Kremlin did not want to do business with him—that he was not to be trusted.

The U-2 plane incident was belabored extensively. Then Marshall Malinovsky lectured De Gaulle and made all kinds of threats about the strength of Russian arms, the crushing power possessed by the new Soviet rocket army, and how his country would lay waste Paris, France and any parts of the world through rockets and missiles.

When Prime Minister Harold Macmillan arrived from London the next day the same act was repeated by Khrushchev and his shadow. This then, was the atmosphere which immediately preceded the summit gathering.

When the conference opened Monday morning, May 16, the Russian boss refused to shake hands with President Eisenhower. He sat during the tense and stormy meeting with his back turned against the President, or seated sideways.

ABUSES IKE

He repeatedly abused Mr. Eisenhower in violent terms. The President kept his temper but it was a mighty effort. And, as events have shown, that was only the beginning of the personal vehement attacks made by Khrushchev against our Chief Executive.

As for the U-2 plane episode, most of our Western European allies believed we needed to make such flights for our security and in the defense of the free world. They do question seriously, however, the timing of a flight on the eve of the conference and they are appalled by the clumsy way in which we handled the matter.

As you will recall, there were numerous conflicting reports. It seems evident that there was lack of proper liaison between the White House, State Department, Civilian Space Agency, Pentagon, Central Intelligence and possibly the National Security Council.

Our statements and reports made it appear that we were not telling the truth. This really hurt us. Today, whatever else may be said against the United States in most parts of the world, few charge us with dishonesty or lack of good faith. Our reputation for truth is a valuable one and we should always keep truth on our side and wheel it out when needed as a gigantic weapon in our arsenal.

No intelligence officers in Western Europe accept the stories and statements put out by the Kremlin about the alleged shooting down of the U-2. They believe that if the plane had been hit by a modern rocket at a height of 60,000 feet or more, that it simply would have disintegrated and that its pilot never would have bailed out and parachuted safely to earth. About all they accept is that the Soviets in some way forced down an American reconnaisance airplane and we admitted losing such a plane while in flight over Russia. The most common belief is that the aircraft encountered some trouble, was forced to a lower altitude of say 15,000 to 30,000 feet, and that Red fighter planes made it crash land.

Suspicion of foreigners has been traditional in Russia. In the days of Catherine and Peter the Great, there was great intrigue in the czarist courts.

The concentration camp, secret police and strict censorship are not new in Russia. Nicholas I, some 154 years ago, had a decree prepared on censorship. It said that no curbs would be put on writers, but that they must be accurate and comply with the truth. Of course, then as now, the censor ruled on what was honest or fair and accurate. The theme of Nicholas' decree has been repeated on several occasions by Nikita Khrushchev. The mighty men of Russian literature, such as Pushkin and Tolstoy, battled against the wielders of the censor's pen.

The present-day rulers of Russia, the meh in the Kremlin, have used the U-2 incident to stir up suspicion and hatred of America and to issue all kinds of nonsense about capitalistic plans to destroy Russia and end communism.

All along the Iron Curtain there already has been a tightening of security and more strict patrol measures are being adopted, along with additional censorship of various mediums of mass communications.

Khrushchev and his colleagues do not want an end to censorship, travel restrictions or the Iron Curtain.

The day is still far off in Russia when a Soviet citizen really is free. That day will have come when he may listen to a foreign radio broadcast without fear of arrest or having the broadcast jammed, when he can stroll down the streets of Stalingrad or Minsk and buy a foreign newspaper, or when he can enter a travel agency and purchase a ticket to Los Angeles.

Meanwhile, Red leaders are preparing new demands for the Russian citizens and their Communist allies or slave followers. New work and production goals will be announced shortly.

Indications are that the Soviets will accelerate their programs of rocket and missile production—and there will be no strikes permitted to halt or slow up the output either. New measures are being taken to try and correct a current weakness which enables foreign jet planes to come in and fly across Soviet territory at tremendous speeds and great heights.

More threats and pressures will be applied against members of NATO and nations permitting the United States to have military bases. Already this program has met with considerable success. We have called off, for at least the time being, any observation flights. Some of our allies have begged us not to use their bases for such flights, if they are resumed.

And we know all about the worldwide Red propaganda drive against the West and us.

Hourly news bulletins from Japan, from the Philippines, from Cuba, and many other parts of the world give the details. You may be certain that President Eisenhower is the butt of much of these efforts and he faces a rough time indeed on his Far Eastern trip.

(Third of a series)

(By Virgil Pinkley)

Russia is not ready, nor does the Kremlin desire an all-out shooting or nuclear war at this time.

This is the general opinion expressed today by top ranking officials in Western Europe.

Just back from a news gathering swing of 3 weeks following the collapse of the Paris summit meeting, I continued to be impressed by the calm of Western Europe and the widespread desire there to step up defensive efforts. There is more unity among NATO members today than at any time since the Soviets, under the personal orders of Nikita Khrushchev, put down with much bloodshed the efforts of the Hungarians to throw off their Communist slavery and regain their independence.

For months Europe has been afraid that Khrushchev might make a fatal blunder over West Berlin. But now that the Paris meeting he first proposed, then demanded and personally wrecked, has now passed without any action over Berlin, people are breathing easier.

BERLIN NOT SAFE

Also, the rather mild statement made about Berlin by Khrushchev when in East Berlin enroute back to Moscow 3 weeks ago, seems somewhat reassuring. This does not mean, however, that Berlin is safe, or that the Kremlin may not at any time reintroduce this time bomb which keeps ticking away.

Europe has learned to live with crises.

I would say that the calmest and most determined people to be found in the world today insofar as Soviet threats and actions are concerned are in West Berlin, and in Finland, Turkey, and Norway in the areas of those countries having common frontiers with Russia.

MORE WORRY HERE

Actually, there is more war scare and hysteria in America than most countries. We seem to be on the mountain peaks, or in the depths of the valleys—wildly optimistic or unrealistically pessimistic.

Gen. Alfred M. Gruenther, former Supreme Commander of NATO, once told me, "Americans tend to think all Russians are 7 feet tall, but the closer one gets to Russia, the more average the Soviets become."

European experts on Russia believe that during the next few months the Moscow-Peiping axis will appear stronger than ever. From these two capitals new drives will be made against neutral countries, small nations permitting NATO or U.S. military bases, and to present America as the warmongering international villain.

The world is being divided up by the Russians and Chinese Red leaders for new propa-

ganda campaigns. Moscow and Peiping will whipsaw nations and countries. Special attention will be given Africa, the Middle East and the Far East by Red China. The Kremlin will rain its biggest propaganda guns against members of NATO, the United States, Africa, the far Pacific, and Latin America.

In Russia itself the emphasis is to be placed on heavy industry, rocket and missile production, reducing the previously announced military personnel cutbacks, trying to devise ways to prevent foreign fast- and high-flying jets from cruising at will over Soviet territory as we have been able to do for the past 4 years, and to pushing agricultural projects, especially in Siberia.

In the latter region some of the pet plans of Khrushchev have met with failure due to drought and heavy and persistent winds and duststorms.

I find that Western Europe looks to America more than ever today for leadership of the free world. They want us to head up moral and spiritual drives as well as staying strong militarily, industrially and economically.

There is much interest in the election of our new President. They hope the man we select will be the most capable and best trained leader we can produce. They trust he will be vigorous, imaginative, young in outlook and actions and an outstanding executive and administrator.

Europeans do not believe another so-called summit meeting is possible for at least a year. They cannot see a new American President rushing off to a meeting with Khrushchev until some time has been spent in office.

Based on the evidence to date, Western Europeans do not expect Mr. Khrushchev to be replaced as the No. 1 man in the Kremlin, unless natural causes so dictate. He does not have the power of Stalin and he must rule through the Presidium and take into consideration the wishes of the Communist Party and the Red marshals. But at present he is still the boss.

I've come home convinced that the most important issue before the American people is to select the best qualified man for President and to surround him with our most capable and dedicated assistants so that maximum efforts can and will be made to maintain the peace. Any nuclear war would destroy much of the human race and most of civilization. No one really can imagine the suffering, misery, and utter devastation a modern war would bring.

Unless the peace is maintained, all other matters become secondary and really unimportant. If the world goes up in a nuclear explosion our hours and wages, more or less social security, higher or lower subsidies for farms, and shorter working hours have no meaning or importance.

I also am convinced that we in America have become soft and too complacent. Perhaps this might be all right, or not too dangerous, if we lived in a secure and peaceful world where all other governments and rulers had our common desires and an equal adherence to fairplay and justice.

Unfortunately this is not the case.

To the best of my knowledge and ability I am certain that we are living in an even colder war era which has become more dangerous.

Russia, Red China, and communism are on the march. Their basic goals of 40 years and more have not been changed. Objectives, regardless of time and effort required, are the same and remain constant.

And in Nikita Khrushchev we face one of the most powerful, capable, cunning, and ruthless men who has ever risen to world power.

He is shrewd and intelligent. He is a gambler. He is a believing and practicing Communist and he is fully capable of bold unorthodoxy.

We have no choice but to remain strong militarily for a long, long time if we wish to remain free. We need to push our rocket and missile programs, and to make our Strategic Air Force even more capable. This means accelerating our output of B–52 jet bombers and getting the B–70's into the air and operational in considerable numbers.

Today, as never before in my opinion, America needs unity, loyalty, and dedication. We need to protect and strengthen our institutions and ideals. We must, if we are to survive, be willing to sacrifice and work harder. And we greatly need leadership of the highest caliber.

Berlin Must Always Be Free

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. HARTKE. Mr. President, the Indianapolis Times of Sunday, June 26, 1960, had a very excellent editorial on Berlin. This editorial stressed the necessity for the United States to be as firm as we were 11 years ago during the Russian blockade of Berlin which we defeated through the now famous Berlin airlift.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

I had the opportunity of visiting West Berlin last year. My definite impression from conversations I had then with officials of the West German and West Berlin governments is that they want the United States not to back down in the face of Soviet threats.

Upon my return to the United States I made some comments on this matter which I now ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

[From the Indianapolis Times, June 26, 1960]

BERLIN MUST ALWAYS BE FREE

U.S. planes sped to Berlin with milk and medicine 12 years ago today.

The shipments were unplanned. It was a stopgap measure.

The Russian blockade of the western city threatened 2½ million Berliners with starvation—just 3 years after World War II had ended.

This was the start of the massive Berlin airlift, in which Allied pilots, mostly American and many Hoosiers, ferried the essentials of life to a courageous city.

Communist rulers still hunger for Berlin.

The city's magnet, drawing the lifeblood from the Russians' East German satellite surrounding it, is more powerful than ever.

Swarms of refugees still reach the free city, despite tightening travel restrictions within East Germany.

West Berlin by no means enjoys all the prosperity of West Germany, but it keeps getting healthier.

Unemployment has been whittled down from 300,000 10 years ago to about 30,000 today.

Buildings keep going up. Investments are increasing.

The city has heart, guts, and brains.

The people are closer to communism than perhaps any others in the West. They understand it better, respect its force, and live next door to it without panic.

Whenever a new crisis is threatened by the Kremlin, Berlin is calmer than Washington.

The airlift of 1948 was so effective that 11 months later the Russian blockade was given up as a failure. It was one of the West's greatest victories.

Some experts today believe it could not happen again. They believe the Eisenhower administration would cave in at a showdown. They believe the Berliners would not be as tough as before, after 11 years of material comfort.

This defeatism must not be accepted.

Military and diplomatic planners, somehow, can always face the past and plan for yesterday's crises.

Today there is a fleet of trucks in a U.S. military compound in Berlin. They are never used, but are ready for airlift duty.

Today the city officials of Berlin have enough coal, food, and medicine in dumps and warehouses to maintain life for a year.

Today the Russians have radar jamming stations surrounding the city, so the planes couldn't fly in every minute.

But if there is another Berlin crisis, it will not be the same. New planning, new moves will be needed, and the West will have to be just as tough, resourceful, flexible, and united as it was 10 years ago.

BERLIN AS I SEE IT—THE CHOICE IS NOT SURRENDER OR WAR

Berlin is the place on the world map where the Soviet Union has decided to test the firmness of the U.S. commitment to the defense of the free world.

As Berlin goes, so will the free (and the uncommitted) world go.

West Berlin is a small, isolated, indefensible, outpost of freedom. Its 2½ million inhabitants are free only because the West, and in particular the United States, has committed itself to stay there. The presence of U.S. troops in Berlin is the equivalent of a burglar alarm. Any military attack on Berlin now would precipitate a military reaction by NATO which might lead to all-out war. The Russians are well aware of this, and this is why West Berlin is still free today. This is why they have mobilized all their political, psychological, and diplomatic resources to try to get us to withdraw from Berlin.

It might be asked why it is so important to the security of the United States that 2½ million West Berliners should be kept from being absorbed by the East German Communist regime. After all, as former Secretary Dulles noted, Berlin is militarily indefensible.

It is true that we have a moral commitment to the West Berliners, but we have a prior moral commitment to our own people. Would any sane American advocate that we run the risk of events which might lead to Soviet nuclear bombardment of the United States and the death of countless millions of Americans, simply in order to try to preserve the freedom—not even the lives—of 2½ million foreigners?

Such questions, which are natural, can only be answered convincingly if the issue of Berlin is seen in a pioneer perspective.

It is my sincere belief that the reason we must be prepared, if necessary, to remain in Berlin at all costs rather than allow ourselves to be pushed out or be a party to disguised capitulation is clear, for if Khru-

shchev believes that we are not prepared to fight, he will bring increasing pressures, threats, and harassment to bear on the Western position and access routes in order to bring about our withdrawal from Berlin, through some form of diplomatic capitulation. This would be another Munich.

Should we ever give up our position in Berlin (except, of course, as part of an overall acceptable settlement to the problem of Germany), we will simultaneously and inevitably have given up our security positions all over the world. The cement of the defense of the free world, which consists of the power, the resolve, and the pledged work of the United States of America, will liquify overnight should we allow the Russians to force us out of a place which we ourselves have proudly built up and protected and committed ourselves to hold as a bastion of freedom.

Berlin is one of those issues which go to the heart of our worldwide security position.

There is a fateful link between the maintenance of the freedom of the West Berliners, and the survival of millions upon millions of our fellow citizens. Here is how the causal sequence might run.

1. The Soviets succeed in driving us out of West Berlin because they realize that we are, in the last resolve, prepared to abandon West Berlin rather than run the risk of all-out war.

2. The handwriting on the wall then at once becomes apparent to all our allies, to all the countries with whom we have mutual security pacts, and—just as important—to all the uncommitted peoples of the world.

3. The foundations of our present defense and security policy would then turn to sand under our feet. By permitting the Soviets to win the battle of Berlin, and showing to the world that the United States will back down rather than risk war with the Soviet Union even on an issue bloodless victory of absolute import on the worldwide front.

4. Then America progressively becomes isolated politically and strategically, as the free world realizes that the once mighty deterrent, backed by unshakeable resolve, no longer exists.

5. One of the last stages is reached when the American Government and people are faced with the decision whether to accept the extinction of our freedom, or to fight, because we believe that life by itself, separated from the values by which we live, is not worth living.

6. The last stage of all would bring home to us the bitter awareness of the relationship between the maintenance of the freedom of 2½ million West Berliners, and the survival of countless millions of Hoosiers and other Americans.

As an illustration of the significance of Berlin to other parts of the world, a Japanese Ambassador to a Western European country recently said to one of our officials that Japan's destiny depended on the outcome of the struggle for Berlin. He said that if the United States and its allies stood firm in Berlin, pending a reasonable final settlement of the German problem, the confidence of the free world in the United States would be strengthened. The other side of the picture, he said, was that if the United States abandoned Berlin, the people of Japan will know that their turn will surely come, and will be guided accordingly.

Thus, the issue before us is inescapable. In order to face the issue successfully, it must be seen in its proper light.

The choice before us is not between giving up Berlin and all-out war. If we stand firm in Berlin and convince Khrushchev of our determination to do so, we shall not have war. On the other hand, if we abandon Berlin, we will have started a chain of events which will ultimately bring our country face to face with the awful dilemma: whether to live as slaves under Communist domination, or die rather than submit to slavery.

VANCE HARTKE,
U.S. Senator, Democrat, of Indiana.

Frank J. Pipal, of Omaha, Nebr.

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. HRUSKA. Mr. President, earlier this week, a very distinguished and widely known Omahan passed on to his great reward. He was Frank J. Pipal, one-time Omaha city forester, author, and naturalist.

He came by his love for trees and forests honestly and almost inevitably because he was a native of Bohemia, now a part of Czechoslovakia. People of that nation historically have shown a love and respect for trees and forestry generally. Mr. Pipal came to this country at the age of 12, determined to devote his lifetime career to that of a forester.

He worked for many years with the University of Nebraska's internationally known naturalist and botanist, Dr. Charles E. Bessey. He was a teacher for many years and served as superintendent of schools. In addition to performing his duties as Omaha city forester notably, he organized Omaha's Junior Foresters among the ranks of grade school students.

As a result tens of thousands of Omahans now know trees and appreciate them much the better because of these unselfish and untiring efforts.

He was well beloved in the community in which he worked. So is the fine family which Mrs. Pipal and he raised, and all of whom came to Omaha to observe their parents' golden wedding anniversary only a week before he passed on.

The Omaha World Herald for Tuesday, June 28, paid tribute to this fine gentleman in its lead editorial under the title, "Frank J. Pipal."

Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRANK J. PIPAL

There are, doubtless, happy men who make their living, say, as accountants, and who spend most of their free time on a hobby such as building boats. But fortunate indeed is the man in whom vocation and avocation are perfectly combined.

Such a man was Frank J. Pipal, retired Omaha city forester, who died Sunday. Mr. Pipal never ceased marveling that people would pay him for doing what he would gladly do for nothing.

Mr. Pipal first fell in love with trees in his native Bohemia; he planted his first tree when he was 5 years old. Coming to this country at the age of 12, he was determined to be a forester. The difficulties were many, and so were the interruptions. But eventually he earned a degree, and later a master's degree, from the University of Nebraska.

Mr. Pipal worked in forestry for years, part of the time with the University of Nebraska's internationally known Dr. Charles E. Bessey. But the interruptions continued. Mr. Pipal was for a time superintendent of schools and, in depression days when foresters were not regarded as essential, he ran a hardware store outstate.

In 1941, when the city of Omaha decided to hire a forester, Mr. Pipal applied, and with his superb qualifications, got the job. From that time on he lived and breathed trees—and communicated his love for them to others.

Far beyond the call of duty, he organized Omaha's junior foresters. Tens of thousands of Omahans now know trees and cherish them because of lectures by Frank Pipal they heard long ago.

In 1951, Mr. Pipal, at the age of 70, was compelled to retire from his city position. But it was only a technical retirement. He wrote a column for this newspaper, and wrote booklets on trees and lawns. As a consulting forester, he was kept busy diagnosing and treating sick trees.

He advised people on what trees to plant. But he never forced his ideas. If one of his clients insisted on planting a fuzz-shedding cottonwood, the gentle Mr. Pipal merely told him the facts, and reflected privately that it was his client who would have to live with the tree.

When tornadoes struck in Nebraska and leveled trees, Mr. Pipal responded instantly. Going to the scenes of disaster, he cheerfully worked 12 to 16 hours a day advising on cleaning up the mess and on the planting of new trees. Such restored towns abound with living memorials to Frank Pipal.

Only a week or so ago the trim and wiry Mr. Pipal bounced into the World-Herald's editorial rooms with a box in his hands. In it he had a cutting from a tulip tree in bloom. With glowing enthusiasm he showed it to his colleagues.

Last Wednesday he and Mrs. Pipal observed their 50th wedding anniversary. Their two sons and their families came to Omaha for the event. On Sunday afternoon Mr. Pipal was playing with his grandchildren at a lakeside cottage near Fremont when he had a heart attack and died almost instantly.

He lived a good life, and he will be missed by thousands who knew him and loved him.

No Outcry for Allan Pope, Doomed To Die in Indonesia

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. SIKES. Mr. Speaker, I call to the attention of my colleagues an article which appeared in the Saturday Evening Post entitled "No Outcry for Allan Pope, Doomed To Die in Indonesia," which I think is thought provoking. The article follows:

NO OUTCRY FOR ALLAN POPE, DOOMED TO DIE IN INDONESIA

A three-man military tribunal in Indonesia last April imposed the death sentence on

American flier Allan Lawrence Pope, of Homestead, Fla., on charges of aiding the 1958 rebellion against the leftist Sukarno regime. The 31-year-old American admitted bombing a military objective, but not civilians. He maintained that he was being tried because he was an American, since Indonesian rebels, who like himself were neither leaders nor planners of the revolt, were released without trial.

The death sentence on Pope raises the question: Why are those who oppose capital punishment indifferent to the fate of this young man who thought he was fighting in the free world's battle against communism? The execution of robber, kidnaper, and sex-pervert Chessman, who had every possible chance during 12 years to prove his innocence, rocked liberals and leftist idealists all over the world. But editors in Italy and France who protested Caryl Chessman's death, or those who stoned the U.S. Embassy in Lisbon, are silent.

Not so long ago there was a similar hue and cry over Julius and Ethel Rosenberg, who had betrayed their country. Before that it was Tom Mooney, convicted of bombing a preparedness parade in San Francisco. And, for those who remember 1927, there were Sacco and Vanzetti, convicted of murder and robbery. The Socialist of their day charged it was their radical affiliations that condemned them. Many citizens who cannot be classed as radicals shared this belief. The protests rocked the Nation. Bombs went off in New York and Philadelphia.

Where do the pseudoliberals and the anti-capital-punishment groups hole up when teenage Hungarian freedom fighters are executed 3 years after the revolt in which they heroically took part? Millions are liquidated in Red China because they hate communism, and "progressives" urge recognition of the Red tyrants. Why no hue and cry for Allan Pope?

Japanese Exchange Student Apologizes for His Countrymen's Misbehavior Toward Eisenhower Visit

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. CEDERBERG. Mr. Speaker, Big Rapids, Mich., in the 10th Congressional District, which I represent, is probably the first city in the United States to receive an apology from a Japanese citizen for the manner in which a throng of leftist agitators conducted themselves with respect to the proposed visit to Tokyo by President Eisenhower.

The letter comes from a Japanese youth who came to the United States as an exchange student under the American Field Service international scholarship program and later returned to his native Japan.

The communication and the circumstances under which it was written are related in the Big Rapids Pioneer, a daily newspaper published in that city. The account of the letter and the letter itself follow:

FEELS ACTIONS OF JAPANESE DETESTABLE

Noby Matsumoto, Big Rapids' first American Field Service exchange student, in a letter to the people of Big Rapids, has extended his apologizes to the United States for the riots and misbehavior of leftist groups in Japan that caused the cancellation of Eisenhower's visit to that country.

Remembering, he said, the friendship extended to him here, he finds it hard to understand the "Pearl Harbor" attack on Hagerty and the rioting that led to the cancellation of the Eisenhower trip.

The letter of apology was enclosed in a personal letter to Lloyd Atkins, Director of the Field Services program here. In his letter to Atkins, Noby expressed his warm regard for the people of the United States and of Big Rapids, and said that he has just finished his year at college and was preparing to return to his home city of Takamatsu.

He says there are two AFS'ers in his city this summer, and stressed the need for making the program more complete, so that everyone will be aware of it and "when the general idea is understood, there will be no riots nor anything of that nature."

As school is over for Noby, he and a few of his friends were preparing for the long, 20-day, 1,000-mile walk to their homes in Takamatsu. Noby spoke of the trip, laughingly, as a break from the routine of school.

He expressed sincere thanks for the Future Farmers magazine which Atkins sends him each month, and sent his warm personal regards to all his acquaintances in Big Rapids.

NOBY'S LETTER

JUNE 22, 1960.

DEAR FOLKS IN BIG RAPIDS: It was on the afternoon of August 13, 1957, when I was merely a high school senior, that I came to Big Rapids as a first American Field Service (AFS) international scholarships exchange student to the city from among 90 million Japanese to work for a tiny part of people-to-people campaigns. Frankly I had carried from home nearly halfway around the globe a bit of anxiety concerning the Pearl Harbor "incident" of 1941; however, my stay in Big Rapids, U.S.A., soon proved it unnecessary, and in fact my best souvenir from the United States was the friendliness of the people.

True friendship is something that can be attained only gradually, and somehow it is so fragile while under construction that we always have to be extremely watchful against stumbling. Although I dare not say that I promoted our mutual understanding to the utmost extent, I should like to regard my job in Big Rapids as fair and not as a complete failure; that is, we were on the way, furthering relations.

Thus it is truly a shame that once again I have to face you with disgrace after the recent "Pearl Harbor attack" on America's press secretary to the President and also our withdrawal of the invitation of Mr. Eisenhower's visit to Tokyo, Japan. I personally detest almost with fury the discourtesies executed by violent rioters of our own country to the U.S. high officials and consequently to the whole nation of America. Here I will neither argue about the present Japanese political issues which I am sure you are informed of nor blame solely the general demonstrators, and I certainly have no intention whatsoever of making an excuse for all the chaos now taking place in and around Japanese capital. But whatever the cause, whatever the reason, our country owes you a deep apology which can hardly be paid off. I really doubt, therefore, how much this my letter will help temper your anger, but here is my personal regret and apology to you folks. I am afraid there is little I can be doing now, but I do promise you that I shall be doing my best to improve the situation, and I earnestly hope that there has been no too disgusting a change made in our good close relationship, though after a terrible storm, and that we are still on the right track.

Very sincerely yours,

NOBUSUKE NOBY MATSUMOTO.

Soviet Subjugation of Latvia, Lithuania, and Estonia

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a letter and splendid resolution which I have received from the American National Latvian League in Boston, Mass., in which attention is called again to the Soviet subjugation of the once free and independent countries of Latvia, Lithuania, and Estonia:

AMERICAN NATIONAL LATVIAN LEAGUE IN BOSTON, INC.,
Jamaica Plain, Mass., June 25, 1960.

The Honorable JOHN W. MCCORMACK,
Majority Leader of the House of Representatives, U.S. House of Representatives, Washington, D.C.

DEAR CONGRESSMAN: Hereby I convey a resolution adopted by American Estonians, Latvians, and Lithuanians assembled at the Little Opera House in Boston, Mass., June 18, 1960, in connection with the commemorations of the Baltic Genocide Day (June 14) and with protest against the violent occupation and annexation of the Baltic States of Estonia, Latvia, and Lithuania by the Soviet Union 20 years ago.

I request your attention and appropriate action in the House of Representatives on behalf of the subjugated Baltic States.

Sincerely yours,

VALDEMARS LAMBERGS, Esq.,
Chairman of the Baltic Freedom Meeting in Boston.

RESOLUTION ADOPTED BY AMERICAN ESTONIANS, LATVIANS, AND LITHUANIANS ASSEMBLED AT BALTIC FREEDOM MEETING, LITTLE OPERA HOUSE, BOSTON, MASS., JUNE 19, 1960

Whereas, 20 years ago, June 15–17, 1940, the Soviet Union violently invaded and occupied the Baltic States of Estonia, Latvia, and Lithuania, and thereafter illegally incorporated them into the U.S.S.R.; and

Whereas, by this unprovoked aggression the Government of the Soviet Union committed an international crime; and

Whereas, 19 years ago, June 14, 1941, the Government of the Soviet Union started mass deportations of the Baltic people of all walks to slave labor camps in Siberia and other remote parts of the U.S.S.R.; and

Whereas, by this inhuman deed the Government of the Soviet Union committed a crime of genocide against the Estonian, Latvian, and Lithuanian nations; and

Whereas, by signing the Charter of the United Nations and later by adhering to the Universal Declaration of Human Rights, and the Convention on Prevention and Punishment of the Crime of Genocide, the Government of the Soviet Union has assumed explicit obligations in regards individual's right to life, freedom, personal security, and human dignity; and

Whereas, in violation of all these explicit obligations—expropriation, exploitation, slave labor, suppression of human rights and fundamental freedoms, Russification, terror, murder, overt and covert deportations are being continued in the Baltic States by ruthless Soviet occupation forces; and

Whereas, we, free Estonians, Latvians, and Lithuanians are conscious of our responsibility toward our subjugated nations behind the Iron Curtain, we feel dutybound to speak out for those in captivity in protest

against genocide and inhumanity in the Baltic States under Communist tyranny; and

Whereas we are deeply concerned about the weakness of the U.S. foreign policy in the face of ever marching Soviet aggression that allows Soviet Union's premier Nikita Khrushchev even to offend the President of the United States without any fear of retaliation: Now, therefore, be it

Resolved by American Estonians, Latvians, and Lithuanians assembled here, that—

(1) We accuse the Government of the Soviet Union of committing and continuing an international crime against the Baltic States of Estonia, Latvia, and Lithuania;

(2) We demand that the Government of the Soviet Union withdraw its military and political occupational forces from the Baltic States;

(3) We appeal to the Government of the United States to strengthen its foreign policy as to the Soviet Union and world communism as well;

(4) We request the Government of the United States to undertake all necessary and appropriate ways and means to speed up the long delayed liberation of the Baltic States as well as the other captive nations.

God save Estonia, Latvia, and Lithuania.

VALDEMARS LAMBERGS, Esq.,
Chairman of the Baltic Freedom Meeting in Boston.

Nothing Is Small, Begun With Prayer

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. BENNETT of Florida. Mr. Speaker, 396 years ago there were no European settlements in what is now the United States. Then on June 30, 1564, the permanent settlement of our country began when Rene Laudonniere and his French followers, seeking religious freedom in the new world, came to near where Jacksonville, Fla., stands today, and began the settlement of our land, which has never been interrupted since.

Significantly, they began their efforts with prayer. As Laudonniere recorded it in his acount of the events:

I commanded a trumpet to be sounded, that being assembled, we might give thanks to God for our favorable and happy arrival. Then we sang a psalm of thanksgiving to God, beseeching Him that it would please Him of His grace to continue His accustomed goodness toward us his poor servants, and aid us in our enterprise that all might turn to His glory.

Afterward having measured out a piece of ground in the form of a triangle, we all exerted ourselves, some to bring earth, some to cut fagots, and others to raise and make the rampart, for there was not a man that had not either a shovel, cutting hook, or hatchet, as well to clear the ground by cutting down the trees, as for building of the fort, which we did hasten in such cheerfulness that within a few days the effect of our diligence was apparent.

It is doubtful that in their days these people had any firm feeling of significance in history in what they did. They were few in number; and severe suffering and sacrifice were ahead for them. It was from the beginning a nip-and-tuck matter of whether or not they would abandon their adventure. They did persist and their deeds inspired England to settle to the north in Virginia and stimulated the Spanish to settle at St. Augustine in 1565. The Spanish coming eliminated the French flag from Florida, at least for that century. The French beginners of things at Fort Caroline in 1564 probably thought of themselves as failures; but their courageous acts in an unknown wilderness almost 400 years ago came at an opportune time in history, when civilized man sought a new freedom in a new land and their fragile beginning started our great America. We should all be thankful that they began their efforts in prayer. Surely nothing is small begun with prayer.

Tribute to Gen. Julius Klein

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. MULTER. Mr. Speaker, it was my pleasure to serve as toastmaster at the testimonial dinner of the American Jewish Literary Foundation on Sunday evening, March 27, 1960, at the Biltmore Hotel, New York City.

Gen. Julius Klein was one of several honored guests at that dinner. Following are the remarks of my dear and longtime friend. Abraham Feinberg, who made the presentation to General Klein, and the remarks of General Klein in accepting the citation:

REMARKS OF ABRAHAM FEINBERG

Congressman MULTER, distinguished guests, and ladies and gentlemen, I am very aware of the restrictions and conscription of time on all of us who are proponents of the various recipients, and, therefore, I will be not only brief, but brief within the limitations set by the chairman.

I think one of the tests of the friendship which a man lays claim to is the expression which people give to him upon an occasion such as this. I think it is not without significance that the friendship which I have for Maj. Gen. Julius Klein has induced me, as a Roosevelt-Truman Democrat, to appear here for a Taft-Eisenhower-Nixon Republican. Moreover, I think it is a sign of his claim to friendship that, as a general of the Army, there is a congratulatory letter handwritten by the fleet admiral of the Navy, Chester W. Nimitz, under whom General Klein served, and sitting on the same platform at a time like this is a general of the Marine Corps, who would have found it, except for his admiration for General Klein, a difficult thing to be with a general of the Army on the same platform. My knowledge of history of the rivalry between the services is balanced.

There are many telegrams here and I know that I would use up more than my few minutes in reading them, but I think it is interesting to see the variety of the names of the people who have sent messages in honor of General Klein. This one is from JACOB JAVITS; the next one is from RICHARD NIXON; the next one from STYLES BRIDGES; another one here from the Ambassador of Israel to the United States, Avraham Harman; from the Governor of Illinois, William G. Stratton; from the Minister of Israel to the United States, Jaacov Herzog, whose father was the Chief Rabbi of Israel; and here is one from a Democrat by the name of ESTES KEFAUVER; and another Democrat by the name of Congressman JOHN W. MCCORMACK; one from the Governor of this great State, the boss of Carolyn Simon who is sitting here as secretary of state, Nelson A. Rockefeller.

I could talk, I think, on each of the phases of the general's career, phases as journalist, author, politician, statesman, hero of his country, decorated not only by this country, but by the Government of France and the Philippines, and his career as a Jew. I think I could talk upon each one for not 2 minutes or 20 minutes, but for 2 hours. I think, in deference to the length of the program and to your own patience, that I should say only that I can think of no one for whom I would rather be present in the function which has been assigned to me tonight than Maj. Gen. Julius Klein, and I now have the honor to present the award to General Klein, which reads as follows:

"The American Jewish Literary Foundation recognizing the preeminence of Gen. Julius Klein herewith bestows this citation upon him in behalf of its division of literary art for a record of distinguished service to the welfare of our country, which the President of the United States declared merits the respect and honor of all Americans, for his championship of human rights and leadership in the struggle against bigotry, for his stature as former Commander of the Jewish War Veterans in which he labored to secure legislation for veterans welfare, for his contributions to the community as former combat soldier, newspaperman, civic leader, and student of international relations, for his efforts in behalf of the State of Israel.

REMARKS OF GEN. JULIUS KLEIN

My good friend Abe Feinberg, Congressman Multer, Rabonim, distinguished guests, I am deeply touched with this award. I don't believe I deserve it, being in the company of such distinguished scientists like Dr. Bela Schick and Dr. Savin and my old colleague and friend Harry Hershfield makes me indeed very, very proud. I am particularly pleased that Congressman MULTER presides tonight. He has severely criticized me in the past and I presume he will do so in the future. From his point of view, I am sure he always felt that he was right. I am delighted to see that my good friend Abe Feinberg, who is so very busy on behalf of my old colleague in the Pentagon, STU SYMINGTON, is gracious enough to make this presentation.

Being a descendant of an old rabbinical family by the name of Schick, maybe Dr. Bela Schick would like to do a little research into his own family. He will find that our ancestors came from Spain. His and my great grandfather was Mcram Schick, the man who wrote the Shale Shuves and so many commentaries to the Talmud.

I think being here tonight and being the recipient of this award makes me feel very, very proud. I hope I can live up to it and I hope your organization is going to call on me for further service. I think this is a typically American gathering tonight, a meeting presided over by a very distinguished legislator of great moral and political and personal courage. I am delighted to be here, and personally pleased that my old comrade in arms, the very distinguished heroic soldier, one of those great sons of New York, General Krulevitsch is here with me. It was my privilege, like his privilege, to be a senior officer in the Pacific, both serving under Admiral Nimitz—he as a marine officer, and I as an Army officer—and I know General Krulevitsch feels the same way as I do; and as we retire from the service, that we hope

we have given our country the best that is in us, and I would like to salute, not only a great citizen of your State, but also a great soldier and a fine Jew.

A week ago today I spent all night from Saturday to Sunday assisting in the arrangement of a most historical meeting, the meeting between Chancellor Adenauer and Ben-Gurion in New York. We got through about 4 or 5 o'clock in the morning, and those who were ready to go to services like Minister Jaacov Herzog, put on the tfillen and tallis and did so. I went home to my room to sleep; but history has changed in 1 week. Adenauer and Ben-Gurion have met.

And so, here I am tonight, a Chicagoan, receiving an award that I hope I can live up to. Harry Hershfield, my old colleague, has spoken in the name of all of those of us who tried our best to interpret the American way of life. I want you to know that I am indeed very, very grateful that you asked me to come here from Chicago, and I shall cherish this award for the rest of my life. Thank you ever so much.

The Association of the Bar of the City of New York

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. LINDSAY. Mr. Speaker, the Committee on Federal Legislation of the Association of the Bar of the City of New York has prepared an excellent report on the Senate approved Senate Joint Resolution 39. This report on the resolution proposing a constitutional amendment to assure prompt filling of vacancies in the House when such vacancies exceed 50 percent of the membership is timely and vital. I call it to the attention of my colleagues and under unanimous consent I include it in the RECORD:

THE ASSOCIATION OF THE BAR
OF THE CITY OF NEW YORK,
June 17, 1960.

Hon. EMANUEL CELLER,
Chairman, Judicary Committee, House of Representatives, Washington, D.C.

DEAR MR. CELLER: The Senate has recently approved Senate Joint Resolution 39 which has been referred to the House Judiciary Committee. The resolution embodies three proposed constitutional amendments, one of which would assure the prompt filling of vacancies in the House of Representatives in the event that vacancies in the House should exceed 50 percent of its authorized membership. The Committee on Federal Legislation of the Association of the Bar of the City of New York has authorized the transmittal to you of this letter setting forth its views on that aspect of Senate Joint Resolution 39.

The proposed article of amendment provides for the appointment of Representatives by the executive authority of each State to fill vacancies in the House of Representatives whenever the total number of vacancies in the House exceeds half of the membership. If that state of affairs should arise, the executive authority during the succeeding 60 days would be empowered to make temporary appointments to fill any vacancies, including those happening during such period. Such appointees would serve only until the people fill the vacancy pursuant to article I, section 2, clause 4 of the Constitution. That clause presently reads: "When vacancies happen in the representation from any State, the executive authority thereof shall issue writs of election to fill such vacancies."

The committee on Federal legislation supports this amendment and the joint resolution which proposes it. Several members of the committee believe also that the proposed amendment should permit temporary executive appointment to any vacancy in the House pending elections to fill any vacancy. The 17th amendment affords precedent for such provision. The amendment proposed by the joint resolution would fill a gap in our constitutional scheme.

It would not affect the existing method of filling vacancies in the House by popular election. It would merely permit, under stated conditions, the prompt, and temporary filling of vacancies pending such elections. In the event of a national catastrophe, as a result, for instance, of a hydrogen bomb attack, a substantial period of time would undoubtedly elapse before elections would or could be held. The report of the Judiciary Committee of the Senate favoring the amendment indicates that a minimum period of 60 days would probably expire before such elections. (S. Rept. No. 561, 86th Cong., 1st sess. (1959).)

The problem arises only out of the existing constitutional provision for filling vacancies in the House solely by election. Other vacancies in the legislative, executive, and judicial branches of our Government may be filled promptly, either for the balance of the term of the vacancy or temporarily pending elections to fill the vacancy. In the case of the Senate, there is provision in the 17th amendment for filling vacancies by temporary appointment pending elections. In the case of the Presidency, article II, section 1 of the Constitution provides for succession of the Vice President upon the removal, death, resignation, or inability of the President, and, pursuant to the power granted by the same article, Congress has provided by statute for succession if there should be neither a President nor Vice President to discharge the powers and duties of the office of the Presidency (62 Stat. 672 (1948), 3 U.S.C. 19). In the case of the judiciary, vacancies are filled by nomination and appointment by the President by and with the advice and consent of the Senate (art. II, sec. 1). Thus, the only gap in our constitutional scheme for dealing with the possible consequences of a hydrogen bomb attack is in the provision for filling vacancies in the House.

From time to time since 1949, Congress has considered the subject matter of this proposed amendment. In that year, Senate Joint Resolution 145, a similar amendment, was proposed in the Senate. In the 82d Congress, public hearings were held on Senate Joint Resolution 59 embodying a similar proposal. In the 83d Congress, public hearings were held on Senate Joint Resolution 39, similar to present Senate Joint Resolution 39 now before the House Judiciary Committee, and the former also passed the Senate. In the 84th Congress, public hearings were held on a similar proposal embodied in Senate Joint Resolution 8, passed by the Senate in 1955. Another similar proposal, Senate Joint Resolution 157, was introduced in the 85th Congress but no action was taken upon it.

Our committee normally takes the position that there should be no idle tinkering with our Constitution and that, if a problem could be disposed of otherwise, there would be no need for an amendment. And it has been suggested that this problem can be dealt with by a change in the rules of the House of Representatives. The suggestion is based upon the assumption that the House interprets the constitutional requirement of a quorum as depriving it of the power to act if there are 50 percent or more vacancies in its membership. We do not understand this to be the case. We understand that, under the present interpretation of this rule by the House, the constitutional requirement of a quorum is construed as meaning a majority of the Members chosen, sworn and living, whose membership has not been terminated by resignation or action of the House. (Rules and Manual, U.S. House of Representatives, sec. 53. H. Doc. No. 458, 85th Cong., 2d sess. (1959)).[1] Presumptively this interpretation would include a vacancy created by impeachment of a Representative by the Senate. Accordingly, no change in the existing House rule appears to be necessary to enable the House to function as a result of a serious depletion in its ranks, unless, of course, more than a majority of the remaining Members were so injured that they would be unable to attend. The proposed amendment would remedy the latter situation in all probability, if all vacancies were filled promptly by appointment. But the fact that the House could continue to function with its ranks seriously depleted does not solve the basic problem which the amendment is intended to solve. It is intended to provide for broad appointive representation in the House from the entire country, pending the filling of vacancies by elections.

In the final analysis, the proposed amendment would merely assure a larger and more geographically representative composition of the House if its membership were sufficiently depleted in a time of serious emergency. The theory is that it would be undesirable for the House to act on necessarily important legislation which would be considered during the interim period pending elections, without representation of the country as a whole. We accept that theory.

We believe that the real need for prompt appointments, pending elections, to fill the depleted ranks of the House is based not alone on the desire for a more geographically representative body but also upon the need for a larger number of Representatives to carry on during a time when, presumptively, the pressure of work upon each Representative will be extremely heavy.

The amendment would also serve to assure the choice of a President by the House, in the event that at least one-half of the seats in the House should be vacant and, at the same time, that no presidential candidate should have received a majority vote of the electors. The quorum for such purposes, under article II, section 1 of the Constitution, consists of representation from two-thirds of the States and a majority vote of all States is required to choose the President.

It is possible, of course, that atomic attack might deplete the ranks of membership in the House by less than 50 percent. This suggests an inquiry as to whether such a situation should also call for Executive appointment to fill such vacancies. There is, of course, no magic in numbers or lack of

[1] Senate rule III 2 provides that a quorum shall consist of a majority of the Senators duly chosen and sworn. The power granted by art. I, sec. 5 of the Constitution to each House to determine the rules of its proceedings would not seem to empower either House to vary the meaning of the constitutional requirements of a quorum. The validity of neither House nor Senate rule has been passed upon by a court. However, we believe that the House rule reflects a valid interpretation of the constitutional requirements for a quorum. See *United States* v. *Ballin*, 144 U.S. 1, 6 (1892) and *State* v. *Orr*, 61 Oh. St. 384, 56 N.E. 14; *State* v. *Farrar*, 89 W. Va. 232, 109 S.E. 240; *People* v. *Wright*, 30 Colo., 439, 71 Pac. 365; *Barry* v. *New Haven*, 162 Ky. 60, 171 S.W. 1012; *North Platte* v. *North Platte Waterworks Co.*, 56 Nebr. 403, 76 N.W. 906; *Mueller* v. *Egg Harbor City*, 55 N.J.L. 245, 26 A. 89.

numbers, but we believe that sufficiently broad representation would still exist in such a situation that there could be no serious objection to the continued functioning of the House under its existing interpretation of the constitutional requirement for a quorum pending elections to fill the vacancies.

Respectfully submitted.

Richard W. Hogue, Jr., Chairman; M. Bernard Aidinoff, Stuart K. Barnes, Alfred Berman, William G. F. Botzow, Victor Brudney, Edward Q. Carr, Marvin E. Frankel, Edwin L. Gasperini, Cecelia H. Goetz, Daniel H. Greenberg, Claude E. Hamilton, Jr., Peter L. Keane, Robert A. Kirtland, Herbert Prashker, William J. Rennert, William I. Riegelman, Leonard B. Sand, William J. Government Needs Understanding

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Reporter Dispatch, of White Plains, N.Y., June 4, 1960:

GOVERNMENT NEEDS UNDERSTANDING

Management in politics? There was a time when the leaders of the Democratic Party would have condemned such a practice as something bordering on subversion. But times have changed—and the new outlook has been described quite aptly by William F. Luddy, the Democratic county chairman.

In an address before a graduating class of the Action Course on Practical Politics, Luddy rapped what he called a drifting away from political life of a large segment of Americans. And, principally, he pointed out the drift of a so-called management class.

"For a great many years," he said, "there has been building up a management class which has taken itself out of politics. They are greatly missed, and I hope that they can be brought back. They must realize that if they want good government they have to take part in practical politics."

At that point, Mr. Luddy said, businessmen can't participate civicly merely by joining luncheon clubs. He suggested that they become active in politics—"politicians must work out problems in the best interest of all the people."

It is a stand that should be endorsed by management personnel of industry and commerce. We have watched the Nation's artists, writers, actors and actresses, the unions—almost every segment of American life—become actively engaged in politics. Yet at the same time, business and industry, vital to the economy and well-being of the Nation, have gone unrepresented.

Thus the initiative, intelligence, and imagination of industrial and commercial leadership is lost to the country. It constitutes an abstention from citizenship responsibility in a field that can advance the cause of our democratic society, the field of practical politics.

Hmm. Could it be that a lot of the bosses of Westchester industry are not enrolled for Tuesday's primary?

Project Hope Accepts South Bend Nurse for Voyage to Indonesia and Vietnam

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1960

Mr. BRADEMAS. Mr. Speaker, Project Hope, a Navy hospital ship soon to head for Asian ports on a mission of medical care and the teaching of health, has impressed many Americans as a symbol of a positive and imaginative approach to building world peace.

I am pleased indeed that on the initial voyage of the SS *Hope*, one of the nurses aboard will be Miss Ann Roden, of South Bend, Ind.

I should like to include in the RECORD a column by Edward P. Morgan from the June 4, 1960, issue of the AFL–CIO news describing Project Hope and an article from the South Bend Tribune of June 12, 1960, concerning Miss Roden's participation in this fine project:

[From the AFL–CIO News, June 4, 1960]

MORGAN SAYS: PROJECT HOPE TAKES HEARTS, TOO, OUT THE MOTHBALL FLEET

On a day of homage to the war dead it seems not untimely to pay respects to those occasional humanitarian ideas to keep people living—ideas which, if brought to full flower, could conceivably obviate the need of New Memorial Days in the future.

About Christmastime a year and a half ago in Washington, a doctor, a lawyer, and a businessman formally incorporated an idea. They called it the People-to-People Health Foundation, Inc., or, for short, Project Hope—health opportunity for people everywhere. The idea was simple: Take a Navy hospital ship out of mothballs, load it with medical supplies, a trained civilian staff of doctors, nurses and technicians and sail it off to Asian ports as a floating storehouse and schoolroom for health with a mission of mercy as an added assignment in case of disaster, like the recent quakes in Chile, the tidal waves in the far Pacific.

Attorney Eugent Zuckert, a former Atomic Energy Commissioner; industrialist Joseph T. Geuting, Jr., and Dr. William B. Walsh, medical officer on a destroyer during the war, were all three driven by this philosophy: Poor health and illiteracy are the two heavy horsemen riding down the hopes of the underdeveloped countries. The unwell cannot learn properly. Poor health leads to poverty, poverty to hunger and hunger to despair. This chain reaction, unchecked, makes the illusory paternalism of communism attractive. As an antidote, Walsh took the idea to President Eisenhower who was struck by its potential in real people-to-people diplomacy. He promised to put a hospital ship in operating condition if Project Hope could raise enough money to run it as a citizens' venture, not a Government project.

Redtape being what it is, even in good will, the U.S.S. *Consolation*—rechristened *Hope*—is still being readied in the Bremerton, Wash., Navy Yard, but by mid-September it will be off to Indonesia with a staff of 60 doctors, nurses and assistants aboard, all volunteers. Already Walsh is oozing optimism: School children's dimes, pledges from industry and labor have subscribed a third of the $3.5 million budget.

So impressed was AFL–CIO President George Meany with the idea that he sent a special letter to all unions urging contributions equivalent to 10 cents a member—this alone could net more than a million dollars. A Detroit milk container company will spend $250,000 to film a documentary of the project. The petroleum industry has pledged $300,000 worth of fuel, enough to run the hospital ship for a year and the American President Lines, in cooperation with maritime unions, will operate the vessel.

Indonesia was the first of half a dozen Asian countries to invite Hope in. And no wonder. The country has 1,500 trained doctors for a population of more than 85 million.

Admittedly this is a tiny drop in the great bucket of need. There are bigger plans. Minnesota's Senator HUBERT H. HUMPHREY has been working for some 2 years with other Members of Congress of both parties on a grandiose project to demothball a number of excess naval ships and embark them as a permanent Great White Fleet of peaceful missions for public health training, other technical assistance programs and to supply food and first aid in catastrophes. A resolution calling on the President to establish such a disarmed and disarming armada is grounded somewhere in committee and with the last fortnight's headlines of disaster as added impetus, HUMPHREY is trying to refloat it.

Walsh is sympathetic toward such moves but with pardonable pride in his own project he hopes to get Hope afloat first. He has an old-fashioned idea that people will respond if they have a sense of participation—something that can easily get crushed in the wheels of bureaucracy.

The job, though, is plainly so vast that to have more than a feature-story meaning, however inspiring, it will need all the combined support of Government and public and all the imagination that the bureaucrats and the private citizens can give it.

At any rate the idea strikes me as more fitting to the occasion of Memorial Day than the prospect of nuclear carnage or the carnage of combat on the highways with which we currently celebrate it.

[From the South Bend Tribune, June 12, 1960]

SOUTH BEND NURSE ACCEPTED ABOARD U.S. MEDICAL SHIP

When the SS *Hope* leaves San Francisco to give medical aid to Indonesia and Vietnam, a 25-year-old nurse from South Bend will be aboard.

Ann Roden is one of the 22 nurses, 15 doctors, and 2 dentists selected out of thousands of applicants to make this first voyage for Project Hope—health opportunities for people everywhere—which promotes world peace by providing medical aid and training for needy countries.

Miss Roden, who was head nurse in pediatrics at Memorial Hospital from 1956–59, became interested in the privately sponsored Hope project through a magazine article. Now working in a children's hospital in San Francisco, she flew to Chicago for an interview with the project's chief nurse. She was accepted, and came to South Bend to tell her parents before returning to her job in San Francisco.

A 1956 graduate of the School of Nursing at the University of Michigan, Miss Roden has "lived and breathed" nursing since she was 7. She says she has always wanted to do foreign service in nursing, and has closely followed the deeds of Dr. Thomas Dooley, University of Notre Dame graduate and medical missionary in Laos.

The first 6 months of the year tour will be spent in Indonesia, and the last 6 months in

Vietnam, she says. These countries were picked out of a great number that asked to have the SS *Hope* and its crew visit their country. Project Hope is the prime function of the People-to-People Health Foundation, a corporate entity of the committee on medicine and the health professions.

Initiated at the suggestion of President Eisenhower, the people-to-people program strives to promote world peace through increased understanding between the American people and the people of other nations. Its basis is the recognition that health is essential to the attainment of national dignity.

Project Hope is essentially a teaching operation, rather than an attempt at widespread treatment. The SS *Hope* was formerly the naval hospital ship *Consolation*. The 1,500-ton vessel, donated to the project by the U.S. Government, is equipped with 800 hospital beds and a surgical section. The ship will serve as a training and treatment clinic; a base for wide-ranging medical, nursing, and sanitation teams; a medical school, and the logistic center for medical aid and health and exchange program.

SHIP CARRIES HELICOPTER

Miss Roden says that the ship will carry a helicopter, which will be used to transport the medical team inland. The team will live in the ship except when they take trips further inland. To better understand the people, during the crossing the team will be oriented toward the religious and historical backgrounds of these countries.

Miss Roden left South Bend Friday to return to her job in San Francisco. The SS *Hope* plans to set sail from San Francisco about September 15. Her parents, Mr. and Mrs. Henry Roden, 51585 Myrtle Avenue, will be there to see her off.

Dr. Arthur M. Gates, Popular Keystone State Dentist and Civic Leader, Is Observing His 53d Year in the Practice of His Profession in Coalport, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. VAN ZANDT. Mr. Speaker, there are few men in public or professional life who, at the age of 78 years, can boast of more varied interests than the popular and genial Dr. Arthur M. Gates, who for the past 53 years has practiced his profession as a dentist in Coalport, Clearfield County, Pa., in my congressional district.

Dr. Gates throughout his entire life has maintained a deep interest in public education, having taught school for 2 years after his graduation from Millersville Normal School. For a period of 46 years Dr. Gates served as a member and treasurer of the Coalport School District and for the past 11 years he has been treasurer of the Beccaria-Coalport-Irvona Joint School's board of education. In addition, during the period 1903–12 Dr. Gates served a 4-year term as borough councilman.

It has been my great pleasure to value Dr. Gates as a personal friend for many years, and I join with the community of Coalport and his many friends throughout the Keystone State in congratulating him on the twin anniversary of his birth and completion of the 53d year of dental practice in Coalport.

The following tribute to Dr. Gates appeared in the June 23, 1960 issue of the Clearfield (Pa.) Progress. It reveals his fine achievements and the pardonable pride Dr. and Mrs. Gates have in the success of their four children together with the upspeakable joy provided by the love and devotion of their grandchildren:

COALPORT DENTIST, 78 TODAY, STILL IS BUSY AT HIS WORK

COALPORT.—Marking his 78th birthday today, Dr. Arthur M. Gates of Coalport can look back at a combined career of dentistry and public service that few men can boast.

In his 53d year as a practicing dentist here, Dr. Gates has served for 46 of the last 48 years as a member and treasurer of the Coalport School District Board of Education. He also served a 4-year term as a borough councilman in 1908–12 and for the past 11 years has been treasurer of the Beccaria-Coalport-Irvona Joint Schools Board of Education.

Dr. Gates' interest in education, however, can be dated even before he became a school board member in 1912, for after his graduation from Millersville Normal School he taught school for 2 years. One year was at Beaver Valley, Cambria County, where he was an instructor in the upper four grades and the second was at Blain City, where he taught seventh and eighth grades and served as school principal.

In 1904, Dr. Gates began the study of dentistry at the University of Pennsylvania Dental College and on graduation in 1907 opened his office here. While studying dentistry, he longed to become a surgeon, but because of financial circumstances had to forego that career.

Because of his interest in education, this year has special significance for Dr. Gates. Three of his granddaughters were graduated from high school this year and he was able to attend the graduation exercises of all three.

The granddaughters are Nancy Lynn Fisher, who was graduated from B–C–I High School May 31; Mary Elizabeth Conners, of Wynnewood, near Philadelphia, who received her diploma June 4; and Karen Marie Gates, of Shamokin, who was graduated June 7. All three girls received special awards at their graduation and Mary Elizabeth was valedictorian of her class at Sacred Heart Convent.

All three girls are registered for college in the fall—Nancy Lynn Fisher, at Carnegie Institute of Technology where she will major in art; Mary Elizabeth Conners at Trinity College for Girls at Washington, D.C., where she will major in languages; and Karen Marie Gates at Misericordia College, Dallas, Pa.

Dr. Gates was born June 23, 1882, the son of the late P. C. and Sematha Jane Hoy Gates, longtime residents of Coalport. His father was one of the incorporators of Coalport Borough and secretary of the board of education and borough council for many years.

Mrs. Gates is the former Frances DeSales Buck, daughter of the late Frank J. and Lucinda Rose Weakland Buck. Mr. Buck operated a grocery and general merchandise store in Coalport for many years.

Dr. and Mrs. Gates are the parents of four children: Frances Gates Fisher, a teacher in the Coalport elementary school; Mary Gates Conners, a teacher in the Lower Merion Township Schools near Philadelphia; Dr. Lionel Perry Gates, chief surgeon of the Shamokin State Hospital; and Dr. Robert Paul Gates, a heart specialist on the staff of the East Pittsburgh plant of Westinghouse Electrical Manufacturing Co.

Dr. Gates still observes regular daily office hours from 11 a.m. to 3 p.m., although he and Mrs. Gates in recent years have taken a month to 6 weeks' vacation, generally in Florida.

Federal Bureau of Investigation—III

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. DEVINE. Mr. Speaker, the following article is the third of a series appearing in the Columbus (Ohio) Dispatch relative to the wonderful record of the world's greatest law enforcement agency:

ARTICLE 3

WASHINGTON.—The FBI freely makes available to local agencies information involving violations of criminal laws within their jurisdiction.

Hence, the FBI expects, in accordance with Presidential directives, that local agencies will immediately refer to the FBI any information relating to subservise activities or possible overthrow of the U.S. Government. And they do.

Attempts at espionage or sabotage have been brought to the FBI's attention by local agencies since a Presidential directive in 1939.

Unified law enforcement in the United States during World War II, coordinated by the FBI, made it possible to avoid a single successful act of foreign-directed sabotage. Enemy espionage was nullified at the outset.

During World War II, countries at war with the United States were driven to desperate lengths in an effort to reestablish espionage and sabotage networks * * * to no avail.

Soviet espionage operations in the United States continue to suffer tremendous setbacks at the hands of the FBI.

During 1951, for example, Julius and Ethel Rosenberg were convicted as atomic spies for the Soviet Union. In 1953, Otto Verber and Kurt Ponger, naturalized American citizens who performed Russian espionage in Austria, were sentenced to prison.

Another Soviet espionage apparatus was smashed early in 1957 with the arrest of Jack Soble, Myra Soble and Jacob Albam by FBI agents.

In the summer of 1957, Col. Rudolph Ivanovich Abal was arrested and the equipment he used to transmit information to Russia was seized.

Abel was a carefully concealed espionage agent living an innocuous life in the United States, but he was a dynamic and active arm of Soviet espionage here.

He made use of virtually all of the techniques of professional espionage agents, including secret drops, special codes, radio transmissions and the use of hollowed-out coins for the transmitting of espionage data.

These are only some of the highlights of FBI accomplishments in combating Soviet espionage operations.

In addition, a number of persons have been indicted as a result of Soviet intelligence activities directed against the United States.

Some of these persons have been convicted while other fled the country to avoid prosecution. Information gathered and disseminated by the FBI has resulted in a number of Soviet and satellite diplomats being declared persona non grata.

World War II was the first public occasion in which the FBI had a clear opportunity to demonstrate its abilities in preserving our internal security.

Within a matter of hours after the Japanese attack on Pearl Harbor on December 7, 1941, FBI agents swung into action based upon a Presidential directive and armed with Presidential warrants. Carefully prepared plans of the FBI which had foreseen such an event were quickly executed.

Director Hoover had instructed that the most dangerous alien enemies be ferreted out and kept under constant observation. This was long before World War II. Plans were prepared to cope with an emergency. The FBI was ready when war started. The most dangerous enemy aliens were promptly taken into custody.

In all, 16,062 alien enemies were arrested during World War II. Each was promptly presented before a Presidential alien enemy hearing board comprised of citizens of his community.

In each instance these hearing boards arranged for internment for the duration of the war, parole, or outright release, depending upon the facts gathered by the FBI.

This program of planning in advance, with careful investigation, had much to do with the prevention of any effective espionage or sabotage here by foreign powers during World War II.

Today, during a period of cold war when it is obvious there are persons at large devoted to the primary interests of foreign powers and not to the welfare of the United States, the FBI is still responsible for the internal security of the United States.

Agencies of the Federal Government and law-enforcement agencies representing cities, counties, and States are cooperating fully with the FBI. The FBI is responsible for correlating all information essential to protecting the internal security of the United States and disseminating it to the interested Federal agencies.

Security operations are primarily preventive in nature. Intelligence and counterintelligence information gathered and disseminated by the FBI frequently results in protective action before a violation of the law has occurred.

Facts furnished may justify diplomatic protests, visa cancellations, denials of access to classified data, and other types of nonprosecutive precautionary action. Naturally such data is of particular interest to the State Department and the White House.

Accordingly, the FBI's effectiveness in combating espionage, sabotage, subversion, and related threats to this country cannot be measured in terms of arrests and convictions.

Based upon facts, witnesses, and evidence located by the FBI, 109 Communist Party leaders have been convicted under the Smith Act of 1940. The first 11 were convicted in New York in October 1949 at the trial of the party's top national leaders. Based upon Supreme Court rulings in 1956 and 1957, however, only 39 of these convictions remain; the others have been reversed by the courts.

During the 1959 fiscal year, six Communists were reconvicted in Denver, Colo., under the conspiracy provisions of the Smith Act. These six subversives originally had been convicted in 1955; however, 2 years later their cases were retried by the circuit court of appeals. On the other hand, during the fiscal year retrials were ordered for six party functionaries in New York who had been convicted in 1956. As the fiscal year ended, indictments remained outstanding against 13 party officials.

Other convictions were returned against persons who failed to admit membership in subversive organizations when executing official Government security questionnaires. In addition, security-type investigations also led to a number of perjury convictions.

With regard to the threat of internal communism today, Mr. Hoover has this to say:

"The Communist Party, U.S.A., remains an integral part of the international Marxist conspiracy against God and freedom. Never has the party's leadership been more strongly pro-Soviet than it is today. The Communists' immediate objectives: 'Establishment of youth group and infiltration of American labor organizations and basic industries * * * all with a view to destroying our economic system and our free government'."

"Public apathy is our greatest enemy." (J. Edgar Hoover.)

One constantly bumps into individuals who claim they were investigated, screened, and cleared by the FBI. Nothing can be further from the truth.

In all of its history, the FBI has never cleared any individual. As a matter of fact, it is quite foreign to FBI responsibilities to clear or not clear any individual.

Even in the most heinous kidnaping or bank robbery, the FBI is forbidden to express any opinion. If an individual is guilty of a crime, the FBI presents the facts to the U.S. attorney. He decides whether there is probable cause and sufficient justification for a Federal complaint and an arrest warrant. The U.S. attorney decides what legal action will be taken. No FBI opinion is offered.

If there is an indication of disloyalty or of a security risk, the FBI will conduct appropriate investigation and make its reports available to the interested Government agency. These reports are not accompanied by any recommendations for corrective action.

The FBI holds steadfastly to its basic premise of being a fact-gathering organization. It was in March 1947, that the Federal employees loyalty program was established. The FBI was given responsibility for conducting loyalty-type investigations of employees in the executive branch of the Federal Government. Under this program, not a single person has been cleared by the FBI. Not only that, the FBI never expects to clear anyone.

The responsibility of the FBI in the intelligence field is clear. Quietly and thoroughly, the FBI handles its particular duties with regard to the preservation of the internal security of the United States. Its effectiveness may best be measured by the continuation of our American way of life—unmolested.

Tomorrow the marvels of modern scientific criminal analysis.

The Challenges We Face

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a review of "The Challenges We Face," by Victor Laskey which appears in the Saturday Review for July 2.

Mr. Laskey points out, that in "The Challenges We Face," Vice President NIXON has commented on virtually every subject of vital interest to Americans.

The review follows:

(By Victor Lasky, a writer for NANA and various magazines, who has observed the rise of RICHARD NIXON at firsthand since 1948.)

Assuming he is not caught flagrante delicto between now and July 25, when the Republican convention opens in Chicago, RICHARD M. NIXON appears destined to be the Grand Old Party's nominee for President this year. This, despite the recent challenge hurled at the Vice President by Nelson Rockefeller. The Governor accused NIXON of fence-straddling and called on him to "tell the people where he stands" on assorted public questions.

Now Mr. NIXON has unintentionally obliged. He has produced a sharp, timely, and substantial reply in "The Challenges We Face" (McGraw-Hill, $3.95), a well-edited, solidly documented compilation of his public utterances over the past 4 years on such varied subjects as Red China, civil rights, education, Latin America, labor, economic growth, national defense, Africa, refugees, foreign aid, Khrushchev, taxes, the budget, and the forthcoming campaign.

In short, Mr. NIXON has commented on virtually every subject of vital interest to Americans. Though it does not possess the literary flavor of the political writings of Adlai Stevenson, his book does present clearly and in depth the views of a presidential aspirant who, in a remarkable political rise, has yet to lose an election.

These, therefore, are the views of the man to whom the American people may well entrust the leadership of the free world for years to come. They should be of particular interest to American liberals, many of whom—for reasons this reviewer finds difficult to comprehend—view with dread the possibility of Mr. NIXON's occupying the White House.

What will undoubtedly surprise some people is the reasonable manner in which the Vice President states his case. There is none of the earthy partisanship of, say, a Harry Truman in this book. And one rather suspects that this will not be to the liking of the NIXON-phobes, who would rather deal with the mythical NIXON they have created—a man of no honor, no principles, no convictions.

This reviewer has known the Vice President for 12 years. He has followed Mr. NIXON'S career on an almost day-to-day basis. And he can state flatly that most of the propaganda attacks unloosed against the Vice President bear little, if any, relation to reality.

Mr. NIXON pulls no punches in his book. He says what he thinks. For example, he is opposed to recognition of Red China. And he spells out the reasons. But he does not follow the example of other presidential hopefuls who also claim to oppose recognition yet, at the same time, call for a reappraisal of that policy.

Not that Mr. NIXON is forever committed to nonrecognition. But he believes the initiative should come from Peiping. Only when that regime adequately demonstrates its willingness to live in peace with its neighbors should we begin a reappraisal of a China policy which, incidentally, has the overwhelming support of Members of both parties in the U.S. Congress.

Mr. NIXON is convinced that Red China may well be an election issue this year. But, he adds, "the overwhelming issue at the present time is the security and survival of the United States of America." And he believes that in choosing their President in November the American people "will put as their first qualification whether or not the candidate is able to cope with this issue of survival in all of its aspects." This involves such related issues as foreign policy, national defene, and methods to meet the ceaseless Soviet challenge—on all fronts—to free institutions everywhere.

But, unlike most of his calamity-howling rivals, Mr. NIXON believes that the United States is in pretty good shape. And that the Soviet leaders whom he's met in recent years are well aware of our overwhelming superiority in most areas.

The Vice President is far from complacent, however.

It is not enough for us to be on the right side [he observes]. History is full of instances in which superior civilizations were overwhelmed by others with more will to win, more drive, more energy. Around the world, in every nation, the representatives of communism are true believers like Mr. Khrushchev—working overtime for the victory of communism. * * * The fact that we have no desire to conquer the world does not mean that our alternative to communism is simply to leave the world as it is—ignoring the misery, disease and inequity on which communism thrives. We, too, have a purpose and a mission in the world today—and that is what we must make clear as we meet the Communist challenge.

And, drawing on his years of intensive world travel, Mr. NIXON spells out the need for better administered foreign aid, increased private investments overseas, more liberal trade policies, and an upgrading of our official overseas representatives.

Like Mr. Rockefeller, Mr. NIXON also emphasizes the necessity of continuing advances in all sectors of American life. But, unlike the Governor, he places greater emphasis on the so-called private sector—not the Government sector—in stepping up our national growth rate to compete with the Soviets. He deplores hysterical reactions to occasional manifestations of Soviet progress. "It would be a mistake in reacting to the Soviet challenge to swing to such an extreme that we might lose our present advantages," he says.

For example, in discussing the need for increased scientific education, the Vice President warns: "We do not want to ape the Russians and eventually become simply a pale carbon copy of the scientific materialists who run the Soviet Union."

Mr. NIXON is far from being the extreme conservative some liberal critics believe him to be. In many areas, his views probably will not satisfy some right-wing Republicans. Generally speaking, the Vice President appears to prefer the middle of the road to the ditches at either side.

What kind of a presidential campaign does Mr. NIXON envisage? He believes it "should be a hard-hitting contest on the great issues before the American people. * * * As to whether this * * * will be a mud-slinging campaign, I can only say that it certainly will not be so far as I am concerned."

This book is an indication of the high-level approach that Mr. NIXON intends to take during the campaign. If his Democratic opponent—whoever he may be—follows suit, then the American people will at long last be able to decide on issues, not personalities.

Maximum Development of Our Cities—A Vast Challenge for a Genuine Public-Private Partnership

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. MOORHEAD. Mr. Speaker, filling the proceedings of this 86th Congress have been many subject of vast importance to America's cities. We have debated mass transportation, housing and urban renewal. In some instances this debate resulted in sound legislative accomplishment and in many, all too many other instances, the debate produced only guideposts for work which must be done here in future years.

I am among those Members who favor various sound Federal programs for our rapidly increasing urban population. Therefore, it is only fitting that I should stress the overriding fact that development of our urban centers to their maximum must involve a comprehensive public-private partnership, embracing all levels of Government and all segments of a community's business life.

Mr. J. Stanley Purnell, one of the leaders in Pittsburgh's renaissance, stressed the importance of this partnership most effectively in a recent speech before the Urban Renewal Advisory Commission in Toledo, Ohio.

Under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I include the text of Mr. Purnell's remarks because I believe them of truly national significance:

ADDRESS BY J. STANLEY PURNELL, ASSISTANT TO THE PRESIDENT, T. MELLON & SONS, PITTSBURGH, PA.

The prophets of urban doom would have us city people mired down in a morass of obsolete physical plant, inadequate transportation, horse and buggy government, and deteriorated housing and neighborhoods.

Inadequate for today, America's cities seem to be completely unprepared for the onslaught of population growth of the next two decades. 85 million more Americans will be here by 1980, and most of them will seek to live in and around our major cities.

Simultaneous with these dire reports are reports of another kind. Cities all over the Nation are starting to face up to their problems. Private enterprise, civic leadership, and public authority have teamed up to meet the future head on, and fashion cities which fully measure up to the needs and desires of Americans of the soaring sixties.

We who live in the atomic age, the age of anxiety and the space age, also live in the new and exciting urban age. It offers the challenge of competition, the satisfactions of civic participation, and the fascination of engaging in the greatest of all arts—that of civic design.

American cities are engaged in an increasing competition, not only for employment opportunity and economic advantage, but also for physical excellence. Attention of an unprecedented nature is being paid to the character, esthetics, and design of urban development. The hodgepodge growth of the 19th and early 20th centuries is being superseded by enlightened planning and design promising significant changes in the character of our cities over the next two decades.

This is a friendly, though vigorous competition. We in Pittsburgh are happy to be in it. We are glad to contribute what we have learned to the growing stockpile of experience in the revitalization of American cities. We seek to learn from others, to borrow from their ideas and their experience.

Although we have been hard at work for 15 years in the conscious effort to improve our city of Pittsburgh and our region, in many ways the job has scarcely begun.

In San Francisco, the dramatic Golden Gateway project involves a design competition in which many of the Nation's leading architectural firms are teamed with large private developers. In San Francisco, too, under the leadership of J. D. Zellerbach and other prominent business and civic leaders, a new dynamic civic group was created to keep the urban renewal program moving and private enterprise involved.

My old home town of Baltimore is forging ahead with the wholly locally financed redevelopment of the heart of the city's center under the guidance of the Greater Baltimore Committee.

A complex of new ideas and devices is being used in the redevelopment of the University Circle in Cleveland under the leadership of Case Institute and Western Reserve University. In addition, 5 years ago, business leaders put together the Cleveland Development Foundation in order to get urban renewal started. Its initial accomplishment was the causing of the private construction of more than 5,000 dwelling units for moderate income families.

In Pittsburgh, business leaders have been pioneers in the redevelopment of the city. As a matter of fact, they started at the end of World War II in 1944, when the city was engaged in a fight for survival. The outlook was bleak; industry was at a standstill. The city was just plain dirty. Civic pride was at a low ebb. Pittsburgh was not a very good place in which to live or work. Many were ready to nail down the lid on Pittsburgh's coffin.

But Pittsburgh wasn't buried. The dire prophecies did not come true.

The reason they have not can largely be attributed to a group of young men of vision and courage who had assumed positions of leadership in our large corporations. They were unwilling to sit on the sidelines and watch their city decay.

Under the leadership of Richard K. Mellon and a number of his associates, these younger officials and executives founded the Allegheny Conference on Community Development. What we call the Pittsburgh Renaissance dates from 1944, the year the conference was organized.

From its inception, the conference has included the community's leaders in business, education, industry, labor, science and local government. Its program is formulated and carried out by an executive committee composed of some 25 of the conference's 100 sponsors. The executive committee meets monthly to debate and confer upon every phase of the organization's civic program. This close devotion has been an outstanding characteristic of the conference since it was first organized.

Several points should be mentioned:

1. The conference was determined and serious.

2. The leadership worked together. Business rivalries and personalities were forgotten in the interest of the community development program.

3. The conference leadership worked with political leadership on the State, county, and city level, disregarding the fact that they might be on opposite sides of the political fence.

4. The conference leaders did not delegate conference work, but gave their own time and prestige to the program.

5. The highest caliber professional staff was obtained for the conference and for other civic and public agencies.

6. Business leaders were not afraid to use available tools, and develop and use new methods when the old ones were inadequate.

The work of the Allegheny conference and the civic and public agencies cooperating with it is evident everywhere in Pittsburgh.

A summary of the achievements of the past few years is impressive. Pittsburgh, once known as the smoky city, is now one of the cleanest in the Nation. The disastrous floods of the past are really of the past. One-third of the downtown areas has been redeveloped. New highways, parkways, and bridges have been built. Land has been made available for the vital expansion of the steel industry and for the growth of educational and institutional uses.

For all of this, we are just getting started. For example, now underway is a $400,000,

3-year regional economic study. The money was made available to the Pittsburgh Regional Planning Association in equal parts by the Ford Foundation and the Pittsburgh Regional Industrial Development Corp. (using Commonwealth of Pennsylvania industrial development funds).

Recently, the countywide smoke control ordinance was thoroughly revised and improved. The proposed new ordinance is the most up to date and the toughest anywhere in the world. Major planning studies of the downtown central business district and in the University of Pittsburgh-Carnegie Institute of Technology areas have been commissioned. The studies are jointly financed by private business and by the city government.

The Allegheny conference has just undertaken a thorough reevaluation of the city and county public and private planning resources. The conference has retained Philadelphia's development coordinator to head up the study. This, to me, is a fine example of interurban cooperation.

I have mentioned our willingness to use the available tools and to fashion new ones when the old ones are inadequate. This pragmatic approach is the essence of the American way of doing things and, for that matter, the business way of doing things.

In some cities, businessmen have opposed using the power of eminent domain for redevelopment purposes. In other communities, they have rejected the idea of Federal renewal subsidy. We have had no such reluctance in Pittsburgh.

Where a job is properly one for private enterprise, we urge private enterprise to do it. When public powers are needed, we use them. When public subsidy is required, we usually get it.

Recently, one of the Nation's leading business letters, read by hundreds of thousands of businessmen and industrialists, devoted an entire issue to urban renewal and housing. It expressed the businessman's stake admirably, and pointed out that housing and urban renewal are good business. They will have a profound effect on the national economy for many decades ahead.

The $85 million Gateway Center, which replaced the commercial slum at the apex of Pittsburgh's Golden Triangle, was made possible through the judicious use of eminent domain for land assembly purposes by the Urban Redevelopment Authority of Pittsburgh. Public subsidy, however, was not needed, and was not used. The Equitable Life Assurance Society paid the full cost of the project in acquiring the land. The same was true of the projects undertaken for the expansion of the Jones & Laughlin steel mills, the University of Pittsburgh, and Children's Hospital.

Our lower hill redevelopment project at the base of the Golden Triangle is a different story. Here, land values are lower, and clearance was only possible through Federal subsidy, and Federal subsidy was used.

Where necessary, our Pittsburgh projects have involved the use of city, county, State, and Federal funds. We have been proud to reinvest our own tax money in the future of our city, our county, our State, and our Nation.

This investment is paying off handsomely. In the 10 years since the Redevelopment Authority acquired its first parcel of land, nearly $200 million in private funds have been invested within the boundaries of eight project areas. Almost 90 percent of this new construction is taxable.

For example, with development yet uncompleted, the 23 acres of Gateway Center are producing almost $1 million more per year in taxes to the local taxing bodies than did the 59 acres at the point in 1946. Thirty-six acres became Point State Park, and are not taxed.

I will not take up your time by reviewing all of the many projects which have been completed in the past 10 years, or are underway in Pittsburgh and Allegheny County redevelopment programs. That part of the program completed so far in the city, however, shows the following results:

1. A total of 236 acres of blight and decay have been restored to new usefulness.

2. The economic position of the downtown has been greatly strengthened. Gateway Center and the Lower Hill redevelopment project inspired an additional $75 million in private investment in the adjacent Mellon Square park area alone.

3. Thousands of new job opportunities have been created, and thousands more preserved.

4. By this summer, 16,000 persons will be employed in Gateway's new office buildings, and annual payrolls there will exceed $100 million.

5. Thousands of skilled craftsmen and laborers have been employed on redevelopment job sites, and thousands more offsite to produce construction materials.

On the other side of the ledger, in eight Pittsburgh redevelopment areas, local public agencies have spent $11,700,000 in public funds. This adds up to $1.40 a year per local city resident, or less than the price of a general admission ticket to see our Pirates play at Forbes Field.

Another kind of tool has been used imaginatively in Allegheny County in a vital area of development—the preservation of open recreation space.

Two years ago, the three Mellon Foundations announced they had purchased about 3,600 acres of farm and woodland in various sections of Allegheny County, and at intervals would sell the land at cost to the county to provide six major regional parks.

This was a tremendously significant event, not only to our community, but to the entire Nation. For the first time in an urban center, a recreational land bank to serve the general public was established by private interests. In this way, land which eventually would have been sold at greatly increased prices for other uses, was reserved for future park use.

This action by the foundations most certainly forestalled the speculation which would have occurred if the county government had purchased the land directly from its owners. Now, with the land bank created, the county will be able to buy the sites as public funds are available.

Thus, a unique private-public partnership, exemplified constantly in the Pittsburgh Renaissance, has preserved a precious natural resource for the benefit of all the people.

In the past decade, the emphasis of renewal and revitalization in Pittsburgh has been industrial, commercial, and civic in nature. About 3 years ago, however, the Allegheny Conference addressed itself to the community's housing problem, and, to guide its course of action, a survey of local housing needs was undertaken.

The survey concluded that a nonprofit, representative citizens' organization with a full-time staff be formed to move effectively against the obstacles to housing progress.

Accordingly, ACTION-Housing, Inc., was established in August 1957. Its board of directors, of which I am proud to be chairman, represents an excellent cross section of community life, and demonstrates the willingness of Pittsburgh leaders to work in the interests of community growth and improvement.

ACTION-Housing, Inc., is preparing, in cooperation with other private, civic, and public agencies, a program of housing and urban renewal to eliminate the slums and rundown areas in Allegheny County.

I'd like to tell you about just one of ACTION-Housing's programs in which the community's business interests are playing a key role. I refer to the Pittsburgh Development Fund of ACTION-Housing, Inc., launched last September, and given impetus toward its goal of $2 million by grants totaling $350,000 from the three Mellon foundations.

The Pittsburgh Development Fund will create a revolving loan fund expected to exceed $2 million, through interest-bearing loans from local major corporations, industries, and organizations. I am happy to report that the fund is backed with substantial loans.

The basic purpose of the development fund is to provide intermediate equity capital—seed money—for an extensive program of privately financed, privately built, and privately operated sales and rental housing, as well as stimulate large-scale home modernization for moderate income families. Please note the emphasis on private participation.

The fund will serve to backstop local lending institutions and the homebuilding industry, and will be primarily a source of working capital that could not be obtained otherwise.

ACTION-Housing, Inc., was created and is working in the belief that our residential neighborhoods, both in the central cities and the surrounding surburbs, must keep pace with the development of our industry, commerce, and institutions. As Richard K. Mellon said at ACTION-Housing's recent annual meeting: "An urban center such as Pittsburgh does not achieve true greatness unless its people are well housed—regardless of how many new office towers, expressways, and industrial plants are built."

For more than 3,000 years, cities have cradled and nouriahed religion, science, industry, and the arts. They have been the developers of tradition and the source of invention. In the new urban age, our cities take on even greater significance.

Since 1860, America has changed from an overwhelmingly rural to an overwhelmingly urban Nation. Formerly, almost every American came from the farm or from farm folk. This will not be true for our children and grandchildren. They will be truly urban Americans. The way we shape our cities will shape their lives and their outlook.

This is a tremendous challenge for Toledo, for Pittsburgh, and for all the cities in America.

In developing and revitalizing our cities, we work in a great tradition. Yet, we are pioneers. This is both our responsibility and our privilege. New frontiers await us. The opportunities are unlimited.

Teenager of the Year, Margaret Anne Fauver, Silver Spring, Md.

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. FOLEY. Mr. Speaker, it is with genuine pride I call the attention of the Members of the House to the "Teenager of the Year, "Miss Margaret Anne Fauver of Silver Spring, Md. By coincidence her father, Clarke L. Fauver is a fellow alumnus and Phi Alpha Delta fraternity brother of mine from Georgetown University Law School.

She is one of my constituents, a nonvoting constituent who has written an essay titled, "Being a Part of the Group but Still an Individual."

In an age of conformists, it deserves wide circulation since the author, Margaret Anne Fauver, is a member of that too-often maligned part of our population called teenagers. We hear too much about the tiny minority of juvenile delinquents these days and not nearly enough about the vast majority of our young people who are good, honest, conscientious civic-minded citizens of their schools and of their communities.

The essay written by Miss Fauver, which has just come to my attention, backs up an imposing list of school, civic, and community activities in which this young lady is currently, and as I suppose teenagers say, frantically engaged. It enabled her to win the Peter Pan Teen-Age Foundation Scholarship Award. This award is worth $4,000 to Miss Fauver. She has just completed her freshman year at Ohio Wesleyan University and I daresay the scholarship award will be as welcome to her parents as I am sure it is to her. It is my understanding that Secretary Arthur S. Flemming will present Miss Fauver with the award.

This scholarship is made available, through a series of regional contests, by Mr. Henry M. Plehn, president of Peter Pan Foundations, Inc., who feels strongly that the teenage group are better citizens than most of us realize and then set out to do something about it. Educators in the Washington area and in Philadelphia, Dallas, Minneapolis, Miami, and Los Angeles, where similar contests were held, warmly endorsed the teenage foundation program. Judges for the contest included Ivy Baker Priest, Dr. Norman Vincent Peale, the Honorable David Kerrick, Dr. Hurst Anderson, Sam Levenson, Dorothy Gordon, to name but a few.

Miss Fauver's essay is brief, but to the point. I suggest that you take a minute or two and read it. You will be the better for it and perhaps have a better understanding of our teenage citizens.

BEING A PART OF THE GROUP BUT STILL AN INDIVIDUAL

In this age of emphasis on mass education and assembly line production, it is difficult to remain individualistic. It requires both courage to resist the comforts of conformity and conviction that individuality is too valuable to be sacrificed to group dicta. Similarly, one must realize that contact with the ideas of others, a stimulus to personal development and group achievement, should not be foregone because of the habit of professional nonconformity.

Recognizing that group relationships are valuable, each individual must determine his function within the group. An evaluation of personal moral standards should be the foundation of this decision. From this the individual can discern when, for the benefit of the group, he should act in accordance with the group's majority. His understanding of values, therefore, becomes a frame of reference by which he may evaluate all situations. A knowledge of his own personal beliefs, of his responsibility to mankind, and of possible consequences for his actions can and should serve as a guide for determining his conduct.

The realization, then, of the problems that must be considered by an individual, makes it seem apparent that remaining an individual within a group can be beneficial to both parties. An evaluation of his standards will enable the individual to understand himself and, perhaps even more important, to contribute more to the group. Independence of thought and acceptance of responsibility for personal action will both contribute to the integrity of his character.

MARGARET ANNE FAUVER, WINNING ENTRY, PETER PAN TEENAGE FOUNDATION SCHOLARSHIP AWARD

1. CIVIC AND COMMUNITY ACTIVITIES

American field service foreign exchange program: One of two students selected to represent high school and Silver Spring community in Americans abroad program during summer of 1958; spent 2 months in Finland living with two Helsinki families.

Acted as host for AFS students from other countries in the Washington area during 1958–59 school year.

Spoke on the student exchange program and its potential contribution to international relations at numerous school, church, and service club meetings.

Served on high school screening committee to select those eligible to participate in 1959 Americans abroad program.

Girl Scouting: Member of a local troop for past 10 years.

One of two troop representatives to the senior planning board of the National Capital Council, which plans and coordinates activities of senior high Scouts in the Washington area; vice president of senior planning board, 1956–57; president, 1957–58.

One of three patrol leaders responsible for 24 Girl Scouts from the Washington area attending the first national Girl Scout encampment in 1956.

Represented Maryland and the District of Columbia at the all-States encampment at Cody, Wyo., in 1957. The encampment included 104 girls from 43 States and 3 Territories.

Christ Congregational Church: Church member and member of youth fellowship; vice president of youth fellowship for past year.

One of two principal speakers before the congregation during special Youth Sunday service.

Volunteer Sunday School teacher for children at District of Columbia Junior Village for 1 year.

Teen-Talk—TV program: Panelist on several television programs in the Teen-Talk series over WRC–TV, discussing problems of immediate concern and interest to teenagers and the general public.

Metropolitan Area Youth Council: Represented Washington area Girl Scouts on this council comprised of delegates from various youth organizations of the community (2 years).

Delegate from the council to conference of the Health and Welfare Council of the Metropolitan area (2 years).

Delegate from the council to the first Youth Fitness Conference of the National Capital area.

2. SCHOLASITIC ACTIVITIES

Honorary societies and special awards: National Honor Society (elected in junior year); Monogram Society (for service to school); Quill and Scroll; Thespians; and Mu Alpha (national mathematics.)

Gold key winner, Washington Evening Star citywide writing contest; 4-year perfect attendance award.

Journalism: Editor in chief, high school annual, Silverlogue (senior year); literary editor, Silverlogue (junior year); reporter, high school newspaper, Silver Chips (sophomore year).

Dramatics: Production manager, annual show; stage manager for "All My Sons"; and property manager for "Starwagon."

Service organizations: Student council (chairman, activities committee, junior year); Library Club (treasurer); baccalaureate committee (cochairman); Foreign Exchange Club.

In addition to these extracurricular activities, I have been a student assistant to the college counselor during the past year. This has taken the place of 1 classroom hour.

3. GRADES, END OF PREVIOUS SCHOOL YEAR

A in English III (accelerated).
A in chemistry.
B in U.S. history (accelerated).
A in plane geometry.

Rank in class of 620 at end of previous year: 27th.

[From the Washington Post, June 29, 1960]

SUBURBANITE IS TEENAGER OF THE YEAR

Margaret Anne Fauver of Silver Spring, Md., was the recipient yesterday of the Peter Pan Teenage Foundation scholarship of $4,000, given on the basis of contributions to school and community, as well as academic standing.

Arthur S. Flemming, Secretary of Health, Education, and Welfare, made the presentation to Margaret Anne at the HEW building.

With the scholarship goes the title of "Teenager of the Year."

Margaret Anne plans to enter Ohio Wesleyan University in the fall. Her father, Clarke Fauver, is assistant secretary of the Governors of the Federal Reserve Board.

World Peace Through World Law

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29, 1960

Mr. CLARK. Mr. President, recent developments in the instruments of warfare compel thinking men everywhere to seek effective means to maintain world peace. It is generally conceded that such means do not exist today. Peace rests precariously on mutual fears inspired by the "delicate balance of terror."

The enormity of the problem of achieving a sound basis for peace, however, has resulted in a dearth of well-thought-out proposals directed to that end. Too many of us in public life have felt that we have done our duty to mankind by paying lipservice to the ideals of peace without taking the trouble to come to grips with the concrete obstacles which stand in the way.

The comprehensive series of proposals set forth in the now famous book by Grenville Clark, Esq., and Prof. Louis B. Sohn, "World Peace Through World Law," invite and inspire hard thinking about the basic and all-important problems of establishing such "legislative, executive and judicial institutions as are necessary to maintain world order under enforcible world law."

The immense amount of detailed work in the Clark-Sohn book is its greatest virtue. At any given point at which the vital question of strengthening the war prevention authority of the United Nations is approached, this volume contains essential background data and carefully studied suggestions. It provides an in-

valuable starting point for the statesmen of the world who must soon attempt to extend the rule of law to those activities of nations which have a direct relation to the issues of war and peace, if civilization in the form in which we know it is to survive.

A second and revised edition of "World Peace Through World Law," first printed by the Harvard University Press in 1958 after 9 years of preparation, is about to be published. In the months ahead, there will be translations of the second edition into French, German, Russian, Spanish, Dutch, Norwegian, and Swedish with translations of the general introduction into Arabic, Chinese, Italian, Japanese, and Polish.

Grenville Clark, a New York attorney since 1906, received in 1959 the gold medal of the American Bar Association for service to American jurisprudence and has been engaged in the study of the problems of achieving world peace since 1939.

Louis B. Sohn was a legal officer in the United Nations Secretariat and since 1951 has been a professor at the Harvard Law School where he gives courses in United Nations law and problems of world order.

I heartily commend to my colleagues in both Houses of Congress and to other readers of the CONGRESSIONAL RECORD this statement by Messrs. Clark and Sohn.

Mr. President, I have been advised by the Government Printing Office that the cost of this insertion will be $972, covering 12 pages of the CONGRESSIONAL RECORD; and, notwithstanding the cost, I ask unanimous consent that the introduction to the second edition of "World Peace Through World Law" may be printed in the Appendix of the RECORD.

Mr. President, I state for the RECORD that the cost for the printing will be defrayed by myself and by the authors of the book.

There being no objection, the introduction was ordered to be printed in the RECORD, as follows:

INTRODUCTION

(By Grenville Clark)

This book sets forth a comprehensive and detailed plan for the maintenance of world peace in the form of a proposed revision of the United Nations Charter. The purpose is to contribute material for the worldwide discussions which must precede the adoption of universal and complete disarmament and the establishment of truly effective institutions for the prevention of war.

At the outset, it may be helpful to explain: first, the underlying conceptions of this plan for peace; and second, the main features of the plan whereby these conceptions would be carried out.

The fundamental premise of the book is identical with the pronouncement of the President of the United States on October 31, 1956: "There can be no peace without law." In this context the word "law" necessarily implies the law of a world authority, i.e., law which would be uniformly applicable to all nations and all individuals in the world and which would definitely forbid violence or the threat of it as a means for dealing with any international dispute. This world law must also be law in the sense of law which is capable of enforcement, as distinguished from a mere set of exhortations or injunctions which it is desirable to observe but for the enforcement of which there is no effective machinery.

The proposition "no peace without law" also embodies the conception that peace cannot be insured by a continued arms race, nor by an indefinite "balance of terror", nor by diplomatic maneuver, but only by universal and complete national disarmament together with the establishment of institutions corresponding in the world field to those which maintain law and order within local communities and nations.

A prime motive for this book is that the world is far more likely to make progress toward genuine peace, as distinguished from a precarious armed truce, when a detailed plan adequate to the purpose is available, so that the structure and functions of the requisite world institutions may be fully discussed on a worldwide basis. Consequently, this book comprises a set of definite and interrelated proposals to carry out complete and universal disarmanent and to strengthen the United Nations through the establishment of such legislative, executive, and judicial institutions as are necessary to maintain world order.

UNDERLYING PRINCIPLES

The following are the basic principles by which Professor Sohn and I have been governed:

First. It is futile to expect genuine peace until there is put into effect an effective system of enforcible world law in the limited field of war prevention. This implies: (a) the complete disarmament, under effective controls, of each and every nation, and (b) the simultaneous adoption on a worldwide basis of the measures and institutions which the experience of centuries has shown to be essential for the maintenance of law and order, namely, clearly stated law against violence, courts to interpret and apply that law and police to enforce it. All else, we conceive, depends upon the acceptance of this approach.

Second. The world law against international violence must be explicitly stated in constitutional and statutory form. It must, under appropriate penalties, forbid the use of force by any nation against any other for any cause whatever, save only in self-defense; and must be applicable to all individuals as well as to all nations.

Third. World judicial tribunals to interpret and apply the world law against international violence must be established and maintained, and also organs of mediation and conciliation—so as to substitute peaceful means of adjudication and adjustment in place of violence, or the threat of it, as the means for dealing with all international disputes.

Fourth. A permanent world police force must be created and maintained which, while safeguarded with utmost care against misuse, would be fully adequate to forestall or suppress any violation of the world law against international violence.

Fifth. The complete disarmament of all the nations (rather than the mere "reduction" or "limitation" of armaments) is essential for any solid and lasting peace, this disarmament to be accomplished in a simultaneous and proportionate manner by carefully verified stages and subject to a well-organized system of inspection. It is now generally accepted that disarmament must be universal and enforceable. That it must also be complete is no less necessary, since: (a) In the nuclear age no mere reduction in the new means of mass destruction could be effective to remove fear and tension; and (b) if any substantial national armaments were to remain, even if only 10 percent of the armaments of 1960, it would be impracticable to maintain a sufficiently strong world police force to deal with any possible aggression or revolt against the authority of the world organization. We should face the fact that until there is complete disarmament of every nation without exception there can be no assurance of genuine peace.

Sixth. Effective world machinery must be created to mitigate the vast disparities in the economic condition of various regions of the world, the continuance of which tends to instability and conflict.

The following supplementary principles have also guided us:

Active participation in the world peace authority must be universal, or virtually so; and although a few nations may be permitted to decline active membership, any such nonmember nations must be equally bound by the obligation to abolish their Armed Forces and to abide by all the laws and regulations of the world organization with relation to the prevention of war. It follows that ratification of the constitutional document creating the world peace organization (whether in the form of a revised United Nations Charter or otherwise) must be by a preponderant majority of all the nations and people of the world.

The world law, in the limited field of war prevention to which it would be restricted, should apply to all individual persons in the world as well as to all the nations—to the end that in case of violations by individuals without the support of their governments, the world law could be invoked directly against them without the necessity of indicting a whole nation or group of nations.

The basic rights and duties of all nations in respect of the maintenance of peace should be clearly defined not in laws enacted by a world legislature but in the constitutional document itself. That document should also carefully set forth not only the structure but also the most important powers of the various world institutions established or authorized by it; and the constitutional document should also define the limits of those powers and provide specific safeguards to guarantee the observance of those limits and the protection of individual rights against abuse of power. By this method of "constitutional legislation" the nations and peoples would know in advance within close limits what obligations they would assume by acceptance of the new world system, and only a restricted field of discretion would be left to the legislative branch of the world authority.

The powers of the world organization should be restricted to matters directly related to the maintenance of peace. All other powers should be reserved to the nations and their peoples. This definition and reservation of powers is advisable not only to avoid opposition based upon fear of possible interference in the domestic affairs of the nations, but also because it is wise for this generation to limit itself to the single task of preventing international violence or the threat of it. If we can accomplish that, we should feel satisfied and could well leave to later generations any enlargement of the powers of the world organization that they might find desirable.

While any plan to prevent war through total disarmament and the substitution of world law for international violence must be fully adequate to the end in view, it must also be acceptable to this generation. To propose a plan lacking in the basic essentials for the prevention of war would be futile. On the other hand, a plan which, however ideal in conception, is so far ahead of the times as to raise insuperable opposition would be equally futile. Therefore, we have tried hard to strike a sound balance by setting forth a plan which, while really adequate to prevent war, would, at the same time, be so carefully safeguarded that it ought to be acceptable to all nations.

It is not out of the question to carry out universal and complete disarmament and to establish the necessary new world institutions through an entirely new world author-

ity, but it seems more normal and sensible to make the necessary revisions of the present United Nations Charter.

MAIN FEATURES OF THE WHOLE PLAN

In harmony with these underlying principles, the most important specific features of the proposed Charter revision may be summarized as follows:

(1) Membership. The plan contemplates that virtually the whole world shall accept permanent membership before the revised Charter comes into effect—the conception being that so drastic a change in the world's political structure should, in order to endure, be founded upon unanimous or nearly unanimous approval.

The assurance of assent by a great preponderance of the nations and peoples of the world would be accomplished by the revised articles 3 and 110 providing: (a) that every independent state in the world shall be eligible for membership and may join at will: (b) that the revised charter shall come into force only when ratified by five-sixths of all the nations of the world, the ratifying nations to have a combined population of at least five-sixths of the total world population and to include all the 12 nations which then have the largest populations. The assurance of permanent membership would be provided by the revised article 6 whereby no nation, once having ratified the revised charter, could either withdraw or be expelled.

The practical result would be that the plan would not even become operative until active and permanent support had been pledged by a great majority of all the nations, including as the 12 largest nations Brazil, France, the Federal Republic of Germany, India, Indonesia, Italy, Japan, Pakistan, the People's Republic of China, the United Kingdom, the United States of America, and the U.S.S.R.

Since in early 1960 there were 99 nations generally recognized as independent states or likely to be so recognized within a few years thereafter, the number of nonratifying nations under the proposed ratification formula would not exceed 16, all of which would probably be nations with populations of less than 40 million. And since, as a practical matter, the average population of such nonratifying nations would probably not exceed 15 million, it is unlikely that the population of the maximum number of nonratifying nations would be more than 240 million, or less than 8 percent of the world's population, which we have estimated as of July 1965 at 3,172,156,000.

With so large a preponderance in the number and population of the ratifying nations, it is reasonable to suppose that within a few years after the ratification of the revised charter, there would be no nonmember nations whatever. For it seems clear that few, if any, nations would wish to stand out when at least five-sixths of all the nations of the world, having over 90 percent of its population, had agreed to the new plan for world peace.

The likelihood that there might not be a single nonmember nation is made the greater by the proposed requirement (under revised arts. 2 and 11) that everyone of the necessarily small minority of nonmember nations shall, nevertheless, be required to comply with all the prohibitions and obligations of the disarmament plan. This provision that every nation in the world shall completely disarm and shall comply with the plan for the substitution of world law for international violence is deemed fundamental, since if even one small nation were permitted to possess the new weapons of mass destruction, such fears and suspicions might remain as to prevent the adherence of others, and the entire plan might be frustrated.

In view of the proposed requirement that every nation would, irrespective of membership, be bound to observe the world law in the field of war prevention, and the further fact that any minority of nonmember nations would necessarily be small, it may be argued that it would be simpler and legitimate to impose compulsory membership upon all the nations without exception. The plan set forth in a preliminary draft of the present proposals issued in 1953 did in fact provide that once the revised charter had been ratified by a very large majority of the nations, all other nations should be deemed full and permanent members, even though they might have deliberately refused ratification. In deference, however, to the view that no nation should be forced to accept such affirmative obligations of membership as the duty to contribute financially, the present plan stops short of compelling membership by any nation, no matter how overwhelming the support for the revised charter.

Nevertheless, the practical result would be little different from that of universal compulsory membership since, as already noted: (a) the maximum possible number of nonratifying nations could not exceed one-sixth of all the nations and could have no more than a minor fraction of the world's population; and (b) even this small minority of nations, although exempt from certain positive duties of membership, would be bound equally with the member nations to comply with the world law prohibiting international violence and requiring complete disarmament. This practical result would be accomplished, however, without the element of coercion involved in requiring active membership from the relatively few nations which might choose not to ratify.

(2) The General Assembly. A radical revision is proposed as to the powers, composition, and method of voting of the General Assembly.

Although the plan sets forth in the charter itself all the basic provisions of the disarmament process and of other main features (such as the proposed world police force, the revenue system and the judicial system), it would still be true that in order to implement these basic provisions, the powers of the legislative and executive branches of the world organization must be considerable.

The plan calls for imposing the final responsibility for the enforcement of the disarmament process and the maintenance of peace upon the General Assembly itself, and gives the Assembly adequate powers to this end. These powers would, however, be strictly limited to matters directly related to the maintenance of peace. They would not include such matters as regulation of international trade, immigration and the like, or any right to interfere in the domestic affairs of the nations, save as expressly authorized by the revised charter in order to enforce disarmament or to prevent international violence where a situation which ordinarily might be deemed "domestic" has actually developed into a serious threat to world peace.

To ensure the observance of these limitations, the delegated powers would be enumerated and defined in the revised charter; while, as still further protection, there would be an explicit reservation to the member nations and their peoples of all powers not thus delegated "by express language or clear implication". The delegated powers are defined in revised article 11 and in various other provisions of the revised charter, while the reservation of all nongranted powers is contained both in revised article 2 and in the proposed Bill of Rights (annex VIII).

As above mentioned, the principle is followed that all the main features of the whole plan shall be included in the revised charter itself as "constitutional legislation", having in mind that the nations will be more likely to accept the plan if all its principal provisions are clearly set forth in the constitutional document itself. The effect would be to bind the nations in advance not only to all the fundamentals but also to many important details, and thus to leave for the General Assembly a more limited legislative scope than might be supposed.

Since, however, the General Assembly, even with elaborate "constitutional legislation," would need to have some definite legislative powers, the plan calls for a revision of the system of representation in the Assembly. For it cannot be expected that the larger nations would consent to give the Assembly even very limited legislative powers under the present system whereby Albania, Costa Rica, Iceland, Liberia, etc., have an equal vote with the United States, the Soviet Union, India, the United Kingdom, etc.

The purpose is, by abolishing the present system of one vote for each member Nation, to substitute a more equitable system, and thus to make the nations more willing to confer upon the General Assembly the limited yet considerably increased powers that it would need.

The proposed plan of representation takes account of relative populations but is qualified by the important provisions that no nation, however large, shall have more than 30 representatives and that even the smallest nation shall have 1 representative. The upper limit of 30 would be imposed partly because weighted representation is not likely to be accepted by the smaller nations unless the differences in representation between the majority of the nations and the largest nations are kept within moderate limits, and also because without some such limitation, the General Assembly would be of so unwieldy a size as to be unable to transact business. At the other extreme the purpose is to ensure that even the very small nations shall have some voice.

The proposed formula divides the 99 nations, generally recognized in early 1960 as independent states or likely to be so recognized by 1965, into six categories according to relative populations, with representation as follows:

The 4 largest nations, 30 representatives each, 120.

The 8 next largest nations, 15 representatives each, 120.

The 20 next largest nations, 6 representatives each, 120.

The 30 next largest nations, 4 representatives each, 120.

The 34 next largest nations, 2 representatives each, 68.

The 3 smallest nations, 1 representative each, 3.

A total of 99 nations and 551 representatives.

It is proposed that the populations of colonial and semi-colonial areas (i.e., the nonself-governing territories and dependencies, including territories under trusteeship administration) shall not be counted in determining the representation of the independent states but that, in order to afford equal treatment to the estimated approximately 95 million people (in 1965) of these areas, they shall be entitled to representation in proportion to population on the same average basis as the people of the member nations. It is assumed that as of July 1965 this method would entitle these areas as a whole to 17 representatives. The General Assembly would allocate these representatives among the various territories or groups of territories, taking into account their relative populations.

Of the assumed 568 representatives, 551 would therefore represent the assumed 99 independent states, while the non-self-governing and trust territories would have 17 representatives.

The four most populous nations of the world—the People's Republic of China, India, the Soviet Union and the United States—would each have the maximum of 30 repre-

sentatives; and even the smallest nation (Iceland) would have 1 representative. The 568 representatives would represent a total estimated world population (as of July 1965) of 3,172,156,000, or an average of about 5,600,000 for each representative.

The effect would be that, with relation to population, the smaller nations would still have a disproportionately large voice, but not nearly as much so as under the present system of one vote for each member nation irrespective of population.

Over a period of years, the authors have studied many plans for determining representation by various formulas that would take account of such factors as relative literacy, relative wealth as measured by per capita income, etc. We have concluded, however, that the introduction of any such other factors would raise so many complications and involve such uncertain and invidious distinctions that it is wiser to hold to the less elaborate formula herein proposed.

We have also studied numerous suggestions for a bicameral world legislature in which the nations would have voting power in one house in proportion to their populations, but equal voting power in the other house irrespective of their size. Modifications of this plan in the shape of a system of double voting in a single house have also been studied. After weighing these alternatives, we conclude that the one-chamber solution herein proposed (together with representation which takes account of relative populations, but is modified by the proposed system of categories and the proposed maximum and minimum number of representatives) is not only simpler, but also is probably as fair an arrangement as any other. However, we hold no dogmatic views on this difficult subject, the essential point being that there must be some radical, yet equitable, change in the present system of representation in the General Assembly as a basis for conferring upon the Assembly certain essential, although carefully limited, powers of legislation which it does not now possess.

As to the method of selection of the representatives, it is proposed that a system of full popular election shall be gradually introduced. This would be done under a three-stage plan providing: (a) that in the first stage all the representatives would be chosen by the respective national legislatures of the member nations; (b) that in the second stage at least half the representatives would be chosen by popular vote of those persons qualified to vote for the most numerous branch of the national legislature; and (c) that in the third stage all the representatives would be chosen by the same sort of popular vote. The first two stages would normally be of 12 years each (three 4-year terms of the General Assembly) but could each be extended by 8 years by a special vote of the Assembly. The popular election of all the representatives would, therefore, normally become mandatory 24 years after the ratification of the revised charter and in any case not later than 40 years after the revised charter comes into force.

With regard to the terms of service of the representatives, it is proposed that they shall serve for 4 years.

Concerning the procedure for voting in the General Assembly, it is proposed in place of the present method: (a) that a majority of all the representatives then in office must be present in order to constitute a quorum; (b) that, except as to certain "important" and "special" questions, decisions shall be made by a majority of the representatives present and voting; (c) that on these "important" questions which would be specifically defined, decisions shall be by a "special majority" consisting of a majority of all the representatives then in office, whether or not present and voting; and (d) that in respect of several "special" questions, also specifically defined, there shall be even larger special majorities which in one instance would require the affirmative vote of three-fourths of all the representatives in office including two-thirds of the representatives from those nations entitled to 15 or more representatives, i.e., the 12 largest nations.

Two full-time Standing Committees of the General Assembly would be constitutionally provided for, namely, a Standing Committee on the Peace Enforcement Agencies and a Standing Committee on Budget and Finance. The former would be a watchdog committee to exercise legislative supervision over the process and maintenance of disarmament and over the United Nations Peace Force. The latter would have vital functions in submitting to the Assembly recommendations as to the amount and apportionment of each annual budget for all the activities of the strengthened United Nations.

With relation tot he powers of the revised General Assembly, a clear distinction would be made between legislative powers and powers of recommendation. The legislative powers would be strictly limited to matters directly related to the maintenance of peace, whereas the extensive powers of mere recommendation now possessed by the Assembly would be retained and even broadened. To this end, the Assembly's legislative authority would, as above mentioned, exclude any regulation of international trade, immigration and the like and any right to interfere in the domestic affairs of the nations, save only as strictly necessary for the enforcement of disarmament or, in exceptional circumstances, for the prevention of international violence.

On the other hand, as distinguished from the power to legislate, the General Assembly would have the right to make nonbinding recommendations on any subject which it deemed relevant to the maintenance of peace and the welfare of the world's people.

(3) The Executive Council. It is proposed to abolish the present Security Council and to substitute for it an Executive Council, composed of 17 Representatives elected by the General Assembly itself. This new and highly important organ would not only be chosen by the Assembly, but would also be responsible to and removable by the Assembly; and the Council would serve for the same 4-year terms as the Representatives in the Assembly.

Special provision would be made for representation of the larger nations, whereby the four largest nations (China, India, the U.S.A. and the U.S.S.R.) would each be entitled at all times to have one of its Representatives on the Council; and four of the eight next largest nations (Brazil, France, West Germany, Indonesia, Italy, Japan, Pakistan, and the United Kingdom) would in rotation also be entitled to representation, with the proviso that two of these four shall always be from nations in Europe and the other two from nations outside Europe. The remaining nine members would be chosen by the Assembly from the Representatives of all the other member Nations and the non-self-governing and trust territories under a formula designed to provide fair representation for all the main regions of the world and to insure that every member Nation, without exception, shall in due course have a Representative on this all-important Council.

In contrast to the voting procedure of the present Security Council, whereby any one of the five nations entitled to permanent membership has a veto power in all nonprocedural matters, the decisions of the new Executive Council on important matters (as defined in par. 2 of revised art. 27) would be by a vote of 12 of the 17 representatives composing it, with the proviso that this majority shall include a majority of the 8 members of the Council from the 12 member Nations entitled to 15 or more Representatives in the Assembly and a majority of the 9 other members of the Council. All other decisions would be by a vote of any 12 members of the Council.

This Executive Council would constitute the executive arm of the strengthened United Nations, holding much the same relation to the General Assembly as that of the British Cabinet to the House of Commons. Subject to its responsibility to the Assembly, the new Council would have broad powers to supervise and direct the disarmament process and other aspects of the whole system for the maintenance of peace provided for in the revised charter.

The Executive Council would, for example, decide (subject to review by the General Assembly) as to whether each stage of the disarmament process has been satisfactorily completed and, once complete national disarmament has been achieved, would watch over its maintenance. Nevertheless, the Council would always remain subordinate to the Assembly, which would have final authority to make such crucial decisions as the possible postponement of any stage of the disarmament process, and the imposition of sanctions in case of any breach of the peace or serious violation by any nation of the authority of the United Nations.

(4) Economic and Social Council, Trusteeship Council. These two Councils would be continued, but with a somewhat larger and different composition than under the present charter designed to provide a wider and better-balanced representation on these Councils.

The Economic and Social Council, instead of its present membership of 18, would have a membership of 24 representatives elected by the General Assembly from among its own number for 4-year terms. They would be chosen pursuant to a formula whereby each of the 12 member nations having the largest gross national products would be entitled to have one of its representatives on the Council at all times, the other 12 members of the Council to be elected by the Assembly from among the representatives of all the remaining member nations and the non-self-governing or trust territories, with due regard to geographical distribution.

The present provisions for the composition of the Trusteeship Council would also be substantially changed. This Council would likewise consist entirely of representatives elected by the Assembly from among its own number for 4-year terms and would be chosen under a formula whereby its membership would include three groups of equal number: (a) a group of representatives from the member nations which are actually administering either trust territories or other non-self-governing territories; (b) a group of representatives from the member nations which have achieved independence since 1939; and (c) a group of representatives from all the other member nations, i.e., from all the member nations not covered by the two preceding categories.

Like the Executive Council these two other Councils would be directly responsible to the Assembly. Their responsibilities would be enlarged; and their usefulness would be enhanced by reason of the greatly increased funds which would be available to them under the proposed new revenue system.

(5) The disarmament process. Annex I contains a carefully framed plan for the elimination—not the mere "reduction" or "limitation"—of all national armaments.

It calls for a "transition period" of 1 year following the coming into force of the revised charter during which the first new General Assembly would be selected, the first Executive Council would be chosen by the Assembly, and the first Inspection Commission would be appointed by that Council, subject to confirmation by the Assembly. The plan then calls for a "preparatory stage"

of 2 years, during which an arms census would be taken, an inspection service would be organized, and other preparations would be made. Finally, it provides for an "actual disarmament stage" which would normally cover 10 years during which there would be a step-by-step proportionate reduction in all categories of all national armed forces and all armaments at the rate of 10 percent per annum. As below mentioned, this normal 10-year period could be reduced to 7 years by the General Assembly or could, on the other hand, be extended by the Assembly under certain circumstances.

The proposed Inspection Commission, the members of which would be appointed for 5-year terms by the Executive Council subject to confirmation by the General Assembly, would consist of 5 persons, none of whom could be a national of any of the 12 nations having 15 or more representatives in the General Assembly and no 2 of whom could be nationals of the same nation. The administrative head of the Inspection Service would be an Inspector-General, who would be appointed by the Inspection Commission for a 6-year term, subject to confirmation by the Executive Council, and would be removable by the Commission at will.

The Executive Council would have general supervision over the Inspection Commisison with authority to issue instructions to the Commission and to remove at will any member of the Commission.

Very careful safeguards would be provided to insure the competence and integrity of the personnel of the Inspection Service and their devotion to the purposes of the United Nations. These would include a provision limiting the number of nationals of any one nation among those performing duties of actual inspection to not more than 4 percent of the total number of inspectors; a requirement that all the personnel of the Service shall be recruited on as wide a geographical basis as possible; a prohibition against their seeking or receiving instructions from any government or authority except the United Nations; and the requirement of a solemn declaration that they will perform their functions impartially and conscientiously. On the other hand, all the personnel of the Service would be assured "fully adequate" pay and allowances and retirement pensions free from all taxation.

As a still further safeguard, the Standing Committee on the Peace Enforcement Agencies of the General Assembly would have the responsibility of watching over the proper performance by the Inspection Commisison of its duties and also over the proper exercise by the Executive Council of its general authority over the Commission with full power to investigate and report to the Assembly itself.

The proposed powers of the Inspection Service are carefully defined in Annex I, and the General Assembly would be empowered to adopt further regulations to ensure, on the one hand, the efficacy of the inspection system and, on the other hand, to protect nations and individuals against possible abuses of power. While Inspectors would be given unlimited access to establishments with especially dangerous potentials, periodic inspections of less dangerous activities would be restricted to a reasonable number each year. Any additional inspection of activities subject only to periodic inspection and of places not ordinarily subject to inspection could be conducted only on the basis of a special authorization issued by one of the United Nations regional courts which would be established as explained below. Such an authorization could be granted only upon a showing to the court of reasonable cause to believe or suspect that a prohibited activity is being conducted in the place sought to be inspected. Regular aerial surveys would be provided for, subject to the limitation that no more than three regular surveys of any particular territory could be conducted in any year. Special aerial surveys could also be made, but only upon court authorization after a showing to the court of reasonable cause.

The reduction process during each year of the "actual disarmament stage" would be verified by the Inspection Commission, which would report fully to the Executive Council as to whether the required proportionate reductions had been duly carried out by all the nations. The General Assembly, advised by the Council, would have power to suspend the disarmament process for 6 months at a time if not fully satisfied that it was being faithfully fulfilled. On the other hand, after the first 4 years, the Assembly would have the power to cut in half the remaining 6 years, so as to achieve universal and complete disarmament in 7 years from the beginning of the "actual disarmament stage."

This disarmament plan, should, however, be thought of as a 12-year plan if normally carried out without either delay or acceleration, i.e., the 2 years of the "preparatory stage" and the normal 10 years of the "actual disarmament stage." At the end of the latter period, no national military forces whatever would exist; and the only military force in the entire world (as distinguished from limited and lightly armed internal police forces) would be a world police force, to be called the United Nations Peace Force, which would be built up parallel with and in proportion to the disarmament process.

No plan for universal and complete disarmament is practicable, unless all nations are bound by it. It is apparent to all that if any one of the larger and stronger nations were exempted from the disarmament process, no such disarmament would be feasible. But it is equally true in this world of novel weapons of tremendous destructive power that even a small nation might become a menace to the peace of the world. The disarmament system must, therefore, cover every nation, whether a member of the United Nations or not; and the plan includes appropriate provisions to this end.

Under the above-mentioned ratification procedure (whereby the revised Charter would not come into force until ratified by five-sixths of all the nations, the ratifying nations to have at least five-sixths of the world's population and to include each of the 12 nations having the largest populations), it is possible, and even probable, that there would actually be no nonmember nations whatever; and in any event any such nonmember nations would be few in number and relatively small in size. In case, however, there should be a few nations which chose to refrain from active membership, it is essential that they shall nevertheless be expressly bound to refrain from violence on the same basis as the member nations and to settle all their disputes by peaceful means. Correspondingly also, all nonmember nations must be required to observe the disarmament provisions. It would therefore be provided that all nations "shall settle their international disputes by peaceful means" and the obligation to disarm would be imposed upon "every nation in the world." Moreover, every nonmember nation would be brought into a special relationship with the United Nations through a system of agreements whereby all nonmember nations would agree to comply with the disarmament provisions of Annex I and the laws, regulations, and decisions made thereunder.

The proposed disarmament plan depends also on its simultaneous execution by all nations. It is obvious that no nation would be willing or could be expected to disarm ahead of the others; and therefore all necessary safeguards must be established to ensure that no nation would be put in a disadvantageous position because other nations have not simultaneously carried out their part of the plan. Accordingly the Inspection Commission would be empowered not only to approve annual disarmament plans for every nation but also to supervise and to ensure their simultaneous execution.

Still further, the disarmament plan must make sure that all nations will disarm proportionately. The year-by-year diminution of military strength must be equal for all nations, since no nation can be expected to disarm by a larger percentage than others and since no nation should be deprived of a main source of its military strength while other nations still retain their principal sources of strength. Thus a nation strong in nuclear weapons should not be entirely deprived of them while other nations retain a large proportion of their preponderant land armies. And similarly, a nation could not reasonably be asked to abandon its ballistic missiles while another was permitted to retain its bombing planes. For these reasons a uniform percentage reduction year by year is provided for as the fairest and most acceptable method to achieve total national disarmament.

It would not, however, be sufficient merely to provide for uniform percentage reductions in the total military forces and armaments of the various nations, since a particular nation might, for example, simply demobilize a large number of foot soldiers while leaving the strength of its air force and navy unimpaired. Similarly, some other nation might limit a required numerical cut in its air force to maintenance personnel while keeping all its pilots in the service. A requirement with respect to the reduction of weapons might also be easily evaded if a nation were permitted to divide the reduction unequally between its fighter planes and long-range bombers, or between its fissionable and fusionable weapons. A really fair and safe method of reduction requires, therefore, that each nation shall reduce in an equal manner the personnel not only of each major service (land, sea, and air), but also of each major component thereof. Moreover, this principle of proportionate reductions would need to be applied uniformly to troops stationed in the home territory and abroad. For example, if in a given year the ground forces of a particular nation should consist of 500,000 men of whom 100,000 were stationed abroad, a 10 percent reduction of 50,000 in that year would have to be divided in such a way as to insure that 40,000 be discharged from the forces stationed in the home territory and 10,000 from those stationed abroad.

Fairness and safety require similar equal and proportionate reductions in each major category of weapons and in all facilities for the production of armaments. Reductions of the same proportionate size should be made, for instance, in each nation's capacity to produce various categories of weapons; for example, with respect to guided and ballistic missiles, separate cuts would be necessary in the capacity for the production of short-, medium-, and long-range missiles.

With these considerations in mind, the disarmament plan includes detailed provisions requiring that all personnel reductions be distributed proportionately not only among the personnel of the major military services but also among their principal components. Similar proportionate reductions would be required among the various categories of the armaments of the various services and components and in the various facilities for armament production. The annual reduction plans of every nation would be subject to approval and supervision by the Inspection Service, and a serious violation could result in the postponement of all further annual reductions, for periods of not more than 6 months at a time, until the violation was remedied.

The disarmament plan also includes provision for a United Nations Nuclear Energy Authority with dual functions: (a) to assist the Inspection Service in guarding against possible diversion of nuclear materials to any war-making purpose, and (b) to promote the worldwide use of nuclear materials and processes for peaceful purposes. To these ends, the Nuclear Energy Authority would have wide powers to acquire by purchase at a fair price all nuclear materials in the world, with the obligation to have them put to use at fair rentals for peaceful purposes in all parts of the world under arrangements that would apportion the materials fairly and safeguard them against seizure. It is contemplated that this new authority, having wider scope and membership than the International Atomic Energy Agency established in 1956, would take over the personnel and functions of that Agency.

As in the case of the Inspection Service, the Nuclear Energy Authority would be under the direction and control of a five-member Commission. This body would be called the Nuclear Energy Commission. Within its field this Commission would correspond to the Inspection Commission and would be subject to the same careful provisions as the Inspection Commission in respect of the eligibility of its members and the authority of the Executive Council to supervise its policies and to remove any member at will.

The administrative head of the Nuclear Energy Authority would be a General Manager appointed for a 6-year term by the Nuclear Energy Commission and removable by it at will. Safeguards corresponding to those provided in respect of the personnel of the Inspection Service would also be applicable to the personnel of the Nuclear Energy Authority, and the Standing Committee on the Peace Enforcement Agencies of the General Assembly would have responsibilities in respect of this Nuclear Energy Authority corresponding to its responsibilities in respect of the Inspection Service.

A new feature of the disarmament plan, made necessary by the recent penetration of outer space and its potentialities for the future, is a proposed United Nations Outer Space Agency. The broad objectives sought are: (a) To insure that outer space is used only for peaceful purposes, and (b) to promote its exploration and use for the common benefit of all the people of this earth, rather than for the benefit of any nation or any part of mankind.

The Outer Space Agency would, subject to the overall authority of the General Assembly and the Executive Council, be under the "direction and control" of a United Nations Outer Space Commission. This Commission, like the Inspection Commission and the Nuclear Energy Commission, would be composed of five members appointed for 5-year terms by the Executive Council subject to confirmation by the General Assembly and would be removable at will by the Council.

Correspondingly also, the Outer Space Agency would have an administrative head who would be called the Managing Director.

Moreover, as to the personnel of the Outer Space Agency, there would be safeguarding provisions in all respects similar to the above-described provisions relative to the personnel of the Inspection Service and the Nuclear Energy Authority; and the Standing Committee on the Peace Enforcement Agencies would have "watchdog" responsibilities identical with those relative to the Inspection Service and the Nuclear Energy Authority.

Provision is made for reporting any violations of the disarmament plan; for correcting such violations; for the prosecution of serious individual violators in regional courts of the United Nations; and for sanctions against nations themselves in the possible event of defiance or evasion by any government. As a still further safeguard, there would be the above-mentioned committee of the General Assembly (the Standing Committee on the Peace Enforcement Agencies) with the function of keeping a sharp eye on all aspects of the disarmament process and of keeping the Assembly informed of any derelictions or defects.

It is a basic premise of this necessarily elaborate plan for universal and complete disarmament that, while the proposed system of inspection and control could not provide absolute assurance against the clandestine retention or manufacture of weapons, it could and would provide highly effective protection. It would be fallacious and a counsel of despair to reject the idea of the complete abolition of national armaments, including nuclear weapons, merely because no absolute or foolproof guarantee can be supplied that every ounce of dangerous war material has been accounted for and that no dangerous new weapon can ever be secretly made.

It is believed that the whole proposed system of inspection, including the inspection of all means of "delivery" of nuclear weapons, would, in practice, make it impossible for any group within a nation or any nation itself to assemble weapons that would constitute a serious danger. And it is also to be remembered that a powerful world police force would always be in the background for the very purpose of deterring or suppressing any rash attempt at international violence.

The guarantees of safety to be relied upon when all national armaments are abolished lie, therefore, in the combination of a comprehensive and highly organized inspection system with a coercive force of overwhelming power. Not exclusively on one or the other, but on the combined effect of both, the world could safely rely in the abandonment once and for all of all national military forces.

(6) A World Police Force. The plan is framed upon the assumption that not even the most solemn agreement and not even the most thorough inspection system, or both together, can be fully relied upon to insure that every nation will always carry out and maintain complete disarmament and refrain from violence under all circumstances. Moreover, it must be recognized that even with the complete elimination of all military forces there would necessarily remain substantial, although strictly limited and lightly armed, internal police forces and these police forces, supplemented by civilians armed with sporting rifles and fowling pieces, might conceivably constitute a serious threat to a neighboring country in the absence of a well-disciplined and heavily armed world police.

In short, our conception is that if police forces are necessary to maintain law and order even within a mature community or nation, similar forces will be required to guarantee the carrying out and maintenance of complete disarmament by each and every nation and to deter or suppress any attempted international violence. In consequence, detailed constitutional provision is made for a world police, to be organized and maintained by the strengthened United Nations and to be called the United Nations Peace Force. This world police force would be the only military force permitted anywhere in the world after the process of national disarmament has been completed. It would be built up during the above-described actual disarmament stage, so that as the last national military unit is disbanded the organization of the Peace Force would simultaneously be completed.

Annex II provides in detail for the organization and maintenance of the proposed United Nations Peace Force—for its recruitment and pay, its terms of service, its maximum and minimum strength, and for its training, equipment, disposition and functions. This Peace Force would consist of two components—a standing component and a Peace Force Reserve—both of which would, save in the most extreme emergency, be composed solely of volunteers.

The standing component would be a full-time force of professionals with a strength of between 200,000 and 600,000, as determined from year to year by the General Assembly. The proposed term of service for its enlisted personnel would be not less than 4 or more than 8 years, as determined by the General Assembly, with provision for the reenlistment of a limited number of especially well-qualified personnel.

In respect of the composition of the standing component, assurance would be provided through various specific limitations in annex II that it would be recruited mainly, although not exclusively from the smaller nations. These limitations would include: (a) A provision whereby the number of nationals of any nation (including any non-self-govering or trust territory under its administration) serving at any one time in the standing component shall not exceed 3 percent of its then existing total strength; (b) a provision that the number of nationals of any nation in any one of three main branches (land, sea, and air) of the standing component shall not exceed 3 percent of the then existing strength of such main branch; (c) a provision that the number of nationals of any nation serving at any one time in the officer corps of either of the three main branches of the standing component shall not exceed 3 percent of the then existing strength of the officer corps of such main branch; and (d) a provision that not less than 2 percent or more than 10 percent of the total strength of the standing component shall be nationals of the nations or nation constituting any 1 of 11 to 20 regions into which the whole world would be divided by the General Assembly pursuant to paragraph 9 of article 26 of annex I.

The units of the standing component would be stationed throughout the world in such a way that there would be no undue concentration in any particular nation or region, and, on the other hand, so as to facilitate prompt action for the maintenance of peace if and when required. Proposed specific provisions in this respect include: A direction that the standing component shall be stationed at military bases of the United Nations so distributed around the world as to facilitate its availability in case prompt action to prevent or suppress international violence is directed by the General Assembly (or in certain circumstances by the Executive Council); a provision that no such base shall be situated within the territory of any nation entitled to 15 or more representatives in the General Assembly, thus insuring that no United Nations military base would be located in any of the 12 largest nations; a provision that all the territory of the world outside that of the 12 largest nations shall be divided by the General Assembly into 11 to 20 regions for the special purpose of distributing elements of the standing component between such regions, with the proviso that not less than 5 percent or more than 10 percent of the total strength of the standing component shall be stationed in bases in any one of those regions, save only when the peace force has been duly called upon to take action.

In order to insure the greatest possible security for the standing component, provision would be made that its units be located to the greatest extent possible on islands or peninsulas, or in other easily defensible positions.

The mobility of the standing component would be of great importance, in order that its widely distributed units could be promptly brought together into a formidable force in the event of any serious threat of international violence or serious defiance of the

authority of the world organization. The equipment of the standing component should, therefore, include an ample number of large and swift aircraft for the long-distance transport of men and supplies, and in voting the annual budgets for the Peace Force the General Assembly would have authority to provide for this need.

As distinguished from the active or standing component, the Peace Force Reserve would have no organized units whatever, but would consist only of individuals partially trained and subject to call for service with the standing component in case of need. It would have a strength of between 600,000 and 1,200,000, as determined by the General Assembly. Its members would be recruited subject to careful provisions as to geographical distribution identical with those applicable to the standing component. The proposed term of service of its enlisted personnel would be for not less than 6 or more than 10 years, as determined by the General Assembly. They would receive a minimum amount of basic training during the first 3 years of their term of service and some further training during the remainder of their terms, but except for these training periods would remain in their home countries on a standby basis subject to call.

The officers of both components would be selected, trained, and promoted with a view to "ensuring an officer corps of the highest possible quality" with adequate opportunity for the selection as officer candidates of highly qualified men from the rank and file.

Specific provision would be made for adequate pay and allowances for the personnel of both components, all pay and other compensation (including retirement pensions) to be free from all taxation.

It is contemplated that the United Nations Peace Force shall be regularly provided with the most modern weapons and equipment, except that its possession or use of biological, chemical, or any other weapons adaptable to mass destruction, other than nuclear weapons, would be forbidden, special provision being made, as hereafter mentioned, for the use of nuclear weapons in extreme circumstances. The initial weapons and equipment of the Peace Force would come from the transfer of weapons and equipment discarded by national military forces during the process of complete disarmament. Subsequent supplies would be produced by the United Nations in its own production facilities through a separate agency to be established by the General Assembly and called the United Nations Military Supply and Research Agency. This Agency would engage in research relative to the development of new weapons and relative to methods of defense against the possible use by any nation of prohibited weapons clandestinely hidden or produced.

With regard to the use of nuclear weapons by the Peace Force, the solution proposed is that neither component shall normally be equipped with any kind of nuclear weapons, but that some such weapons shall be held in reserve in the custody of a civilian agency for use only under the most careful precautions. This agency would be the Nuclear Energy Authority which would be authorized to release any nuclear weapons for possible use by the Peace Force only by order of the General Assembly itself, and then only if the Assembly has declared that nuclear weapons (which might have been clandestinely hidden or clandestinely produced) have actually been used against some nation or against the United Nations, or that such use is imminently threatened. While it may be argued that nuclear weapons should be part of the regular equipment of a world police force so that it could immediately crush by ruthless action any defiance of the world law, this solution has been rejected as being no more consistent with the purpose of the Peace Force than the regular equipment of a city police force with weapons whereby thousands of citizens could be killed in suppressing a riot.

It is also realized that it can be persuasively argued that nuclear weapons should not be even potentially available to the Peace Force. On balance, however, it is believed wise to make it possible for the Peace Force to use nucelar weapons in extreme circumstances provided that, as called for by the above-described proposals such possible use is safeguarded with the utmost care.

The immediate direction of the Peace Force would be entrusted to a committee of five persons—to be called the Military Staff Committee—all of whom would have to be nationals of the smaller nations, i.e., of those nations entitled to less than 15 representatives in the General Assembly. Beyond this safeguard, however, the Military Staff Committee would always be under the close control of civilian authority, i.e., of the Executive Council. Still further, the General Assembly, through its Standing Committee on the Peace Enforcement Agencies, would exercise a general supervision over the work of the Military Staff Committee and over the Executive Council itself in respect of the organization and all the activities of the Peace Force. In short, the plan includes the utmost precautions for the subordination of the military direction of the Peace Force under all circumstances to civilian authority as represented by the Executive Council and the General Assembly.

While a world police force, well-equipped and strong enough to prevent or promptly to suppress any international violence is, we believe, indispensable, the danger that it might be perverted into a tool of world domination is fully recognized. It is with this danger clearly in mind that meticulous care has been taken to surround the proposed Peace Force with the above-mentioned careful limitations and safeguards, so as to make its subversion virtually impossible.

Even with these elaborate safeguards, it is realized that the danger of possible misuse of the Peace Force cannot be wholly eliminated any more than every conceivable danger of violation of the disarmament process can be eliminated. However, in order to achieve complete national disarmament and genuine peace, some risks must be taken. What we have attempted is to reduce these to the very minimum. On the one hand we have sought to provide for a world police so strong as to be capable of preserving peace in any foreseeable contingency. On the other hand, we propose such careful checks and limitations that there would be every possible assurance that the power of this world police would not be misused.

It will be seen that despite all the proposed safeguards this plan calls for a world police that would be a strong and effective fighting force in case of need. The idea of some people that a world peace force somewhat similar as to arms and functions to the United Nations Emergency Force of 1957–60 might suffice is, we believe, unsound and untenable. Even in a world in which all national military forces were abolished, there would, as above mentioned, necessarily remain internal police forces of substantial strength which would probably need to possess a considerable number of rifles and even a few machineguns. In addition there would remain literally millions of sporting rifles and revolvers in the hands of private persons and thousands of nonmilitary airplanes, large and small. Accordingly, it is conceivable that, even with total disarmament, an aroused nation with a strong grievance could marshal quite a formidable armed force even if no one in it possessed any weapon stronger than a rifle. And while it is true that any such force, even of a million men, could not withstand a well-armed contingent of the world police of even one twentieth its strength, that contingent in order to suppress the aggression promptly and with minimum injury would need to be a genuine fighting force, well equipped and highly disciplined.

Moreover, there would remain a lurking suspicion for some time at least that despite the most efficient world inspection system some nation or nations had contrived to hide or might produce secretly some forbidden weapons. In these circumstances it seems perfectly clear that in order to provide the necessary assurance to obtain general assent to universal and complete disarmament, it will be essential to provide a world police of such strength and armament as to be able quickly and certainly to prevent or suppress any international violence. We firmly believe that on no cheaper terms can universal and complete disarmament be achieved, while it is equally clear that without total disarmament, genuine peace is unattainable. We submit, in short, that a strong and well-armed police force is part of the indispensable price of peace and that the sooner the world faces up to this conclusion the better it will be for all peoples.

(7) The judicial and conciliation system. In accordance with the conception that the abolition of national armaments is indispensable to genuine peace, and that if such armaments are abolished other means must be simultaneously provided for the adjudication or settlement of international disputes and for "peaceful change," provision is made for a world system of conciliation and adjudication.

In proposing such a system, recognition is given to the existence of two main categories of international disputes, namely: (1) those disputes which are capable of adjudication through the application of legal principles, and (2) the equally or more important category of disputes which cannot be satisfactorily settled on the basis of applicable legal principles.

With respect to those international disputes which are susceptible of settlement upon legal principles, it is proposed to empower the General Assembly to direct the submission of any such dispute to the International Court of Justice whenever the Assembly finds that its continuance is likely to endanger international peace. In case of such submission, the Court would have compulsory jurisdiction to decide the case, even if one of the parties should refuse to come before the Court.

The International Court of Justice would also be given authority to decide questions relating to the interpretation of the revised Charter; and to decide disputes involving the constitutionality of laws enacted thereunder. Compulsory jurisdiction would also be conferred upon the Court in certain other respects as, for example, any dispute relating to the interpretation of treaties or other international agreements, or as to the validity of any such treaty or agreement alleged to conflict with the revised Charter.

In order to strength the independence and authority of the International Court of Justice in view of these enlarged powers, it is proposed that the tenure of its 15 judges shall be for life, instead of for 9-year terms as provided by the present statute of the Court, subject only to the possibility of dismissal if in the unanimous opinion of his colleagues, a judge is no longer able properly to perform his functions or, as now provided, has in their unanimous opinion "ceased to fulfill the required conditions" of his tenure. The judges of the Court would be elected, not by concurrent action of the General Assembly and the Security Council, as at persent, but by the General Assembly alone, from a list of candidates prepared by the Executive Council upon the

basis of nominations received from the members of the highest courts of justice of member nations, from national and international associations of international lawyers and from professors of international law. The Council would be required to present three candidates for each vacancy.

In respect of the enforcement of the judgments of the International Court of Justice, it is proposed that the General Assembly (or in certain special circumstances the Executive Council) could direct economic sanctions or, in the last resort, action by the United Nations Peace Force to ensure compliance. Any such action would, however, be limited, if at all possible, to air or naval demonstrations and would involve actual military operations against a noncomplying nation only if absolutely necessary.

With regard to the other main category of international disputes, i.e., those inevitable disputes which are not of an exclusively legal nature, it is proposed to establish a new tribunal of the highest possible prestige, to be known as the World Equity Tribunal. To this end it is proposed that the tribunal shall be composed of 15 persons elected by the General Assembly pursuant to safeguards and an elaborate procedure designed to ensure the choice of individuals whose reputation, experience and character would furnish the best assurance of impartiality and breadth of view. Thus no two of them could be nationals of the same nation, and it would be required that at least 10 of the 15 must have had more than 20 years of legal experience as judges, teachers of law or practicing lawyers. In addition, the General Assembly would be restricted in its choice to a list of persons nominated by the member nations upon the recommendation of a committee in each member nation which would have to include representatives of its principal judicial tribunals and legal associations, and of its leading academic, scientific, economic and religious organizations. Beyond this, the General Assembly would be required to pay due regard to the geographical distribution of the members of the tribunal, so as to ensure fair representation of all the principal regions of the world.

To insure the independence of the members of the World Equity Tribunal, they would be elected for life, subject only to the possibility of dismissal if, in the unanimous opinion of his colleagues, a member is no longer able property to perform his functions or has ceased to fulfill the required conditions of his tenure.

In ordinary circumstances this world equity tribunal could not make binding decisions, as distinguished from recommendations, except with the consent of the parties. But provision is made that if the General Assembly votes by a large special majority, i.e., by a three-fourths majority of all the representatives then in office (including two-thirds of all the representatives from the 12 largest nations), that the carrying out of the tribunal's recommendations is essential for the preservation of peace, the recommendations of the tribunal shall become enforceable by the same means as a judgment of the International Court of Justice.

The purpose of this important departure is to supplement other methods for settling nonlegal international disputes (such as negotiation, conciliation and agreed arbitration) by providing an impartial world agency of so high a stature that, under exceptional conditions involving world peace, its recommendations may be given the force of law.

Through the adoption of these proposals in respect of both legal and nonlegal international disputes, world institutions would at last exist whereby any nation could be compelled to submit any dispute dangerous to peace for a final and peaceful settlement; and the world would no longer be helpless, for lack of adequate machinery, to deal by peaceful means with any and all dangerous disputes between nations.

In order to provide means for the trial of individuals accused of violating the disarmament provisions of the revised charter or of other offenses against the charter or laws enacted by the General Assembly, and to provide safeguards against possible abuse of power by any organ or official of the United Nations, provision is also made for regional United Nations courts, inferior to the International Court of Justice, and for the review by the International Court of decisions of these regional courts.

The proposal is for not less than 20 or more than 40 such regional courts, to have jurisdiction in regions to be delineated by the General Assembly, each regional court to be composed of not less than three or more than nine judges. The judges of these courts would be appointed by the Executive Council from a list of qualified persons prepared by the International Court of Justice, with the provisos that not more than one-third of the judges of any such court could be nationals of the nations included in the region of the court's jurisdiction, and that no two judges of any such court could be nationals of the same nation. Their appointments (which would be subject to confirmation by the General Assembly) would be for life, subject only to dismissal for cause by a vote of two-thirds of all the judges of the International Court.

The regional United Nations courts, together with the International Court of Justice, would introduce a regime of genuine and enforceable world law in respect of all legal questions likely to endanger world peace, while the World Equity Tribunal would, as above mentioned, provide means for the authoritative and compulsory settlement of nonlegal situations seriously dangerous to peace.

In addition to these judicial agencies, it is proposed to establish a World Conciliation Board which could be voluntarily availed of by the nations, or to which the General Assembly could refer any international dispute or situation likely to threaten peace. The functions of this new Board would be strictly confined to mediation and conciliation; and, if it failed to bring the disputing nations to a voluntary settlement, resort could be had to the International Court of Justice or the World Equity Tribunal, as might be most suitable in view of the nature of the issues involved.

In order to achieve genuine peace we must have more than total and universal disarmament and more than an effective world police. We must also have world tribunals to which the nations can resort with confidence for the adjustment or decision of their disputes and which, subject to careful safeguards, will have clearly defined authority to deal with any dispute which is dangerous to peace even if a nation does not wish to submit to the jurisdiction of the appropriate tribunal.

(8) Enforcement and penalties. The plan envisages a variety of enforcement measures, including the prosecution in United Nations regional courts of individuals responsible for a violation of the disarmament provisions.

In order to aid the Inspection Service in the detection and prosecution of any such violators, it is proposed to have a civil police force of the United Nations with a strength not exceeding 10,000. This force would be under the general direction of an Attorney General of the United Nations, to be appointed by the Executive Council subject to confirmation by the General Assembly. The Attorney General, besides having supervision over the civil police force, would be responsible for making arrangements with national authorities for assistance in the apprehension of persons accused of offenses against the revised charter and the laws and regulations enacted thereunder and for the detention of such persons pending trial. Provision would also be made for Assistant Attorneys General of the United Nations who would be assigned to each regional court.

In case of a serious violation of the revised charter or any law or regulation enacted thereunder for which a national government is found to be directly or indirectly responsible, the General Assembly could order economic sanctions against the nation concerned. In extreme cases the Assembly (or the Executive Council in an emergency and subject to immediate review by the Assembly) would also have authority to order the United Nations peace force into action. Any such enforcement action would correspond to the above-mentioned action available for the enforcement of judgments of the International Court of Justice or of the recommendations of the World Equity Tribunal for the settlement of a dispute when the General Assembly has decided that a continuance of the dispute would be a serious danger to peace.

(9) World development. The plan further provides (revised articles 7 and 59 and annex IV) for the establishment of a World Development Authority, whose function would be to assist in the economic and social development of the underdeveloped areas of the world, primarily through grants-in-aid and interest-free loans. This Authority would be under the direction of a World Development Commission of five members to be chosen with due regard to geographical distribution by the Economic and Social Council, subject to confirmation by the General Assembly.

The World Development Commission would be under the general supervision of the Economic and Social Council which would have power to define broad objectives and priorities. Since that Council would be composed of 24 representatives of whom 12 would come from the member nations having the highest gross national products and 12 from among the representatives of the other member nations selected with due regard to geographical distribution, there would thus be reasonable assurance that account would be taken both of the views of those nations contributing large shares of United Nations revenue, and also of the nations most in need of the Authority's assistance.

This proposed World Development Authority could, if the General Assembly so decided, have very large sums at its disposal, since the Authority's funds would be allocated to it by the Assembly out of the general revenues of the United Nations. With the large resources which the Assembly could and should provide, the World Development Authority would have the means to aid the underdeveloped areas of the world to the extent necessary to remove the danger to world stability and peace caused by the immense economic disparity between those areas and the industrialized regions of the world.

While universal, enforceable and complete disarmament, together with adequate institutions and methods for the peaceful settlement of disputes, are certainly indispensable, no solid and stable peace can be assured by these means alone. There is also required a more positive approach through the amelioration of the worst economic ills of mankind. To this end, the new World Development Authority, together with the Nuclear Energy Authority, would serve as important arms of the strengthened United Nations.

(10) A United Nations Revenue System. It would obviously be futile to establish the proposed new world institutions called for by the plan (including the United Nations Peace Force, the Inspection Service, the

World Development Authority, the Nuclear Energy Authority, the Outer Space Agency, the World Equity Tribunal and the World Conciliation Board) unless a well-planned system is provided for their sufficient and reliable financial support. Such a system should also, of course, provide for the adequate support of the already existing organs and agencies of the United Nations which would be continued and, in some cases, would have enlarged functions and responsibilities. These include the revised General Assembly itself, the strengthened International Court of Justice, the Economic and Social Council, the Trusteeship Council, the Secretariat and the various specialized agencies already affiliated with the United Nations.

The United Nations Peace Force, with an assumed strength for its standing componet of, say, 400,000 (midway between the proposed constitutional maximum of 600,000 and minimum of 200,000) and with an assumed strength for the Peace Force Reserve of, say, 900,000 (midway between the proposed constitutional maximum of 1,200,000 and minimum of 600,000) would alone require some $9 billion annually. The minimum annual amount required for the General Assembly and Executive Council, the judicial system, the Secretariat, the Inspection Service, the Nuclear Energy Authority, the Outer Space Agency and the other organs and agencies other than the World Development Authority may be estimated at $2 billion. To this should be added a large amount on the order of $25 billion which should be annually appropriated by the General Assembly for the proposed World Development Authority in order to make a real impression on the vast problem of mitigating the worst economic disparities between nations and regions.

Upon first impression, this assumed $25 billion figure for world development may appear high, but is in fact moderate if the purpose is to accomplish a substantial change in the living conditions of the more economically underdeveloped areas of the world. This is so because before the machinery for supplying any such amount can become operative, there will probably be an increase in world population to nearly 4 billion, by which time the number of people living in poverty relative to the standards of the industrialized nations will certainly be not less than 2 billion. Accordingly, the annual expenditure of $25 billion to improve the condition of these people would represent only about $12 per capita which is little enough to accomplish any substantial improvement in their living standards.

It is apparent, therefore, that the reasonable expenses of a world authority adequately equipped to deter or suppress any international violence, to administer a comprehensive system for the peaceful settlement of all disputes between nations and also to do something substantial for the economic betterment of the underdeveloped parts of the world, could easily run to $36 billion per annum. And while this amount would be less than one-half of the 1960–61 budget of a single nation—the United States—it would, nevertheless, be so large a sum that reliance for supplying it should not be placed on a system of yearly contributions by the separate governments of nearly 100 nations. Apart from a World Development Authority, the maintenance of a high level of efficiency and morale by the proposed Inspection Service, the Peace Force, the Nuclear Energy Authority, and the Outer Space Agency would be of crucial importance; and it would indeed be folly to set up these and other vital organs without reliable machinery for supplying the necessary funds. To this end, a carefully devised collaborative revenue system is proposed.

A chief feature of this system would be that each member Nation would assign in advance to the United Nations all or part of certain taxes designated by it and assessed under its national laws. Each nation would undertake the entire administrative function of collecting the taxes thus assigned to the United Nations, these taxes to be paid directly to a fiscal office of the United Nations in each member nation. In this way it would be unnecessary to create any considerable United Nations bureaucracy for this purpose.

Another important feature would be an overall limit on the maximum amount of revenue to be raised in any year; namely, 2 percent of the gross world product (total value of all goods produced and services rendered) as estimated from year to year by the above-mentioned Standing Committee on Budget and Finance of the General Assembly.

The General Assembly would adopt the annual United Nations budget covering all its activities, and would determine the amounts to be supplied by the taxpayers of each member nation for that budget. These amounts would be allotted on the basis of each member nation's estimated proportion of the estimated gross world product in that year subject to a uniform "per capita deduction" of not less than 50 or more than 90 percent of the estimated average per capita product of the 10 member nations having the lowest per capita national products, as determined by the Assembly. A further provision would limit the amount to be supplied by the people of any member nation in any one year to a sum not exceeding 2½ percent of that nation's estimated national product.

Taking 1980 as an example, and assuming that the gross world product for that year was estimated at $2,600 billion, the maximum United Nations revenue which could be raised would be $52 billion. And if for the 1980 fiscal year a budget of $16 billion less than the maximum, or $36 billion, was voted, it being then estimated that the United States had 30 percent of the gross world product, the amount which the taxpayers of the United States could be called upon to supply, allowing for the per capita deduction would be about $12.2 billion. This charge upon the taxpayers of the United States, while substantial, would still be less than one-third of the approximately $46 billion to be supplied by them in 1960–61 for military purposes alone. It follows that upon the completion of national disarmament, whereby this $46 billion item would be entirely eliminated, even the maximum possible charge for the budget of the strengthened United Nations would seem relatively small. The same would be true of any other nation with large military expenses.

In addition to the provisions for the raising of annual revenue, a United Nations borrowing power would also be provided for, with the limitation that the total United Nations debt outstanding in any year shall not (except in grave emergency declared by the General Assembly) exceed 5 percent of the estimated gross world product in that year.

A more detailed explanation of this revenue plan is set forth in annex V. It is believed that the plan would be effective to provide reliable and adequate revenues for the strengthened United Nations without involving the creation of a United Nations revenue-raising bureaucracy.

(11) Privileges and immunities. Annex VI relates to the privileges and immunities of the United Nations itself and of the greatly expanded personnel (including the United Nations Peace Force) which, under the revised Charter, would be in the service of the United Nations.

For the successful operation of an effective world organization to maintain peace, a body of genuinely international servants of high morale is clearly essential. To this end, it seems advisable to provide constitutionally and in some detail not only as to the privileges and immunities of the United Nations as an organization, but also as to the rights and privileges of all United Nations personnel and the limitations thereon.

(12) Bill of rights. Annex VII contains a proposed bill of rights having a twofold purpose: (a) to emphasize the limited scope of the strengthened United Nations by an explicit reservation to the member nations and their peoples of all powers not delegated by express language or clear implication; and (b) to guarantee that the strengthened United Nations shall not in any manner violate certain basic rights of the individual, that is to say, of any person in the world.

The reason for the former is to make doubly sure that the authority of the United Nations shall not be enlarged by indirection, but shall be confined within the limits set forth in the revised charter.

The latter set of provisions would not extend to any attempted protection of the individual against the action of his own government. It may be argued that the time has come for a world organization to guarantee to every person in the world and against any authority whatever a few fundamental rights—such as exemption from slavery, freedom from torture and the right to be heard before criminal condemnation. We have not, however, thought it wise to attempt so vast a departure; and the proposed guarantees relate solely to possible infringements by the United Nations itself. Against such violations it does seem advisable and proper to have the explicit assurances which would be provided by annex VII.

The assurances thus provided would include: guarantees, in considerable detail, of the right of fair trial for any person accused of a violation of the revised charter or of any law or regulation enacted thereunder; a guarantee against double jeopardy; i.e., against being tried twice for the same alleged offense against the United Nations; and also a prohibition against any ex post facto law of the United Nations; i.e., against any law making criminal an act which was not criminal at the time the act occurred.

Provisions would also be included against excessive bail and any cruel or unusual punishment, including excessive fines; and the death penalty would be specifically prohibited. In addition, a remedy would be provided against unreasonable detention through a provision securing the right of any person detained for any alleged violation of the revised charter or of any law or regulation enacted thereunder to be brought wtihout undue delay before the appropriate United Nations tribunal to determine whether there is just cause for his detention.

Unreasonable searches and seizures would also be forbidden, subject to the proviso that this prohibition shall not prejudice searches and seizures clearly necessary or advisable for the enforcement of total disarmament.

Finally, it would be provided that the United Nations shall not restrict or interfere with freedom of conscience or religion; freedom of speech, press or expression in any other form; freedom of association and assembly; or freedom of petition.

The effort has been to provide protection for all the most fundamental individual rights which might conceivably be infringed upon by the United Nations without, however, going into undue detail. Necessarily, as in the case of any constitutional guarantees of the rights of the individual, there will be room for judicial interpretation and application of a United Nations Bill of Rights. This function would be performed by the International Court of Justice which, in the exercise of its proposed jurisdiction to interpret the revised charter and to declare void any law, regulation or decision conflicting with the revised charter as so interpreted, would gradually build up a body of world constitutional law relative to the

scope and application of the various provisions of the Bill of Rights.

(13) Ratification: The proposed requirements for ratification of the revised charter are (a) that ratification shall be by five-sixths of the world's nations, including all the 12 largest nations, the aggregate of the populations of the ratifying nations to equal at least five-sixths of the total world population; and (b) that each nation's ratification shall be by its own constitutional processes.

At first glance, the requirement that so very large a preponderance of the nations and people of the world shall be necessary for ratification may appear excessively difficult. But it must be remembered that it would be impossible to accomplish the main purposes of the whole plan—namely, total disarmament and the establishment of an effective system of world law—unless there is a preponderant acceptance throughout the world of the constitutional document which would provide for the necessary world institutions. In practice, this means that the 8 or 10 principal powers—especially the Soviet Union and the United States—would first need to agree. But once these powers (containing together a large majority of the world's people) had reached agreement on the essentials of a revised charter, there can be no doubt that virtually all the other nations would, as a practical matter, give their assent. Thus, the obviously desirable object of obtaining the unanimous or nearly unanimous assent of all the nations appears also to be a practical one—once the indispensable assent of the leading powers has been obtained.

(14) Amendment: The proposed requirements concerning the procedure for amendments to the revised charter are almost as strict as those provided for its ratification. Any future amendments would be submitted for ratification when adopted by a vote of two-thirds of all the representatives in the General Assembly, whether or not present or voting, or by a two-thirds vote of a General Conference held for that purpose. In order for an amendment to come into effect, ratification by four-fifths of the member nations would be required, including three-fourths of the 12 member nations entitled to 15 or more representatives in the Assembly.

It will be noted that while the proposed provisions for ratification of the revised charter would require that the ratifying nations shall include all the 12 nations having the largest populations, the provisions relating to the ratification of amendments would require the assent of only three-fourths of those 12 nations.

The reason for this difference is that in order to insure the necessary overwhelming support for the revised charter in its initial stage, it is considered essential to have the prior assent of literally all the world's largest nations—defined as the 12 nations with the largest populations. On the other hand, in the case of future amendments after the strengthened United Nations is functioning under the revised charter, it seems unduly severe to require absolutely unanimous approval by the 12 largest nations. Instead, it seems sufficient to require the assent of no more than a preponderant majority of those nations.

(15) Continued organs and agencies: It should be emphasized that, far from impairing the existing organs and agencies of the United Nations which, despite all obstacles, have accomplished important results, the intention is not only to preserve but also to strengthen them. Thus, the General Assembly would have much greater scope through having the final responsibility for the maintenance of peace, through the new system of representation and voting, and through the new, although limited, power to legislate.

The Security Council would, indeed, be abolished, but would be replaced by the vetoless Executive Council, chosen by and responsible to the General Assembly. The Economic and Social Council and the Trusteeship Council would be continued, with important changes as to their composition and functions, and with much stronger financial support under the new revenue system. The International Court of Justice would be continued with greatly enlarged jurisdiction and greater authority. And as to various other organs, and such agencies as the Food and Agricultural Organization (FAO), the United Nations Educational, Scientific, and Cultural Organization (UNESCO), the International Labor Organization (ILO), and the World Health Organization (WHO), the revision would not only provide for their continuance but would also give opportunity for the enlargement of their activities and usefulness.

The intention is not to dispense with anything which has proved useful, but rather to revise, supplement, and strengthen the existing structure so that the United Nations will be fully and unquestionably equipped to accomplish its basic purpose—the maintenance of international peace.

WHETHER TO REVISE THE UNITED NATIONS CHARTER OR TO CREATE A NEW WORLD ORGANIZATION

We have cast our proposals in the form of a proposed revision of the present United Nations Charter, retaining the structure of its 111 articles and supplementing those very articles, as revised, by seven annexes.

We have done this because it seems logical and reasonable to utilize an existing organization of such scope and experience as the United Nations; because the primary purpose of the United Nations has been from the beginning "to save succeeding generations from the scourge of war"; because the name "United Nations" is very suitable to a world authority dedicated to the maintenance of world peace under effective world law; and because the creation of a new and separate world organization adequately equipped for the maintenance of peace would necessarily overshadow the present United Nations.

Nevertheless, we do not regard this question of method as one of principle, but merely of policy. It must be recognized that if the creation of adequate world institutions for the prevention of war is to be achieved through the medium of the United Nations, numerous amendments of the charter will be required which would together amount to a fundamental change in the structure and powers of the United Nations. And if it should develop that for technical or psychological reasons it would be more difficult to accomplish these amendments than to create a wholly new world organization to take over the peace maintenance functions of the United Nations, we wish to make it clear that we would not object to that alternative method. In other words, a thorough revision of the charter is merely, as we see it, the most reasonable means to the end in view and not an end in itself.

For example, it has been suggested that, while continuing the United Nations in nearly its present form, there could be separately created by universal, or nearly universal, treaty an entirely new world organization wholly restricted in its functions to those matters directly connected with the prevention of international violence. Such a world organization existing parallel with the United Nations might be called the World Peace Authority and, to be effective, would necessarily have to possess institutions and powers similar to those formulated in the proposed charter revision for the enforcement of total disarmament and of world law in the field of war prevention. In that case, the United Nations could continue as a forum for the exchange of views on all matters of international interest.

The existence of a new, separate and powerful world organization alongside the present United Nations would obviously be an awkward arrangement. And yet since it would be better to tolerate some awkwardness than to do nothing effective to achieve universal and complete disarmament and a genuine regime of enforcible world law, the idea should not be entirely dismissed.

We emphasize, also, that while an elaborate plan for universal and complete disarmament is included in the proposed revision of the charter (annex I), this does not imply that the revision of the charter must necessarily precede an agreement for total disarmament. It is quite conceivable that an agreement on the technical aspects of universal and complete disarmament will be reached first, and that a revision of the charter would come about later as the most logical means of insuring adequate supervision and enforcement of such a disarmament agreement.

What we wish to make crystal clear is that in casting our proposals in the form of a comprehensive revision of the present charter, we are not dogmatic about advancing this as the only available means to the desired end; and that if it develops that some other method is more feasible, we would be very ready to adopt it in order to reach the end in view.

THE PRACTICAL PROSPECTS

What are the practical prospects for the realization of genuine peace, through universal and complete disarmament and enforcible world law, not in some indefinite future but within some such period as 15 years, i.e., by 1975?

The question is crucial because the achievement of genuine peace will largely depend upon the persistent effort of many people and, unfortunately, only a small fraction of the human race seems capable of working persistently for a purpose, however desirable, that appears far off and uncertain. On the other hand, if convinced that the goal is attainable within a reasonably short time, they will work for it in greater numbers and with greater zeal, and by this very fact make it the more realizable.

I take a hopeful view on this question and will, in fact, venture a reasoned prediction as follows: (a) That within about 4 to 6 years (by 1965–67) a comprehensive plan for total and universal disarmament and for the necessary world institutions to make, interpret, and enforce world law in the field of war prevention will have been officially formulated and will have been submitted to all the nations for approval; and (b) that within 4 to 6 years thereafter (by 1969–71) such a plan will have been ratified by all or nearly all the nations, including all the major powers, and will have come into force.

If these things come to pass, it follows that by 1975 the process of universal and complete disarmament will be well on its way, that the new world security organization (whether in the form of a revised and greatly strengthened United Nations or an entirely new world organization) will be in actual operation and that a new era world history will have begun.

I now summarize my reasons for this prediction, mentioning first what I conceive to be the principal forces working against total disarmament and genuine peace.

The most important single adverse factor I suppose to be the reluctance of the average person to make any drastic change in his traditional form of behavior. As experience shows, he will, of course, try hard to save himself from destruction when he is not only in actual and imminent danger but also comprehends that danger. Short of these circumstances, however, his tendency is to procrastinate and hold to his old ways, often until it is too late.

This deep-seated trait of human nature is very evident at the beginning of the

1960's as a grave obstacle to genuine peace. This is so because nothing is more certain than that under the conditions of our nuclear age the realization of genuine peace will require a truly revolutionary change in human thinking and behavior, a change so drastic that human nature almost automatically resists it, no matter how clear the necessity may appear. As the historian, Arnold Toynbee, has put it, "We shall have a hard struggle with ourselves to save ourselves from ourselves."

For many centuries the units into which mankind has combined—family, tribe, town, city, national state—have been accustomed to assert or defend their interests, real or supposed, by violence or the threat of it, culminating during our advanced 20th century in the two greatest wars in history and, by 1960, in the maintenance of the most elaborate and destructive armed forces that the world has ever possessed. And yet, no matter how obvious it may be that, in order to achieve genuine peace, these forces must be abolished, along with the whole ancient method of international violence, it is foolish to ignore the strongly adverse influence of these habits and traditions and of certain special influences and vested interests created by them.

Of these special influences and interests, by far the most formidable, I judge, is that of the military profession which, in many nations, has sufficient influence to force their governments to resist rather than to aid the cause of total disarmament and the establishment of the world institutions that are essential to the settlement of all international disputes by peaceful means. Unfortunate as it may be, it is necessary to accept the fact that, as of 1960, there is throughout most of the world what has been aptly called a "vested interest in armament" on the part of the military profession, which is a constant and powerful influence adverse to the new conceptions which can alone suffice to achieve genuine peace.

In appraising the weight of this pervading military influence, it is necessary to recognize its good faith in most cases. The typical professional soldier, sailor, airman, or missileman does not deprecate or oppose disarmament because he is any less humane or less civilized than the average civilian. He does so because his training and environment have irrevocably conditioned him to assume that his profession is indispensable. In consequence, it is simply too much to expect that the military profession as a whole will do otherwise than oppose or at least drag their feet in respect of all proposals for total disarmament and all that this implies. It follows that there will be no solution for the problem of world peace until the vested interest in armament of the military profession everywhere is firmly overruled.

A less important yet significant adverse vested interest is that of traditional diplomacy. It must be remembered that for centuries a principal occupation of the professional diplomat has been to deal in power politics, that is to say, in the making of alliances or in seeking to undermine counteralliances or in veiled or open threats of force as a means of advancing the real or supposed interests of this particular country. These habits of thought are almost as difficult to shake off as those of the professional military man; and, consequently, those who seek peace through total disarmament and enforceable world law will do well to discount the almost certain resistance of the professionals in many foreign offices in all parts of the world.

Another vested interest sometimes mentioned as an important obstacle to disarmament and peace is the presumed interest of many millions of armament workers in a continuance of their jobs and the corresponding interest of proprietors in their profits from armament contracts. But while the problem of readjustment to nonarmament work is certainly one that will call for attention and planning, this should not be regarded as a serious difficulty. What is often overlooked is that the process of disarmament would necessarily be a gradual one. At the outset there would almost surely be an interval of several years between the formulation of a comprehensive disarmament agreement and its coming into force through ratification by the respective nations, and this interval would serve as a warning period in which to plan for and partially carry out the shift of workers and materials to nonmilitary purposes. There would then undoubtedly follow a considerably longer period (10 years as proposed in this book) for the carrying out, stage by stage, of the process of actual disarmament, during which the conversion of the armament plants would be completed. Remembering also the immense tax burden which would be lessened year by year and the release of manpower and materials for such purposes as roads, hospitals, schools, urban renewal, and other pressing needs even in the most prosperous nations, it seems clear that this particular obstacle to disarmament and peace will prove to be a minor one.

Far more serious is the factor of mutual fears and recriminations which as of 1960 so poison the East-West atmosphere as to bring under suspicion in the West almost any proposal coming from the East and correspondingly in the East almost any proposal proceeding from the West. This state of affairs is unfortunately deeply rooted on both sides. It has been built up over a long period and "conditions" the thinking of millions of people—East and West—who on other subjects are capable of unbiased judgment. There is little use in seeking to assess the blame which both sides must share, and we must accept this mutually poisoned atmosphere as a fact of life which cannot be gotten rid of for a long time. This mutual fear and suspicion is indeed a most formidable barrier to peace and we should recognize that success in the accomplishment of total disarmament and the establishment of enforcible world law will not be because this barrier will soon disappear but because it will be pushed aside under the pressure of necessity.

Apart from the just-mentioned deeply rooted obstacles, there are several others which are only less important because they are likely to be more transitory. These include the exclusion of mainland China from world councils, a lack of sufficient understanding as to the necessity for complete, rather than partial, disarmament and a similar lack of understanding of the necessity for a comprehensive and interrelated plan rather than a piecemeal approach.

Taking together all the adverse factors—especially the strong tendency to resist any drastic change, the certain opposition of the military profession and of traditional diplomacy and the mutual fears and suspicions between East and West—we have a truly formidable group of obstacles. What are the favorable factors which are capable of offsetting or overcoming them?

Of these favorable factors the most important single one seems very clearly to be the steadily increasing risk of world catastrophe resulting from a continuance of the arms race and a continuing lack of effective world machinery to settle international disputes by peaceful means.

In specifying the increasing risk of world disaster, it is realized that the likelihood of all-out nuclear war may not increase at all and may even diminish during the 1960's because of a greater mutual understanding of its destructive consequences. But more than offsetting this factor is, I believe, the rapidly mounting potentialities of destruction if a large-scale nuclear war should, nevertheless, occur. For while it may be true that the chances of an all-out nuclear war may not increase during the 1960's, it is a certainty that the potential damage from such a war, if it should occur, will steadily increase from year to year. It follows that, taking the two factors together, the real risk will, in the absence of universal and complete disarmament under effective world law, be a steadily mounting one. A greater comprehension of this fact will be, I judge, the major influence in bringing about the formulation and acceptance of an agreement for total disarmament under enforcible world law.

Concerning this increase in the destructiveness of modern weapons, the most obvious development is the constantly increasing efficiency and accuracy of the so-called means of delivery of nuclear weapons. From year to year there has been progress in compressing more and more explosive power into less and less volume and weight, resulting in startling increases in the range and accuracy of the ballistic missiles designed to deliver nuclear warheads.

With regard to the explosive power of the nuclear weapons capable of accurate "delivery" from planes or by ballistic missiles, a report in 1959 of the Special Subcommittee on Radiation (the Holifield committee) of the Joint Committee on Atomic Energy of the U.S. Congress is significant. This report postulates that 263 nuclear weapons with a total explosive power equivalent to 1450 megatons (1,450 million tons of TNT) could be landed on U.S. territory in a single attack; and the report therefore assumes that the average explosive power of each of these 263 weapons would be the equivalent of about 5.5 million tons of TNT. This means that the average explosive power of each such weapon would be 275 times that of the 20,000-ton bomb dropped on Hiroshima in 1945, and that each such weapon would have more than four times as much explosive power as all the bombs dropped by the Western Allies on Germany in World War II. It means also that the total explosive power of the weapons postulated by the Holifield committee as landed on U.S. territory in a single major attack would equal about 72,000 times the power of the Hiroshima bomb and over 1,000 times the power of all the bombs dropped on Germany in World War II.

Since it is difficult to grasp figures of this sort, it may be helpful to give an illustration in terms of mass. Let us imagine a solid column of TNT with a uniform size equal to that of the Washington Monument in Washington at its base, i.e., about 55 feet (16.8 meters) square. In order to comprise 1 million tons of TNT that column would need to be 6,416 feet (about 1,956 meters) high. And in order to comprise 5.5 million tons of TNT (the above-mentioned average strength of the 263 nuclear weapons postulated in the Holifield committee's report), there would need to be six columns of TNT each of which would be 55 feet (16.8 meters) square and nearly 5,900 feet (about 1,800 meters) high.

If we imagine these six immense columns of TNT set up and exploded in London or Paris or New York or Moscow, we can easily see that even so vast a city as any of these could be utterly destroyed.

Even more important is the installation of rocket-launching sites from which it would apparently be possible even in 1960 to "deliver" weapons of appalling power over ranges of up to 8,000 miles and within a mile or two of the target point. It seems clear, therefore, than even as this is written the capacity exists to land highly destructive missiles on New York or Chicago as well as on Moscow or Leningrad from sites thousands of miles distant and within 30 minutes from launching time. And if this could be done in 1960, what will be possible in 1965 after 5 years more of a continuing and even accelerating arms race?

Beyond this is the building of nuclear-powered submarines equipped to launch nuclear weapons from under water; the development of aircraft capable of launching nuclear weapons hundreds of miles from their targets; and, still further, the never-ceasing secret work on biological and chemical weapons.

Such facts as these are only beginning, it seems, to penetrate the general masses of the people in all nations; but it seems certain that their comprehension of the danger will increase from year to year with a corresponding increase of pressure on their governments. Their dominating motive will not, I judge, be fear in the ordinary sense but rather a growing exasperation over the rigidity and traditionalism which prevent the formulation of adequate plans to remove so obvious a manmade risk. Whatever the motive, however, it is impossible to believe that the peoples will be so apathetic and helpless that they will fail to apply a steadily increasing pressure on their governments to take the long-overdue action which is necessary to remove the growing danger.

Next in importance to the risk of appaling disaster from the increasing destructiveness of modern weapons and the increasing popular pressure on the governments to remove this risk is, I believe, an increasing impatience with the vast economic waste and burden of the arms race. In terms of money this burden as of 1960 amounts to not less than $100 billion per annum, while in terms of human energy it means the full-time employment in the armed forces of some 15 million men and of not less than 30 million civilians in the manufacture of arms and other military activities—or a total of at least 45 million persons.

In the United States the resulting cost of about $46 billion per annum in 1960–61 absorbs more than half of the total Federal budget and about 9 percent of the gross national product, while in the Soviet Union the proportion of the national product devoted to military purposes is even higher. In many other nations the cost, although proportionately smaller, is nevertheless a heavy drain on their economies which prevents or handicaps the carrying out of many badly needed improvements. Even in so affluent a country as the United States, the vast military expenditure holds back such urgent needs as the improvement of education and of medical care for lower-income people, urban renewal and the conservation of natural resources; and in nations less economically fortunate, like India, the adverse effects of military expenditure are naturally much greater. As the years have passed, there has been a growing consciousness that the existence of these burdens is incompatible with economic and social reforms urgently demanded by the peoples of many nations. In the 1960's, this consciousness will almost certainly become a more powerful force in favor of total disarmament.

Another helpful development should be a clearer realization from year to year that it is impossible to arrive at any important political settlements in the absence of an agreement for comprehensive disarmament. There has been much ill-considered talk to the effect that the settlement of various difficult political problems—such as the problem of Berlin and German reunification, the problem of Soviet dominance in Eastern Europe, the questions of Korean and Vietnam reunification and the Quemoy-Matsu situation—must precede, or at least be simultaneous with, any comprehensive disarmament. The commonsense of the matter is, however, that in an armed world it is most improbable that any of these difficult East-West issues can be settled—for the simple reason that it is virtually impossible to settle any hard controversy between opponents of equal strength and pride when the opposing parties are armed to the teeth and, therefore, bitterly suspicious of each other. All experience shows that before such opponents can settle any important issue, they must first agree to dispense with violence and cease their mutual threats and insults.

It has taken a long time to grasp this simple truth as applied to the crucial disputes between East and West; but in the 1960's it will become more and more apparent to most reasonable men and women that an agreement for universal and complete disarmament must be reached before these thorny East-West issues can be resolved.

Another favorable factor will be the almost certain abandonment during the 1960 decade of the exclusion of mainland China from the United Nations and from normal relations with the United States and many other nations. The bankruptcy of this policy, which has so greatly prejudiced adequate negotiations for peace, has long been apparent and it is hardly conceivable that it can much longer survive. When China, with its more than one-fifth of all the people of the earth, is admitted to full participation in world councils, an important barrier to the formulation of a comprehensive plan for peace will have been removed.

Still another encouraging sign is the increasing knowledge of the ways and means whereby genuine peace can be achieved. The persistent and rising desire since the end of World War II for the abolition of war has unfortunately been accompanied by considerable defeatism as to the feasibility of accomplishing this result. This defeatism has, however, been largely caused by an exaggerated view of the difficulty of the problem which has been due in turn to a lack of sufficient study and discussion of the concrete problems that are involved, i.e., the various interrelated questions as to the nature and form of the world institutions requisite for world order. At the start of the 1960's we can discern a marked change in this respect, in that a beginning has at last been made in a closer study of the specific problems—not only by private persons but even by public officials. There is a definite relation between the development of this study and progress toward the desired goal. This is true because the problems involved are by no means insoluble, and as more and more people begin to apprehend how these problems can be dealt with, the spirit of defeatism will naturally lessen and the better will be the prospect for the acceptance of an adequate plan for peace.

An important result of the more intense study just mentioned will inevitably be a more general understanding that total, rather than partial, disarmament will alone meet the situation. In 1960 it is almost universally recognized that, in order to induce acceptance of any important disarmament, a well-organized inspection system is essential, while only a minority as yet seems to understand that complete disarmament is equally indispensable. For this proposition there are three main reasons: (a) because experience has shown that it is virtually impossible to agree upon any plan of any consequence for merely partial disarmament, since one nation or another is almost certain to claim, and with some justification, that the particular proposed reduction would put it at a disadvantage; (b) because even if agreed upon any merely partial disarmament would not fulfill the purpose, since in the nuclear age the retention of even a small fraction of the armed forces of 1960 would be enough to keep in existence many pernicious fears and tensions between the nations; and (c) because, although an effective world police force is clearly indispensable as a condition for disarmament, there is a distinct practical limit upon the size and expense of such a force, so that if even as much as 10 percent of the national armed forces of 1960 were retained, it would be impossible to maintain a world police of sufficient strength to insure its capacity to deter or suppress any possible international violence. As the disarmament negotiations of the 1960's develop, it can safely be predicted that the validity of these reasons will be more and more recognized. And when it is generally accepted that total, rather than partial, disarmament is no less necessary than an effective inspection system, a long step forward will have been taken.

Along with a clearer understanding that nothing less than the abolition of all national armaments will suffice, there is badly needed a clearer realization of the necessity for a comprehensive rather than any piecemeal or partial plan. No intelligent person sets out to build an adequate house without a plan providing for all the elements necessary to make the structure fulfill its purpose. He knows from the start that foundation, sidewalls floors and roof must all be provided and that they must be so fitted together that, with each performing its necessary function, the house will stand. It is deplorable, therefore, that even in 1960 only a small minority seems to realize that the necessity for a complete initial plan applies also to the structure of peace; and that, if the structure is to stand, all the basic organs necessary for the maintenance of peace must be included in that plan. A more general realization of this truth will almost certainly come in the 1960's and will be a powerful force for world order.

When the various adverse factors are put in one scale and the various favorable factors in another scale and weighed against each other, my considered opinion is that the favorable factors clearly outweigh the adverse, and that we can reasonably look forward to a new world order based upon universal and complete disarmament and enforceable world law within some such period as 15 years.

Against any such optimistic view, it may be objected that it takes too little account of the factor of leadership. It may well be said: "Granted that the destructive power of modern weapons will constantly increase; granted that concern over the risks and the ultimate result will also increase; granted that there will be a wider understanding of the necessity for total, rather than partial disarmament and of the ways and means whereby complete disarmament under enforceable world law can be achieved; granted that the popular pressure for a termination of the arms race will intensify; where is the requisite leadership to come from for the formulation and acceptance of the necessary novel and elaborate plan?"

It must indeed be recognized that, even in spite of a strong and worldwide demand for a cessation of the arms race, nothing effective can be done in the absence of vigorous and persistent leadership for a specific and adequate plan. I am confident, however, that effective leadership will develop; although it will probably need to come, in my judgment from sources other than either the Soviet Union or the United States.

In the case of the Soviet Union, there is indeed every reason to suppose that for obvious reasons of self-interest, it will press persistently for the "general and complete" disarmament proposed by Chairman Khrushchev on September 18, 1959. The difficulty is, however, that because of the intense suspicion with which almost any Russian proposal is regarded in some quarters the leadership of the Soviet Union would be under such a constant handicap that the acceptance of Soviet leadership in unlikely.

With regard to the United States, a similar handicap will operate in view of the reciprocal suspicion with which almost any American proposal is regarded in some parts of the world. And beyond this, it is unfortunate, but true, I believe, that as of 1960 the United States cannot be expected to provide wholehearted leadership on behalf of total disarmament, as distinguished from acquiescence and ultimate support. For this there

are, I believe, basic reasons which include the relative geographical remoteness of the United States even in the nuclear age, and above all its relative lack of suffering from modern war in comparison with the Soviet Union, France, Britain, and several other nations of Western Europe. It is therefore, no accident, I believe, that the first proposals for universal and complete disarmament came, on the one hand, from the Soviet Union and, on the other, from the United Kingdom, both of which suffered so greatly in World War I and II and both of which would be subject to the most dire destruction in a possible world war III.

For these reasons I believe that the necessary leadership will proceed from the United Kingdom and Western Europe, however much in later stages it is supplemented by support from other nations.

For years I have believed that the question of complete disarmament and all that it implies would come to a head when the Soviet Union was able to install a large number of ballistic missile sites both in its own territory and in Eastern Europe from which nuclear missiles could be launched with accuracy against targets in the United Kingdom, France, Italy, and other nations of Western Europe. I have long been convinced that when this came about some, at least, of these nations would say in effect: "This arms race may be all very well for the superpowers, but our very life is threatened by it and we must now insist that the concept of complete disarmament under enforceable world law be taken seriously." This conviction has now been vindicated to some extent by the important proposals of the British Government of September 17, 1959, for "comprehensive disarmament by all powers under effective international control" whereby all armaments and military manpower would be reduced to "levels required for internal security purposes only."

With the constant "improvement" in the power and accuracy of ballistic missiles, it is obvious that in an all-out nuclear war the United Kingdom would be a prime target. It seems virtually certain, therefore, that with its large population in a small area the destructive effect of nuclear war on the United Kingdom would be truly appalling; and since this fact is now becoming generally appreciated, there is every reason to suppose that any British Government will feel obligated to persist in the effort for complete disarmament initiated in September 1959.

Apart from this strong motivation of the United Kingdom to strive persistently for total disarmament, the high degree of civilization and the maturity of the United Kingdom make it will equipped to assume this leadership. It could confidently rely upon the early support of nearly all the nations of the British Commonwealth (Australia, Canada, Ceylon, Ghana, India, Malaya, New Zealand, Nigeria, Pakistan, etc.) so that before long the initial leadership of the United Kingdom would be thought of as that of the British Commonwealth, with all its authority and prestige.

As of early 1960, this British leadership seems to offer the best prospect. But this is not to say that it is the only promising one. Thus it is also to be hoped that a group of nations which are neutral or uncommitted as between the superpowers (such as Austria, Burma, Indonesia, Ireland, Sweden, Switzerland, the United Arab Republic and Yugoslavia) can be formed to supplement and support the British leadership if it develops, or to take its place should it falter or fail. Another useful possibility would be the formation of a worldwide group of smaller nations irrespective of their neutrality which, besides the smaller neutrals, could include such countries as Belgium, Czechoslovakia, Denmark, Greece, the Netherlands, Norway, the Philippines, Poland, Rumania, and Thailand, and various of the smaller nations of Latin America and Africa.

Altogether in one or the other of these ways, or by a combination of them, I have confidence that the necessary leadership will be forthcoming. The role of the Soviet Union and the United States would then be not to lead the way, but to refrain from formulation and implementation of a great and sufficient plan. The same will be true of Communist China, which, in the end, will have an equally important role.

What the whole question comes down to in last analysis is whether the human race will show enough intelligence to enable it to make the required adjustment to the nuclear age. In 1960 the issue as to the future of mankind is whether the human race is sufficiently resourceful to formulate and accept world institutions which will once and for all abolish war and utilize the great new discoveries of science for peaceful uses alone. This issue will, however, depend not upon any inherent lack of intelligence but upon whether sufficient effort is made to make effective use of our present fund of intelligence. If the peoples are so apathetic as to permit the domination of military and old-style diplomatic thinking, they can expect nothing better than an indefinite continuance of the arms race and ultimate disaster. On the other hand, if the peoples make an even reasonable effort to comprehend the danger and the available means to remove it, it lies within their power to solve the problem and to institute an age of genuine peace under world law.

EVOLUTION AND PURPOSE OF THE PROPOSALS

This book is the work of two lawyers. One of them, the writer of this introduction, has been engaged in the practice of law in New York or in public affairs since 1906. The other, Mr. Sohn, is a generation younger, a scholar learned in the history of past efforts to achieve peace and now a professor of law at the Law School of Harvard University where his courses include "United Nations Law" and "Problems in the Development of World Order."

The detailed proposals of the book are the result of an evolution over a period of years. In my own case, they took tentative form in a proposed world constitution privately circulated in 1940; and 10 years later certain basic ideas of the proposals were expounded in my small book, "A Plan for Peace." In the case of Professor Sohn, who came to the United States from Poland as a young lawyer in 1939, the proposals reflect 20 years of thought and teaching on the subject and his experience as a legal officer of the United Nations.

Our collaboration began in October 1945 at a conference of private citizens as to "how best to remedy the weaknesses of the United Nations Charter," which some persons even then recognized as inadequate to ensure world peace; and our association has continued ever since.

During 1949, in response to various demands for a comprehensive set of proposals for charter revision, I resolved to undertake this arduous task and sought out Mr. Sohn who was then a lecturer at the Harvard Law School. He agreed; and the result of our collaboration was a joint document, issued in 1953, entitled "Peace Through Disarmament and Charter Revision," together with a "Supplement" thereto issued in 1956. Both of these documents were widely circulated for comment and criticism; and were then revised and combined in the book entitled "World Peace Through World Law," published by the Harvard University Press in March 1958. The present second edition embodies certain minor revisions without change, however, in the underlying principles or main features of the authors' proposals.

The title "World Peace Through World Law" reflects a change of emphasis, progressively arrived at, whereby universal and complete disarmament, however indispensable, is treated as one of several interrelated and equally indispensible elements of world order rather than as an all-inclusive solution. Our basic premise, however, has remained intact, namely, that if the world really wants peace, it must accept world institutions fully adequate to achieve universal and complete disarmament and to enforce world law within the limited field of war prevention. Far from being weakened by recent events, this fundamental conviction is stronger than ever.

As already stated, the purpose of this book is to provide material for the extensive discussions which will be required before truly effective world institutions for the maintenance of peace are accepted by the peoples of the world.

It is true that the authors have attempted to present a complete plan whereby genuine pace, in a disarmed world, would actually be secured. It is true also that we have confidence in our work which is the result of so many years of study and of searching criticism by hundreds of qualified persons in many nations. Nevertheless, it would indeed be presumptuous to assert that we have the final answers to the various thorny problems. We well know that better, or at least more acceptable, solutions may be hammered out in the process of debate. We do believe, however, that these detailed and specific proposals will serve to encourage others to discuss the many and difficult questions that are involved.

The need is not for more generalities in recognition of the necessity for world law. There are already enough of these. Rather, the need is for alternative detailed plans to furnish a basis for discussion; and our purpose has been to supply such a plan. If by so doing this book hastens even slightly the day when enforceable world law actually prevails between all nations, it will have fulfilled its purpose.

For modern man the prevention of war is not only the most important of problems; it is also one of the most difficult. During our work we have often thought of Professor Einstein's remark on this point. When asked why it is that when the mind of man has reached so far as to solve the secrets of the atom it has not been able to devise means to protect mankind from destruction by the new discoveries, he replied: "The answer is simple. It is because politics is more difficult than physics."

Nevertheless, our proposals are advanced in the firm conviction that genuine peace through total disarmament and enforceable world law is now a practical prospect which practical men can work for with reasonable hopes.

Senator McGee's "Senate Summary"

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29, 1960

Mr. McNAMARA. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD a news release entitled "Senate Summary," issued by the office of the junior Senator from Wyoming [Mr. McGEE]. This particular release is dated June 15, 1960, and discusses, among other things, many phases of our foreign relations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATOR GALE MCGEE'S SENATE SUMMARY

Fellow Wyomingites, during the Memorial Day recess of the Senate, I was privileged to attend the Bilderberg Conference in Burgenstock, Switzerland. A colleague, Senator HUGH SCOTT, Republican of Pennsylvania, and I were the Members of the Senate attending. Members from the parliaments of the other NATO countries of Western Europe, diplomats, and leaders of business and industry were also present. Presiding over the series of meetings was H.R.H. Prince Bernhard of the Netherlands. To assure frank and uninhibited discussion, the meetings were closed to the press, all comments were off the record, and no conclusions were formalized. The transportation costs, moreover, were paid by a private foundation rather than by the taxpayer. It was felt that only in these ways could men high in the governments of the world be encouraged to speak bluntly on the issues of the day.

Coming as it did in the wake of the collapse of the Paris summit meeting, our deliberations in Switzerland became, in fact, a sort of "pick-up-the-pieces" conference. While there were no group conclusions, it is permissible to share with you some of the individual and personal observations picked up in private conversations with persons from 10 or a dozen governments of the world.

Almost without exception there was agreement that the United States had stumbled badly in the early phases of the U–2 incident. Criticism of our handling of the U–2 seemed to center around three aspects: (1) the timing of the U–2 flight itself, (2) the President's decision to take full, personal responsibility, and (3) the handling of the news releases of the incident by Washington.

Mindful of the fact that there may have been deeply rooted intelligence reasons for a special U–2 flight as near the summit conference as the fateful flight of pilot Powers was, the thought prevailed, nonetheless, that the time was unfortunate and may even have been an unnecessary risk to have taken.

In regard to the second criticism, it was pointed out that the President's personal assumption of responsibility more than any other single development provoked the inexcusable and unfortunate tirade of Mr. Khrushchev against President Eisenhower. The consensus was that espionage is dirty business at best and necessary, but that the head of state can never afford to be personally identified with it. To do so calls into question the legal and ethical position of his government at the same time that it places in jeopardy the treaty relationship of his friends and allies. For example, it will now be increasingly difficult for Turkey, Pakistan, and Norway to permit our continued use of bases on their territory for our own purposes.

And criticism regarding the handling of the news releases on the incident in Washington centered on the obvious ineptness of the bureaucrats in the Capitol. It was clearly a case of the left hand not knowing what the right hand was doing. Quite obviously there was no one minding the store at this critical moment. The Secretary of State, Mr. Herter, was in Turkey; the President was in Gettysburg; and in Washington there was a merry-go-round of conflicting statements coming out of the NASA (National Aeronautics and Space Administration), the CIA (Central Intelligence Agency), the Department of State, and the White House.

What disturbed many of our friends was the thought that we in the United States were attempting to hide a clearcut mistake behind a facade of unity. The fear was expressed also that we were dangerously exploiting the loyalty of our allies.

It is only fair to say, however, that while our friends and allies were all shook up over our fumbling, the incident did not destroy their basic confidence in our leadership. Their one desperate hope seemed to be, however, that somehow we in the United States might learn from this experience. As I urged upon several of our critics, in the American system of government we are entitled to make mistakes; to do so is not fatal as it is in a dictatorship. But there is a corollary to that. We are also entitled to learn from those same mistakes.

The events preceding and following the Paris debacle have brought into focus two serious consequences.

One is the freezing of the public mind in America. Because of the unfortunate turn of events, the candidates for President in both parties face the danger of being straitjacketed by public opinion on matters affecting not only the Russians but great questions of peace all around the world. Some of them have already yielded to the temptation to run against Mr. Khrushchev instead of for a positive and constructive program for peace.

A second is the inclination to vote more and more military funds in the expectation that we will thus be correcting what went wrong. The harsh truth is that this may only aggravate the present worldwide condition of unrest and anti-Americanism. Nowhere around the globe can it be said that the United States has failed to project its military image. But there is real reason to believe that we have failed to project a more positive national profile. Recent riots in our own hemisphere, in Africa, and in Asia offer dramatic testimony. What we are against has been made abundantly clear; but what we are for has not gotten through.

Time presses America for a larger effort in nonmilitary fields overseas. Yet, the net effect of the impulse to increase military appropriations is to take funds away from the nonmilitary. While we cannot afford to slip back militarily, neither can we afford to neglect the other, more constructive side of the American image.

By way of a postscript to the discussions at the Bilderberg Conference, let it be noted that the international position of the United States has further deteriorated—dangerously so. In a matter of weeks American prestige has suffered a succession of body blows.

To the bungling of U–2; the Paris fiasco, and the withdrawal by the Kremlin of the invitation to President Eisenhower to visit the Soviet Union, has now been added the humiliating withdrawal of a similar Japanese invitation; hostile mobs confronting the President in Okinawa; and a renewal by Communist China of bombardments of Quemoy and Matsu, deliberately timed to further embarrass our President.

That there will be still more incidents is a realistic prospect. Nor is there any reason to believe that the approaching Democratic and Republican Conventions may cause the Communists to suspend similar psychological attacks just for the month of July. This fact thrusts to the fore the question of whether the Congress dare be away from Washington even long enough to nominate Presidential favorities in July. If the world situation has slipped as badly as recent crises suggest, it is doubtful wisdom for the U.S. Senate at least to subordinate the Nation's foreign policy crisis to previous calendar commitments in Los Angeles and Chicago.

Without any question, greater unity—at home and abroad—has resulted from the incidents. But the harsh fact remains that we now stand united on a far lower level than we had a right to expect or to hope for had the U–2 affair not triggered the succession of incidents we have just experienced.

This brings us then back home where we in America have to decide for ourselves how important it is in a democracy to encourage constructive criticism rather than to excuse mistakes behind a facade of unity.

It is unfortunate that the U–2 incident and the others occurred in a Presidential election year. Criticism is now too often dismissed as being political when in all truth something basically went wrong in a most vital segment of our national security setup. For this reason, it is imperative that Republicans and Democrats alike unite as Americans in support of a sober, intelligent, objective assessment of this whole episode in the expectation that the next President, whomever he may be and from whichever party, may learn the lessons that desperately must be learned if we are to meet the risks of work leadership sucessfully.

To err is human, but to err repeatedly may no longer be one of our permissible luxuries. As one of the great statesmen of Europe put it, "You in America are on the spot. We all make mistakes," he said, "but your mistakes carry a special weight because of the gigantic role you play in the world. If my country makes a mistake, it matters very little to the rest of mankind. But you in America are like Atlas with the world on your shoulders. When you stumble, the whole world falls with you."

Kennedy as a Catholic: An American Answer to the Religious Question

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, Oregon State Senator Monroe Sweetland, candidate for secretary of state in Oregon, has written an eloquent letter, dated June 15, 1960, in response to a petition signed by 33 members or associates of the Stafford Baptist Church in Oregon.

Monroe Sweetland recognizes the sincere concern which prompted the petition. The result was that he went to some length to spell out his opinion.

Mr. Sweetland has been a long time supporter of the candidacy of Senator KENNEDY for the Democratic nomination for President. He believes that Senator KENNEDY's long record of public performance is the real test of qualification and sincerity. He believes, as I do, that there should be no religious qualification for the Presidency of the United States. He believes, as I do, that Senator KENNEDY's choice of church, is not, under American precepts, a legitimate issue.

Moreover, it would seem that the people of West Virginia, almost wholly Protestant in religion, demonstrated their agreement in the recent primary contest there between Senator KENNEDY and Senator HUMPHREY in that they voted overwhelmingly in support of Senator KENNEDY even though they knew very well that he was by religion a Catholic.

We are in mortal combat with dedicated enemies of all Christendom—

Senator Sweetland writes in his letter.

What arrogant folly it would be, 1,960 years after Christ, for Christians to allow sectarian

rivalry to deprive us of the best leadership—to be more at war with fellow Christians than with the evil forces which threaten us.

Under unanimous consent I am including the entire text of Senator Sweetland's letter:

OREGON STATE SENATE,
Salem, June 15, 1960.

DEAR FRIENDS OF STAFFORD BAPTIST CHURCH: Recently I received the petition signed by 33 members or associates of your Stafford Baptist Church in which you urged me to oppose for the Presidency any candidates who are members of the Catholic Church. This petition was addressed to me, I assume, because I am an elected delegate to the Democratic National Convention, pledged to Senator JOHN F. KENNEDY under the law after his decisive victory in the recent primary. Perhaps you also selected me as the object of your petition because I am your State senator, and a fellow Protestant.

I recognize the sincere concern which prompted this petition. Many of the current rash of tracts and letters attacking candidates for President or Vice President who happen to be members of the Catholic Church are abusive or even vulgar. They promptly end up in our wastebasket. Yours is not at all in that category, and I am going to some effort to spell out my opinion to you. I hope you will have the generosity and patience to read through this letter discussing the issue you raise.

You state vigorously your feeling that members of the Roman Catholic minority in the United States should be denied certain basic constitutional rights. Your argument recited some quotations from claims of Catholic writers and even of some Popes over the lives and opinions of individual Catholics. These may be matched, let me point out, by similar claims or demands by some spokesmen for almost every religious group powerful enough to dominate a nation—Lutherans, Moslems, Hindus, Eastern Orthodox, Episcopalians, Dutch Reformed, and even Cromwell's Protestants and our early New England Puritans. Minorities have been quashed under many faiths. Only eternal vigilance will prevent this happening at any time in human history.

In every State the people decide how far they wish to aid religion through public support. In Oregon, as you know, we give State support through tax exemption to your church and other houses of worship, but draw the line at parish houses, monastaries or manses. Catholics, like the rest of us, are not bound to vote one way on these issues, and are divided in their opinions. Senator KENNEDY, who is the particular target of your petition, has frequently opposed public funds to aid parochial education, has long opposed sending a U.S. representative to the Vatican, and has been harshly attacked in some conservative Catholic publications and circles for his opposition to moves which might lead to church-state union. You have a perfect right, of course, to oppose any candidate for what he advocates, but please do not attack a candidate for positions he does not advocate or endorse, even though contrary positions may be the official policy of some organization to which he belongs.

A long record of public performance is the real test of qualification and sincerity—and Senator KENNEDY has met these tests. If we accepted the thesis of your petition no Methodist could sit on the Oregon Liquor Control Commission, no Baptist Governor could permit men and women to be gassed for murders, no Quaker (like Mr. NIXON) could be entrusted to be Commander in Chief of the Armed Forces.

In short, your petition asks me to assist in setting up a religious qualification for the Presidency of the United States. This I cannot approve. It is a concept so contrary to our American policy that I hope that you will also reject it upon further reflection and study.

Furthermore, may I urge that we Christians should be much more concerned over the conduct and point-of-view of elected officials toward humanity than over the denominational labels they may inherit or choose. Many will pray loudly in public places, like the Pharisees of old, without relating their professions to the welfare of their fellow men. But when American Christians review the record of a dedicated young man like JOHN F. KENNEDY, whose compassionate concern for the senior citizen, for the underprivileged Negro, for the poorest family on public welfare, and for the little people who need our help in the most remote parts of the world, we find a man who meets the test.

It seems to me we should all be very pleased to be able to pick a practicing Christian for President—one who has put his principles to work in many practical, humanitarian ways. Note, too, that here is a man who will not make his first tie with a Christian faith after getting into the Presidency.

When a Christian or a Jew of any denomination takes his oath on the Holy Bible to uphold the Constitution of the United States, including the principle of separation of Church and State, he should be held to it notwithstanding the historic positions of nearly all powerful sects and religions against the American policy. So it has been throughout our history as hosts of Senators and Congressman, Supreme Court Justices, Governors and Mayors who were members of the Catholic Church, have upheld their oaths with fidelity. Probably no tenet of the Catholic faith is more vigorously held than the sanctity of marriages and the evils of divorce. Yet judges of Catholic faith carry out our divorce laws in every State of the Union.

Oppose Senator Kennedy for many reasons and you are well within the bounds of fair criticism. Oppose him, if you wish, because of his bills for health insurance for the elderly; oppose him for his work against Mr. Hoffa of the Teamsters; oppose him because he is a Democrat; oppose him because he advocates the $1.25 minimum wage law; oppose him for his support of river development and a high dam at Hells Canyon—all these and many others are legitimate issues. His choice of church is not, under American precepts, a legitimate issue.

Think, too, how hypocritical we would look to the outside world if we deny to the world's largest body of Christians the right to the highest offices in our democratic nation. Jews and Protestants and Catholics and Quakers have suffered this discrimination in other lands. Are we Americans no better after all our claims to be the land of liberty and opportunity for all?

You have every right as Baptists, as I do as a Methodist, to try to persuade Catholics or other Protestants or non-Christians that they should accept our beliefs as a better way. But as Americans none of us has any right to suppress a minority or deny full citizenship to any man or woman or child under our flag, however much we disapprove or even detest their views. This certainly includes the right of an American of any faith to aspire to be President or Vice President of the United States.

The terms of your argument urging our non-Catholic majority to deny the Presidency to Catholics applies to all other public offices too. In various past elections, and again this year in my contest for Secretary of State, I have found myself pitted against candidates who are members of the Catholic and other minority churches. I hope to win this year as I have in most of my election races, but I would far rather lose than win on the negative and, I feel, un-American basis of religious or racial bias.

Knowing how I feel on the subject, a very large majority of Oregonians of my political affiliation (the majority party) has elected me to vote for them and Oregon at the Democratic National Convention. I will do everything I can to bring about the nomination and later the election of Senator KENNEDY, not because he is a Catholic, but because of the high principles which I think he exemplifies and because he can give our Nation dynamic world leadership at an hour of desperate need.

We are in mortal combat with dedicated enemies of all Christiandom. What arrogant folly it would be, 1,960 years after Christ, for Christians to allow sectarian rivalry to deprive us of the best leadership—to be more at war with fellow Christians than with the evil forces which threaten us.

Between now and November each of us must think this over for himself and herself. I do not claim to have all the answers, but this letter explains how I am answering it for myself.

Sincerely yours,

MONROE SWEETLAND.

MILWAUKIE.

Austria Achievement

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Post of June 20, 1960, written by Sylvia Porter:

AUSTRIA ACHIEVEMENT

(By Sylvia Porter)

The much-touted "Labor-Management Conference" at which industry and labor leaders would discuss fundamental problems away from the bargaining table and thereby help promote healthy price and wage stability in our land is apparently heading for a quiet death in infancy. The likelihood that a second summit meeting of industry and union leaders will be held "in the foreseeable future" is, according to informed sources, "very dim."

There was an initial meeting on May 19 in Washington. To it came the president of the National Association of Manufacturers and other top industry leaders, the president of the AFL–CIO and other top union officials. They talked in private for almost 3 hours and at the end, AFL–CIO chief George Meany said the discussion had been "completely amicable" and the next meeting would be held as soon as possible.

The support behind the initial conference was certainly high-level enough—ranging from President Eisenhower down. To avoid any taint of Government "pressures," though, the program called for only labor and management participants, no observers from Government or the "public."

Yet even this modest effort to reduce misinformation and misunderstandings about each other which could lead to a repetition of the prolonged steel strike of 1959 is to get nowhere.

Can any voluntary program of this sort ever produce results? Whether it can in our sprawling industrialized country with its giant corporations and powerful unions I wouldn't presume to guess but at this moment of disillusion about even a bit of progress, a report about what is being achieved in Austria appears worthwhile.

In the first several years following World War II, Austria's inflation was a devastating

20 to 30 percent a year but since 1957, it has chalked up the best record for price stability of any European nation—including traditionally stable Switzerland. Its wholesale price index has remained absolutely level in the 3-year period, its consumer price index has climbed only 2 percent. At the same time, the spectacular rise in the efficiency of its production has permitted significant wage increases and a shortening of the workweek.

A key reason for the impressive performance, international economists agree, is Austria's Price-Wage Commission, created March 20, 1957, to serve as an adviser to the Austrian Government and consisting of 12 key members from industry, labor, agriculture, and government.

The commission's key objective is to maintain economic stability by studying and weighing the economic justification of any proposed wage and price increases.

All intended price or wage hikes must be reported to the commission which exhaustively analyzes each request. A unanimous decision is necessary on the propriety of each request.

While the commission has no legal powers to enforce its decisions and submits its findings to those involved in the form of "recommendations," obviously the power of its recommendations and the force of public opinion are sufficiently strong not only to have restrained price increases but at times actually to have induced price cuts. As for wages, last year, it disapproved demands by the Teamsters Union and in many instances, sliced original demands for increases of 15 to 20 percent to 3 to 5 percent.

No one even pretends the commission is fully effective or foolproof. Probably it shouldn't be in any country aspiring even to a semblance of freedom. But it has been remarkably effective. Can't our industry and labor leaders find anything in the Austrian experience that might be of value to us?

Army Report Refutes FMC Critic's Charges

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks I submit herewith an editorial which appeared recently in the San Jose (Calif.) Mercury relative to the charges made by the gentleman from Ohio [Mr. VANIK] that a contract recently awarded Food Machinery and Chemical Corp. was rigged:

ARMY REPORT REFUTES FMC CRITIC'S CHARGES

The Department of the Army has now kicked the last prop out from under an Ohio Congressman's charges that Food Machinery & Chemical Corp. was favored in bidding for an armored personnel carrier contract.

We trust the report, from Assistant Army Secretary Courtney Johnson, will silence Representative CHARLES VANIK, Democrat of Ohio, and his idiotic assertion that the bids were rigged so that FMC couldn't lose. VANIK's election-year tactics should deceive no one; an Army-owned tank plant is standing idle in his district. The setup, of course, is a natural for a vote-getting expedition.

However, the facts simply do not support VANIK's contention that the Army so wrote the contract specifications that FMC obtained the $34.4 million job when it could have been done cheaper in the Cleveland area.

As Secretary Johnson pointed out, if all the evaluation factors (the cost of tooling up, for instance) had been applied against FMC and none against the lowest bidder in the Cleveland area, FMC's proposal would still have been the lowest submitted to the Government.

Wisdom in a Troubled World

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, "Wisdom in a Troubled World" is a very timely article, particularly in light of the collapse of summitry, personal diplomacy, and the tragedy of the Presidential mission to the Pacific. This article was written by David Lawrence and appeared in the U.S. News & World Report February 8, 1960.

By leave previously granted, I insert Mr. Lawrence's article in the RECORD:

WISDOM IN A TROUBLED WORLD

(By David Lawrence)

In many parts of the world, there is turmoil, friction, fear—or else restlessness, discontent, and a searching for the Utopia that is never found.

In France, there is a new crisis.

In Africa and Asia, seething masses of people clamor for a better life.

In the Middle East, deepseated enmities show no signs of being resolved.

In China, hundreds of millions have become the pawns of dictators, even as tens of millions in the Soviet Union find themselves victims of the mad passion of their rulers for world conquest. Unscrupulous leaders turn away from individual betterment to the pursuit of more and more power over their fellow men. Human slavery is on the increase.

In Latin America, the crisis deepens. Cuba, the unhappy victim of Communist infiltration, now openly defies her longtime friend—the United States.

Throughout Central and South America, Communist intrigue carries its subversion into governments, universities, trade unions, the press, and the church.

Amidst it all, the Soviet Union preaches hourly over the radio waves its own brand of hypocrisy. It claims to be for peace, for disarmament, for an abandonment of the use of nuclear weapons. But while its voice is the voice of Jacob, its hand is the hand of Esau.

Meanwhile, science is implored to make haste, to invent deadlier weapons.

International conferences seeking humane objectives proceed with external piety and inward distrust.

And what sort of spectacle does the United States itself present?

We see ambitious men belittling each other in a quest for political gain.

We see huge blocs, possessed of vast power over the economic life of our country, vying with each other in establishing their respective monopolies.

We see evidences of broken ethics in various fields.

We see a recrudescence of religious bigotry.

We see a contemptuous indifference to the lessons of history. Our boast is that this age—our age—is indeed the greatest of all. We ignore the Scriptural injunction: "For what shall it profit a man, if he shall gain the whole world, and lose his own soul?"

What, indeed, do we gain by going to the moon when we have forsaken our duty to each other on this planet? Where, to be sure, is the true key to peace? Is it in the weapons we have forged and in the missiles we shall build to protect ourselves against the madman who may press the button of world destruction or who, even foregoing war, will attempt conquest by threat?

What have we learned through history—that only war and brute force will gain victories for the strong over the weak? Or have we learned something of the spirit of man himself and of the incalculable power of human beings who, when they concert their will, can brush dictators aside as mere pygmies?

The writings of the great philosophers of the republics of ancient Greece bring uncomfortable reminders of our own inadequacy. We today criticize an emphasis on luxuries and an addition to materialism. Yet we cry out for more and more subsidies to the individual and show less and less interest in the need for self-reliance. Unwittingly, we are building up the image of a totalitarian state in which the dependent citizen is taught to abide by the will of his omniscient masters.

What about the simple and elementary principles of human conduct that have brought happiness to many an individual and success to the pursuits of many an enterprising mind? Shall we regard as trite the doctrine of human love or the advocacy of a spirit of mutual helpfulness in all human relations?

We must have better communication—from group to group, from people to people. We must not give way to the egocentric illusion that other peoples have no wisdom to impart to us.

We must not look on history as the faded pages of some other generation's failures.

We must communicate to each other once more the wisdom of the ages—that friction among human beings is more often than not the product of selfishness and greed and that the need for cooperation between peoples is the greatest challenge of our times.

Science has its worthwhile objectives, but the constant effort to enlarge man's knowledge in any field of exploration must be put into proper perspective.

Shall we, ignoring the crises in human relations that beset us on earth, seek in outer space to gain an imaginary triumph in the competition for so-called "prestige"?

The answer comes from the books of faith. There can be no peace on earth until we have learned to respect the dignity of man and are willing to build on the foundation of human love the kind of world that the great teachers of mankind have portrayed to us from the time of the Ten Commandments and the Sermon on the Mount. These are the true lessons of mortal life.

Committee for Effective Use of the International Court by Repealing the Self-Judging Reservation

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. LINDSAY. Mr. Speaker, I should like to bring to the attention of my col-

leagues a statement of position issued by the Committee for Effective Use of the International Court by Repealing the Self-Judging Reservation. It is a good statement and it cogently summarizes the case for repeal of the self-judging reservation.

Apart from the value of the statement itself, I should like to point out to my colleagues the makeup of this new committee. The Honorable Learned Hand is honorary chairman. The other officers are: Robert Dechert, chairman; William T. Gossett, treasurer; H. Dawson Martin, assistant treasurer; and Terence H. Benbow, secretary. The committee sponsors are: Dillon Anderson, Houston, Tex.; Douglas Arant, Birmingham, Ala.; Eugene D. Bennett, San Francisco, Calif.; David K. E. Bruce, New Windsor, Md.; John G. Buchanan, Pittsburgh, Pa.; Ben M. Cherrington, Denver, Colo.; James B. Conant, New York, N.Y.; Thomas K. Finletter, New York, N.Y.; Jefferson B. Fordham, Philadelphia, Pa.; Erwin N. Griswold, Cambridge, Mass.; Alfred M. Gruenther, Washington, D.C.; Mrs. Elizabeth B. Heffelfinger, Wayzata, Minn.; Arthur N. Holcombe, Duxbury, Mass.; Edward C. King, Boulder, Colo.; Grayson L. Kirk, New York, N.Y.; Benjamin H. Kizer, Spokane, Wash.; Jacob M. Lashly, St. Louis, Mo.; Henry R. Luce, New York, N.Y.; William L. Marbury, Baltimore, Md.; John J. McCloy, New York, N.Y.; Mrs. Millicent C. McIntosh, New York, N.Y.; Robert D. Murphy, Corning, N.Y.; Howard C. Petersen, Philadelphia, Pa.; George N. Shuster, Stamford, Conn.; Joseph M. Snee, S.J., Washington, D.C.; Charles A. Sprague, Salem, Oreg.; Harrison Tweed, New York, N.Y.; Arthur K. Watson, New York, N.Y.; W. W. Waymack, Adel, Iowa; Bethuel M. Webster, New York, N.Y.; Joseph N. Welch, Harwichport, Mass.; Henry M. Wriston, New York, N.Y.

This list of distinguished persons—all leaders in their respective communities—is a powerful testimonial in support of the cause which they sponsor.

The statement of position follows:

STATEMENT OF POSITION

At the very time the United States is trying to win and hold the respect of uncommitted nations outside the Iron Curtain, it is continuing its recorded distrust of the International Court of Justice. At the very time the United States is trying to foster the rule of law among nations as the ultimate substitute for the rule of force, it is continuing its self-judging limitation on its adherence to the Court. Our committee believes this limitation should be repealed.

The basic terms of adherence: Our country adherence to the Court was pursuant to a 1946 Senate resolution. The resolution repeated the provisions of the statute creating the Court (part of the United Nations Charter) under which any country may accept the Court's jurisdiction as compulsory in disputes meeting these requirements: the dispute must be with another state accepting the same obligation, it must be a legal dispute, and it must concern either the interpretation of a treaty, or a question of international law, or the existence of any fact which would constitute a breach of an international obligation, or the reparation to be made for such breach.

In addition the Senate resolution, as introduced and unanimously approved by the Foreign Relations Committee, provided that the adherence should not apply to disputes on matters essentially within the domestic jurisdiction of the United States. This principle is implicit in the nature of international law and in the text of the Court statute, and was already expressed in the United Nations Charter. It is just as important to other nations as to the United States. Its restatement in the resolution may have been unnecessary, but of itself would not have impaired our adherence to the Court in any way.

The self-judging reservation: During the debate on the Senate floor, however, this provision was amended by adding eight final words, so that, as filed, our adherence to the Court did not apply to disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America "as determined by the United States of America." In other words, for deciding whether a matter is essentially within the domestic jurisdiction of the United States (and thus outside the jurisdiction of the Court), the United States substituted itself for the Court. By adding this self-judging reservation the United States reserved the power to prevent the Court from passing on the matter, and thus reserved to itself a complete veto as to what cases could be brought against it.

The boomerang: The existence of a self-judging reservation in the adherence of any plaintiff country creates a like right for the defendant country (even though the defendant's own adherence contained none), because of the statute's requirement that adhering nations accept the same obligation. Thus when France (which had a self-judging reservation) sued Norway (which did not), the Court held that Norway could deny jurisdiction simply by announcing that in Norway's opinion the dispute was within Norway's domestic jurisdiction. Two years later (1959) France withdrew its self-judging reservation.

This boomerang effect of the self-judging reservation is probably its most serious aspect from the viewpoint of immediate economics. Thus foreign countries, despite their adherence without a similar reservation, can prevent the Court's passing on the validity of their taking of U.S. citizens' property or on the adequacy of any compensation proffered. The United States and the citizens it protects, who have a larger stake in foreign investment than any other country, can thus be deprived of their day in an international court.

Our companions in distrust: After the United States filed its adherence to the Court with a self-judging reservation, seven other countries adopted such self-judging reservations. France and India later dropped theirs, leaving such reservations now in effect by Mexico, Liberia, Union of South Africa, Pakistan, the Sudan, and the United States. Including these, 38 nations have now accepted the Court's compulsory jurisdiction.

The Court is well constituted to earn respect. It has 15 judges, each elected for 9 years, with 5 elected every 3 years. No two can be nationals of the same state. They are nominated by members of the Permanent Court of Arbitration, and elected by the United Nations General Assembly and Security Council (without any veto power). The Court has conducted itself conservatively, and given no indication of a desire to extend its jurisdiction. We may terminate our adherence to the Court by 6 months' notice.

Speaking of the Court in his state of the Union message of January 8, 1960, President Eisenhower said: "There is pending before the Senate a resolution which would repeal our present self-judging reservation. I support that resolution and urge its prompt passage." The Senate Foreign Relations Committee held hearings on this resolution (S. Res. 94), but deferred action.

Little to lose: This committee believes that the United States should withdraw its self-judging reservation, at once. The Court's compulsory jurisdiction would still not include disputes on matters essentially within our domestic jurisdiction, but the determination of whether a dispute involved such matters would be by the Court. Assuming that the United States would exercise the self-judging reservation only in good faith and not as an excuse to avoid defeat, our only risk in withdrawing the reservation would be that the Court in some future dispute would decide that the matter was not essentially within our domestic jurisdiction when we considered that it was. Based on the structure, history and prospects of the Court, this committee believes that any harm to the United States from the acceptance of such a risk is most unlikely.

Much to gain: The gains to the United States, however, from withdrawing the self-judging reservation, would be substantial and in the long run could be tremendous. With the reservation still on file, giving our country a veto power to prevent a decision of the Court, other countries are not prepared to assume that we will exercise the veto only in good faith. From their point of view our support for the Court is little better than that of the Iron Curtain countries, none of which has filed any adherence. We have put ourselves in the posture either of expecting to break out international obligations, or of being afraid to defend our conduct in court. We have prevented ourselves from showing the world the stark contrast between bona fide support of the Court, and the Iron Curtain countries' rejection of it.

If we Americans wish the governments of other countries to follow our lead in the arduous search for a way to the rule of law among nations, we must renounce the self-judging reservation. We must strike from the rolls our recorded distrust, and become a true adherent of the International Court of Justice.

Are You Tired of Traveling to the Old Familiar Places?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1960

Mr. PORTER. Mr. Speaker, following is the text of a brochure drawn up by a group affiliated with the American Friends Service Committee in New England. This group, over the past 2 years, has been working to improve relationships between our country and the People's Republic of China.

As you will see from the text, this is a different approach, although no less serious in intention than has been used in the past.

The authors of the brochure can be excused for not knowing that our Government has allowed six people to enter officially.

It is generally believed that the attempt to carry on a "containment by isolation" policy is completely successful, at least to the extent of preventing all such visits.

The text of the brochure follows:

ARE YOU TIRED OF TRAVELING TO THE OLD FAMILIAR PLACES?

Do you yearn for new ports and new vistas?

How about a trip to a country that has not been visited in 10 years.

In 10 years?—that is, not legally—by Americans.

Canadians have been there and Englishmen and Russians and Indians; but no Americans—officially, that is.

It is said to be an interesting country geographically, economically, culturally, even politically. Perhaps we should not have mentioned that last because our Government says it is bad—and who are we even to question what our Government tells us about far-away places?

Has our Government been there? No; governments never go where they're not recognized. It's not protocol. Nevertheless this faraway place keeps persisting in existing.

Our Government talks to their government in Poland, in Korea, in Switzerland, but not in our country—nor in theirs. Why? Because they're not acceptable politically. Are they really that bad? Is anything about them true? Or false? How do you know if you can't go and see for yourself?

But will their government let you in? Most likely. Will they let you out? Definitely. Will we let you back in again? Absolutely—we can't keep us out. Then where's the hitch? You lose your passport.

What? You heard right, our Government takes back your passport (after all, it's "theirs") and thereafter, you stay home.

Some Americans must think it's worth it, though, in fact, quite a few—43 young people went in 1957 and lost their 43 passports. Last summer there were quite a few other Americans over there, people who went over to look and see.

Did they lose their passports, too?

Nobody knows yet—they're not all back yet. But chances are they will. Do any of them ever come over here? Heavens, no. Why should we let them come here when we won't let us go there? It's not logic.

Would you like to go to see? (Without loss of passport?) Do you think some of them would like to come here to see? How much longer ignorance?

How much longer the head in the sand?

We waited 16 years to recognize their neighbor. We've already waited 10 years not to recognize them. Do we have only 6 more years to wait, then? Only 6 more years of ignorance? Maybe. Unless you and 99 other typical honest, representative citizens from our country went to their country and 100 of their typical honest, representative citizens came here by boat or a safe, nonnuclear intercontinental missile (fitted, you might say), with a peacehead.

What's to be gained? Information, perhaps understanding, ultimately even trade?

Between 200 million of us, and three times that number of them. Why, we have three times as much to gain and three times as much ignorance to lose. We used to be very mutually friendly with these people. And they with us. In other words:

Why don't we start now to go forward to where we used to be? If you believe this, too, join us.

Check one or all:

☐ I am interested in visiting China.

☐ I am interested in making it possible for others to visit China.

☐ I believe an equal number of Chinese should be permitted to visit the United States.

☐ I am willing to help raise money.

☐ I am willing to write to Congress, the State Department and the President.

☐ I want more information.

☐ I enclose $_____ for which send me _____ copies of this brochure (at 10 cents each).

Scotty Reston Writes of the President, Ingemar and Other Affairs of State

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1960

Mr. UDALL. Mr. Speaker, the following is an article by Mr. James Reston which appeared in the New York Times this morning:

TO INGEMAR JOHANSSON WITH LOVE

(By James Reston)

WASHINGTON, June 28.—Dear Ingemar: You asked me what you should say in your forthcoming TV report to the Swedish people about the recent regrettable incident with Mr. Floyd Patterson at the Polo Grounds in New York.

I have three suggestions. The best thing is to say nothing. The next best thing is to deny that you ever went to America. But if you have to make a report, I suggest that you follow the victory-through-defeat system used by President Eisenhower in his report on Japan, speaking—if you are now able to speak—as follows:

My friends:

I have just returned to Sweden from America, where almost everybody treated me very kindly. It has been a trip so marked by events that I shall try this evening to give you a simple background of fact against which these recent events can be viewed in perspective.

First, Swedish relations with the United States have been strengthened. I wish that every one of you could have accompanied Birgit and me to New York and thus witnessed for yourselves the outpouring of friendship and respect for Sweden and the Swedish way of life.

Second, the happiness created among the colored people of America as a result of my appearance there this time was not only heartwarming but surpassed by far their reaction to my last visit.

Finally, as the Marquis of Queensberry once said, it matters not in this life whether you win or lose, but how you play the game, especially when economic rewards are so agreeable.

Now, let's look at the background of this trip and the others I have taken in the interests of world understanding. For some years the world has been inclined to think only of the beauty of Swedish women.

Meanwhile, the heroism and warrior tradition of Swedish men had long been overlooked, not only by atheistic international communism, but even among the peoples of our sister democracies.

Accordingly, I have traveled tirelessly around the world, seeking lucrative personal contacts in my own people-to-people program, and belting old retreads regardless of race, creed, or color.

With the passage of time I began to receive urgent invitations to attend a heavyweight summit meeting in America. Many months ago I concluded that I should accept these invitations whenever the price was right. In this decision Birgit enthusiastically concurred.

Incidentally, I have never believed that victory and money were the only things in life, although, as the Americans say in their picturesque way, these things are not to be sneezed at. What matters is the international goodwill that results from bilateral reciprocal aggression before multitudes of well-heeled savages in the overdeveloped and undereducated areas of the globe.

Now as to the incident at the Polo Grounds, I have been assured that the people there were, in overwhelming majority, anxious to welcome me as a representative of a nation with which they wished to cooperate and have friendly relations.

It is true that the outrageous conduct of a violent and disorderly minority prevented me from achieving all of my objectives, and that Mr. Patterson displayed toward me, especially in the fifth round, a certain animus and even hostility, which temporarily interrupted my mission.

Nevertheless, if you could have heard the cheering that filled that great arena, when I finally regained consciousness, I think you would agree with me that a great many peace-loving Americans were actually overjoyed at my survival.

I shall never forget the look of relief on the face of Mr. Patterson at the end. He kept saying in a faraway voice: "Wake up, Ingemar. Wake up." It is in such moments a man realizes there is no defeat.

Now, a final personal word:

Sweden has nothing to regret. In the long history of human conflict no man has ever lost and regained the heavyweight championship of the world until now.

As I said to Birgit, this is our consolation: We have made it possible for Mr. Patterson to lose and regain a crown, and all I can hope is that he will do the same for me.

Thank you and—good night.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

The Power To Destroy

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Appendix of the RECORD, I am including a series of six articles by the publisher, Eugene C. Pulliam, which appeared in his papers, the Indianapolis Star and the Arizona Republic, entitled "The Power To Tax Is the Power To Destroy."

Of course, the power to tax is an essential element of any responsible government. You will recall that the lack of this power under the Articles of Confederation was disastrous. The proper title should be "The Abuse of the Power To Tax Is the Power To Destroy." It is much like the axiom often referred to, "money is the root of all evil," when in truth it should be, "the love of money is the root of all evil." The distinction in both cases is apparent.

There is national interest in House Joint Resolution 23, which calls for the repeal of the personal income tax and provides for the disposition of the 2,500 Government corporations, which in their tax-free, rent-free status, compete with private industry. These tax-free corporations constitute the greatest tax loophole we have, and if they were privately owned, they would produce several billion dollars in taxes annually as well as eliminate the deficits which they each year charge to the Federal Government.

The following editorials deal with the provisions of House Joint Resolution 23, and should be carefully considered by every American:

THE POWER TO TAX IS THE POWER TO DESTROY

We believe:

1. It is not only desirable, but possible to abolish the personal income tax which is damaging the economic and moral fiber of the Nation.

2. This can be done without adding new taxes or reducing the amount of money spent on any essential military or civilian obligation of the Government.

3. That the first step toward abolishing personal income taxes is the removal from Government ownership all corporations and properties that now compete with private enterprise.

4. That the corporation income tax can be replaced with other forms of taxation less burdensome to incentive, initiative and economic progress and fairer to the entire country.

5. That these objectives can be achieved within 3 years if Congress starts this year.

(The enclosed series of editorials on income taxation is written in the belief that the progressive income tax is dangerous to the economic progress of the United States, is unethical and unfair to the people of the United States, and if it is not abolished, imperils the personal liberty of the American people. We believe these editorials demonstrate not only that abolition of the income tax must be done, but can be done—Eugene C. Pulliam, publisher.)

THE POWER TO DESTROY

"The power to tax involves the power to destroy." Chief Justice John Marshall, McCulloch vs. Maryland, March 6, 1819.

Extensive hearings have been held in Washington on reform of the income tax, the most extensive since 1913, when the tax was imposed. Six thick books of testimony have already been issued by the Ways and Means Committee of the House and more are coming. Most witnesses propose new exemptions to make the tax more "fair" to certain groups. Others propose, as does Chairman Wilbur Mills of Arkansas, ending all exemptions and imposing uniform lower rates ranging from 12 percent to 55 percent. Many suggest closing "loopholes" in the law under which some taxpayers get special exemptions for old-age, sickness, investments, oil depletion, or dependents, or foundations and special interest organizations.

It seems to us that none of these proposals to reform the income tax law really gets to the root of the evils of income taxation. Everyone admits that progressive taxes with special exemptions create inequalities and special privileges. But nobody seems to realize that it is not the way in which income tax laws are written that makes these "loopholes." It is the very principle of income taxation itself which is unequal, undemocratic, punitive and unfair.

It is our contention that no progressive income tax can be fairly and equally applied, giving no special privilege or imposing no special punishment. It is our contention that no matter how Congress tries to adjust the interests of one badly treated group, it will end up merely by creating other badly treated groups or specially favored groups in the process.

It is also odd that most of the testimony does not seek to reduce the burden of taxation on the American people. Instead most witnesses try only to provide ways of distributing the tax burden in a different way. Chairman MILLS himself does not aim at reducing taxes. He aims only at redistributing them.

The income tax brought in $80 million in its first year, 1913. In 1960 it is expected to produce $40 billion in personal income tax collections, or 500 times as much as 1913. Corporation income taxes will produce $22,500 million, excise taxes $9 billion and other receipts $6,007 million. Thus the personal income tax has become the major revenue producer for the Government instead of a minor factor. Consequently the cry of most of those in Congress or out is, "How can we cut such an important tax? What will we do for revenue to run the Government?"

It is the purpose of this series of editorials to prove that the income tax cannot only be drastically cut—it can be abolished, and still there will be enough revenue to run the Government. It is our purpose to prove that the progressive income tax is destroying too much that is vital to American freedom and prosperity. It is destroying the ability and the incentive of individuals to raise capital to invest in new businesses employing more workers. It is destroying the people's faith in the fairness and morality of their Government. It is destroying the moral fiber of our people by creating inequities, by making Federal taxation arbitrary, unfair and outright dishonest. The complexity of the tax has made it impossible to be sure of making out a truly accurate return, thus destroying the confidence of the people in the Government's intent to treat them honestly.

Cameron Hawley, author of "Cash McCall," wrote in the Saturday Evening Post in 1946, "Bad laws produce bad men. Even good men, in a bad moral climate, are inclined to lose their ethical orientation * * * the very unfairness of the law becomes an accepted moral justification to break it, evade it or avoid it. When the law loses its respect for the individual, the individual loses his respect for the law." This has already happened in America.

The income tax is a bad law, a law unacceptable to honest people, a law that is immorally and unevenly applied. It is violated more and more every year, knowingly and unknowingly. Nobody is ever sure exactly what it means. In 1958 the Government published a book, "Your Federal Income Tax." It had 128 pages of explanation and index and still its authors admitted they did not give all of the answers on the income tax law.

All of the voluminous testimony before Congress makes it perfectly clear that, as Representative MILLS put it, "We have a tax system riddled with preferential benefits and falling on only a part of our economy. The heavy tax burden is on those who must carry more than their share. A fair and equitable tax system is not only desirable, but may well be an element in our national survival."

But a progressive income tax cannot be made equitable. It is the kind of tax that has built-in inequities, no matter how it is written. More than that it attacks the very fiber of our American way of life.

In 1910, Richard E. Byrd, Speaker of the Virginia House of Representatives, warned the Nation of the dangers that income taxation would bring to this country. "This amendment," he said, "will extend the Federal power so as to reach the citizen in the ordinary business of his life. A hand from Washington will be stretched out upon every man's business; the eye of the Federal inspector will be in every man's counting house.

"The law will, of necessity, have inquisitorial features, it will provide penalties. It will create a complicated machinery.

"An army of Federal inspectors, spies, and detectives will descend upon the States. They will compel men of business to show their books and disclose the secrets of their affairs. They will dictate forms of bookkeeping. They will require statements and affidavits. On the one hand the inspector can blackmail the taxpayer and on the other he can profit by selling his secret to his competitor."

All this has happened in America in the last 47 years. But it is even worse than Byrd predicted. For now, every home, every wage earner, every family is under the eye of the tax inspector. The bulk of income taxes are not paid by business. They are not paid by the rich. They are paid by the great forgot-

ten middle class of the United States who earn from $4,000 to $25,000 a year.

The progressive income tax is dangerous, unfair and punitive. It has given the Government the power to spend unchecked tremendous sums of the people's money. It violates the personal privacy and personal liberty of every American who pays it.

An alternative must be found. We believe an alternative can be found.

THE POWER TO DESTROY—II

In our first editorial of this series we pointed out that the main objection to drastic reduction or abolition of the income tax is that "the Government needs the revenue and cannot find a way to replace it." We believe the Government does not need the revenue and can find ways to replace it that are less burdensome on the American people.

The most dramatic proposal for abolishing the income tax and replacing the lost revenues comes from Congressman JAMES B. UTT of California. Last year he introduced the 23d amendment to the Constitution. It would do two things. First, it would mandate the disposal of all Federal corporations and properties that compete with private business. Second it would abolish the income tax. Congressman UTT believes that revenues from the liquidated Federal corporations would make any new or additional tax unnecessary. He inserted in the CONGRESSIONAL RECORD an analysis by Willis E. Stone, chairman of the National Committee for Economic Freedom.

Mr. Stone points out that the House Government Operations Committee has estimated the book value of these 700 Federal corporations at $262 billion. If these properties (which comprise 20 percent of the Nation's industrial capacity) were sold to private investors, they would bring in an estimated $65 billion. If that much of the national debt were paid off with the proceeds, it would reduce the Federal budget by $2 billion in interest costs alone.

But there is much more to be saved. These 700 Federal corporations lost a staggering total of $19 billion in 1959. So even if the Government just gave them away, the taxpayers would be immediately saved $19 billion.

In addition, more than 1 million employees who work for these corporations are paid out of the U.S. Treasury, according to Stone's figures. They are paid an average of $4,300 million a year by the taxpayers of the country. All of this could also be saved.

Next, Mr. Stone figures that it takes at least $3 worth of free goods and services for every dollar of payroll provided for these 700 corporations. That totals $12,900 million which can be taken off the taxpayer's back.

Saved also would be the amortization costs of this portion of the national debt reduced by the $65 billion proceeds from the sale of Federal corporations. Figured at 40 years such costs are $1,625 million per year.

The total of all these savings made possible by sale of Government corporations is $59,825 million—a tremendous sum. Added to these savings to the taxpayers would be Federal corporation taxes paid to the Government by these 700 corporations after they become privately owned. The estimate is that they would pay an average of $5,100 million in new taxes. Add this sum to the amounts saved above and the total would be $44,925 million. That is more than is expected to be collected in 1960 by all personal income taxes put together ($40 billion).

So if these estimates are correct, the 22d amendment would make possible the complete abolition of the personal income tax and the Government would have nearly $5 billion extra in the till.

Now it is quite possible that the Government could not get $5 billion for its properties that compete with private business. But even if it got half that amount, there would still be gigantic savings to the taxpayers. It would still be possible to cut the income tax in half, or reduce it two-thirds, or impose another fairer, more easily collected and more equitable tax in its place. And not one single fundamental service of the Government would be affected—not social security, not welfare programs, not any necessary services, not even foreign aid!

Clearly it is not true that the income tax cannot be abolished because it is needed for revenue to support the Government. Just as clearly there are other means by which revenue can be raised so that income taxation can be eliminated with all of its evils, special privileges and punitive aspects. We will discuss some of these alternate tax plans in the next editorial.

THE POWER TO DESTROY—III

We have shown, in the second article of this series, that personal income taxes can be either greatly reduced or abolished. It could be done by divesting the Federal Government of the 700 properties and corporations that compete with private industry, returning them (20 percent of the Nation's industrial capacity) to private ownership.

It is also possible to abolish the income tax on corporations—which the people pay anyhow in the higher prices they pay for the goods and services they buy. Business has to lay the cost of its taxes on the consumer if it is going to make a profit, pay good wages, give stockholders a fair return and stay in business. What is the alternative to corporate income taxes?

There are several possibilities. In 1956, U.S. News & World Report published a study of the problem and outlined several types of tax that could replace income taxation with less trouble of collection and more even distribution of the taxload among the people.

For instance, they found that a 10 percent manufacturers sales tax, in 1956, would have produced $13 billion in revenue. A retail sales tax of 10 percent would have produced $21 billion which is almost as much as the entire tax expected to be collected from business and industry in 1960. If food and medicine were exempted from such a sales tax, $16 billion could still have been collected. In 1960 these taxes would all produce even greater tax revenues than in 1956.

A turnover tax on business operations would have raised $45 billion, or twice as much as corporate tax collections in 1960. That is even more than personal income tax collections bring in. A "spending tax" of 10 percent (a tax that is applied only on money people actually spend, and not on savings or investments) was estimated to produce $18 billion. That today could replace the entire corporation income tax.

So there is an alternative to income taxes. There are many ways in which Congress could abolish or drastically cut all taxes on income in the United States.

Nor is it correct to assume that if taxes are abolished or cut, the remaining tax structure would not produce as much or even greater tax revenues—even at much lower rates. It has happened before in this country. It would undoubtedly happen again. For billions of extra dollars would be released to the people to spend in their own way. When they spent their tax savings, they would set off a tremendous economic upsurge. New industries would spring up, old ones would be expanded to compete for the consumers' additional dollars. New investment capital would be available in huge amounts. Economists who worry about the slowdown in the economic growth of the United States in recent years could stop worrying. It is likely that if income taxes were cut by $40 billion—as they can be within just a few years—we would double our rate of economic growth—and thus produce much more tax revenue.

Something similar happened between 1925 and 1930. In 1925, income tax rates were 40 percent maximum with a $2,500 maximum personal exemption. Total Federal income tax collections were $2,584,140,000. (Just think. Today the citizens of Indiana pay almost as much as that to the Federal Government in income taxes.) By 1930, after the income tax rates had been gradually reduced, first to 24 percent with a $3,000 exemption and then to 20 percent with a $3,500 exemption, Federal income tax revenues had risen to $3,040,146,000. There was thus a 17 percent increase in Federal tax collections after the rates had been cut in half.

Large tax cuts on personal incomes and corporations are bound to stimulate business activity, increase incentives to earn more, to invest more and to spend more. As economic growth rises, tax revenues will also rise despite lower rates. It is demonstrably untrue that lower taxes must mean lower tax revenue. Certainly if $40 billion of the people's money were returned to them in the form of income tax reduction there could not help but be a terrific increase in industrial growth.

Great Britain, France and Germany have all discovered this simple economic truth, to their great advantage. It is time the United States rediscovered it.

So, we have demonstrated conclusively that personal income taxes can be abolished and corporate income taxes can be replaced. The argument that there is no alternative to income taxes simply does not stand up. We will discuss the reasons why it is vital to find an alternative to income taxation in our next editorial.

THE POWER TO DESTROY—IV

Why do we believe income taxes must be abolished? Well, let's just take some specific examples from the way it is applied and you will see why.

Back in 1958 a Gary (Ind.) schoolteacher bitterly complained because her salary was $3,550.50 instead of $3,550. Why didn't she want to be paid the extra 50 cents? Because when she made out her tax on the short form she discovered that extra 50 cents cost her an additional $10 in income taxes. She found she was in a higher tax bracket by just 50 cents. Now what is fair about that?

Between the years 1951 and 1956 convictions of income tax evaders increased from 261 to 631—more than doubled. Why? Because people are getting fed up with what they know are inequalities in the law. People are trying to escape paying what they believe to be an oppressive and unjust tax. A rich man can afford to pay his tax accountant enough money to keep him out of trouble. The average man, leafing through the 144 pages of the 1960 tax manual, has to do the job himself. Usually he winds up using the simplified form and thus cheats himself by not taking his legal deductions. Others who try to do that often end up by being called into the Internal Revenue office because they made either deliberate or inadvertent errors in the complex business of computing their taxes.

Do you know that people earning less than $7,000 a year will pay two-thirds of the $41 million in personal income taxes collected in 1960? People earning more than $7,000 will pay the other third despite their higher rates. Because income taxes have become the most important single tax of the Federal Government the average man is being forced to pay the huge bill Congress saddles on the American economy.

Congressman WILBUR MILLS recently pointed to a case of two men, Smith and Jones, both earning the same salaries, having the same family situation. Smith has

an income of $6,000 but his company gives him cut price lunches, health insurance, free medical checkups, life insurance a pension program, and an expense account which pays for part of his and his wife's meals and entertainment. The total value of these extras is $2,300—and it is all tax exempt. Yet his real income is $8,300.

Smith deducts from his taxable income $750 he pays in interest on his mortgage, $500 he pays in property taxes and $600 for a dependent aunt of his. He was sick for 5 weeks and the law says he can deduct up to $100 a week in the salary he was paid after the first week—so that is another $400 deduction. He has $200 income from tax exempt municipal bonds so he owes no tax on that. He contributes $300 a year to charity which is deductible.

Jones earns the same salary, $8,300. He also contributes $300 to charity. But he rents his home, so he cannot deduct mortgage interest. He pays no real estate property taxes so he cannot deduct them. He pays for his own meals, insurance, and retirement plan. He wasn't sick, so he has no deduction there. The extra $200 income he has comes from interest on savings and is therefore fully taxable. The aunt he supports is his wife's by marriage—no blood relation. Therefore he cannot take a deduction for her.

So what is the result?

Smith pays $210 income taxes on his $8,300.

Jones pays $1,090 income tax on his $8,300.

Why should Jones pay five times as much taxes as Smith? Their earnings and living situations are almost identical. Yet this is typical of the favoritism for special groups and the punishment for other groups that results from a progressive income tax.

Such a system is not fair. It is not equal. It is not democratic. It is not even honest.

A tax system that can produce such inequality is contrary to every democratic American principle we have come to believe in. And no wonder. A heavy progressive income tax is the second plank in the Communist Manifesto.

Not only does the personal income tax impose inequalities. So does the corporation income tax. Most American business pays income taxes on net earnings at rates up to 52 percent. The people who invest money in these businesses have to pay personal income taxes on the part of the remaining 48 percent that is distributed to them in the form of dividends. Thus people who invest in business have to pay two taxes on the same income—one corporation, the other personal. What is fair about that?

Then there are businesses that pay no taxes at all—or very little. Congressman NOAH MASON once wrote, in Reader's Digest, about the Farmer's Union Grain Terminal. In 1946 it had net earnings of $3,650,000. Thus one would think it would pay taxes of $1,400,000. But it paid no Federal income taxes. Why? Because it is a "cooperative."

The Red River Lumber Co., of Westwood, Calif., paid almost $1 million in Federal income taxes in 1943. In 1946 it paid none. Why? It was bought by the giant 'cooperative,' the California Fruit Growers exchange, which does $300 million business a year.

Is this fair? Who has to make up the difference in taxes which these big cooperatives do not pay? You do. The business you work for does. The businesses that compete with them do. Is there anything equitable about such a system? We do not see it.

We do not believe that any adjustments can be made in either the personal income tax or the corporation tax that can make these taxes fair. We do not believe that Congressman MILLS' plan simply to abolish all exemptions for everybody and retain the progressive income tax will be fair either. For everyone has a different personal situation just as every business is in a different competitive situation. And the progressive principle itself causes inequalities. It is meant to. That is why the Communists like it. For these reasons we believe the only way to provide fair and equal taxation is to abolish progressive income taxation and replace it with something else.

THE POWER TO DESTROY—V

How can the American people stop the ever-growing Government spending in Washington? Only by demanding that Congress reduce the taxes it imposes on them. The Congresses of the last 20 years have rarely reduced spending except by reducing taxes.

In 1960 the Federal Government will spend over $100 billion including the $20 billion for trust funds for highways, social security and the like. Together with State and local taxes, Government will take 30 percent of the Nation's income in 1960. The administration has been spending $8 billion in foreign aid and support programs every year. There is a Federal payroll of over $20 billion. And very little has been done to save the $7.5 billion Congress is wasting each year by not putting the saving recommendations of the Hoover Commission into effect.

These tremendous sums of money come from nowhere else but your pocket. By 30 percent your freedom to spend what you earn has already been taken away from you. The beginning of this fast growing expansion of Federal spending was in 1913, with the imposition of the income tax. The income tax has become since than a vast engine of burgeoning bureaucracy and an engine of Government stimulated inflation. It has made possible the Government establishment of tax-free businesses and industries that now comprise over 20 percent of the Nation's industrial capacity.

Every American citizen is in debt to the Government by $5,700. The average tax load on every American family is $2,400 a year in all forms of taxation. The national debt is $292 billion. I O U's for future payment of veterans and Government employees and other retirement programs are another $350 billion. The Federal Government is obligated to spend an additional $98 billion on roads, public works, and housing. The real total debt of your Government is thus around $750 billion—more than the entire national gross product and almost double the total wages and income of our people.

There is only one way to stop this growing debt, this heavier tax burden, this erosion of the people's right to spend what they earn and to be free from the prying eyes and heavy hand of the tax collector. That is to demand major surgery on the Nation's tax structure, not just minor changes that might well be soon changed right back. The income tax is a dangerous tax—as can be seen by its history. It has been made even worse by adding the withholding provision, which not only forces employers to do the Government's tax collecting for it—without compensation—but also seizes part of every worker's pay check before he even sees it.

Even another small cut in income taxes is not likely to stop the big flow of our tax dollars to Washington. In 1954 taxes were cut 10 percent. Yet in 1960 Government will collect almost $20,000,000,000 more in taxes than in 1954. The cost of the Federal Government has increased by $16 billion since the Korean war. The national debt has increased by $13 billion.

Government spending is virtually out of control. No real efforts have been made by Congress to cut either spending or taxes. A constant inflation has accompanied this massive Federal spending, cutting the value of our dollars, but not cutting the cost of our taxes. According to the Tax Foundation, a married man with $3,000 in income paid $269 Federal taxes in 1942 when the rates were about the same as today. In 1959 a man with the same income would pay the equivalent of $716 in taxes, when they are adjusted to the rise in consumer prices. Consumer prices have increased by 77 percent. But this man's taxes have increased by 166 percent. Inflation, caused by Government spending, has in fact become an additional tax on our incomes.

Not only does the income tax seize large chunks of our incomes, but also it causes us all extra expenses and extra effort just to figure out our taxes and try to avoid paying more than we owe. This is especially true of corporation income taxes. As Dr. Emerson P. Schmidt has written in "The Annals" of the American Academy of Political and Social Science, "The taxpayer, whether individual or corporate, is increasingly making his business and economic decisions in terms of minimizing his tax burden. This drains energy and ingenuity from constructive economic activity to the negative activities of tax avoidance. * * * Vast armies of high-salaried attorneys as well as business executives, devote a prodigious amount of time, energy, and resources to minimize the tax burden. A significant reduction or elimination of the corporate income tax would not only reduce this misallocation of resources, but would encourage industrial modernization and new investment which, in turn, would lead to lower real prices." Elimination of the personal income tax would, as we have pointed out, have the same effect.

"The cost of living today is three and one-half times as high as it was just after the turn of the century," says the Institute of Life Insurance. "By a striking coincidence, total Government spending has risen three and three-quarter times as fast as economic activity during this period (which coincided with the life of the income tax)." Not only has inflation resulted, but "considering today's tax burden and its impact on savings, capital formation and incentive, excessive growth of Government spending tends to become a drag on the growth of the economy rather than a stimulus."

Every attempt to make a major reduction in spending and taxing has failed—except in 1947 when the "do-nothing Congress" reduced both substantially. It is obvious that merely to try to change the income tax structure will neither stop Government spending or reduce taxes. Only a bold and all-out attack on the income tax aiming at its abolition can do this. This is the key to the whole problem.

THE POWER TO DESTROY—VI

It is indeed true that "the power to tax involves the power to destroy." But in our Republic the power to tax is a power granted to Congress by the people. It can be taken from Congress by the people. The people, with their votes, have the power to destroy politicians who abuse the power to tax.

We believe that we have demonstrated in this series of editorials that it is possible to abolish the personal income tax. We believe that we have shown that the income tax is an iniquitous and unfair tax that must be eliminated. Therefore, we believe the people should demand that Congress change the tax laws and relieve them of this vicious burden.

The 23d amendment, requiring the disposition of all Federal corporations competing with private industry and business and abolishing the income tax in 3 years, should be passed this coming session. Even if the sale of Government corporations does not raise as much money as estimated, there would still be tremendous yearly savings to the taxpayer by eliminating their losses and their payrolls. It is only good sense to believe that return of these huge amounts of money to the people in the form of tax reduction would so stimulate the economy that all necessary expenses of Government could be met by other forms of taxation.

We believe Congress should also work toward the replacement of income taxes on business with other forms of taxes. We would suggest a retail sales tax that exempts food and medicine (food is the biggest single item of the low income man's budget—except his taxes). Another possibility would be a spending tax which would be levied on the amount of money each taxpayer spent each year. Both of these taxes would be fair to all and discriminate against none. They would also be clearly labeled to the people so they would know exactly how much they are paying their government every day of the year. Nobody could then be fooled into thinking that he pays no taxes, when he surely does.

Sales taxes or taxes on spending are also anti-inflationary in contrast to the inflationary income tax. As Dr. John F. Due, professor of economics at the University of Illinois put it in an article in the Annals of the American Academy of Political and Social Science, "Their anti-inflationary influence arises from their effect in reducing real purchasing power by raising commodity prices relative to factor incomes. Unlike other price increases, this type does not have a spiraling effect because it does not generate additional income. * * * They give some incentive to spend less and save more." (Which is the exact opposite of the income tax.)

Dr. Due believes an "expenditure" or savings tax would be best. Such a tax would be levied on the total spending each taxpayer did out of his yearly income. It could be simply figured by subtracting savings from income at the end of the year and paying taxes on the balance. Food or medicine could be exempted, of course. Also personal exemptions could be included for members of the family.

Such a tax, however, should not be progressive. The progressive principle leads to too much discrimination and inequality. At a 10 percent rate, for instance, with a $600 exemption, a single man spending $20,000 would pay $1,940. A single man spending $3,000 a year would pay $240, or much less if food were exempted.

Another source of taxation that has not been considered is taxation on imports. Traditionally tariffs have been levied in this country to protect domestic industries from competition abroad. Instead they should now be levied to raise revenues—and therefore rates should be set to encourage imports and thus produce more tariff revenue.

It is our belief that inheritance taxes should be either eliminated as a source of Federal revenue or limited to at least 25 percent. Heavy inheritance taxes discourage savings, and are thus inflationary. They make it difficult for the average person to provide for the future of his family after death. They encourage excessive spending since there is no reason to save for the future when the Government takes most of what you save when the future becomes the present.

All past experience, in this country and in others throughout the ages, has shown that when taxes on the people become burdensome and unfair, the nation's economy suffers, the people rebel, prosperity is destroyed and all too often freedom itself is lost. It has happened time and time again in nation after nation. Recent economic experience—in Germany, Britain, and France—has proved that when the tax burden is lightened and people are allowed to make more of their own decisions as to how their earnings are spent, production increases, industry expands, prosperity rises, inflation stops.

The people of the United States have a tremendous future ahead of them if they will just begin to demand an end to excessive spending and taxing by their Government. Congress must be made to understand that the time has come for them to start serving the people of the United States and not the insatiable bureaucracy that has swarmed like locusts into Washington.

Do you want an increase in your paycheck of from 15 to 20 percent weekly? Demand that your Congressman work to abolish the income tax and you will get it. Demand that Congress stop wasting your hard earned money. Taxes can be cut. But the job is up to you.

Textile Industry Must Turn to Congress

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 30, 1960

Mr. TALMADGE. Mr. President, the concern which the people of Georgia feel about the failure of the U.S. Tariff Commission to grant relief from unfair foreign competition to the American textile industry was eloquently expressed by the Augusta (Ga.) Chronicle in its lead editorial of June 29 entitled "Textile Industry Gets No Relief." I concur fully in the Chronicle's conclusion that the industry must now look to Congress for help and I ask unanimous consent, Mr. President, that the text of the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEXTILE INDUSTRY GETS NO RELIEF

A U.S. Tariff Commission majority has dealt a staggering blow to the Nation's textile industry in its rejection of a National Cotton Council petition for limiting foreign cotton textile imports.

The four-member majority not only turned down the industry plea for quotas, or a tariff-quota combination, but ruled that import duties are not needed to offset the Government's cotton export fees.

In so doing, it failed to stem a swelling tide of textile imports that threatens to wreck the domestic textile industry and upset the cotton price support program in this Nation.

The gravity of the textile import problem is reflected in post-World War II export-import statistics. In 1947, U.S. textile exporters found a world market for $1.4 billion worth of textile manufactures, while imports amounted to only about one-fourth of this volume. This net textile export balance diminished until, by 1955, U.S. imports of textile products of $585 million had grown to 95 percent of our $615 million export trade. By 1958, a net textile import balance was firmly established, and in 1959, American imports totaled $837 million in contrast to exports of only $634 million.

Later statistics indicate that this trend is continuing, with imports of textile manufactures currently running some 140 percent of the U.S. export trade. And textile imports, if allowed to remain unrestricted, may be expected to cut even deeper into the American market in coming months. Not only do foreign manufacturers have the advantage of cheap labor and lower costs, but they buy cotton, including U.S. growths, at prices about 25 percent below those U.S. mills must pay.

The Japanese voluntary quota arrangement eased the problem to some degree in 1957, decreasing cotton cloth imports temporarily. But U.S. manufacturers cannot hope for any similar relief in the future, because imports are now pouring in, not only from the traditional Japanese and European competitors, but from an ever-widening circle of low-wage manufacturers based in Hong Kong, India, Korea, Pakistan, and Formosa.

Adding a deplorable note of irony is the fact that the United States, through the ICA, is financing the construction of many of these newer foreign mills that add to the woes of our own established textile manufacturers.

Viewed in the light of these facts, the Tariff Commission's action is indeed alarming. The United States must take some action to limit this low-cost foreign competition if the American textile industry—a basic element of the Nation's economy—is to continue to provide good jobs for millions of Americans and quality products for national and world consumption.

Having been denied by the Tariff Commission, the textile industry now must turn to Congress for action. As Senator STROM THURMOND said in commenting on the Commission decision, this case "proves the imperative need of Congress to take action in the next session to regain control of its constitutional authority over our trade program."

Platform of Affiliated Young Democrats, Inc., of New York State

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following platform adopted by the 14th biennial State convention of the Affiliated Young Democrats, Inc., of New York State, at the Hotel Piccadilly, New York City on June 18, 1960.

PLATFORM ADOPTED BY THE 14TH BIENNIAL STATE CONVENTION OF THE AFFILIATED YOUNG DEMOCRATS, INC., OF NEW YORK STATE, JUNE 18, 1960, AT THE HOTEL PICCADILLY, NEW YORK CITY

The 1960 presidential campaign once again brings our country to a crossroads. Once again the American people must choose between two concepts and philosophies of government. The decision which they will make in November will have profound effects not only upon our own destiny but upon that of all the world.

After more than 7 years of apathy and drifting by the Republican administration, the prestige of the United States is at its lowest ebb for the 20th century. This country has regressed from its position of preeminence in the areas of science, technology, social responsibility, and protection of fundamental freedoms among the family of nations.

The solidarity that marked the Western Alliance at the end of World War II, and through the early part of this decade has been strained by the failures and excesses of a foreign policy that at its best is merely makeshift, without any long-range program to which we can aspire and dedicate our efforts and toward which our allies would join in sincere and equal partnership.

Our party once again comes to the people with a platform and a candidate pledged to the public interest in principle and in administration. We will expose the Republican record of cynical opportunism and en-

trenched privilege. Dedicated to the assurance of full civil liberties for all of our citizens, our party cannot fail in leading the public to the inevitable repudiation of the Republican candidate, and its do-nothing, giveaway everything record.

The Republican Party and the Republican administration come to this campaign a bankrupt party, a divided party, and a party with a record of promises broken and unfilled. Its promises of civil liberties has been torn asunder like the Civil War over the principles of equal and sovereign rights for all its citizens. Its conception of the public interest becomes clear in the memories of Dixon-Yates, and the Mulligans, of Wenzell, of Mansure, of Talbot, of Al Serena, and Sherman Adams. Theirs is a sorry record of nonperformance, of broken promises, and duplicity of hypocrisy and thievery.

We are confident this November a new Democratic President will be returned to office with sufficient Democratic majorities in both Houses of the Congress to permit a halt to the paralysis and impotence of government, to the calculated plan of giving away enormous public assets, and to the appointment of public officials who oppose and seek to destroy the programs which they have been appointed to administer.

Our party has always been eager to let the people know where we stand on the vital issues that concern them. In that tradition, we of the Affiliated Young Democrats of New York have always stated clearly and without equivocation our position and that of the candidates we support. We do so once again.

1. FEDERAL TAXES

We favor a complete overhaul of our entire structure. Our tax structure invites subterfuge and an erosion of our moral fiber. We need to eliminate the loopholes.

We urge the taxing powers, notably excises should be transferred to the States from the Federal Government permitting the States to regain these lost rights.

2 EDUCATION

We favor increasing the amount of Federal scholarships. We urge Federal assistance to States for school construction.

We favor greater autonomy for the Children's Bureau within the Department, and additional appropriations for the relief of children, widows, and the disabled.

We favor greater Federal contributions to combating the ravages of heart disease, cancer, veneral disease, and the other diseases that annually take their toll of life.

3. SOCIAL SECURITY

We favor allowing health and medical care of the aged, over 65, who are eligible under social security benefits, with the first $100 to be paid by the patient.

We urge the increase of the present maximum earnings from the present level of $4,800 to meet the changes in the cost of living. We favor the removal of the requirement that disability benefits begin at the age of 50, there should be no age for disability.

We favor the extension of social security to those segments of the population not already covered by it.

4. FOREIGN AID

We favor the continued economic aid to underdeveloped countries, but waste should be eliminated where possible.

5. FOREIGN AFFAIRS

We advocate the reestablishment of a genuine bipartisan foreign policy in which responsible leaders of both major political parties will participate. We deplore the fact that under the present administration we have not had a bipartisan foreign policy, but that in fact we have had no foreign policy at all.

We must develop, with the assistance of the great abilities possessed by the leaders of both political parties and without domestic political motivation at home, a positive long-range foreign policy designed to preserve the peace ,to promote genuine friends and allies for democratic concepts among all the free nations of the world, and to create a powerful moral force for the defense of all nations and all individuals against the cancer of Communist imperialism and authoritarianism.

We believe that such a foreign policy must include in its fundamental precepts: a firm belief in the right of all nations to determine their own destinies and their own form of government, without interference from imperialists of any character;

A program of extending friendly cooperation in meeting their legitimate aims of independence and self-government to all of the young nations of Asia, Africa, and the Pacific, without sinister or selfish exploitation;

We support the principle of cessation of nuclear testing;

A firm resolution to maintain a strong national defense until assured of genuine disarmament, with enforcement of such disarmament placed in the hands of United Nations inspection forces;

A full support of the United Nations and its agencies in their endeavors.

6. CIVIL RIGHTS

We unconditionally support the principles enunciated in the decisions of the U.S. Supreme Court outlawing segregation and other violations of civil rights.

We are opposed to segregation and discrimination in any form.

7. INFLATION

We favor vigorous enforcement of the antimonopoly laws and a review of tariff policies. The Government should try to live within its income where possible.

8. AGRICULTURE

We favor establishment of an international food agency to increase consumption of farm surpluses. We urge expansion of domestic consumption of farm products to assure an adequate diet for all. Finally, we hope for the free market to be restored as soon as feasible.

9. LABOR

We favor the enactment of the Kennedy-Ives Labor-Management and Reporting Act. An increase in the minimum wage to $1.25 an hour. Broadening the coverage of the minimum wage program to include at least 10 million additional workers.

10. DEFENSE

We favor a complete reorganization and unification of all military services, with the elimination of duplication and waste.

11. PUBLIC HOUSING

We favor a more expanded public housing program. We urge liberalized programs for middle income and cooperative housing and a larger program for urban renewal.

12. PUBLIC POWER

We favor the immediate recall of the restrictions which have been placed by this Republican administration upon the administration of Bonneville, Grand Coulee, and other public power developments.

We reassert our continued support of the TVA and the development of the Tennessee Valley.

13. CONSERVATION

We reiterate and restate our strong position for the protection and the preservation of our great natural resources—our forests, our soils, and our waters. Our great forest wilderness should be zealously guarded, protected, and preserved.

We favor a strong, well-defined program to effectuate and to supplement and improve the work now being done to save our soils.

We urge a forceful and continuing fight for clean air, a clean watercourse, and a clean shore.

Our national resources are invaluable and irreplaceable. They are priceless public possessions. We must not only inform ourselves but enlighten others as to the character, the uses, and the great values of these resources and the urging to preserve and protect them.

14. SMALL BUSINESS

We favor aid to small business and suggest greater credit be given to help them.

15. COMMUNISM

We abhor communism. We oppose Russian aggression abroad, and the arrogance of its leader. We believe that the surest method to expel successfully communism from the American scene is the white light of public disclosure. We believe that our Government should expose wherever possible the penetration of communism and Communists into the various channels of American life. A Communist cannot honestly take an oath of allegiance. We believe that Communists should be barred from employment in our schools, from employment by the Federal, State, and local governments, and from employment in such vital fields as transportation, communication, and atomic energy.

16. FEDERAL AID

We favor a Federal program of aid to the chronically depressed areas, to advise and help such areas in resolving their critical problems during transitional periods as a consequence of automation or for other reasons.

17. EIGHTEEN-YEAR-OLD VOTE

We again urge, as its original sponsor, the extension of the right to vote to 18-year-olds. Now a law in Georgia and Kentucky.

18. NATIONAL SERVICES

We deplore the policy followed by the Republican administration of cutting down the services required by the individual citizen. We favor the immediate restoration of appropriations of the Weather Bureau so that it may again function efficiently and with adequate power. We urge the reorganization of the Post Office so as to provide efficient and frequent deliveries. We favor readjustment of the pay of postal employees so as to give them adequate compensation for their work.

19. ELECTORAL REFORM

We again favor the abolition of the electoral college and the substitution of a direct popular vote for President and Vice President, and the establishment of national presidential preference primaries.

20. SELF-GOVERNMENT FOR DISTRICT OF COLUMBIA

We favor self-government and the right to vote for the citizens of the District of Columbia.

We Learned All About Japan After Damage Had Been Done

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. MUSKIE. Mr. President, there has recently been a great deal of discussion about the meaning of the cancellation of President Eisenhower's recent trip to Japan. On Thursday morning, June 23, 1960, the Portland (Maine)

Press Herald carried an excellent editorial on this discussion which I would like, at this time, to have printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE LEARNED ALL ABOUT JAPAN AFTER DAMAGE HAD BEEN DONE

The feeling grows that somebody was sold a bill of goods in the matter of President Eisenhower's going to Japan—in fact, several somebodies. The list includes the President. It includes the Secretary of State. It includes the larger portion of the American press, this newspaper being no exception. And, in view of what the press was saying only days before the visit was scheduled and with Japanese student mobs virtually out of control, it includes most of the American people.

With variations, usually meant to shorten the limb out on which this host of people was inexorably climbing, the argument went that the President should go to Japan because he'd said he would, because an important peace treaty hung in the balance, and because Ike's benign presence infallibly engenders thoughts of peace.

We know now that, at best, this rationale was horribly oversimplified. The treaty has been technically ratified by Japan, probably soon will be by the United States through the agency of the Senate. But of what use, it is fair to ask, is a treaty when one of two signatories shows firm signs of wrenching away from its obligations before the ink is dry?

Most Americans had been led to believe—indeed, perhaps still believe—that cancellation of the trip and all the difficulties that flow from it, at home, in Japan, throughout the shrinking globe, are the work of mobs carefully directed, and frequently paid, by the agents of Moscow and Peiping. Yet we now learn that this is but part of what happened and by no means the prime cause.

We know now that one major factor in events was the as-yet-imperfect Japanese grasp of the democracy we ourselves insistently tried to teach them as we consciously broke the traditional molds of life and society in imperial Japan.

We know now how widespread is the pacificism which grips the Japanese who, although they have adopted much that is American, both good and bad, have not forgotten the lessons of their own militarist history, the catastrophe it brought to the islands, and above all the horror of Hiroshima and Nagasaki as they dissolved beneath two atomic bombs.

We know now that the U-2 incident, and its capacity to frighten allies whose sovereign territory was used to launch intelligence flights, had a heavy impact in Japan.

We know that there is no magic which can quickly convert a nation of the banzai charge and kamikaze planes into a Far East replica of the United States from which friendship is automatically returned.

We now know a good deal more about the crude tactics Premier Kishi used to ram through the controversial treaty. And we know as well how shot with holes was the advice received from our Embassy in Tokyo about the manner in which calmer Japanese heads would prevail and the certain efficacy of Japanese police.

All these things we know now, as the State Department might have known them all along. Yet we Americans on the one hand blandly accepted the explanation which pointed exclusively to the Communist bogey men and let it go at that. And on the other the State Department kept to its way until, the point for cancellation with minimum loss of prestige gone forever, the initiative passed to the Communists.

It is too late now to do anything about the past and it may be some time before similar circumstances again present themselves. For one thing Secretary of State Herter has said this country is through dealing in summitry and personal diplomacy. And for another we are well into the quadrennial suspension of our finest political skills and best instincts known as a presidential election. This means that although Moscow and Peiping will continue their policies without interruption ours are not likely to take firm shape again until another man is in the White House.

There is no help for this but if Americans in and out of the seats of authority could somehow use the time to become more sophisticated about international affairs it would be profitable indeed.

Perhaps the best expression of what is meant here is maturity of outlook, an attitude toward world events that, among other things, automatically suspects neat simplifications and instinctively rejects a division of all problems into black and white, good and bad, holy and unholy.

How our diplomacy is to do this is one question. How ordinary Americans are to do it is another. But done it must and can be. Nor is there any quetsion of taking glibly out of hindsight. All the factors which built up to the terrible defeat over Japan were available for assessing before the event. Yet after the event they have entered the public consciousness as eye-opening news.

In short Americans must learn to see what is there to be seen with the same clarity as our enemies. And to act in accord with what is true rather than what we would like to be true.

Summit Conferences Are Not Desirable

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, June 30, 1960

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Caldwell Hits Summit Conferences," published in the Tampa Tribune of June 29, 1960.

Former Governor Caldwell is a man of deep convictions. He always speaks his convictions vigorously and courageously. I am sure that all Senators will find his remarks challenging and intriguing.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CALDWELL HITS SUMMIT CONFERENCES

MIAMI BEACH, June 28.—Millard F. Caldwell, former Governor of Florida, said today U.S. diplomats "have had their pockets picked everytime they have met with the confidence men of the Kremlin."

"Sensible men would never think of sitting down with a family of rattlesnakes to discuss peaceful coexistence," Caldwell told the convention of Civitan International.

"If proof of those elementals is needed, we can cite the precedent of President Roosevelt losing his shirt in his conferences with Stalin and we can remember that President Eisenhower was consistently outmaneuvered and humiliated in the summit meeting debacles."

PRIMARY DANGER

Caldwell said the primary danger facing the Nation is not communism but "indifference of our citizenship."

"It is true that we read the evidence of Soviet superiority in the field of military science with some trepidation," he said.

"We evidence a general fluttering of concern as Washington usurps the rights of the States. We shrug with mild annoyance when the Supreme Court renders an unconstitutional decision. And we are irritated by the frustrations of American diplomacy in its retreat from Khrushchev.

RECONCILE SELVES

"But what do we do? We just timidly reconcile ourselves to disintegration, frustration, and failure."

Caldwell called the U.S. Supreme Court "a court composed of pseudosociologists which has spewed upon the Nation a series of unfortunate extrajudicial philosophical treatises."

He said the Court "has lost the respect and confidence of the people.

"That the state of our Union is precarious can no longer be a matter of doubt," Caldwell said. "That our domestic economy is balanced precipitously between depression and inflation is obvious. Our international relations have deteriorated almost beyond the point of return.

PROSPECTS NOT GOOD

"As a Nation we are without capable leadership and our prospects for improvement in the next election are not good.

"You and I, the private citizens of America, have neglected our responsibilities and shirked our duties. We are directly responsible."

Caldwell said both political parties "have become meddlers."

"The Paul Butlers and the Nixons, the Humphreys and the Rockefellers are stirring up sectionalism, racial strife, and class consciousness," he said.

CAPTAINED BY WEAKNESS

"The political parties are no longer concerned with the welfare of the country. Their only interest is in the next election. They are captained by weakness and motivated by the lust for power."

Caldwell told the Civitan delegates that "if your organization has any justification for its existence, it must be found in the realm of public service. It must be evidenced by the use of your collective intelligence, training, and knowledge in the task of solving some of the riddles of this generation."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).
